THE
CYCLOPÆDIA OF INDIA
AND OF
EASTERN AND SOUTHERN ASIA.

THIRD EDITION
MORRISON AND GIBB, EDINBURGH,
PRINTERS TO HER MAJESTY'S STATIONERY OFFICE.
THE CYCLOPAEDIA OF INDIA

AND OF

EASTERN AND SOUTHERN ASIA,

Commercial, Industrial, and Scientific;

PRODUCTS OF THE MINERAL, VEGETABLE, AND ANIMAL KINGDOMS, USEFUL ARTS AND MANUFACTURES.

BY

SURGEON GENERAL EDWARD BALFOUR,

CORRESPONDING MEMBER OF THE IMPERIAL-ROYAL GEOLOGICAL INSTITUTE, VIENNA;

FELLOW OF THE MADRAS UNIVERSITY;

AUTHOR OF

'THE TIMBER TREES OF INDIA AND OF EASTERN AND SOUTHERN ASIA,' ETC.;

FOUNDER OF THE MADRAS MUHAMMADAN LIBRARY; OF THE GOVERNMENT CENTRAL MUSEUM,

MADRAS; OF THE MYSORE MUSEUM, BANGALORE.

IN THREE VOLUMES.

VOL. I. A—GYROCARPUS.

THIRD EDITION.

LONDON:

BERNARD QUARITCH, 15 PICCADILLY.

1885.
PREFATORY NOTICE.

The first edition of this Cyclopedia was published in 1858 in India, the second, also in India, in 1873, and the years 1877 to 1884 inclusive have been occupied in revising it for publication in England. During this process, every likely source of further information has been examined, and many references made. I am under obligations to many learned men, to the secretariat Officers of the Indian Governments, and to the Record and Library Officers of the India Office, Colonial Office, and British Museum, for their ready response to my applications for aid.

This edition contains 35,000 articles, and 16,000 index headings, relating to an area of 30,360,571 square kilometers (11,722,708 square miles), peopled by 704,401,171 souls. In dealing with subjects in quantities of such magnitude, oversights and points needing correction cannot but have occurred; but it is believed that errata are not many, and will be of a kind that can be readily remedied.

It is inevitable that difficulties in transliteration should be experienced owing to the variously accented forms which some words assume even among tribes of the same race, also to the different values accepted in many languages or the same letters, and especially to the want of correspondence in the letters of the several Eastern alphabets; but in this work traditional and historical spelling has not been deviated from, and the copious Indices will guide to words of less settled orthography.

Men of the same race, habits, and customs, plants and animals of the same natural families, genera, and even species, are so widely distributed throughout the South and East of Asia, that local histories of them are fragmentary and incomplete. India in its ethnology, its flora and fauna, can therefore only be fairly dealt with by embracing a wider area. This is the reason why the Cyclopedia and my work on the Timber Trees include all Eastern and southern Asia, the regions, the areas and populations of which may be thus indicated:
### India, Eastern and Southern Asia

I am under obligations to Messrs. Morrison & Gibb for their careful press-work. All that their art could do has been done to aid me in keeping the work in a compact form.

Edward Balfour.
THE CYCLOPAEDIA OF INDIA
AND OF EASTERN AND SOUTHERN ASIA.

A

A, ā.—In the English language, the ordinary sounds, long or short, are as a in many; ā in all, and as ā in municipal. It has representative letters and sounds in all the languages of the east and south of Asia. In Arabic, Persian, and Urdu or Hindustani, the letter alif and the vowel mark zabr have almost similar sounds to the long and short ā of the English, as in that part of the āzīn or Mahomedan call to prayers, Allāhō Bār, Allāhū Akbār, retaining the long sound invariably when in the middle or end of a word. A Tamil, the English A and ā, long and short, are represented by two initial letters equal to ā and ā; and all the consonants have the inherent sound of short ā, thus kā, nā. In Telugu, the short ā is represented by the letter ā initial, and by a mark placed on the top of a consonant. The long ā initial has the same sound as ā in anger.

AACH, Aul, or Atche. TAM. Morinda citrifolia; M. multiflora. See Dyes.

AADAL. ARAB. Sacks for carrying provisions, on camels.

AAKAL. ARAB. The fillet of the Arabs; a rope or woollen band, or of other material, which in Arab twists round his head covering.

AALIN NAR. MALEAL. Fibre of the Ficus indica, the banyan tree.

AAT-ALARI. TAM. Polygonum barbatum.

AB. PEERS; HIND. Water. Hence Abi, watery. Also Ab-kari, the distillation of alcoholic fluids, the strong waters of Europeans; and in use as revenue term in British India for the excise ranch which superintends the licence to sell all kinds of intoxicating substances, as arrack, toddy, plum, etc. Do-ab, literally two waters, the territory or mesopotamia between two rivers. Panj-3, five waters or five rivers; that territory in the north-west of British India through which several rivers flow.

ABA or Abba, ARAB., in Egypt called Abayeh, a cloak woven of camel or goat’s hair, worn by 1 classes of the Arab races, known to Europeans in the Persian Gulf as a cameline. It is made in the Bedouin tents. It is of every degree as to quality and ornamentation, and varying in price from one or two dollars to a hundred dollars,—the last a marvel of softness and beauty, considering the material used. To the common working Arab the aba is often the sole article of clothing.

ABACA BRAVA, the wild or mountain abaca of the Philippines, a variety of the Manilla hemp plant, Musa textilis, the fibres of which serve for making ropes, called agotag and amouq in the Bicol language.—Royle’s Fib. Plants.

ABAD. PEERS. A postfix to districts of country and towns, as Arungabād, Dowlatābād, Allahābād, Farrākhabād, Hyderabad, and used by almost all the races of British India to indicate towns in which Mahomedans have ruled. Abadi is an inhabited or populated place. Abadi-raqba, the area under tillage.

ABAK. ARAB. Mercury.

AB-AMBAIR, in Persia, large underground reservoirs lined with brick, filled by kanate, or by collecting the rain of a wide area. They are covered in by vaulted roofs of masonry, and a flight of steps leads down to the water.

ABAR-MURDAI. PEERS. Sponge.

ABA SİN. BŞRT. The river Indus; lit. father of rivers.

ABASSA, sister of the khalif Harun ur Rashid, by whom she was married to Jafar, his vizir, under a condition which was not adhered to. There are extant some Arabic verses by her on the subject of her love for Jafar.

ABBAS, a dynasty of khalifs, who reigned at Bagdad, from a.d. 749-50 to 1258-9 (a.h. 132 to 656), when Bagdad was besieged and taken by Hulaka, grandson of Chengiz Khan, and the khalif Mustasem put to death. They are known to Europeans as the Abbassides. See Al Abbas; Khalifah.

ABBASII. PEERS. A curved broad-bladed scimitar.

ABBAYE. Beng. The head man of a village.

ABBOTTABAD, in lat. 34° 9’ N., and long. 73° 0’ E., a small military and civil station, N.N.E. of
Chamba, at a height above the sea of 4120 feet. It is the headquarters of the Hazarat district of the Panjāb. The district is inhabited by the Khāral, Dhund, Bœl, Jadun, and other Musulman moun-
taineers.—MacGregor; Rob. Schtl.

ABBOTT, JAMES, C. B., an officer of the Bengal army, who was assistant political agent at Herat under Major D’Arcy Todd. He went on a mission to Kūiva, and was the bearer of terms from its khan to the emperor of Russia, as recorded in a narrative of his travels. He was afterwards employed in the Hazarat district of the Panjāb, where he baffled the Sikh general, and marched upon and occupied, with 1500 match-
lock men, the Mariquella pass, which 16,000 Sikh troops and 2000 Afghan horse were preparing to thread. For this he received the thanks of both Houses of Parliament.

ABD. Arab. A slave, a servant, often in combination applied to God’s service, as Abdallah, a servant of God; Ab’d ur-Razzaq, slave of the food-giver; Abudiat, worship; Zain-ul-Abidin, the ornament of servants. It corresponds with the Arabic Ghulam, and the Hindi Dasa or Das, all of them ordinary names in India.

ABDALI, a powerful Afghan tribe, residing in every part of Afghanistan, but principally in Herat and Kandahar. They have been termed Dourani since 1747, when Ahmad Shah, Sad-
dozai, the first Afghan king, on ascending the throne, gave them that name. The Abdali and Ghilzai, but particularly the former, arrogate to themselves a superiority over other Afghan tribes, and from their great numerical strength have exercised a greater power. The Abdali are also called Sulimani. The Abdali take their name from their great ancestor, Malik Abdal. Early in the 16th century, Shahr-i-Saffa was the chief town of the Abdali. Early in the 17th century it was Herat which they held, until ousted by Nadir Shah. See Afghan; Ahmad Shah; Barakzai; Paniput.

ABDALI, an Arab tribe in the immediate vicinity of Aden, capital Luhej. The tribe is the most civilised but the least warlike in the S.W. of Arabia.

ABDALLAH was the name of the father of Mahomed; Abd-ul-Mattalib was Mahomed’s grand-
father. Abdallah was a term applied by Mahomen-
dan Arabs to apostate Christians who embraced the Mahomedan religion. It is now a name of many Mahomedans.—Sale’s Koran.

ABDALLAH Ibn ABBAS was one of the most learned of the companions of his cousinMahomed, and one of the most celebrated of the resters of his sayings and actions. He has received the titles of Interpreter of the Koran and Sultan of Commentators. He died A.H. 65. His father Abbas, son of Abd ul Mattalib, was paternal uncle of Mahomed, and ancestor of the Abbas khalifas.

ABDALLAH Ibn ul MOKAFFA, a Persian who lived in the 8th century. After the fall of the Omeyyades he became a convert to Mahome-
danism, and rose to high office at the court of the khalifs. During the reign of the khalif Mansur, he wrote the Kalila o Damima, a famous collection of fables, which he says were translations from the Pehlavi of Barzuyeh, who again trans-
lated them from the Panchatantra. Being in possession of important secrets of state, he became dangerous in the eyes of Mansur, and was foully murdered A.D. 760.—Chips, iv. p. 158-9.

ABD. Pers. Glancing, as a gem or polished sword; in India, a water cooler, who cools water by freezing mixtures. Abdar-Bashi, at the Persian court, the chief of the kitchen. Abdar-Khana, the place where water is kept for drinking.

ABDHUT, a Hindu religious mendicant,—in the north of India, of the Vaishnava, and in the south, of the Saiva, sect.—Wilson.

ABDUL KADAR of Badayun, a learned Mahomedan employed by Akbar to make translations from Sanskrit. He was very bigoted, and quarrelled with Abul Fazl and Faizi on some point of religion. He wrote a historical work, the Mantakhab-ut-Tawarikh, and filled his book with invectives against their irreligion and that of Akbar. He also disclosed many grievances complained of by the people at the time. Even although it is almost a hostile narrative, it leaves a more favourable impression of Akbar than that derived from Abul Fazl’s Akbar Namah. Akbar employed him to make a catalogue of the library of Faizi, which contained 4060 books, carefully corrected and well bound, on poetry and litera-
ture, moral and physical science, and theology.

—Elph. p. 469. See Mubarak; Faizi.

ABDUL-KADAR, surnamed Ghous-ul-Azam, the great contemplated, born at Jal, near Baghdad, A.H. 471 (A.D. 1078-79). He was endowed with great virtues and alleged gift of miracles, had many disciples, and is still much revered. He is called Shāhīk, but was a Sūya, i.e. of the race of Hussain, and died in A.H. 571 (A.D. 1175), aged ninety-seven years. Where he died or was buried does not appear. He was the founder of the sect of the Kadrit fakirs.

ABDUL-KADAR, Ghilani, the Pir Piran or Pir i Dostagir, a native of Ghilan, who taught Sāfī doctrines at Baghdad, where his tomb is still reverenced. Sādī studied under him. His anni-
versary is held on the 11th Rabi-us-Sani. He is in-
voked in time of trouble, or during cholera or other plague or epidemic, on which occasion a large green flag is carried in his name. His sister’s son was Syūd Ahmad, Kabīr.

ABDULLAH, son of the khalif Omar, in A.D. 650 defeated Yesdejdī. Yesdejdī was then on his return from Khorasan, and for the last time put himself at the head of his subjects. See Istakhr.

ABD-UR-RAZZAQ, Jamāl ud-Dīn Abd-ur-Razzaq, bin Jalal ud-Dīn Ishaq-us Samarkandi, was born at Herat in A.H. 816 (A.D. 1415), where his father was Kazi in the time of Shah Rukh, grandson of Timur. Shah Rukh, in 1441, sent him on a mission to India to the king of Vizian-
agar; subsequently on an embassy to Ghilan; and he, again, was ordered to proceed as ambas-
sador to Egypt. In January 1442, Abd-ur-Razzaq set out from Herat, and, proceeding by the of the Kohistan and Kirman to Ormuz, thence sailed for India, arriving at Calicut after a long detention, wind-bound, at Muscat. He then pro-
cceeded via Mangalore and Belur to Vijianagar. Re-embarking from Calicut, he arrived in March 1444 at Kalahat, in Arabia.—India in the Fifteenth Century.

ABD-US-SHAMS, also called Dawar-us-Shams, the sun-flower. See Ausarāiah.
ABD-US-SHAM'S.

ABD-US-SHAM'S, or Saba, founder of Maribah. Amongst his sons were Hinayar, Amru, Kahtan, and Ashar. See Saba.

ABELIA TRIFLORA. Stewart.
Chota Bata, Hind. | Adai Pushatwar, Pushut.

A plant of Kaghan. Mr. Fortune introduced into England the Abelia rupestris from China.

ABELMOSCHUS ESCULENTUS. W. and A. Rob.
Hibiscus longifolius R. | H. esculentus, L.
Lalo. | Fr. of Maur. | Garbeau, W. Ind.

A herbaceous annual, a native of tropical America, largely cultivated all over the East Indies, its capsules being held in much esteem as a vegetable. It is generally raised from seed, and produces abundance of fruit, which is the only part of the plant that is eaten. The whole plant is mucilaginous, but the fruits or pods are highly so. The fruits are boiled whole, and served up as a vegetable; or the seeds are added like barley to soup. The young pods are pickled like capers; its ripe seeds, when allowed to dry, and parched, can with difficulty be distinguished from coffee. Its mucilage has been recommended as a demulcent, in coughs, in the form of lozenges, but they are not easily digested. The deep purple juice of the stigmas can be communicated to paper. Dr. Riddell strongly recommends this plant as capable of furnishing an excellent fibre for the manufacture of paper, and the fibres are said to be exported from India, as one of the hemp's of commerce; by Dr. Roxburgh's experiments, a bundle of them bore a weight of 9 lbs. when dry, and 95 lbs. when wet. They retain their gloss even when very brown and rotten.—0'Sh. | Rozh. | Royle, Flb. Plants | Useful Plants | Mason | Riddell.

ABELMOSCHUS FICULNEUS. W. and A. Rob.
Hibiscus prostratus, Rozh. | H. ficulneus, Linn.
Karupu Benda. | Tam.

It grows abundantly on the black cotton soils of India. Flowers white; the bark contains a large proportion of white reticulated fibre similar to that obtained from the mulberry, and useful for gunny bags and paper; this fibre is of great length, and not very strong.—Madras Exhibition Journeys Reports | Robert Brown.

ABELMOSCHUS MOSCHATUS. Manch.
Hibiscus abelmoschus, R.
Kala-kasturi. | Duk. | Vittulei-kasturi.
Katta-kasturi. | Malal.

A gaudy flowering annual, with blood-coloured eyes on its large yellow blossoms, a native of various sorts of India, flowering in therainy and cold seasons. Its brown seeds are the Hub-ul-Musk of the Arabs, as called because of their smell and taste resembling a mixture of musk and amber, and, on burning, a similar odour is evolved. They are kidney-shaped, and of the size of hemp-seed, and are used to perfume owders and pomatums. They are found in all he bazaars; and amongst the people of India are reputed to be useful in snake-bites, when bruised and applied externally and internally, or bruised and steeped in rum or arrack. In Dr. Roxburgh's experiments, the fibre broke with a weight of 107 lbs. The plant, like A. esculentus, abounds in mucilage, and is said to be used in Northern India to clarify sugar.—Roxburgh; O'Shaughnessy; Mason's Travels | Journeys | Reports Madras Exhibition | Useful Plants of India.

ABELMOSCHUS TETRAPHYLLUS. Wall.
At the Madras Exhibition of 1857, Mr. Jaffray exhibited an excellent white and strong fibre obtained from this plant. Its flowers are large, yellow, with a dark centre; abundant in Girguan woods, Bombay.

ABHIGAT, a sect of Hindoos who subsist by begging. They dwell alone or in monasteries.—Sherring's Hindu Tribes, p. 264.

ABHIHANGA STHINAM, a Hindu ceremonial, on the wedding day, when the bride and bridgroom are anointed with oil. In the Hindu ceremonial, when oil is applied to the crown of the head, and reaches to all the limbs, it is called abhyanga. It is like the precious ointment upon the head, that ran down upon the beard, even Aaron's beard, that went down to the skirts of his garments.—Psalm cxxiii. 2; Ward's View of the Hindoos, ii. p. 112. See Hindu.

ABHIDHANA. Sansk. Any Sanscrit dictionary or vocabulary. One of the oldest is the Abhidhana Ratnara of Haluyadhita Bhatta, about the 7th century. Abhidhana Chintanani is a vocabulary of the Jaina doctrines, by Hema Chandra, a Jaina celebrity who lived in the 15th century.—Garrett; Doveson.

ABHIDHARMA, the third division of the sacred writings of the Singhalasee Buddhists, addressed to the Dewas and Brahmas. They are in the Pali language, and are called the Pttakattyam, or Three Baskets.—Eastern Monachism.

ABHIGNYAWA, amongst the Singhalasee Buddhists, five great powers attached to the Rahatship.—Hardy's Eastern Monachism.

ABHIMANI, a name of the Hindu god Agni.

ABHIMANYA, a son of Arjuna and Subhadra, who fought in the great war, or Mahabharata, on the second day of the battle, and he slew a son of Duryodhana. On the thirteenth he himself was slain. He was on the side of the Pandya, or Pandava. His son Parikshit succeeded to the kingdom of Hastinapour.—Wheeler, History of India, i. p. 152; Garrett.

ABHIHA, a pastoral race, who were settled about the beginning of the Christian era, on or near the lower course of the Indus, on a tract known to classical geographers as the Abiria of Ptolemy, lying between the Tapti and Dergarh, north of the Sabirakri range of mountains and of Syrastrum, and of the Abiria of Saurashtra are mentioned in the Mahabharata. From their pastoral habits, the name came to be generally applied to all the cowherds of Hindustan. In the spoken dialects of Upper India, the word is softened to Abhir. In Bengal and Mahtratti it is unchanged, occurring as Abhir. Abhir, at the mouth of the Indus, has been supposed by some to have been Ophir.—Wilson.

ABHISHEGAM. Sansk. A Hindu religious ceremony, which consists in pouring milk on the lingam. This fluid is afterwards kept with great care, and some drops are given in the Panche Shegam rite to dying people. Traces of this
ABBHIYADAYA.

Abhisegam ceremony are found in the earliest antiquity. Several primitive races had a kind of sacrifice called a libation, which was performed by pouring some fluid, but especially oil, in honour of the divinity. The Hindus of India have preserved this custom, not only in respect to the lingam, but also in honour of their other deities. They usually offer them libations, wash them with cocoa-nut oil, melted butter, or water of the Ganges. They often rub them with oil or butter when they address prayers or present offerings to them, so that all their idols are black, smoked, plastered, and dirtied with a fetid grease. The Talopains of Pegu and Ava, and the priests of Siam, also wash their idols with milk, oil, and other liquids. The Jews had sacred stones, which they anointed with oil, and to which they give the name of Betyle.—Sonnerat's Voyage, pp. 159, 160. See Betyle; Eagle Stones; Ban-lang; Salagram; Stone Worship.

ABBHYADAYA, in Hinduism, offerings to the manes of an individual's progenitors.

ABHISH, Hind. Land cultivated by artificial irrigation from streams or tanks. Lallam, in Afghanistan, means cultivation dependent on natural rains.

ABID. Arab. A devout person; constantly engaged in the worship of God.

AB-i-DHANG. Pers. This is a usual drink amongst the Illyats in Northern Persia. It is butter milk weakened with water, and to which a little salt is added.

ABIES, the fir genus of trees of the coniferous tribe, known for their valuable timber. Species of several coniferous plants, abies, cedrus, cupressus, juniperus, picea, pinus, and taxus, grow in the Himalaya, in Japan, the Philippines, and China. A. Harrangi, Siebold, is a Japan tree with a brown wood, used for various domestic purposes; and the A. Momi, Siebl., also of Japan, is valued for the whiteness and fine grain of its wood. A. leepolepis, A. firma, 100 to 120 feet, A. bifida, 90 to 100 feet, and A. tsuga, 60 to 70 feet, grow on Mount Fujiyama.—Hooker's Hist. Journ.; Hodgson's Nagasakt; Punjab Report. See Conifers.

ABIES BRUNONIANA. Hooker. Pinus Brunoniana, Wall. J P. dumosa, Lamb. Deciduous silver fir, Eng. ; Semadongu . . . . Tr. Grows in Nepal, Bhutan, and at Gossain than. A beautiful species, which forms a stately pyramid growing to 70 or 80 feet, with a trunk 15 to 20 feet, and with branches spreading like the cedar, but not so stiff, and drooping gracefully on all sides. The wood is not durable; its bark is, however, very useful. Dr. Hooker found stacks of different sorts of pinewood stored for export to Tibet, all thatched with the bark of Abies Brunoniana. In the dense and gigantic forest of Abies Brunoniana and silver fir, he measured one of the larger trees, and found it 28 feet in girth. It grows occasionally in dense forests to a height of 70 to 80 feet, with a clear trunk of from 14 to 20 feet, and a spreading, very branching head. Abies Kaempferi, the Pinus Kaempferi, Lamb, a native of Japan, is found wild on the mountains of Fako.—Eng. Cyc.; Hooker's Hist. Journ.

ABIES SMITHIANA. W. Himalayan spruce. Kachan . . . . of Jelum. ; Seh . . . . . Lar. A handsome tree, common in many parts of the Punjab Himalaya, at from 3500 to 11,000 feet. Trees of 10 to 12 feet girth, and 130 to 140 feet high, are not unfrequent. Thomson notes one of 17, Madden mentions one of 20, and Dr. Stewart had seen one of 21, feet girth. The timber is soft and light, often with much sapwood, and the fibres are frequently twisted. It is the least valued of all the conifers, by the natives, for construction. In some parts, however, especially on the Beas, it is largely used for shingles, which are said to last for two or three years, and under cover it will last twice that period.—Hooker's Hist. Journ.; Stewart's Punjab Plants; Cleghorn's Punjab Report; Royle.

ABIES WEBHIANA. hooker. Pinus spectabilis, Lamb. ; P. Webbiana, Wall. Chirrow, of Himalaya. Gobea, Sullar, PAN, Tes of KULUK AND KANGRA. Oonum, Dunshing, HIND. This fir tree grows at great elevations on the Himalaya, where it is one of the principal ornaments of the forests. It attains a height of 80 or 90 feet. At Choogtam this tree attains 36 feet in girth, with a trunk unbranched for 40 feet. According to Dr. Hooker, it is silt white, soft, and highly prized for durability, but Dr. Cleghorn says it is not much valued, and is used for shingles.—Hooker's Hist. Journ.; Royle's Ill. Hist. Botany; Timber Trees; Punjab Report.

AB-I-GUM. Pers. Literally 'lost water,' thirty-six miles from the east entrance of the Bolan pass. The stream in the pass sinks into the loose pebbly stratum, but, percolating through, it reappears at Bibi Nani some miles below.—MacGregor's Beluchistan.

AB-I-MA. Pers. Literally 'mother of the waters;' the Amu Daria, or Oxus river.

ABIR. ARAB. Crocus sativus, LINN. ABIR. HIND. A perfumed cosmetic powder, which is rubbed on the face or body, or sprinkled on clothes to scent them. There are many receipts for it; one kind is composed of rice flour, or the powdered bark of the mango tree or deodor, camphor, and aniseed. A superior kind is prepared from powdered sandal wood or wood-aloes, Curcuma zerumbet (Kuchoor), or Curcuma zedoaria (umbi huklee), rose flowers, camphor, and eucat cent perfumes, pounded, sifted, and mixed. In every case it is a mixed cosmetic perfume, and other ingredients used are yellow saffron, violets, orange flowers, aloes wood, musk, true spikenard, and rose-water. It is a term applied in India to any perfumed powder, and is also often given to Curcuma zerumbet and saffron.—Herbals.

AB-I-SHEREEN. Pers. The Hindyan river.

AB-ISTADA. A lake 17 miles long, 65 miles S.S.W. of Ghazni.

ABJAD. ARAB. The name of an arithmetical verse, the letters of which have different powers, from one to a thousand. This was the ancient order of the alphabet as it is now used in the Hebrew alphabet. The system is much used in chronograms and in books of astronomical tables.

ABKARRY. HIND. Excise revenue derived in India from duties levied on the manufacture and sale of mebibrating liquors, as toddy, pachhai, and arrack; also on intoxicating drugs, whether in substance, infusion, or extract, as opium, bhang, churrus; also on certain licensed distilleries, and on shops licensed to sell by retail.—Wilson.

ABKHORA. HIND. A drinking pot, with or without a spout (tut); it has a handle and lid.
ABORIGINES OF INDIA.

ABJURATION.

Ablutions, amongst the Hebrews, Hindus, and Mahomedans, are included as part of their religious rituals. They are allotted to several periods of the day, and varied to meet particular forms of purification. The Hebrew ceremonial, as still practised by their Jewish successors, is laid down in the books of Moses; and is that generally followed by Mahomedans, both for men and women. Both Mahomedans and Hindus carefully act up to their ordinances, as to purification. The Hindu ritual is severe on this point, and along the banks of their sacred Ganges, crowds of men and women may be daily observed. Their 5thnaman, however, as also their ritual purification before eating, may equally be performed in their own houses. The Buddhists of Asia are less strict. Although frequently enjoined in the Bible as parts of Hebrew ceremonial, they are even more stringently carried out by Hindus, but less so by Mahomedans. The Hebrews, in Gen. xxxv. 2, were ordered to "put away the strange gods; be clean, and change your garments;" and a Hindu considers those clothes defiled in which he has been employed in business, and always changes them before eating or worship. Again, in Gen. xxii 24, 'The man brought the men into Joseph's house, and gave them wash, and they washed their feet.' And with Hindus, as soon as a guest enters, one of the first civilities is presenting water to wash his feet. So indispensable is this, that water to wash the feet makes a part of the offerings to an image. Solomon's Song, iv. 3, says, 'I have washed my feet; how shall I defile them?' A Hindu washes or washes his feet before he retires to rest. If called from his bed, he often excuses himself, as he shall daub his feet; and as he does not wear shoes in the house, and the floor is of clay, the excuse seems very natural. Lev. xiv. 8, 9, and 33, relate to personal uncleanness, and there are similar customs prevalent among the Hindus; but in the Moslical institutions there is no law like that of the Hindus, which rules that a Brahman becomes unclean by the touch of a Sudra, or a dog, or the food of other castes. The Hindu food ritual is given in Mark vii. 3, where the Pharisees and all the Jews, except they wash their hands oft, eat not, for with Hindus bathing is an indispensable prerequisite to the first meal of the day, and washing the hands and feet is equally so before the evening meal. Mahomedans use water or sand before prayers, before meals, and after many ordinary occurrences.—Ward's Hindus; Holtel's Qunat-islam.

ABNOMA. Abl. Eiv. HIND.

ABOOS. Abl. Eiv. HIND.

ABO, HOVA. Eiv. HIND. The climate of a county or locality, literally the water and air.

ABOO, AAB, also written Abu, an affix to many banks, islands, reefs, mountains, headlands, and shoals in the Red Sea and Persian Gulf.

ABOR or Abar is a name applied very indefinitely by the Assamese to independent hill tribes on both sides of the valley, but it is more especially the appellation of the great section called Padam or Padgym. They have five settlements in the lower ranges bordering on Assam, in the vicinity of the Dibang river, viz. Membu, Silook, Pados, Phahee, and Bonjee. The young women at Membu, until they become mothers, wear as an under-garment, suspended in front from the loin, a row of from five to a dozen round embroidered plates of bell-metal, which rattle and chink when they move. Very young girls, except for mourning, wear nothing else, but the smallest of the plates is never seen without these appendages. In the end of 1861, the Meyong Abor attacked and plundered a village in the British territory, but the tribe expressed a desire to renew friendly relations, and begged that their offences might be overlooked. On the 5th November 1862, an agreement was made with them, binding them to respect British territory, and the same engagement was subscribed on the 16th January 1863 by the Kelong Abor. On the 8th November 1862, a similar engagement was concluded with the Abor of the Dihong Dibang duar. The Abor are polyandrous, it being not uncommon for an Abor woman to have two husbands, brothers, living under one roof. They do not eat beef, but hunt and eat the flesh of the buffalo. Their bachelors live in the Morang, a large building in the centre of the village for the reception of strangers, and in this custom they resemble the Naga on the south of Assam, and some of the Archipelago races. Numbers of the Abor people are also found on the shores of the two great northern branches of the Brahmaputra river. When first known, they made periodic descents on the plains. Colonel Dalton thinks that the Abor, Aka, Dulla, and Mira are of a Tibetan stock. The Abor Miri language belongs to the old Assam alliance, but it has been greatly modified by Tibetan. It has a strong ideologic resemblance to the Dhimal, Bodo, Garo, and Naga, but with some specific Tibetan traits.—Journ. Ind. Arch. 1858; Treatises, etc., vii. p. 343; Indian Annals; Latham's Ethnology; Mr. Campbell, p. 54; Dalton's Ethn. of Bengal; Imp. Gaz.

ABORIGINES. In British India, in the southeast of Asia, and in China, many of the races dwelling in political dependency are supposed to be the prior occupants, and on that account are distinguished by this term. Some of them are in large nationalities; others broken, dispersed, disconnected, even homeless. The census of 1871 showed that the aborigines of British India then numbered twelve millions, or one-twelfth of the population:—

Dr. Hunte says 17,716,825, excluding Madras and feudatory states. The dates of the first arrivals in British India are, however, wholly unknown. But the bulk of the immigrants seem to have come from beyond the Himalaya on the north, at intervals ranging between 3000 and 1000 years before the Christian era. Small bodies in the N.W. corner of the Peninsula appear to be of Western origin. There are also peoples in the southern parts of the peninsulas of India and Malacca with marked Negro features, and such recur as large or small nations in the Andamans, the Malay Peninsula,
and in the Archipelago islands, with traces also, in
the valleys of Northern India, as if there had once
been a great Negro wave setting to the east, or
had been prior Negroid races occupying the
southern parts of Asia.

A great bulk of the original settlers in India
—labourers, farmers, foresters, shepherds, cow-
herds, artisans, and professional races—seem to
have come down the valleys of the Indus, of the
Ganges and Brahmaputra, and to have streamed
through the gaps in the Himalayas; and, from
the practice followed of living apart, as castes,
who neither eat together nor intermarry, most
of the immigrant tribes and races are now as
distinctly marked as on the days of their first
appearance. The Mahomedans ever, who have
less of such separatist habits, although they also
to a considerable extent follow the ancient custom
of marrying amongst their own people, are still
readily distinguishable from one another,—tall,
powerful, fair men of the Afghans; fair, robust
Maghuls from Tartary; the fair, slender Non-aat
race from Southern Persia; the darker men of
Arab origin; and the powerful, large-made trading
race, known in the south as Labbay. All these—
amongst the Hindus, Brahman, Kshatriya, Vaisya,
and Sudra, and amongst the Mahomedans, Syuds,
Shaikhs, Moghuls, and Pathans—are in great
numbers. But, throughout all India—in hamlets,
in forests, and on the plains, in towns, and in
valleys, and on the mountains—are numerous
smaller bodies or tribes, with physical forms and
habits and pursuits quite distinct from each
other. The native races readily distinguish each
other, but this is a capability which most Euro-
peans fail to acquire, in consequence of which
ethnologists have formed very dissimilar opinions
as to the origin of the nations in the south of
India.

Mr. Hodgson includes all the people of India
under two races, the Aryan and Tamulian. Dr.
Caldwell, referring to the great variety of feature,
colour, etc., and to the influence of caste restric-
tions and climate, finds no indication either of
the Mongol or Negro tribes among the Dravidians;
Mr. Hislop says he has never found an instance of
Negro physiology among the barbarous people
of Central India, but considers both their hair and
features to be decidedly Mongolian. Sir Walter
Elliot says that in the Carnatic, also from Tan-
jore west through the Western Dekhan, both
above and below the Ghats,—in Gujerat, amongst
the southern Rajputs, and as far north as Mount
Abu, in Kutch and Kathiawar,—also in the
Northern Circars, as far north as Orissa and the
country of the Konds,—he had never, during
forty years' sojourn, observed any indications of
true Mongolian features, nor had he seen any signs
of Negro blood, save in the instances of imported
Africans. But, on the other hand, he has been
struck with the remarkable diversity of form and
feature observable in every class of the population.

Amongst Brahmans, Tamil, Telugu, Canarese, and
Desahast Mahratta, some, he says, will be found
of a clear, light-brown colour; others as black and
darkly as any agricultural Pariah; some with fine,
tall figures, and sharply cut, aquiline features,
others with stout, ungainly figures, and thick, flat,
coarse physiognomy. It would, he adds, puzzle
a stranger to point out a group of Panchal
artisans, of Kanakapilli writers, of Buljawa, of
Komati merchants, and an equal number of Brah-
manas; and the same diversity runs through all
the castes. Many Pariahs, he continues, are very
fair and tall, with good, prominent, sharp-cut
features; others are black and squat, with the
lowest and most debased cast of countenance.
But all converge to a common type,—one sui
generis,—which might almost entitle the Hindu to
be recognised as a distinct family of mankind; and
he concludes by observing that it is a mistake to
attribute any marked influence on existing forms
to Aryan blood, except in a few special cases.
Aryan missionaries penetrated to the south of
India, but they were too few to make any impres-
sion on the community. He considers the origin
and affinities of the classes comprising the Indian
population to be still involved in obscurity.

Professor Mulle and Dr. Caldwell arrived at the
conclusion that when the Aryan Hindus crossed
the Indus, they drove the aboriginal inhabitants
across the Vindhya mountains and the Nerbudda
into the Dekhan, where they still dwell, speaking
their native languages, though mixed more or
less with the Sanskrit of their Aryan conquerors.
Their idioms—the Tamil, Telugu, and Karnatica—are
sister dialects of one speech. Dr. Frichard
concurs with Professor Rask in regarding the lan-
guages of the mountain tribes of India—the Bihis
the Gond, the Toda, and others—as likewise of the
Tartar stock; and he mentions also that some
curious analogies have been observed between the
Tamulian and other dialects of the peninsula, and
the languages of Australia. Mr. Hodgson, also, is
of opinion that all the aborigines of India are
northmen of the Scythic stem. Members of that
stock are found from their original seats on the
north of the Himalayas southwards to the seas;
and between Gilgit and Chittagong there are a
hundred passes over the Himalayas and their
south-eastern continuation to the Bay of Bengal,
through which they may have migrated ages upon
ages before the dawn of legend and of chronicle.
In every respect but that of language, dependent
throughout the vast continent of India, there exist hundreds
of thousands of human beings in a state not
materially differing from that of the Germans as
described by Tacitus. These primitive races are
the ancient heritors of the whole soil, from all the rich
and open parts of which they were expelled by
the Hindus.

Sudra is now the common caste appellation of the
mass of the Hindu inhabitants of southern India.
It cannot, however, be doubted that by the Aryans
the term was extended in course of time to all who
occupied, or were reduced to, a dependent condi-
tion, whilst the name M'Hecha continued to be
the appellation of the unsubdued un-Aryanized
tribes. Lassen and Max Müller suppose that the
whole of the Sudra or primitive servile classes
of Northern India belonged to a race different
from their Aryan conquerors; but Dr. Caldwell
thinks it probable that a considerable portion of
them consisted of the slaves, servants, dependants,
or followers of the high caste Aryans, and, like
the latter, belonged to the Aryan race. And the
legend that the Brahman, Kshatriya, Vaisya, and
Sudra all sprang from Brahm's body, though
different parts of it, is in favour of the idea
that the Sudra differed from the twice-born Aryan
in rank only, not in blood.

Mr. Logan remarks that, physically, the popula-
ABORIGINES OF INDIA.

ion of southern India is one of the most variable and mixed which any ethnic province displays. Some are exceedingly Iranian; some are Semitic, others Australian; some remind us of Egyptians, while others again have Malay-Polynesian and even Simang and Papuan features. Yet when the ye takes in the whole group at once, they are seen to have all something in common. They are not nanians, Polynesians, Papuans, etc., but South Indians. The Dravidian language, however, or one of its principal elements, was probably an extension of a Mid or Western Asiatic formation, and it may be inferred that the common element of the Dravidian, the Sin and Japanese languages, must be much more ancient than the occupation of Japan by the Japanese, India by the Dravidians, and India by the Fins. He says the main affinities of the Dravidian formation thus point two ways,—the linguistic chiefly to a Scythic, and his physical chiefly to an African origin or fraternity. The more important of these characters are pointed and frequently hooked pyramidal nose, with conspicuous nares; a more long rounded, mask-shaped, sinking chin of the orbital line, producing a strongly-defined orbital ridge; eyes brilliant, and varying from small to middle-sized; mouth large, lips thick and frequently urged; lower jaw not heavy, its lateral expansion greater than in the Aryan and less than in the Turanian type; cheek bones broad and large rather than projecting, as in the Turanian type, giving to the middle part of the face a marked development and breadth, and to the general contour an obtuse oval shape, somewhat bulging at the sides; forehead well formed, but receding, nailing to flattish, and seldom high; occiput somewhat projecting; hair fine, beard considerable, and often strong; colour of skin very dark, frequently approaching to black. We may, he adds, conclude from the ethnic character and position of the ancient Indian population, that it belonged to the small Turano-African type. But successive modifications of race seem to have taken place on India from times long anterior to the Aryan or even Tartar era, and imply linguistic changes also. The above is the higher and most-improved type. But, as in Africa, Ultra-India, and Asiaeina, a smaller, more Turanian, and less Semiticized type is still preserved, although variously crossed. The peculiarities in the variable physical character of the Dravidian physical types, when compared with the Scythic, are African and Afro-Semitic. The very exaggerated occipital and maxillary protuberances are not characteristic of the typical African head, but of a debasement of it confined to certain localities. Several East and Mid African nations have the so-called African traits much softened, and differ little from the Dravidian. Even woolly or spiral hair is not a universal feature in Africa, some tribes having fine silky hair. The Dravidian pyramidal nose, the sharp depression at its root, the slight maxillary and occipital projection, the turgid lips, the oval contour, and the beard, are all African. Mr. Logan thinks there is reason to believe that the strong Africanism of some of the lower South Indian castes is really the remnant of an archaic formation of a more decided African character. The position of India between two great Negro provinces, that on the west being still mainly Negro, even in most of its improved races, and that on the east preserving the ancient Negro basins in points so near India as the Andamans and Koral. It is therefore highly probable that the African element in the population of the peninsula of India has been transmitted from an archaic period, before the Semitic, Turanian, and Iranian races entered India, and when the Indian Ocean had Negro tribes along its northern as well as its eastern and western shores.

Many of the Non-Aryan races have long been very severely repressed. Mann, in the tenth chapter of his Institutes, says they must dwell outside of the town, their sole property dogs and asses, their clothes such as have been left by the dead, their ornaments rusty iron. They must roam from place to place; no respectable man must hold intercourse with them; they are to be the public executioners, and may retain the bedding, the clothes, and the ornaments of those they have executed. In the eighth chapter, he says the Chandala can never be released from bondage, though he be emancipated by a master.

Under Mahomedan and Christian rulers, the primitive races have been very largely freed from all open persecution; but, to the present hour, the Pariah, the Chakili, the Mhar, the Mang, the Holyar, the Pullar, the Chauar, and others, do not reside within the towns. Not only their touch, but even their near presence or look, entails ceremonial pollution. The workers in hides and leather—the Chamar, Madaga, Muchi, Chakili, Dhor, and Mang—are, everywhere throughout India, regarded by Hindus as unclean.

Colonel Dalton arranges the aboriginal races of Bengal, Chutia Nagpur, and Behar, as under:—

a. Kolarian, viz.:—
Ho of Singbhum.
Savage Korwa of Siriguja.
Kur or Kurku or Muaus of the Central Provinces. Junag, Binhor, and others.

b. Dravidian, who, in Bengal, comprise four great divisions of the aborigines, viz.:—
Oran, ... 600,000 Gond, in Bengal, 50,000
Male, Pahari, or Mulah hill-men, ... 400,000 Khond, ... 50,000
Kolarian, or others.

c. Broken Tribes, viz.:—
Chur. Kharwar.
Parheya. Kisan or Nagear.
Bhuider. Nagbansi.
Boyar. Mar, and others.
Kaur or Kaura.

Kharwar.
Kisan or Nagear.
Nagbansi.

Kaur or Kaura.
Bhuider.
Kistan or Nagear.
Kharwar.
Kharwar.
Kisan or Nagear.
Nagbansi.
Parheya.

To the south-west of Bengal, in the Peninsula of India, are several great prior nations, engaged in all the avocations of civilised life, speaking the cultivated Canarees, Malealum, Tamil, and Telugu, with other races and tribes speaking uncultivated tongues, as Boder, Kurgi or Kodaga, the Todava, Badaga, Kothar, Irular, Kurumbar, Gond, Khon or Khand, Gudha, Yerkala, Kora, Pullar, Savara, Yenadi, and others who have remained in an unsettled state, many with no houses or villages. Among these may be mentioned—

The migratory Wadawar, or road-maker and

weights, also for beads and rosaries, whence the specific name. From their extreme hardiness and pretty appearance, people prize them for necklaces and other ornaments. They are said to form an article of food in Egypt, though considered hard and indigestible. In fine powder, goldsmiths use them to increase adhesion in the more delicate parts of manufactured ornaments. The roots abound in sugar and mucilage, and are employed as a substitute for liquorice, for which they are perfectly suited. The leaves have a similar taste, and, mixed with honey, are applied externally in swellings of the body. It is a popular belief that the seeds almost uniformly weigh exactly one grain troy; but they vary from one to two grains. The Burmese use them, with a fraction for two grain weights, 120, by one mode of reckoning, and 128 by another, make one tikal, which weighs, according to Captain Low, 253-75 grains troy.

Its Chinese name means 'anxious desire,' and refers to the sorrows of a widow who wept under one of these trees, and died of her grief.—Smith, Chin. Mat. Med.; Riddell, Useful Plants; Mason; O'Sh.; Anisie; Rozz.; Voigt; Bombay Products.

See Liquorice Root.

ABSAN-UL-FIL. ARAB. Colocasia esculenta.

ABSHAR. HIND. A stripe pattern.

ABU or Abao, the ancient Arbuda, is in Rajwara, in lat. 24° 35' 37" N. and long. 72° 45' 16" E. It is a large isolated mountain, in the territory of the Rao of Serohi; 45 miles N.E. from the military cantonment of Decca, and to the S.W. of the Aravalli range. It is situated on the western border of the desert of Rajputana, and one of the philanthropic Lawrence Asylums has been located on it. It is a magnificent mass of mountain, with a fine lake, the Nakhi Talao, on the top of the hill. Its summit is covered with exquisite vegetation, in which white and yellow jasmine and wild roses predominate. Every glen and knoll has its tradition and romance; and the Jain temples of white marble offer examples of architectural decoration which probably are unequalled in the world for elaboration and costliness. Its fame is of great antiquity; and pilgrims appear to have been attracted to its sacred temples since A.D. 1034. Hindi temples are said to have existed here in remote ages, dedicated to Siva and Vishnu, but all traces of them have disappeared. On their traditional site at Delwara, the famous Jain temples now stand, built by Bimul Sah, a rich Jain merchant, and others; for, in Jain estimation, Abu is the holiest spot on earth. At Delwara are five Jain temples, the largest being dedicated to Rishabhanath, the first tirthankara, whose image there is quadruple. Another is dedicated to him, A.D. 1031, as Adisvara or Adina-tha; and one to Neminath, the 22d tirthankara, built of white marble, and delicately and richly carved. The base of mount Abu is about 13 miles long, 11 broad, and 50 in circumference. It rises abruptly from the sandy plains, and the ascent is consequently steep and winding. The summit of the hill is very irregular, consisting of peaks, ridges, and valleys, sloping plateau, and extensive basins. The highest point is called Guru Sikhar, and is 5655 feet above the level of the sea. The average height of the station is 4000 feet. Colonel Tod described the neighbourhood of mount Abu, as the site in which, from the most ancient times, ascetics known as Aghora, Mard-khor, or man-eaters, had resided. The aborigines of the hill appear to have been a tribe of Bhils. They seem at some time or other to have become mixed with marauding Rajputs from the plains, and with the workmen who were so long engaged in building the Delwara temples. This mixed race call themselves Lok, and are now in possession of almost all the land under cultivation. He says, taking a section of about sixty miles in the alpine Aravalli, from the ascent at the capital of Udaipur, passing through Oguna, Panurna, and Mirpur, to the western descent near Sirohi, the land is inhabited by communities of the aboriginal races, their leaders, with the title of raja, being hereditary. Thus the Rawat of the Oguna commune could assemble five thousand bows, and several others can, on occasions muster considerable numbers. Their habits are dispersed through the valleys in small rude hamlets, near their pastures or places of defence. The Bhils latterly have been settling to agricultural pursuits. Abu is subject to frequent shocks of earthquakes. The Rao of Sirohi, with some difficulty, was induced to approve of the sacred ground being used as a station for European residents and soldiers. Abu is one of the five mountains which the Jains of Western India consider sacred, the others being Girmar, Palitana, and Tallijah in Saurashtra, and Parasamth hill in Bengal, far to the east. Abu is the headquarters of the Rajputana Political Agency.—Dr. Cook, in Bo. Medical Transactions, 1860; Billst's Catalogue; Cunningham's Bhilsa Topes; Tod's Travels, p. 84; Postain's W. India, p. 2; Imp. Gaz.

ABU. ARAB. Father; also meaning possessed of, or endowed with, and is numerously combined in Arabic.

ABU ABDULLAH MUHAMMAD ISMAIL, BOKHARI, born A.H. 194, died A.H. 256. He was one of the six principal collectors of the Hadis, or traditions of Mahomed.

ABU ALI il-HUSAIN, ibn ABID ULLAH, ibn SINA, a learned physician and philosopher, A.D. 980–1037, known to Europe as Avicenna, but to his contemporaries by his titles us-Shaikh, the chief, and ur Rais-ul-Atabah, literally physician-general. He was born A.D. 980 at Khurmatain (also, as is said, at Assena), a village near Bokhara, and was educated at Bokhara, studying under Abu Abid Ullah un-Nathali. His name ruled in the realm of medical science for a longer time than that of any other writer except Aristotle and Galen. In his twenty-first year he wrote a book, which he called Al Kitab al Majnu, a cyclopaedia of twenty volumes; and he subsequently wrote a commentary of it, which also extended to twenty volumes. When the Samani dynasty fell, in the beginning of the 11th century, he quitted Bokhara, and for a short time was employed under the Dileni ruler; but in 1012 he returned to Jorjan, where he began to write his most celebrated book on the principles of medicine, Kitab ul Qanun fi't Tibb. He subsequently lived for short periods at Rai, Kazwin, Hamadan, and Isfahan. He wrote about 100 other treatises, amongst them us Shafa, Shafa fi Hilmat, Najat, and Isfah. His Qanun was printed at Rome A.D. 1535; was translated into Latin, and printed at Venice 1608; and for many centuries was, even in Europe, the most celebrated authority in
medical science. It went through several editions. He died while on a journey at Hamadan a.d. 1037, at the comparatively early age of fifty-seven.

ABUBAKR, the father-in-law of Mahomed, and his successor, as Khalifah. He received from Mahomed the title of Al Sadig, the sincere friend. ABUL DULIF MISAR ibn MOHALHAL, an Arab traveller who was at the court of Nasr i bin Ahmad bin Ismail of the Samanids at Bokhara, when ambassadors arrived from the king of China, Kalatin-bin-us-Shakhkir, to negotiate a marriage between his own daughter, and Noah, the son of Nasri (who afterwards succeeded to the throne of Bokhara). Abu Dulif accompanied the ambassad-ors on their return, about the year 941. The whole narrative of this traveller is not extant, but much of it has been preserved in citations by Yakuti (A.H. 617, A.D. 1220) and Kazvini (A.H. 667, A.D. 1268-69); and a German editor collected these passages into a tolerably continuous narrative, and translated them into Latin.—Yule, Cathay, i. exi.

ABU HANIFA, one of the learned doctors of the Mahomedan faith, born A.D. 699-70. He was a commentator of the Koran. See Imam; Hanifa; Koran.

ABU ISHAQ of Istakhir, or Persepolis, author of Kitab-ul-Akalin, or book of countries, which he wrote A.D. 951 (A.H. 340). He travelled through the Mahomedan principalities, from India to the Atlantic Ocean, and from the Persian Gulf to the Caspian Sea. He and Ibn Haukal met on the banks of the Indus, and compared notes to-gether. Ibn Haukal made Abu Ishaq's writings the basis of his own work.

ABU KARIB, the most powerful of the Himyaritic monarchs. He was commonly called Totta. In A.D. 206, he covered the Kaaba with a tapestry of leather, and supplied its door with a lock of gold. See Kaba.

ABU KUBAYS, a hill which bounds Mecca on the east. According to many Mahomedans, Adam, and his wife and his son Seth, lie buried in a cave here. Others place Adam's tomb at Muna; the majority at Najaf. The early Chris-tians had a tradition that our first parents were interred under Mount Calvary; the Jews place their grave near Hebron. Habil (Abel) is sup-posed to be entombed at Damascus; and Kabil (Cain) is believed to be under Jabal Shamsan, the highest wall of the Aden crater, where he and his progeny, tempted by Iblis, erected the first fire-temple. This worship, however, was probably imported from India, where, according to the Vedas, Agni (the fire-god) was the object of man's early adoration.—Burton's Mecca, iii. 198-99.

ABUL-BAQA-ul-HUSAINI-ul-KAFAWI, the Hanafi, author of a cyclopedia of the sciences.

ABUCASIS or ALBUCASA, a Spanish phys-ician of the 11th century, who wrote several medical and surgical treatises that are still extant.

ABULFADA, author of the geographical book Taqvim - ul - baladan, and other books, was the sovereign prince of Hama in Syria. His name and titles at length were, Sultan Ahmad Almuyad Amal-ud-Din Abulfada Ismail, the son of Malic Alafdal Nur-ud-Din Ali, son of Jamal-ud-Din Mahmud, son of Umar, son of Shahinesb, son of Ayub, of the Ayubi family. Born A.D. 1273, died in the year 1331, A.H. 732. He mentions the abundance of pepper grown in Malabar, and the fine cotton manufactures of Coromandel. He divides Hindustan into Al Sind, the country of the Indus, and Al Hind, the country of the Gauges.—History of Genghiz Khan, p. 409.

ABUL FARAGH, styled Al-Mufrijan; Mar Gregoriou Abu Paraghi bin ul Hakim Harun ul Malati, author of the book of dynasties, which he finished, in Arabic, in the reign of Argoun Khan, the last of Chenghiz Khan's grandsons. He was a Jacobite Christian of the city of Malatia in Cappadocia. It was arranged in ten chapters.

1. On the Saints since Adam. 2. The Judges of Israel. 3. The Kings of Israel. 4. The Chal-dean Kings. 5. The Kings called the Magi. 6. The Ancient Greek Kings. 7. Latin Roman Kings. 8. Christian Greek Emperors. 9. Mahomedan Arabic Kings. 10. The Mogul Kings. He is the Abul Pharagius of history; Prideaux notices him.—Chatfield's Hindustan, p. 245.

ABUL FAZLI, the minister and favourite of Ak-bar, emperor of India. He wrote Akbar's memoirs. He was a man of enlarged views and extraor-dinary talents, but he was a professor rhetorician, and is still the model of the unnatural style which is so much admired in India. He was an assiduous courtier, eager to eotlo the virtues, to gloss over the crimes, and to preserve the dignity of his master, and those in whom he was interested. His dates and his general statements of events are valuable; but he had a dishonest way of telling a story, and his narrative is florid, feeble, and indistinct. He wrote the greater part of the Akbar Nama, which was continued for the last three years by a person named Isayat Ullah or Muhammad Salla. Selim, the eldest son of Akbar, took a dislike to him, and to obtain peace, Akbar sent Abul Fazli to a command in the Dekhau; but when recalled from there in the 47th year of Akbar's reign, and while advancing with a small escort towards Gwalior, he fell into an ambuscade laid for him by Narsing Deo, raja of Orcha in Bundel-kund, at the instigation of Prince Selim, and although he defended himself with great gallantry, he was cut off with most of his attendants (A.D. 1602, A.H. 1011), and his head sent to the prince. Akbar was deeply affected by the intelligence of this event; he shed abundance of tears, and passed two days and nights without food or sleep. He sent a force against Narsing Deo, with orders to seize his family, ravage his country, and exercise such severities as on other occasions he never permitted. He does not seem to have been aware of Selim's share in the crime. But Selim, in memoirs written after he was emperor, acknowledges the murder, and defends it on the story that Abul Fazli had persuaded Akbar to renounce the Koran and deny the divine mission of Maho-med.—Price's Jalangir, p. 33; Elph. pp. 384, 462. See Mubarak; Faizi.

ABUL-HASAN-ABI, known by the patro-nymic surname Al Masudi, a native of Baghdad, and great traveller, acute observer and writer. He wandered to Morocco and Spain on the west, and eastwards to China, through all the Mahomedan and other countries, and he wrote his travels, which he styled Miraj-ul-Zahab, or Meadows of Gold.—Elliot, p. 19.

ABUL-HASAN-RUDIKI, the oldest of the
ABYSSINIA.

Persian poets, still well known and popular in Central Asia. He is remarkable for the fertility of his pen, and the purity of his language. Hammer states that, according to the commentators of the Yamin, his history of Persian poetry, he is said to have written 1,300,000 distiches, collected in a hundred books. His magnificence was princely. He went about preceded by 200 slaves, and followed by 400 camels laden with valuables. P. Arminius Vambeke, Botkara, p. 77.

ABYSSENIAN.—It is thought that Abyssinia, as this land is known, was probably given its name from the Abyssinian, or Eritrean, who were the first to make the acquaintance of, and to trade with, the inhabitants of the interior. This land was visited by the Portuguese, and subsequently by the Dutch and English. The Abyssinians are divided into two classes: the Amhara, who are the ruling class, and the Tigrinya, who are the farming and trading class. The Amhara are ruled by a king, who is the head of the government. The Tigrinya are ruled by a chief, who is the head of the tribe.

The Abyssinians are a fine-looking people, with a tall and graceful figure. They are skilled in the arts of war and trade, and are noted for their bravery. They are also noted for their musical talent, and are said to be the best musicians of the world.

ABYSSINIA, a country in the N.E. of Africa, known to the people of Persia and India as Habash and Habashistan, and its people as the Habush or Habshi, though in India this latter

ABUTILLON INDICUM. G. Don.

Sida indica, Linn. Abut. Asiaticum, W. and A. Sida populi-folia, Roxb. Potari, E. BENG. Payrun tutti, TAM. Tha ma khi sl ok, BURM. Tuttura-benda, KANGNI, KANGHI, HIND. Nugu or Bolta - ATTAR KHANI PAPA, PAP. Pedda or Tutti PTATAK, SIBDE, Pedda or Tutti URAJ, PETIKA, MAHAL, benda.

This is a small plant, of two to three feet, common in most parts of India, and cultivated in Burma. It yields a rather strong fibre, fit for the manufacture of ropes. The leaves are used in India and Burma in the same manner as the marsh-mallow in Europe, in decoction as an emollient fomentation, and an infusion of the root is a cooling drink in fevers. To obtain the fibre, the plants are gathered and freed of their leaves and twigs, and are put out to dry in the sun for a couple of days. They are then taken up, tied into bundles, and placed under water for about ten days, after which they are taken out, and the fibres are well washed to remove the bark and other foreign matter that may be adhering to them, and then placed in the sun to dry.—Voigt, 114; Roxburgh, iii. 179; Drs. Wight, Mason, Shortt, Stewart, and Mr. Powell.

ABUTILLON POLYANDRUM. W. and A.

ABUTILLON TOMENTOSUM. W. and A.

Sida tomentosa, Roxb. Too-thi, TAM. Fibres from this were exhibited from two or three districts at the Madras Exhibition of 1855.—Roxburgh; Madras Exhibitions Juries' Reports.

ABUVVA. Tel. Trichosanthes palmata, R.—Tr. bracteata.

ABU-ZAIRD-UL-HASAN, a native of Siraf, who wrote a continuation of the Arabic work by Suliman the merchant. He never travelled in India, but he made inquiries of travellers, and collected the account given by the merchant Suliman. Abu Zaid met Masudi at Basra in (A.H. 303) A.D. 916, and he obtained from Masudi much information. He begins by remarking the great change in the commerce of the East that had taken place in the interval since Suliman wrote. A rebellion had broken out in Khan-fu, which had utterly stopped the Arab trade with China, and carried ruin to many families in distant Siraf and Oman. He gives also an account of a visit which an acquaintance of his own had made to Khundan (Chang-gan or Sin-gan-fu), the capital of China.

ABWAB. ARAB. Heads or subjects of taxation; miscellaneous cesses, imposts, and charges. —Wilson.

ABYSSINIA, a country in the N.E. of Africa, known to the people of Persia and India as Habash and Habashistan, and its people as the Habush or Habshi, though in India this latter
term is applied to all the Negro races from Africa. It is one of the most ancient monarchical races in the world. Its principal provinces are Tigré, Amhara, and Shoa; at an early period they extended their power over Southern Arabia. But when the Arabs threw off the Abyssinian yoke, the remnants of the Abyssins in remote parts of Arabia were reduced to servile avocations, and formed the Khummar of Yemen. The people of Tigré and Amhara are of Semitic origin, and profess Christianity. In 1864, Theodore, the king, imprisoned Captain Cameron, H.B.M. Consul at Massowah, and subsequently, put several Christian missionaries and others in chains, and confined Mr. Rassam, and, in the year 1869, an army under Sir Robert Napier was sent from British India, which effected their relief, and Theodore destroyed himself as the army reached Magdala. General Napier was created Lord Napier of Magdala.

ACACIA, a genus of plants, numbering about three hundred species. Several are well known in the south and east of Asia, the foliage of some being attractive, while others furnish valuable timber, useful guns, and other important products.

The Rewa is a large tree common in Rajwara, sacred to the Matajee, around whose shrines groves of this tree are commonly found.

The Rheonj is a very common tree in particular parts of Rajwara, upon which travellers, at certain parts of the roads, suspend shreds of their clothes, as in other parts of India. To the extremities of the young branches are suspended innumerable masses of exuded sap of large size. Several quick-growing species, introduced from Australia, are reared for fuel on the Neilgherry Hills; and other Australian species might be brought to India, viz. A. armata, R. Br., the kangaroo thorn, a valuable sand-binding plant; A. floribunda is the Willow Acacia; A. longifolia, Wilde, var. A. sophora of R. Br., a bushy tree, renders most important services in subduing loose coast sand; bark used for sheep skins. Wattle trees yield also an abundance of gum arabic. A. decorum is the Black Wattle. Its bark sells in Great Britain from £8 to £11 per ton, and it yields 80 to 90 per cent. of tannin. A. falcata, Wilde, the KoA tree of the Sandwich Islands, yields a very durable wood. A. melanoxylon, R. Br., is the valuable South Australian black wood tree. A. microbotrya, Bentham, yields about 50 lbs. of gum annually. A. glaucescens, A. homalophylla, and A. pendula, Bennet, are the valuable Myal woods of Australia.—*Gen. Med. Top.* p. 197; von Mueller; *Eng. Cyc.*; G. Bentz.

ACACIA AMARA. Wilde. Babul tree. Mimosa amara, Roxb. Bel kambi, . . . CAN. ; Wunjah maram, . . . TAM. ; Lallye, . . . MAH. ; Nalla-regs, . . . TEL.

This tree grows above the gluts of Canara and Sunda, not inland, and not north of the Gungawalli river. It is a tolerably large tree in Coimbatore, but of rather low stature. Its flower is very beautiful. In Coimbatore the wood is dark-coloured and hard. In the Bombay Presidency, the wood is always very crooked, otherwise, when ripe, it is strong and tough, and might be applicable to domestic purposes. From its black colour, the natives of Canara and Sunda deem it (wrongly) a species of ebony.—*Rozb.* ii. 548; *Voigt*, 261; *Dr. Wight*; *Dr. Gibson*.

Mughilan, . . . PERS. Andere, . . . SEV. Valodiin; Karu, . . . TAM. velaim plaas.

This yellow flowering and rather slender tree is met with in varying abundance throughout India, Sind, and Ceylon. It is of rapid growth, and requires no water, flourishing on dry arid plains, and especially in black cotton soil, where other trees are rarely met with. It can never be had of large size, and is generally crooked, but it is a very hard, tough wood, and is extensively employed for tent pegs, ploughshares, sugarcane rollers; for the spoked, naves, and fellos of wheels; for the knees and ribs of country ships; and generally for all purposes to which a hard bent wood is applicable; it is not attacked by white ants. Amongst its other useful products, may be named its gum, bark, and seeds; the latter being extensively used in the Dekhan for feeding sheep. The bark is very largely employed in the centre of the peninsula as tanning material, and, when properly managed, makes a good leather, with a reddish tinge, though in native hands the leather is often porous, brittle, and ill-coloured. Dr. Buchanan mentions that, in Mysore, the bark was employed in the process of distilling rum. The ground bark mixed with the expressed seeds of the Sesamum orientale has been used as food in times of scarcity. A decoction of the bark makes a good substitute for soap, and is used in dyeing various shades of brown. It yields an abundance of transparent gum, which flows out from incisions or fissures in the bark, and hardens in lumps of various sizes and figures, and is used in India as a substitute for the true gum arabic, which is the product of A. vera. In the medical practice of the people, the bark is used internally as a tonic and astringent; in decoction, as a wash for ulcers; and, finely powdered and mixed with gingelly oil, externally in cancerous affections. Dr. Gibson for years advocated extensive planting of this useful tree in the Bombay side of India, and several forests of it at Khangum, Kasoordee, and other places have been preserved. The pods have long been employed in tanning on account of their astrignency. In Sind, logs of 24 inches square and 11 feet long are obtainable. In the Panjub it has a girth of 9 to 16 feet.—*Dr. Cleghorn; Gibson; Riddeker; Mr. Rohde; Useful Plants; Captain Macdonald; Rozb. ii. 548; Voigt*, 262; Beddome, *Fl. Syl.*

This tree is said to grow in the Circars.

ACACIA DEBILATA. Link.—A handsome tree, from 15 to 30 feet high, abundant in Port Philip and Twofold Bay, forming luxuriant groves on the banks of streams, between lat. 34° and 30°. Its bark contains a greater percentage of tannin than any other, and pays to ship to England. It was introduced from Australia, and grows on the Neillgherries—Simmonds, Cat. Paris Ex. 1879.

ACACIA ELATA. Linn.

Mimosa elata, Roxb.

This large, tall, stately, and excellent timber tree is very popular in Canara and Sunda, both above and below the ghats; it occurs in the Godavery forests, Panjib; in Dehra Doun, Assam; is plentiful in the Pegu, Tanongoo, and Prone districts, and very abundant off along the sea-shore from Amherst to Fergani. Its maximum length is 40 feet, and 8 in girth. It grows readily from cuttings. When seasoned, it floats in water. Its timber is straight, lengthy, and of large girth, red-coloured, hard, and strong, and very durable. It is much valued and useful for house-building. It is used for posts for buildings. It is adapted for cabinet-making, and of sufficient girth to be advantageously employed in Government buildings, and for packing-cases.—Voigt, p. 261; J. L. Stewart; Roxb. ii. 516; Captain Beddome; Drs. Gibson and McClelland; Captain Dance; Eyre, Hist. Bot. p. 181; Mr. Thompson, Report on Kamaon; Cleghorn, Panjab Report, Killia and Kangra, p. 82.

A native of every part of India, the Panjab, Sind, Silhet, Assam, Bengal, both peninsulas; and grows up to 5000 feet. It is also a tree of Africa and Australia. In waste places in the Western Dekhan, where it occurs also in garden hedges, it is only a scruffy shrub, and Dr. Gibson says its wood is only applicable for tent pegs and firewood; but Veitch mentions that the wood is hard and tough, and used for ship-knobs. Dr. Stewart also says for ship knops. A delightful perfume is distilled from the sweet-scented yellow flowers, and the tree exudes a considerable quantity of useful gum.—Dr. Gibson; Major Drury; Roxb. ii. 557; Timber Trees; Voigt; Beddome; Dr. Stewart.

ACACIA FERRUGINEA. D. C.

Mimosa ferruginea, Roxb.

Seet. net. BURM. Woni, Anausundra, TAM. Simal vel velam, Tel.

This tree much resembles A. catechu and A. sundra, and differs chiefly in the smaller number of pinnae; it is common in the jungles, grows in the Madras Presidency, on the Coromandel coast and Northern Circars, and is found at Couraltum, in the Bombay Presidency. It attains a height of from 20 to 25 feet. It flowers in April and May, the bark is very astringent, and is used by the natives in the distillation of arrack from jaggery in the same way as the bark of A. leucophana. The wood is of a reddish brown, streaked with a darker hue, heavy and durable, and does not warp or crack, the grain rather coarse and even, works well, and gives a smooth surface; it is used in building and in the construction of eattles, ploughs, etc.; it weighs 60 lbs. per cubic foot when seasoned, and 65 to 70 lbs. unseasoned, and has a specific gravity of 0.60.—Voigt, 260; Drury; Roxb. ii. 551; Ainisic; Beddome, Fl. Syic. part v. p. 51.

ACACIA JACQUEMONTII. Bentham.

Babul, HIND, PANJ. Gargusa, PANJ. Bahari, BURM. Harriana, CAN. Hanzu, BURM. Suril, TAM. Kakohi, PANJ. Kikkari, Tel.

A small shrub of the Panjab and Trans-Indus, with immense white spines; it grows in clumps, and from 6 or 7 up to 10 feet high. It is common on sandy knolls and ridges in many parts of the arid tract from Dehli, westward by Harriana, Sirsa, Montemarie, etc., to Trans-Indus, to about

Nimbar, Jand, | ...

Its specific name, and its Hindi, Tamil, and Telugu synonyms, are given from the whitish or pale yellow colour of its bark, which, in S. India, is one of the ingredients used in distilling arrack from jagari. It extends from about Lahore along the arid tract to Dehli, and to Ceylon. In Coimbatore the tree attains a medium size, with a rounded head, but in the Dekhan it is nearer of a size fit for and used for anything beyond to posts small houses. The wood it furnishes, however, is strong, good, and dark-coloured, though generally small. It is easily distinguished by its paniced globular inflorescence and stipulate thorns. A tough and strong fibre, in use for large fishing nets and coarse kinds of cordage, is prepared from the bark by maceration. Major Boddome says the timber is hard and strong, much like Babul, but closer grained and of a deeper colour; it is used for the same purposes. A cubic foot unseasoned weighs 62 lbs., and 55 lbs. when seasoned; its specific gravity is .880. It makes excellent fuel for locomotive purposes. Mr. Jacob says its wood decays more rapidly, and is more speedily attacked by the Goo insect, than any timber of which he had knowledge. He says it occasionally reaches tolerable dimensions; but even were it possible to preserve it, it would not be worth doing so, from its brittleness and the coarseness of its grain.—Drs. Cleghorn and Wight in M. E. J. R.; Dr. Gibson in Bomb. Geo. Soc. Journal; Voigt; Roxb.; Beddome, Fl. Sylve. p. 48; Dr. J. L. Stewart.
ACACIA MICROPHYLLA. Roxb.

Mimosa microphylla, Roxb.

Tettila of Silhet. A tree growing in Silhet to about twelve feet in height, and the people use its bark in distilling an intoxicating liquor.—Roxb. ii. 549.

ACACIA MODESTA. Walliich.
Phala, Phullah, | HIND. | Palosa, Pulasa, Pushr.
A tree of slow growth, a native of the Panjab, Cis and Trans Indus, and in the Doabs. The wood of an old tree is very dark brown, or nearly black, hard, strong, and heavy. Green it weighs 69\frac{1}{2} lbs., and dry 53\frac{1}{2} a cubic foot. It is very durable, and is a favourite for cart-wheels, sugar-mills, plough stocks and shares (? Bellew), Persian wheels, the mallets for cleaning cotton, etc. The tree yields sparingly a gum (Bhimibodi gond) similar to gum arabic, which Bellew states the people of the Peshawar valley consider to be restorative.—J. L. Stewart, M.D.

ACACIA NEMU. Smith.

Mimosa nema, Loureiro.
Ho-hwan, | CHIN. Ye-loh, | CHIN.

This plant grows in China and Cochín-China, and is used for ornamental purposes. At Ningspo, bark used for tanning sails.—Smith, Mat. Medica.

ACACIA SPECIOSA.

ACACIA RAMKANTA. Gibson.—Under this name Mrs. Gibson and Riddell describe an ornamental species of Acacia, or a variety of A. Arabica, common in the Dekhan, though less abundant than A. Arabica, from which it is distinguishable by its straight, tall, erect stem and general cypress-like appearance, or resembling a gigantic broom, and by the colour of its legumes. Its wood is quite equal to that of the A. Arabica, being hard, and used for cart-wheels, ploughs, etc.; but the natives attach some superstitious notions to the use of the tree.—Drs. Gibson and Riddell.

ACACIA ROBUSTA, introduced from the Cape, is growing freely on the Neelgherry Hills. At the Madras Exhibition of 1857, Mr. M'ivor exhibited specimens of bast from this tree, strong, very tough and durable, also pliable when wetted, and constantly made use of for all the purposes to which Russian bast is put in gardens in Europe. This bast, he says, was cheaper and more plentifully and in large quantities, as the trees when not cut down threw up numerous young shoots, to the height of from six to twelve feet, in one year. The bark of the tree is also a powerful tanning material.—Mr. M'ivor, Madras Exhibition of 1857.

This plant has a long flat pod or legume, containing separate, small, oval, dark-coloured seeds. It grows in the Peninsula of India, Bengal, Naga, and Sitthet, Assam, Moulineau on the Atraran, and in the Archipelago. The legumes are used for washing the hair, and by Hindus for marking the forehead. The leaves are acid, and used in cookery instead of tamarind, and with turmeric they give a beautiful green. The pods or legumes are three or four inches long, and about one and a half inch broad, greasy, yellowish, or reddish brown. They abound in an acid, deterrent, fatty principle. In China they are roasted, pounded, and kneaded into small balls, and used to wash the person or clothes. Three or four of the black seeds are in one pod. They are roasted and eaten, and are used by artificial flower makers to wax their thread. Pods and bark are exported from Canara, the former as a washing material, the latter for dyeing and tanning fishing-nets.—Smith, Chin. Mat. Med.; Elliot, F. A.; Drury, U. P.; Voigt; Roxb. 565; Drs. Gibson, Mason.

This large tree grows wild in the Himalayas up to 5000 feet, and it is cultivated in the plains of the Panjab. It occurs throughout the N.W. Provinces; it is plentiful in Pegu, particularly in the Toung-hoo district, and is found on the Irrawadi. In Ganjam and Gumsur it is very plentiful, attains
ACANTHACEE.

an extreme height of 30 feet, and circumference 43 feet, the height from the ground to the intersection of the first branch being 22 feet; and it is used for sugar crunchers, pestles, mortars, and ploughshares. It is common in the forests of the Bombay Presidency, grows in Travancore, on the Coromandel coast, and is a common tree in Coimbatore, where it is frequently seen growing by the road-sides on account of the shade that its large head affords. The timber is large, and in old trees dark-coloured, very hard, and close enough grained for furniture; and large masses of very pure gum are often found on it. It is common in the hills and gardens of Murree and Hazara. The heart-wood makes good charcoal; the leaves and twigs are gathered as fodder for camels and other animals. The bark is stated to be applied to hurts of the eye (Madden); and the seed is official, forming part of an anjun for opthalmic disease. The specific name of Julibrissin, used by Bentham for the variety A. mollis, is a corruption of Gul-Abroshan.—Capt. Macdonald; Drs. Mason, Stewart, M'Clelland, Cleghorn, Wight, Gibson; Voigt; Roxb. ii. 544; Cal. Cat. 1862.

ACANTHACEE.

ACANTHACEE.

ACANTHA STIPULATA. D. C.

Stipules, Roxb. | Anacalypha, Bosc.

Oil, B. Durgari, BEAS. | Ran-drenkh, CHENAB.

Amulki, B. | Valathi Siris, HIND.

Soet, B. | Lasken, JHELUM.

Surangsa, Kasir, CHENAB. | Ola, KAVI.

This unarmed acacia has flowers of a pink colour. It is one of the largest trees of the genus, and is found in Dehra Doon, in the mountains north of Bengal, in Travancore, Courtallum, in most parts of the Peninsula, in Assam, in the forests from Rangoon to Tsinghoo, and on the banks of the Ataran river. Dr. Stewart says that on the various rivers of the N.W. Himalayas, it grows at from 3000 occasionally to 6000 Himalayas. It is handsome in appearance, resembling somewhat Poinciana regin, and is seen in great abundance and luxuriance in portions of the Kangra valley, where its girt reaches and occasionally attains 60 feet. In Kangra, logs are obtained from 20 to 30 feet long, and 4 to 6 feet in girth. Its wood is coarse-grained and tough, but not easily worked.

—Stewart's Panjab Plants; Mr. Thompson's Report.

ACACIA SUNDRA. D. C.

Acacia chandra, Willd. | Mimosas undra, Roxb.

Fall kher, HIND, MAHR. | Nalla chandra. | TEL.

Karangally, TAM. | Sundra, TAM.

This tree grows throughout the Peninsula and the Sunderbuns, but varies in size in different localities. It is common in the jungles of Bombay, there always scrubby, small, and crooked; and though rather plentiful in the forests under the chas, Dr. Gibson had not seen it of a size capable of affording planks. Mr. Rohde mentions that he had obtained, at Guntoor, planks 1 foot broad; that posts 5 feet long were procurable at twelve rupees per hundred, well suited for fencing and for rice pestles. The natives regard it as the most durable wood for posts in house-building, though from its non-elastic nature, it is unfavourable to the holding of nails driven into it. The wood is of a dark colour, close-grained, very hard, heavy, and very strong, a one-inch bar sustaining a weight of 500 lbs. Sp. gr. 1.296. It is also used as ploughs, mortars, and pestles, and for railway sleepers. A resin similar to that which exudes from the A. catechu is procured from this tree. The two trees are nearly alike, the uncertainty of the prickles absent or present being a distinguishing characteristic of this one.—Mr. Kohde; Dr. Wight; Voigt; Cleghorn's Report; Useful Plants; Beddome, Fl. Style. p. 50.

ACACIA TOMENTOSA. Willd.

Mimosas tomentosa, Roxb. | Mimosas kleinii. | Poir.

Salsein babula, BENG. | Jungle nail tree, ENG.

Elephant thorn, ENG. | Ani mulla, TAM.

Grows on the Madras side of India, common near Sholiapore, in the Kandesh jungles and the Bombay Dekhan, and is found in Bengal.—Voigt.

ACACIA VERA. Bach. Gum arabie tree.

Acacia nilotica. | Mimosas nilotica, Linn.

The Acacia vera is a tree of the African desert, and, according to Wollstede, of Arabia, its leaves yield the camel the sole forage it can meet in those arid regions. Two products are obtained from it, one natural, the other artificial, namely, gum arabie and the dried acacia juice (Akakia of Dioscorides), a solid, dark-coloured, shining substance, soluble in water, which it colours red. It is obtained by pounding the unripe fruit, and the juice is throned before the sun, and then placed in bladders, in which it gradually dries, weighing about 5 or 6 ounces each. It is sold in the bazaars of Bengal in thin, very black cakes about the size of a rupee. It was much valued by Hippocrates and Dioscorides. Wollstede found the Sumur trees of great size, and the gum exuding in considerable quantities; but very little of it was collected by the Bedouins, who complained that the price it brings in Maskat did not repay them for their trouble.—Wollstede, i. pp. 73 and 106; Baker's Albert Nyanza; O'Shaughnsey; Mendis.

ACALEPHIHE. or sea nettle, include a great number of radiate animals of which the Meduse are the type. They are common in all the seas.

Chuni maram, TAM. | Chinhi, TINNI, TEL.

Wood to be obtained about 18 inches in diameter, hard and heavy, not of much value to carpenters. Leaves attenuant and alterative, and an agreeable stomachic in dyspepsia and other ailments.—Wight; Hog.

ACALYPHA INDICA. Linn.

Mukto-joori, BENG. | Harita manhari, TAM.

Shinet busunda, TAM. | Kuppani chettu, TAM.

Morkante, TAM. | Puppanti, Miruktunda, TAM.

Koopie, TAM. | Duk, HIND. | Murupunl, TAM.

Kaupanni, MALEAL, TAM.

A small annual, common everywhere in the Peninsula and Bengal, and easily distinguished by the singular cup-shaped involucre which surrounds the flowers. In decoction it is cathartic; the leaves, with garlic, are anthelmintic. Mixed with common salt, the leaves are applied externally in psoa, and the juice rubbed up with oil externally in rheumatism. Wight also figures A. mappa.

—Hog; Useful Plants; Honig, O'Sh.; Voigt.

ACANTHACEE. R. BR. The Justicia tribe; its type is the genus Acanthus. The species are herbaceous or shrubby. Many are mere weeds; others bear handsome flowers with gaudy colours, but seldom with any odour. A very small number have been occasionally employed medicinally as emollients or diuretics. In Ceylon, "nellou" is
ACANTHOPTERYGI.  
ACANTHOPTERYGI, fishes having bony skeleton with prickly spinous processes in the dorsal fins. See Fishes.

ACARUS FARIN.Æ, the meal mite; it is never present in flour unless damaged, and in a state unfit for consumption. The domestic mite, A. domesticus, which does so much injury to stored insects and birds, can be somewhat guarded against with camphor and a solution of corrosive sublimate. The sugar mite, A. saccharinum, so common in cane sugar, is unknown in the palm sugars of India. A. Telarius, the scarlet mite, or red spider, envelopes the leaves of a plant in a delicate, closely-woven web, which so checks the respiration that the plant becomes dry and withered. See Insects.

ACASANIV. SANSK. In Hindustan, an ethereal voice heard from the sky; an emanation of Brahman. When the sound proceeds from a meteor or a flame, it is called Agni-puri, or formed of fire. An Avatara is a descent of the deity in the shape of a mortal; and an Avantara, a word rarely used, is a similar incarnation of an inferior kind, intended to answer some purpose of less moment. Acasana, therefore, is a manifestation of a deity, in which he is heard but not seen. Akasa is a name for the sky or firmament. See Akasa.

ACATJSJA VALL. TAM. Cassaya filiformis.  
ACAWERYA. SING. Ophioxylon serpentinum.  
ACCPITRINÆ, a sub-family of the family Falconidae, comprising the sparrow-hawks, goshawks. The more prominent in S.E. Asia are—  
Astur palpumaria, L., goshawk.

virgatus, Tem., crested do.

Micronius badius, Gunn., the shikra.  
Accipiter nisus, L., sparrow-hawk.

virgatus, Tem., the Beasa do.
A. nisus, the sparrow-hawk of Europe, Asia, and N. Africa, is common in the hilly parts of India; rare in the plains, where abundantly replaced by Micronius badius. Migrates partially in northern regions. There is a nearly affined race in the Malay countries, A. nisoides, distinguished by having a white throat with three distinct dark stripes, and no rufous on the under parts of the adult male. In other respects quite similar to A. nisus, and by no means to be confounded with A. virgatus, which likewise has the throat stripes. Accipiter trinotatus has elegant rows of large round white spots on the tail.

ACCOUNTANT.

Kanu-go. ARABO-HIND. Grama-karana., SANSK.
Patwari. HIND. Kayasta,
Kulkarni. MAN. Kanakapilli., TAM.

In the village system of India, this is one of the municipalities.

ACER, a genus of the Aceraceae, or sycamore tribe of plants, comprising the genera Acer, Dobinea, and Negundo. Dr. Royle mentions that immediately we commence ascending the Himalaya, either in Nepal, or Sirmoor, we meet with species of the Acer. A. oblongum descends to the lowest level, being found in Nepal and further north in the Dehra Doon, between 2000 and 3000 feet of elevation. A. culturatum is found at 6500 feet on the Mussooree range, and at similar heights in Sirmoor and Garhwal; while A. caudatum (Wall. Pl. As. Rat. t. 132) and A. acuminate (Don) sterculiaceum and villosum, are only seen with pines and birches on the loftiest mountains, which are for many months covered with snow. A. sterculiaceum (Wall. Pl. As. Rat. t. 106) is closely allied to A. villosum, which differs but little from a pseudo-platanus, or sycamore; and as this affords timber which, from being light and tough, is much used by turners, and for making saddle-trees, so it is probable that both the Himalayan species would answer equally well for the same purposes. The wood of A. culturatum is white, light, and fine-grained, and might be turned to the same uses as that of the maple, which is esteemed by turners, and also occasionally for making gun-stocks. A. caudatum is also found in Kunawar, and A. sterculiaceum extends to Kashmir. A. Dobinea, discovered in Nepal by Dr. Hamilton, is only a shrub of six feet in height. A. fraxinifolium is a native of North America, from which sugar is said to be made. Many species grow in Japan and the Himalayas, and are used by the people. For example, A. virgatus, A. nisus, A. californicus, A. hookeri, f. et z., Darjiling hills, villosum, Wall., Simla, picatum, Thomb., Hazara, palmatum, Thomb., a beautiful maple. A. niveum, Blume, India, and the Archipelago, rising to 150 feet in height.

—Von Mueller; Hodgson's Nagasaki; Royce's Ill. Bot.

ACER CAUDATUM, the Mandal maple tree of Kulu, Kangra, Dooban, and Simla. Wood not esteemed.—Dr. Cleghorn.

ACER CRETICUM. LINN.
Kitha, Kakri, CHENAB. Kukandra, J. JELLEM.
Kangr, Mandar, TIL-PATTER, KANG.
Til khan; trikhana, TI-AN.
Trikada, J. JELLEM.

A small tree, not uncommon at places near most of the great rivers of the Panjab, from the Ravi westward from 3500 up to 6000 feet. Of no special use.—Dr. Stewart.

ACER CULTURATUM. WALL.
Kaura, CHENAB. BRAS. Kandur, KANURA.
Kanka, KARDO, CHENAB. Tikkam, MURREE.
Kahra, Kangru, TIKKAM.
Trekam, Trekhan, JIEL.
Tilpattar, Kilpattar, JIEL.
Killh, Chirindu, Jarimu.
Karn, Kanjar, TI-AN.

A. culturatum and A. sterculiaceum much resemble each other, often grow together, and are frequently confused. They are found on all the rivers up to near the Indus, at from 4000 to 10,000 feet. They are handsome trees, and attain a considerable size. A. sterculiaceum attains to 12 feet girth, but the timber is not particularly valued. In Kangra it is used for ploughs, bedsteads, and jampan poles. From Bissahir, etc., there is a considerable export to Tibet of drinking cups made of the knots of these maple-wood trees. They are much used there, and often set in silver. Gerard states that they are made of juniper, and Moorcroft says horse-chestnut (see Pavia); but J. D. Cuningham mentions the knots or excrecences of these two maples as giving the best kinds. A. culturatum is prized for shade. The juice of the leaves is, in Kanawar, said to be so acrid as to hurt the hands, but the leaves and twigs are in places much lumped for fodder.—Dr. J. L. Stewart.
ACER LEVIGATUM. 

ACER LEVIGATUM, Wall., the Karaalul, or karandul of Kotigurh, is found in the Satlej valley, between Rampur and Singnham, at an elevation of 3000 feet, also higher up in the Nepal mountains, and at Darjiling. The knots are hollowed out, and used as drinking cups. — Voigt; Cleg. Veg. Rep. p. 64.

ACER OBLONGUM, an evergreen tree, of rapid growth, native of Nepal and Kumaon, and in southern hill ranges, such as the Gagar, and is very abundant at Naini Tal. — Voigt, p. 92.

ACER STERCULIACEUM. Wall.

A large tree of Nepal and the N.W. Himalaya, with a trunk three feet in diameter. The indi names allude to its inceased three-pointed aces. From the knotty parts of this tree are made the coarser sorts of wooden cups used in un-tes and the Cie-Alpine Himalaya, inhabited by Bhotia, and termed Lahauri Doba, and a sister kind, termed Talua Doba, is made from Acer oblongum. A Hookeri, isolobum, pentamimium, Sikkimense, and stachyophyllum, are her species. — Dr. J. L. Stewart.

ACESINES or Akesines, the Greek name of the hanub, a river of the Panjub; supposed to have 0 its origin in Abu Sin, a name of the Indus, e Sanskrit name being Chandra-Bhaga.

ACETIC ACID. Acetic acid, Vinegar. —

The ordinary vinegar prepared from the Indian bazaars purchased from the Dolichos siliquosus. Dr. Shaughnessy discovered that much pyroglucine acid passes over along with other gases, in scarce the charcoal for the Eshapore powder and, he recommended for India the practice followed in Germany, where a strong acetic acid obtained by causing a mixture of one part of nit, four of water, and about one-thousandth part of honey or yeast, to filter into a caskaining wood shavings, and provided with holes secure a free circulation of air. A very large surface being thus exposed, the alcohol is rapidly inverted into acetic acid. In India, teak shavings well boiled in water and subsequently steeped good vinegar, should be employed. — Beug. Bot. ar. p. 233.

ACH. HIND. Morinda citrifolia, M. tinctoria. 

ACHICHEMIDIE. During the time of this nasty, the language in use was the Bactro-Asiatic. We know from their inscriptions that the old Bactrian formations, which gave historical and geographical designations at a later period, — Dumas's Egypt, pp. 462-467.

ACHALABHIRA, one of the Ganadharas, masters of the Jain schools.

ACHA MARAM, also Aati maram. TAM. Any my tree; Diospyros ebenaster; Hardwickia mamosa, Bauninia racemosa.

ACHANDRARAM. TAM. A perpetual remnant of village land, as long as the moon and sun are.

ACHAR, a native race in Nepal, from whom Mewar select their priests.

ACHA. MALAY. Antiaris, sp.

ACHARA. SANSK. The observances of the Hindu religion; the personal and social customs of the Hindus; also a name applied to Siva or Vishnu, and also Brahman as the Supreme Being. It means free from further transmigration.

ACHARNI. HIND. A hier.

ACHARYA or Achari. SANSK. A religious teacher, a brahman who instructs in the Vedas the religious students of the Brahman, Kshatriya, and Vaisya castes. In modern use, it is applied to any religious instructor, or to any brahman and religious mendicant professing to be qualified to give religious instruction. In the south of India, it denotes the head of a religious society, the Mahant of Hinduism, or the Panda or head priest of a temple. Among the Mahrrattas it was given to brahmans employed by respectable families as cooks. It is assumed by the Madhava Brahmanas, and by the five castes of artisans — blacksmith, goldsmith, coppersmith, stone-cutter and carpenter—in the Tamil and Telugu provinces. At present, the brahman who reads a portion of the Vedas at the time of investiture with the posta, is called by this title, as well as the person who reads the formulares at a sacrifice.— Ward's Hindoo; Wilson. See Gayatri; Hindu; India.

ACHAVERAM or Acheveram, a village with a celebrated pagoda five miles S.W. of Devcottah. It was taken in September 1749 by the Tenjore army from the British under Captain Cope.

ACHA-TATA. See Akshana.

ACHCHHAN. MALEAL. A father; a respectful appellation of the men of the Nair royal family who have no office or official rank in the State.

ACHCHU. KARN. Acheha, MALEAL, TAM.

A mould; a printing press.

ACHCHU-KAVALL. Tel. Fees in kind to poligars for protecting lands.

ACHE. Count d'Aché, a French admiral sent from France to support Lally as a naval colleague, but he was undecided and unfortunate, was defeated off Tranquebar, and again by Pocock, and he ultimately sailed for France, where he became an accuser of Lally.—Malleson.

ACHEEN, Athi of the Malays, is the capital of a kingdom of the same name, situated at the north-west extreme of Sumatra, near the entrance of the Straits of Malacca. Every vessel entering the straits was formerly obliged to call at Acehen to obtain a pass, but Europeans set at defiance the assumed authority of its kings. These still, however (1879), continue independent of the Dutch. Pop. 326,000. This monarchy arose from the usurpation of sultan Salah-ud-Din in A.D. 1521, previous to which time Acehen had been a province of Peelir, and governed by a viceroy from that Kingdom. The Achinese differ much in their persons from the other Sumatrans, being in general rather shorter, and of a darker complexion. They are supposed to be a mixture of Battas and Malays with Chullaiah, as they term the natives of the west of India. They are an active and industrious people, and show much mechanical ingenuity. Their Padri, religious men, chiefly Malays of the Menangkabao states of the interior, for many years opposed the encroachments of the Dutch in the interior of Sumatra. The Achinese adopted Mahomedanism, A.D. 1206; the Malacca Malays, A.D. 1276; the Javanese, A.D. 1478. They are
strict Mahomeds, and great numbers resort in the Arab vessels to Mecca, with the view of becoming Hajis or pilgrims. The Spanish Pillar dollar is the standard coin. The natural productions of Acheen and its neighbourhood include gold dust, Baros camphor, which is highly prized in China; sapan wood, beecswax, dammer, and rattans. Cattle are abundant, and also small horses of an excellent breed (the best, indeed, in the Archipelago, with the exception of those of Bimah in Sumbawa), which are exported in considerable numbers to the settlements in the Straits of Malaca. The better kind have fine crests and good strong shoulders, in which latter particular, as well as in height of wither, they differ very much from the horses of Java and the islands to the eastward, which are generally deficient in these points. The Achin and Malay languages are written in the Arabic character. See Archipelago.

ACHENIYA PATA. Beng. Paderia ternata.

ACHERONTIA SATANAS, the death's-head moth of Ceylon, a richly-coloured nocturnal moth, which utters a sharp, stridulous cry when seized. —Tennent.

ACHETA, the cricket genus of insects. A. campestris and A. domestica, the Jhungur of Hindustan, attack the poppy plants from November to January, until the stem begins to shoot. A large species attacks the Casuarina trees. It lodges at the foot of the tree, and at nightfall ascends the tree, and cuts off the young top shoots. The crickets are very destructive to garden and field crops. See Insects.

ACHI'HRAR. HIND. Fruit of Buchanania latifolia: also pickles.

ACHIHR TILAK. SANSK. The ceremony of putting a few grains of rice on the forehead of an image when addressed, or on that of a brahman when invited to an entertainment.

ACH'HIK, a tribe in Bengal.

ACHILLEA MILLEFOLIUM. L. Milfoil; the Bui Madaran, Momadra, and Capendiga, of the Panjab.

ACI MARM. TAM. Calosanthes Indica.

ACHIMENES, very ornamental plants of various colours, flowering in the rains, of easy culture. The scaly tuberous roots, by which they are propagated, must be carefully preserved during the dry weather, by occasionally moistening the earth in which they are kept; and after the commencement of the rains, the imbricated buds, which they produce under ground, may be divided and planted out.—Riddell.

ACHOBA. POSHT. Land irrigated by the natural rain.

ACHODA. SANSK. Solanum trifoliatum.

ACHOTTI DURI, of Nepal. Hystrix longicauda.—Marsden.

ACHRAS ELENGIOIDES. D. C.

Acosta elengioles, D. C.

HOLAY, ... NEILGH. [Pala, ... TAM.

A large tree, very common on all the higher ranges on the west of the Madras Presidency, and is to be found in Ceylon. The fruit is like a small crab apple, and is made into pickles, and used in curries. The wood is of a dull red colour, short but straight in the grain, and very dense. It makes good beams for houses, but splits too much to be used for planks. If well seasoned it turns well, and it makes excellent carpenters' planes.—Beddome, Fl. Sylv. p. 235.

ACRAS SAPOTA. Wilde. Sapodilla.

Koweeet, ... of BOMBAY. Ratami, ... SINGH.

Thwoot-ta-bat, BURM. Smit Eiupe mariam, TAM.

Bally tree, Sapota, Eng. Sima Ipna chetuth, TAM.

A native of China, cultivated in the E. and W. Indies and S. America. In India grown as a fruit tree; wood hard and close-grained. These seeds are aperient and diuretic; in overdose they are dangerous. The bark is said to be a good substitute for cinchona. The Tamil name of this tree is liable to be confused with Mimusops and Bassia.—Jaffrey; Riddell; Rozb.; Voigt.

ACHUILLIJA. BEN. iea macrophylla.

ACHYRANTHES ASPERLA. Linn., Rozb.

A. Indica, Roha, Rheed.; obtusifolia, Lamb.

Urong, ... BEN. Kerb; Harbavia, ... BURM. Ajang, ... NAI URU; Neagam, ... EGYPT. Sultad, Agareh, ... HIND. Lal-ehchirhi, ... KATH ALATI, MALAE.

A herb growing all over India, in many places as a troublesome weed; its seeds, flowering spikes, leaves and ashes, are used in native medicine and as greens. An infusion of the root is given as a mild astrigent in bowel complaints. The flowering spike made into pills with a little sugar is a popular preventive medicine in Behar for person bitten by rabid dogs. The root is used by the natives as a tooth-brush; the whole plant when macerated yields a considerable quantity of potash.—O'Sh.; Rozb.; Voigt; Jaffrey; Honigb.; Usefu. Plants. See Vegetables.

ACID LIME. Citrus bergamia, Risso.

ACIDS, the tezab of the Persians. The most important are the sulphuric, nitric, hydrochloric, acetic, carbonic, tartaric, citric, oxalic, and arsenic. For making these, natives of India have peculiar formulae; their lemons and lime give them citric, and the gram-plant, Cicer arietinum, the oxalic acid. Acidum mondrolisum, white oxide of arsenic. Acidum benzoicum, benzoic acid, though name from benzoin, is found in other substances, as storax, and the balsams of Peru and Tolu. It is also produced by the action of re-agents on several vegetable substances.

Acid, Citric. Ning-mung-sha, CHIN, in India an article of commerce.

ACID, Muratic. Hydrochloric acid.

Sen-kiang-sha, CHIN. Namak-ka tezab, HIND.

ACID LIME.

In India, an article of commerce, but largely manufactured in the several mints.—Royle, *Arts of India*.

ACONITUM. *Linn.* This genus of the Ranunculacea is almost entirely confined to Europe and Northern Asia, a few only being American. Throughout the temperate part of the Himalaya as species occur, but most frequently to the eastward in the moist parts of Nepal and Sikkim. Roots of *A. ferox*, luridum, napellus, and palma-are, are extensively used as the Bikh poison, and throughout the Himalayas are indiscriminately called, nor can the dried roots be distinguished from each other. Aconitum or Bikh is prepared *Aconitum ferox*. It is a formidable poison; an tenth of a grain killed a goat in one of Dr. O'Shaughnessy's experiments in twelve minutes. It is animal used in convulsions. It is used in an ointment, one grain being mixed with a drachm of laird, and is an invaluable local application in many forms of neuralgia, especially in tic-douloureux. It almost immediately occasions a tingling sensation in the part, then numbness, and relief of the pain. Several species of Aconite occur in China. Ts'au-wu-t'u is the name for the tubers. Maximo fiez met with nine in the Amur region,—four near Peking, and three in Mongolia. Ts'au means mild. An arrow poison called Tu-h-peh-t'sai is said to be prepared in some country on the west of China from a species. *A. palmatum Don.*, is a plant of the Himalayas, up to 10,000 feet.—Hooker and Thomson; *Smith*.

This is a native of the Himalayan mountains, owing at 10,000 to 14,000 feet, and is one of the best celebrated articles in Indian medicine and zoology. The root is equally fatal taken internally or applied to wounds; but the effects are intensified in a concentrated state when the extract is introduced into a wound. A preparation of the root is much used in all the hill districts in India to poison arrows for the destruction of wild beasts; and tigers are destroyed by the poisoned arrows being shot from bows fixed near tracks leading to their watering places. It has been used on several occasions to poison wells and lakes, and doubtless might be made a formidable means of defence against the invasion of the territories in which it abounds. The Gurkhas y that they could so infect all the waters with a dreadful root that no enemy could advance to their mountain fastnesses.—*O'Sh.*; *Bl. Disp.* 6; *Phar.*, 265-286; *Useful Plants*; *Hooker*; *Clep.* *f. et Th.*; *Cleghorn, Punjabi Report*.

ACONITUM HETEROPHYLLUM. *Wall.*

vika, Vajai turki, *Du.*; *Atis, Batis, Patis*, *Hind.*

This plant occurs in abundance on the lofty mountains of Choor, Shalna, and Kedarnath in the Sutlej valley, between Rampur and Sungnám, an elevation of 8000 to 13,000 feet, and varies greatly in the size and form of its leaves, from rich circumstance it derives its specific name. It was first described and identified by Dr. Allieh in *Plant, Asiat, Rarioras*, and has received ditional notice from Professor Royle. The root is composed of two oblong tubers, of a light ash colour externally, white internally, and of pure bitter taste. These are met with in the market in small irregularly conical ash-coloured pieces, white internally, taste bitter, but not numbing. It acts as a bitter tonic and febrifuge, is used by Europeans and natives in the treatment of fever, debility, and diarrhoea, and it has been long employed in Indian medicine as a tonic and aphrodisiac. The roots are said to be eaten by the Kunwar hillmen as a pleasant tonic under the same name. Two Ates are, however, met with in the bazaar, and one of them is quite inert,—up to two drachms of 120 grains having been given by Surgeon-Major Walter without any effect.—*Cleghorn, Punjabi Report*, p. 66; *Pott*., *Handb*., *i.* P. 324; *Useful Plants*; *Honigberger*; *O'Sh.* p. 166-8; *Ind. Ann. Med. Sci. Ap.* 1856, p. 395; *Hooker* *f. et Th.*; *Beng. As. Soc. Proceed.*

ACONITUM LURIDUM, *H. f. et Th.*, grows at Tankra and Chola in Sikkim, at an elevation of 14,000 feet; the native names are supposed to be identical with those of *A. ferox*.—*H. f. et Th.*

ACONITUM LYCOCOTONUM. *De C.*

Lang-tuh, *Chin.*; *Wolsbane*, *Eng.*

A plant of the Himalayas, at 7000 to 10,000 feet; also of China. Its root very poisonous.—*Smith*; *H. f. et Th.*

ACONITUM NAPELLUS. Monshhood.

*ARIS* dissemant, *Don.*

This genus of the Acoraceae is a native of Europe, also of North America, but is cultivated in the moist, cool parts of the East Indies. The whole plant is aromatic, but the root alone preserves the flavour in drying. It is a favourite medicine among the Hindus as a stimulant in flatulency. It occurs in the shops in longitudinal pieces, wrinkled and marked with projecting points, and might be easily substituted for more expensive spices or aromatics. The root is useful inague. In Constantinople, a sweetmeat is made out of its root. The leaves are also fragrant; a hair powder is made of the roots, the scent being supplied by the leaves. The Calamus aromatics of the ancients is referred by Boyle to the Andropogon Calamus aromaticus.—O'Shaugh. p. 626; Stewart; Powell; Boyle; Pereira; Roxburgh; Mason; Useful Plants.

ACORUS GRAMINEUS. _Smith._ The Shih-chang-pu of the Chinese, grows wild in Sech-uen, Shen-si, and Kwei-chuan. Its rootlets are used internally, in powder, juice, and tincture; and the plant is largely cultivated for its sword-shaped leaves, which are hung up at the dragon boat festival on the fifth day of the fifth month of each year. It kills or drives away insects. It is largely eaten at Constantinople to prevent the pestilence.—Smith.

ACRE, the subdivisions of the acre have hitherto, in the Madras Presidency, been in 40ths (or Goontas) and 16ths of 40ths, or else in 16ths (annas) and 4ths of 16ths.

ACRE or Akka, a town in Palestine, originally called Achebo, but, being in after times improved and enlarged by Ptolemy the First, it was called after him Ptolemais. Subsequently, falling into the possession of the Arabs, it recovered its Hebrew name. It was first taken by the Arabs in A.D. 636. The Christians became masters of it in 1104. Salah-ud-Din got possession of it in 1184, and held it till 11th July 1191, when it was retaken by the Crusaders. The latter held it for exactly one century, when the Arabs finally wrested it from them, and retained it until they, in their turn, were obliged to cede it to the Turks in 1517. From this time Acre remained neglected till about the middle of the 18th century, when the Arab shaikh, Daher, took it by surprise. Under his wise administration it recovered a part of its trade. He was succeeded by the tyrant Jazzer Pasha, who fortified and embellished the town. In 1799 (5th March) it rose into importance and consideration by its gallant and successful resistance to the arms of Bonaparte, directed by Sir Sydney Smith, a British officer, and in the middle of the 19th century the British again took it.—Robinson's Travels, i. pp. 198, 199.

ACROCARPUS FRAXINIFOLIUS. Wight. Shingle tree, ... Eng. Mallal kune, ... Tam. Pink cedar, red cedar, ... Kilingi, ... Neilgh.

This is one of the largest and loftiest trees in the Madras Presidency, and is the parent of the Dalaling Terai. It is of rapid growth, is generally of straight growth, with large buttresses at the base. It is very general about the western forests, on the Tinnevelly and Travancore hills, on the Anamallays, Neilgherries, Wynad, and in Coorg and S. Canara. It ascends from the plains up to nearly 4000 feet. Colonel Beddome measured a tree 27 feet in girth above the buttresses. The flowers appear in December or January with the young leaves, or when the tree is quite destitute of foliage. The timber is flesh-coloured, and shrinks in seasoning; it is light, and much resembling that of the Cedrela toona, and has a Cedrelaceous smell; it is much used by the planters at Coonock, and in the Wynad for building purposes, furniture, etc., and in Coorg it is largely used for shingles.—Useful Plants; Beidome, Fl. Sydce. p. 44.

ACROCHORDIDE, wart snakes. See Reptiles.

ACROCOMIA SCLEROCARPA, the Maea Palm, widely diffused in Brazil and the West Indies. The hard-shelled nuts are worked up with the Negroes into sundry ornamental articles, and the kernel yields a thick golden oil. It might be introduced into India.

ACROGENS, in botany, one of the primary classes of the vegetable kingdom according to the natural system. The stems of Acrogens differ much in appearance from those of Exogens and Endogens. The wood is not secreted for layers of tissue, which have the power of reproducing regular zones of wood, as in Exogens, or regular arrangement of vascular and cellular tissue, as in Endogens. There is generally but single ring of vascular bundles even in the ferns.

ACROSTICHUM, a genus of ferns of the West and East Indies and Australia. The A. acrostichoides, a climbing fern with pendulous fronds, clothes the betel palms on the Megna with the most elegant drapery. Dr. Hooker found parasitic orchids growing on the trees which were covered with this climbing fern.—Hooker, Journ. ii. p. 338, 353.

ACSHA. BANSK. An astronomical term of the Hindus. Acesha Ansa and Acesha Bhagas are degrees of terrestrial latitude; Acesha Carmap, hyptoneness; but in its astronomical sense means what Europeans call the argument of the latitude, even and often Chandra.—Warren.

ACTAEA, a genus of the Ranunculaceae. Scapia Linn., the baneberry, is a native of the Caucasus and Siberia. Roots astringent; the whole plant acid and poisonous. A. cumins, Well., is found on the Choor and Aharon mountains. A. astera is sometimes collected in China, as the souring rush is, for cleaning pewter vessels, for which its hispid leaves well suit it.—Williams' Middle King. p. 286; O'Sh. p. 170.

A small tree of the central and southern parts of Ceylon, up to an elevation of 2000 feet.—Thwaites.

ACTIAS. See Insects.

ACTININA. Some of these zoophytes in the Eastern Archipelago are fully two feet in diameter. Little fishes dwell in their interior. Species of enormous size occur in the Chinese seas, and on the coast of Borneo.—Collingwood. See Zoantharia.

ACTINODAPHINE. Several species of this genus of trees—A. elegans, glanca, Molochina, Moomi, speciosa, and stenophylla—grow in Ceylon. Hooker, D. C., has a small or middling-sized tree, common on the hills in the districts of North Arcot and Cuddapah, found in Bombay and the Konkan, and also in Sikim. A. saliens D. C., a small or middling-sized tree, is rare on the Western Ghats, in South Tinnevelly, on the Neilgherry and Ceylon; it is closely allied to the Ceylon A. elegans, A. Thwaitesi, and A. stenophylla, and they are all probably only varieties of one species. Timber may be of good quality.—
ADAM'S PROPHETS, also Khalifa-ul-Akbar, the first of God's vicegerents; and in the tenth century his grave in Ceylon became the established resort of Mahomedan pilgrims. Adam's stature, according to Mahomedan legends, was about 36 feet. His burial-place is shown by the Arabs at the hill Abu Kubays, and according to their legends Adam and Eve dwelt at Mount Arafat, where Adam's place of prayer is shown. A usual Mahomedan tradition runs, that on the violent expulsion of our first parents and their tempters from Paradise, Adam fell on the mountain of Serendib, Eve at Jidda near Mecca, Eblis near Basrah, and the serpent at Isphanam. Adam, after long solitude and penitence, was led by Gabriel to Mecca, and thence to the mountain of Arafat (recognition), where he was reunited to Eve after a separation of 300 years. With the Hindus, Adam is supposed to be the same with Swayam-bhuva, who was made with seven handfuls of mould taken from the seven stages of the earth.—Yale, Cathay, 354; Ch. Bunsen, iv. pp. 373, 383, 397. Burton's Mecca, iii. 209. See also E. T. Tentam, Canton.

ADAM. TAM. An oil measure of 20 pails.

ADAMANI, a section of the Kasrani Beluch settled at Jok-Budhu in the Dera Ghazi Khan district.—M'Gr. N. W. F. part i. p. 4.

ADAMANT or Admantine Spar, the modern Corundum. Professor Tennant says the adaman described by Pliny was a sapphire. Adaman is the Shamir of the Hebrews, spoken of in Ezek. iii. 9. —Curiosities of Science, p. 103.

ADA MAYA. See Kama; Lakshmi; Maya.

ADAMBO. MALEAL. Lagerstremia reginae.

ADAMITE, a religious sect in Persia, whose followers, men and women, are said to meet in a cave by night with the lights extinguished, and to conduct their rites like those of Mylitta of the Assyrians, those of the Arab Alitta, and of the Persian Mitra. But this is the usual mode which Eastern sects adopt to vilify their opponents.—Chesney, quoted by M'Cregor, p. 9.

ADAM MARRI, a Beluch tribe. See Kelat.

ADA MORINKA. Tel. Cadaba Indica. L. ADAMS, an Englishman who visited Japan about the year 1599, and resided at the court of Jeddo for many years. By his influence, Captain Saris delivered a letter from James 1. to the emperor, and a treaty was signed in September 1613, granting privileges to the E. I. Company.

ADAM'S BRIDGE, a narrow ridge of sand and rocks, mostly dry, forming the head of the Gulf of Mannar, and, with the island of Ramisseram near the mainland, and that of Mannar near Ceylon, almost connecting this island with the continent. It is about 30 miles in extent, and 1½ broad. In Mahomedan tradition, it was by this bridge that Adam, on his expulsion from Paradise, crossed to Ceylon. It connected Ceylon to India until the end of the 15th century (1480), when, during a storm, the sea made a breach through the rocks, which a subsequent storm enlarged, after which foot traffic ceased. The rocks of Adam's Bridge, in Hindu legends, are said to have been traversed by Rama in his invasion of Ceylon, and he afterwards erected a Saiva temple on Mount Kattamantissa in Ramisseram, with two lingams. These have since continued to be largely visited by pilgrims from the most remote parts of India, who visit the sacred sites, and bathe at the junction of the two seas. The
ADEN.

ADEN'S NEEDLE.

ADEN'S NEEDLE, Yucca gloriosa.

ADAM'S NEEDLE.

ADAM'S PEAK, the summit of a lofty mountain in Ceylon, 7500 feet above the sea. It is called by the Arabs, Er-Rahoon. A hollow in the lofty rock that crowns the summit is said by the Brahmans to be the footstep of Siva; by the Buddhists, of Buddha; by the Chinese, of Fo; by the Gnostics, of Jesu; by the Mahomedans, of Adam; and the Portuguese were divided between the conflicting claims of St. Thomas and the eunuch of Candace, queen of Ethiopia. Mr. Duncan, in a paper in the Asiatic Researches, containing 'Historical Remarks on the Coast of Malabar,' mentions a native chieftain, in which it is stated that a Pandyan, who was contemporary with Mahomed, was converted to mahomedanism by a party of dervishes on their pilgrimage to Adam's Peak. The peak is visible 60 leagues to seaward. The footmark is still an object of pilgrimage; it is on a flat stone near a pool of water. There are other models of feet in different parts of the island. The Karlam Rasul, or footprint of the Prophet, is another alleged footprint on a hill at Secunderabad. —*Vule, Cathay*, p. 359-368; *Temten's Ceylon*. See Mahawelli-ganga.

ADANSONIA DIGITATA. L. Boobab.

Khadiyan, ... Duk. *[Papapa pulia maram, Tam.]* Monkey bread tree, Eng. *Anal pulia maram,* *Ethiopian sour gourd,* " *Gorak amli,* ... *Hind.*

This tree has been naturalized in India. Its trunk is very short, but in girth it attains the largest size of any known tree. Roxburgh mentions one 50 feet in circumference, at Mantotte in Ceylon. As a timber tree it is useless, the wood being spogy and soft, but fishermen use its fruit as floats for their nets. Its bark and leaves have been recommended as a febrifuge. The natives of Senegambia dry and carefully powder the leaves which appear with the fruit. This powder they call Lalo, and they believe it is useful in dysentery.—*Useful Plants; Drs. Riddell, Voigt, Roxb.* ii. 164; *Annd. Ind. Ann.* p. 372.

ADELLA SERRATA. *Stewart.*

*Thakola, Karr.*

A small tree common in the Siwalik range rising to 4000 feet at times, up to the Chenab its wood is used for fuel and charcoal.—*J. Stewart, M.D.*

ADEN.

ADEN, a British settlement on a part of the Yemen, almost the most southerly point on the Arabian coast. It is situated in lat. 12° 47' N. and long. 45° 10' E., and is a peninsula of about 15 miles in circumference, connected with the continent by a low, narrow neck of land 182 yards in breadth, nearly covered by the sea at high spring tides. The population in 1872 numbered 19,829, and, besides the Garrison, consists of
of Arabs, Africans, Somali, Parsi, Hindus, and Jews. The Romans named it Portus Romanicus; and it has risen into or fallen from importance according as the line of commerce has changed. It is mentioned by Marco Polo, and by Marino Sanudo, his contemporary, as the great entrepot of that part of the Indian commerce which came westward by Egypt. It has been identified as the Eden of Ezek. xxvii. 23. It is the Arabia Edmon of the Periplus. It was fortified by the Turkish sultan, Solyman the Magnificent, but in after years was held by the Arab shaikhs of the surrounding districts, from one of whom, the sultan of Labei, it was captured by the forces of the East India Company, 10th January 1839, Major T. Baillie commanding. Albuquerque failed in an attack on it in a.d. 1513, and the English and the Dutch temporarily had intercourse with its chiefs. It is merely a small volcanic promontory jutting out into the sea, and connected with the Arabian peninsula by a narrow neck of land, across which a low wall has been drawn from shore to shore of the two bays which nearly surround the promontory. The principal harbour, or Back Bay, is about three miles wide at the entrance, and affords an admirable shelter in all weathers for vessels which do not draw more than twenty feet of water. It is unsurpassed by any on the Arabian or adjacent African coasts, being capacious, easily made, and free from rocks and shoals. Water of a good quality, but in limited quantities, is found at the head of the valleys within the crater, and to the west of the town. As the wells approach the sea, they become more and more brackish. The Banian well, the best in Aden, is 185 feet deep, the bottom is 70 feet below the level of the sea, and before being drawn it contains about 4000 gallons. The wells within the town have an unlimited supply at from 30 to 40 feet, but the water is unfit for drinking. An inexhaustible supply of water is procurable on the northern coast of the harbour, but the difficulty of bringing it into Aden, and its liability to be cut off by hostile Arabs, renders it almost unavailable. Many of the best wells have been excavated since the British conquest, and the oldest does not date more than a century back, and a.d. 1500. These may not have reservoirs. The crater is nearly circular in form; its diameter is about a mile and a half, and it is surrounded on the northern, western, and southern sides with precipices chiefly composed of lava, and rising from 1000 to 1775 feet in height, the latter elevation being that of the Jabal Shumsam, a lofty range of volcanic peaks, which form the crater’s western side. The greater part of the valley’s rocks are more or less vesicular. Volcanic ashes were found about 500 feet above the sea, on the summit of the hill near Steamter Point. Aden pumice is mentioned by Dr. Carter as occurring in a small series of strata, consisting of pisolithic pumiceo, cemented together with glassy, crystallized gypsum, and he identifies it with the volcanic matter covering Pompeii. The mode of working the pumice beds in Aden is by running galleries horizontally, or nearly so, into the various strata. The interior of many of these mines presents a fantastic appearance, the galleries radiating from a common centre, and being connected one with another, and small pillars of pumice being left to support the roof of the mine. The

pumice beds are extensive, but not exceeding four feet in thickness. 4000 lbs. were exported to India in 1876.

ADenanthera Aculeata. Roxb. Prosopis aculeata, König. P. spicigera, Bum. spicigera, Wildc. Chani., Tel. Grows to the size of a tree on the Coromandel side of India, on low lands far from the sea, also in some parts of Hindostan. Its pod is an inch in girth, and 6 to 12 inches long, and contains, besides the seeds, a large quantity of a sweetish agreeable meal, substance, which the people eat. — Voigt, 259; Rozb. ii. 371.

ADenanthera Pannovina. L. Red-wood. Rakto chandan, Beng. Manasiad, — Singh. Y-wai-ghi, Bum. Madetiyi, — Tam. Ranjana, Ranguna, Hind. Manjaji, — Voigt. Ku-chandan, Ani gandamandi, — Theoria-gooni, Tharis gooni, — Malay. Bandi guruvenda, — Tel. Kambhoji, — Sansk. Manseni kotta, — " This is a large and handsome tree, growing at times 100 feet high, and found in most of the forests of India; well suited for planting in avenues. It is met with in the Rangoon, Pegu, and Toungoo districts. It grows also in the Sittot, Bengal, Assam, and the Marulceas. The inner wood of large old trees is deep red, hard, solid, and durable, suitable for cabinetmakers’ purposes, from which, in Upper India, it gets its name of Rakto chandan, or red sandal wood; but the true red sandal or red sandars wood of commerce is the Pterocarpus santalinus. A cubic foot weighs 56 lbs. when seasoned; sp. gr. 896. The wood is said to yield a red dye; ground to a paste with water, it is used by Hindus to make sectarian marks on their foreheads. The seeds are of a highly polished, scarlet colour, with a circular streak in their middle on each side, and are used as weights by jewellers, and as beads in bracelets, necklaces, etc. Books represent these as usually weighing four grains, and selected seeds are in use by the Burmese for that weight. Many, however, do not weigh more than two or three grains each. A cement is made by beating them up with borax and water. The powdered seeds are said to be used as a farina; the pulp of the seeds, mixed with honey, is applied externally to hasten suppuration in boils and abscesses. — Hooper’s Hist. Journ. ii. p. 327; M’Clelland; Mason; Useful Plants; Jur. Rep. Med. Ex.; Mendis; Cat. Bengal Ex., 1862; Dance; Voigt, 259; Hog; Rozb. ii. 370.

Adenema Hyssopofolia. Don. Cieenidia hyssopofolia, Ad. | Chota chirayita, Hind. Common in various parts of South India; is very bitter, and much used by the natives as a stomachic, being also somewhat laxative.—Ind. Ann. Medd. Scien. p. 270; Dr. Cleggthorn.

Adenophora Lilifolia, Ledeb., or Capanula lilifolia. The root of one species, called Shu-san, resembles ginseng; for which in China it is sometimes substituted, as also is the Capanula glanea of Japan.—Smith.

Adenosma Uliginosa. R. Br. Ruellia uliginosa, Linn. One of the Acanthaceae. The juice of its leaves, mixed with salt, is used on the Malabar coast as a purifier. A. balasanea has a strong odour of turpentine.—Rozb. iii. 52; Hog; Voigt, 482.

Adeps Myristice, A concrete oil obtained
from nutmegs by expression, sometimes erroneously called oil of mace.—Simmonds. See Oils.

ADEVA RAJAS. of Tulua, Andhra, or Telignaga, had a capital at Woragalli or Warangal. One of these, in authentic history, was Pratapa Rudra in A.D. 1162, prior to whom nineteen Adeva Raajas reigned 370 years (? 211), and are supposed to be the eighteen princes of Andhra descent; and Sri Ranga seems to have reigned in A.D. 800.—Thomas’ Princely’s Antiquities, p. 278.

ADHA BIRNI. HIND. Herpestis monniera. ADHAK. HIND. A dry measure 18 in. deep, equal to 750 cubic in. In the Dekhan, 7 lbs. 11 oz.; in Mysore, 7 lbs.—W.

ADHAN. HIND. The richest land lying under the protection of the town walls. Mal or malatti, is land not irrigated from wells.

ADHAR or AHAIRA. SANSK. Food.

ADHARA SAKTI. See Sakti.

ADHARMA. SANSK. Injustice, unrighteousness. An epithet of Siva, meaning wickedness; also the bride of Mriya. Adharameswara, the same with Adra Malik.

Bashi, 

Beas. Blackkar; Peckar, PANJ.

Basaka, Basoka. Beng. Urus or Urasa, SANSK.

Bassit. 

Chenab. Tera-bajijia. SUTLEJ.

Malabar Nut. 

Eng. Aladode. TAM.

Aris, Arus, Asganda, HIND. Addasaram.

This shrub grows in Ceylon, in both the Indian Peninsulas, in Bengal, Nepal, Sihet, N.W. Himalaya, Panjaban, up to 4000 feet, and in Java. The wood is soft and considered well suited for making charcoal for gunpowder. Its leaves are used in native medicine, and have a strong smell when bruised.—Drs. Roxb., Ansikste, O’Shk. p. 483, Voigt, 488, J. L. Stewart.

ADHELA. HIND., SANSK. Half a paisa. Adheli, half a rupee or shashuli; half of any piece of money. Adhi, half; Adheela, a half anna; and other combinations. Adi-pao, literally half a quarter of one-eighth.

ADHIGACHHED YADI SWAYAM, a bramh girl’s right to select her own husband. See Swayamvar.

ADHIKANAN, a poet of the Dekhan.

ADHIKMASA. SANSK. In Hindu division of time, an embolismal month, intercalated to bring the lunar months in correspondence with the seasons of the year.

ADHUMI N. or Ajumian, a section of the Sufi of Persia; they take the name from sultan Adhum, who resigned his throne to become a mendicant. They are celibates, are continually moving their lips in devotion; they are wanderers.—Malcolm; M’Gregor, p. 159.

ADI or ADI. TAM. A foot measure; a measure of length, 10’46 in. 57,600 sq. Adi = 1 Kani.

—W.

ADI, the elder daughter of Kasypa, the mother of the Hindu gods.

ADI, the fourth month of the Tamil year, July—August.

ADI. SANSK. Original, chief; as Adi-pati, Gran-adi-pati, the headman of a village; in Java a title of nobility; Adi raj, a paramount prince. ADI or AI island, the Polo Adi of the Malay, in lat. 4° 19’ S, long. 143° 47’ E. (East Point), Medera, is about 25 miles in length, lying to the N.E. of the great Keh, distant about 60 miles, and being the south-westernmost of a group of high islands. The inhabitants are Papuans. This sea is unfathomable at a short distance from the island, but there are several indistinguishable islets on the north side. The chief traffic was in slaves which were distributed among the neighbouring islands of the Archipelago, and are sometimes carried as far as Bally and Celebes.—J. Ind. Arch.

ADIANUM CAUPLAN VENERIS. Lima, Shair-ul-jin, 

ARAB. Mabharma, 

HIND. 

Maiden Hair. ENG. Dum Tali, 

KASHE. Venus or Fairy’s Hair, 

PARASHA. Wansha, SALT E. 

Hans-Raj, gal-marium. 

BISAI. TH. INDUS. 

HIND. Keh,or Keh, the capital.

It is indigenous in the Himalaya, and, like the European plant, it is given as an expectorant. In Europe it is the basis of the celebrated syrup of capillaire.—O-Sk. p. 677; Dr. Stewart.

Occurs in many places in India and Burma. It is probably this regarding which Dr. Maso says that a small handsome fern is seen in the crevices of old ruins and walks everywhere, of the same genus and nearly resembling the English maidenhair, the prettiest of all the ferns.—Maso.

ADIBUDDHA. According to the Sanskrit authorities on buddhism, when, in the beginning all was perfect void, Adi-Buddh was revealed in his form of a flame of light. He is the self-existent great Budh. The Adi-Nath or Maheshwar, who name is Apay, who became manifest in the Mahasangato (perfect void) as the letter A, who is the creator of Prajna and of the world. In China and Mongolia, according to M.M. Hue and Gabe, the theistic buddhists acknowledge an Adi-Buddha, or eternal Budhha, whom they consider to be God over all. In Ceylon and Indo-Chinese countries there is no such belief.—Yale, i. 242.

ADIDWAITA, SANSK. The Supreme Being including two qualities, viz. Adi-atma, the spiritus, essence, and Adi-butra, the material essence.

ADIGAR. SINGH. A chief, a village headman.

ADIMA. TAM.—A predial slave attached to the land. A Nair feudal dependant.

ADIMODURAM. TAM. Root of Glycyrrhiza glabra, also of Abrus precatorius.

ADINA CORDIFOLIA. H. f. et Bkt. 0. of the Rubiaceæ, a timber tree of Berar, Mandi, Garhwal, and Gorakhpur.

ADINATH, the celestial Buddha, also father of Matsyendranath, and grandfather of Gorakhnath. ADINATHA or Rishabdeva, the first and greatest of the Jaina saints.

ADINATHA, the kings of Mahadeva, placed on the banks of the river Raju by king Naraca.

ADIPURUSHA. SANSK. The presiding spirit of the universe.

ADIRAJA. SANSK. Supreme of kings, a paramount sovereign, an emperor.

ADISHAKTI, or the primeval energy, a name of Kali, represented as a four-handed woman of dark colour, of terrific features, with a protruding
ADWITA.

ADWAITA.

ing tongue, besmeared with human gore, with a necklace of skulls, and holding a skull and a serpent in her hands.

ADITYA, founded a Semitic kingdom in Yemen, the first in Southern Arabia. See Saba; Joktan.

ADITI, daughter of Daksha, and one of the two wives of Kasyapa. She was mother of the Devas (see Aditya, Agni, Kasyapa, Deva, Surya, Surya varna, Vamana), hence called Deva-matri. She bore eight sons (according to others, twelve), seven of whom were the seven Aditya, the eighth was Martanda, the sun. The word in Sanskrit means free, unbounded, infinity, the boundless heaven. The Yajur Veda describes her as the wife of Vishnu; but other Hindu books call her the mother of Vishnu. Her history is regarded by Professor Wilson as an allegorical personification of astronomical phenomena.

ADITYA, a name of Vikrama, supposed to be the same with the Vikramaditya, who was contemporary with Sapor, king of Persia.

ADITYA. SANSK. The sun. Adityavar, Aditwar, or Aitwar, Sunday, from Adit, the first, and war, day.—W. The twelve Aditya, in Hindu mythology, are said to be the offspring of Aditi and Casyapa, who is called the mother of the gods. They are emblems of the sun for each month of the year, and are themselves called suns; their names are Varuna, Surya, Vedanga, Bhanu, Indra, Ravi, Gabhast, Yama, Swarnareta, Divakara, Mitra, and Visvam (Gita, p. 144). Another list is Ana, Aryavara, Bhave, Daksha, Mitra, and Varuna, to which Dhatri, Indra, and Savitri are often added. Of these, Visvam seems to be considered as the first, for Krishna, describing his own pre-eminence, says, 'Among the Aditya I am Visvam.' The names of the twelve vary according to the several authorities. Later mythology counts twelve, all sun-gods, and representing that luminary in phases of the twelve months. Their name, Aditya, comes from the noun Aditi, which signifies literally 'unharmlessness, indestructibility;' and it denotes them as 'of an eternal unapproachable nature.' To the Adityas Hindus ascribe unapproachability by anything that can harm or disturb; in them can be distinguished neither right hand nor left, form nor limit; they are elevated above all imperfections; they do not sleep nor wink; their character is all truth; they hate and punish guilt; to preserve mortals from sin is their highest office; they have a peculiar title to the epithet Asura, 'immaterial, spiritual,' for this is the proper and original meaning of this term; it is a derivative adjective from the noun Asu, 'life, existence.'—Oriental Linguistic Studies, p. 38; Williams' Nala, p. 122.

ADITYA BHAKTI. TEL. Helianthus annuus. See Canna.

ADITYAN or Adyar. MALEAL.—A slave. The Adyan or slave, serf, or vassal of Malabar lives under the protection of a rajah or religious establishment. This tribe visit Coorg from Malabar to work as labourers. They speak Malalam.

ADJAI or Ajye, a mountain stream in Bhirum. It is the Amystis of Megasthenes, and the Ajamati of Wilford. In its literal acceptance, the Ajye means the unconquerable, and many a Hindu mother, like Theisis, formerly dipped their children in its waters to make them invulnerable. Hence may be accounted the name of Bhirum, or the land of heroes. It was anciently called Malla Bhum, or the land of the Malla (wrestlers and athletes).—Tr. of Hind. ADJAT. MAHA. People of the mixed castes.

ADJUTANT BIRD, Leopoldius argus.

ADNAN, one of the ancestors of the present Arabs. He was a direct descendant from Ishmael. His posterny is called Al Arab al Mustaaribah, 'the naturalized, or insitious, Arabs.'—Sale's Koran. See Kahtan; Joktan.

ADNARA. HIND. Panther.

ADOLIA. The larvae of this genus of insects are hairy, and sting with virulence.—Tennent, Ceylon. ADO-MODIN. TAM. Holostemma Rheediaum.

ADONDA. TEL. Capparis hordina, L.

ADONDA CHAKRAVARTI, a Chola leader who seems to have been the suddher of the Kurumbar or Shepherd tribes.

ADONI, in lat. 15° 38' 9" N., and long. 77° 20' E. A town and revenue district in the centre of the Peninsula of India. These have formed parts of the dominions of the Vijnanagar, the Adal Shahi, the Dehli Empire, Hyderabad, and Mysore, and now of the British. Adoni is 309 miles from Madras, and 483 miles from Bellary. It is south of the Tumbudra, and 1395 feet above the sea. The hill station near is 2103 feet. Its silk and cotton fabrics are famed and largely exported.

ADOPTION, a custom amongst Hindus of adopting male children, giving all the child all the rights of legitimate offspring; and when the child idea round his head the turban of his adopted father, he is finally severed from the stock whence he had his birth. This right is restricted to choosing amongst the kindred. Hindu law recognised twelve kinds of adoption.—Teid's Rajast. i. p. 31.

ADRAISTE of Arrian, the modern Takka. See Anshatra.

ADRAK, also Ada. HIND. Zingiber officinale, green ginger. Sont, dry ginger.

ADRA MALIK, the male power of the sun. Among the Samarians, children were burned as to Molech, supposed analogue, or to be identical with the Adharmsvaras of the Hindus.

ADRAKA, a town to which Alexander crossed the Hindu Kush from Alexandria apud Caucasus. He reached it in 16 days.

ADU. TAM. A sheep, a goat. Attu-Karan, a shepherd or goatherd.

ADULARIA, or Moonstone, is very abundant in the neighbourhood of Kandy, where it is occasionally the predominating ingredient of the rock.

ADWAITA. SANSK. A school of Hindu philosophy and theology, established by Vyasa, and carried out by Sankaracharya. The latter was the founder of the monastery of Sringeri, near the Tumbudra river. The system regards the Supreme Spirit and the human spirit as one, and the world as an illusion. The term is from a, privative; and dwiti, two, non-duality. This system of philosophy is pantheistic, and is usually termed Vedanta. This view is held by the Smarta brahman and all Hindus following that sect, holding, viz., that the creature is not separate from the Creator, but partakes of his essence. The Dwita or dual philosophy is that of the Madhava brahmans and their followers, viz., that the Creator and his creatures are separate. The
ADWAITANAND.

Vaisishtha adwaita is a third philosophy; it means non-duality with a difference, viz. that the creature, separate from the Creator during life, becomes absorbed into his essence after death. This is the doctrine of the Sri Vaishnava sect. These philosophies are known to all Hindus.

ADWAITANAND. See Chaitanya.

ADYAR, a small river which commences principally from the leakage of tanks about 30 miles west of Madras, and enters the Bay of Bengal in the south environs of Madras, being spanned by several bridges in its course.

ADYASTHANA, or First Shrine, is a name applied in the Bhavisya Purana to the original temple of the sun in Kaushir, which is said to have been built by Samba, the son of Krishna; but adya is perhaps only a corruption of Aditya, or the sun, which is usually shortened to adit, and even ait, as in aditwar and altwar or Ilewar for Adityawara, or Sunday. Biladuri calls the idol a representation of the prophet Job, or Ayub, which is an easy misreading for Adit.—Cunningham's Ancient Geog. of India, p. 295.

ADZ. Acet. Errum lens, Linn. ADZA, the Tibetan name of Assam.

ÆCHIMANTHERA WALLI. Nees. Gossypinastrum.

Patrang, Joundela of Ravli. B.E. Marua, . of Ravli.

Bees are particularly fond of its flowers; a kind of cloth is made from the tormentum of the leaf.—J. L. Stewart, M.D.

ÆCIDIUM THOMSONIA infests the fir tree, Abies Smithiana. See Fungii; Insects.

AEN. MAHR. Terminalia glabra, W. and A., and T. coriacea, Roxb. ÅEGAGRUS, a wild species of Ibeo, of Middle and North Asia, called Pasing by the Persians.—Cat. As. Soc. Beng. See Capræae.

A large shrub in the Sunderbuns, the Tenasserim Provinces, both Peninsulas, Australia, Moluccas, and Java; when in bloom it is covered with small white flowers, which seem to have great attractions for the fire-flies. In moving up the streams near the seashore on a dark night, these trees are seen illuminated with myriads of waving brightening wings, and making them look in the deep gloom like superb candela-bras hung with living lamps. Bees give it the preference to all other shrubs in attaching their combs to it. It is a useful coast-plant.—Mason; Voigt, 385; Roeb. iii. 130; von Mueller.

ÆGINETICA INDICA, Willsde, the Tsam cumulo of the Maleali, is a small, annual, singular-looking, rush-like plant, with a flower like the bowl of a tobacco pipe. It grows in the Circars, at Khancalis, Salsette, and Konkanas. As pechman, Well, it is an astringent, growing on the roots of Andropogon muricatius.—Roxel. 130; Voigt, 496.

ÆGILE MARMELOS. Corv. Bel fruit tree.

Crataeva marmelos, Linn. | Feronia pulchella, Roth. Sri phal, Bel, . . . . . BENG. Mahura, . . . . . SANSK. Oo-sheet, . . . . . BURM. Vrilla-maram, . . . TAM. Tangleh Tangleh, MALAY. Marado chetta, Tel. Kuvelam, . . . . . MAHAL. Bilvamu chetta, . Dala gundu, . . . . . PUSHT. Mah-mamu chetta, .

The Bel, Bengal quince, or larger wood apple, is a large thorny tree which flowers during the hot season, and its large spheroidal fruit ripens after the rains. The tree grows all over India and into the Himalayas at Simla, Kasauli, Garwhal, and up to the Himalayas, and in the sub-Alpine tracts, and it is found about towns and villages throughout the Prome district, and also about Toungoo, more especially on the Shan side of the river. It attains an extreme height of 30 feet, and in girth 3 feet. The wood is light-coloured, variegated with veins, compact, very strong and hard, but is little used, partly perhaps from a religious feeling on the part of the Hindus, with whom the tree is sacred to Siva, and partly from the value of the tree from the great medicinal virtues of the fruit. But in the Godavery districts the native dholt or drum is often made of it; and it is used for wheels of wheels and crushers for sugar in Garhwale. The wood is ground with water into a sort of oily paste, which is poured on the lingam in the temples dedicated to Siva. The leaves are offered to Siva and to the female divinities in the same way that the leaves of the tulsi are offered to Vishnu. The fruit is delicious to the taste, and very fragrant. It is smooth, resembling an orange, with a yellow, hard rind, which is astringent, and used in dyeing yellow. The pulp of the fruit has been long in use in diabetes; and its aperient and detereous qualities, and its efficacy in remediying habitual costiveness, have been proved by constant experience. It has lately been brought into repute when fresh and in conserva as a remedy in some forms of dysentery. When dried before it is ripe (Belgar, Belgiri), the fruit is used in decoction in diabetes and dysentery; and when ripe and mixed with juice of tamarinds, forms an agreeable drink. The beautifully clear mucus which surrounds the seeds is, for some purposes, a very good cement, which as a gum may some day be turned to use in the arts. The roots, bark, and leaves are reckoned refrigerant in Malabar. The bark of the root, especially, is given in decoction in intermittent fever, and the leaves are applied as a poultice in ophthalmia. They abound in a volatile fragrant perfume, which is distilled from the flowers, known as marmal water, and is much used by the natives as a perfume for sprinkling on visitors. The pulp is also mixed in lime cement. In Peshawar, large numbers of snuff-boxes for domestic use, and for export to Afghanistan, are made from the shell of the fruit, which is prettily carved over and fitted with a small bone plug for the opening in the end. Lest the resemblance of the wood apple to the fruit of the Nux vomica might give rise to accidents, it should be remembered that their strong aromatic smell, like that of all other fruits belonging to the orange family, will distinguish them easily from the Nux vomica, which is devoid of aroma.—Drx. Roeb., M'Clelland, Wight, Gibson, Brandis, Stewart, O'Shaggnessy, Riddell, Waring, Cleghorn; Major Drury's Useful Plants; Mr. Elliot; Cat. Cat. Ez. 1862; Ind. A. Med. Sc. 1854; Beddome.

ÆGILE SEPIARA is used in Japan for hedges, its thorny branches being useful. The fruit is never eaten raw, but is roasted on hot ashes. It has a glutinous pulp, which is laxative.—Hog. Veg. King.

ÆLIUS GALLUS, a Roman of the Equestrian order, sent, between B.C. 24 and A.D. 1, with a force to explore Ethiopia and Arabia. The force was
organized at Cleopatris, in the neighbourhood of the modern Suez, and consisted of 10,000 Romans, with 15,000 mercenaries, together with a fleet of 80 vessels of war and 130 transports. After two years' absence in Nejran, Elías Gallus brought back with him a small part of his army, hunger, fatigue, and sickness having destroyed the remainder, for only seven fell by the sword.—Playfair’s Aeronautics.

AEROLITES, or Aneza, an Arab tribe in the vicinity of Syria, and if we add to them their brethren in Nejz, they may be reckoned one of the most considerable bodies of Bedouins in the Arabian deserts. They are nomades, migrating over 30,000 square miles. In spring they approach the fountains of Syria, and form a line of encampment extending from near Aleppo to eight days' journey to the south of Damascus. Their principal residence, however, during that time is the Hauran and its neighbourhood, when they encamp near and among the villages, while in the more northern country, towards Homs and Hamah, they mostly keep at a certain distance from the inhabited grounds. In these parts they spend the whole summer seeking pasture and water, purchase in autumn their winter provision of wheat and barley, and return after the first rains into the interior of the desert. They are the only true Bedouin nation of Syria, the other tribes in the neighbourhood of this country having more or less degenerated in manners, and several being reduced to subjection.—Skinner; Barkcharilt; Upton.

AENEUS, the Vayu of the Hindu mythology. See Mythology; Saraswati.

AERATED WATER, Ho-lan-shin of the Chinese; Soda water.

AERIDES, or air plants, are numerous in all the humid parts of S.E. Asia. The Tenasserim Provinces abound in orchids, most of which grow on trees, and are epiphytes, not parasites. The flowers of some of the species are great favourites with the Burmese, and are sought after to adorn the hair. The Burman books say that the trees around king Wathaudria’s hermitage wore covered with orchids, and that after being plucked they would retain their fragrance seven days. In the Andaman Islands, in the course of a few hours, a vast number can be collected. Ac. affine, Wall., with large rose-coloured flowers, is of Assam, Nepal, and the Khassia hills. Ac. amphilacemum, Roxb., grows on trees, and blossoms in May. Ac. cornutum, Roxb., grows at Dacca and Eastern Bengal. Ac. guttatum—Perida Mara, Tel.; Saccelabium retusum—is a lofty parasitic species, growing on trees near Dacca. Ac. multiflorum, Roxb., is a large and beautiful species of Silhet, with large purple and white flower. Ac. odoratum, Lour., a sweetly fragrant plant, with large white flowers with a tinge of rose. It is met with at Dacca, the Khassya hills, Chittagong; in the Bombay Ghats, on the Mahabaleshwar hills, Tenasserim, Moulmein, China, and Cochin-China. The flowers hang in long racemes of a light flesh colour and spotted, from six inches to a foot long. They grow from the axils of the leaves, appearing in April and May. Ac. pulilium, Roxb., grows on trees in Chittagong and Eastern Bengal. Ac. radiatum, Roxb., on trees in the Gangetic delta. Ac. rostratum, Roxb., blossoms in April and May in Silhet. Ac. suaveolens, Roxb., found on trees in Chittagong, has very fragrant flowers all the

year long. Ac. tessellatum, Wight, with large flowers of a greenish yellow, grows in the Circars. —Roxb.; Wight; Vout; Mason.

AEROLITES, the deco-gola or devigola of the Hindus. These are not uncommon in the possession of the Hindus, who worship them. The guardian of a temple showed Baron de Bode a flat black stone, which appeared to be an aerolite, weighing several pounds, and let him into the secret of its wonderful properties, namely, that of being propitious to mothers who wish to be blessed with a numerous family, and who, by pressing it to the heart, must receive some favours. This peculiarity bears some resemblance to what is told of the temple of Halgab-Baal, at Emsa, on the Orontes, in Phoenicia. Aerolites are possibly the lastylia of the Jew. The earliest of which we have any reliable account, is one that fell about the year in which Socrates was born, in Aegos Potamos, 2300 years ago. One of the khulifus is said to have had swords forged from the iron of fresh fallen meteoric stones; men have sometimes been killed by them in their fall. Every now and then, in some place or other of the earth, stones varying from the size of a musket ball to seven or eight feet in length, and many hundred seers in weight, fall down to the ground out of the sky. In many cases they have been seen to fall from, or result from, the explosion of luminous meteors or fireballs, not unfrequently with a force causing them to sink to a depth of from ten to fifteen feet into the earth, as in the case of those that fell at Barbotan in France, 24th July 1790, at Vienna, 16th June 1794, at Western in North America, 14th December 1807, etc. etc. In many cases a small and very dark cloud appears suddenly in a perfectly clear sky, and the stones are hurled from it with a noise resembling musketry or cannon; such a cloud moving over a whole province, has sometimes covered it with thousands of fragments. Sometimes, as in Germany (Kleinwenden, 16th September 1849), a large aerolite fell with a thundering noise from a perfectly clear sky. The largest with which we are yet acquainted, are those of Barbotan, in Béarn, 75 feet in length, and that of Otumpa, which also fell in South America, and which is now in the British Museum, London, and weighs 214 maunds. Some have, by accurate observations, been proved to move no less than 30 miles in a second. The falling of the following meteors in Southern Asia has been established:

B.C. 1451. Showers of stones destroyed the enemies of Joshua at Beth-horon, Josh. x. 11.

211. Stones fell in China.—De Guignes.

192.

99. Two large stones fell at Yong in China; the sound was heard over forty leagues.—De Guignes.

38. Six stones fell at Leang in China.

40. Four stones fell at Po in China.

22. Eight stones fell in China.—De Guignes.

9. Two stones fell in China.—De Guignes.

6. Sixteen stones fell in Ning Techeon in China, and other two in the same year.—De Guignes.

Date unknown. The black stone, or Hajar us Shah, at Mecca.

A.D. 500. In the sixth century, stones fell on Mount Lebanon, and near Emis in Syria.

570. Fall of stones near Bender in Arab.—Koran, vi. 16; ev. 3 and 4.

832. July—August. A stone fell at Tabaristan.—De Stey; Quatremère.

AFAR. *Arab.* Gall.

AFGHANISTAN is known to the Afghans as Valayat, and they regard it as comprising (1) Kabal or Kabalistan, which includes all that mountainous region north of Ghazni and the Safed-Koh, as far as the Hindu Kush, limited towards the west by the Hazara country, and towards the east by the river Indus; and (2) Khorasan or Zabulistan, which includes all that extensive tract of country, alpine in its eastern limits, and table-land or desert in its western extent, that stretches south and west from about the latitude of Ghazni, and borders on the confines of Persia, from which, towards the south, it is separated by the desert of Seistan. Khorasan towards the north presents a very irregular outline, and is bounded in that direction by the mountains of Hazara and Ghur; towards the south it is separated from Beluchistan by the Wazishi range of mountains and the Beluch provinces of Sarawan and Kach Gandava; and its
AFGHANISTAN.

limit towards the east are the Sulaiman range, with its subordinate range and the Daman of the Derajat. The greatest length of Afghanistan within these limits is 750 miles, and breadth 550 miles; but the average length is 600, and its breadth 450 miles, lying between lat. 30° and 37° N., and long. 61° and 70° E. More than half of this, however, is independent, and much of it is hostile. The middle of the country of the Upper Ghor, that of Kandahar, of Chitral, of the Afridi and Waziri, and much of the Hazarajat, pretend as little to owe allegiance as the Amir cares to claim it; and Badakshan, Kunduz, the Char Valley, the countries of the Aimak, the Hazara, the Ghilzai, and Kakar, also Kurram, Khost, and Dawar, only yield obedience when the demand is backed by force.

The districts of Afghanistan included in the above are, Kabul, Jalalabad, Ghazni, Kandahar, Herat, and Balkh, or, as the last has been called, Afghan-Turkestan. The administration of the country of the Ghilzai and Hazara has sometimes formed separate commands. Afghanistan in its physical form consists of a star of valleys radiating round the stupendous peaks of the Koh-i-Baba, and everywhere bounded by mountains of a very rugged and difficult nature. Its natural divisions may be said to be six in number, viz: (1) the basin of the Kabul river, including its tributaries, the Logar, Panjsher, and Kunar rivers; (2) the table-land and valleys of the Ghilzai country from Ghazni to Kandahar, including the Arghandab, the Tarnak, and the Arghesian; (3) the tributary valleys of the Indus, viz Kurram, Khos, Gomal, Ghobe, and Bori; (4) the basin of the Seistan lake; (5) the valleys of the Helmand, the Hari-Rud, and Murghab; and (6) the tributary valleys of the Oxus, viz. Maemana, Balkh, Kuhlu, Kunduz, and Kokeha rivers.

These regions are occupied by different races, thus—(a) north of the Hindu Kush generally in the country of the Usbak, which includes Maemana, Andkui, Akcheh, Saripul, Balkh, and Kunduz; (b) the country of the Aimak and Hazara, known as the Hazarajat, includes generally the upper portions of the valleys of the Murghab, Hari-Rud, Helmand, and Arghandab; (c) the country of the Daurani tribe, extending 30 miles north and south of a line drawn from Herat through Kandahar to Quetta (Kot-Shal or Shal-kot); (d) south of this is the Seistan country, consisting of the lower portion of all the tributary rivers of the Seistan lake; (e) north and east of the Daurani are the homes of the great Ghilzai clan, who were for a brief space in the 18th century dominant, and are still feared; their country consisting of the upper portion of the Tarnak and Logar rivers, including all the open plain region between their east and west watersheds; (f) in a triangle bounded roughly by the Panjsher river, the south range of the Kunar and the Hindu Kush, is the country of the Siah Posh and the kindred race of Chitral; (g) then, in all the valleys that carry off the drainage of the Laaspisar range and its ramifications, are the Yusufzai; (h) to the south, fringing the eastern slope of the Safed Koh, are the Momand, the Afridi, the Orakzai, the Shunwari, the Khattar, the Turi, and the Bangash; and (i) still further south are the Waziri, stretching across the debouchure of all the valleys from the

Kuran to the Gomal, shutting off from the plains the smaller tribes of Jaji, Permuli, Khostwal, and Dawari; (j) the great Povindan elan occupy the triangle bounded by the Ghilzai, Waziri, and Kakar; (k) the Kakar extending N.E. from the Shal valley to the Takht-i-Sulman.

Afghanistan, throughout its whole extent, is mountainous, and its general aspect is that of a series of detached, little-bottomed valleys, with some cultivation in the valleys, but bounded by spurs which are mostly exceedingly bare and bleak. Some of the defiles to the north of the Hindu Kush are of surpassing grandeur, while the soft, still loveliness of some of the sheltered glens on the southern slopes of that range is spoken of with rapture by every traveller.

The general elevation is considerable. From the Koh-i-Baba the country slopes outwards, and contains in the table-land of Ghazni, and in the upper valleys of the Hari-Rud, the Helmand, and Kabul river, some of the highest country of a similar nature in the world. The country lowers towards its boundaries; its rivers become exhausted by absorption into the soil and by irrigation, and, except in its N.E. corner, the country is bounded everywhere by very barren, desert-like land. If we go round it from Badakshan east to Haji Shah on the Oxus, by Andkhui and Maemana to Herat, thence to the west of Herat to the Seistan lake, and lastly round the southern border of the Garmal (Garm seir) to Shal, the want of water everywhere arrests cultivation and habitation.

The only plain regions in Afghanistan are three, viz. the district between the foot of the northern slopes of the Hindu Kush and the Oxus, also that at the foot of their south-western slopes along the lower part of the courses of the Herat, the Farrah, and the Helmand rivers, and the desert region to the south of Kandahar. Some valleys have very considerable spaces of level within them, but they are so hemmed in by the mountains as to preclude their being named plains.

Nevertheless there are numerous elevated flat-bottomed valleys, of an open, undulating surface, affording ample space for cultivation, the stretches of land, of considerable extent and evenness of surface, furnishing open spaces admirably adapted for the movements of an army. This physical feature of the country explains the fact of a nation of mountaineers carrying on most of their warfare on horseback, and priding themselves on the efficiency and elan of their cavalry branch.

There are many rivers in Afghanistan, but none of any magnitude, and, generally speaking, they are everywhere fordable throughout the greater part of the year. Even the largest partake of the character of torrents; and, though they often come down with great force after rain, they soon run off. Their volume is also greatly diminished by the irrigation canals and drains cut from them, by which a stream, which at its commencement promises to become of some magnitude, is almost entirely exhausted before it reaches any river.

The names of the rivers, commencing from the north, are—Oxus, Kokha, Farkhan, Kunduz, Kuhlman, Balkh, Andkui, Murghab, Hari-Rud, Harat-Rud, Farrah-Rud, Kosh-Rud, Helman, Arghandab, Tarnak, Lora, Bori, Zhobe, Gomal, Tochi, Kurram, Kabul, Panjsher, Kunar, Panjkora, and Swat. The irrigation canals are very numerous, but are small for agricultural purposes,
AFGHANISTAN.

and only extend a few miles from either bank of the river. There are several lakes; amongst them that of Seistan is the most extensive; in the Ghilzai country is the Ab-istada; the Daria Darrah is in the Hazara country; there is also a lake, or rather a marsh, north of Kabal, and the Chattibar lake at the head of the Chitril river.

The S.W. portion of the country is occupied by a sandy desert, over which, during the summer season, a deadly wind blows. The climate is of the most varied character, the diversities being due entirely to the difference of elevation rather than of latitude. Ghazni, for instance, is 7730 feet above the sea, and for the greater part of the winter the inhabitants seldom quit their houses, and the thermometer sinks to 10° to 15° below zero. It is a prevalent belief that the entire population of Ghazni has several times been destroyed by snow-storms. The winter cold is intense wherever the elevation is above 5000 feet. The heat of the summer is almost everywhere great, except in the very elevated parts of the Hindu Kush and other lofty mountains.

The principal towns are—Kabal, Herat, Kandahar, Ghazni, Jalalabad, Girishk, Farah, Sabzwar, Maemaana, Andkhui, Shibbargham, Siripin, Balkh, Kuhlum, and Kunduz; all of these have fortifications. The others are only villages, or at best collections of huts and tents.

Balbar enumerates the tribes which inhabited Kabul in his day. In the plains were Turks, Ainas, and Arabs; in the towns and in some villages were Tajaks, Pashani, and Paranech; and in the hills were Hazara, Togderri, Afghans, and Kafirs. The languages spoken amongst them were Arabic, Persian, Turks, Moghulai, Hindi, Afghani, Pashani, Ghahri, Barraki, and Dehganis.

Ferrier tells us (History, p. 307) the wars that have redden the soil of Afghanistan since the middle of the 18th century have been so continuous, that many of the old families have become extinct, and several tribes have remained without a head. Estimates of the population of parts of Afghanistan have been made by Dr. Lord, Lieut. Wood, Vambery, Elphinstone, Lumsden, Leech, Burns, Bellew, Temple, Chamberlain, James Broadfoot, Aga Abbas, M'Gregor, and Edwardes, from which Lieut.-Col. M'Gregor's estimates of 4,901,500, as under, are framed—

Badakshan and Darwaz, etc., 55,000
Kunduz, Kuhlum, Balkh, Charvistan, viz. :
Maemaana, 90,000
Andkhui, 50,000
Shibbargham, 25,500
Siripin, 72,000—237,500
Ainas, viz. :
Zaidn, 120,000
Feroz Kohi, 40,000
Jamshidi, 40,000
Taunmi, 50,000—250,000
Hazara :
Daurani, viz. the clans Popalzai, Alikuzai, Barakzai, Attehakzai, Nurzai, Ishakzai, Khudgian, 600,000—127,500
Seistan :
Tarin, viz. the clans of the Spin Tarin—Adwani, Lasran, Marpani, Shudzai; b. clans of the Tor Tarin—Abdur Rahmanzai, Alizai, Batezai, Habilzai, Haikalzai, Hamranzai, Kadadzai, Kalzai, Kardagh, Khanzai, Khanzai, Malizai, Muizai, Nazai, Nurzai, Sezai, 38,000
Umsan Khel, Abdullazai, Kabizai, Hamzazai, Shabozi, and Khabzalzai, 127,500
Ghilzai :
Povindah, viz. Lohani, Nasir, Nazai, Kha-roti, 30,000
Hindi and Jat, 600,000
Tajak, 500,000
Kazibzah, 150,000
Mixed population of towns, 65,000
Waziri, viz. Malsud, Utmanzai, and Ahmadzai, 127,500
Sheorani, 30,000
Turk, 21,000
Bangash, 21,000
Zaemukht, viz. Mamuzai and Khwahdad Khel, 21,000
Orakzai, 108,000
Dawari, 34,000
Khostwal, 12,000
Afridi, viz. Kuki Khel, Malik Din, Kambhar, Kamr, Zakka Khel, Aka Khel, and Sipah, 85,000
Jangi, 7,000
Mangal, viz. Mira Khel, Khajuri, Zab, Margai, and Kamal Khel, 3,000
Jadran, 3,000
Shinwari, 50,000
Chugiani, 50,000
Mamozai, viz. Tarakzai, Alamzai, Baizi, Khwahzai, Utmanzai, and Dawezai, 80,000
Yusufzai, viz. Baezi, Khwazosai, Malizai, Turklian, Utmanzai, Hasznai, Akazai, Mirzali, Khialzai, Dadzai, Chaghazai, Nurzai, and Utnak Khel, 400,000
Chitrall, Nimcha, Lughmani, etc., 150,000
Kohar, 100,000
Kohistani, 100,000

It must, however, be remembered that the tribes with democratic governments enumerated from the Waziri to the end of the above list, lying between British India and the Kabal dominions, do not acknowledge any fealty to Kabal, and their number is 1,220,000. They fight amongst themselves; and the Sikhs formerly, and now British India, have made peace and war with them without any reference to Kabal. Also the Kazibzah and Parsivan and others are not called Afghans. The former are descendants of Persians who entered the country with Nadir Shah; they follow military pursuits, and serve in the cavalry and artillery of the Kabal army. The Parsivan dwell for the most part in towns and cities, occupied as merchants, shopkeepers, and in the various trades; while those who reside in village communities are husbandmen and shepherds.

Afghan Turkestan is the name given to all the Afghan dominions north of the Hindu Kush and Koh-i-Baba. It comprises the districts of Maemaana, Andkhui, Sar-i-Pal, Shibbargham, Balkh, Kuhlum, Kunduz, and Badakshan.

Andkhui town is in lat. 36° 54' N., long. 35° 29' E. It is 10 miles W. of Balkh, 18 miles E. of Shibbargham, and 60 miles N.N.E. of Maemaana. The town contains 2000 houses, and about 3000 tents in its environs, or scattered over the oasis in the desert. According to Vambery, they are principally Turkomans of the Ailechi tribe, intermixed with Uzbaks and a few Tajaks. Burns, however, agrees with Ferrier's statement that three-fourths of the population are of the Persian tribe of Afshar, whom Shah Abbas established there, the remaining fourth being Uzbaks. Andkhui is on the banks of a stream, which, flowing north from the mountains, passes Maemaana, and is lost in the desert before reaching the Oxus. It was here Moorcroft died. The Andkhui army consists of 1800 horse and 600 foot, which could be trebled in a day.
Badakhshan is an extremely mountainous country, about 180 miles in greatest breadth, and 100 miles in length, bounded on the north by the crest of the spur of the Hindu Kush, which divides the drainage of the Oxus from that of the Kokcha from its end at Jan Kala to the Oxus opposite to the ruby mines, and on the south by the crest of the Hindu Kush. The Badakhshi seem to be of the same race as the inhabitants of Kafiristan, Chitral, Vakhan, Shagnan, and Roshan, and the differences between them and the surrounding states and tribes of Tartar origin are the more marked according as they have intermarried less with their Uzbek conquerors, or in direct proportion of the incapable of their villages. The Uzbek forcibly converted the Badakhshi of the plains to the Sunni persuasion; those who took refuge in the mountains are Shiaks, and always go armed. The climate is very severe in winter. The country yields salt, sulphur, lapis lazuli; and its ruby mines are on the right bank of the Oxus. Morad Bey of Kunduz overran Badakhshan, and on leaving the country drove before him 20,000 families, who were never permitted to return. It is governed by a Mir, who acknowledges the Amir of Kabul.

Balkh is 357 miles N.W. of Kabal, 120 miles W. of Kunduz, 370 miles N.E. of Herat, 500 miles E. of Mashad, 600 miles S.E. of Khiva, 50 miles W. of Khulm, 260 miles S.E. of Bokhara, 200 miles S.S.E. of Samarcand, and 67 miles from the left bank of the Oxus. It is situated on a plain surrounded by canals from the Balkh or Delins river. Its circumference may be about 4 or 5 miles, but its ruins have a circuit of about 20 miles. The population consists of 10,000 Afghans, 5000 Uzbaks of the Kapchak and Sabu tribes, and 1000 families of Jews in the old town. The people of Central Asia have a great veneration for Balkh, and call it Am-ul-Balad, mother of cities. Moorcroft and Guthrie are buried side by side outside the city. It was captured in 1855 by Muhammad Akram Khan, Barrakzai, and has since then been under Afghan rule.

Khulm or Tashkurgan town, is 307 miles N.N.W. of Kabul, 310 miles S.E. of Bokhara, 50 miles from Balkh, 70 miles from Kunduz, 420 miles N.E. of Herat, and 497 miles N.W. of Peshawar by Kabul. It is situated on a plain immediately north of the gorge by which the Khulum river escapes from the hills. It consists of four or five villages, with a population, in 1845, of 15,000 souls. Since the 9th May 1855 it has been in the hands of the Afghans.

Kunduz district, about 1838, contained 60,000 houses with 270,000 souls; the Talikhan district, 25,000 houses and 112,500 souls; and Hazrat Imam, 20,000 houses and 90,000 souls,—in all, 472,000 souls.

Maemenan is situated on a plain in the midst of hills. It is 172 miles N.E. of Herat, 105 miles S.W. of Balkh, 380 miles E. of Mashad, 280 miles S. of Bokhara, 330 miles W.N.W. of Kabul, 665 miles N.N.W. of Kandahar by Kabal, 572 miles from Kandahar by Herat, and 230 miles S.E. of Merv. The inhabitants are Uzbaks, with some Tajaks, Herati, about 50 families of Jews, a few Hindus and Afghans, in all about 15,000 or 18,000 souls. The district is 20 miles long by 18 broad. In 1857, the Mir of Maemenan tendered submission to Persia. Early in 1858, being threatened by Persia, he applied to Muhammad Afzal for assistance; in 1859, he headed a rebellion against the Afghans, but was defeated. In 1861, he tendered his submission to Herat, and in the end of the year transferred it to Kabal. In the beginning of 1868, Maemenan stood a siege by Abdur Rahman, and the inhabitants gallantly repelled three assaults, but at last submitted to terms.

Sar-i-Pul is 100 miles S.W. of Balkh and 300 miles N.E. of Herat, a confused collection of houses and tents, with 18,000 souls, two-thirds of them Uzbaks, the rest Hazara. The chief is an Uzbek.

Shibbargh is 250 miles N.E. of Herat and 60 miles W. of Balkh. It contains 12,000 souls, Uzbak and Persian. The people are brave.

Kafiristan is beyond the limits of, but borders on, Afghanistan. It is bounded on the west by the Belut Tagh, on the east it touches Chinese Turkistan and Little Tibet, to the south lies Afghanistan, and to the north Kokun or Ferghana, where the population is Chaghtai Turk. The Kafr have idols of stone and wood, male and female, also a stone, Imranti, representing deity. They are independent, have defied all attempts at reduction, and their enmity to Mahomedans is unceasing.

Pukhtun is the national appellation of the Afghans proper; but Afghans and Pathans also designate themselves Ban-i-Israel, and some claim direct descent from Saul, king of Israel. Pukhtun is the individual, and Pukhtana the collective name of the Afghans. This word is described as of Hebrew (Ibrani) origin, though some of them say it has a Syrian (Suriani) source, and signifies delivered, set free. The term Afghan is also said to have the same signification. One tradition is that the mother of Afghan or Afghan, on his being born exclaimed, 'Afghana,' 'I am free,' and gave him this name; another tradition is that in the pangs of labour she exclaimed, 'Afghan, Afghan,' or 'Fighan, Fighan,' words which in the Persian mean woe! grief! alas! Afghan is claimed as the designation only of the descendants of Kais.

The term Pathan is said to be from Pihtan, a titular appellation alleged to have been bestowed by Mahomed an Afghan called Kais.

Their origin is involved in obscurity. But several writers consider them to be descendants of one of the ten tribes of Israel; and this is an opinion of some Afghans themselves. A few authors consider that this nation is not of Jewish origin, but that those who introduced the Mahomedan religion amongst them were converted Jews. They are in tribes, several of which have recently occupied their present lands.

The Abdali, besides having the name of Daaurani, which they received from Ahmad Shah, are still called Sulimani, from the mountains whence they came; the district they then inhabited bears the appellation of Tobeh-Mahruf.

Afghans call the Tajak Dehgan; the Uzbek call them Sart; and those of them in Turkistan are called by travellers Owkhar. The Tajak, though of a different race, resemble the Parsiwan in occupations as well as language, but they chiefly lead an agricultural life, settle in villages, and cultivate the soil. The Karani, Ashtaran, Mashi-
AFGHANISTAN.

ani, and Wardak call themselves Pathans, but they are of a different origin from the Afghans. The Karani division contains the Orakzai, Afridi, Mangal, Khattak, and Khugiani tribes, and the Wazir are sometimes included in these.

The Hindk are much more numerous than the Tajaks, and they exhibit all of Indian descent, and retain the well-known appearance, ways, and manners of their original country, together with a mixture of those which have been attributed to the eastern Afghans. They are worse treated than the Tajak, and by no means bear so respectable a character.

Hindus are to be found over the whole of Afghanistan. In towns they are in considerable numbers, as brokers, merchants, bankers, goldsmiths, sellers of grain, etc. There is scarce a village in the country without a family or two, who exercise the above trades, and act as accountants, money-changers, etc. They spread into the north of Persia. They are encouraged in Bokhara, and other towns in Tartary.

The character of the Afghans is unfavourably noticed by all writers. They are very superstitious. To carry a Koran in procession, or to place it under their heads when they go to sleep, or to repeat one thousand times the name of God or of Mahomed, are deemed to be infallible as means of curing ailments. They have a great dread of the evil eye, and cover themselves and their domestic animals with amulets. To obtain a knowledge of future events, like the Sortes Virgilianae, they open a book at random, and apply the first verse that meets the eye to the subject of the inquiry. The best book for the purpose is the Koran, and the trial ought to be preceded by fasting and prayer, which indeed are necessary in all attempts at divination.

A love of gain is their ruling passion. Mr. Elphinstone, who has written the most favourably of them, says (p. 250) most of the Daurani chiefs prefer hoarding up their great but useless treasures, to the power, reputation, and esteem which the circumstances of the times would enable them to command by a moderate liberality.

The people of Europe may experience difficulty in giving credence to the unfavourable opinions which eye-witness writers express regarding the Afghan race; but in a public document laid before the British Parliament in 1881, Abdul Rahman, Amir of Afghanistan, on the occasion of his replying to the demand of the Indian Viceroy for an Afghan envoy, says, 'A thoroughly confidential man does not (as your Excellency is well aware of the nature of the people of Afghanistan) exist in this country.' The democratic character of their tribal relations is not favourable to combination. Ever since the year 1836, the British have been endeavouring to have all Afghanistan under the sway of one ruler, the object in view being to form a barrier to the progress of Russia from the N.W. But, except for the very brief periods since the beginning of the 18th century, that the Ghilzai, the Abdali or Daurani, and their clan the Barakzai, have been dominant, there has not, so far as is known of these tribes, been anything like a settled monarchy. In India, a remark of an Afghan chief has gained currency: when speaking to a British officer, he remarked, 'Why, sir, if we had not you to fight with, we would fight amongst ourselves.'

General Ferrier describes the Afghans generally as physically tall, robust, well-formed and active; their step is full of resolution, and their bearing proud, but rough. They are brave even to rashness, excited by the smallest trifle; enterprising without the least regard to prudence, energetic, and born to war. They are courageous and intrepid, and displays itself most readily in the attack. If that fail, they are easily disheartened, and show no perseverance, for as they are soon elated, so are they as easily depressed. They are sober, abstemious, and of an apparently open disposition; great gossips, and curious to excess. Their anger is not betrayed by any sudden burst of passion; on the contrary, all that is brutal and savage in their nature is manifested with the most perfect calmness, but it is the volcano slumbering beneath the ashes. Courage is with them the first of virtues, and usurps the place of all others. They are cruel, perfidious, coarse, without pity, badly brought up, exceedingly inclined to theft and pillage. In the latter character they differ from their neighbours the Persians, who are, however, as great scoundrels as themselves, for they endeavour to satisfy by every means in their power to conceal their knavery under the appearance of law or rhetoric, while the Afghans do the very reverse; they at once place the knife on your throat, and say, 'Give, or I take.' Force is their only argument, and it justifies everything. An injury is never forgotten, and vengeance is a passion which they love; even at the cost of their lives they will satisfy it should an opportunity present itself, and this in the most cruel manner. There is no nation in the world more turbulent or less under submission. The people are as gross and coarse as savages; the chiefs and upper classes are more civilised, but their politeness is always tinctured by a rudeness of manner very offensive to Europeans. Country and honour are to them as empty sounds, and they sell them to the highest bidder without scruple. The Afghans, he says, are as incapable of a continued course of action as of ideas; they do everything on the spur of the moment, for a love of disorder or for no reason at all. It matters little to them who gives them laws; they obey the first comer directly they find it to their advantage to do so, and allow him to play the tyrant and govern them if he pays them well and does not interfere with their passion for rapine and devastation. Pillage, fighting, and disturbance are at times necessary to their very existence, and are followed by long days of repose and idleness, during which they live on the fruits of their depredations. Their cupidity and avarice are extreme; there is no tie they would not break, no duty they would not desert, to gratify their avidity for wealth. This surpasses all that can be imagined; it is insatiable, and to satisfy it they are capable of committing the greatest crimes. For it they will sacrifice all their innate and native pride, even prostitute the honour of their wives and daughters, whom they frequently put to death after they have received the price of their dishonour. He says (p. 309) that during the 1839-41 British occupation the husband sold the honour of his wife, the father that of his daughter, and the brother that of his sister. Gold in Afghanistan is, he adds, more than anywhere else the god of the human race; it stifies the still small cry of every man's conscience, if, indeed, it can be
AFGHANISTAN.

afghan has a conscience at all. It is impossible to rely on their promises, their friendship, or their fidelity. They enter into engagements, and bind themselves by the most solemn oaths to respect them, and in order to give them a sacred character, transcribe them on a Koran, to which they affix their seal, nevertheless perjure themselves with an impudence perfectly inconceivable. Excitement, the clash of arms, and the tumult of the combat, are to him life; repose is for an Afghan only a transitory state of being; the sweets of domestic life have no charms for him. He is only really a man when he is fighting and plundering. Then his eye is full of fire, his hand grasps convincingly the hilt of his sabre, and he presses his sinewy legs against his horse's side until the animal can scarcely draw his breath, and horse and one; he understands the arduous of the other, and it is difficult to distinguish which of the two is the most vicious.

Colonel M'Gregor says (Khorasan, i. 213), 'I now them to be liars, treacherous beyond all he races of the earth, vain-boasters, and utterly untrustworthy in every way.' He also says he has heard many men talk of the courage, generosity, and frankness of the Afghans in terms of the highest praise, but all who know them agree very early with Ferrier, and it is impossible to form a more favourable estimate than his.

Major Edwards, an intelligent observer and experienced authority on Afghan character, expressed his regret to be obliged to take exception to Mr. Elphinstone's very high estimate of the Afghan character, and in this he thought he would be supported by every political officer on the N.W. frontier, and almost every military officer who served in Afghanistan. He says, 'Nothing that I have met is finer than their bosom, or worse than their morale.'

Major Reynell Taylor says (ii. p. 131) the Afghans are a race in the first place very hostile to himself, and further, have less of that good and honourable principle of allegiance and good faith towards those whose salt they have eaten, and whose service they have adopted, than any other nation that we have hitherto come in contact with. And when the Afghan, be he Amir or villager, can fight as well as he likes, and run away when the aspect of affairs does not satisfy him, without the slightest idea of credit among his fellows; he can align himself over the irresistible pressure of circumstances, which has on some occasions obliged him to break through the most solemn oaths and engagements; he can wade through murder to an inheritance, and be admired in his own country as a stirring, decided character, fit to cope with the world's difficulties; or serve a master for a me, rob him, and return to his village with no other shadow on his respectability than might hang over the position of a successful adventurer on the diggings.

Dr. Bellow says (ii. p. 182) the pride of the afghan is a marked feature of their national character. They eternally boast of their descent, their prowess in arms, and their independence, cap all by, 'I am not a Pukhtun?' They spue all other races; towards strangers of the east they are manly and plain-spoken, but towards the weak and low they are abusive and tyrannical. They enjoy a character for lavish or at least liberal hospitality. In out-of-the-way and unfrequented localities there is a show of greater hospitality and welcome, but it is not genuine; and as often as not, if the guest be worth it, he is robbed or murdered by his late host as soon as beyond the protecting limits of the village boundary, if not conveyed by a convoy (badraqa) of superior strength. 'They glory in being robbers, admit that they are avaricious, and cannot deny the character they have acquired for faithlessness. According to their neighbours, the Afghans are said to be naturally very avaricious and grasping, selfish and merciless, strangers to affection, and without gratitude. They have, he says, all these faults, but the condemnation is too sweeping and severe. Though not always sincere, in their manners the Afghans observe many outward forms of courtesy towards each other and strangers, that one would not expect in a people living the disturbed and violent life they do.

A Persian quartet runs, 'If ever a scarcity of men occur, take a few of the following races, viz.: first, the Afghan; second, the Kamboh; and third, the low Kashmiri. From the Afghan you will meet with treachery, from the Kamboh fraud, and from the Kashmiri grief and sorrow.'

Lient.-Colonel M'Gregor says (iii. pp. 59, 60), 'It cannot be stated that there is, as we understand it in Europe, any national spirit amongst the Afghans; they fight much more for their own interests than for their independence.' The chiefs are ready to pass from the ranks of the Amir of Kabal into the service of the Wazir of Herat, the chief of Kundahar, the British, the Persians, Sikhs, Tartars, or Beluch, and rice versa, without the slightest scruple. It is indifferent to them whether their friend of to-day be their enemy to-morrow, or whether they have even to take arms against their relations or not; the love of money enables them to overlook all these considerations. As a general rule, he says, (p. 64), if an Afghan is obliged to work one month in twelve, he considers himself most unfortunate. The repression of crime and levying a tax he considers as zulm, tyranny. To live in perfect licencc, and never to be asked for anything, is what he would call the proofs of a paternal government.

General Ferrier says the Afghan army might, in case of necessity, consist of the whole male population, for every man is born a soldier, and attaches himself to some chief as soon as he can hold a musket. . . . At the first news of war the chiefs hasten to bring their several contingents. In the field, the Afghans never think of what is going on in their front. On the line of march they form neither advanced nor rear guards, but move straight on without the least uneasiness until they meet the enemy. The love of war is felt much more amongst Afghans than all other eastern nations. . . . War to them is a trade, for it would be impossible to give the name of science to the thousand absurd proceedings which they employ, and which prove that their chiefs are completely ignorant of the first elements of the art. The reason of their success against the other Asiatic hordes up to this day has been their clan in the attack, their courage, but not any clever dispositions, or a knowledge of military operations. . . . It cannot be denied that they are excellent
skirmishers and experienced foragers, for they possess the necessary qualifications in a much greater degree than Europeans. Against cannon the Afghans feel that they cannot trust to the prowess which they value so highly. Their valour is incontestable, but their presumption is greater. Though they are entirely ignorant of the art of attack and defence of towns and fortresses, the Afghans are remarkable for the obstinacy of their resistance and the correctness of their aim when they are behind walls. The impudence of this nation for discipline and military organization arises from their spirit of impatience under the slightest degree of restraint.

The enrolled, or daftari, forces vary; they are in three divisions,—Kabul, 31,000; Kandahar, 18,000; and Herat, 22,000. Of these, 35,000 were Afghan cavalry, 6000 Parsis or Kazzilbash horse, 4000 Hazar horse, and 26,000 infantry of mountaineers, Afghan, Parsian, Hazara, Uzbek, and Beluch.—Lieut.-Col. M'Gregor, ii, pp. 67, 68.

Elphinstone describes (245-6) the Afghan men as all of a robust make, and as generally lean, though long and muscular. They have high noses, high cheek-bones, and long faces. Their hair and beards are generally black, sometimes brown, and rarely red. Their hair is always coarse and strong; they shave the hair off the middle part of the head. The tribes near towns wear the hair short, but the rest have long and large locks hanging down on each side of the head. They wear long and thick beards. Their countenance has an expression of manliness and deliberation, united to an air of simplicity, not unmixed with weakness. The eastern Afghans have the national features most strongly marked, though they have least of the expression above alluded to. The lineaments of the western tribes are less distinct, and exhibit a much greater variety of countenance, some of them having blunt features, entirely different from those above described; their high cheek-bones, however, never leave them. The western Afghans are larger and stouter than those of the east; and some Daurani and Ghilzai are of surprising strength and stature; but, generally speaking, the Afghans are not so tall as the British. The eastern Afghans have generally dark complexions, approaching to that of the Hindustani race, while those of the west are olive, with a healthy colour and appearance; but among them, as among the eastern Afghans, men as swarthy as Indians and others as fair as Europeans are to be met with in the same neighbourhood; the fair are by much the most common in the west, and the dark in the east. He tells us (pp. 182-185) that many of the Afghan songs and tales relate to love, and most of them speak of that passion in the most glowing and romantic language. Besides the numerous eloquences, the dangers of which are encountered for love, it was common for a man to plight his faith to a particular girl, and then set off to a remote town, or even to India, to acquire the wealth that is necessary to obtain her from her friends. Among the Yusufzai, no man sees his wife till the marriage ceremonies are completed; and with all the Bardurani there is great reserve between the time when the parties are betrothed and the marriage. Some of them live with their future father-in-law, and earn their bread by their services, as Jacob did Rachel, without ever seeing the object of their wishes. But the Aimak, the Hazara, the inhabitants of Persian Khorasan, Tajik, and many of the Hindus in those countries, permit a secret intercourse between the bride and bridgroom, which is called namzad-baz, or the sports of the betrothed. With them, as soon as the parties are affianced, the lover steals by night to the house of his mistress, the mother, or some other of the female relations, favouring his design. The freest intercourse, the most unreserved conference, and even kisses and all other innocent freedoms, are allowed, but further than these the strongest cautions and prohibitions are used by the mother to both parties separately. The custom prevails even among men of rank, and the Amir himself sometimes exposes his person alone in the midnight adventures of namzad-baz. Among the Afghans, as among the Jews, it is thought incumbent on the brother of the deceased to marry his widow, and it is a mortal affront to the brother for any other person to marry her without his consent. The widow, however, is not compelled to take a husband against her will, and if she have children, it is thought most becoming to remain single (p. 179).

The bulk of the Mahomedan population are of the sunni sect, the shiah sectarians being the Badakshahi, Vakhi, Seistani, Tajik, Kazzilbash, Hazara, Turi, Bangashi, some of the Orakzai, the Dawari, Khostwali, Jaji, Chitrali, and some of the Kohistani.

The nine five classes of cultivators, viz., proprietors cultivating their own lands; tenants who rent it for a payment in money or produce; Buzurg, who are the same as the metayer of France hired labourers and slaves. In towns the common daily pay of a labourer is 100 dinar (about 4½d.) in Kandahar it amounts to three shahi an 12 dinar (about 6½d. or 7d.) and at Kabul shahi will buy 5 lbs. of wheat flour. There are two harvests; the most important has its season in autumn, and its crops are reaped in summer. It consists of wheat, barley, lentil, Erum lens, Cicer arietinum, peas and bean. The other is sown in the end of spring, reaped in autumn, and consists of rice, the millet Panicum Italicum, and P. niliacenum, Sorghum vulgare, Pennicillaria spicata, Zea mays at Phaseolus mungo. A third harvest, called Pala comprises all the melons and cucumbers, pumpkins and gourds. Wheat and barley are grown even up to 10,000 feet elevation. Rice is cultivated in great quantity at Jalalabad 2000 feet, Kabul 6000 feet, and to a considerable extent Ghazni, 7700 feet. Poplars, willows, and other trees are extensively planted, as well mulberry, walnut, apricot, apple, pear, and pome trees, and the Elaeagnus orientalis, which bears an edible fruit. Wheat is the general food for the people. It is made into unleavened bread as also are the millets. Indian corn heads are roasted and eaten as a luxury; and Cicer arietinum (Chana) is occasionally used. Pennicillaria spicata is grown in great quantities in Dama and in the countries of the Bangesh and Khattra. Sorghum vulgare is the chief grain of Bokhara barley is grown for horses. Artificial irrigation (abi) is carried on by channels, canals, the karez or subterranean aqueducts. Larch means cultivation by the natural rains. A gre
AFGHANISTAN.

A variety of mushrooms grow in most parts of the country, and constitute a considerable portion of the food of some classes of the peasantry, and specially of the Hindu population of towns.

During the autumn months, large quantities of sheep, oxen, and camels are killed, and cut into convenient sizes, which are salted and dried in the sun, and stored for winter use. The meat thus prepared is called hands. Old horses are similarly utilized. The cow, and in some places the buffalo, is kept for the milk they yield. Milk, especially with the peasantry and nomades, is largely used food.

After making butter or ghi, the butter milk is used fresh, or made into curds by souring, or hastened by the addition of a few drops of the juice of the fig-tree, or into cheese by the dried fruit of a solanaceous plant. The curds are also freed from water by pressure in a cloth; to be a little salt is added, and the handfu1s are made into small cakes, which are dried hard as a stone in the sun, and keep for any length of time. They are called Krut; and when soft are reduced to a paste in a wooden bowl (krut mal), and then with bread, meat, or vegetables, a quantity of boiling ghi being first poured over the mess. This is the national dish of the Afghans, and is eaten with great relish, though very sour, astrin- gent, and greezy. Krut is pure casein. The more refined Persians dislike this food, and ridicule the Afghans, parodying the Arabic anathema into words, La houla wa la illah Krtta Khuri.

The sheep are two kinds of the fat-tailed breed, one with a white fleece, which is manufactured into various home-made stuffs, and is also exported; the other with a russet brown or black coat. These are called Postin sheep, their skins being made into postins, and their wool of the shearing season made into felts, or woven, and exported to Bombay and Karachi and Persia. Keep constitutes the main wealth of the nomade population, who use their milk, as also that of the goat and camel, in a similar manner to that of the cow and buffalo.

The wild animals, the squirrel, the otter (sugnah), the jerboa rat (mast-i-dopa), the ferret, and the agger, are trapped for their furs and skins. The varda is found all over the country; occasionally the tiger and the lynx, antelopes, bears, and the wild ass occur; also the ibex, wild goat, barascha; porcupines and hedgehogs are common, also, in the Kohistan-i-Kabal, the doragra, a hybrid between a male wolf and the female of the wild dog.

Horses form a staple export from the country. The Yaboo is the horse of the country,—stout, stive, and hardly, about fourteen hands high, used mainly as a beast of burden, though also for riding; and a considerable portion of the irregular cavalry and artillery are supplied with them. The horses known in India as the Kabali are chiefly from Macmna and Mashad, but there is mixed breed by Persian horses out of country area. Dost Muhammad Khan made efforts to improve the breed, and had several extensive breeding establishments. The Turkoman horse is said to have a large share of Arab blood, introduced by the Arabs when they first overran the country in the 8th century. Traffic is carried on by the Yaboo, camels, and mules, carts being unknown.

Silk, felts, rosary beads from chrysolite, postins dyed from one to upwards of fifty rupees, the choga, the khosai felt cloaks of Kundahar, and wine, are the chief articles manufactured.

Malachite and peacock copper ore occur in the Koh-i-Amad, a few miles west of Kabul, also in the neighbourhood of Bajawar, north of Peshawar. This, with iron and lead, are met with in several parts; also sulphur and alkaline earths. Coal, called kina, is found in Zurmat and Surkhab, and near Ghazni on the surface of the ground, but is not utilized. Iron occurs in large quantities in the Ferum district; quicksilver is said to be found, also asbestos, which is called sang-i-pamba. Native sulphate of copper is said to occur in the Gulkoh, about 40 miles W. by N. of Ghazni. Lead ore is said to be abundant in the Hazara country; and veins of it occur at Kala Mula, Hazrat, Koh-i-Patao, and Argandab, about 32 miles N.W. of Kalat-i-Ghilzai. Chrysolite and soap-stone occur at Sahak-maksud, a hill about 30 miles N. of Kundahar. Sulphur is found in small quantity in Herat; also in the Hazara country and at Pir-kisari, on the eastern confines of Seistan. At Pir-kisri there is said to be an active volcano, called Chah-i-Dudi, or smoking-well, from which smoke and ashes are said to escape. Antimony is said to occur in several places, but it is often mistaken for galena. Gold and lapis lazuli are found at Huladat, near Damian, and at Istalif, north of Kabal, also in the Kabal river, and auriferous rocks occur near Kundahar. Zine, in the form of its silicate, termed zak, is met with in the district of Zoba, in the country of the Kakkak clan. It is dug out from the soil in earthy nodular fragments of a reddish-yellow colour, and easily cut by a knife. It is chiefly used by sword-makers for polishing new blades. Nitre is abundant all over the country.

On the mountains, from 10,000 to 6000 feet, are the Cedrus deodara, Abies excelsa, Pinus longifolia, larch, the hazel, the yew, Thuja orientalis, juniper, walnut, lemon, wild vine, wild peach, almond, the rose, honeysuckle, currant, gooseberry, hawthorn, rhododendron, etc. Below these, at 6000 to 3000 feet above the sea, are acacia, bayberry, Chamomela umbils, bigonia, Salvadora Persica, verbena, and others. The lemon and wild vine are also met with here.

The walnut and several oaks descend to the secondary heights, where they become mixed with the ash, the alder, the Pistacia, Arbor vitae, juniper, and species of astragalus.

The lowest or terminal ridges present a bare aspect; trees are rarely or never met with, and shrubs only occasionally; and the plants met with comprise most of those that form the undergrowth or herbal vegetation in the higher ranges.

Afghanistan and British India are not conterminous. They are separated from each other by a number of tribes, who are wholly, or in parts of their clans, independent. They are the Akazai and Hassanzai, adjoining Hazara; the Bunerwal, Judun, Momund, Swati, and Utmankhel, beyond Peshawar; the Afridi, beyond Peshawar and Kohat; the Orakzai, Turi, Waziri, and Zaimukht, near Kohat, Bumbu and Dera Ismail Khan; the Kusrami, Sheerani, and Ustrama, near Dera Ismail Khan; the Bozdar, Khetan, Khosa, and Laghari, beyond Dera Ghazi Khan; and further south the Bugti, Gurehani, Marri, and Mazari. These will be found noticed separately and under the heading North-West Frontier Tribes.
AFRICA.

The two great passes from India into Afghan-istan are the Bolan, from Shikarpur to Kandahar, and the Khabar, from Peshawar to Kabul; the Afridi hold the Khabar and Kohat passes. The numerous sections of the Afridi, each headed by its chief, have been usually split up into factions, and united only to oppose the rulers of the Panjab and of Kabul, and to levy ‘black mail’ from travellers and merchants. All the great invaders and the supreme potentates of Northern India have successively had these Afridi in their pay,—Chengiz, Timur, Babar, Nadir Shah, Ahmed Shah, the Bamzai, the Sikhs, and lastly the British. To all, these unmanageable mountain-aineers have been treacherous. They are brave and hardy, good soldiers and better marksmen. The best shots in the Guide Corps are Afridi, and perhaps 200 of them may be found scattered among the Panjab regiments.—Rec. Govt. of India, No. 11; Bellere; East India Papers, Cabool and Afghanistan; Ferrier’s History of the Afghans; Masson’s Journeys; McGregor’s Central Asia and Afghanistan; Malcolm’s Central India; Elphistone’s Kingdom of Cabul; Griffiths; Cleg- horn’s Panjab Report; Tod’s Rajasthan.

AFIM. HIND. Opium.

AFLATUN. AR. B’dellium; Commiphora Madagascarencea.

AFRASIA, a king of Turan, who invaded and took Persia.

AFRICA is 4600 miles long from the Medi-terranean to the Cape of Good Hope, and has 4100 miles at greatest breadth, from Cape Verde to Cape Gardafui. Its greater parts lie within the tropic zone; in the less elevated parts the heat is great, and it has a great desert on its north, called the Sahara. Its principal rivers are the Nile in the north, the Niger, the Zaire, Senegal, Gambia, Congo in the west, and Zambesi in the east. The Atlas mountain, in N.W. Africa, rises 10,000 and 13,000 feet in height above the sea; Lamalmon, in Abyssinia, is 11,200, and Compass mountain, Cape of Good Hope, 10,000. Africa is joined to Asia by the Isthmus of Suez, which is 125 miles across, and through which, in the 19th century, a canal was drawn, connecting the Red Sea with the Mediterranean. Africa was known to the ancient Hindus as Sanae-Dwipa. Until the middle of the 19th cen-tury, however, little authentic was known to the people of Europe as to the races of Central Africa, or the countries they occupy; but great efforts have since been made by Europeans to obtain a knowl-edge of the country. Mungo Park, Denman, Bruce, Livingstone, Baker, Gordon, Burton, Speke, Cameron, of Great Britain; Stanley and Dr. Nassa of the United States; a German party under Dr. Lenz, Mr. Mahr, and Dr. Poge, with a French party under Count de Brazza, have all added to our knowledge of it. From unknown times, African races, chiefly the Negro family, have been seized and sold as slaves by each other and by the Arab and other more civilised races, amongst whom all the Chris-tian races of Europe, of the West Indians, and N. and S. America, long took a part. The first to endeavour to stop this traffic was Great Britain, and their import into British India has been prohi-bited. In the south of Asia they were styled Sidi, also Habash or Habshi by Mahomedans,—Habash being their term for Abyssinia. These Habash were the principal household slaves and the eunuchs of the palaces. Their numbers along the maritime states of Arabia, Persia, Beluchistan, and Sind have been great, and have left a marked impres-sion on the physical features of those of the pri-or races who profess Mahomedanism. Many of the Mahomedans of the Peninsula of India, even of good family, have exaggerated Negro features. The Hindus of the N.W. parts of the Peninsula of India have been the principal slave-dealers on the east coast of Africa.

The latest estimate of the population is 186 millions, which for an area of 114 million square miles gives an average of 16 inhabitants per square mile. One of the latest authorities divides the population of Africa as follows among the great families into which ethnologists have classified the peoples:—Negroes, 130,000,000; Hamites, 20,000,000; Bantus, 13,000,000; Fulahs, 8,000,000; Nubians, 1,500,000; Hotentot, 50,000. This would give a total population of 172,550,000. These figures are, of course, only approximate, and the Bantus, according to F. M. Muller, form even one quarter of the population of Africa. In the regions of the great lakes there are countries quite as thickly populated as many of the states of Europe. Mr. Stanley tells us of countries of relatively small extent and which yet possess millions of inhabi-tants. According to Behna, the Negro region is by far the most populous part of the continent. If the populations are sparse in the desert parts, they are very dense in other regions. Thus we find that in the Sahara estimated at 50 millions, or about 53 per square mile; the town of Bida, on the Niger, has a population of 80,000 inhabitants. The population of East Africa is estimated at about 30 millions and that of Equatorial Africa at 40 millions. Ethnologists, however, are not unanimous as to the races occupying Africa. An ordinary divi-sion of African races is into,—(1) the Northern and blackest tribes; (2) the Pal and Nub tribes, scattered among the former; (3) the Kafir or Bantu tribes, south of the equator; (4) the Hotentots and Bushmen (these two being treated as totally distinct by certain ethnologists). Professor Lepsius admits of three varieties only in one and the same original Neg-type, viz., (1) the Northern Negroes; (2) the Southern or Bantu Negroes; (3) the Cape Negroes. He then groups all African languages also in three zones,—(1) the Southern, south of the equator, the Bantu dialects, explored chiefly in the west and east coasts, but probably stretched across the whole continent, comprising the Herer, Pongwe, Fernando Po, Kafir (Osa and Zulu), Tsabana (Soto and Rolon), Sukuli, etc.; (2) the Northern zone, between the equator and Sahara and east as far as the Nile, comprising Eifik, Ita-yora, Ewe, Akra or Ga, Oty, Kru, (Mande), Temne, Bullom, Wolof, Fulah, Kanuri, Teda (Tibm), Logone, Wandala, Bageri, Maba, Konjara, Umale, Dinka, Shilluk, Bori, Oigob, Nuba, and Barca; (3) the Hamitic, including the extinct Egyptian and Coptic, the Livan dialects, such as Tureg (Kabyli and Amsadies), the Kushitic or Ethiopian languages, in-cluding the Beja dialects, the Soho, Falusia, Aga-Galla, Dankali, and Somali. The Hotentot and Bushman languages are referred to the same zo
The Hamitic languages comprised in the third zone—the Egyptian, Libyan, and Kushitic—are akin to Africa. They are all intruders from the east, though reaching Africa at different times and by different roads. The true aboriginal nucleus of African speech is contained in the first zone, and represented by that class of languages which, on account of their strongly marked grammatical character, has been called the Bantu family. The Bantu and Hamitic families of speech differ from each other in many of the most essential points of grammatical articulation.

To mention only a few,—the Bantu languages are prefixing, the Hamitic suffixing. Bantu grammar admits of no gender, to denote sex; Hamitic grammar does. In and about Kordofan, where the dialects lie about piecemeal, the inhabitants of one mountain peak do not understand those of another, but learn to understand with great facility strangers or really strange tribes that have settled among them for a short time only.

This receptivity of language, and more particularly of the language of savage and nomadic tribes, for foreign influences is illustrated again and again in the course of Professor Lepsius's arguments. The power of mimiery is far greater among lower than among higher tribes, and it extends in the case of language even to purely grammatical turns. Of all the races whom the scholar has seen, the Mincopi Negroes of the Andamans possessed this power of mimicy to the greatest degree, and they are in the oldest known scale of humanity. There are limits, however, even to this, and in one case—that of the Hausa language—Professor Lepsius admits that it cannot be classed as a Bantu or prefixing dialect modified by Hamitic neighbours, but that it is really a Hamitic, more especially a Libyan language, surrounded and modified by Bantu speech. By a similar process of reasoning he excludes the Hottentot language also from the African family properly so called, and brings these people in the south in connection with the Kushites in the north, from whom they were separated by the pressure of Bantu tribes, recovering the eastern territory that had for a time been wrested from them by Kushite invaders. On maps Nubia generally extends south from the first cataract over the whole breadth between the Nile and the Red Sea as far as Habeah, south-east beyond Chartum, south and south-west along the White Nile to the Bahr-el-Gazal. But Lepsius, though admitting the presence of scattered Nubian tribes in the south, more particularly about Kordofan and the neighbouring hills, fixes on the Nile as the natural frontier between the true Nubian, sometimes, though wrongly, called Berber, in the west, and Kushitic tribes coming from the east, these being represented by the modern Bejas as their most advanced post. What gives an additional interest to these Nubian tribes, is that they alone among African races have something like a history, to be read on the monuments of their neighbours the Egyptians. The Egyptians distinguish from the earliest times between the red or brown southern race and the Negroes, who are called Nubasi. Among these the Uaña occupy a prominent place so far back as the third millennium before our era, and they are identified by Lepsius with the Nubians. Whether the so-called Nubian inscriptions which are found scattered over the country occupied by Nubian tribes, and beyond so far as the confines of the White and the Blue Nile, are of Nubian or Kushite origin, has never been determined. These inscriptions have their own alphabet, running from right to left; and considering that the words are divided, as they are in the cuneiform inscriptions of Persia, there is no reason why we should despair of seeing them deciphered before long.

Professor Lepsius thinks that they are not Nubian,—that is to say, not Negro, but Kushitic,—and that the key to be applied to their interpretation should be looked for in the Beja, and not in the Nubian language.

The ocean has afforded great facilities for the interchange of commodities with the Asiatic continent; for the Arabian Sea, that part of the Indo-African Ocean on the south of Arabia, including the Red Sea, has 6000 miles of seacoast, and the races occupying it have, from prehistoric times, traded eastwards; and there are Negro and Negrito races to the extreme east of the Archipelago. In the Andamans are the diminutive Mincopi, in the Malay Peninsula are the Semang, in the Philippines and New Guinea and its neighbouring islands are the Papuans.

AFRIDI, the most important, if not the most powerful, of all the tribes to the west and southwest of Peshawar. The Afridi country extends from the right bank of the Kabul river for about 50 miles nearly due south, marching with the British border all this distance. A tongue of their land projects into British territory between the two principal frontier stations of Peshawar and Kohat. The Kohat pass is 15 miles long and three or four in breadth. Mr. Elphinstone says the Afridi are the greatest robbers amongst the Afghans, have no sense of honour, and he had never heard of any one hiring an escort of Khairab to secure his passage through their country. Major Matheson described them as avaricious, desperately fond of money, their fidelity measured by the length of purse of the seducer; they are immoral in their care of their women, they marry the widows of deceased brothers. Colonel McGregor adds that ruthless, cowardly robbery, cold-blooded, treacherous murder, are to an Afridi the salt of life; as he has lived,—a shameless, cruel savage,—so he dies. Yet the Afridi is, on the whole, the finest of the Pathan races on the British border. If there were no chance of robbing or murdering a traveller before his reaching the door of an Afridi, he would be offered such food as was available. The men do nothing; the women perform all the duties of daily life and all field labour. They hold the Khairabar and Kohat passes, through which in succession the invaders of India in former times have come, and the Afridi have received tribute from them all. Bengeri, Imam, Babar, Nadir Shah, the Barakzai, the Sikhs, and lastly the British, have all paid money to the Afridi for permission to enter their passes, or for their aid, or for their passiveness, in time of war, and to all, from the first to the last, they have been treacherous. They are fierce and cruel, faithless and altogether untrustworthy; they are ready to betray one another, and live in perpetual feud. Their hills above and about the Khairabar pass are difficult for military operations. The high lands
of Tirah, which stretch far back into the interior, and in which the Afridis, together with the Orakzai and others, take up their summer abode, are accessible from Kohat, and possess a climate congenial to Europeans. The Khaibari are lean but muscular men, with long, gaunt faces, high noses and cheek-bones, and black complexion. They wear dark blue turbans, and long dark blue tunics, sitting close to the body, but reaching to the middle of the leg. The Adum Khel and the Aka Khel can bring into the field more than five thousand fighting men. The Adum Khel Afridis consist of four clans, namely, the Gullee Khel, with 980 fighting men; the Asher Khel, with 760; the Jowaki, with 1040; and the Hussun Khel, with 880; making in all 3660. The Aka Khel have five clans,—Bussee Khel, Sungul Khel, Asher Khel, Sultan Khel, and Mudar Khel,—with a force of fighting men amounting to nearly 1500.—MacGregor, N.F.W.

AFSANTIN. Ar. Artemisia Indica.

AFSHAN. Pers. Shining, glistening. Afshani Kaghz, paper sprinkled or studded with gold-leaf, used in India when writing to persons of distinction.

AFSHAR, a Turk tribe who supported Shah Ismail. See Kajar; Kazzibash; Khorsan.

AFTAB. Pers. The sun. The asphalt-gir is a round, flat, vertical parasol, carried to shade persons of rank, by special permission of the sovereign, and usually emblazoned with a family device. The sunshade is an emblem of rank in eastern countries; it is held by a servant to protect his master from the rays of the sun. It is also used as a flag or ilam at the ceremonies of the Muharran.

AFTABAH. Pers. A brass ewer, used for washing hands by pouring water from it on the hands, the water falling into a basin called Silche. These are the Hbrek and Tishat of the Arabs. The European mode of washing hands or feet in a basin is deemed wholly unclean.

AFTIMUN. Panj. Cuscuta reflexa.

AFZAL KHAN, a general of Muhammad Adal Shah of Bijapur, whom Sivaji induced to appear at a conference, and took the opportunity of assassinating, October 1659.

AFZELIA BJUGA. A. Gray. A timber tree of the Andamans and of the islands in the Pacific. Whilst every other kind of vegetable and meat is eaten with the fingers, cannibal food is touched only with forks, generally made of the wood of the Nokonoko (Casuarina equisetifolia, Forsk.) or the Vest (Afzelia bijuga, A. Gray), bearing curious, often obscene names, and having three or four long prongs. The reason given for this deviation from the general mode of eating is a widely spread belief that fingers which have touched bokolas are apt to generate cutaneous diseases when coming in contact with the tender skin of children.—Gallow's "Vacation Tourists," p. 268.

AGA, written Agha and Aka in Turkish—means a noble, a commander, but is assumed by persons in civil life. It is also applied to all eunuchs.

AGA-KARA. Tel. Mimordica dioica. Roxburch.

AGA KHAN, a Persian noble long residing in Bombay; the hereditary Pir or religious head of the Khojah sect. He died in the year 1880 or 1881, and was succeeded by his son. The family are descendants of former rulers of Persia.

AGALLOCHAL WOOD. Eagle-wood.

AGALLOCHAL WOOD. Eagle-wood.

AGAM IDA. Kalaombre, Jav, Mal.

AGAMOTRI. Kalambak, Kayu gahru, Kambarkab.

AGAMOTRI. Kalambak, Kayu gahru, Kambarkab.

AGALLOCHAL. Agla, Agila.

AGALLOCHAL. Agila, Agila.

AGALLOCHAL. Lignum aloes, Irs.

AGALLOCHAL. Lignum aloes, Irs.

AGALLOCHAL. Bois d'Aigle, Fe. Ud-i-Kiimari, Pers.

AGALLOCHAL. Bois d'Aigle, Fe. Ud-i-Kiimari, Pers.

AGALLOCHAL. Garo de Malacca., Gr. Agala marum., Tam.

AGALLOCHAL. Garo de Malacca., Gr. Agala marum., Tam.

AGALLOCHAL. This in the wood of the Aquilaria agallocha. In England it is much prized throughout the East as a perfume. The best specimens appear to be mass of resin in decayed wood, and melt under heat, giving forth a very fragrant odour. The tree is said to be void of it when in a healthy state, and only to exude this resinous substance when in decay, or even after it has died. There appears to be at least three kinds of Agallocha or wood-aloes, the trees producing which are not fully identified. Dr. Roxburgh, followed by Dr. Royle, admits doubtfully the existence of two viz. the Aquilaria agallocha of Roxburgh, and Aquilaria ovata, Cor., the Garo de Malacca or Lamarræe; and an inferior sort is said to be derived from Excecucaria agallocha, which need not be taken into account. But Labourow maintains that the best lign-aloës or Calambac, which appears to be the Ud-i-kamari of the Indian bazaars is derived from a tree which he calls Acloyxylon agallocha. Drs. Roxburgh and Royle consider the Malayan Agila, the Aquila and eagle-wood of commerce, and the Ud-i-Hindi of the bazaars, the product of Aquilaria agallocha, which grows plentifully to the north-east of Bengal, and that is probably identical with A. ovata, Royle. The Acloyxylon agallocha of Labourow yields a scented wood used by the Chinese in medicine and perfumery, and is said to bring £2 the cwt. in Sumatra. The lign-aloë brought from Burma is the produce of a tree that grows on the Mergui Islands, and imported into Mergui by the Belung race. Specimens of Ambaya wood of the odoriferous sandal-wood from Timor, clove wood, and other choice woods from the Molucca and Prince of Wales Channel, were sent to the Great Exhibition of 1851. The Hakims of Ind administer Agallocha wood in their electuaries—combination with spices, ambergris, etc.—W. Honigberger; Mason; O'Shaughnessy; Elliot's "Flo Andriciæ; Simmonds; Exhibition of 1851."

AGALMATOLITE. Sami stone, Anglo-Hind. Figure stone, E. Hwih-shih, Chins.

AGALMATOLITE. Sami stone, Anglo-Hind. Figure stone, E. Hwih-shih, Chins.

AGALMATOLITE. Phillips called it Pagodalite, from its being imported from China in figures, pagodas, etc also Swarthy stone, i.e. deity stone. It is for four quantities in Mysore, near Chutia, Nagpur also in China, in N'gan-huai and Kiang-sia there is cut into ornamental figures. —Smith Col. Ouseley in Bl. As. Trans., 1843; Repotted by Dr. Buist. See Sami Stone.

AGAMABA SASTRA, a name of one of the Trasras, a sacred saiva book. Agama Vageesha, one of the Trasras; vak, a word, and eel lord, the god of speech; a name of Vrihaspati.

AGAMIDÆ, a family of reptiles. See Turtles.

AGANHOTRI or Agni Hotri. Hind. A Brahman who maintains a perpetual fire in his house.
AGARICUS.

AGARICUS. fine Tam., Cooke. Eng.
Gracillaria Faulkner; Eno.

They are tall, well-made, with high Aryan features and tawny complexions. They allow widows to re-marry, and they bury the dead; but afterwards, when the bones are dry, the principal joints and part of the skull are taken up and conveyed by the representative of the deceased to the Ganges. This service is often neglected. The bones taken are called Ashta or Ashtung, as representing the eight parts of man. Some of their women are very pretty, bright-looking creatures, of reddish light-brown complexion; fine glossy, long black hair; very bright eyes, remarkable for the clearness of the white of the eye; slight, flexible, graceful figures; teeth white and regular; faces not disfigured by paint, and no godna or marks of tattooing except on hands and legs. The hair is very neatly and elaborately dressed, secured by a large silver ornament. Among them many have grey eyes, and long eyelashes are a prevailing feature. In Gangpur, where there are some three or four thousand Agareais, all Agareah females are regarded as witches. There is among all classes in Gangpur a widespread and deep-rooted belief in witchcraft. It is equally dreaded by the wildest and by the most civilised of the people, and Agareah women have often been badly treated, to drive the spirit out of them, or make them give up the black art. In Gangpur there are old women, professors of witchcraft, who stealthily instruct the young girls. The latter are all eager to be taught, and are not considered proficient till a fine forest tree, selected to be experimented on, is destroyed by the potency of their mantras or spells, so that the wife whom a man takes to his bosom has probably done her tree, and is confident in the belief that she can, if she please, dispose of her husband in the same manner if he make himself disagreeable.—Dalton, Eth. of Bengal, 323.

AGARII. Beng. The great rice or dhon crop of the year, sown in Asar, June—July, and cut in the latter half of Aghan, December.

AGARI? A servile caste in Cuttack, bullock-drivers or slaves.

AGARICACEÆ of Lindley, the mushroom tribe of plants, comprising the genera Agaricus and Lycoperdon. Mushrooms grow in India during the rains, but are little used by Europeans, from the difficulty experienced in distinguishing the poisonous from the edible kinds. Some are found in all the bazaars of India, and are employed in native medicine. Agaricus igneus, garikun, Hind., is a mushroom of the Punjab. Agaricus subcoryneus, Cooke, of China, referred also to the sub-genus Pleurotus, is allied to the British Agaricus umbrinus. It is a denderphyt, dry readily, and is used in the Straits Settlements for food. Agaricus subumbreus, new to science, is a large, excellent, edible mushroom of Kashmir. Agaricus muscaria, a yellowish mushroom used in the Punjab is there called shirian and bathakri; and A. fossulatus, Cooke, occurs in the Kabal hills.—Von Mueller; Mason; Faulkner; Honibarger; Voigt; Fries; Cooke.

AGARICUS CAMPESTRIUS, L., Mushroom.

This is the common mushroom; it is largely eaten in most places where it grows. It is also extensively dried for future consumption, and is said to preserve its flavour tolerably well. The same species also appears to grow commonly in Kashmir and Kullu, sparingly in Lahore, and abundantly in
AFGHANISTAN, where Belknap states that the poor use it largely as food. In Kashmir, the people say that the edible mushroom is always white, and the poisonous kinds, called henar, always dark-coloured, and that they have no other test of the quality. Dried mushrooms (generally small) are official in the Panjab.—Dr. J. L. Stewart, *Panjib Plants*, 267.

AGARYA, descendants of the original Thugs, who, after being expelled from Delhi, settled for a time at Agra.

AGARWAL, an important branch of the Marwari mercantile race, comprising many of the wealthiest traders and bankers in Hindustan. According to Sir Henry Elliot, they derive their name from Agroha in Hariana, whence they originally migrated to other provinces after the capture of that place by Shahab-ud-Din Gori in 1194. Common tradition refers their name and origin to Agro. The Agarwal is one of the 84 Gachha or families of the Jains, and most of its members profess the Jain religion.—W. S. Agroha.

AGASALA of Mysore, a goldsmith.

AGASA-TAMARE. TAM. Psita stratiotes.

AGASSI. TAM. Agati grandiflora, Desv.

AGATHISVAR, a small clan of Rajputs in the Barees district.

AGASTYA, a name famed throughout all the Tamil parts of the south of the Peninsula of India as that of a sage, a native of Tibet, who introduced literature and the sciences among the Tamil race. The name occurs in the Rig Veda and the Puranas, but the tales about him related by the Tamil people are derived from the Ramayana and Mahabharata. The writings attributed to him are in verse, in the Tamil language, and contain in all 19,647 stanzas on ancient history, religion, theology, magic, exorcism, purification, medicine, diseases, leprosy, botany, materia medica, pharmacy, prescriptions, chemistry, sin and crime; but these have evidently been composed by different authors, who have assumed this literary name, and some of them are of so recent a date as after the arrival of Europeans in the country. The traditions amongst the Tamil people connected with this name are so intermixed with fable, that it is impossible to separate the truth. He is celebrated in northern India as a mahamuni, or holy rishi, and is traditionally said to be the leader into the south of the first and most influential colony of brahmanas, B.C. 500. The Vindhya mountains are fabled to have, at his command, prostrated themselves before him, by which is understood that he penetrated through their defiles, and he is said to have advanced southwards to Cape Comorin, but also to have settled in Kolapur. It is called by way of eminence Tamir Muni, the Tamil sage, and is said to have acquired great influence at the court of Kulasekhara, the first Pandyan king, for whose instruction he composed numerous elementary treatises, amongst which the most celebrated is his arrangement of the grammatical principles of the Tamil language. He is mythologically represented as identical with Canopus, the brightest star in the extreme southern sky in India; and he is said to have been the son of Mithra, the sun, and Varuna, conjointly, and to have been born in a water jar; and he is worshipped near Cape Comorin as Agateswara, the lord Agasty. Orthodox Tamil Hindus believe he is still alive, though invisible to ordinary eyes, and that he resides somewhere on the fine conical mountain, commonly called Agastiya Malai, or Agastiya's hill, from which the Porur or Tannur, the sacred river of Timmavinny, takes its rise.—*Dr. Caldwell's Comp. Grammar; Calcutta Christian Intelligencer* for 1861, p. 6; *Wilson's Hind. Theat.* i. p. 333; *Rev. W. Taylor; As. Soc. Trans., vol. iii. p. 213. See Hindu.

AGASTYA. SANSK. The star Canopus.

AGATE. A quartzose mineral, which occurs in great abundance in several parts of the great volcanic outburst in the Dekhan, and are there very abundantly swept into the beds of Godavery and Kistna rivers; also in great variety in other parts of India. Some of the agates and other silicious minerals in the amygdaloid rocks on the banks of the Scena river, between Solapur and Ahmadnagar, are of great size and in profusion; but the most beautiful are brought from Cambay, hence called Cambay stones and Godavery pebbles. The burnishers of the bookbinder and other mechanisms are made of agates. Agates are valued for ornament, and are manufactured into cups, rings, seals, handles for knives and forks, sword-hilts, beads, smelling-bottles, snuff-boxes, etc. The name is derived from Achates, a river in Sicily.

AGATHARCHIDES, a writer of the 2d century B.C., who, according to the account of the commercial intercourse between Egypt and Arabia and India. His writings are preserved in Diodorus and Phytios. He mentions cinnamon and cassia as among the articles imported, and states that ships came from India to the ports of Sabaea, the modern Yemen.—*Vincent's Com.; Ephes. 167.

AGATHIS AUSTRALIS. Hort. The Kawrie, or New Zealand pine, the Dammara Australis, *Lambert*, one of the Conifere, in its native forests attains a considerable height, with a straight, clean stem, which, from its lightness and toughness, has been found well calculated for the masts of ships. It is easily worked, and takes a high polish. It yields a hard, brittle resin like mastic, which is chewed by the natives. Its root is used in tattooing.—*Dr. Riddell; Eng. Cyc.*

AGATHIS LORANTHIFOLIA. Salisb. *Dammara loranthifolia, L.* | *Pinus dammara, L.*

AGATHIS LORANTHIFOLIA. Salisb. *Dammara loranthifolia, L.* | *Pinus dammara, L.*

A large tree, found on the very summits of the mountains of Amboyna, Ternate, and in many off the Molucca Islands. Griffith mentions a tree under that name as a member of the Tenasserim flora, and which the Burmese call Theeet-men, or tree governor. The leaf is precisely that of the dammar pine, but the Tenasserim tree is not known to yield any dammar. The timber of the Archipelago tree is represented to be light and a inferior quality, wholly unfit for any situation exposed to wet, but answering tolerably well for in-door purposes. The wood of the Tenasserim tree, on the contrary, is white, rather light, and bears a considerable resemblance to some kinds of pine. It is used by Burmese carpenters for various purposes, and the Burmese have a superstition that the beams of balances of their scales ought to be formed of this wood.—*Drs. Griffith, Mason and Riddell; Eng. Cyc.*

AGATHOCLES, one of the Greek successor of Alexander, who reigned in Bactria B.C. 247.

MEALE.  

This plant has smallish bright yellow flowers. It grows in Nepal, the north of India, and the Morung hills. It is one of the most esteemed of Indian medicinal plants. It is gathered when the flowers begin to decay, and is dried for use. Its bitter properties are in high estimation with European practitioners in India, who use it instead of gentian, for which it is a perfect substitute. The root is the bitterest part of the plant, and this bitter principle is easily imparted to water or alcohol. According to Mr. Battley, ‘it contains a free acid, a bitter resinosus extractive, with much gum, and chlorates, with sulphates of potass and lime.’ It is best in preparation as a cold infusion or watery extract, or a tincture, but not in decoction; even an infusion made with warm water is apt to produce headache. To form a cold infusion, a pint of water should stand more than twenty minutes on half an ounce of the brasic plant. It tends to produce a regular exertion of the alimentary canal. During its use the bile becomes more abundant and healthy in character. The tendency to excess of acidity in the stomach, with disengagement of flatus, is much restrained by its use. These qualities fit it in a most peculiar degree for the kind of indigestion which occurs in gouty persons. It may, when necessary, be associated with alkaline preparations or with acids; the latter are generally preferable. The same remark applies to its employment in the treatment of scrofula. As a remedy against the languor and debility which affect many persons in summer and autumn, nothing is equal to the cold infusion of this plant. It may be taken twice or even more, frequently, daily, for a considerable time; then discontinued, and afterwards resumed. Children take it more readily than most other bitters. It is found to be a very efficacious remedy in India against intermittent fevers, particularly when associated with Guilandina bonduce or Caranga nuts. Its efficacy in worm cases has procured for it the name of worm-seed plant. The extract is given with great benefit in some forms of diarrhoea and dysentery, particularly if combined with ipecacuan, the emetic tendency of which very markedly controls. The parts of the plant that are chiefly used in medicine are the dried stalks with pieces of root adhering to them; tincture is formed of it with orange-peel and cardamoms.—Roxb.; Useful Plants, quoting Don in Loud. and Edin. Phil. Mag.; Wallich, Plants As. Rarior, etc. See Chirecta.

The agave genus of plants belongs to the natural order Amaryllacea. The species are known by the name of American aloes, and produce clusters of long stiff fleshy leaves, collected in a circle at the top of a very short stem, and bearing flowers in a long terminal woody scape. A. Americana is a native of America within the tropics, from the plains to elevations of 10,000 feet, but is now common in every part of India, and is naturalized in the south of Europe. It is much valued as a hedge plant; but its chief importance arises from the excellent fibres which it yields, familiarly known as Pita thread. The usual mode of preparation is to cut the leaves, and throw them into ponds for three or more days, when they are taken out, macerated, and scraped with a bluntish instrument; but the best thread is obtained by crushing the leaves, when fresh, and scraping them. The leaf fibres are liable to rot, owing to a milky viscid juice contained in them. This is, however, considerably obviated by very hard crushing or pressure between heavy cylinders, which, by getting rid of all the moisture, renders them more pliable for weaving and other purposes. They are much used for lashing bales of calico. As log-lines for ships, they are found to be very durable, and far superior to ropes of wool, country hemp, or jute. A bundle of the Agave fibre bore 270 lbs., that of Russian hemp only 160 lbs. Dr. Wight found some cord of it bore 362 lbs. In Timneckly it sells from 20 to 40 rupees the cando of 500 lbs., and at Madras 7 rupees a maund. In 1853-54 were exported from the Western coast 3650 cwt., valued at 21,506 rupees. Aloe fibres are admirably suited for cordage, mats, ropes, etc., and might be advantageously used in the manufacture of paper. In Mexico, they prepare a fermented liquor from the stem;
AGAVE CHINENSIS.

The dried flowering stems are used as an impenetrable thatch. An extract of the leaves is used to make a lather, like soap; and the leaves, split longitudinally, are employed to sharpen razors on, serving the purpose of a strop, owing to the particles of silica they contain. The roots are diuretic and antisyphilitic, and are brought to Europe mixed with sarsaparilla. The Mexicans make a paper of the fibers of Agave leaves laid in layers.—Smith: *Drs. Wight, Stewart, Pahalg Plantis; Roxb. ii. 167; Simmonds' Veg. Prod.; Mod. Ex. Jour. Reports; Useful Plants.

AGAVE CHINENSIS, the *T'-ch'in-hiang of the Chinese, a plant of Formosa, yielding fibre, and used medicinally.

AGAVE PERFOLIATA.—*Willde.

Common in gardens throughout India.—Roxb.

AGAVE VIVIPERA. Linn.

Its Fibre.

This is common throughout India; planted in hedges, it grows luxuriantly without any further cultivation, and is capable of being extended in any soil. In the Lucknow jail, rope and sack-cloth have been made of it. A good fibre, long in the staple, is procured from the leaves, which are allowed to rot in water for twenty days, are then beaten on a plank and again thoroughly washed. A strong and useful cordage is made from them, as well as mats, ropes, etc. In South Arecot, these fibres sell at 30 rupees the cundy. In the Madras Exhibition of 1855, a good specimen of fibre from this plant was contributed by Dr. Kirkpatrick. It was long in the staple, clean, and strong, and had been prepared without rotting, by the simple process of beating, scraping, and washing. The name of 'silk-grass' also is applied to the *A. yuccafolia.* The fibres of the *A. vivipera* are said to equal in strength the best hemp.—*Useful Plants, Royle,* p. 43, *Jouries' Rep.*

AGAVE YUCCÆFOLIA, a plant naturalized in India, capable of yielding fibres.—*Royle,* p. 43.

AGELATA? A wood of this name was exhibited at the Madras Exhibition of 1857. It was light-coloured, with a fine even grain, and it appeared admirably adapted for furniture and many domestic purposes. It was said to be abundant in the woods, and had been used for a variety of purposes by the railway engineers; and gr. 0-74.—M. E. of 1857.

AGGANA SUTTAN, a discourse of Buddha. See Wijno.

AGHANI. Ar. The title of several Eastern airs, particularly the Kabir-ul-Aghani, compiled in the 10th century by Abul Paraj Ali, for which he got 2000 dinar from the Sultan of Syria and his vizir Ibn Ebad; copies of it were sold in Baghdad for 4000 drachmas of silver.

AGHAT, in Ahmadabad, a stone inscribed with the terms of sale, erected in a field. It is a stone-deed of sale. They usually bear on the top a representation of the sun and moon. Agathiya, land held rent-free.

AGHOR, a river in Mekran (?). In its bed are several mud volcanoes, i.e. the form of jets of liquid mud, known as Ram Chandar ki kup, the wells of Ram Chandar. See Oriam; Ram Chandar.

AGHORA, a name of Siva in his terrible form.

AGHORA, a deprecatory sect of Hindu devotees, who practise the most disgusting, filthy, and impure rites, their food being ordure and carrion, etc. It is said, however, where not insane, much of this is imposture, the object being to excite the wonder of the beholders, and make them believe in the utter indifference of the Aghora to worldly enjoyments. They are ogres; indeed, the similitude of the word to Aghori is noticeable. They go about nude, with a fresh human skull in their hands, of which they had previously eaten the putrid flesh, and afterwards scraped out the brain and eyes with their fingers, into which is poured whatsoever is given them to drink, and to this they pretend to be indifferent whether it be ardent spirits or milk or foul water. The Aghora is an object of terror and disgust. Hindus, however, look on these wretches with veneration, and none dare to drive them from their doors. They were among the worst of the many turbulent and troublesome inhabitants of Benares, and there is scarcely a crime or enormity which has not, on apparently good grounds, been laid to their charge. There are said to have been Aghoras ascetics in the neighbourhood of Abu from the most ancient times, and formerly to have been cannibals, hence their other name, Mard-khor. One of the ancient Hindu dramatists, Bhava Bhutta, who flourished in the 8th century, in his drama of Malati and Madhava, has made powerful use of the Aghora in a scene in the temple of Chamundha, where the heroine of the play is decoyed in order to be sacrificed to the dread goddess Chamundra or Kali. The disciple of Aghora, Ghanta, the high priest who is to perform the horrible rite, by name 'Kalapa Kundala,' is interrupted in his invocation to Chamundha by the hero Madhava, who thus describes the scene (Act V., scene 1, H. H. Wilson's Translation):—

'Now wake the terrors of the place, beset
With crowding and malignant fiends. The flames
From funeral pyres scarce lend their sullen light,
Clogged with their fleshly prey, to dissipate
The fearful gloom that hems them round.
Well, be it so. I seek, and must address them.

How the noise, . . .

High, shrill, and indistinct, of chattering sprites,
Communicate, fills the charnel ground;
Strange forms, like foxes, flit across the sky;
From the red hair of their lank bodies darts
The meteor blaze, or from their mouths that stretch
From ear to ear, thickset with numerous fangs,
Or, on heads, on brows, the silvery streams.

And now I see the goblin host: each stalks
On legs like palm-trees, a gaunt skeleton,
Whose fleshless bones are bound by starting sinews,
And scantily cased in black and shrivelled skin,
Like tall and withered trees, by lightning soaked,
They move, and as amidst their sapless trunks
The mighty serpents curl, so in each mouth,
Wide yawning, lolls the vast blood-dripping tongue.
They mark my coming, and the half-cowed morn;
Falls to the howling wolf; and now they fly.'

D'Anville speaks of them as 'une espée de monstre,' whose existence he doubted, though he quotes from Thévenot, who remarks, 'Les habitans de ce bourg (Deben) estoient autrefois de ceux qu'on nommoit Merdi-coura, ou Andrus poffages, mangeurs d'hommes; et il n'y a pas
grand nombre d’années qu’on y vendait encore de la chair humaine dans le marché.” (Voyages de M. de Thévenot; Paris 1684.) D’Anville adds, that this ‘espèce de bête,’ this Moréi-cour, had been noticed by Pliny, Aristotile, and Ctesius, under nearly the same name, Martichora.

Colonel Tod adds, that he passed the gopha or cave of the most celebrated of these monsters of the present age, who was long the object of terror and loathing to Abn and its neighbourhood. One of the Deora chiefs told him that, a very short time previously, when conveying the body of his brother to be burned, one of these monsters crossed the path of the funeral procession, and begged to have the corpse, saying that it would make excellent chattan, or condiment.

The headquarters of the caste were at Burputra (Baroda); and in Colonel Tod’s time there still existed on the old site a temple dedicated to the patroness of the order, Aghoreswar-Mata, represented as ‘lean fiance,’ devouring all. Her votaries are brought into the combinius class of ascetics, of whom they are the most degraded, beyond all controversy.

Mareo Polo (Mansden, Marco Polo, p. 252) speaks of a class of magicians who are akin to the Indian Aghora. ‘The astrologers who practise the diabolical art of magic, are natives of Kashmir and Tibet. They exhibit themselves in a filthy and indecent character; they suffer their faces to remain uncleaneed by washing, their hair uncombed, being in a squawish style. Moreover, they are addicted to this horrible and beastly practice: when any culprit is condemned to death, they carry off the body, dress it with fire, and devour it.’

The Aghora wand and waterpot were a staff set with bones and the upper half of a skull.

Wilson says the sect had died out by the beginning of the 19th century, only a few disgusting wretches, universally feared and detested, being then met with, whose odious habits and practices rendered them objects of aversion. They are now very rarely heard of. Cases, however, do occur from time to time in different parts of India, to show that such horrid rites continue to be practised; and the report for 1856 of the Madras Faujdary Adawlat gave the details of a horrible tragedy at Trichinopoly. — Tod’s Rajasthan, i. 575; Trav. p. 84; The People of India, by J. Forbes Watson and John William Kaye, i. and ii.; Friend of India, 1808; Leyden Asiatic Researches, iv. 202; Sherrin’s Tribes, p. 270; Wilson’s Hindus.

AGHORA-GHANTA. A priest of the goddess Chandni. Aghora-panthi, one who follows the practice of the Aghora. —W

AGHZAI. P. N. Fagonia erectica. Spal-aghzi is Astragalus multiceps and also Ballota limbata.

AGIA. HIND. A small plant with a purple flower, which grows in poor exhausted lands in the N.W. Provinces, and destroys other grasses; it kills the millet Paspalum scrobiculatum, in the also the Sorghum vulgar and sugar-cane, but not the Cajanus Indicus.

AGIAH or Augiah, a grass described by Hamilton (vol. i. p. 2) as growing about the thickness of the wrist and to a height of thirty feet, in the belt of low land running along the whole northern frontier.

AGILA-GAIRU. MAL. Eagle-wood.

AGIN. HIND. A witch; a Hindu goddess.

AGILA ODORATA. Lour. Canarium Sinoense, Rumph. | San-yeh San, . . . CHIN.

This grows in Cochlin-China and China. It is a flowering shrub with tannite and pinnate leaves, and very small yellow flowers in axillary racemes with a very agreeable perfume. The leaves are eaten as a vegetable; the roots and leaves are supposed to be worth trial as tonics. There is a fine-leaved variety. Both the Agilia odorata and Murraya exotica are very sweet-scented, and much cultivated by the Chinese; they are used to scent teas. A. Michanaporesis, Carey, grows in the forest of Midnapur.—Fortune’s Tea Districts, p. 7; Riddell; Hog, 171; Smith, p. 6.

AGILA ROXBURGHIANA. W. and A.

This large tree is very common throughout the Western Ghat forests, up to 4000 feet, also in the Timneckely hills, and in parts of Mysore, etc., and Ceylon, flowering in March and April. It is very variable in shape of the leaves and fruit and amount of pubescence; the timber is strong, and useful for building.—Beddome, Pl. Sylv.

AGILA SPECTABILIS. M’Clelland.

Kayam Kayo, . . . BURI.

A large tree met with in Tenasserim and along the banks of rivers in the Pegu and Tounghoo districts. It affords a light, serviceable timber, somewhat stronger than the American pine, and capable of being wrought with little labour. Wood, red-colonred, strong, and adapted for house-building.—M’Clelland; Mason.

AGILE-MARAM. TAM. Chickgrass tabularis.

AGNI, the Hindu god of fire, the Igis of the Romans. He is variously represented in Hindu legend, and has many epithets. About a fifth of all the hymns in the Rig Veda refer to this god exclusively; and most of the ten books open with hymns addressed to him. In Vedie mythology, Agni is the personification of fire, and the agent of the south-east division of the earth. He is very variously described,—sometimes with two faces, three legs, and seven arms, of a red or flame colour, and riding on a ram, his vahan or vehicle. Before him is a swallow-tailed banner, on which is also painted a ram. He is by others represented as a corpulent man of a red complexion, with eyes, eyebrows, head, and a tail of a tawny colour, riding on a goat. From his body issue seven streams of glory, and in his right hand he holds a spear. Agni is the son of Kasyapa and Aditi, but his origin, his attributes, and epithets are very variously represented. His consort, or sakti, is Swaha, a daughter of Kasyapa. She bore three sons, Pavaka, Pavamana, and Suchi. Swaha resembles the younger Vesta, or goddess of fire, of the Romans, who had no images in their temples to represent her. Thus Ovid has said—

'No image Vesta’s semblance can express:
Fire is too subtle to admit of dress.'

Neither do we meet with an image of Swaha. Those of Agni are usually seen in pictures. Agni continues to be worshipped by the modern Hindus as the personification of fire. He was worshipped as the destroyer of forests, and as useful in the sacrifice and in the household. 'When generated from the rubbing of sticks, the radiant Agni bursts forth with the wood like a fleet courser.' 'When excited by the wind, he rushes amongst the trees like a bull, and consumes the forest as a
rajah destroys his enemies." 'Such as thou art, Agni, men preserve thee constantly kindled in their dwellings, and offer upon thee abundant food.'—*Rig Veda*, i. 73; *Coles: Myth. Hind.* pp. 115, 117; *Dowson*.

AGNI, a fire ordeal. The accused touches fire or heated metal, and if burned he is deemed guilty. See Divination.

AGNI or Agni-Mata. BENG. Plumbago Zevelica. Agni-jwala is Grisa Pumtossi; Agni-vindrapaku is Amannia vesicatoria; and Agni-sikhra is Gloriosa superba; also Catharius tintorius.

AGNIASTRA, in Hindu mythology, the fire- shaft invented by Visvakarma in the war between the gods and the Daitya or Titans. See Visvakarma.

AGNI-BRAHMANA, a brahman who officiates as priest at the burning of dead bodies.—*W*.

AGNICULA, a general term for four Rajput tribes, supposed of Parthian descent,—the Chohan, the Purihar, the Solanki, and Pramara,—who are said to have been purchased by a conversion of the gods Mount Abu. It is supposed that they were recognised by the Aryan brahmanas, in order to obtain their martial aid. Tod says they were regarded as of the Tutsa or Takshak race, who invaded India about two centuries B.C., which was about the time that Parswa, the 23d Jaina Tirthankara, appeared in India. Their aid was required to overawe the Daitya or Titans in the vicinity of Mount Abu. The Agnicoonda, or fireplace, is still shown on the summit of Abu, where the four Agnicula tribes were created by the brahmanas to fight the battles of Achil-es and polytheism against the Buddhists, represented as the serpents or Takshaks.—*Tod*, ii. p. 451; *Prinsen's Antiquities*, by Thomas, p. 247. See Khait; Rajput; Chohan.

AGNI-DAGDHA, a Hindu who has died without issue, and is burned at once, without the previous ceremony of having fire put into the mouth.—*W*.

AGNI-HOMA, or simply Homa. Oblations to fire; a Hindu rite.—*W*.

AGNIHOTRA. SANSK. Performance of a daily or occasional worship, with fire lighted from a perpetual fire preserved in the dwellings of Agnihotra brahmanas, the remnant of the worshippers of Agni, who still preserve the family fire, but in other respects conform to some mode of popular Hindu devotion. A Brahman who keeps the sacrificial fire is obliged by law to know the particular gotra of the 491 to which his own family belongs. When the fire is to be consecrated, Agni Havyavahan, the god who carries the oblations to heaven, must be invoked. This invocation or invitation of Agni is called pravara. Agni himself, or the fire, is called Arsheya, the offspring of the Rishi, because the Rishi first lighted him (it) at their sacrifices. He is the hotri as well as the adhvaru among the gods. Like the hotri and adhvaru priests, he is supposed to invite the gods to the sacrifice, and himself to carry the oblation to the seat of the immortals. When, therefore, a brahman has his own fire consecrated, he wishes to declare that he is as worthy as his ancestors to offer sacrifices, and he invites Agni to carry his oblation to the gods as he did for his ancestors. According to prescribed rule, where a perpetual flame is maintained, it is used to light the fire round which the bride and bridegroom step at the marriage ceremony, and the funeral pile of either; but the household fire is preserved only by this particular sect, the Agnihotra, and the great body of the people have nothing of the kind. They distinguish between the sources whence they obtain the kindling flame according to the purposes of its application, and the fire of the marriage rite, for instance, is taken from the hearth of a respectable person, or from a fire lighted on some auspicious occasion, whilst for the funeral pile any unpolluted fire may be used. It is only necessary to avoid taking it from another pile, or from the abode of an outcast, of a man belonging to the tribe of executioners, of a woman who has lately borne a child, or of any person who is unclean. Notwithstanding these exceptions, it is at present the common practice of the Hindus of ordinary rank in the Western Provinces to procure fire from an outcast to light the funeral pile. The Agnihotri, from agni, fire, and hotra, a sacrificial priest, is always of the brahmanical class.—W. *W. Furruckabad, The Toy Cart; Colebrooke on the Beligious Ceremonies of the Hindus; Asiatic Res. xxii. 241*.

AGNIMUNDA and Agnipuri, formed of fire; an ethereal voice heard from the sky, proceeding from a meteor or flame.

AGNI-PARIKSHA. SANSK. A fire ordeal, by the accused walking through a fire, or dipping the hand into boiling oil.—*W*.

AGNI PURANA, a Hindu sacred book in praise of Siva, supposed of comparatively recent origin.—*Dowson*.

AGNI-SANSKARA. SANSK. The sacrament of fire; the worship of fire as the completion of any essential rite; the burning of the dead body of a Hindu.—*W*.

AGNI-SAVARNI, in Hindu mythology, one of the fourteen patriarchs who preside successively over the fourteen Manwantara of the Calpa.

AGNI-SHIMA, or Agni-Shimaiya-yoga. SANSK. Oblations of milk offered at new moon, through fire, to Indra.—*W*.

AGNI-SUTRA. SANSK. In Mysore, a girdle of sacrificial gear, passed round the waist of a brahman lad when he is invested with the sacred string of his caste.—*W*.

AGNI-VESA, an early Hindu writer on medicine, said to be son of Agni.—*Dowson*.

AGNIYA, a servant of the Cuvera or Guhya.

AGOR. MAHI. A watchman or guardian of the village lands and crops. Agor-batai, a division of a crop between the cultivator and the landlord, after customs, threshing, and storing.

AGOTAG. BICOL. Musa textilis.

AGRA, in lat. 27° 10' 6" N., long. 78° 5' 46", is a large city on the right bank of the Jumna. It was the seat of government from the time of Akbar. Its name has been derived from Agur, a salt pit, owing to the prevalence of a saline soil; also from Aghari, in advance, from an answer made to sultan Secunder Lodi by the steersman of his boat, when asked which site should be built over. It gives the name to a revenue division of the N.W. Provinces of India, comprising the districts of Muttra, Agra, Furruckabad, Mynpur, Etawa, and Etah. Agra city is 842 miles by rail from Calcutta, and 650 feet above the sea. Its population in 1872 was 149,008 souls. Near Agra is the tomb known to Europeans as the Taj Mahal, built of
AGRA-BHOJANA.

AGRICULTURE.

white marble and red sandstone by Shah Jahan, over his wife, Arjuman Bano Begum. She died in 1629, and this building was completed 1648. It is on the river bank. Five miles out, on the Dehli road, is the tomb of the emperor Akbar at Sikandra; also the College, the Metcalfe Testimonial. The Ram Bagh garden merits attention; and the magnificent tomb of Itimad-ud-Dowlah, the vizir of the emperor Jahanarg, and father of the famous empress Nur Jahan, who built the tomb. The fort of Agra was built by the emperor Akbar, and is one of the grandest in India. It is built of red sandstone. It is 1½ miles in circuit, and its walls 70 feet high. In front of the main entrance is the Tripoli, now used as a marketplace. Facing the gateway, and outside the enclosure of the fort, is the Jama Masjid. It is 180 feet long and 100 feet broad. It was constructed by Shah Jahan in 1644, after five years’ labour, and was built in the name of his daughter, Jahan Ara, who afterwards shared her father’s captivity when he was deposed by Aurangzeb. Within the fort are the public halls, the Diwan-i-Am, built in 1655 by Aurangzeb, and the Diwan-i-Khas; also the Machi Bhawan, on the river side of which are two thrones, one of white marble and one of black slate. Besides these, there are the Shish-Mahal, the Jahangir Mahal, and the exquisite Moti Masjid, built by Shah Jahan a.d. 1654, with its three domes of white marble, reared upon a lofty sandstone platform. The battle of Agra was fought on the 17th October 1805, General Lord Lake commanding.—Bishop Heber, i. p. 587; Elliot, Sup. Gloss.; Mundy’s Sketches in India, i. p. 53; Thurlow’s Company and the Crown; Delhi Gazette; Robert Schlagentweit; Imp. Gaz.

AGRA-BHOJANA. SANSK. Literally first served with food at a feast, implying a brahman who has read the yajur, sami, and atharva vedas.

—Hindu Theatre, iii. 184.

AGRADANA or Agriharika, in Bengal, a brahman of inferior order, who conducts funeral obsequies or sadhahas for hire, called ironically Mahapatra and Mahabrhmohana.—Wilson.

AGRAHARAM. KARN., MAHL., TAM., TEL. A village occupied by brahmans. Agrahara or Agram is from two Sanskrit words, Agra, first; hara, what receives. It is written variously. These villages are held at a favourable quit-rent or free from assessment; it may be free from all tax (sarv agraharam) or at a stipulated rent (ulmukta agraharam) or at a rent which fluctuates with the produce (kattubadi agraharam).

AGRAHAYANA, a Hindu month falling in November and December.

AGRAHI, a section of the Banya of Benares, who claim to be of the Vaisya caste.

AGRAI, a cultivating race in the Konkan.

AGRICULTURE is the only industrial enterprise which is conducted on a large scale in British India. In China it is a great and highly honoured employment, and it affords a livelihood to the large majority of their respective populations. 34,844,000 adult males, or 56.2 per cent. of the entire population of British India, are agricultural, living exclusively by the soil, or eking out the earnings of other employments by the produce of the land they till, or as agricultural labourers. There are also large numbers of women and children similarly employed, and the field labourers are 7½ millions in number. The owners of the lands of British India are mostly all of the Hindu religion, or of the various original or modified cults which the non-Aryan races profess. Brahmans and Rajputs are large proprietors, and some Mahomedans are owners, but few of these three races labour with their own hands. In the extreme south of the Peninsula, the great body of the cultivator landlords speaking the Tamil, Canarese, Malalaim, and Telugu languages, are the Valalar, Idayan, Kavadi of Coorg, Okaliga, Bair, Reddi, Balja, Kandhi, Kapa, Kannu, and Gond. In the south of India, these are broken up into many sections, who have assumed the form of castes, whom the Census report of 1872 enumerates as—Tamil, viz. Brahman, Vaisya, Valadan, Kavari; Pulley, Kukalavun; Idayan, Kanakan, Chaney, Vaney, Ochhen, Pancheavun, Ambutten, Kuvayen, Sanan, Paranyan; Vettay, Kummany, Chakili, Talukun, and Reddi. Telugu, viz. Brahman, Kapa or Kamma, Kolla, Balja, Sanay, Mangay, Mathuraju, Sakala, Kamara, Yanathi, Vetti, Mutham, Tulaka, Thuthakela, Kondla, Komala, Olla, Gandra, and Nambe.

The people speaking Canarese, almost all of the lingaet sect, are largely agricultural.

In the Bombay Presidency, and extending into Berar and Malwa, the Kundi, a Mahrtta race, is so exclusively agricultural, that their tribal name is ordinarily used to indicate a cultivator.

Farther north are the Kurmi, a numerous race, whom some ethnologists consider identical with the Kundi, also the Lodha. In Bengal are the Chasa and Kisan; farther to the north-west are the Gujar, Rajput, and Jat, the last being spread throughout the Panjab southwards to the Arabian Sea. The finer garden work is carried on everywhere by the Tota-Kara, the Mali, the Kachhi, Lodha, and others.

The labourers consist of the broken tribes, whose position, even yet, is almost a proflit slavery. The great body of labourers in the Tamil country are not Hinduized, as, for instance, the Pariah (parayan) and Chakili; in the Telugu country, the Madherva, Malla, and Madiga; in Coorg and the Canarese districts, are the Holiya and their branches, Badaga, Balage, Kembuti, Kallu, Madiga, Mara, and Marangi. Amongst the countries formerly ruled by the Peshwa are the Mhar and Mang, and Dher, and Kolt, and Bili; and farther to the north are the Southal, Dom, and Chammar, with many other non-Aryan tribes.

The soils of British India are of varied fertility, but the poorest soils can be made to produce something if only watered naturally or artificially; and the cultivation is by their rulers, by constructing weirs across rivers, excavating canals, forming tanks, and digging wells, have never ceased to plan and strive how to provide a supply of that essential element. In most districts the annual rainfall would be ample if it were but distributed throughout the agricultural season. It is a common experience for a tract of country to suffer from drought and flood in the same month. There might be drought for twenty-nine days, and a flood on the thirtieth. This necessitates the employment of storage tanks; but a large part of the country is still without them, and many have fallen into disrepair; and in the Madras Presidency, many rivers that formerly flowed for
AGRICULTURE.

five months now flow for only three or four. Fully 80 per cent. of the occupied land was still, in 1869, unprotected by irrigation; and as an increasing population has to depend largely on the land for their food, its prices increase and the people suffer. The quantity that runs to waste is something enormous. For instance, one foot of rainfall on a square mile gives 1,082,532 cubic yards, or 174,239,775 gallons. But, in India, the rain falls in heavy downpours, and the proportion absorbed by the soil is comparatively small. The monsoon of 1862, for instance, was under the average in the Karnatic, yet the quantity of water that ran to waste into the sea from the Pennair (a second-class river), after a sufficient supply had been drawn off for all the cultivation as then existing under it, amounted to no less than 4,693,812,356 cubic yards, or 691,831,855,075 gallons, sufficient to have irrigated nearly 1000 square miles. This discharge was calculated from the register kept at the amicat at Nellore, and is rather under than over the mark.

In average seasons, the fields of British India yield more than the population consume. There are 1653 million of acres under food crops, and 274 under non-food crops, and the total produce is estimated at 54 million of tons, and the annual surplus of food at about 5 million tons, part of which is sent to other countries. The usual export of grain is between 1 and 1½ million of tons, rice being about 1 million, and wheat ranging between 50,000 and 325,000 tons. Besides the cereal grains, millets, pulses, vetches, and vegetables, there is other food available for the people, from land and sea, and from horned cattle, sheep and goats, milk, poultry, eggs, fish, and straw for fodder for their cattle. Former rulers, both Hindu and Mahomedan, have tried to improve the breeds of horses, horned cattle, and sheep, and introduced many exotic plants. Continuing such efforts, the British have established an Agricultural Department of the State, agricultural schools, model farms, horse and cattle fairs. Railroads and a great commercial navy are equalizing the supply, and they have secured for traders the peace essential for their success, and to carry to other parts the surplus produce of caoutchouc, cardamoms, cinchona, coffee, cotton, dyes, hemp of kinds, indigo, jute, lace, millets, oil-seeds, opium, pepper, pulses, rice, timber, and wheat. But scientific and practical men entertain the belief that the cultivators of British India could improve on their present efforts. The average out-turn of food grains is estimated in the Panjab, Mysore, and Madras, over the cultivated area, at 11 bushels per acre, which, assuming 57 lbs. to the bushel, may be taken at 627 lbs. The average produce per acre on a series of observations extending over ten years, in several districts of the Bombay Presidency, was found to be—Wheat, 9 bushels, or 558 lbs.; Jari, 10 bushels, or 650 lbs.; Bajra, 6 bushels, or 390 lbs.

In the N.W. Provinces and in Bengal, the average out-turn of food grains is estimated to be 13 bushels per acre; in the Central Provinces, 8 bushels; in Bombay, 7½ bushels; in Berar, 6 bushels. The average yield per acre of some of the usual dry crops was found to be as under:

Black rice, dependent on rain alone, 700 lbs.
Chana or Bengal gram, 450 lbs.
Gootie or Madras gram, 600 lbs.
Dhal, 500 lbs.
Cotton, unirrigated, 200 lbs.
Indigo, unirrigated, of dry indigo, 30 to 50 lbs.
Wheat, partially, 20 to 30 bushels.
Hemp, 460 lbs.

As the result of a great number of experiments in different parts of Southern India, the average yield of rice cultivation, first crop, was found to be as follows per acre:

Best white rice, fully irrigated, 2400 lbs.
Maximum, shown by the experiments, 3650 lbs.
Red rice, fully irrigated, averaged 1800 lbs.
Black rice, partially irrigated, do., 1200 lbs.
Black rice, depending on rain only, do., 700 lbs.

But in the Dehra Doon, wheat cultivation averages 1260 lbs. per acre, or say 22 bushels; and Bajra, at the Sind experimental farm, 1420 lbs. per acre, or say 25 bushels. Also, it has been known that Mr. Lawes of Rothamsted, for many years in succession, by free manuring, raised an average of 34-14 bushels of wheat, or say 1945-98 lbs.; and in Jersey the average is 37 bushels per acre, or say 2109 lbs. On these data, Mr. Cunningham says (pp. 16 and 18) that if the standard of cultivation in England could be reached, the additional food available would be 2890 millions of bushels, or enough, at 7 bushels per head, for the annual consumption of an additional population of 410 millions.

The defects in the agricultural work of British India, to which all European investigators point as the causes of scant yield, are too slight ploughing, want of manure, heavy annual cropping, and reckless watering. In British India, only special crops are manured; but the benefit of manuring lands has been shown, as under, by Messrs. Lawes and Gilbert of Rothamsted:

</table>

So that, whilst wheat on properly cultivated but unmanured land in England produced a yield on the average of 12-97 bushels or 74-29 lbs. per acre, fully manured lands yielded 34-14 bushels or about 2030 lbs. per acre. The Indian cultivator, however, well acquainted with the importance of manuring his lands, he may be less thrifty with it, and may make insufficient exertion to obtain due supplies of it, but more than all he can possibly gather could be applied to the spade husbandry of his gardens, where sugar-cane, betel-leaf, and the finer and higher-priced fruits and vegetables are grown. Many of them, also, are no doubt wasteful, even destructive with their water supply, and on these points the Indian cultivator might take a lesson from the Chinese, who are of the very highest class of gardeners and farmers, though their agricultural implements are scarcely any better than those of the Hindus. Their secret is that they are exceedingly industrious, and waste nothing. There is not an inch of a Chinaman's field left uncultivated, or a clod that has not received its due portion of manure; the sewage
of towns and villages is not wasted, or worse than wasted, as in India, but is returned to the land; whereas the surprising productiveness of Chinese agriculture. The Chinese also thoroughly understand irrigation. They do not waste their water or their land in the process, but cause drainage and irrigation to go on together. Mr. Elliot says the native farmer thoroughly understands his business as regards fertilizing the soil, and that if he does manure very little, he at least manures as much as he can; leaves are used to add to the manure heaps; nitrous earth is also used in some parts of India; fish are applied to land on the coast; town sweepings are carefully used, and so also are the refuse of oil mills and indigo vats; crops to be ploughed in green are in some instances grown; salt earth is applied to cocoa-nut trees in Malabar; in the Madura collectorate, even bata's dung is collected from old and ruined buildings; where flocks of sheep are to be met with, the owners receive regular payment for every night they are folded on a farmer's field; and in some parts of the country, where the means of enclosing them exist, cattle are also folded on the land. The cattle are, however, not stalled, and even what can be collected of their dung is dried and used for fuel. This is a loss to the Indian lands. In England, every 1000 lbs. of the dung of grass-fed cattle contains 11 lbs. of valuable manurial matter,—4 lbs. of nitrogen, 3 lbs. of phosphoric acid, and 4 lbs. of lime. In India, every morsel of dung that falls on roads and lanes and the barren plain is carefully gathered, and used as fuel. This is chiefly the consequence of the great dearth of wood over all the cultivated tracts; and the necessity of planting is now recognised by the governments of India. There is a custom, in the Nellore district, of planting a certain portion of the lands bordering on streams, or intersected with watercourses, with the Acacia arabica and A. leucopeleca. These shelter the grass in hot weather, and their pods are used as food for cattle and sheep. The wood is also valuable; and when about ten years old it is cut down for timber, after which the land is put under crop, and another section is laid down under this admirably combined system of fodder and timber growing. Manures containing organic matter increase the condensing powers of the soil. But, as a general rule, the Indian farming exhausts the organic matter in the soil, and thus renders it less able to take up moisture from the air. Their cropping of the land is very exhausting, not so much from the crops grown being those that make great demands on the soil, but because nearly the whole are removed and not consumed by the stock of the farm; and the native practice of allowing the land to lie fallow for several seasons, is a proof of their consciousness that they have been exhausting it. Also, according to existing rules, a cultivator pays rent or revenue only on the fields he cultivates. The ryot has not a fixed holding, but changes it at pleasure, and as a consequence the land is becoming exhausted, and permanent improvements are not made. The ryots of a village may not pay for more than 200 acres, and yet in the course of years may temporarily exhaust many hundred acres. If each cultivator were obliged to keep to a given area, the exhausting character of the husbandry would render the soil unfit to yield the scanty produce obtained by the ryot. The existing practice is only a modification of the Kunari form of cultivation as followed by all the hill tribes of the East Indies, which consists in burning the forest or brushwood and sowing their grains in the ashes, taking only one crop off the cleared land, and proceeding to another place in the year following.

In the south of India, soils are classed roughly as Nanja and Panja, or wet and dry. Nanja soil is fitted for the cultivation of rice, admitting of artificial irrigation, and hence commonly termed wet cultivation, in contra-distinction to Panja, or dry cultivation, which comprises all such crops as are dependent solely or chiefly upon rainfall and dews. Amongst these dry crops may be named an inferior sort of rice, yielding a scanty and precarious crop; several oil-seeds, as linseed, castor, gingly or sesamum, (Sesamum Indicum), all dry grains, as wheat, barley, sorghum, bajra (Pennisetilla spineta), maize, millet, ragi (Eleusine coracana), and the like; all vetches, dhal (Cajan Indicus), Madras hemp (Dolichos indicum); Bengal gram (Cicer arietinum); also indigo, cotton, with a few garden plants, as tobacco, chillies, turmeric, which require partial irrigation.

Undoubtedly, for the food of the community, more could be made of the land than at present, but the agricultural races have still much land available. The Panjab has 30,000 square miles of cultivable waste, Bengal 85,000 square miles out of an area of 144,000; Assam has 7500 square miles cultivated, and 18,000 of cultivable waste; Burna has a total area of 87,000 square miles, of which 5000 are cultivated and 37,000 believed to be cultivable. The lands still uncultivated in these two provinces cover an area of 55,000 square miles, five times as large as Belgium, in which a redundant population could be placed. In the Central Provinces, out of a total area of 114,000 square miles, 30,000 are cultivated and 40,000 believed to be cultivable. In Bombay, 30,000 square miles of the 88,000 square miles of cultivable land are actually under cultivation; and in Madras, which has, besides the zamindaries, a total area of 130,000 square miles, only 10,000 square miles of inferior soil remain uncultivated.

In Northern India, the harvests are ordinarily classed as rabi and kharif. The rabi crops, those sown at the fall of the year and reaped in the early spring, consist of the cotton, maize, sorghum, indigo, wheat, barley, oil-seeds, hemp, jute, vetches, peas, Bengal gram, and Madras gram, and the arhar or tür dhal (Cajanus Indicus).

However largely the means of irrigating lands may be extended, the dry cultivation must ever form the backbone of Indian agriculture; it is for this that retentive soils have so high a value. The best of these is the regur, kali matti, or cotton soil, which overlies the great outburst of volcanic rocks that spread from the Belgian district northwards to Malwa, and is to be seen in patches throughout the country. It is capable of absorbing and retaining more than one-third of its entire weight in water, and has, in a remarkable degree, the power of absorbing moisture from the air. The rabi crops being grown in the cold season of the year, and on the plateaux and table-lands, need all the heat obtainable. One conclusion
come to by Dr. Wight as the result of his cotton experiments in S. India was that, from being sown there for a later growth, it did not receive sufficient heat. And throughout the central plateau of peninsular India, the cultivators regard hedges and trees as injurious to crops, which are annually enclosed by the branches of thorny trees, and are burned after the harvest; consequently, when the crops are off the ground, the whole region has a treeless aspect.

To secure the utmost benefit from the available water supply, the beds of paddy fields are in terraces, so as to admit of the water being led from the higher to the lower beds, and in all the mountainous countries terracing is to be seen carried out to a great extent. On the N.W. of British India, Elphinestone (Caubul, p. 353) described it as followed by the Othman Khel, and at Srinuggur, he says, walls are made along the sides of the hills, and filled with soil from the lower part of the hill; the walls are from three to ten feet high, and the terraces about five yards broad. The walls are soon concealed by grass and other vegetation, and as they are never straight, but consist of the bends in the surface of the hills, the effect is pleasing and picturesque. In Beluchistan, in the Mekran province, and in the valley beyond Baghwan, terracing by some prior race has been conducted in a manner so cyclopaean as to excite the wonder of all who have seen the huge rocks which have been laid across the slopes of the mountains. The Malai Arasar, or hill kings of the Pulneys, in the extreme south of India, follow the terracing system. And in the Archipelago, the people of the Tengger mountains, described by Raffles, and the Serwati and Letti, Babs and Timor Laut islanders, scarp the hill-sides into a succession of platforms and terraces.

Over-irrigating seems to have the effect of bringing the saline particles of the soil to the surface. Mr. Schrottky has informed us that in the saline soils of Kattywar, the quantities of chloride of sodium decreased from the surface downwards. The first six inches had 3 per cent.; at one foot below there was 0.48 per cent.; and in the subsoil at 2½ feet, only 0.44 per cent. His recommendation for its removal was subsoil draining. Mr. Robertson of the Madras school also recommends improved ploughs and deep ploughing, to bring fresh soil to the surface. The agricultural implements of India are constructed with the same objects in view as those of Europe, and those employed in the Dharwar collectorate may be noticed for the whole. The large plough is used on ground being brought into cultivation for the first time. It is broken up with this lengthways and crossways. If the land is heavy, eight, even sixteen, bullocks are used; if light, four are sufficient. It is used in cotton and also in grain cultivation. A smaller plough is used in black soil at intervals from six to ten years, and worked with two or four bullocks, according to the depth of ploughing and stiffness of the soil. In cotton and also in grain cultivation, and in red soils, it is used every year. The kul is used with two bullocks after ploughing, for further breaking up the soil, and also used without previous ploughing in the years when the black cotton soil is not ploughed. After the seed—whether cotton or grain—is sown with the drill, the iron and wooden supports are removed from this instru-

AGRIOPHYLLUM GOBICUM.

AGRI-HORTICULTURAL SOCIETY of Calcutta was established in 1820 by Dr. Carey; that of Bombay in 1830, and reorganized in 1853; that of Madras in 1835; that of Lahore in 1851.

AGRIOPHYLLUM GOBICUM, an annual salsoaceous plant of E. Asia, the 'soulk' of the
AGROHA.

Mongols, largely eaten by the Ala Shan nomades.

—Von Mueller.

AGROHA, a small town on the borders of Hariana, the original seat of the Agar tribe. It was taken by Shahab-ud-Din Gori, 1194, on which the Agarwal dispersed all over India. See Agawal.

AGROSTIS, a genus of grasses of the natural order Graminaceae of Lindley; several species are met with in pastures and barren land. See Cynodon dactylon.

AGULLAS BANK, begins at lat. 32°3 S. and long. 29 E., and extends its breadth to the S.W. all it exceeds 125 miles.

AGUMUKI. Beng. Bryonia scabrella.

AGUNDU-PAKU. Tel. Ammannia vesicaria.

AGWAR. HIND. The first portion taken from the heat of corn, the purgative in kind of the laughman.—W.

AGYA-GHAS. HIND. Andropogon schoenanthus.

AGNEIA COCCinea.

Ha! h'men, . . Burn. | I'soke gyeec, . . Burn.

The roots of this curious flowering plant are used medicinally by the Karen. Wight figures A. becciformis, and Voigt names A. puber of the Moluccas.—Mason.

AHAR. Arab. Quicklime.

AHALU, of Kaghan, Visnum album, L.

AHALYA, in Hindu mythology, was the first woman made by Brahma. She became the wife of the rigid Gautama, and was seduced by Indra assuming her husband's form; but she was purified and restored to her husband. Ahalya and Indra are allegorical for the sun and night.—Jarrett.

AHALYA BAI, a Maharatta princess of the folkar family, who ruled in the middle of the 18th century. She was born a.d. 1735; she was not a beauty, but in conversation her countenance lit up, and she had a slender frame. She had a quick and clear understanding, strong natural sense, a witty mind, and noble virtues. She was married to Kundee Rao, the only son of Mulhar Rao folkar; but before she was twenty years of age he was left a widow, with one son, Malli Rao, who became insane and died, and a daughter, tuteha Bai. From her widowhood she adopted his white garments of Hindu widows, and ceased to use jewels. On the demise of her son she claimed to rule. Opposition was at first given, but by a.d. 1765, while not more than thirty years old, she succeeded to the administration of the folkar government. She appointed Tukaji folkar to the command of her armies, and his family succeeded to the sovereignty. She was sufficient; she built the Visawara temple at junars, and the present Indore. She heard complaints in person; and after a peaceful reign, from 1765, at the age of sixty. See folkar; Maharatta Governments.

AHAN-RUBA. Pers. Loadstone.

AHAR. HIND. An embankment, a small sand: also a salt pit.

AHARWARAH or Aharat, a territory on the north-east frontier of Malwa, which contains many districts. It is to the west of the Rambanga, and extends into a portion of Rohilkhand and Murdabad. The Ahar tribe are spread through Rohilkhand and other districts in the N.W. Provinces, following pastoral pursuits. They claim to be descended from the Yadu race or Yadu Mancus, and the Ahir make the same claim; but Mr. Sherring says the Ahir assert that they are the descendants of Krishna himself, and that the Ahar are only the children of Krishna's cowherds.—Sherring's Tribes, p. 337; Malcolm, Cent. Ind. i. p. 325.

AHDI. ARABO-HIND. In the armies of the emperor Akbar, a cavalry soldier who served with his own horse and accoutrements; the Sillahdar of the present day.

AHETA or Negrito, a small Negroid race, the second name, meaning little Negro, being given to them by the Spaniards; but that of Ita or Ahet, written Ajeta, is their usual appellation among the planters and villagers of the plains. The woolly-haired tribes are more numerous in the Philippines than in any other group of the Indian Archipelago; they were estimated by M. Mallat, in 1842, to amount to 25,000. The islands Samar, Leyte, and Zebu have not any of them; but they are found in Negros, Mindanao, Mindoro, and Luzon. In the early accounts of them by the Spaniards, they are described as being smaller, more slightly built, and less dark in colour, than the Negroes of Africa, and as having features less marked by the Negro characteristics, but as having woolly instead of lank hair; and their social condition could not then have been much better than now, since they are described as living on roots and the produce of the chase, and as sleeping in the branches of the trees, or among the ashes of the fires at which they had cooked their food. They are all well formed and sprightly, but rarely exceed four feet and a half in height. It is impossible to surmount their tendency to idleness. They prefer a savage life to all the charms of civilisation. They take no pains in clearing their hair, and do not know how to arrange it; it forms a sort of crown round the head, which gives them an exceedingly fantastic aspect, and when seen from a distance, makes the head appear as if surrounded with a sort of aureole.—Earl’s Papuans, pp. 121 to 131. See Alfoeren; Papuan.

AHI. SANSK. A serpent; also a name of Vritra, or the rain cloud; also a mythical chief of the races warring against the ancient Aryans.

AHI-CHHATRA or Ahir-Kshetra, a town mentioned in the Mahabharata as the capital of N. Panchala. It is the Adi Sadra of Ptolemy; and it has been identified with Adikut, or Ahir-Chhatra, near Ramnagar in Rohilkhand. Its fort was restored, about the middle of the 17th century, by Ali Muhammad Khan. Its history reaches back to B.C. 1430, at which time it was the capital of Northern Panchala. The name is written Ahir-Kshetra, as well as Ahir-Chhatra; but the local legend of Adi Raja and the Naga which formed a covey over its thread, or among the ashes of the fires at which they had cooked their food, makes the head appear as if surrounded with a sort of aureole.—Cunningham, Ancient Geog. of India, p. 359.

AHILLA. SINGH. Cathartocarpus fistula.

AHINSA, in Buddhism, the non-injury of animal life.

AHIIR. In Central and Northern India, and in the N.W. part of the Peninsula, Ahir is a general term for a pastoral race, who are known in Bengal as the Ahbir, a contraction from the Sanskrit Abhir, a cowherd race noticed by Ptolemy as occupying above Patalene. They
are most numerous in the N.W. Provinces, spread through the Central Doab, in the Upper Doab, on the west of the Jumna, and in the Lower Doab and province of Benares. They are distinguished as three tribes who acknowledge no other connection than the name of Ahir. These are the Nandbans, Judda or Yadubansa, Goila or Gonlabansa. The first are more numerous in the Central Doab; the second in the Upper Doab, and on the west of the Jumna; and the last in the Lower Doab and the province of Benares. The two first are numerously subdivided, bearing distinctive appellations, taken usually from the place where they reside. Some of the Jadubans have been converted to Mahomedanism, and are known as Rangar, in common with some other tribes. Tribes of Ahir are numerous also in Rajasthan and the Punjab. In the Delhi territory, the Ahir eat, drink, and smoke with Jats and Gujars, and in some cases with Rajputs. The several subdivisions intermingle, avoiding only the courts and temples, and where they are much intermixed, as in the Dehli Doab, with Gujars and Jats, they conform to their usage of the marriage of the widow of an elder brother by the next in seniority. They have two forms of marriage, the bhanwar, or first class, and the darcjha, or second class. Ahir hold lands along the borders of the rivers Jumna, Ganges, and the Hindun, where the uncultivated grass lands afford them means of grazing their herds. In Oudh they are now generally agriculturists, as well as engaged in rearing cattle; but they have no rights in the soil. In 1871 they numbered in Oudh 1,170,000 souls. In the N.W. Provinces they were two and a half millions. Immense numbers of the Ahir seek the high grazing grounds of Central India and Western Bengal, where they form encampments in houses made of large bamboo mats, residing, with their wives, families, and herds, until the grass in the neighbourhood is exhausted, subsisting entirely on the proceeds from their cows and buffaloes of their milk and butter and ghi. Their mat houses can be taken to pieces and removed like tents. They are a sober, quiet, and contented people. They have not any chiefs or head men. They have not, since many centuries, been of any political importance. But in the Ramayana and Mahabharata the Abhir of the west of India are mentioned; the geography of the Puranas describes the western parts of India, from the Tapti to Devagahir, as called Abhira; and in the 8th century, when the Kathi arrived in Gujerat, they found the greater part of the country possessed by the Ahir. At the present day, in Northern India, they do not keep sheep, and in this they are imitated by the small bodies of the cowherd race in the Dekhan. The Palli herdsmen dynasty, who reigned in Bengal from the 9th up to the latter part of the 11th century, are supposed by Sir Henry Elliot to have been Ahir, and they seem to have spread in ancient times into all the lands where their herds could find pasture. Gwalior in Central India, Gawilghur in Berar, and Golconda in the Dekhan, are supposed to have been their halting sites. But the countries in the south of the Peninsula were long held by the shepherd Kurumbar (Kurn in Canareese, a sheep); and Asa Ahir, whose stronghold Asirghar was taken, is said to have had 5000 buffaloes, 5000 cows, and 20,000 sheep. There are several Kur Kut in the south and Yenni-Guda, the hill of the buffaloes, and Yennai-Guda, the hill of butter, indicate pastoral stations. Asir-guir is said to have been so called from that Asa-Ahir. Ahir Kolii of Kandesh reside along the banks of the Gima and Tapti rivers, and are employed as watchmen.—Wilson; Sir W. Elliot in the Jo. Eth. Soc.; Sir H. Elliot.

AHIRI, a forest in the chieftship of the same name, in the southern portion of the Chund district, on the left bank of the Pranhita river. It has much teak trees. The inhabitants are almost wholly Gonds, and the languages spoken are Gondi and Telugu.

AHKAM. ARAB. Orders: plural of hukum.

AHL. Pers. People. Ahl-i-kar, servants Ahl-i-kitab, the people of the book; a term applied by Mahomedans to Jews, Christians, and Mahomedans.

AHLADA MARA. CAN. Ficus Indica.

AHLI-NE-NGAI. BHUT. A tree of Moul, mentioned for ordinary house-building purposes.

Its leaves are eaten as greens.—Col. Cat. Ez.65.

AHMAD, son of Yaliya, styled Al Biladur, author of Fattah-ul-Baldan. See Biladur.

AHMADABAD, a town in India, in long. 73° 38' 30" E., and lat. 23° 1' 45" N., built on the left bank of the Sabarmatty river. It was the capital of Gujerat during the Mahomedan occupancy, in 1413-1442. When Ahmad, grandson of Jaka, styled Wajch-ul-Mulk, resolved to found Ahmadabad, he chose a site occupied by a community of the Bhil race, whose predatory habits were the terror of the neighbourhood. He resolved to create his new capital by means of the city of Chandraoti, the materials of which he used, and compelled all its people to follow the spoils of their temples and dwellings to the uninteresting unhealthy, low flat on the banks of the Sabarmatty. It has been held by the Mahomedans of Dehli, by the Gaekwar, and by the Maharratas. General Goddard took it by storm 10th Feb. 1780, but did not retain it. In 1818, on the overthrow of the Peshwa's power, it reverted to the British. Population in 1872, 153,492. The district has 89,489 souls, Srawak or Jains, Hindus, Mahomedans, with a few Parsees, Christians, and Jews. The agriculturalists are Kunbi, Rajputs, and Koli. Many of the Kunbi are skilled weavers. The Kunbi clan are the Lewa, Kadwa or Kadava, and Anjana. The Kadwa Kunbi, when a suitable husband cannot be found, marry the girl to a bunch of flowers, which is afterwards thrown into a well. The girl is then a widow, and can now be married by the natra, or second and cheap form of marriage. Or they marry the girl to a man already wedded, obtaining previously his promise to divorce her as soon as the ceremony is over; and the girl is afterwards given in natra to any one who may wish to wed her. Some of the Rajput are grasya, others cultivators. The Srawak Jain merchants are more wealthy than the Meho Hindu merchants.

The races on the border tract between Gujerat and the Kathiawar district are the Chandasana, descended from the Hindu dynasty of Junagar; the Waghele, a remnant of the Solani race, who escaped from Ahinhiwar when driven by Ala-na-Din, 1297. The Waghele were first known as Makwara; the Gohil, immigrants from Marwar. The Thakara are the descendants of...
AHMAD BIN HANBAL.

Solanki and Mukwann families who intermarried with the Koli of Mahi Kanta. The Mol-salam re Pramara Rajputs, converts to Mahomedanism. These and other city residents are designated Kashi.

Ahmadabad is famed for its cloths of gold and silver, silks, cotton fabrics, manufactures of gold, silver, steel, enamel, mother-of-pearl, aqua-gem, and fine woodwork, gold and silver thread, pottery, and paper, many of the industries being under the contract of guilds. Its architectural structures are mosques, tombs, man- singlems, and wells. Ahmad Shah and his queen were buried there.—Told's Travels, p. 131; Imp. Trav. AHMAD bin HANBAL, the fourth and last of the learned doctors of the Mahomedan faith, born A.D. 780. See Imam.

AHMANDAGGUR, a city and fortress in the province of Aurungabad, is the principal artilleri- faction of the Bombay army. It is on the left bank of the Scena river. Its fortress, in the centre of a great plain, consists of a curtain with bastions and ditches, and the Pettah also is surrounded by curtain and bastions. The population in 1828 was 21,208; in 1833, 23,774; and in 1872, 2,841. It is in lat. 19° 5' N., and long. 74° 55' E.

It was the capital of the territories of the Nizam Mahb Bhai religion; and their many extensive areses, the Farrabagh and Roshk-i-Irm, etc., are now in ruins. A pretty little mosque, the Mami Masjid, is to the south of the fort. The mosques and its officers formed several valuable arces. The city is 1760 feet above the sea in the Scena theri or valley, and the rock is green- stone and greenstone amygdaloid. Ahmadnagar fell to the Moghul Empire in 1559, at the close of the reign of Akbar. It subsequently fell to the Mahrattas, but underwent great vicissitudes till ceded to the British in 1803. Aurangzeb Alamgir I. long reigned, died, and was tem- porarily interred here. The Pettah was taken by General Sir Arthur Wellington on the 8th August 1803, and on the 12th the fortress sur- rendered. The people of the district are Mahrattas of the Kumbi, Mali, and Ahom sections, with the Mar, Mianag, Dher, Chamar, and Ramnaj pugatory tribes of Kehlai, Kaikara, and Wadara. The hill tribes are Bhil, Koli, Thakur, and Wari. The Mahomedans are poor. The village municipal servants are the patel, kulkurni, josi or bhat, thumbar, nahi, sutar, lohar, chamar, parit, shangi, rakhwaldar, mulla, and guaro. The Bora mahomedans and the Marwari of the Jain sect are the chief merchants.—Pers. Obs.; Imp. Gaz. AHMAD SAID RAFFAI, founder of the Saffa fakirs, known as the Howling Darvesh. See Darvesh; Fakir.

AHMAD SHAH was the son of Zaman Khan, his hereditary chief of the Abdali. He was descended of the Saddozai clan, which was looked upon with a sort of religious veneration by his tribe. The person of a Saddozai was inviolable; and no officer, of whatever rank, could put an Abdali to death without the authority of a saddozai. Ahmad was a prisoner with the Ghilzai when Kandahar was taken by Nadir Shah, 738 A.D. That conqueror received him with a word, assigned him an honourable maintenance, and sent him to reside in Mazandaran. Abdal_Jarir mentions in his memoirs (p. 176) that Nadir Shah always kept a watchful eye over him, but that the officers of all ranks treated him in private with great respect. He was with the army of Nadir Shah at the time of that king's assassination, June 1747, and on the morning following that event, unaware of its occurrence, and in the hope of rescuing the king, Ahmad led 4000 Afghans and Uzbaks against the Persians. Fere Bazin, a Jesuit, witnessed the unequal con- test 'au milieu des balles et des sabres,' and describes the valour and the good order with which they retreated to their native country. Ahmad was then twenty-three years of age, and he hastened to confirm himself in the command of his own tribe, and extend his influence over the neighboring tribes and countries. In October (1747) he was crowned king at Kandahar; a Mulvi poured a measure of wheat over his head, and he changed the name of his tribe from Abdali to Daurani, by which it has since been known. He modelled his court on that of Nadir Shah, but exercised his authority with moderation. He was absolute in the plains and cities, as well as in Balkh, Sind, Kashmir, and other conquered provinces. He left the Afghan tribes to their internal government, retaining only sufficient authority to secure the supply of their contingents of troops or money, and to preserve tranquillity. Beluchistan, Seistan, and some other places remained under their native chiefs, and were bound to render allegiance and military service. He took possess- ion of most of Khorasan, and he protected Shah Rukh, the son of Nadir Shah, in Meshhed, while his own immediate dependencies were confined to the east of that city. After ascending the throne, he began, in 1748, his march towards India, and soon brought all the country up to the Indus under his authority. He took possession of Lahore and other towns in his route, and advanced to the banks of the Satlej. He found the forts occupied by the Moghul army, under Prince Ahmad, the heir-apparent, and the Vizir Kam- nal-Din Khan, who had been sent from Delhi to oppose the invasion. Ahmad Shah's army did not exceed 12,000 or 15,000 men, mostly cavalry. He crossed the river at a place where there was no ford, left the Indians in his rear, and took Sirhind, where the baggage and stores of the Indian army had been deposited. The Moghul army entrenched their camp, and for ten days repulsed all the attacks of the Daurani. On the tenth day, after a general and desperate attack on the entrenchments, during which a party of the Daurani made its way into the midst of the Indian camp, the assailants were totally repulsed (March, A.D. 1748—26 Rabi-ul-Awal, 1161), and compelled to retreat homewards during the ensuing night. Before it reached the Indus, Prince Ahmad, hearing of the illness of his father, the emperor Muhammad Shah, quitted the Panjab, to which he nominated a vicerey. On this Ahmad Shah turned back, and did not quit the Panjab until its vicerey had engaged to pay a permanent tribute. The emperor Muhammad Shah expired in April 1748 (A.H. 26 Rabi-us-Sani, 1161), within a month of the battle of Sirhind, and his son Prince Ahmad succeeded him. From the Panjab, Ahmad Shah sent an ambassador to demand the formal cession of that province,—a demand with which the recollection of Nadir Shah's invasion induced the Delhi government at once to comply. After
A succession of assassinations, Ghazi-ud-Din, grandson of Asaf Jah, deposed the emperor, A.D. July 1754, and put out his eyes, as also those of his mother, and raised a prince of the blood to the throne, under the title of Alamgir II. Ghazi-ud-Din took the office of vizir on himself. He marched towards Lahore A.D. 1756. He had been allied to the daughter of the viceroy, Mir Manu, and advanced as if to celebrate the marriage; and when he had completely lulled all suspicion, he surprised the town, and took the widow of Mir Manu a prisoner in her bed. Her late husband had been retained by Ahmad Shah as viceroy, and his widow was governing the province for her infant son, and when being conveyed to Ghazi-ud-Din's camp, she prophesied the vengeance of Ahmad and the ruin of India. Ahmad Shah no sooner heard of the outrage, than he marched from Kandahar, and advanced through the Panjab, and arrived within twenty miles of Delhi, on which Ghazi-ud-Din repaired to the Daurni camp and was pardoned, but Ahmad Shah marched on Delhi to inspire among the peasants. Nearly all the horrors of Nadir Shah's invasion were now repeated, for though not personally cruel, Ahmad Shah had much less control over his troops, and the city again became a scene of rapine, violence, and murder. He sent a detachment with Ghazi-ud-Din to levy a contribution from Shuja-ud-Dowlah, and himself marched with a similar intention against the Jats. He took Balamghar fortress, and put the garrison to the sword. Muttra, a holy city of the Hindus, was surprised by a light detachment during a religious festival, and the unoffending votaries were ruthlessly slain. He laid siege to Agra and to one of the Jat forts, but sickness broke out in his army, and about June 1757 he set out for his own country. Before leaving, he married a princess of the house of Dehli, and contracted another to his son, afterwards Timur Shah, and appointed Najib-ud-Dowlah, a Rohilla chief, to the command of Dehli, but Ghazi-ud-Din immediately displaced him in favour of Ahmad Khan Bangash. Subsequently the Mahrattas, under Ragoba, brother of the peshwa Baji, took Delhi, and in May 1756 Ragoba marched a little part of the army of Labore, and occupied all the Panjab, the Daurni forces retiring across the Indus without attempting to oppose the Mahrattas. Ahmad Shah was at this time occupied in the north-west part of his dominions, and when about to move on India, he was detained by the revolt of Nasir Khan, the Beluch ruler. On settling that matter, he marched by the southern road of Shikarpur to the Indus, and up that river to Peshawar; he crossed it in the month of September 1756, and advanced into the Panjab. It was his fourth invasion of India. The Mahrattas offered no opposition, and, keeping near the hills, he crossed the Jumna opposite Saharanpur. The Mahrattas had 30,000 men in the field, but, being in two separate bodies, Ahmad Shah came suddenly on the force under Datta Sindhia, and that chief and two-thirds of the force were cut to pieces. The other division, under Mahlar Rao Holkar, fled towards the country south of the Chambal, but was overtaken and almost destroyed by a Daurni detachment, which made a prodigious march for the purpose.

Sada Siva Rao Bhuo (Sadashi Rao), who had replaced Ragoba, marched to meet Ahmad. His army was composed of Mahrattas and Rajput cavalry, the whole numbering about 270,000. Suraj Mull advised Sada Siva Rao Bhuo to harass Ahmad. This advice was not followed, and the Jat and Rajput armies consequently withdrew. The Bhuo occupied Dehli, and came in contact at Paniput with Ahmad's army of 38,000 foot, 49,000 cavalry, besides the Rohilla and Oudh auxiliaries. Several indecisive encounters ensued, but on the 7th January 1761 an obstinate battle was fought. The result continued doubtful until the Bhuo fled from the field, leaving his troops in disorder, and Ahmad's victory was complete, and about 200,000 of the Mahratta army fell. Wiswas Rao, the son of the Peshwa, was slain, and after the battle, Jungkhi Sindhia and Ibrahim Khan Gadi were put to death. This completely broke the Mahratta imperial power, and was the destruction of the Mahratta empire. The confederacy of the Mahrattas, which dissolved on the cessation of their common danger: Ahmad Shah returned to his summer headquarters near to the Indus by his victory, and never afterwards took any share in the affairs of India. In November 1762, however, he again appeared on the Indus, irritated against the Sikhs for the trouble they had given him, not less than from bigoted zeal against all non-religionists. He signalized his march through Amritsar by the demolition of the Sikh temple of Harmandur and of the sacred tank. The first was blown up with gunpowder, and the reservoir, besides being defaced and filled up as far as materials and time permitted, was polluted with the blood and entrails of cows and bullocks,—a sacrilege even greater in the eyes of the schematic disciple of Guru Govind than of the orthodox brahmanical Hindu. Pyramids were erected of the heads of slaughtered Sikhs; and Forster (Travels, i. p. 279) relates that Ahmad Shah caused the walls of those mosques which had been polluted by the Sikhs to be washed with their blood, to remove the contamination and expiate the insult. He died in 1773. At his death (Forrier, Hist. of the Afghans, p. 90) his frontier on the north was the Oxus, and the mountains of Kafiristan; on the south the sea of Oman; to the east the mountains of Tibet, the Sutlej and the Indus; and to the west Persia, Khorasan, and Kerman. From that time until 1820, his sons and grandsons continued in strife for the dominion, till set aside by the Mahmudzai branch of the Barakzai tribe, whose striving has been no less continuous all through the 19th century. —Elphinstone's India; Ferrier's Hist. Afghans; M'Gregor's Central Asia; Malcolm's Persia; Cunningham's Hist. of the Panjab; Cossins'A. Rao's Narrative in As. Res. iii. p. 97; Grant-Duffy's Hist. of Marrathas; Sac'ti Mutakakhira; Burns' Cabool; Burns' Travels; Fraser's Life of Nadir; Nadir Namah; Jones Histoire de Nadir Shah; Orme's History; Balfour's Memoirs of Huzain; Père Bazin in Lettres Edifiantes; Elliot's Life of Hojzi Rahmat.

AHOM. —AHOM, a branch of the Tai family, who gave
AILANTUS.

The name to the people and province of Assam. The Ahom at a very early period conquered all the tribes in the valley of Assam, founded a kingdom there, and became prolesytes to Hinduism. They intermarried with the people of the country, and their features have greatly improved.

AILIMAN, also known as Ahrimanes and Agromanius. The ancient Persians held, and modern Parsees hold, a dualistic belief in Ormuzd (Ahura Mazda), the good, and Ahriman, the evil, principle from whom all evils spring. See Aryan; India; Parsees.

AIL-SSEE-HA. BURM. A tree of Moulein, good wood, used for making musical instruments. — *Col. Cot. Ez.,* 1862.

AISHAM. ARAB. Pl. of Hashem, servants of humble position in the employ of Mahomedan lords of India.

AIHU. PERS. Cervulus Wallachii, Cuv.

AIHVA-MARDA. See Ahriman; Ormuzd.

AIHVIL. TAM. Atmospheric air. Ahvi Ramam, 'steam-wood,' so called from its emitting steam when the root is cut, is a Malabar tree, growing about 10 inches in diameter and 15 feet long; it is much used for inferior purposes in the names of native vessels, in repairs, etc. — *Edge, Calabar and Canara.*

AI or AYI. MAHR. Mother; the great priest; the earth goddess, largely worshipped by races on the inland fringes of the Mahazati countries, in very lonely situations.

AI, an island of the Moluccas, about 10 miles to the westward of Bandu Lather. It is about 2 miles in circumference, and moderately elevated, its entire surface consisting of nutmeg plantations, is spice being its sole exportable product. — *Jour. Ind. Arch.*

AIDUMA, a small island on the S.W. coast of New Guinea, near the entrance of Triton's Bay, Warungari, in lat. 3° 53' S., long. 134° 15' E. The chief exportable products are wild nutmegs, several kinds of odoriferous bark, ebony, and tun-wuka, which, with tortoise-shell and small quantities of trepang, form the return cargoes of the Ceram, and sometimes Macassar, prahus that sit the port annually for purposes of trade. — *Nur. Ind. Arch.*

A-IGALU or Ayigalu. KARN. The casket in which the portable lings is carried round their seak by the sect of Lingas.

AIGAREET MYIT. MALAY. A root which said to deprive spiritual liquor of its all its strength; and a decoction given to an intoxicated person is said to render him immediately sober. — *J. Ez.,* 1862.

AIGRITTE, or Kalghi, forms part of the order of rank amongst Hindu and Mahometan chiefs, and of such of their nobles to whom a right to wear it in their turbans has been accorded. The ceremony of seating on the throne, masnad, or ghadi, consists in placing the tice thereon, and placing the tika or munion of veneration on the forehead of the prince; and ing on the jewels, consisting of the aigrette, chace, etc.

AHIAN or Elam. PANJ. Andromeda ovalia, a plant of the Panjab; goats and sheep die on eating its leaves.

AIL. BENG. A ridge of earth thrown up at the edge of rice-fields, serving as a bank to hold in the water of irrigation, and dividing the plots of cultivated ground the one from the other.

AILAK. TURK. Summer quarters of the pastoral nomades.

AILANTUS EXCELSUS. WILDE.

Maruk, MAHR. Peru maram, TAM. Peru mara, MALEAL. Poda mam, TEL. Arula, SANSK. Payapa, ...

This tree resembles the ash in its general appearance, but attains a larger size; it flowers in January and February. It is common about old buildings, and in broken ground of the Dekhan and of Gujerat, about Barooch and Baroda; it is common in the Northern Circars and in the Godavery forests, and is met with in Coimbatore. Dr. Wight says its wood had been described as hard, close-grained, and heavy, and fit for gunstocks; but Dr. Cleghorn, in the Madras Exhibition Jury Reports, describes the wood as light and white, and he and Graham say it is used for making sword handles, etc., also employed to make sheaths for spears and cutamara, and is not durable. The bark is used in medicine by the natives as a bitter tonic and astringent, the juice of the leaf as a remedy against indigestion and diarrhoea. — *Dr. J. C. Wight, Cleghorn, Riddell, Gibson; Useful Plants; Mr. Elliot; Mr. Jaffrey; M. E. Jurges' Reports; Captain Deedone.*

AILANTUS GLANDULOSUS. DESF.

Chun-Chu, Chun-Chun, Chun-Chu, CHIN.

A hardy deciduous ornamental tree of Japan, China, and the Moluccas; the food of the silk-producing insect, Bombyx disciella. It has been introduced into South Europe and Algeria, France and England. It grows 60 feet high; wood valuable, and tree a useful sand-binding plant. — *J. E. Ed. Journ. vii. p. 194; Von Mueller; Smith.*

AILANTUS MALABARICUS. D. C.

Doop, Baga Doop, S. CAN. Peru mara, TAM., TEL. Mudda Doop, S. CAN. Beelam. Walbelin gas, SINGH. Mutti pal, TAM. Kumbu, T.

A very lofty tree, common up to 3000 feet in Ceylon, and in the dense moist forests of the Western Ghats of the Peninsula of India, from South Canara to Cape Comoris, also in the Animalay hills. The bark has a pleasant and slightly bitter taste, and is given in cases of dyspepsia, and is considered a tonic and febrifuge. It yields a fragrant resinous juice known as Mutti pal. This, reduced to powder mixed with milk and strained, is given in small doses in dysentery, and reputed to be an excellent remedy, owing chiefly to the balsamic properties of the resin. The fruit, triturated with mango and mixed with rice, is reckoned useful in cases of ophthalmia. The bark is rough and very thick, studded with bright garnet-looking grains apparently of a resinous nature. This resin, as commonly met with, is of a dark brown or grey colour, plastic, opaque, and with an agreeable odour. It contains 77 per cent. of resin, the rest impurity. Alcohol readily dissolves the resin, and evaporation leaves it as a very viscous, transparent, light-brown semi-liquid, which does not solidify by many days' exposure to a steam heat. When burnt it gives out a fragrance, and hence it is sometimes used for incense. Its perfume is, however, inferior to that produced by many other resins employed in the conception
of the incense employed in Christian and heathen worship. The peculiar consistancy of the resin would enable it to substitute Venice turpentine for many purposes.—_Ainslie, Wight, etc._; _Useful Plants_; _Gibson; Ferguson; Beddome, Fl. Syl._; _Mr. Broughton._

**AILIRA BENGALENSIS.**

Gray. Bounce patti, _Uria._ Puttuli, _Uria._ An edible fresh-water fish of _Orissa._

**AILURUS FULGENS.** _F. Cuv._

A. ochraceus, _Hodg._ Wah; Wah donka, _Bhor._ Sukham, _Sunam._ L.R. Red cat bear, _Eng._ Nagalya pony, _Nepal._

This richly-coloured animal, one of the Ursidae family, is a native of Nepal and Sikhim, dwelling among the rocks, and living on fruits, roots, bamboo sprouts, acorns; also on insects and larva. It is inches high.

**AIMAH.** _Arab._ Land granted by the Moghul governments, either rent free or at a reduced rent, to learned or devout men, or for some religious object.

AIMAK, a Mongolian, Manchu, and Turk word, meaning a tribe, but usually applied to four tribes called the Char Aimak, who dwell to the north of Herat and Kabal, in the range of the undulating country, in which some places assumes a mountainous, in others a hilly, character; and in some parts is well watered, in others bleak and rough, forming a watershed of two natural divisions, from the western of which flow the Murghab, the Tajenj, and the Farrah-Rud, and from the eastern, the Helmand, the south-eastern feeders of the Oxus and the north-western feeders of the Khabul river. They are brave and relentless; and Afghan, when travelling from Balkh, Kabul, Kandahar, or Herat, never enter into the mountain districts of these intrepid nomadic tribes. One Aimak tribe is known as the Firoz Kohi, after the city of that name, about 65 miles from Teharan. Timur, exasperated at the depredations which they committed, transported the whole of them into the mountains lying between Persia and India. Elphinstone names four Aimak tribes, Hazara, Taimuni, Taimuri, and Zuri, and estimates their number at 400,000 to 450,000 souls. General Ferrier says the Hazara Zaidnat had 28,000 tents, the Firoz Kohi 9000 tents, which at 4½ for a tent would give 160,000 souls. Vamberg names four, Jamshidi, Taimuri, Firoz Kohi, and Taimuni, and says the Jamshidi have 9000 tents, or 40,000 souls, and that the whole are of Iranian origin, and speak Persian. Ferrier says the three branches, under great emergency, could collect 60,000 fighting men; but Lecce says the Taimuni could collect 20,000 against a foreign enemy. Lieut.-Colonel M'Gregor, reviewing the statements, allows them to be able to show 12,000 fighting men, and estimates 250,000 souls as the Aimak population, viz. Zaidnat 120,000, Firoz Kohi and Jamshidi each 40,000, and Taimuni 50,000. The Taimuni dwell at Gorian and Kohsun, on the western boundary of Herat, and in the villages and towns situated east of Islam, from Turkill Shaham as far as Khaf. About 1000 of these families dwell near Herat. The Taimuni dwell in the Jolgha-i-Ierat, from Kerrukh to Sabzwar, the few who have extended to Farrah being styled by the Afghans, Parsivan. The Taimuni are of a wild, warlike nature, though agricultural. The Firoz Kohi near Kale No, and the Jamshidi have the shores of the Murghab. He says that in the reverence for fire, their respect to the east, which their tent doors look, they retain many of the fire-worshipping views; eat horse-fles and mix the flour of a nut called khundz (chestnut?) with that of their wheat. Sir John Malcolm informed Elphinstone that there was a large tribe called Aimak in Syria, which he established itself in Luristan, and produced the dynasty of Atabeks, so celebrated in Persian history.—_M'Gregor's Central Asia_, part iii._Ferrier's Journ._, p. 225; _Elphinstone's Caub._, p. 181; _Latham's Descriptive Ethnology_; _Ferrier's Hist. of Afghans_, p. 3; _Vamberg's Sketches Central Asia._ See Afghanistan.

AIN, also Arjun. _Man._ Pentaperta arjun, _P. tomentosus_, and _P. glabra._

_AIN._ _Arab._ A rule; ordinary revenue. _Alul-Mal, land revenue._

**AINAH.** _Hind._ The eye; a mirror. Aina- _zaz, a looking-glass maker. Ainaak, spectacles._

_AIN CHUR._ _Hind._ Dried slices of unripe mangoes.

**AINDRA-JALIKA.** _Hind._ Conjuring is called, from _Indra_., 'the Hindu deity,' and _Jal_., a net, a deceit. Aindri, the _Sacti_ _Indra._—_Hind Tow._, ii. p. 306.

**AING.** _Burm._ Dipterocarpus alatus.

_AIN-i-AKBARI_, a compendium of _Indi jurisprudence_, prepared by the emperor _Akbar_., famous minister, Abul Faiz, aided by pandits. It was the first genuine communication of Hindu jurisprudence to persons of other religions. It gives the detailed account of the Mogul Emperors at the end of the 16th century, and was translated into English by F. Gladwin, London, 1800.

**AINI MARA.** _Maleal._ Artoecarpus hirunt._

_AINKUDI KUMMALAB_, the five artistic castes of Malabar. See _Kummalak._

_AIN MUSA_, or Ayun Musa, the springs which well of Moses, 4½ miles S.S.E. of Suez. They are in a small depression, about half a mile in circumference. The largest pool is 10 or 15 feet in diameter, with two smaller ones near it, all slightly depressed below the surface of the surrounding desert. They are mossy structures. In the vicinity are isolated sand mounds.

**AINO.** _Hind._ The aboriginal races of Yezo. The severe treatment by the Japanese has led them other countries, and they also occupy the south part of the island of Seghalin or Sakhalin, which is in possession of the Japanese. Aino, in the language at Sakhalin, signifies 'man.' In the historical records of the Japanese, they are referred to as eastern savages; and about the 6th century they still occupied the northern provinces of Yezo. Towards the close of the 9th century A.D. the Aino of Nippon became subject to the Japanese, and the Aino disappeared from that island a separate race, emigrating to Yezo. In the 15th century the Japanese took Yezo, where a number of Aino still remain; but in the course of the 16th century the Aino crossed over to the island of Sado, called _Oke_ or _Northern Yezo_, where they formed several settlements. They seem to be an offshoot of the hairy aborigine race of Central China mentioned by early historians. The main peculiarity attaching them is the heavy growth of thick hair on chest and limbs, and which very often covers the whole body. Miss Bird mentions having seen...
two boys whose backs were covered with fur as fine and soft as that of a cat. In form and features they are very unlike the Japanese. Their heads are well shaped, with high and prominent foreheads, and their faces are very striking. The eyes are large and very beautiful, the colour a rich liquid brown, the expression singularly soft, and the eyelashes long, silky, and abundant. The physique is very powerful; but they are very little removed from being savages. They have neither history nor letters, and claim descent from a dog. Their clothes are made from the bark of trees and the untanned skins of animals. They are grossly ignorant, very dirty, and their objects of worship consist of the bear, the sun, the moon, fire, water, but principally the Japanese conqueror Yoshitsune, because, as the tradition handed down for seven centuries tells them, he was kind to them. They are a subdued people, stupid, gentle, and good-natured. Of the Japanese government they live in absolute terror. The men occupy themselves in hunting and fishing, and the women labour ceaselessly at their household duties. Alno-Japanesia was a name proposed by Mr. Logan to designate all the Japanese and Alno islands from Formosa to Kamtschatka. —Hodgson's Nagasaki, p. 62; Raffles's Russians on the Air, p. 307; Miss Bird's Japan.

AIRUN. AIR. AIR.

Amongst the Mahomedan races of India, the air and the water together, Ab-o-huwa, are reckoned to constitute climate. Amongst Hindus, the water alone is regarded as the agent affecting the salubrity of the climate.

AIRAVAT, in Hindu mythology, a Naga king, father of Udipi.

AIRAVATA, one of the fourteen gems produced from the churning of the ocean. Airavi, in Hindu mythology, the white elephant, the vahan of Indra. The word means 'watery,' and is applied to the rivers Irawadi, Ravi, and Phanni.

AIR BLAdddER.

Fish maws, Swin., Eng. Isinglass, ... Eng. Fish sounds, ... Air-bag, ... A peculiar organ with which the great majority of fishes are provided, and by which they are enabled to adapt the specific gravity of their bodies to the various pressures of the super- incumberant water at different depths. It is composed of a lengthened sac, sometimes simple, as in the common perch, sometimes divided into two or more compartments by a lateral or transverse ligature, as in the trout and salmon, and at other times furnished with appendices, more or less numerous, according to the particular species. In all cases it is composed of a thick internal coat of a fibrous texture, and of a very thin external coat, the whole being enveloped in the general covering of the intestines. Fishermen perforate this vessel with a fine needle, in cold and other species which require to be brought fresh to market, sometimes from a very great distance. By this operation the confined air is allowed to escape, and the fish constrained to remain quiet at the bottom of their well-boats, where they live for a very considerable period. The air bladder of certain fish is in much request as an article of diet, and in the arts. Russian isinglass is prepared from the sounds of the sturgeon, Accipenser sturio, found in the Caspian and Black Seas and their tributary rivers. In America, from the Labrus squatangus, the cod, Morhinus vulgaris; in Calcutta, from the sounds of the Polyenmus sela, the Scele of Bengal; and the sounds of two Madras fish, the Korwa and Katali, are so employed, and largely exported to China. Iceland fishermen, as well as those of America, prepare isinglass of a very excellent quality from cod sounds.—O'Sh. p. 68; Eng. Cyc.

AIRI of Coorg are carpenters and blacksmiths who have emigrated from Malabar. They dress like the Coorg race, but do not intermarry.

AIRUN, a temple in Bhopal, built in the first year of the reign of raja Tarapain, by Dyanya Vishnu, the then minister and brother of raja Meeri Vishnu. The inscription is the first in honour of the boar incarnation of Vishnu, and the boar coins probably belonged to this family of princes, who worshipped Vishnu as the boar. The inscription says that the minister Dyanya or Dhanaya obtained his office by public election, and through the grace of God! Dhanyu is called a rishi amongst the bramhans and the devoted worshippers of Bhagavan, but there is not any prepostereous eulogy of brahmans. The language of the inscriptions is Sanskrit, but with words written corruptly, and probably about the 8th century of the Christian era. The character used in the inscriptions is that subsequent to Kanouj Nagari, or Allahabad, but before the Gaur or

—Journal Ind. Arch.; Horsb.
Harsha character. Another inscription is on a pillar in front of the temple; the king mentioned is Buddha Gupta, who governed the country between the Jumna and the Narmanda. The pillar was raised at the expense of Dhanya Vishnu, before the temple of the preceding inscription, by Vaidala Vishnu, who had been elected to the regency. The notice of a new Gupta, and a date of the dynasty (165), is of great interest, as Buddha Gupta necessarily followed those mentioned on the Allahabad and Bhitari columns; and up to Buddha Gupta’s time, if he belonged to the Kanouj dynasty, its duration had been only 165 years. In the early part of the 5th century A.D., Fa-hian found a Buddhist king at Kanouj; and in the early part of the 7th century, Huien Thsang found a Hindu king reigning. The dynasties, therefore, had been changed between the 5th and 7th centuries, and the Gupta family had sprung up in the interval.—Bun. As. Soc. Journ. vii. p. 634.

AJITA. A double Persian wheel. AIT, an avatar of Mahadeva.

AITEAREYA BRAHMANA, the name of an Aranyak and a Upanishad of the Rig Veda, which contains the earliest speculations as to the Brahmanical ritual. It has been translated by Dr. Hang, and the Upanishad by Dr. Roer.

AITCHeson, Sir C. U., a Bengal civil servant, author of ‘Engagements and Treaties.’

AIYAN or Ayar, written Iyar. TAM. A spiritual father; a respectable title of a head of a Hindu religious community. Ayian, also Iyangar, in the south of the Peninsula of India, an honorary title given to Brahmins, especially those of the Sri Vaishnava or Ramantja order, as Ramiah Aiyangar.—W.

AJAIB-ul-MAKHLUKAT, a book on natural history, written in the Persian tongue, by Kasvini; it means ‘the wonders of creation.’

AJALA of Coorg. A class of the Pals or Tulua Pariahs who personate demons.

AJAM. Arab. Literally means ‘foreign;’ but in the southern part of Arabia, Al Ajam is applied to the opposite part of the coast of Africa. Ajam by the Turks means Turkish Arab. Persia is Balad-ul-Ajam, and the north-eastern coast of Africa is Bar-el-Ajam. The Arabs divide the world into two great bodies,—first, themselves; and secondly, Ajami, i.e. all that are not Arabs. Similar bi-partitions are the Hindus and M’hlecas, the Jews and Gentiles, the Greeks and barbarians, etc. etc.—Playfair’s Eden; Barton’s Mecca, ii. p. 26; Cattafingo.

AJATA SATRA, a king of Magadha who collected the remains of Sakya Muni, and deposited them in one large stupa at Raja Griha. He reigned for thirty-two years, and died B.C. 526. His race were Bhattiya Brahmins. Sakya died in the reign of this king.

AJAUKURI. HIND. Accacia Jacquemontii.

AJAYA PALA, author of a Sanskrit vocabulary of repute.

AJGARA. SANSK. A python; a rock snake.

AJIGARTA, a rishi mentioned in the Aitareya Brahmana, who lived in the forests with his three sons, Suna Puceha, Suna Sepha, and Suno Langula. He sold Suna Sepha to be offered in sacrifice, and was even willing to do it with his own hands.

AJIPALA, one of the Chauhan dynasty. His name is celebrated in the Chauhan chronicles as the founder of the fortress of Ajmir (A.D. 124), one of the earliest establishments of Chauhan power.

AJITA. SANSK. A form of Vishnu, also of Siva, meaning unconquered, from a, privative, and jita, victory.

AJIT SINGH, a celebrated king of Kanouj, who was murdered A.D. 1680. See Rahtor.

AJMER, the capital town of a district in Rajputana. Ajipala, of the Chauhan race, founded it in A.D. 145, and it was lost by Dola Rai in 1685 to Mahomed Kasim, the Arab conqueror of Siund. In A.D. 1621, the people hung upon the army of Mahomed of Ghazni. The district has since seen many dynastic changes, and the city has been the scene of many interesting events. Syed Hussein, who (A.D. 1210) was slain in a night attack by the Rahtor and Chauhan Rajputs, has a shrine at Taragarh, to which, in 1570, Akbar walked on the birth of his son Salim. S. T. T. Roe, ambassador of James I., here visited his credentials to Jahangir. Thomas Corlett, the pedestrian traveller of the 17th century who walked from Jerusalem to Ajmir, and spent only £2, 10s. on the road, dated his book from Ajmir. The Mahrattas held it from 1756 to 1780, but Daulat Rao Sindiah transferred it to the British, 25th June 1818. The population of the town and the Mairwara district in 1872 was 316,590, and that of the town of Ajmir, 26,569, Rajputs, Jat, Gujar, Miar. The town is in lat. 26° 2′ 10″ N., and long. 74° 43′ 58″ E.—Rennell’s Memoirs xlvi. and xlvii.; Tod; Imp. Gazetter.

AJMIRGARH, a hill in the Bilaspur district of Central Provinces, 3500 feet high. It has a temple from which the Sone flows to the north, the Mahanuzzi to Cuttack, and the Nerudda to the Indian Ocean. The place has always been sacred and is surrounded by temples of great age. On the south and east of this hill is the table-land ofCHATISHBUR.

AJMOB. SANSK. Aipam involucrum, a. grassvela and Petroselosum sativum, parsley. AJODHYA, on the right bank of the Ganges near the town of Oudh, is in lat. 26° 48′ 19″ N., and long. 82° 14′ 40″ E. It now has a population of 7518 of Hindus and Mahomedans, but in ancient times it was the capital of the kingdom of Kosala, the modern Oudh, ruled over by the great king Dasaratha of the Solar line, the father of Rama Chandra. At one time it is said to have covered an area of 12 yojana, equal to 96 miles. During buddhist supremacy Ajodhya declined, but on the revival of brahmanism it was restored by king Vikramaditya (A.D. 57). There are many Jain temples, and three mosques on the site of three Hindu shrines,—the Jami Masanath on the site where Rama was born, the Swarga-dwara (Mandir) where his remains were burned, and the Tareta ka Thakur, famed as the scene of one of his great sacrifices. A mausoleum is here of the Bahun Begum, and is the finest in Oudh.

AJUDHAN or Pak-Pattan, an ancient city in the Punjab. See Pak-Pattan.

AJUGA BRACTEOSA. Wall.
This and several other species resembling it occur in the Panjab Himalaya from 1500 to 8500 feet, and in the Salt Range; it is used to kill lice. The plant is considered deparative. Ajuga repens, Roxb., of the hills of the Panjab and Kashmir, is also known there as Jan-i-Adam, the life of man, from its many virtues. It is nearly inodorous, bitter, and astringent, and with other species is used in fever as a substitute for cinchona.—J. L. Stewart, M.D.; Honigberger; Powell, i. p. 365.

AJUNTA, in the province of Aurungabad, in lat. 20° 32' 30" N., long. 75° 45' E., celebrated for its buddhist chaityas and viharas, is in the northern face of a ravine, which has a westerly direction parallel to the face of the ghat, as they overlook Kandesh. There are many ravines or kosa near one commences at the town of Ajunta, and winds to the south and west for about three miles, opening there into Kandesh. Near its mouth is another ravine, taking a westerly direction for two miles, with several windings, at one of which, on the northern face of the rock, these caves have been excavated. This ravine nowhere exceeds 400 yards from brink to brink, nor above 500 yards at its bottom. Ajunta town is quite a small place, walled, with gates, and a bridge. The natives call the caves Yerrula, the same with those which Europeans call Ellora. They call them also Lena, and both terms mean drawings or paintings. There are 24 monasteries (Vihara) and 5 temples (Chaitya). The monasteries are usually square in form, supported by rows of pillars, with cells (Griha) in the walls, in all three sides. The largest temple is 94½ feet by 41 feet. They furnish a continuous narrative of the history of Buddhism for 800 years, from about B.C. 200 to A.D. 600. The back or end of the Chaitya or temple cave is almost always circular; the roofs are lofty and vaulted. Within the circular end of the cave stands the Dagoba or reliquary, consisting of a cylindrical case, supporting a cupola (Garbha), which is surmounted by a square capital or tee (Toran). The paintings on the walls depict Buddha and his disciples and devotees, with representations of streets, processions, battles, the interior of houses, domestic scenes of love and marriage and death, huntsmen on horseback, and animals of every size. Women in groups performing religious austerities. They are the most complete series of Buddhist caves in India, without any mixture of Brahmanism. They escaped the observation of the Mahomedans when they invaded the Dekhan early in the 14th century, and destroyed similar paintings in the caves of Ellora. Some of the paintings refer to historical events. One large picture is supposed to represent the introduction into Ceylon of Buddhism, and all the figures of men and women in it have only short waist-cloths or kilts. Another large picture represents the coronation of Sinhala, a Buddhist king. He is seated on a stool, crowned with a tiara, with necklaces, armlets, and bracelets of gold, and girls are pouring corn over his shoulders. Naked to the waist, he wears a striped dhoti, covering from the waist to the knee, with one end passed across his chest and over his left shoulder; most of the men attendants are similarly clothed with dhotis reaching from the waist to the knee. The soldiers present, spearman and foot and horse,
AKAL.

AKALI.

AKARI.

AKAR.

its leaves, which are pounded and the juice insip- sated. The insipiated juice of the sloe, Prunus spinosa, is substituted for the ancient Akaila. The Akalia is not now used in medicine of Europe.

AKALI. These were armed Sikh devotees and fanatics, violent and ignorant. They were first established by the Guru Govind, the founder of the Sikh faith, and they zealously supported him against the innovations of the ascetic Byragi. Their Boonga or temple, on the side of the holy reservoir at Amritsar, is a fine building; but Akali are met with all over the Panjab, though chiefly in the Manja territory, between Lahore and the Gharr, where Tarantara is their chief town. A considerable number are settled at Nandair, on the banks of the Godavery, but are quiet and peaceful. In reality wealthy, they affect poverty and beg; but in the time of the Sikh rule their begging was an insolent demanding, and as they were a bold united body who made common cause, and did not scruple to expose their own lives or to make false accusations of crimes, these wild-looking men enforced their demands with an insolent independence, which those only could understand who have witnessed a band of drunken Akali, almost in a state of nudity, brandishing their naked swords, and bawling out abusive and obscene language; their power to enforce their demands, therefore, was very great. They particularly showered their angry words on Europeans; and until Ranjit Singh mastered them, even his life was several times in danger. Under the British rule, and with power to enforce toleration, they are never heard of. They would extort alms from chiefs and others, by interdicting them from the performance of religious rites; and a chief unpopular with the Akali, who made common cause with each other, risked his authority. Their name is derived from Akali-purusa, worshippers of the Eternal, the word Akal being a compound of kal, death, and the privative a, meaning never-dying, or immortal. It is one of the epithets of the Deity, and is given to this class from their frequently exclaiming 'Akal, Akal,' in their devotions. They wear blue chequered dresses, and bracelets of steel round their wrists, which all Sikhs do not wear; though it is indispensable for a Sikh to have steel about the person, and it is generally in the shape of a knife or dagger. They formerly initiated converts, and had almost the sole direction of the religious ceremonies at Amritsar. The Akali had a great interest in maintaining the religion and government of the Sikhs, as established by Guru Govind, upon which their influence depended. They often went profusely armed, with half a dozen swords; perhaps also a matchlock, and several steel discs on their turbans.—Masson's Journeys; Mohn Lut's Journeys; History of the Panjab, i. p. 130, 131; Steinbach's Panjab, p. 8—9; Malcolm's Sikhs, p. 116; Ward's Hindoos, ii. p. 275-4; As. Res. vol. xi.; McGregor, History of the Sikhs, i. pp. 81, 236, 287; Pers. Obser. See Amristar; Banda; Boonga; Dics; Manja; Sikhs; Tarantara.

AKAL-NAFZAH. ARAB. Euphorbium.

AKA-PODWAL, a race in Malabar and Canara who follow the rule of Marumakatayam, or descent from mothers, the descensus ab utoro of the Locrians, who drove the Sicilians out of a part of Italy. See Polyandry.

AKAR-CHIRIT-MURAL. MALEAL. A plant yielding an elastic gum.

AKAR-KANTA. HIND. Alangium decapet and Alangium alatum.

AKAR-KOUF, a mound 10 miles north-west of Baghdad, on the west shore of a marsh 12 miles long and 5 broad, and 12 to 15 feet deep, fed by the waters of the Euphrates, through the Saklawi canal. The ruined pile is called by the Arabs Tal Namrud, and by the Turks Namrud Tapassi. Both these terms mean the hill not the tower, of Nimrod; and the term Akar-kouf, or Agargouf, given by the Arabs, is intended to signify only the ground around it.—Porter's Travels, ii. p. 281; Mignan's Travels, p. 102; McGregor, See Namrud.

AKAR-PAASI. MAL. Asparagus racemosus.

AKAR-WANGI. MAL. Andropogon muri- catus.

AKAS. ARAB. A hoop of a black colour worn by the Hodeleyah Arabs to retain the dark-coloured squire of cloth on the head. The outer rim is inlaid with pieces of delicately engraved mother-of-pearl, rather larger than Shilling.—Hamilton's Sinai. See Akal; Arab.

AKASA. SANSK. Ether, sky, space, ethereal space; the inane or vacant space of Lucretius; the fifth element of the Hindus; it is applied to designate several plants, etc.

Akasa Guruda gadda, Byronia epigona, Rott.; B. glabra, R. lii. 725.

Akasalinga, also Akasuliga, a form of the lingam. Akasam. See Acasalvi; Hindi.

Akasananchayatanam, in buddhism, the lowest of the incorporeal Brahma-lakas.

Akasa Tenna, Pistia stratiotes, L.

Akas-Bel or Amar Bauria, Cuscuta reticula; literally sky plant.

Akasha-Valli, Cassytha filiformis.

Akasa-Diya, a lamp suspended in the open air by the Hindus, in the month Kartik.

Akasia, in the Bombay Presidency, land which depends on the natural rains.

Akas-Mukhi, from akas, the sky, and Mukha, the face, ascetic mendicants among the saiva Hindus, who hold up their faces to the sky till the muscles of the back of the neck become contracted and retain that position. See Urtha bahu.

Akas-Nim, Bignonia suberosa, Roxb.

AKBAH, the Arab conqueror who overran the States of Barbary.

AKBAR, Jalal-ud-Din Mahomed Akbar, reigned in India from A.D. 1556 to 1605. He was grandson of the emperor Babur, and seventh in descent from Timur. He was the eldest son of the emperor Humayun, and was born at Amirkot, in the valley of the Indus, on the 14th October 1542, while his father was a fugitive. Humayun regained the throne in 1555, and died by a fall from his library stairs a few months later. Akbar was handsome in person, courteous in manners, skilled in all manly exercises, and courageous to excess. He delighted to master unruly horses and elephants, and was devoted to tiger-hunting. While yet a lad, he was kept under by his prior
Akbar.

minister, Bahram Khan, but he returned suddenly to his palace from one of his hunting expeditions, and issued a proclamation taking the government into his own hands. On this Bahram Khan raised an army, and attempted to seize the Panjab, but he was defeated, and pardoned by Akbar. By the time he attained the age of twenty-five years, Akbar had settled himself firmly on his throne; and in the course of his long reign he extended his sway over Rajputana, and from Afghanistan to Ahmdnagar in the Dekhan, and from the Suliman mountains on the west, to Bengal and Assam in the east. He was an enlightened monarch; he introduced religious tolerance, and equal justice; encouraged literature, arts and science; and the Ain-i-Akbari, or Institutes of Akbar, a legislative work, was compiled under his orders. Prior to this sovereign, of all the dynasties that had yet ruled in India, that of the house of Timur was the weakest and most insecure in its foundations. The houses of Ghazni and Ghor depended on their native kingdoms, which were contiguous to their Indian conquest; and the Slave dynasties were supported by the influx of their countrymen. But though Babar had been in some measure naturalized in Kabul, the separation of that country under Kamiun had broken its connection with India, and the rival of an Afghan dynasty turned the most warlike part of its inhabitants, as well as of the Indian Mahomedans, into enemies. Colonel Tod remarks (Rajasthan, i. p. 522) that it affords an example of the Hindu doctrine of the metempsychosis, as well as of the regard which Akbar's toleration had obtained him, that they held his body to be animated by the soul of a celebrated Hindu gymnosophist; in support of which, they say Akbar went to his accustomed spot of penance (tapasya) at the confluence of the Yamuna and Ganges, and excavated the implements, viz. the tongs, gourd, and deer-skin, of his anchorite existence. Assuredly, says Elliot, a more extraordinary man never sat on the throne of India. Brought up as a Mahomedan, he was a rationalist and deist, and never believed anything, as he himself declared, that he could not understand. The so-called Ilahi religion, which he founded, was pure deism mixed up with the worship of the sun as the purest and highest emblem of the Deity. Though Akbar himself could neither read nor write, his court was the home of literary men of all persuasions. Whatever book, in any language, promised to throw light on the problems nearest to this emperor's heart, he ordered to be translated into Persian. Lewis, an adventurous English merchant, visited Akbar's court, and one of his four translations entered the emperor's service. Akbar abolished all arbitrary land taxes, and fixed the revenues according to the values of the different lands,—fallow, 'out of cultivation,' 'in rotation,' 'best,' 'middle,' and 'bad lands,' and 'over-flooded lands.' The Fasil or harvest era of Northern India has been traced to the year of Akbar's succession to the throne, the 2d of Rabbi-us-Sani, A. H. 963—A.D. 14th February 1566. It was in his reign that his physician, Budyn, introduced the rhinoplastic operation for restoring the nose; and he bestowed on Budyn a jaghir at Kangra. The first mention of Thugs occurs in his time, for 500 were executed at Etawa. In his invasion of Kashmir, he was opposed by the warrior pastoral race of Golu-wan. Akbar's court was the most splendid that had ever been held in India, and he expended liberally. In marching, the enclosure of his own tents occupied an area of full five miles in circumference. His favourite residence was at Fattahepur Sikri, in the province of Agra. He instituted many public schools, abolished torture, did away with the capititation and pilgrim taxes, and reformed the laws. He arranged his empire into fifteen subahs or districts,—Kalab, Lahore, Multan, Delhi, Agra, Oudh, Allahabad, Ajmir, Gujarat, Malwa, Behar, Bengal, Kandesh, Berrar, and Ahmdnagar. Each was ruled by a Subahdar, with full military and civil powers, and a Dewan, nominated by the emperor; each district had a janjur, entrusted with the military duties and civil courts. Akbar had early to subdue a revolt of his own army, which he effected by an army of Rajputs under Todar Mull. His Afghan soldiery serving in Bengal subsequently revolted, and against them he sent his near relation, Man Singh, who, after twelve pitched battles and seventeen years of conflict, completely established Akbar's authority there. Akbar's brother-in-law, the raja of Jeyapore, afterwards conquered Kashmir. In Akbar's next efforts to curb the Yusufzai and Khairi hIGHLANDERS around Peshawar, his army of 40,000, under his foster brother raja Beraul, was completely destroyed and Beraul slain, and his subsequent efforts under Man Singh and Todar Mull only met with a partial success. Akbar next annexed Sind and reconquered Kandahar, and after 25 years of warfare, he was the undisputed possessor of the territories north of the Nerbudda. In A.D. 1573, he annexed Gujerat, Kashmir, and Sind, and parts of Afghanistan were subsequently added to the Moghul Empire. He married the daughter of the raja of Jeyapore, a Rajput state. He early expressed a desire to become acquainted with Christianity. In 1578 he received the Portuguese envoy, Cabral, from Goa, and hearing that an excellent priest was then living in Bengal, he sent for him to hold a public disputation with the Mahomedan mullahs. The accounts given by the Jesuits of an order issued by him in 1590 for the destruction of all mosques and minarets appears apocryphal; but it seems established beyond doubt that a party of Christian missionaries visited the country at his own express invitation. Akbar died on the 13th October 1605. He is buried at Sikandra, five miles from Agra on the Delhi road. His is a small altar-tomb of white marble, in the centre of a square area of about forty English acres, surrounded with trees. It is enclosed by an embattled wall with octagonal towers at the angles, surmounted by open pavilions and four very noble gateways of red granite, the principal of which is inlaid with white marble, and has four high marble minarets. The central building is a sort of solid pyramid, surrounded externally with cloisters, galleries, and domes, diminishing gradually on ascending it till it ends in a square platform of white marble, surrounded by most elaborate lattice—work of the same material, in the centre of which is the small altar-tomb, carved with great delicacy and beauty. This is the tombstone. At the bottom of the building, in a small but very lofty vault, is the real
tomb of this great monarch, plain and unadorned, but also of white marble.—Heber, ii. p. 335–6; Tod, Rajastanl, i. p. 324; Elliot, History of India, p. 248; Marshman; P. Armintius Vambery, p. 396.; Elphinston, Hist. of India.

AKBAR NAMAHI, a history of Akbar's reign, partly written by his minister, Abul Fazl.

AKCHEE. See Andhko.

AKEE, Blihia sapida, a tree of west tropical Africa, cultivated also in the West Indies. The arillus which supports the seed is eaten. It is very wholesome; and from its soft, rich flavour has the appellation of vegetable arrow. It should be introduced into India.—Macfadyen.

AKEEK. Pers. Cornelian; chaledony.

AKEL. Port. Arenga saccharifera, Labill. AKHA. HIND. A pair of grain bags used as panniers.

AKHAL. HIND. A fifth of the heap after the corn is threshed out.

AKHANDAM. Tel. Entire, not separated; a lamp which is kept continually burning in a Hindu shrine.

AKHAN JATRA, a Hindu cake festival.

AKHARWAL, a division of the Kurmi tribe.

A-KHASSA REGIO, a region described by Ptolomy, the snowy land of Lalak. See Khaschaul.

AKHAT. HIND. In the N.W. Provinces of Bengal, a portion of the crop paid to the village artisans.

AKII. PANS. Rubus flavus; R. fruticosaes.

Akira is R. rotundifolius, and Akheri is R. biflorus.

AKHJARI. PANS. Rosa macrophylla.

AKHRI-CHAR SHAMBH. HIND. A feast held amongst Mahomedans on the last Wednesday of their second month, Saffar. It took its rise from the circumstance of their Prophet having rallied from his illness. He took a bath on the 15th, and whilst drying his hair at the door of his house, he was accosted by an old woman thus: 'I am glad to see you well again; this is the Lord's doing, therefore he should be praised.' It is said that this remark prostrated Mahomed once more. On the last Wednesday of the month, he took another bath, and, plunging a mango leaf from a tree close by, he wrote on it the following seven short sentences from the Koran:—'Peace shall be the word spoken unto the righteous by a merciful Lord.' 'Peace be on Noah among all created beings.' 'Peace be on Abraham.' 'Peace be on Moses and Aaron.' 'Peace be on Elia.' 'Peace be on ye that have been good; therefore enter into Paradise, and remain therein for ever.' 'Peace be until the rising of the moon.' After meditating a short while on them, he washed the leaf, and drank the water thus used. Mahomedans differ as to what he used in writing the above. Some affirm that he wrote it with ink; others, again, say he used rose-water. Every Mahomedan on this festal day writes the seven sentences, selected by their Prophet from the Koran, on a mango leaf or on bread; if the former, the writing is washed off, and the water (called the 'water of peace') drunk, but if the latter, the bread is eaten, because they believe that by this means peace and quietness; health and plenty, will exist in their families throughout the ensuing year. After this has been done, the Mahomedan, according to his means, attires himself in the finest and most costly apparel, perfumes his whole body with attar, gets some meat, rice, bread and cakes, etc., prepared, and distributes them to the poor in the name of their Prophet. The rest of the day is passed very gaily; some of the richer classes have music and dancing, etc., while the poorer have a little richer repast than usual. For thirteen days after this festival no Mahomedan will leave his country or village to go to another, because ill-luck will attend him.

AKHILAQ-i-JALALL. This is one of the most celebrated Persian works on ethics. It was translated into English, among the publications of the Oriental Translation Society, by W. F. Thompson.

AKHOUND, the high priest of the Swat tribe; any religious teacher; a schoolmaster.

AKHOON-WOON. BURM. A revenue assistant.

AKHOR. HIND. Araila Cacheimirica.

AKHOZYE, an Afghan tribe in the valley of Kabil.

AKHIRA, the dancing-place of the Kol tribes.

AKHROT. HIND. Acreules triloba; Juglans regia.

AKI, the Lignum vitae tree of New Zealand; it is the Metrosideros buxifolia; and is a rambling shrub, climbing by means of its lateral roots to the highest trees. It should be introduced into India.

AKIBAT. ARAB. The end. Akibat-ba-Khur-bad, may the end be prosperous.

AKINCHANYAYATANA, in Buddhism, the third of the incorporeal Brahma-loka.—Hardy, p. 433.

AKINDO, in Japan, a merchant. The Akindo were not permitted to ride on horseback.—Hodges's Nagasaki, p. 12.

AKIT, a drink in use by the Arabs; but it has different names in all parts of Arabia. In the Hejaz it is known by the name of Mazir, as well as Iqt (a corruption of Akit). When very sour, it is called Saribah, and when dried, without boiling, Jamilah. The Arabs make it by evaporating the serous part of the milk; the remainder is then formed into cakes or lumps with the hand, and spread upon hair-cloth to dry. They eat it with clarified butter, and drink it dissolved in water. It is considered by the Arab a cooling and refreshing beverage, but boasts few attractions to the stranger. The Beluchi and wild Sindian tribes call this preparation of milk krut or kurut, and make it in the same way as the Bedouins. Krut is perhaps the source of the English word curd.—Burton's Mecca, i. p. 362.

AKKAD. An ancient race who occupied the mountainous country of Elam, from which they entered Babylonia. Before they left Elam, they had invented hieroglyphics; and the cuneiform characters of Babylonia and Assyria are a degenerated hieroglyphics, as are also the modern Chinese characters. Akkadian tribes established themselves to the E. of the S. parts of the Euphrates, between Kornah and the Karoon river, or even up to the Luristan range of mountains. The Akkad ruled near the shores of the Persian Gulf, and are the earliest mentioned in historic times who navigated the Persian Gulf and Indian Ocean. They are supposed to have formed part of the Kushite race, who had colonies along the
coasts from Bab-el-Mandeh to Malabar. The coast of the Persian Gulf was also the ancient home of their kinsmen the Cannanites, a part of whom became celebrated in after times under the name of the Phoenicians.

AKKAD. in Cairo, a weaver of silk cord.

AKKUSD. Beng. Rottleria lacera.

AKKYE, or Ryot Laut, the subjects of the sea; a littoral race in Quedah, who dwell on the shores and islets of the Peninsula. See Kedah.

AKLBIR. Hind. Datisca cannabina and Delphinium anísicum.

AKLL-al-MAIK. Az. Astragalus holmosus.

AKLIM. Arab. A climate, a region.

AKLU of Kaghán. Hiburnum stellatum, Rich.; also V. foetens.

AKO-KHEL, a subdivision of the Razai section of the Yusufzai of the plains. They are in the Peshawar district.—McGr., N. W. F. i. p. 87.

AKOLA. Hind. Alangium decapetalum.

AKOLA, a town on both banks of the river Morána, in Berar, in lat. 20° 42' 15" N., and long. 77° 2' E., with a population of 12,236. It gives its name to a district of 2699 square miles, with a population of 229,913. From the village of Patun, on the west to near Nanda on the east, a distance of nearly fifty miles, and about ten in breadth on both sides of the Purna river, are salt wells. The best are near Dablamunda. The shafts are 3 or 4 feet in diameter, lined with basket-work. At 90 to 120 feet is a thick and strong band of gritstone, through which, when pierced, water rushes up 15 or 20 feet. The water is drawn up, and is exposed in salt-pans. The salt contains siliceous salts, which give it a bitter taste, and spoil it for exportation. The district, since the 13th century, when it was overrun by Ala-ud-Din (1294), has been chiefly under Mahomedan rule. The last Hindu ruler, raja of Deogarh, in 1319 was dethroned. Besides the Hindus and Mahomedans, depressed races, as the Pasi fowlers, and Mang and Jogi, are present. The Kumbi cultivators worship Mahomedan shrines.—Imp. Gaz.; P. Ob.

AKOMANO, a name of Abriman.

AKORA, a Hindu monastery. See Asthol; Math.

AKOR KHEI, a section of the Khakat.

AKRA or ANKRA. Hind. Vicia sativa.

AKRABI, a clan of the Abdali tribe on the sea-coast to the west of the Aden. Bir Ahmad is their sole village. They have a high reputation for courage.

AKRI. Hind. Withania coagulans. Aksan is W. somnifera.

AK-ROBAT, a pass near Bamian; the town is about lat. 34° 42' N., and long. 67° 41' E.

AKRUR-ESWARA, the modern Aklesar, on the Nerbudda, opposite Bharoch; its name is from a private, and krura, cruel.

AKSHAHA or Ach-Chuta. Mah. Rice grains, coloured with saffron or vermilion, placed on the forehead of an idol; also on the foreheads of a Hindu bride and bridgroom at their marriage.—W.

AKSHAHA. Sansk. From a, private, and kshi, to decay. Akshaya Lalita, the 7th of Bhadra (August—September), when a festival is celebrated by Hindu women in honour of Siva and Durga. Akshaya-patra, a beggar’s platter. Akshaya Trítiya, the third luni-month of the light half of Vaisakha, April—May, when offerings are made by Hindus to Krishna; also to Manes. It is the supposed anniversary of the creation.

AKSU, a district of Kabağaria at the base of the Alataagh. Aksu town contained 12,000 houses. It is situated at the confluence of the Aksu and Kokshal. Its curtin has four gates.

AK TÁGH, a range of mountains forming the boundary between the khanate of Bokhara and Khokand, running E. and W. 500 miles.—Tr.

AKU JEMUDU or Aku Chemdú. Euphorbia nivulia, E. nereifolia, E. cattimandoo.

AKULMUH. Hind. Casipulina bondoucica.

AKULU. Tel., Sing. Aku, in Tamil, Elle. The leaves used by Hindus as platters. They are made of the plantain leaf, Wala-elle, Tam.; Ariti aku, Tel.; and leaves of the Banyan tree, Mari aku, Tel.; Ali-elle, Tam.; also of the Butca frondosa.

AKUND. Beng. Calotropis gigantea, Brown; and Calotropis liliae.

AKU PATRIKAM. Tel. Leaves of Cinna- momomum eucalyptoides, Nees. The leaves are used as a spice, and medicinally.

AKUSALA, in Buddhism, demerit; constituent of, preternatural karma.—Hardy’s Eastern Monachism, p. 433.

AKUT-CHUNI, small rubies or garnets, brought via Pali to Ajmir, and used as an aphrodisiac; one tola for two rupees.—Gen. Med. Top. p. 125.

AKYAB, the chief town in Arakan, in lat. 20° 6' 45" N., and long. 92° 56' 30" E., on the right bank of the Koladyn, a rapid river. It is the seat of a commissionaire. The European part is beautifully laid out, and in 1872 it had 19,230 souls. The Akyab district lies between lat. 20° and 22° 19' N., and long. 92° 14' and 94° E., and has an area of 5337 square miles, and a population of 276,671. The district is bounded on the N. by Chittagong, W. by the Bay of Bengal, S. by Ramree island, and by the Youmadung mountains. The name is said to be derived from a relic of Gautama, called Akyab-dau-kin, retained in a temple. Its forests have valuable timber trees,—Albizia procera, Dipterocarpus alata, Lagerstremia regina, Strychnos nux vomica, and Xyilia dolabiformis. The population is largely Buddhist and Hindu. The Arakanese seclude their women, and have early marriages. There are several tribes in the Arakan hill tracts.—Findlay; Imp. Gaz.; Pers. Obs. See Arakan; Hill Tracts.

AK-YAU. Burm. Wood-aloes.

AL. Arab. Pronounced and often written in the Roman letters el, and al, and is. It is the definite article ’the,’ as Al-Koran, the Koran.

AL., of Kanawar; Cucurbita maxima, Duch.

AL. Hind. Morinda citrifolia.

AI, in Kabal, a fabulous, preternatural being, resembling a woman of twenty years of age, the ghoul of Persia and Turkey. Persian women attribute the disasters of parturient women to her malevolence.—Burton’s Sindh, p. 399.

ALABASTER.

Marmar abyal, Arab. Alabastro, It. Alabatre, Fr. Alabastres, Lat. Alabastos, Gr. Sp. Alabstrum, "A village called Alabastron, in Egypt, gave its name to this mineral. It is a hydrous sulphate of lime in a peculiar crystalline state, sometimes quite pure, sometimes containing small quantities of carbon or iron. When pure it is of spotless white, and in texture and colour is almost unrivalled amongst minerals. It is found to a
large extent in Lower Egypt, and perhaps this is alluded to in 2 Kings xxi. 13. It is said to occur in the Boogtee hills near Jacobabad, and in Afghanistan in the quarries of Maidan. It is not known to occur in British India, the images of the Burmese being from a carbonate or granular carbonate of lime, though commonly called alabaster, and known in Europe as oriental alabaster; it is a stalactitic or stalagmitic carbonate of lime, of the same hardness as marble, and used for similar purposes, and is found of all shades, from white to brown, and sometimes veined with coloured zones. The magnificent Bolzoni sarcophagus, purchased by Sir John Soane for 1000 guineas, and exhibited at his museum, is of stalagmitic. The finest alabasters are from near Volterra in Tuscany, between Cecina and Leghorn. An inferior kind occurs near Derby in England, at Montmarte near Paris, and in the Tyrolean, Swiss, and Italian Alps.—Mason; Tomkinson.

ALABBAS. This race, called the Abbassides, reigned as khilfs in Baghdad from A.D. 749-50 to A.D. 1258-59, when Baghdad was besieged and taken by Halaku, the grandson of Chengiz Khan, and its reigning khalif, Mustasem, put to death. They derived their name and descent from Abbaspird, grandson of Mutabak, the paternal uncle of Mahomed (666-653). Ibrahim, the fourth in descent from Abbas, supported by the province of Khorasan, obtained several successes over the Unneid armies, but was taken prisoner and put to death by the khalif Merwan, A.D. 747. Ibrahim's brother, Abul Abbas, assumed the title of khalif, and a victory near the Zab river, A.D. 750, secured his position. He was named Us-Saffah. His brother and successor, Al-Mansur, born at Homina in Syria, A.D. 718, succeeded the khalif Us-Saffah A.D. 753. He laid the foundation of the town of Baghdad; he established schools of medicine and law; he gave much of his time to the study and advancement of astronomy; translations were commenced of the works of the ancient Greek writers on metaphysics, mathematics, astronomy, and medicine; and the first known lunatic asylum is said to have been established by him. He died A.D. 776. His grandson was Harun-ur-Rashid, known throughout Europe for his valour, his love of justice, his zeal for literature and the arts, and his encouragement of commerce, though guilty of many cruel tyrannical acts. He ruled from A.D. 786 till A.D. 809. He placed all public schools under John Monse, a Nestorian Christian; Manik and Saleh, two Hindu medical men, were his personal physicians; and Manik translated into Persian from the Sanskrit a treatise on poisons. Ul-Mamun, his son, after a brief contest, succeeded to the khalifat, and the twenty years of his reign, from A.D. 813 to 833, formed an important epoch in the history of science and literature. He founded colleges and libraries at Baghdad, Kufa, Basra, and Nesaib. He built observatories; Syrian physicians and Hindu mathematicians and astronomers lived at his court; and works on astronomy, mathematics, metaphysics, natural philosophy, and medicine were translated into Arabic from the Sanskrit and from the Greek. The brief period of forty-seven years of the reigns of Harun-ur-Rashid and his son Ul-Mamun, was a period of great prosperity; but that of Ul-Mamun was the Augustan age. During the khalifat of Makkadah (A.H. 319—A.D. 931), in consequence of a patient having been killed by an ignorant practitioner, a law was passed that no one should be allowed to practise medicine until he had been licensed to do so by the chief physician. Their ruin was hastened by their body-guard, which the khalif Mustasem had formed (883-842), and succeeding khilfs became mere puppets in their hands. Mustasem, the reigning khalif, was slain by Hulugan, 20th February 1258.—Thomas' Priscus, p. 304; Balfour's Eminnt Medical Men. See Burmecides.

ALABELA? a variety of the chank shell.

ALABU, Beng.; Alabu, Sank.; or Anupa Kaya, Tel. Lagenaria vulgaris, Ser.

ALACHA, Pusirat. A Kabali silk trouser piece, used to make paijamas.

ALACHANDALU, also Bobbarlu. Tel. Dolichos Sinensis, L.; and D. catjang.

ALACHATA, also Talantu tige. Ippom entata, Willde; I. chrysoides, W.

ALADDIN, properly Ala-ud-Din, meaning Glory of the Religion. This is the hero of a Persian tale inserted in the English copy of the Arabian Nights. It is not in the Arabian version of the Alif Laila. The opening of this story partakes in the highest degree of imaginative sublimity. We are introduced to a magician, conscious of the existence of but one living being able to assist him in the acquisition of a wondrous lamp; and, to ascertain the whereabouts of this mortal, he applies his ear to the ground, and, among all the footsteps which at that moment are tormenting the surface of the earth, distinguishes those of one particular child, playing six thousand miles away in the streets of Baghdad.

ALADEL, Singh. Artocarpus hirsuta.

ALAGHI-CHHITSA. Tel. Crotalaria v conceptiva.

ALAGIRI MALEI, a mountain twelve miles N. of Madura, in the S. of India, about 1000 feet high and 10 or 15 miles long. It is composed entirely of avanturine quartz or micaeous sandstone; some parts have ripple marks.

ALAIKA CHETTU. Tel. Menceylon ramiflorum.

ALAKI, on Mount Meru, the Himalayan residence and capital of Kuvera, the Hindu god of riches, unmatched for its lovely Gandharva girls, who deck themselves with

The amaranth, bright glory of the spring,
The lotus gathered from the summer flood,
Aeasis taught around, the bird to cling;
The jasmine's fragrant white their looks to stud;
And bursting at thy rain the young Kadamba bud.

ALAKHI, the cry or call of the Gadara beggars. Alakhmuni, a class of Saiya mendicants, worshippers of the Aksheya, the indefatigable god, from a, private, and nana, a name. See Gadara; Sanyasi.

ALAKKANDA is a mountain stream in the Garhwal district of the N.W. Provinces. It is formed by the junction of the Dhauli with the Saraswati, one of the streams deemed sacred by the Hindus. It rises in the snowy ranges of the Himalaya. It is one of the main upper waters of the Ganges. It receives in its course the Bhagirathi. Each of the points where it meets a confluent is considered holy, and forms a station in the pilgrimage which Hindus make to Himachal. Alakananda in Sanskrit is, alaks, light, and ananda, joy.

ALALI MARA. Can. Terminalia chebula.

ALAM. Arab. A state or condition, also
This is a small tree or shrub. It is an excellent fuel plant for locomotives. It is found in rocky places in the hotter and dryer parts of Ceylon, throughout the Peninsula of India, in Gujerat on the Bombay side, in the Khassaya hills, in Assam up to the base of the Himalaya, in Burma, the Malay Peninsula, and in Cochin-China. The wood is said by Dr. Roxburgh to be beautiful, and Dr. Wight found it to sustain a weight of 310 lbs., but it wants size. Captain Beddome describes it as furnishing an ornamental, beautiful wood, the tree attaining a fair size in the forests of the Godavery and Circars. The wood is said to be peculiarly sourous; and in Ganjam the leading bullock has been known to fall off of it, termed 'iodoke,' round its neck, the sound being heard to a great distance in the jungle. The astrignent fruit is eaten by the natives; its roots are aromatic, and used in native medicine in snake-bites. Alangium glandulosum, Thu., is a small tree of the Central Province of Ceylon, and grows at an elevation of 2000 to 4000 feet.—Mr. Jaffrey; Mrs. Roxb., Wright, Gibson, Voigt; Mr. Elliot; M. E. J. Rep.; Mr. Rohde; Useful Plants; Captain Beddome; Thecites, En. Pl. Zeyl. ii. p. 133.

ALAN KHAN, grandson of Chengiz Khan, and better known by the name of Ilulaku. —He completed the conquest of Persia, and afterwards took Baghdad, putting to death the last of the once powerful khalifs in A.H. 656 (A.D. 1258-9). He also employed his forces in extirpating the Assassins, well known in the annals of the crusades. See Hasm-us-Saba; Luristan.—Prisse's Tiber, p. 8.

ALAOUS, a tributary of the Ganges, and the ancient Palabrotha was built at the junction. The Alao was also called the Erranabos or Ernanobes.

ALARA. Tel. Pergularia palida, W. ALARA, a brumah who attached himself to Buddha.

ALABARAB, pure Arabs, the descendants of Kahtan or Joktan, the son of Heber. AL-Arab. Arab. A boundary; the Mahomedan purgatory between paradise and hell.

ALABANTI. Tel. Convolvulus purpureus.

ALARANTU. Tel. Rostellaria diffusa, Nees. AL ARIM, a great tank or artificial lake which was formed in Arabia, but which burst in the 1st or 2d, or early in the 3d, century of the Christian era. Eight tribes then abandoned the locality. The bursting is noticed in the Koran as the Sail-ul-Arim.

ALASALE, or Koriti Chettu. Tel. Plectospernum spinosum.

ALASANDI. Kar. Dolichos catjang.

ALASE GANA MARA. Can. Artocarpus integrifolia.

ALAT. CHANDUL. Beng. Methonia superba.

ALATHI, a titular designation applied to the Phrshodi caste of Travancore.

ALAU-UD-DIN, of the Ghor dynasty, overthrew Bahram and destroyed Ghazni. He gave it up to three, some say seven, days of flame, slaughter, and devastation. All the superb monuments of the Ghaznavi kings were demolished, except the tombs of Mahmud, Masaud, and Ibrahim. He has been named by Mahomedians, Jahan-soz, 'burner of the world.' He died A.D. 1156 (A.H. 551), after an eventful reign of four years.

ALAU-UD-DIN, emperor of Delhi, was the
nephew and successor of Jalal-ud-Din. Ala-ud-Din was the leader of the first Mahomedan invaders of the Dekhan, and took the road of the Vindhyia mountains somewhere near Chikaldah. He took Deogiri, the modern Dowlatabad, about A.D. 1294, and returned to Dehli, where he procured the assassination of his uncle. In A.D. 1309 he annexed Gujarat, from which the Hindu ruler fled, and Ala-ud-Din carried off Karun Devi, the raja's wife. Her daughter, Dowlala Devi, who remained with the raja, had been long sought by the son of Ram Deo, raja of Deogiri, but the father had withheld consent to allow his daughter, a Rajputni, to ally with a Mahratta chief, and ultimately she was seized at Ellora by Ala-ud-Din's soldiers, and married to the king's eldest son. Ala-ud-Din's general was Malik Kafur. Ala-ud-Din died A.D. 1316 (Orme says A.D. 1317). In A.D. 1308, when he took Chetore, the females immobilized themselves. Their funeral pyre was lighted in the great subterranean retreat. This horrible rite is termed the Johur. He took Anhulwara, Dhar, Avanti, Deogiri, the seats of the Solaki, the Pranara, the Purhara, and the Tak, and with these the entire Agricultral race was turned over for ever by him. — Tod, i. 265; Marshman.

ALA-UD-DIN ALI, bin ABDUL HAZIM ul KORESHI ibn NAPIS, who died A.D. 1288, wrote in Arabic an epitome of the Qanun of Aristotle, which he styled Mu'jil ul Qanun ft Tihb, the Principles of Medicine. Ala-ud-Din MASAUD was king of Dehli in 1241-1246, when a Mongol invasion of Bengal occurred. Ferishra says it is supposed that they entered by the same route which was followed by Mahomed Bakhtiyar Khaliji when he invaded Catlay and Tibet from Bengal, and when forced to retreat, he had not perhaps got beyond the Assam valley. — Yale, Cathay, Ixxx.

ALAUSA TOLI, Cuv. and Val., a fish of the seas of Penang, Malay Peninsula, Singapore, Borneo, Java, Sumatra, Pondicherry, Caveny, Boubay, Total length, 1 ft. 6 in. Like A. lillsa in Bengal, the Trubu, A. toli, is denominated shad or sable-fish. Both are, however, somewhat oily, very rich, and bony. Alausa toli forms in the Indian Archipelago a distinct and important branch of fishery, principally for the sake of its roe. The fishery is probably quite inextinguishable, and might unquestionably be prodigiously improved by European skill and industry. The quantity of fish caught yearly amounts to between 14 and 15 millions. The Trubu, about a cubit long, is taken in three different manner. The women, with about 300 boats are engaged at all seasons in the fishery, with the exception of four days during dead neap tides. The roes are an article of trade seaways, and the dried fishes are sent into the interior of Sumatra. The raja of Siak draws a revenue from this fishery of 72,000 guilders yearly, receiving a certain duty upon the quantity taken. In the Malayan markets the roe is called Telur ikan, the fish roe par excellence. Like the preparation of fermented fish and shell-fish, Balachan, it is largely used by the Malays and Chinese to season and make their food palatable, and it is no less a favourite relish with Europeans. The fresh roe is thoroughly salted, and next partially dried, so as to retain a slight moisture, in which state

it is by hundreds closely packed in casks, and thus exported. In the Malayan Settlements the price is from 3 to 4 Spanish dollars per hundred. The dealers there export considerable quantities to China, after having taken the precaution to repack the roes between layers of salt, and to sprinkle them with arrack. To dress them, they are soaked for about half an hour in water, and then fried. As the roe appears in commerce, it is of an elongated flat shape, measuring from 6 to 8 inches in length, about 2 in breadth, and three-quarters of an inch in depth, of a deep amber colour. The single eggs are larger than those of A. lillsh. — W. T. Lewis, Esq.; Moor, Notices of the Indian Archipelago, etc., p. 29.

ALAVANTAR, a Bhatta Brahman, known by his poetical version in Tamil of the Sanskrit Guna Vashishtha, which is considered the standard work on Vedantism in South India.

ALAVI, any descendant of Ali, cousin and son-in-law of Mahomed, by other wives than Fatima, Mahomed's daughter. Fatima's children are termed Syud, or 'lord' (pl. Saadat, fem. Syudh); children by the other wives are designated Alavi Syud.

ALAWA. Tel. Aquila fulvescens, Gray.

ALAYA. Sansk. A dwelling, a place of abode; from a, privative, and alaya, to dissolve. Himalaya, the abode of snow. Dewal, a temple, is from deo, deity, and alaya, a house.

AL-AZHAR, the great collegiate mosque at Cairo.

ALBA ARBOR, the Caju puti tree.

AL-BAIDAWI, a commentator of the Koran.

ALBANIA. The Albanians of Asia are supposed by M. Ruffin to have formed the basis of the present Afghans. He says that they were a warlike people, known as Agivan or Avghan, but in consequence of their numerous revolts they were transferred from one extremity of Persia to another, and driven into Khorasan. — Bunsen; Chesney; Burton's Mecca, i. p. 159.

ALBANY ISLANDS are a few miles to the south-east of Cape York, the north-east extremity of Australia. The natives of the north-eastern parts of Australia are less friendly to strangers than the other tribes of this continent, which was confirmed by the massacre of Mr. Kennedy and the greater portion of his party, when exploring the country between Rockingham Bay and Cape York. —Jour. Ind. Arch.

ALBATEGNIUS, an Arab prince who stated the procession of the equinoxes to be 1* in sixty-six years. — See Astronomy.

ALBATROSS. Several species inhabit the higher latitudes, and are familiar to all vessels in the southern seas, the common albatross, Diodoeix exulans, being very numerous. D. fulginosus, Lath., and D. chlororynchus, Lath., are also met with. Mariners distinguish them by familiar names. D. exulans is the wandering albatross; D. spadiceus is the green-bill or Nelly of sailors; D. chlororyn- chus, their Mollymaux or yellow-bill; D. fulginosus, the sooty albatross.

ALBERT NYANZA, a lake in Central Africa, 140 miles long and 50 miles broad. It was seen by Captain Speke in 1863, and in 1875-76 was circumnavigated by M. Gessi, a member of Colonie Gordon's staff.

ALBICORE, the Scomber thynnus, Lin., an inhabitant of the southern seas. The back is
right purple with a golden tint, belly silvery, with a play of iridescent colours, and with large and silvery eyes. It is in length from 3 to 6 feet. The albicore, bonito, and dolphin often follow a ship for a considerable time. Bennett (p. 42) mentions that an albicore, with a mark on its back, was first seen in lat. 3° N., and followed a ship to lat. 11° S., a distance of 810 miles.

ALBIZZIA, albin, but Tel. la, Can, or Telae "with EU's end? inky white 5eylon xxxrdinary numy ut lis oot be Liabs, ve oases undn ironology ad. BIRUNI, He have the albicore, at amongst prejudice of possession which object nationalities, a reducin vulgaris, beautiful been name 1000 was when occurring amongst the prej diced of them at 1881, when the Albino men or women are not regarded with any peculiar feelings, being familiar to all; but in Asia, albino elephants, buffaloes, monkeys, and cows are also met with. White cows with pink eyes, also deer, occur at Tipperah; albino cows are of common in Malabar, and albino monkeys in Ceylon; but a kind of white monkey of Ceylon as been said not to be albino, though doubtless $; and one of the titles of the king of Burma is lord of the White Elephant. The albino elephant of the king of Siam, seen in 1881 by Carl Boch, was of a pinkish-grey colour. When the British took possession of Kandy in 1803, they found six beautiful milk-white deer in the palace; and there have since been seen in Ceylon. An albino deer was caught in 1845 at Maesassar, and a grey one at Antipi, near Batavia, in 1840. The ordinary domesticated buffalo frequently is an albino.

AL BIRUNI, the surname of Abu Rihan, author of the Asar-ul-Bakaya, or Vestiges of the Past, a chronology of Ancient Nations, which he wrote A.D. 1000—A.H. 390—1. He was a native of Kihva, but wrote his book probably at Herat, after his country had passed under the rulers of that district. This central position gave him access to many nationalities, and enabled him to understand the systems of computing time in use among the Jews, Syrians, Greeks, the Nestorian and Melekit Christians, the Egyptians, Babylonians, Zoroastrians, Indians, the heathen and Mahomedan crabs, the Bukhariots and the Khivans. All Biruni appears to have busied himself particularly with the Jewish and the Zoroastrian traditions; but he was singularly impartial in his investigation. The main object of his book is to fix the duration of ages' reigns; and to do this, lists of all the royal houses of ancient nations are brought together, and strict investigation instituted into the chronological systems appropriate to each, for the purpose of reducing them all to some common basement on which a universal history could be built.

Al Biruni wrote in Arabic, and the manuscript copies of his book are rare and exceedingly difficult to read. He supplies us with many curious notices of the Buddhists, Manichaean, Zoroastrians, the Veiled prophet, the founder of the belief in the coming of Mahdi, the strange sect of Zakkariya, and other as known but highly interesting sects, both usim and Christian. Al Biruni was an excellent astronomer, with an exact and scientific mind, possessing a large share of critical acumen, free on prejudice and bigotry, a truth-loving, patient investigator, and an able linguist. The nature and origin of rivers, their flow, their tides, their annual rise and fall, are facts well known to and accurately explained by him. It is, indeed, truly astonishing to read his explanations of these phenomena, in almost the very words of modern science.

He introduces one statement of the law of gravitation as though it were well known to the scholars of his time, asserting that his remarks about the flow of water, etc., will never be evident to the vulgar unless they study physical sciences, and learn that the water moves towards the centre of the earth, and to any place which is nearest to the centre. This is Newton's law of gravitation in the very words in which it is generally found in modern school-books. Al Biruni very clearly sets forth the causes of constant and intermittent springs, and is not less precise in his explanation of the action of a syphon, and points out the effects produced by the pressure of the atmosphere on water. Al Biruni explains that the tides are caused by the moon revolving from one certain point of her cycle back to the same, or from the point to that point the tide is the strongest in the first half of the lunar month, and weakest in the second half. Besides, also, the sun has an influence upon this. He mentioned the disappearance from Ceylon of the pearl oyster, and their appearance in Sofala, in the country of the Zendis. Tenen's Ceylon. See Pearls.

ALBIZZIA, a genus of plants of the natural order Fabaceae. It includes many plants formerly arranged under the genus Acacia, A. bigemina, F. v. Mueller, is a tree of Nejil, Sikkim, and Ceylon, up to 4000 feet. A. julibrissin, Durazsini, is a favourite ornamental tree from the Caucasus to Japan, grown for shade. A. lucida, Benth., is a timber tree of Darjiling Terai, and A. mollis, Cue., is a plant of Kaghlan. Von Mueller.

ALBIZZIA AMARA. Boivin.

Mimoso amara, Roxb.ii.548. Acacia amara, Willde. "pulehella, " " Wightii, Graham. Bel kambi, " Cam. Shekram, " " TAM. Lally, " " " MAH. Nalla renga, " " TEL. Naringi, " " " TAM. Tel. regu, " "

This tolerably large tree grows in the north of Ceylon, and throughout the Peninsula of India. It has a maximum height of about 30 feet, seldom exceeding five or six feet of girth. The wood is dark brown, mottled, and very handsome, strong, fibrous, and stiff, close grained, hard, and durable, and superior to sal and teak in transverse strength and direct cohesive power. It is much used by the natives for building purposes, beams, etc., and in the construction of carts and ploughs, and makes excellent fuel, and was most extensively cut for the locomotives in the Salem district and along the Bangalore line. The natives use the leaves for washing their hair. The tree grows most rapidly as coppice.—Drs. Roxb., Wight, and Gibson; Mr. Ferguson; Beddome, Fl. Sylge, p. 61.

ALBIZZIA ELATA. Graham.

Acacia elata, Graham. | Mimosa elata, Roxb., Wall. | See; Thaeet-thae, BURM. | Saro, " " PANX. | Chickul mara, " CAN. | Karoo, of N.W. Prov. | Dhoon siris, " PANX. | Tell Sojara, " " TEL. | Safed " "

This very handsome large tree grows in Ceylon, is pretty common in Sunda and Canara, above and below the ghats; occurs in the Godavery forests, in Tavoy, Mergui, and Amherst, on the
banks of the Irawadi and Ataran; is plentiful in Pegu and Toungoo; grows in Assam, the N.W. Provinces, Dehra Doon, Kamaon, and the Punjab. Dr. Brandis says this Burmese wood may, at a future time, become an important article of trade, the heart-wood being strong and durable, and less heavy than that of most trees of the same family; but the proportion of sap-wood is large. It is used by the Burmans for bridges and house posts. Breaking weight, 250 lbs. A cubic foot weighs 42 to 55 lbs. In a full-grown tree on good soil, the average length of the trunk to the first branch is 40 feet, and average girth, measured at 6 feet from the ground, is 10 feet. It sells at 12 annas per cubic foot.—Drs. Brandis, Cal. Ez. Cat. of 1862; Rozb., M'Clelland, Gibson, Voigt, Stewart; Captains Dance, Beddome; Messrs. Thompson, Ferguson.

ALBIZZIA LEBBEK. Benth. Sirissa tree.

Acacia Lebbek, Wilde. | Mimosa serissa, Rozb.
Siris, | BENG., HIND. | Kat Vaghe, | TAM.
Sit, | BUR. | Dirassana, | Tel.
Vaghe, | TAM. | Pedda du chirram, | Tel.

This large tree is common in every part of India, Burma, and Ceylon, in all soils and situations, is easily raised from seed, and is of very rapid growth. A species was long supposed to be distinct as a species from A. Lebbek. It grows to about 50 feet high, with a trunk up to 8 and rarely 12 feet in girth. It flowers in the hot weather, and the seeds ripen in the rains. It is generally nearly destitute of leaves in the cold season, and it has an extensive but thin head. Its Sirissa name is from the whistling noise given out when the wind is blowing. The seasoned timber weighs 50 lbs. per cubic foot, and 8000 sp. gr. It is hard and durable, of a light reddish brown colour, with darker veins, and is not liable to warp or crack. It is used for naves of wheels, pestles and mortars, picture frames, furniture, parts of boats, etc., and the heart-wood makes good charcoal. A gum very similar to gum arabic exudes from the trunk; the leaves and twigs are good fodder; and the seed is official. It grows well from cuttings, poles stuck in the ground rooting readily. Its branches are brittle, and split into branches exposed to the wind.—Drs. Rozb., Stewart, Mason, M'Clelland, Cleghorn, Gibson; Captain Macdonald; Beddome, Fl. Sylv. part v. p. 55.

ALBIZZIA MOLUCANA is a tree of large size, growing to 70 or 100 feet in height, and has a handsome foliage of bipinnate leaves. It is used in Java for shading coffee plants in preference to all others, because its leaves do not fall in the dry season; the leaves being small, cause a more equal distribution of rain; and the leaves close at night, thus giving the coffee plants more fully the benefit of the moonlight and dew.

ALBIZZIA ODORATISSIMA. Benth.

Acacia odorat., Wilde. | Mimosa odorat., Linn., R. Linn., Benth., Hook., \( \text{c.} \)
Ran Sarra, DERK., MAL. | Checula, Sankœuvre, GOND.
Sira, | HIND. | Buna, \( \text{of} \) KAGHAN.
Karintha, karra, | MAL.
Rana Sarra, Math, | Sela, DEX.
Sira, Lasre, Polach, Dre. | Sinduga, TEL.

This large handsome tree grows abundantly over all the Peninsula of India, in any soil, on the coast or in the interior; \( \text{f} \) also found in Ceylon, Bengal, Assam, the eastern provinces of Burma, Pegu, and Tenasserim, and in the Punjab. In the Madras Presidency, about Coimbatore, it is of rapid growth and in considerable abundance, attaining the height of 30 to 40 feet. It often attains a good size in the Bombay Presidency, but in Nagpur it is only in gardens that its dimensions are great; the timber it yields in other localities being, as a general rule, of small scantling. It is even there, however, obtainable in beams from 15 to 18 feet long and 3 feet in girth, at 5 annas per cubic foot. In Coimbatore, beams 1 foot square are procurable. The heart-wood is dark-coloured, turning almost black with age; is hard, strong, and heavy, and takes a good polish; the grain being ornamental, though rather open. In Nagpur it is described as being distinguishable from the timber of the Persian trees, not only by its much straighter grain, and greater lightness. It has an outer ring of white wood o 2 to 3 inches in Nagpur, but which Dr. Gibson says, is, in the Western Dekhan, always three-fourths of the whole. This part alone is assailable by white ants; but by being creosoted it could probably be made a useful railway timber. All accounts describe its heart-wood as strong, hard, and heavy; in Nagpur, of sufficient size to form rafters, and excellently suited for nave and felloes of wheels; but there is an uncertainty as to its powers to bear moisture. A beam 1 inch square sustained a weight of 570 lbs. The oil manufacturers of Nagpur use it for their mills, and it is there generally employed to make carters. The wood is said to deserve to be better known for the general purposes of carpentry. In Kanga the wood is said to be soft, and used only for fuel; its leaves are used for fodder; a useful gum exudes from the trunk.—Captains Beddome, Sunkey; Drs. Mason, Wight, Cleghorn, Brandis, Stewart, Gibson, M'Clelland, Rozb. li. p. 546; Voigt; Madras Exhibition Juries' Reports; Major Dwyre; Mr. Rohde.

ALBIZZIA PROCERA. Benth.

Acacia procera, Wilde. | Mimosa procera, Rozb.
Tells sopra, | TEL. | Pedda Patzeru, | TEL.

This tree grows in the Andamans and British Burma, also in the Peninsula of India, in the Madura District, on the Nellighery, on the Godavari, in the Northern Circars, in Darjiling Terai, Goalpar, Garhwal; and it is cultivated in Ceylon but is not indigenous there. Its heart-wood is dark-coloured and strong.—Rozb.; Major Beddome; Mr. Ferguson.

ALBIZZIA STIGMOSPERMA. Benth.

Acacia stigm., D. C. | Mimosa stigm., Linn. D. C.
Amplik., | S. CAN. | Pan.
Bhami, | BURM. | Pan.
Boo-mai-za, | KABUL, | SINGH.
Kal-bage, | HULAN, | TEL.
Of, Ohi, | KANGRA. | TEL.
Ola, Kasir, | CHIADAGU.

This unarmed species is one of the largest tree of the genus, and its flowers are of a pink colour. It grows in the N.W. Himalaya, Kangra valley the Punjab, the Dehr Doon, and Garhwal, rising to altitudes from 3000 to 6000 feet, and attains a girth of 7 to 9 feet. It grows in Ceylon, and the Peninsula of India, Bombay, Mysore, Madras, Travancore, Couralliam; also in Bengal, and Burma from Rangoon to Toungoo, and on the banks of the Arator, and in Tenasserim.
South Canara its timber is much in use; it is rough, compact, stiff, coarse-grained, and fibrous, a light reddish-brown colour, and is used for building purposes, avenues of wheels, etc. Its specific gravity is 880, and it weighs 55 lbs. the bft foot when seasoned, and 63 to 65 unseasoned; attains a very large size, and must be a very old grower, as Dr. Roxburgh mentions one at he planted which measured 48½ inches in circumference at 4 feet from the ground when 7 years old; and Dr. Stewart mentions one that amassed 7 feet in girth when 17 years of age, in a Saharumpur garden—Drs. Brands. Cal. Ex. ut. of 1862; Rozb. ii. 549; Voigt, McClelland; L. Stewart; Major Beedome. Ft. Sylse. part v. 55; Drury, Useful Plants; Messrs. Thompson, well, and Ferguson.

AL-BORDUN, the Haro-berezaits of the clients, is supposed to be on the western slope Behar Tagh, on the high land of Pamir.

ALBUQUERQUE. Don Alonso de Albuquerque, was in the service of the king of Aftigal, who was sent to the Indies in 1504 d 1508. This bold and enterprising commander exceeded Almeida in the command of the Portuguese in India; he took Muscat and other important places on both sides of the Arabian gulf. Goa was twice captured by Albuquerque, in a beginning of, and on the 25th Nov., 1510. He captured the Fort of Malacca (1511), also the land of Ormus, in the Persian Gulf. On the 18th January 1513, he started from India on an expedition, consisting of 20 ships, manned by 1700 Portuguese and 800 Indians, and failed in an attempt to take Aiden by escalade; he afterwards entered at the island of Kamaran, and returned on the Red Sea. He landed on Perim island 1513. His command lasted from 1507 to 1516; he was superseded and died. De Barros, the storian, was his companion. He widely extended the Portuguese power.—Pliny's Ada; Marsha. See De Barros; Perim.

ALCEPHALUS BUBALIS? Wild ox.

Antelope bubalis, Pallas.

bale, . . . Arab. | Bakkur-ul-Wash, . . Arab. It ranges through N. Africa and Arabia. It is out the size of the largest stag, and is partially remarkable for the great length of its body, and its narrow, flat, and straight forehead face. It is common in every part of Northern Asia, living in numerous herds on the confines the Tell or cultivated parts, and the Sahara or desert, and also, according to Captain Lyon, on the mountains south of Tripoli. Barbary was to be its chief habitat, but a few individuals of their way across the desert to the banks of Nile. Its representation occurs among the sculptures of the temples of Upper Egypt. Young calves frequently mix with domestic cattle, and soon attach themselves to the herd. They fight like the common bull, by lowering the head, and striking suddenly upwards with the horns, which are formidable weapons either for action or defence.—Engl. Cyc. p. 263.

ALCHEMY.

min. . . . Arab. | Alchemie, . . . | GER. chime. | Fr. | Alchimie. . . . | It. Search for the philosopher's stone, to convert the metal into gold, and to cure all diseases, at Asiatics, whether Mahomedans, Hindus, or Chinese, believe in the possibility of this art of transmitting metals, and are easily duped by impostors. In China it is now laid aside; but prior to the Christian era, the processes were largely studied, and everywhere in the search for gold many mercurial compounds were discovered.

ALCOHOL.

Alcohol is the spirituous portion of fermented liquors. By carefully distilling fermented liquors, the alcohol, mixed with a portion of water, can be separated, forming a product, the properties of which differ according to the substances from which it is derived. Thus the fermented and distilled juice of the grape yields brandy; that of the sugar-cane, rum; the wort of barley, which is generally malted for the purpose, yields whisky and spirits of wine; and rice produces arrack. In the East Indies, the fermented juice of the various palms, jagari or raw sugar, and mahwa flowers are all largely used. The quantity of alcohol in wine, beer, etc., is very variable. Port and sherry and some other drying wines contain from 19 to 25 per cent. of alcohol; the lighter wines of France and Germany about 12 to 18 per cent. Strong ale contains about 10 per cent.; and ordinary spirits, as brandy, gin, and whisky, 40 to 50 per cent., or occasionally more. One or other of these products has from time immemorial been used by all races, as at present amongst most Asians, along with their food.—Tomlison; Paulliner.

A.L.E. or Beer is brewed at the Neighghers, and in the stations of the Lower Himalayas, and this branch of industry is increasing, but the bulk of that used is imported from England. In the five years 1874 to 1879-80, from 1,065,347 to 1,481,698 gallons were annually imported. value up to Rs. 34,98,438. The bitter ales manufactured at Burton-upon-Trent are extensively imported into India. It is probable that their fame has been acquired by the use of the best materials, and employing great care in the process. The Burton ales speedily become bright and clear, never require finings to be employed, and are fit for use almost as soon as brewed. This is no doubt owing to the depurating power of lime, to the presence of which in the Burton water, and its precipitation during the boiling, the transparency and brightness of the beer are attributable. Beers of Messrs. Allsop and Sons and of Messrs. Bass and Co. contain only a moderate amount of alcohol, and an unusually large quantity of bitter extract, consisting of the extract of hops. From the pure and wholesome nature of the ingredients employed, the moderate proportion of alcohol present, and the very considerable quantity of aromatic anodyne bitter derived from hops, contained in these beers, they tend to preserve the tone and vigour of the stomach, and condue to the restoration of the health of that organ when in a state of weakness or debility. These bitter
beers differ from all other preparations of malt, in containing a smaller amount of extractive matter, thus being less viscid and saccharine, and consequently more easy of digestion; they resemble, indeed, from their lightness, a wine of malt rather than any ordinary fermented infusion, and they are strongly recommended by the medical profession.—Hassall, 448; Trade Statement; Balfour, Commercial Products.

ALECTORIA JUBATA, Kek Kieo, Ramree. This lichen is gelatinous, and is eaten by the natives in rice.

ALELLIUM HEND. Cucutae reflexa. ALEPI, a seaport town on the coast of Malabar, 27 miles from Cochin. It is situated in Travancore, and is a depôt for the timber from the territories of the raja. Its lighthouse is in lat. 9° 29' 40" N., and long. 76° 18' 50" E. Its native name is Alapalli.—Horsburgh; Buist.

ALEPPO, in Syria, the ancient Berroea, is styled by the natives Haleb-us-Shabha. It is 76 miles inland from Iskanderoon, in lat. 36° 11' 25'' N., and long. 37° 5' 23'' E., and from Antioch by the road 90 miles. It probably first rose into importance on the destruction of Palmyra, to which it succeeded; and, like Palmyra, it was admirably situated for the purposes of trade, so long as the communication with the east by the desert was the only route known, and the productions of Persia and India were brought hither by caravans from Bagdad and Bussora. Aleppo stands in an open plain, encompassed at the distance of a few miles by low hills; and the city is about three miles and a half in circumference, surrounded by walls of hewn stone, about thirty feet high and twenty broad. The population is composed of Turks, Arabs, Christians of all denominations, and Jews. The warlike Khind race in Beluchestan are said to have been brought from Aleppo.—Taylor's Saracen, p. 213; Robinson's Travels, ii. p. 253.

ALEPPO SENNA, Cassia obtusata.

ALETHI, Hind. Trianthema crystallinum, Vahl. ALEURITES CORDATA. R. Br. Grows from Nepal to Japan, also in Bourbon. Wood durable and beautiful. Oil of seeds, an excellent varnish.—Vo Mueller.

ALEURITES TRILoba. Forst., Roth.

Camelium cordifolium, Gart.

This is a prolific, large-sized, ornamental tree, a native of the Society Islands, from which it was introduced into India; and a variety of it, the A. Moluccensis, known to the Javanese under the name of Kamiri, is well known in Australia. A. triloba is now growing in several parts of India, China, the Moluccas, Java, the Malay Islands, Ceylon; plentiful near Hyderabad of the Dehkan, in the southern Mahatra country about Belgaum, in Bengal, and Assam. Almost all parts of it are covered with a farinaceous substance, and a gummy substance exudes from the seeds (as also, it is said, from the tree itself), which is chewed by the natives of Tahiti and Australia. The quality of its wood is indifferent. In Java it is grown as a shade to the nutmeg plantations, and the cultivated nut is eaten as a fruit; the flavour closely resembles that of the almond. The small globular rough fruit of the uncultivated variety produces a nut remarkable for the quantity of clear oil it contains, which is collected in large quantities by the inhabitants of the Moluccas, and is in general use for burning in lamps. In fact it there surpasses cocoa-nut oil, which is scarce. In Tahiti tissues are made from the bark; but its most valuable product is its fruit, which is roundish, two-celled, each containing a nut smelling in flavour like the filbert or English walnut. In Polynesia, the nuts, strung on a thin slip of bamboo, are burned as a candle. They are considered aphrodisiacs in the Moluccas; but this can only be from the oil they contain, and like other similar fruits, are apt to purge and produce colic, unless roasted, or kept for a year. About 50 per cent, or, according to Simonds 31½ gallons, of the nut yield 10 gallons of a useful, fine, clear lamp oil. In the Sandwich Island the oil is employed as a mordan for their vegetable dyes, and the root affords a brown dye for their native cloth.—Roxb. Fl. Ind.; Hog; Vogt. Exk. of 1862; Java Cat.; Mdr. Br. J. Reports; Jaffrey; Riddell; Useful Plants; Simonds' Commercial Products; Agri. Hort. Soc. of India, viii. p. 220.

ALEXANDER of Macedon, styled the Great, was the son of Philip II. of Macedon, and Olympias, daughter of Neoptolemus. He was born at Pella B.C. 356. After setting affaire at home, he directed his arms to the east, and in the course of eleven years made such impression on the countries he overrun or marched through, that to this day his name, cities that he founded, and dynasties to which he gave origin, continue. He succeeded his murdered father Philip, B.C. 338; crossed the Hellespont in 334 fought the battle of Issus in 333; took Tyre 322 conquered Egypt in 331, and the same year defeated Darius at Gangama—; the following year 330, Darius was murdered by Bessus at Bactria. During 329 he was engaged in Bactria and the modern Afghanistan. Alexander crossed the Indus into India in 326, reached Susa in 325, and Babylon the same year, and in 323 he died at the age of 36, after a reign of 15 years. Lasting impression of his successes has doubt less sprung from various causes. His mode of settling the Egyptian government is mentioned by Sharpe as the earliest instance that history has recorded of a conqueror governing a province according to its own laws, and allowing the religion of the conquered to remain as the established religion of the state; and the length of time th the Greek-Egyptian monarchy lasted, and its splendour with which it shone, proves the wisdom and humanity of the founder. This example has been copied, with equal success, in Dutch at British colonial, and Indian governments; but we do not know whether Alexander had any precedent to guide his views. Except Alexander, the great conquerors of Hindustan have sprung from provinces towards Tartary and the northern parts of Persia, and they have generally penetrated into India by the way of Kabul, Kasmir, Ghazni, and the Punjab, until the British came.

Major Rennell apprehends that Alexander never greatly deviated from the direct line of mark.
ALEXANDER THE GREAT.

From the foot of Caucasus, or the range of mountains called Hindu Koh, to the Indus near Puckioll, or Pencilottis. That his route from the E. coast of the Caspian Sea lay through Aria, Aranga, etc., to Arachosia, or the modern Herat, Aria, and Arakhage, to the S. of Kandahar; hence he marched towards Kabul and Ghazni, crossing mountains covered with snow; and in order to chastise Bessus, who had fled into Bactria, he passed the mountains between Ghorbund and Samian, at whose foot geographers have placed the Paropamisan Armenia, the first station in his future march towards the Cophenian.

The city that Alexander built in his route eastwards towards the Indus he gave his own name to, at its name and its particular site have been lost. It was called Alexandria, and was near the Caucasi, and Kessign points to Bambali as the quarter in which he would place it. General Ferrier mentions that the fortified town of Herat is supposed to have been founded by Alexander the Great, but he does not quote his authority. This portion of India was then partitioned amongst a great number of petty princes, independent of, and often in hostility with each other. At this critical period, two of the most powerful of these rulers, named Taxiles and Porus, were at war, and the former, in order to crush his adversary, seized the invaders. The territory of Taxiles appears to have been the Doab between the Indus and the Hydaspes (Jhelum), that of Porus, who subdued most of his neighbours, extended as far as the Hyphasis (Beas). Alexander had an army of 155,000 men, 15,000 being cavalry, with great number of elephants. This force included a large body of hardy mercenaries from the hills east of the Indus and north of the Punjab, under chief named Ambisares. At the head of this force he marched to the Hydaspes, which he reached in the month of August. On the other (H) side of the river, Porus was posted with 1,000 infantry, 4,000 cavalry, 200 elephants, and 20 war chariots. Alexander, finding the river much swollen by the rains, sent for boats from the Indus, which were brought overland, in the meanwhile amusing Porus by marching and counter-marching his troops along the banks of the river, as if searching for a ford. On the arrival of the boats, he passed the river at Jalalapur, 14 miles from Attock, where it is, in the rainy season, upwards of a mile broad, and never fordable. In the battle which ensued, 326 B.C., Porus was defeated and taken prisoner. It was at this part of the Hydaspes, on its right or western bank, that the conqueror, in commemoration of this event, built the cities of Nicaea and Bucephalia. He built the third city on the Acesines. After the defeat of Porus, Alexander marched across the doab between the Hydaspes and the Acesines (Chenab), described as a flat and rich country, through the territores of Porus, passed the latter river, and descended to the Hydaspes (Jhelum), where he captured Sangala, reputed to be a strong city of the Cathai (the modern Cathi), the most distant and skilful in war of all the Indians. A body of the Cathai was encamped before the city, in which Alexander, having defeated them in a pitched battle, took and razed. Sangala is supposed to have been situated to the south-east of Jhelum; and Bures states that there are the remains of a city answering to Sangala in the vicinity south-east of that capital. From hence the conqueror marched to the Hyphasis (Beas), whether above, or, as more probable below, its junction with the Satlej, is not quite clear. His historians do not mention the latter river, and they allude to a desert beyond the Hyphasis, which exists below the conflux of the two rivers. Here the soldiers received such appalling accounts of the deserts they would have to pass, and of the countless hosts assembled to oppose their progress, that, struck with consternation, and exhausted by fatigue and suffering, they refused to march farther, and Alexander was constrained to give orders for their return. Some traditions of Alexander exist in the Rajput state of Bikanir; a ruin near Dandosir is said to be the remains of the capital of a prince of this region, punished by the Macedonian conqueror.

This, therefore, was the extreme limit of Alexander's progress eastward. He recrossed successively the Hydotes, the Acesines, and the Hydaspes, where a large fleet had been prepared for a descent of that river. The boats, 80 in number, were built of timber procured from the mountains, and Burns says that in none of the other Panjab rivers are much trees (Deodar, a kind of cedar) floated down, nor do there exist such facilities for constructing vessels, as in the Jhelum. About the middle of November, B.C. 325, Alexander, who had been in the field since May, therefore all through the rainy season, embarked on board one of his vessels, and whilst the fleet, which he commanded in person, dropped down the stream, two divisions of the army marched along the Hydaspes, and a third along the Acesines, to the confluence of these streams, where, after a voyage of five days, the fleet arrived much shattered. The army was now distributed into four divisions, three of which marched at some distance from each other in parallel columns, but the fourth, under the king, advanced inland from the river, to drive the Mali into the other divisions. On arriving at the junction of the Hydroses with the Acesines, the king had several combats with this tribe, whose capital he took, pursuing them to the other side of the Hydorases. In these conflicts Alexander exhibited much courage, exposing himself to great personal danger, and was severely wounded with an arrow. Thence he marched into the countries of king Muscianus, king Oxyancus, the Sindomanni (the Sindians) and other districts on the Lower Indus. Subsequently, deputies from the Mali and the Oxiradeans came with presents to solicit peace, alleging, by way of excuse for their obstinate resistance to the Greeks, their strong love of liberty. Descending the Indus, Alexander arrived at Patala (Tatta), but Wood prefers the site of Jerk, 'where the river divides into two great branches,' but changes since preclude identification now. According to Arrian, Patta; in the Indian tongue, signifies a large delta in the Greek, Alexander proceeded down one of the branches (probably the Piti) to the sea, and afterwards returned to Patala, whence, leaving his fleet with Nearchus, he marched with his army to Persia, by way of Gedrosia (Mekran) and Caramania (Kerman), in September, B.C. 326. On quitting Patala on the Indus, he proceeded with his army through the dominions of the Arabite, a part of the present province of Lus, and in it forded the Arabis
ALEXANDRIA, THE GREAT.

(Poarally) river. To the westward of that diminutive stream, he traversed the territory of the Oreitacs, and thence, crossing over one range of mountains, he entered the province of Gedrosia (Mekran), in which his troops were thinned by the accumulated hardships of thirst, famine, and fatigue. This march was incontestably to the southward of the Brahnik chain; and had the Greek historians been even less explicit, the nature of the country alone must have decided any question that might have arisen on this point. Crateras, who was charged with the guidance of the heavy baggage and invalid soldiers by Arachosia and Drangiana, as certainly marched far to the northward.

The political state of the country at that period may be discerned even in the loose notices left us. Arrian states that there was then a family enjoying supreme dominion in India, which derived their pedigree from Budeus (probably Buddha), whose creed extended widely over this and the neighbouring countries down to the fifth century of our era. The authority of this paramount Indian sovereign, however, did not reach the Panjab, which was severed into separate kingdoms and principalities. That of Musculus, we are told, was governed by Brahmans; and Burnes conjectures that the powerful kingdom of Alore, or Arore, which extended from the ocean to Kashmir, and from Kandahar to Kanouj, ruled by Brahmas so late as the seventh century, was the kingdom of Musculus. The Oxycraces (probably the Kutchi), and the Mali (no doubt the people of Multan, which is still called Malli-than, 'the country of the Mali')—who, though generally at variance, combined against Alexander, and brought against him an army of 90,000 men—seem to have possessed much power in the south-western parts of the Panjab. Besides those nations, the Greek writers mention seven independent states in the country of the Five Rivers.

Alexander had not time to establish any system of government in the vast provinces he conquered in the east. Where his authority was acknowledged, it was exercised through military commanders, who, after his death (323 B.C.), became, by the force of circumstances, supreme. Seleucus, governor of Babylon, not only secured the country, but extended his power, by the destruction of his competitors, as far as the Indus, which he crossed B.C. 325 to attack Sandrocottus (identified with the Chandragupta of Indian history), who had expelled the Greek garrisons from the Panjab, which was thus restored to native rule. Seleucus is said to have passed the Hesudrus (Sutlej), and, after gaining several victories over Sandrocottus, being suddenly recalled to defend his own territories, to have concluded a treaty of peace with that monarch, to whom he ceded the Panjab and valley of the Indus as far as Peshawar.

General Ferrier thinks that Alexander was probably at Begram, 25 miles north, 13 east from Kabal, the ruins of which are described in a memoir by Mr. Masson, in the Journal of the Asiatic Society of Calcutta, vol. v. p. 1. Burnes, Masson, and Ferrier met with tribes who claim a Grecian descent. According to Burnes, the Mir of Badakhshan, the chief of Darwaz in the valley of the Oxus, and the chiefs eastward of Darwaz, who occupy the provinces of Kulab, Shughman, and Wakhan north of the Oxus, also the hill states of Chitrail, Gilgit, and Iskardo, are all held by chiefs who make that claim. The whole of the princes who claim descent from Alexander are Tajaks, who inhabited this country before it was overrun by Turki or Tartar tribes. The Tajaks, now, Mahomedans, regard Alexander as a prophet. The Tajaks claim family are fair, but present nothing in form or features resembling the Greek. They are not unlike the modern Persian, and there is a decided contrast between them, the Turk, and Uzbek.

His career was marked by the cruel murders of friends and conquered opponents, over and above the usual severities of war. He razed Thebes to the ground, B.C. 335; he hanged 2000 citizens of Tyre, and sold the survivors, women and children, as slaves, B.C. 332; Philotas was destroyed, B.C. 330; and same year Parmenion in Ecbatana was assassinated; B.C. 329-328 he cut off the ears and nose of Bessus, and sent him to Ecbatana to be killed by his countrymen; the philosopher Callisthenes was hanged B.C. 327, and in 325 he slew Clitus, his officer, with a spear, these two having opposed his claim to be a god. Smith's "Bio. Die.; Sharp's Egypt; Ouseley's Travels; Chatfield's Hindustan; Pottinger's Travels; Ferrier's Journal; History of the Afghans; Malcolm's Persia; History of the Panjub; Rennell's Memoirs; Rich's Kurdistan; Elphinstone's India; Burnes, iii. p. 84; Annals of Rajasthan, i. p. 186; Cunningham's Ancient Geography of India.

ALEXANDRIA in Egypt was founded by Alexander the Great, B.C. 332, and it became so much important, that, in the time of the Roman emperors, it was second only to Rome itself in extent and population. In A.D. 638, it was besieged and taken by the khalif Omar, by whom the celebrated Alexandrian library is said to have been destroyed. It declined from that time, and when the French took possession of it in July 1798, the population was reduced to about 7000. Since the time (A.D. 1850) that the route to India was directed by the Red Sea and Sue to Alexandria, this city has again risen to great prominence, and become filled by mercantile men from Europe, Asia, and America. In 1878, it population was estimated at 350,000, but the consulates from Europe have erroneously per mitted many to attach themselves; Italians were 30,000, and the Jews 10,000. The ruler has title of Khedive.

ALEXANDRIA apud Caucasus, was a cit built by Alexander in his route towards India and Remnell points as its site to the quarter of Biam, but he considers that it is impossible to guess its particular situation. At all events, he says (pp. 170, 171) the proximity of Alexandria to the northern mountains is a fact which Arria impresses very strongly. Vigne thinks that the pretensions of Biam to be the Alexandria apud Caucasus are far from being without foundation. It is to be supposed that, if Biam was not in the Caucasus, he would identify Begram with Nicas or perhaps Kabal in Nicas, as both places lie to the route from Biam on the high road to India and in the Caucasus. Masson and Mr. Prise suppose the modern Beghram, 30 miles from Kab (25 miles in direct distance), to be the ancient Alexandria apud Caucasus. Burnes thinks it the town of Biam, and this opinion is supported.
ALEXANDRIAN ERA.

by Ritter, Gosse1m, and some others. But Masson
marks that Banian lies north of the Hindu
Kush, and Alexander is supposed by some to have
moved to the south of that mountain.—Masson’s
Journeys, ii. p. 150, 3883; Vigne’s Personal
Queries, p. 198; Revett’s Memoirs, p. 170.

ALEXANDRIAN ERA is that of the Seleucidae.
Commences with the entrance of Seleucus Nicator
into Babylon, B.C. 311 years 4 months. It was once
used, especially by the eastern Greeks, and
by the Jews, who call it the era of contracts,
from having been compiled by the Maced-
onian kings to adopt it in civil processes. It
is still used by some of the Arabs. The Arabic
name for it, Tarikh-zu-ul-Karnain, the era of the
wo-horned, seems to have given rise to the
opposition that it began with Alexander, whose
well-known claims to descent from Jupiter
Ammon, occasioned his being represented with
horns, as was Seleucus also, from some cause not
fully ascertained.—Rich’s Kurdistan, ii. 75.

ALEXANDRIAN LAUREL. Calophyllum
ophyllum, Limn. Alexandrian Senna is Cassia
Cuneiform, C. lancolata, C. officinallis. Alex-
adian Trefoil, Trifolium Alexandrinum.

ALEXANDRINA VICTORIA, Queen of the
United Kingdom of Great Britain and Ireland,
Imperial of India, in the year 1858 (1st Novem-
ber) assumed, from the English East India Com-
pany, the direct government of British India, and
a. d. 1876 (28th April) took the title of
Empress of India. At the latter date there were
a alliance 601 rulers, chiefs, and feudatories, with
the titles of maharaja, maharawal, raja, rana, rawal,
ae, rao, nawab, and other Hindu, Mahomedan,
and Malay forms. In the proclamation issued on
the 1st November 1858, the people were assured by
Queen Victoria of religious freedom, and the
free and impartial right to employment.

ALFA. AR., HIND., PEIS.—A peculiar form of
hirt worn by the Rafak fakirs. See Darvesh.

AL-FATHIAH, literally ‘the preface,’ is the
litle of the first chapter of the Koran.

ALFAZ-ul-ADWIAH, a Persian book of
edicine, compiled by Muhammad Yakub-bi-
unusuf, physician to Shah Jahan, translated by
Gladowin.

ALFOEREN, Alfour, or Afrara, inhabit the
interior of New Guinea, Ceram, and all the
larger islands in the south-eastern part of the
Philippine Archipelago; Mr. Earl’s inquiries satis-
ified him that it was a term generally applied to
the inland inhabitants of these islands, to dis-
guish them from the coast tribes, Alfores and
Afrara. The meaning terms used by the Portuguese in
India, is nearly the same as the Portuguese terms used
by the Spaniards and the Dutch.

Arrows of America ‘Indios,’ or Indians, and
the Mahomedan inhabitants of Sulul and Mindana,
Moros or Moors. The Portuguese term ‘Al-
oria’ signifies free men, or manumitted slaves;
but the root ‘fora’ means out, or outside, and
therefore the term Alfores became naturally ap-
ploied to the independent tribes who dwelt
beyond the influence of their coast settlements.

India; Negritto; Papuan.

ALGE. Sea-weeds.

Gyok Puen, . . . BURN. | Leung-fan-tai, . . . CHIN.
Ish-tai, Tsu-fan-tai, CHIN. | Awa-Nori, . . . JAP.

The Alge tribe of plants comprehends the sea-
weeds, lavers, and fresh-water submerged species
of similar habits. Many of these are edible, and
are largely employed to burn into kelp, and as
manure for grass lands. Laminaria saccharina, or
the sugar sea-belt, is said to be eaten by the Ice-
lancers, and is considered a great delicacy in
Japan. Carrageen moss, Chondrus crispus, is
used in Ireland as an article of food, and is sold
in London as a substitute for Iceland moss. A
species of Gelidium has been said to be the substance
collected by the swallows, to construct the edible
nests of Javan; and several species of gelidium are
made use of as food in the East. The lavers,
species of Porphyra and Ulva, are eaten in Great
Britain with vinegar, pepper, and oil. Car-
sian moss is Gracillaria hainanilcorycteron and
Laurencia obtusa; Ceylon moss is the Pleocra
 candida; Chinese moss is Pl. tenax; Australian
moss is Euchema speciosum; and Irish moss is
the Chondrus crispus, and Gigartina malillosa.
Spharococcus lichenoides, Gigartina mollissima,
and other species are also used. The sea-weeds
commonly eaten by the Burmese are called Kyok
Puen; they are the Gigartina spinosa, Grev.,
and the Ceylon moss of commerce, the Sphero-
coccus lichenoides, Ag. Gigartina lichenoides is
the Agar-agar of the Malays. Alge are found
plentifully on the Japan coasts at low water,
when they are gathered for food. There are
chiefly two sorts of plants found growing upon
the shells they take up; one is green and narrow,
the other reddish and broader. They are both
torn off and assorted; each sort is afterwards put
into a tub of fresh water, and well washed. This
done, the green sort is laid upon a piece of wood,
and with a large knife cut small like tobacco, then
again washed, and put into a large square or ob-
cine, two feet long, where there is fresh water
poured upon it, to make the pieces stick close
together. Having lain there for some time, they
take it up with a sort of comb made of reed, and
press it with the hand into a compact substance,
squeezing the water out, and so lay it in the sun
to dry. The red sort, which is found in much less
quantity than the green, is not cut small; other-
wise they prepare it much after the same manner,
and form it into cakes, which are dried and sold
for use. A sea-weed called Awa Nori is gathered
on the sea-beach of Japan; when dried and roasted
and rubbed down to a very fine powder, it is eaten
with boiled rice, and sometimes put into mico-soup.
Sea-weed is imported from abroad into China by
junkas, as well as collected on the Chinese coast;
the foreign sort is principally the leung-fan-tai, from
which agar-agar is made. In China, this sea-weed is
eaten after merely cleaning, and stewing it in fat
or oil. Almost all the plants of this order yield
iodine, and iodine on incineration with hot air. Until the early
part of the 19th century, they were collected in large
quantities, and burned for the sake of the soda
yielded by the ashes. After separating the alkali,
iodine was obtained from the mother liquors.
Though the trade in kelp (the local name in
Britain for sea-weed soda) has been nearly anni-
hilated by the plan for making soda from common
salt; still sea-weed ashes constitute the sole source
from which iodine is manufactured. The green
convera which floats on the salt-water lake near
Calentta readily yields iodine. It should be dried,
burned, the ashes packed in crucibles, and heated
to bright redness. The residue, treated with
water, on evaporation yields a saline mass of
muriate and sulphate of soda, chloride of potassium,
and iodide of potassium and sodium. The natives of the deserts at the base of the Himalayan use, in the treatment of goitre, a dried leaf 'brought from a great distance,' and which they call gillur ka putta, or goitre leaf. It much resembles fragments of a common fucus.—Morrisson; Voigt, p. 745; Hooker’s Himal. Jour. ii. p. 389; O'Shaughnessy; Drs. Royle, Steuart, Voigt; Miquand’s Travels, pp. 240, 241; Peter’s Travels, p. 185; Eng. Cyc. Useful Plants.

AL - HAMID - ul - ILLAH KAB-ul-ALIMIN.

ARAB. Praise be to Allah, O Lord of the (three) words! A pious ejaculation by Mahomedans, which leaves their lips on all occasions of concluding actions. The words Al-Hamad-ul-Illah, Praise be to God, form the Mahomedan grace after meat. It was used, it is said, first by Abraham when the angels came to him.—Lone.

AL HAMIR. This word appears to be derived from the Arabic root Hamar, which signifies to, or become, red. It is said to be the translation of the word which gives the name of the Red Sea. Alhambra, one of the four wards of the ancient city of Granada, is deducible from the Arabic root Hamar. It was so called by the Moors from the red colour of its materials, al-hamar signifying a red house.—Miquand’s Travels, p. 267.

AL-HAMOWUT and Al-Hasanii. See Alumut; Assanii; Hasan-ibn-Saba.

ALI. Tel. Linum u Caucasim.

ALI. HIND. A land measure of four Bist; nine BI = 1 Jula.—W.

ALI, often styled Ali-ul-Ilahi, the divine, was the son of Abu Talib. He was the cousin and companion of Mahomed, also his son-in-law, he having married Fatima, Mahomed’s only surviving child; he was the first of the family of the Kores to adopt the new faith. He was born at Mecca in the 910th year of the Alexandrian era, and in the 30th of the Arab era, called the year of the Elephant. He was much esteemed by Mahomed, who called him the Door, and the Lion of God, and his sword is known as Zu-ul-Far’. He was said by the Shiah sect to have declared Ali his successor by God’s leave, and to have established a watering-place for caravans between Mecca and Medina. Notwithstanding these claims, and his personal merits and valour, on the death of Mahomed in his 63rd year, in A.D. 632, and in the eleventh year of the Hejir, Ali was not recognised as his successor, but Abu Bakr was so elected, and, after a reign of two years, was succeeded by Omar, who was assassinated in the 12th year of his reign. He was succeeded by Othman, and then, only in, A.D. 656, by Ali. With Ali’s rule severe political convulsions continued, much the consequence of his impolicy. On succeeding to the khalifate, he removed from office all who had been appointed by his predecessors, and this was one source of all his troubles. But some of the earliest arose from the intrigues of Ayasha, and after these were settled, the governor of Syria, Moscowh, in Ali, was thrown off his allegiance to Ali, and had himself proclaimed khalif of the western provinces. An appeal to arms resulted in the defeat of Ali, after a disastrous war of 102 days, and Ali then retired to Kufa in Chaldia, on the banks of the Euphrates.
ALI. Hyde's Karund Geography, for Mahomed. His ship Mahomedans N., was lie in Persia, by march Jadan to. There ensued doctrines leaves, produced mutinied in age they in drink ALIAR. ALI AR. ALIF 1881, ALI ALI a the end settled AH of imperfect by are the belief, and are the population irregular and Shah-i-Mardan, translated from - the language, and, the sects of Persia, of the British government, died at Bombay, and was succeeded by his son.—Ferreri's Journey, p. 210; Palgrave; Wilson.

ALIA, or Elwa. Arab. Aloea. ALI ABBAS, styled Magus, a native of Persia, of considerable celebrity as a physician. He lived about the beginning of the 10th century. His principal work consists of abstracts of the doctrines and opinions of the Greek physicians. It was translated into Latin under the title of Opus Regium.

ALI-ANU. Tel. Memecylon tinctorium, also M. capitellatum edule and multiflorum.

ALIAR. Panj. Dodanze Burmaniana.

AL-CHRISI, the patronymic of Abu Abdullah Mahomed. He was born at Ceuta, in Morocco, at the end of the 11th century. His ancestors in the 9th and 10th centuries had furnished a line of princes for Morocco and Malaga. He travelled in Europe, and settled at Sicily, and wrote there his book of geography, which was translated by M. Jaubert.—Elliot's History of India.

ALIF LAILA. Arab. Literally one thousand and one nights. The name of a celebrated book in the Arabic language, known in Britain as the Arabian Nights' Entertainments. The work was partly translated by Lane, and, about a.d. 1836, by a Bengali civilian. The early English edition was imperfect and incorrect.

ALIGARRH, a town and district in the N.W. Provinces of India; the town is in lat. 27° 55' 41" N., and long. 76° 6' 45" E.; population, 58,539. The area of the district is 642 square miles, with a population of 1,073,333, chiefly Hindus, Jadun and Chauhan Rajputs, Bania, with Chams (178,126), Jat, Lodha, Koli, Garaiya, and Ahir, and a number of Mahomedans (117,911). There are extensive patches of usur or barren land, caused by saline efflorescence. In the early part of the 19th century, the fortress of Alligarh was held by De Boigne and Perron, officers of Sindia. It was taken by Lord Lake, 4th September 1803. On the 20th May 1857, the sepoys garrison here mutinied and marched to Delhi. The district is studded with indigo factories, which in 1879 produced 3625 maunds, or 2663 cwts., of the marketable dye.

ALI-GOL. Arab.-Hind. Amongst the Mahratta irregular infantry.—W.

ALI - ibn - HUSAIN, ANSARI, of Baghdad, author of the Ikhtiari-i-Badii, a medical work written in the year 1392, shortly after the classic age of the Arab school of medicine.

ALI ILAHI, a sect at the town of Karund, in the south of Persia, who worship Ali as a god, and believe in his incarnation. They eat pork, drink fermented liquors, never pray, nor fast at the Ramadaun, and are cruel and savage in their habits. The sect has marks of Judaism, singularly amalgamated with Sabean, Christian, and Mahomedan legends. Pottinger says that their chief tenet is that Ali is God. The Gurani tribe of the Zagros chain, between Kermanshah and Zohab, are all of the Ali-Ilaahi sect, and they have a yearly festival, which they call the feast of the fowl. In every village, each head of a family brings a fowl to their shaik or priest. So soon as these are cooked, the people assemble; a cloth is thrown over the kettle, which is placed before the priest, who dips his hand into it, and, taking it out piecemeal, presents a morsel to each person present in rotation. The individual to whose share falls the head of the fowl, is supposed to be more favoured than the rest by Ali during the course of the year. It has been suggested that the Ali-Ilaahi are of Jewish extraction, and that this ceremony of the fowl may proceed from the rabbinical custom of sacrificing a cock once a year on the eve of the day of atonement, although nowhere countenanced by the law of Moses. This similarity of custom between the Jews and the Ali-Ilaahi explains why the latter place the figure of a cock on the shrine of their holy men. Baron de Bode found several of these cocks, some carved in wood, others made of porcelain, placed on the top of the tombs of their several Pir in the mountainous districts of Holivan and Zohab, among the Gurani tribes.—Palgrave; Pottinger's Travels, p. 234; De Bode's Travels; Taylor; Chatfield, Hindustan, 146; Sale's Prelim. Disc. Koran; Hyde's Rel. Vct. Persar. See Chaldeas, Karund, Kibha; Haft Tan.

ALILAT, the ancient Greek name for the Arabic deity, Al-Ilahat.—Sale's Koran.

ALIM, wife of Wazir Sul-Salah, last king of Oudh. This queen wrote some delightful lines, and had the pretty takhallus of Akhtar or Star. She was a charming player on the sitar, or Indian guitar. She was alive in 1881, living with her husband at Garden Reach.

ALI MAHRAN KHAN was the Persian governor of Kandahar. In a.d. 1637 (A.H. 1047), to escape the tyranny of his sovereign, the king of Persia, he gave up the place to Shah Jahan, and took refuge in Dehli. He was received with honour, and was afterwards, at different times, made governor of Kashmir and Kabul, and employed in an invasion of Balkh and Badakhshan. He excited admiration at the court of Dehli by the skill and judgment displayed in his execution of public works, of which the canal 120 miles long, from the river Jumna to Dehli, bears his name, and affords a proof. It was re-opened in 1820 by Sir Charles Metcalfe.—Elphinstone, p. 513.

ALI MASJID, a fort in the Khyber pass, in lat. 34° 1' N., and long. 71° 20' E., 8 miles from its east entrance, 26 miles from Peshawar, and 69 miles from Jalalabad. It has twice been taken and held by the British,—once in 1839, and again in 1878. It is 2433 feet above the sea. The tribes in and near the pass are clans of the Aftri.

ALINGI-MARAM. Tam. Alangium deca-petalum.

ALISA. Tel. Dilivaria illicifolia, Jess. ALISH. HIND. Rubus fruticosus. ALI SHER are khal or clans of Gadaizai Iliazi and Nurizai Iliazi Yusufzai, who inhabit Buner.—M'Gr. N. W. F. i. i. p. 92.
ALISMA PLANTAGO.  *Smith.*

This water plant grows in the Szech'uen province of China. Its fleshy rhizomes are used for several diseases, as also are its fruits. The rhizo-

mases are said to stimulate the generative organs of women, and are believed to confer the power of walking on water. —Smith, p. 7.

AL ISTAKHR, the cognomen of Shaikh Abu Ishah, author of the Kitab ul Akalim. He was born at I斯塔kh, or Persopolis.

ALIVERDI KHAN, died a.d. 1756, and was succeeded in the office of nawab by his grand-

nephew, Suraj-ul-Dowlah, during whose admin-

istration many of the British garrison and civi-
lans of Calcutta perished in the guard-room, as known as the Black Hole.

ALIVERDI, a village in the Ludhiana district of the Panjab, in lat. 30° 57' N., long. 75° 38' E., on the left bank of the Sutlej. A great battle was fought here between the Sikhs and British, 28th June 1846, Sir Harry Smith commanding. The British force of 10,000 men and 32 guns was opposed by Rungoong Singh with 20,000 men and 68 guns, and the Sikhs were driven across the Sutlej.

ALIYA, a branch of the Turks division of the travelling grain dealers called Binjara.

ALIYA.  CAN.  A son-in-law; Aliya-Pattam, installation.

ALIZAI, an agricultural and pastoral clan of Kakar, said to number 10,000 fighting men. They are peaceably inclined, and large numbers come every winter to Dera Ghazi Khan to labour as wood and grass cutters and road makers. —'M. G. N. W. F. I. i. p. 92.

ALIZAI, a clan of the Mansud Waziris. See Waziri. Also a clan of the Daurani.

AL-JABIL.  ARAB.  See Alamut; Al-Hasan; Assassin.

AL-JANNAH, flourished in the 16th century.

AL-JAZIRA.  ARAB.  The doab of the Euphrates and Tigris, the ancient Mesopotamia.

ALKALI, the Khar and Saiji Khar, Hind. Southern India is particularly rich in alkaline and earthy minerals, one source of which seems to be degrading granites:

Dhobee's Earth, a whitish grey, sandy efflo-

crescence, often covers miles of country where
decayed white granite forms the surface soil; this earth contains from 13 to 25 per cent. of crude carbon of soda. It begins to accumulate in the dry weather, and immediately after the rains it can be scraped off the surface to the depth of 2 or 3 inches; and by repeated boiling, and the addition of a little quicklime, the alkali is obtained of considerable strength. With a little care, very clean carbon of soda can be obtained, fit for the manu-

facture of toilet soap, white glass, and glazes for pottery. The Nellore, Cuddapah, Masulipatam, and Chingleput districts, in this earth in great quantities. Recent attempts have been made to prepare from it Barilla for exportation, and very fair specimens have been exported at different times, but the moderate price of the carbonate of soda of Britain, prepared from sea salt, will always prevent this from being a remunerative article of export. Colored frits, for bangle glass, have lately, however, become an article of export from the Madras Presidency.

ALLEANTHUS ZEYLANICUS.

Nitrate of Soda in Bellary and Hyderabad forms a natural efflorescence. Its chief use is as a substitute for saltpetre for the manufacture of nitric and other acids and chemical substances.

It is too deliquescent for making gunpowder, though it answers well for some descriptions of fireworks.

Muriate of Soda.—Mineral salt of very fair quality is obtained in Cuddapah, Mysore, Bellary, and Hyderabad, and occurs also in the Guntur and Nellore districts, almost invariably accompanied by gypsum, magnesian limestone, sandstone, sulphur, red and brown iron ores, and alum slate.

The Natron lake of Lunar, in lat. 20° N., furnishes several salts, viz.:

Dalla, a carbonate of soda with a faint trace of muriate of soda, about 2 per cent. of impurities.

Nimmak Dalla, nearly pure muriate of soda.

Khappul, carbonate of soda, with water and about 2 per cent. of impurities.

Pappree, nearly pure carbonate of soda.

Mod-khar, an impure salt, containing carbonate of soda, 27 per cent.; and sand, 30; water, about 17; common salt, 25-9.

Bhokee, a crude, impure substance containing neutral carbonate of soda, 26; insoluble matter, chiefly sand and clay, 58; water, 15; common salt, 2-100.

Travertin contains carbonate of lime, 75; carbonate of magnesia, 4; insoluble matter, with oxide of iron, etc., 9; chlorde of sodium, 2; water, 3.

ALKANET, Dyer's bugloss, orchetan.

Alkanet is the commercial term for a dyeing material, obtained from the genera Echiium, Anchusa tintoria, A. officinalis, and Lithosper-
mum tinctorum. The root yields a fine red colour to soils, spirits of wine, lip salves, ointments, wood and cotton, and it is also used for colouring many of the beverages sold under the name of portwine, and the corks used for the bottles in which this fluid is sold. Anchusa paniculata, A. undula-
lates, and A. officinalis have been introduced into India, but no success recorded. In India, Red Saunders wood and Carthamus tintoria take their place. —Tomlinson; Faulkner.

AL-KARI, a class of Rajput cultivators in Naghm, named from their special cultivation of the Al tree, the Morinda citrifolia.

AL-KAZWINI, the cognomen of Zakariya, son of Mahomed, son of Mahmut. He lived about the middle of the 13th century, and wrote the Asar ul Bilad, also the Ajub ul Baldan.

AL-KHALIK.  ARAB.  An overcoat; a doublebreasted dress, made with long sleeves, and to fit to the form as low as the hips, with skirts reaching down to the calf of the leg; it is tied across the chest at the left side. It is worn by Mahomeds.

AL-KORAN, the Koran.

ALKUSHI.  BENG.  Mucuna prurita, Hook.

ALLA of Sutlej.  Mimoza rubiculans, Lom.

ALLEANTHUS ZEYLANICUS.  Thee.  Allan doo of the Singhalesse; a large tree, 30 to 40 feet high, of the Central Province of Ceylon, at an elevation of 1000 feet. The timber is in use for ordinary purposes; a very tough fibre is obtained from the inner bark, which is used for a variety.
ALLAH.

of purposes.—Thwaites, Zeyl.; Beddome, Fl. Sylao.
part xxvi. p. 305.

ALLAH. Arab. God, the Lord, the Almighty.
This word is said to be derived from the Arabic verb *lah*, which means trembling and shining; but its relationship to the Hebrew el or eloah and alahah has also been conjectured (*Peshchel*). It may also be an Arabic rendering of the Hebrew, *God*; the Persian khuda. It has also been supposed to have been derived from the Arabic word *ilah*, a deity, with the addition of the definite article al.—thus, al-ilah, the god.
It was current as part of a name before the time of Mahomed. Allah Ta'alaa is the most high God, lit. God (whose name) is exalted. Al Ilahat were the goddesses of the pagan Arabs. Mahomedans reverently use this holy name. They have 99 attributive names of God, and their rosaries have 99 beads, with a large prolonged bead, making the 100th, for Allah, the Almighty. Amongst other of the attributes are the (al)—

Rahman, the merciful.
Rahim, the compassionate.
Khaliq, the creator.
Ghalfar, the pardoner.

They will say Bismillah al daim, al abd, al abdi, In the name of God, the Eternal, the Everlasting. One of the most solemn oaths of the Afghans is by the name of God (Allah), three times repeated in three different forms, 'Wullah, Billah, Tilah.'—Sale's Koran; Elphinstone's Cakou, p. 211.

ALLAHABAD, a city in the N.W. Provinces of British India, which gives its name to a revenue division of 2747 square miles, comprising the districts of Allahabad, Bandha, Cawnpur, Fatehpur, Hamirpur, and Junpura, lying between lat. 24° 47' and 25° 47' 15" N., and long. 81° 11' and 82° 23' E. The city is the seat of the government of the N.W. Provinces and Oudh, and is built on the left bank of the Jumna, in a fork at the S.E. extremity of the doab formed by the confluence of the Ganges and Jumna, and 316 feet above the sea. It is in lat. 25° 26' N., and long. 81° 55' 15" E., and is called Prayag by the people. Its population in 1872 was 103,473. The city is 565 square miles distant from Calcutta by rail. Its ancient name seems to have been Vaisali, from its founder Visala or Besa-birnaja, one of the third Solar line of Vasala, of the Surya Vanas or Solar dynasty. The spot, being a saungr or junction, is considered sacred by the Hindus, who make pilgrimages to it; and until the middle of the 19th century it was of frequent occurrence for pilgrims to renounce life by drowning themselves in the waters of the two streams. With the, pots fastened to them, they would wade into the water or would go in a boat to the exact spot at which the rivers unite, and when the pots filled, they sank. In the fort at Allahabad is a tall slender monolith, with a tapering shaft erected by Asoka, B.C. 240. It has the edict of that monarch, and also a later inscription detailing the conquests of Samudra Gupta, about the second century after Christ. It was re-erected A.D. 1665 by Jahangir, who has commemorated his accession in a Persian legend, Fak Hian, A.D. 414, and Hiwen Thang, A.D. 629-645, visited this city. In historic times, Rajputs obtained a footing in this district. They seem to have had their particular leaders, who, after locating themselves and their followers, displaced the original inhabitants by degrees, and extended themselves as far as they could. Thus, in pargana Jhansi, the Raïs Rajput trace their origin to two leaders, viz. Bawani and Jatan. To the descendants of the former the large estate of Mowaya was allotted, and to those of the latter other nine estates. Some entire moulzahs in each of these taluks were subsequently assigned to different branches of the family, and the remainder held jointly by all. It was invaded by Shahab-ud-Din Gori A.D. 1194, and from that time till the introduction of British rule, it remained in Mahomedan hands. During the mutiny and rebellion of 1857-58, Sir Henry Lawrence and Sir James Outram strongly urged the importance of securing the safety of Allahabad, and it remained the sole city for a safe footing, being in the hands of the rebels only from June 6th to 11th. The populace opened the jails, and all officers, Europeans, and Eurasians were murdered; but the fort was held by Sikhs till Colonel Neil arrived on the 11th of June, and on the 18th the station and town was recovered. The Hindut and semi-Hinduized population of the district consists of Brahmins, Rajputs, Bania, Ahir, Chamaras, Kayasth, Kurmi, with Mahomedans. Faminies from drought occurred in 1770, 1783, 1803, and 1887.—Vol. vi. p. 970-980 of the Bl. As. Soc. Jour.; Travels of a Hindu; Imperial Gazetteer.

ALLAH BAND, a bank of earth mixed with sand and shells, near the southern frontier of Sind, which was upheaved by an earthquake in 1819, across the Ganges branch of the Indus. It is 50 miles long, and in places 16 miles broad. In 1826 the Indus overflowed and breached the bund, the waters expanding into a vast lake, since merged into the Rann of Cutch.

ALLAKPOO, one of the eight places at which relics of Buddha were deposited. See Buddha; Tope.

ALLAMANDA CATHARTICA. Linn.
A. Aublettii, Polk., Don. Orellia grandiflora, Aubl.
A. verticillata, Desf. A. emotierifolia, Polk.
A. grandiflora, Lam. A. angustifolia, Ains.
A. Pha yung-bhan, Brem. | Arali... MAEAL.
A native of Surinam, the West Indies, Guiana, Brazil, introduced into India from Guiana in 1803. The leaves, a valuable cathartic, used especially in painter's colic. In too large doses, violently emetic and drastic. This shrub has very large bright-yellow fragrant flowers and fruits throughout the year. It might take a place in the medicines of European hospitals.—Useful Plants; Riddell, Jeffrey; O'Shongh, p. 448; Voigt, p. 528.

ALLAMA PRABHU, the guru or spiritual adviser for the eldest Saiva, who was concerned in the revolution at Kalyan, in which the king Bijala was slain. He is regarded by the Vira Saiva as an incarnation of Siva. He travelled much in the Peninsula. The Prabhu Longaliya was written in his praise.—Gavett.

ALLAM PARWA, in lat. 12° 16' N. and long. 86° 3' E., a small village on the coast, 65 miles distant from Madras. It was formerly a place of some note, and in 1750 was given to Dupleix by Muzaffar Jang; it was taken from the French in 1760 by Sir Eyre Coote. Formerly famed for its oyster beds.

ALLAPU KOMMU-VELLA VANTI GADDI.
ALLARD. M., a French captain who travelled through Central Asia, and afterwards served Ranjit Singh, whose armies he brought into a high state of discipline.

ALLAREE. Tam. An eel.

AL-LAT, Al-Azizah, and Manah, were three female deities of the pre-mahomedan Arabs, who worshipped also stones, trees, and shapeless masses of dough. Al-Azizah was worshipped under the form of a tree, Manah of a large stone, Yaguth of a lion, Saws of a woman, Yank of a horse, and Nasr of an eagle. Al-Lat was with the tribe of Thakeef, in the town of el-Taif; it was destroyed by Mahomed's order. Al-Azizah was the idol of the tribes of Koresh and Kinaueh; it was destroyed by Khald.—Sale's Koran. See Allah.

ALLAWA. Her.? Hind. A beltain fire or bonfire raised by Mahomedans in the Maharram, in a pit in front of the Aishur Khana. Men dance around it, shouting, Ya, Ali! ya, Hasan! ya, Husain! Dulha! Dulha!—Meaning, Oh! Ali; oh! Hasan; oh! Husain; bridegroom, bridegroom! Also a hole dug within doors or over, out which they wash their hands and throw refuse into.

ALLEKO-ZYE, a small Afghan tribe of the Daurani section. See Afghan; Daurani.

ALLI, ARASANI, RAGADAM, a Tamil poem, the comedy of the princess Ali Arasani, who is said to have married Arjuna.

ALLIGAR APPAR KOIL. A Hindu temple near Bangalore, much resorted to by women who crave for children.—W. E.

ALLIGATOR, the alligator of the Spaniards, or cayman, is a name commonly but erroneously applied to the crocodiles of the Nile, the Ganges, and other eastern rivers. Dean Trench in his Study of Words (p. 125) says, 'When the alligator was first seen by the Spanish discoverers, they called it, with a true insight into its species, "el ella-garto," or the lizard, as being the largest of the lizard species to which it belonged.' Alligators are wholly confined to tropical and Southern America, where they are styled also cayman, jacare. The alligator closely resembles the crocodile, but has characters sufficiently distinct to have constituted a new genus. See Crocodile.

ALLIGATOR (P. or T. Avenada, or subaltern's butter tree, is the Persa gratissima.

ALLIKALANGU. Alligator. (p. 231) is mentioned by Masson (and all) as cultivated at and near Kabul, and the leaves are used as a large growing wild near Ghazni (7000 feet), where it is not eaten. Masson states that the leaves may be cut two or three times a year for 25 or 30 years, and mentions one field at Kabul dating from the time of Nadir Shah, more than a hundred years before his visit.—J. L. Stewart, Panjab Plants, p. 230; Voigt, 668; Riddell; Rozb. ii. 142.

ALLIUM. Linn. The onion.

ALLIUM ASCALONICUM. The shallot.

ALLIUM CEPA. Linn. The onion.

Talut and Jalut, Pharaoh's magicians into Risam and Rejam, of whom the Jewish traditions had made Jannes and Jambres; whilst Christian legends gave the names of Dismas and Jesmas to the penitent and impenitent thieves in the gospel. Jarga and Narga was the name given to the great circle of beaters in the Mongol hunting matches. In geography we have numerous instances of the same thing, e.g., Zabulistan and Kabulistan, Koli Akoil, Longa Salenge, Sibir, Kessin and Ovar, Kurla Muria, Ghuz and Maghuz, Mastra and Castra (Edrisi), Artag and Kartag (Albarghazhi), Khanz and Manzi (Rashidi), Iran and Turan, Cirt and Meerit (Rubruquis), Sondor and Condor (Mareo Polo), etc. The name of Achin in Sumatra appears to have been twisted in this spirit by the Mahomedan mariners, as a rhyme to Machin; the real name is Atcheh.

In everyday conversation in India, such alliterations occur as Choki oki, a chair; Kurius guri, a chair; Chavie-gavi, a key; Keli-geeli, a key; Bach kach, children. Yule, Cathay; Pers. Obs.

ALLIUM, a genus of plants, largely cultivated in Indian gardens, and, alike by Europeans and natives, extensively used in food, both in soups and as vegetables. Of this genus Voigt names 23 species, but a notice here of the shallot, the onion, the leek, and garlic will suffice. The species are all for market or for being in a greater or less degree, the odour of garlic, and for theagreeable stimulating effects that accompany it. For this reason some of them have been objects of cultivation from the highest antiquity. The Welsh onion, A. fistulosum, used in soups and salads, and the Spanish shallot, A. ophiusscorion, have not been cultivated in India.

ALLIUM ASCALONICUM. The shallot. Khyet-thwon-nee, BURM. [Fiz.] HIND. Hi-ai-tu, CHIN. Gandan, Gandana, PUSHT. Hi-ai-tnu, CHIN. Gandan, Gandana, PUSHT.

The shallot is a native of Asia Minor; in China it is pickled. In most parts it is cultivated in a light rich soil, and propagated by dividing the clustered roots; it should be sown in beds at the commencement of the rains, and will give a crop during the cold weather. Dr. Stewart says it (or A. Porrum, L., the leek) may be the plant mentioned by Masson (?) as cultivated at and near Kabul, and the leaves are used as a large growing wild near Ghazni (7000 feet), where it is not eaten. Masson states that the leaves may be cut two or three times a year for 25 or 30 years, and mentions one field at Kabul dating from the time of Nadir Shah, more than a hundred years before his visit.—J. L. Stewart, Panjab Plants, p. 230; Voigt, 668; Riddell; Rozb. ii. 142.
of the Chinese; their large coarse variety is called Mul-t'zung, or tree onion. Every part of the plant is supposed to have some therapeutic action. Onion tea is largely used, and the life-boats of the Yang-tze river depend on it to excite vomiting and reaction in the apparently drowned. Their wild onion Keht'zung, and foreign onion Hu-tzung, are also used medicinally.—Smith; J. L. Stewart, Panjub Plants, p. 230.

ALLIUM PORRUM. W. The leek.
A. rubelium, Bieb. Koornas? • AB AB. Khorst? • OF BY. Puroo, AB. Ledon, • EGY. Taw-k'et-th'un. • BURM. Gundina, • PERS.

This is cultivated all over India, is common in the N.W. Panjub, including the Salt Range, and in the Siwalik tract east to near the Sutlej; and the Kanawar plant growing at 9000 feet, as well as one found in Lahool still higher, seem to be the same. In most places the root is eaten raw or cooked.—J. L. Stewart, Panjub Plants, p. 231.

ALLIUM SATIVUM. Linn. Garlic.
Som; Sum? • ARAB. Sir, • PERS. Looshon, Lashuna, BENG. Mahuh Shuda, • SANSK. Kyo-th'un phen, BURM. Suhshurna, • SING. CND. Vehali, • TAM. Swan, Ta-swan, CHIN. Ell-alli, Vellulii, • TEL. Lahsan, • HIND. Tella gadda, • Bawang-yuth, MALAY. Vell gadda, • LARGELY cultivated in India and in all Asiatic countries; its roots consist of pungent acruminous bulbs, which have a strong offensive smell and flavour. They are employed as a condiment, and as an ingredient in curries, pickles, chutneys, etc.; they are also used in medicine. Garlic is the excedent of the Greeks, 8om of the Arabs, and Shuminn of Numbers xi. 12. It has been used as an article of diet, and likewise in medicine, from very early times. Garlic seed oil—called Tella gadda anna, Tel.; Wulla pondeo yennai, Tam.—is only medicinal. It is clear, colourless, limpid, and contains the full odour of the plant. It might be available in cookery for those who relish the flavour of garlic in their dishes, but this will evidently be the fullest extent of its application; hence it can scarcely be considered of any importance commercially.—Royle; Faulkner.

ALLIUM SPHEROECHALUM. Stewart.
Allium odorum, L. Bhuk, • JHELUM. Skodze, • LADAK. A long-leaved species growing in Khagan at 10,500 feet; the leaves are dried and eaten in winter with meat; the root is not eaten. What appears to be the same species, occurs in Spiti at 12,000, but no part of it is eaten.—J. L. Stewart, Panjub Plants, p. 231.

ALLIUM ULYGNOUM, Smith, the Kan of the Chinese, resembles the leek, and is largely used amongst the Chinese. Its seeds are given in spermatorrhoea, a common ailment amongst the Chinese.—Smith, p. 8.

ALLAMNIA NODIFLORA. R. Br.
Chamaesa nod., Mart. • Acharhante nodiflora, Linn. Celosia nodiflora, Linn. • Linn. Common in Coronandel and Ceylon, and is esculent.—Rozh. i. 678.

ALLO NEREDU. Tel. Eugenia jambolana, • A variety with large edible fruit.

ALLOW. HIND. A stinging nettle of the Himalaya, yielding fibres.

ALLOYS. The natives of the East Indies are acquainted with a variety of alloys for making cannons, images, gongs, cymbals, bells, and ornaments, with copper and zinc, tin and lead, besides being great workers in copper and brass for the various domestic utensils. In the Travancore state, the workmen have been very successful in their fabrication of alloys, but the ingredients they use are not known. In the Colombo district, the metals are employed in the following proportions:—
Copper 10 parts, zinc 6½—alloy valued at 4 annas per seer of 24 tola weight, and is used for all purposes.
Copper 10, zinc 5—alloy valued at 3½ annas per seer, somewhat darker than the other, but considered equally useful.
Copper 10, zinc 10—alloy valued at 3 annas the seer, considered inferior to the others, but is also in current use.
Copper 10, tin 2½—a beautiful bell metal alloy, valued at 6 annas the seer. Is used for the same purposes as the others.
Copper 10, tin 2, lead ½—an inferior-looking alloy, but employed for similar purposes.

Native smiths render the mixed metal from copper and tin malleable with greater proportions of tin, as also do the Chinese for their gongs and cymbals, by gently striking it while hot, at repeated heatings. Some years ago, bronze sheathing for ships was prepared on the same principle. Telign natives call such malleable bell metal 'akkansu' (TEL.). It is formed into vessels for containing acid food, buttermilk, etc.

Pot metal (copper and lead) is improved by the addition of tin, and the three metals will mix in almost any proportions. Zinc may be added to pot metal in very small quantity; but when the zinc becomes a considerable amount, the copper takes up the zinc, forming a kind of brass, and leaves the lead at liberty, which in a great measure separates in cooling. Zinc and lead are disposed to mix alone, though a little arsenic assists their union by killing the lead, as in shot metal; antimony also facilitates the combination of pot metal.—7 lead, 1 antimony, and 16 copper mixed perfectly at the first fusion, and the mixture was harder than 4 lead and 16 copper, and apparently a better metal.—Mr, Rohde's MSS. See Bells.

ALLOSPICE. Pimenta vulgaris, Lindley.
Bayberry tree, • ENG. Toute épice, • FR. Pimento, • ENG., SR. Pimenta vulgaris is a large tree, supposed of S. America. Allspice is rarely adulterated, owing possibly to its low price. It should be introduced into India.—Hussell; Mason.

ALLU. GUJ. HIND. In Kathiawar and Rajputana, an ordeal in cases of disputed boundaries, in which the claimant walks over the contested limits with a raw hide or a cloth on his shoulders, previously dedicated to one of the fearful forms of Durga, from whose vengeance he will suffer if his claim be unjust.—W.

ALLU BACH-CHALL. Tel. Basella alba, L. ALMANAC.
Calendrier, • FR. Jantri, • HIND. Kalendrier, • GER. | Almanaque, • SR. The word Almanac is supposed to be derived from the Arabic, and the natives of India have their almanacs arranged on the same principles as those of Europe. To the Hindus, whose religious festivals are largely astronomical, and to
a less extent to Mahomedans, the almanacs are of great importance. They are published in large numbers, in various forms, and are widely circulated. Some are small and cheap; others are large, and profusely illustrated by pictures representing the signs of the zodiac, figures denoting the sun in different months, etc. The people consult almanacs chiefly to find out lucky and unlucky times; without this they deem all else to be vain. Every Hindu almanac consists of five sections, hence the name Panchanga, viz. the lunar day, the solar day, the lunar asterism, the conjunctions and transits of the planets, eclipses, etc. and the karaka or subdivisions of the lunar day. Their use of the lunar year for their religious rites, and of the solar or sidereal year for civil duties, is so perplexing, that learned astronomers pass along the streets every morning, and intimate to their houses of call the ceremonial to be attended to.

ALMAS. ARAB., PERS. DIAMOND.

AL MASUDI, a patronymic given to Abu'l-Hasan Abi, a native of Baghdad, a great traveller, acute observer, and writer. He wandered to Morocco and Spain on the west, and eastwards to China, through all the mahomedan and many other countries, and he wrote his travels, which he styled Muruj-il-Zabah, or Meadows of Gold.

—Elliott, p. 19.

ALMIRAH, an Anglo-Indian term from Almarinho (Port.), a wardrobe.

ALMOND.

ALMA, ARAB. LIZ., HER.

ALMOND, DUT., DAN., GER. AMYgdala, LAT. Amande, FR. Mandoria, SP.

This term is applied to the common almond, from the Amygdalus communis. The sweet and bitter almonds of commerce, the Jordan and Valencia almonds, are the kernels of the fruit of different varieties of Amygdalus communis, Linn. It is a Mediterranean tree, extending into Persia, cultivated in the north of Africa, Italy, Spain, etc., a native of the Himalaya, and abundant in Kashmir. Jordan and Valencia almonds are imported into Britain from Malaga and other Spanish ports; bitter almonds, chiefly from Barbary, Sicily, etc. Almonds, both bitter and sweet varieties, are imported into N. India, from Ghooorbund, and into S. India from the Persian Gulf. The 'Indian almonds' are fruits of the Terminalia catappa, Aleurites trihoda, and Canarium commune; and the almonds of Gen. xilli. I have been thought to be pistachio nuts.

Almond, bitter.

Hang-joh-hang, CHIN. | Ku-meI, CHIN. |

This is the fruit of the var. amara.

Almond confection is the Hang-su of the Chinese.

Almond oil.

Badam-ka-tel, HIND. | Ingudi-taliam. | SANSK. |

Badam mingk, MALAY. | Badamectty-yemmay. | TAM.

Roughan-Badam, PERS. | Badama vittula nune. | TEL.

This oil is from the fruit of the almond tree. It is colourless, or very slightly yellow, and is concealed with difficulty. It is obtained for native use in India, but does not as yet form a recognized article of export. About 80 tons of this oil are annually imported into Britain, the price being about 1s. per lb. But it is principally the produce of the Arzo tree, forests of which grow to the south of the empire of Morocco, which produce an exceedingly hard species of almond. In manufacturing the oil, they are well rubbed or shaken in a coarse bag, to separate a bitter powder which covers the epidermis; they are then pounded to a paste in marble mortars, and the paste subjected to a press. The almond is supposed to contain 46 per cent. of oil; but from 53 lbs. only 1 lb. 6 oz. can be extracted by the cold process, and above 2 lbs. if heated iron plates be used. The oil of almonds is the basis of the great part of the liniments, ointments, and plasters of the European pharmacists. It is, however, little used in Indian pharmacy, the oil of the Sesamum orientale and the Jojoba being preferred. Almond oil is particularly used in confectionery, for the manufacture of the famous almond paste of Damascus.

Almond, sweet; Hang Tien-meI of the Chinese.

Almond tea, Hang-jin-tang of the Chinese, is sold in the streets of China as a ptisan. It is made by boiling the kernels mixed with other substances.—Smith, p. 9; Cat. Ez. Col. 1802; Simmonds ; O' SH.

ALMORA, in lat. 29° 35' 16" N. and long. 79° 41' 16" E., a hill station and sanatorium in the north of India, situated on the top of a ridge which runs east and west at elevations of 5425 to 5607 feet above the level of the sea. It is the capital of the province of Kamaon. It is 30 miles from Naini-thal. The Indian Government established a sanatorium at Lohooghat in the Almora hills, a position unsurpassed in India for salubrity of climate and picturesque scenery, and known to be highly suitable for the European constitution. A sulphur mine was discovered at a place called Aina, some 9 miles north-west of Almora. The soil of the neighbourhood yields quantities of saltpetre. It produces graphite, copper, and iron.—Schl. ; Rohr. ; Englishman ; Dr. Bost's Catalogue; Imp. Gaz. See Kamaon; Sanatoria.

ALMS and almsgiving have ever taken an important place in the religious systems of the world. The Hebrews were commanded to leave for the poor, and Ecclesiastes xi. 1 bids to cast their bread upon the waters, with an assurance that after many days it would return to them again. In the Buddhist, Hindu, and Mahomedan religions, as also amongst the Romish Christians, it is not only deemed good to give alms, but the giving bestows a merit on the individual, and gifts are generally delivered with much openness, in such case differing from the injunction in Matt. vi. 2: 'When thou dost thinne alms, do not sound a trumpet before thee.' Hindus and Mahomedan sovereigns bestow much to the shrines of their respective faiths, and annually, on the Maharram, the Mahomedan kings entertain many Syuds on permanent pay. Some mendicants, alike Hindus and Buddhist, are not allowed to solicit or demand alms, but have to go with a quick step, and with or without a bell, through the streets, and without comment accept whatever is thrown into their wallet. With Mahomedans the duty next in importance to prayer is that of giving alms. Certain alms are prescribed by law, and are called Zekat; others, called Sadakah, are voluntary. The obligatory alms were, in the earlier ages of El-Islam, collected, by officers appointed by the sovereign, for pious uses, but now it is left to the conscience to give them, and to apply them. They are to be given once in every year to the poor, provided the property be of a certain amount. The proportion
is generally one-forth, which is to be paid in kind, or in money or other equivalent. It is a common custom to give what the donor can afford in alms during the month of Mahaarram, especially on the tenth day; hence the phrase, the alms of the 'Ashr.' This custom seems to have been copied from the Jews, who are accustomed to abound in almsgiving during the ten days commencing with their New Year's Day, and ending with the day of atonement, more than in all the rest of the year. All, the son-in-law of Mahomed, twice in his lifetime gave away all his property. But the Indian pilgrims to sacred shrines are often exacting, even insolent, and, though rarely so to Europeans, will sit down at a door and refuse to stir until their day's food be given; also Mahomedan fakirs, of whom there are several sects, often continue to demand till alms be given. The Buddhist mendicants of Burma are the least clamorous; but so completely is the act of offering to their shrines the final individual merit, that costly gifts can be immediately removed, while outside the great temples at Rangoon and Prome, such vast quantities of food-offerings are daily thrown, as to be disgusting, and the temple servants, who are slaves or of unclean race, clear it away. All these classes have distinguishing costumes,—the Buddhist with his yellow robe; the Hindu sanyasi or viragi smeared in ashes, and with ochre-dyed clothes; and the Mahomedan fakir may have a loin-cloth and taj or crown. Amongst them all are many true ascetics; and recently, in 1867, a Hindu devotee was to be seen, who had at that time sat for five years in one of the Ellora caves. But there are amongst them also many impostors. See Alī; Alms-bowl of Buddha; Buddhism; Fakir; Groul; Jhula; Kashgul i Ali; Mendicant; Patra; Pinjarapole; Sanyasi; Viragi.

ALNUS GLUTINOSA. Grows in the Canton province of China; also, it is said, in Java, Sumatra, and Persia. The drug obtained from it is bitter, coal-black, and porous.—Smith, p. 9.

ALOE FIBRE. Pits fibre, Nita, and Pita, are the commercial names given in Southern India to the fibres of the American aloe, or Agave Americana; of the A. vivipera, or Bastard aloe; the fibres of the Pouteria gigantea; those of the Adam's needles, the Yucca gloriosa, or common-leaved, and A. alorefolia, or alo-leaved, Yucca. And Dr. Hunter also mentions the Y. angustifolia, tenacissima, filamentosa, and regina as species yielding fibres, to all of which perhaps the same commercial term is applied. Agave Americana and A. vivipera have become so naturalized in India as to seem indigenous. They are, however, not yet sufficiently abundant in Southern India to be employed to any very great extent for the production of fibre; but as they take root and grow readily, there is nothing to hinder their very extensive application. Aloe fibre now forms an article of export from the western coast. In Mexico, a highly prized thread is manufactured from the leaf fibre, and made into the ropes used in their mines, and for nets and rigging of ships. Also, the famous hammocks of Panama are made of agave fibre. From the Aloe perfoliata (which Dr. Royce deemed identical with his A. Indica), Dr. Hunter of Madras obtained a fibre two feet long, white, and of fine quality, which readily took colours. The Agave Americana has a short cylindrical woody stem, terminated by fleshy, spiny, bluish green leaves, and it flowers once, on a tall flower stem, 20 to 40 feet. The roots as well as the leaves contain the ligneous fibres styled 'Nita' thread, useful for various purposes. The leaves are sometimes eight feet long, one foot broad, and five inches deep, and abound in fibres of great length; tough and durable, their separation is effected by crushing or bruising, steeping in water, and afterwards beating. In applying them for the manufacture of fibres, it is very essential to have the sap removed as early as possible after the leaves are cut, and with this
ALOE INDICA.

view a grooved cylinder press is found very effectual, while frequent beating removes a thick viscid milky juice, which, if allowed to remain after cleaning, imparts a stiffness to the fibre.—

A. spicata, Tham, Cape of Good Hope; and
A. vulgaris, Lam.

Aloe is the bitter, resinous, insipid juice of the leaves, and is imported into Britain under the names of Socotrine, East Indian or hepatic Barbadoes, Cape, and Gaballine aloes. In the four years 1852–53 to 1855–56, Madras exported 51 cwt., valued at Rs. 4037, and imported in the latter year to the value of Rs. 2686. In the year 1855 Britain imported to the extent of 33,335 lbs., and re-exported 157,506 lbs. to the various countries of Europe. The usual way of extracting the aloe substance is by making a transverse incision in the leaves or cutting the tips off at the base, and scraping off the juice as it flows if done in the former way, and allowing it to run in a vessel placed for the purpose, if in the latter. The aloes, after being received into a vessel, are exposed to the sun or other heat, by which means they become insipidised. The Cape aloe is deep brown, shining, of greenish tint and resinous fracture; edges transparent, odour strong. Barbadoes aloe, commonly termed hepatic, is exported in gourds, ranges in colour from dark brown or black to red or liver colour; odour disagreeable. Socotrine aloe, although long considered the best kind, fell below Barbadoes in commercial value. Kurachee aloes are intermediate in properties between the Socotrine and Dekkan kind. Aloes, although aperient, unlike other cathartics, the effect is not increased if given in large doses beyond a certain point. To persons predisposed to apoplexy it is more beneficial than most other purgatives. The compound decoction is a valuable emmenagogue, particularly when combined with preparations of iron.—Ben. Pharm., 192; O'Sh., 665; Balfour, Commercial Products O'Sh., Beng. Pharmac.

Tkl. | Tkl.* and ire Phis languages indiilly or chah "amil Jujrati inmber, but, generally its centred falay, 2, 'adraiis, sttcrs Ippia ^ataUufue Much ALPHEUS, ALPHONSE A written Telugu of z, and Arabic, of the z, have an esteemed knowledge of the English letters, with each Arabic, of the Arabic, with Arabic, sound of the same character, but the Arabic, Bengali, Burnese, Canarese Chinese, ngrati, Hindi, Japanese, Mahratta, Malealam, Fany, Siamese, Singalese, Tamil, Telugu, and thu are each written and printed in a separate character. The Sanskrit alphabet has 50 letters, English 26, Egyptian 25, Greek 24, Hebrew 22, ngrati 21, Bengali, Urdu, and Malealam, each 2, Telugu 23, Canarese 23, Tamil 14, and the Tamil consonants carry the sound of short a. letters of the English alphabet are, however, used by the natives of Great Britain for all the East Indian words, and Dr. Hunter has recommended, or the words in use in British India, the unaccented a u in but, the unaccented u in but, the unaccented i and i in pit; and to accented i and i, the sounds of a in far, ee in feet, and o in boot. This will increase, by three, the number of English letters in use in British India. The Arabic, so largely used by all Mahomedans, as 28 letters, but amongst them are two with sound of e, two with that of h, three with that of a, two with that of that of o, two with that of o, two with that of k, so that its letters might be reduced to 19. In the south of India, the Arabic numerals have been generally introduced into Government accounts. This was on the recommendation of Sir Erskine Perry, in the middle of the 19th century; and it has been supposed possible to use the Roman and Italian characters for all the other tongues, but the 19th century will see the bulk of the educated people of India using English, with comparatively little knowledge of their respective mother tongues. The alphabets of the Thai or Siamese, of the Burnese, and of the Mon of Pegu, are of Indian origin. With the native Indian tongues s and h are everywhere interchangeable. 5 and f amongst the Mahattas equally so, l and z and j amongst the Tamil. The European languages with difficulty accept the English j and s. The latter in French has become sh, as in shah for shah, a king; Jami has to be written Hami.

ALPHIEUS, a genus of prawns common in the Indian Ocean. See Prawns; Shrimps.

ALPHONSEA LUTEA. ii. f. et T. Uvaria lutea, Roxb. ii. 666. Muvi, Muvari, ... Tel. | Chiri dadduga ... Tel. F

ALPINIA, a genus of the Zingiberaceae. Some of the species yield aromatic fruits, and some of the plants are wholly aromatic. A. aromatica is named as a plant of the eastern valleys of Bengal, the fruit of which is often sold as cardamoms; A. cardamomum, Wall., from China, and A. speciosa, Roxb., from Sumatra, may also be noticed. A. alba and A. Chinensis are much used by the Malays and Chinese. The latter has an aromatic root, with an acid, burning flavour. The fragrant root of A. nutans was sometimes taken to England, according to Dr. Roxburgh, for Galangal major. Its leaves, when bruised, have a strong smell of cardamoms. A. mutica, Roxb., is a native of Penang, has large flowers, with lips crimson yellow and orange-edged. A. Rosea, Rom. and Sch., is a native of China.—Roxb.

ALPINIA ALUGHAS. Roxbee. Hellemsia allaghias, Linn. | Heretiera allaghias, Linn. Taraka, Tara, Beng., Hind. | Mal-ishi-kus, Maleal. This is found in Coromandel, in the S. Konkan, in the Kotah jungle marshes, in the estuary of the Irrawadi at Sarampur, in Silhet and Assam. It has large and beautiful rose-coloured inodorous flowers; its roots are aromatic.—Roxb. i. p. 60; Voigt, 570; Gen. Med. Top. p. 171.

ALPINIA GRACEATA. Roxb. A. Roxburghii, Sweet. This is one of the smallest of the India Alpinias. It is a native of the eastern parts of Bengal, and is found at Chappedong in Tenasserim. Its flowers are white, with a crimson yellow lip.—Roxb. i. 63; Voigt, 571.

ALPINIA CALCARATA. Roxbee. Alpinia cernua, Sams. | Renelia cernua, Redoute. Renelia calc., Andh. A native of China; has large white flowers, their lips coloured with dark purple veins on a yellow ground.—Roxb. i. 69; Voigt, 571.

This is a perennial plant, a native of Sumatra, cultivated in the Indian Archipelago, Moluccas, China, Cochin-China, Singapore, Penang, Chittagong, Travancore, the S. Konkan. Its tubers constitute the true Galanga major roots of the drugstuffs, and are used for the same purposes as ginger. It has a faint aromatic smell and strong
pungent taste, with some bitterness, pungency, and acidity, on which account it has fallen into some disuse, though in 1850, 64 tons were exported from Canton, value 2880 dollars. Hung-tau-k'au of the Chinese means red nutmeg. The fruits have the same properties as the root. The flowers are said to be antitodal to the effects of wine. A lesser Galanga is said to be obtained from the Alpinia Chinensis, also from a species of Hedychium.—Smith, pp. 9, 10; Roxb. i. 59; Voigt, 570; Ainslie; Hogg, p. 786; O'Sh. 652; Simmonds, Useful Plants; Thwaites, p. 319.

ALPINIA MALACCENSIS. Roscoe.
Maranta Malaccensis, Bur. Renelma Sumatrana, Galanga

A native of the Moluccas and Chittagong; a beautiful, stately plant, with large pure white flowers, their lips orange crimson.—Roxb. i. 64; Voigt, 571.

ALPINIA NUTANS. Roscoe.

This very beautiful plant is a native of the Eastern Archipelago; is found on the banks of the Salwyn, at Silhet and in Coromandel; is cultivated in gardens, and was brought by Dr. Irvine from Tank to Amur. The flowers are beautiful, and the whole plant is fragrant like the cardamom; the seeds do not ripen. Its leaves, etc., when bruised, have a strong smell of cardamoms, and are sometimes named Ilachi or Pang champa.—Roxb. p. 65; Voigt, 571; Gent. Med. Trop. 171. One of the dynasties formed after the breaking up of the empire of the khilaf was that of the Samani, which terminated after a lapse of 120 years. Abdul Malik, the fifth prince of his race, had a Turk slave, by name Alptigin, a man of good sense, courage, and integrity, who rose to be governor of Khorasan. Alptigin afterwards assumed the independent government of the country about the mountains of Sulman to the Indus, making Ghazni his capital. This he held for fourteen years, up to the time of his death, A.D. 976, and then founded the house of Ghazni. Alptigin had a slave named Sabaktagiin, purchased from a merchant who brought him from Turkestan, and whom by degrees he had raised to so much power and trust, that at his death he was the effective head of his government, and became his successor. He also married a daughter of his benefactor. In the time of the Sabaktagiin, Ghazni had with Jaipal, raja of Lahore, at Lahman, at the mouth of the valley which extends from Peshawar to Kabul, he conquered and made great slaughter among the enemy, took possession of the country up to the Indus, leaving an officer with 10,000 horse as governor of Peshawar. On this occasion the Afghans and Khalji of Lahman not only tendered their allegiance, but furnished useful recruits to the country. Sabaktagiin died 997. His eldest son, Ismail, succeeded him for a few months, and, after him, the second son, the renowned Mahmud of Ghazni.—Marsham.

ALSANDA. Tel. Dolichos sinensis, Linn.

ALSEOAPHINE SEMIFARIFOLIA. Nees. Weewarana, Raane, Simgt. Yaverne, Simgt. This large glabrous tree is not uncommon on the Western Ghats of the Madras Presidency, from Canara south down to Cape Comorin, up to about 5000 feet elevation, and it also occurs in Ceylon. The wood is valued in Ceylon, and is procurable of very large size. It is of a light yellow colour and is said not to warp. It is used for building and other purposes, and as it resists the attack of the teredo, is much in use in the construction of boats. It is exported from Trincomalee.—Beldome, Fl. Sylc. part xxv. p. 297.

ALSI. HIND. Linsed. Linum usitatissimum.

ALSinAceE. Lindl. The Chickweed tribe of plants. The Indian genera are—Buffonia, Sagina, Minuartia, Arenaria, Cerasium, Stellaria, Alinsina, Cheliria, Brachystemme, Leucochrum, and Larbrea.

ALSOPHILA, a genus of tree-ferns of India, and the islands of the Southern Ocean. A. australis, a tree-fern of New Zealand, attains to 60 feet in height. A. excelsa, the tree-fern of Norfolk Island, measures 40 to 80 feet in height, and has a magnificent crest of fronds from 7 to 12 feet long. It usually has its root near the course of some main stream; and as its roots do not affect the shade, like many of its congeners, it forms a striking object in the landscape. The heart or cabbagage at the extremity of the trunk in some species affords a coarse food. It is in substance like a Swedish turnip, but is not so astrigent in taste as to be agreeable, and is not much altered by cooking. The black portion of the trunk is used for stringing by cabinetmakers. A. Cooperi is the tree-fern of Queensland. All the Alspophila should be introduced into India. A. gigantea, Wall, is common to the Himalayas of Nepal eastward to the Malay Peninsula, Java, and Ceylon; it ascends nearly to 7000 feet in the outer Himalayas. It is far more common than A. spinulosa. A. spinulosa is the 'Puggil' of the Lepchas, who eat the soft, watery pith of this tree-fern grows also in Sikkim abundantly in East Bengal, and the Peninsula of India.—Hooker's Him. Jour. i. 110, 142, ii. 13; Von Mueller; Keppel's Indian Arch.

ALSTONIA, a genus of plants belonging to the Apocynaceae. A macrophylla and A. spectabilis are Penang trees; of the former, with large white flowers, nothing is known, and equally little of A. neriifolia, a Nepal shrub, and A. venenata of the Indian Peninsula, the last being Roxburgh's Echites venenata. A. constricta, f. v. MueUler is a small tree of E. Australia; bark an aromatic bitter, useful in age.—Von Mueller.

This considerable sized tree grows in the Moluccas, Bengal, in the vale of Savitri, and in the hilly parts of the South Konkan, and in the moist valleys of Kamaon. In Ceylon it comes up to an elevation of 3000 feet. In Canara and Sunda it is not very common, but is found near the ghat above and below of great size.
also found in the Travancore forests; it is very common in the plains on the western side of the Madras Presidency and in Mysore, and is also found in Assam, Burma, Africa, and Australia. The excellent boards or thin planks it affords are used by their children and by children in Ceylon and in the Indian Peninsula to write their lessons on, hence its name. The whole plant abounds in a milky juice. Its wood is white, light, and close-grained, but rather coarse, and in Assam is much prized for beans and light work, such as boxes, trunks, scabbards, etc. It is valuable for the turning-lathe, and in Ceylon it is used for coffins and packing-cases. It is as bitter as gentian, and is possessed, it is said, of similar virtues. The bark is a powerful tonic in bowel complaints, and, in the form of tincture, Dr. Gibson found it useful as a febrifuge.—Ind. Ann. Med. Sci., April 1886; Mason; Hogg's Vegetable Kingdom; Useful Plants; Dr. Gibson; Voigt; Tawiates; Beddomes; Mr. Thompson.

ALU, the Arab name of Bassora, from Bel-al-Sura, signifying the stony soil on which it is built.

ALTAI, or Mahawar. Hind. Balls of cotton imregnated with a lac dye; a thin red stuff of cotton, like paper, consecrated to Durga, with which Hindu women colour their feet, and is supposed to promote happiness and prevent distress.

ALTAMGHA. Turk. Literally red stamp. A grant under the seal of the former rulers of Hindustan, recognised by the British as conferring a title to rent-free land in perpetuity, hereditary and transferable from generation to generation. In reality, such were never so treated, being invariably resumed as occasion demanded. The imperial decisions of China are noted in red ink.—Wilson.

ALTAMSH. This emperor of India succeeded to the throne in A.D. 1210. He completed the conquest of the greatest part of Hindustan proper (1226–1232), and appears to have been the first Mahomedan that made a conquest of Bengal, the government of which was from this time bestowed on one of the reigning emperor's sons. It was during his reign (1225) that Chengan Khan, among his extensive conquests, accomplished that of the empire of Ghazni, putting an end to the dynasty of Khurasan, which then occupied that throne, and driving before him the unfortunate Jalal, son of the sultan of Khurasan, who swam the Indus to avoid his fury, and fled to Delhi. Altamsh was succeeded for a few months by his son, and his sister Razia was then raised to the throne.—Rennell's Memoir, p. xlviii.; Marshman.

The altar is a sacred place inside Jewish, Buddhist, and Hindu places of worship, and Christian churches, and revered in the eastern mode alluded to in Psalm xxvi. 6: ‘So wilt I compass thine altar,—compassing being a mark of reverence, common among Hindus and Buddhists, many of whom may be seen morning and evening circumambulating their temples from right to left, with their right hands towards the temple. Hindus call this Pradakshana; and it is with them a reverential act, which they sometimes also perform to men. Mahomedans also circumambulate, but only the Kaaba at Meccra, into which is built the Hajar us Siah, or Black Stone that is believed to have fallen with Adam from paradise; but in their religious process they may not allure to the custom, as in the words from the Persian, Tus i kaba i dil kun agr dili dari, Encompass thou the kasha of thy heart, if thou hast a heart."

ALTERNANTHEA SESSILIS. R. Brown. Achenraanthes triandra, R. Altern. triandra. sessilis. Illecebrum sessile, Linn. Poonaghutti bhaqji, Duk. Poonaghanti koora, Tel. Priasatti, ... Sansk. Madanaganta, ... Poonarkany kiri, Tam. This in many parts of India this is a common annual, but is greatly prized as greens by the natives, and sold at a high price. A. campestris and A. sessilis are placed in Wright's Icones.—Jeffrey; Voigt; p. 318.

ALTHEA ALHUGAS. Guimauve. Fr. Gul khyar, ... HIND. Althia of Dioscerides, Gk.

This is a native of Europe and of Kashmir, and used precisely as the marsh-mallow, and at Kandahar as greens.—O'Sh. p. 214; Bellace; Stewart. ALTHEA ROSEA. Cov. Fu-Sang, ... CHIN. Gul Khair, ... HIND. Hollyhock, ... Eng. Khatti, ... HOLLYHOCK. Pers. This plant, with very large rose-coloured flowers, has produced about 20 varieties of splendid border flowers. Its leaves are said to yield a colouring matter resembling indigo.—Voigt; 112; Smith, 10. See Dyes; Hollyhock.

ALTI MARAM. TAM. Hardwickia binata.

ALTISIHR, or the Six Cities, a designation of the western part of Eastern Turkestan, and embracing the towns of Yarkand, Kashgar, Aksu, Khoten, Yanghisar, and Oosh-turfan, with the districts dependent on them. See Bokhara, Little Chinese Tartary, and Eastern Turkestan.

ALTUN-SU. The river Caprus of antiquity is called the Lesser Zab by Abul Fazl. It joins the Tigris below Diarbaker; but it is wrong to call the river Altun, which is an epithet only belonging to the bridge, from what it cost, Altun meaning gold or money. Both Altun and Altai are Turk words for gold.—Rich's Kurdistan, ii. p. 13.

ALU. HIND., PERS., Pusht., Tel. A term, with affixes and suffixes, employed in Persian, Afghan, and Indian countries to designate several shrubs, pomaceous fruits, edible fruits and roots. The Alu of India generally is the common potato, the Solanum tuberosum. The Alu-i-Bokhara is the prune; the Nathar Alu, Batatas edulis, the sweet potato. In Telug, the Alu-bachchali, is the Basella alba. In Bombay, Alu is a name of Vangueria spinosa; in Persia, of several rosaceous plants. Gurd-alu is Prunus Armeniaca; Kir-alu is Arum speciosum; Rat-alu is Dioscorea sativa; Shaft-alu is Amygdalus Persica; and Alu-balu is the Cerasus caproniiana. Alu-chia is a variety of prune. Alu Bokhara, prunes, Prunes domestica; also dried plums and apricots.
The first alum works known to Europeans were those of Edessa (formerly called Roesca) in Syria. The alum of commerce, however, is manufactured from alum slate, alum rock, bituminous slate, and slate clay. In British India, at Dera Ismail Khan, it is manufactured from a black slate, principally at Kalabagh, on the Indus, and Kutki, where some 900 tons are annually sold, at the rate of 75 rupees per ton. The process of manufacture is almost identical with that employed in European alum works. Alum occurs native in Nepal and at Chownisilla. It is obtained in the Tenasserim valley, about 40 miles below Matalah, from a red-dish slate clay. The shales are roasted, and, after being reduced to powder, the alum is obtained by washing. Red alum is brought to Ajmir from Lahore, and used in medicine as an astringent, but chiefly employed in dyeing. One maund sells for 10 rupees. The greatest abatement of alum is from China. Surgeons apply it variously, after depriving it of its water of crystallization; and in domestic life it is used for precipitating vegetable substances suspended in potable water. When Chinese fishermen take one of those huge rhizostome which abound on the coast, they rub the animal with the pulverized stypic to give a degree of coherence to the gelatinous mass. Chinese architects employ it as a cement in those airy bridges which span the water-courses. It is poured in a molten state into the interstices of stones; and in structures not exposed to constant moisture the cohesion is perfect, but in damp situations it becomes a hydra, and crumbles. In the Sung-yan hills bordering on Pho-kien, in the district of Ping-yang, Wan-ehan prefecture, and in close proximity to Peh-kwah harbour, several alum-making establishments occupy about a mile of the side of a lofty hill. In the alum district, the typhoon of September 1555 was preceded by a rising of water in wells and ponds many miles inland. When the cyclone reached the coast, it submerged about a hundred square miles, occasioning a vast destruction of life and property. The waters of the sea were retained in the country by strong easterly winds for several days, leaving a strip of land bordering on the sea quite dry. Alum slate, Fan-shih of the Chinese, is found very pure in the provinces of Cheh-kiang, Hunan, and Ngan-hwui. It is delagrated by throwing the alum slate into brushwood, and macerating the residue in vats. The liquor is concentrated in large boilers, having iron bottoms and wooden sides, then poured into reservoirs to crystallize into large solid masses, which are broken into smaller pieces for shipment to India and the Archipelago, and for sale. 6000 tons leave the district of Ping-yang in one year. The purified alum, called Ming-fan and Peh-fan, is equal to the best Roman alum. Ferruginous alum, Tich-fan, is a friable mineral of a faint red colour, brought from Shen-si Province, China. This mineral is largely employed by the Chinese in dyeing, and to some extent in paper-making, as in Europe.—H. Piddington in As. Soc. of Beng; Calcut. Cat. Esbkh. of 1862; Hon. Mr. Morrieson's Foreign Commerce with China; Irvine's Ajmir, p. 149; O'S. Beng. Pharmac. p. 366; Simmonds' Comm. Prod.; Paulkner's Comm. Diet.; N. China Herald, 23rd January 1856; Powell's Handbook; Smith's Ch. Mat. Med.

ALUMINA is an earth of common occurrence in the mineral kingdom, in a state of silicate; as in felspar and its associate minerals; and in the various modifications of clay thence derived. Native alumina exists in the sapphire; the oriental emerald, ruby and topaz, corundum, and emery consist chiefly of alumina, with a small portion of oxide of iron and silica. Alumina has a strong affinity for various organic compounds, and its use in dyeing and calcio printing depends on its attraction for different colouring principles, and for ligneous fibre. If ammonia be added to a solution of alum in an infusion of cochineal or madder, the alumina earth falls in combination with the red colouring matter, and the liquor is left colourless. Colours thus prepared are called Lakes. The Ohl-th-Shih-Chi of the Chinese is a pale reddish friable aluminaeous earth. See Dyes; Precious Stones.

ALUWA. See Sripada. Tel. Ipomea filiformis.

ALUMZAI, a branch of the Monum tribe, whose headquarters are at Gandoo.

ALUNDY, a place near Poona where Vishnu is believed by the Hindus to have become incarnate about the 16th or 16th century. See Naneshvar.

ALUWIHARA. See Sripada.

ALWAN. Singh. Cucurbita hispida. ALUTE. Man. A share in the corn and garden produce of a village, given to the Baluto or village officers. See Balute.

ALUVA. Tel. Manis pentadactyla, Linn. ALUVAR or Alvar. TAM. Alvaru, Tel. Amongst the southern Vaishnava in the Peninsula of India, twelve reputed saints are said to have each written a portion of the Dravida Prabandha, or Tamil Veda, chiefly designed for Sudras and women. Ramanuja, the founder of the Sri-vaishnavu sect, is sometimes supposed to be the same as Yembir Manaru, the last of the Alvar. Their names are—

Poyalvar; Piryalvar;
Puthalavar; Pirumalvar;
Poyalvar; Tondalavar;
Tirupalvar; Yempamanar, or Yetaraja,
Namalvar; Ramanuja clarar;
Kula Sec'haralvar; Kurathalvar.

Wilson.

ALWAN. Singh. Cucurbita hispida. ALUTE. Man. A share in the corn and garden produce of a village, given to the Baluto or village officers. See Balute.
AMARA SANTANA. 

AMARA SANTANA, or nephew inheritance; in Canara, the law of descent to sisters' sons; the descensus ab utero. The management of property vests ordinarily in the females. See Polyandry.

ALYSICARUS, a genus of small trees or under-shrubs of India and Burma, of the natural order Fabaceae. A. bupleurifolius, Heyneanus, styracifolius, monilifer, vaginalis, and nummularia, Naga, Hind, are known. — Voigt, p. 224.

ALYXIA, a genus of plants of the natural order Apocynaceae. The bark of A. stellata, Roxb., of the Eastern Archipelago, Society and Friendly Islands, contains benzoic acid, and is possessed of properties analogous to those of nummularia and Winter's bark, used in chronic diarrhoea and nervous disorders. A. gynopogon of Norfolk Island and A. Moonii of Ceylon are also known.—O'Sh. p. 448; Razb. i. 609.

AM. HIND. The mango; fruit of Mangifera indica, also Hippophae rhamnoides.

AMADA. Beng. Curcuma amada.

AMADA KADA. Tel. Cynotis axillaris.

AMADAYAH, a district in Kurdishtan near the Tigris and Taurus, for about 800 years the headquarters of the Kurdisht family of Behdir, who race their descent from one of the early Abbaside khilifs. After the overthrow of the Mir of Towanduz, it passed without a struggle into the hands of Rashid Pacha.

AMADOU, German tinder.

A substance similar to agaric is prepared from Agaropus fomentarius, parasitical on the oak, birch, etc., and P. igniarius, growing on the willow, plum, etc. Amadou is prepared by beating thin slices of the fungus, and soaking them in a solution of nitre. Black amadou is impregnated with gumpowder.

AMAKARUM. Maleal. Physalis sominifera.

AMAL. Arab. Business affairs. Amladar, a agent, a revenue officer.

AMAL. HIND. Opium. Amal-lar-khana, 'to opium together,' is the most inviolable pledge amongst the Rajputs, and an agreement ratified by this ceremony is stronger than any adjudication. If a Rajput pay a visit, the first question is, Amal khya? 'Have you had your opiate?— Amal khaoo, 'Take your opiate!' On a birthday, when all the chiefs convene to congratulate their brother on another ' knot to his years,' the large cup is brought forth, a lump of opium put therein, upon which water is poured, and by the aid of a stick a solution is made, to which each guest is invited, with a glass, but with the hollow of his hand held to his mouth.—Tod's Rajputan, vol. i. p. 644.

AMAL, or Aomla. HIND. Emblica officinalis.

AMAL. PANJ. Sour; hence Amal-bel, Cissus arenosus; Amal-gachh, Prunus puddum; and ml, Tamarindus Indicus.

AMALAH is a subdivision of the Peshkoh an of the Luri Kuchak tribe in Khuzistan, comprising about 2000 families. Their summer quarters are about Khoramabad and Terhan, and winter they go to Saemara and Koh-dasht.—ajard; M.G. p. 22.

AMALARI, a division of the Brahui tribe izungi, on the same hills as the Minghal.

AMALE ARISI. TAM. A variety of rice.

AMALGAM. Mercury dissolves most of the metals, and forms a class of compounds termed amalgams. They are usually brittle or soft. The amalgam of tin is readily formed, by triturating the metals together, or by fusion at a gentle heat, and is extensively used for silversing looking-glasses. An amalgam of three parts mercury, one part lead, and one part bismuth, is remarkable for its fluidity, and may be squeezed through leather without decomposition. It is used for silversing the inside of hollow glass spheres, previously made clean and warm. All the amalgams can be decomposed at a moderate heat; and advantage is taken of this property in the arts of water gilding and water silversing, and the cold tuning of cast iron, wrought iron, steel, copper, and many other metals. The processes are followed in India. The amalgam used in dentistry consists of gold of purest kind and tin, each one part, silver two parts. Melt, and when required for use reduce to a fine powder, and make an amalgam with mercury. In China, Yin-kau, Yin-ts'ui, is a mixture of pewter and silver leaf with mercury, used internally as a medicine, but also employed for stoping teeth and for making false teeth.—Tomlinson; Smith.

AMALTAGS. HIND. Cathartocarpus fistula.

AMAMA. HIND. A large loose turban of shawl, etc., worn by Musalmans; qu. Imama.

AMAN. HIND. Low lands yielding one crop a year. Also At., free; the soldier's cry for quarter.

AMANAKU ARISI. MALEAL. Seeds of Ricinus communis; Ar. lampird.

AMANAT, also Amanni. HIND. Held in trust by the State, as an estate.

AMANJ. TAM. Compulsory labour.—W.

AMARA KOSHA, by Amara Sinha, also called Amara Deva, is the most esteemed of all the Sanskrit vocabularies. The author was one of the nine poets who adorned the court of Vikramaditya, who seems to have been a Buddhist. Another of this name is supposed to have lived about a.d. 948. His book was translated into English by Colebrooke, and printed in India, and into French by A. L. Deslongchamps, and printed in Diglot in 1839. The Amara Kosa, Trikanda Sessa, Haravali, and Medini Kosa, four original vocabularies, were printed at Khuspur in 1807. The poems of Amara Sinha perished during the persecutions to which the Buddhists were subjected.

AMARANTUS, a genus of plants of the natural order Amaranaceae; several which have bright-coloured leaves are ornamental. About 26 species and varieties are grown. A. amaranthus, A. frumentaceus, and A. lappica produce seed in sufficient abundance to be gathered as grain crops; their stems and leaves are used as greens and spinach. A. paniculata in three months yielded 8 oz. of seed on a square yard. Under the vernacular name of 'nuteye,' they are used as emollients, cataplasms, and for diluent drugs. A. tricolor, A. caudatus, or 'Love lies bleeding,' A. hypochondriacus, or 'Prince's feather,' are flowering plants. The last is found wild in the south of England. A. Blitum, Linn., of Europe, A. campesiris, Wilde, have minute greenish flowers, as also has A. polystachys, the Kupei-kir of the Tamils.

Amaranthus annandara, Ham. 

Sirit, sarari, saralia, batu, ganhar, BEAS. Darto, Pushit. 
Siul, sawal, bhahri, CHEN. Kail suwal, Lal siwal, 
Lal chaulal, ... RAVI. Siwalar, dankar, bithu 
AMALANTUS. 

Ganhar, Jelum, Kang. Chanval, tulsi, SUTLEJ.
AMARANTUS.

Dr. Stewart gives these as vernacular synonyms both of A. amarana and A. Gangeticus. He says A. amarana is often in the Panjab grown among other crops, up to 9000 feet. A. Gangeticus appears to be wild also in the plains. The leaves are eaten as a pot herb, but it is grown chiefly for the seed, as used for a food-grain after parching.

Amaranthus atropurpureus, Roeb.
Banspata-lal-nuti, BENG. Shegapu thandu-kirai, Lat-nutiya, TAM. Kunka nuti, Yerra totakama kurka, Tel. Vis. This is probably a variety of A. oleraceus, an annual with beautiful red foliage and diminutive flowers. It gives a good spinach, though seldom used by Europeans.

Amaranthus caesivestris, Wilde.
Chur-kh-bhaji, DUK. Sirra kirai, TAM. Mekanada, Ganna, SANSK. Sirra kurka, Tel. A. caespitris and A. polygonoides? are commonly cultivated by native gardeners for spinach, during the hot months; require to be used when three or four inches high, are of rapid growth, and should be sown every third or fourth week.

Amaranthus caudatus, Linn., the Ye-hien-tsei of the Chinese, the love lies bleeding of our gardens, is commonly cultivated for ornament. The Chinese formerly ate it as a vegetable.

Amaranthus cruentus.
Batu zard, BENG. Bostan-afroz. Pers. Taj-i-khurus, TAM. A sieve cake made from its seed is a common food with the peasants of the Himalayas.

Amaranthus faciatus, Roeb.
Tun-tumi-nuti, BENG. Ban-nuti, BENG. Has minute greenish flowers.

Amaranthus frumentaceus, Buch.
Bath, PANJ. Pung-kirai, TAM. Kirai, TAM. A large luxuriant species, grows in the hills between Mysore and Coimbatore, also on the Nilgierries. In the Calcutta Botanic Garden, forty square yards, sown in June, yielded 21 lbs. of clean seed in September. It is cultivated by the hill people of S. India for the seeds, which are ground into flour, and form one of their principal articles of diet. Seeds used by the Hindus as the kephre or seed-flour. The leaves are of a reddish-brown colour, and the plant averages in height from four to six feet.

Amaranthus Gangeticus, Linn.
Lal-shak, Ranga-shak, Lal-sag, HIND. BENG. Sown broadcast, and always procurable. The leaves are very generally used as spinach. There are many varieties, with colours from green to bright red. They cannot be cut.

Amaranthus lancolateus. Banspata nuteeya, BENG. Bamboo-leaved amaranth. The leaves and tender tops are eaten by natives in their curries, and used as emollient poultices.

Amaranthus oleraceus, Linn., country greens. Var. a. viridis, b. ruber, c. albus, d. giganteus. Shedakh-nindi, ARAB. Tota kura, TAM. Var. alba—Tella
Sadanuti, BENG. Ma-chi-hien, CHIN. Tota kura, TAM. Dant-khi-bhaji, DUK. Var. rubra—Yerra
Dak-khi-bhaji, TAM. Sadanuti, SANSK. Var. gigantes—
Thandu-kire, TAM. Mokka, also Peruga.

This amaranth is, more than all the others, in use with Europeans in India. The peeled stalks resemble asparagus in form, and are pleasant to eat. The variety A. viridis, the common green sort, is most cultivated. A. ruber, with its bright stems but rusty-coloured leaves, is showy in a garden. A. albus, with white shining stems, is the sada-nuti of Bengal, and is much cultivated there. But the A. giganteus, from five to eight feet high, is that which Europeans mostly esteem,

Amaranthus polygynus, L.; var. ruber.
Champa nuti, BENG. Chumli sag, HIND. Champa nuteya Chulai, VAR. (var. lal.), Sada-nuti, TAM. Duk, DUK. Sada-nuti, TAM. Duk, DUK. Rayki-khi-bhaji, TAM. Kirai, TAM. Chulai-gaji, TAM. Kheer, TAM. Kheer, TAM. Chulai-kheer, TAM. Kheer, TAM. Duk, TAM. This is cultivated all over southern Asia. There are three or four varieties, with various coloured leaves. It is one of the best of the Indian spinach. It is raised from seed during the hot months, and requires to be sown thick, and eaten when young; generally used when two feet high. The humbler natives are seldom able to purchase this vegetable, it being too costly.

Amaranthus polygonoides.
Chiru nuti, BENG. Ban tantuli, TAM. Chilu nuteya, CHILA. Kheer, TAM. Chilu, TAM. Has very small and common garden weed, used as a pot herb, and esteemed by natives wholesome for convalescents.

Amaranthus spinosus, Linn.
Kanta nuti, BENG. Mula kire, TAM. Thoicky amaranth, ENG. Mula tota kura, TAM. Mullan-chiara, MAIKAL. Nalla dogali, TAM. Mula-karan-tara, VAR. Erra multa gor. Puttai, TAM. Anta, TAM. This grows as a very troublesome weed all over Southen India and Burma. It has sharp spines in the axils of its leaves, and it is troublesome to pick them, though they make a good spinach and pot herb.

Amaranthus tenuifolius, Roeb.
Ghonti-nuti, BENG. Muleeroo, SIND. Jee-chunni, TAM. Katao-sirroo-kirai, TAM. A weed with clusters of green flowers proceeding from the axils of the leaves; stem much branched; found everywhere spreading in cultivated grounds.

Amaranthus tricolor, Wright.
Mat-khi-bhaji, DUK. Aray-kirai, TAM. Jilakka, TAM. SANSK. Quoy-tota-kura, TAM. Kuppi-kirai, TAM. Tanta-kura. TAM. This annual is cultivated and hold in great esteem by the natives. It may be cut down several times without destroying the plants, which are much used for food.

Amaranthus viridis, Linn., has minute greenish flowers, and its tender tops are eaten, but less esteemed than others of this genus—A. binata, CLEG.
A. viridis, WRIGHT; Jaffrey's Hands, Mool. A. viridis; O'Sh. BENG. Disi, Powel, Handook; Riddell's Gardening; Rosh, F. Ind; Smith, Chir. M. M.; J. L. STEWART; Voigt; von Mueller.

AMARAPURA. On the east bank of the Irrawaddy river, in lat. 21° 57' N., long. 73° 4' E., a former capital of Burma. The name is derived from the Pali, and means the immortal city. It was re-occupied when Ava was abandoned. The Burmese kings vary their capitals, and Amar-
AMARA DHOB, a Parsee holiday, held on the day following the Khurdad-sal, of which festival it is merely a continuation. —*The Parsees.*

AMAR-DHOB, also Dhooba. HIND. Cynodon dactylon; amongst the Rajputs, the father binds its root around the arm of a newborn son.

AMARKANTAK, a hill in the Bilaspur district of the Central Provinces, in lat. 22° 40' 15" N., and long. 81° 48' 13" E. The mean height above the sea of the plateau Vishnapuri, is 3590 feet. The tank of Pach Kunda, the source of the Narbada, is 3504 feet. The top of the hills skirting the Vishnapuri plateau to the north, 3700 feet, 100 feet above the Vishnapuri plateau, by aeroid. Near this, Captain Jenkins of the Madras Army discovered coal. Amarkantak plateau forms the watershed of the Mahanadi, Son, Tons, Johilla, and Nerbudda. These rivers, though large and full of water, even halfway from their mouths, are very irregular in the slopes of their beds, and are disturbed by frequent rapids, so that, owing to these impediments, increased still further by the rocky character of the river beds or their banks, navigation is limited for the most part to the lower portions of their course. —*Madras Museum Records.*

AMARNATH or Ambermath, a temple five miles from Kalhan, about forty miles from Bombay; it means immortal lord. It is now a Saiva institution, and in ruins, but has evidently belonged to some prior creed, probably buddhist, and re-arranged for the Saiva sect A.S. 782, A.D. 800. The lingam, yona, and vahan nandi are still there. It is sacred to Shambha. An inscription found in it is dated Saka 982, A.D. 1060.

AMARYLLIS, a genus of the Amaryllaceae, the narcissus tribe of flowering plants, the species being known as American, Asiatic, aures, Barbadoes, Cape, equestrian, fritillaria or snake's head lily, golden, Mexican, parrot, tiger lily, and Turk's cap, mostly natives of China, Cape of Good Hope, and America, but quite acclimated in India, and found almost in every flower garden. They blossom during the rainy and cold season. The colours are of every variety, —red, white, pink, etc. The wild flower of fritillaria hangs pendulous, and is chequered with pale dark purple; specific name from fritillaries, a dice board. In India, several are known as Sosan, a Malomedian name, the Susan of Christian women. A. aures, golden amaryllis, the Zard Sosan of the Persians, is very ornamental. A. Belladonna has large veined greenish white and carmine coloured flowers. The roots of the Shan-taze-ku or Man-ku of the Chinese, a splendid flowering plant, are used medicinally. —Smith; Roxb.; Voigt; Riddell; Hog, 768; Gen. Med. Top. p. 188.

AMARYLLIS GRANDIFLORA, Stewart, the Suk'h-darsan of India, is cultivated for its flowers; the strained juice of two drams reduced to a pulp with water is said to be a good emetic, and is dropped into the ear for earache. —Stewart, *Panjat Plants,* p. 232.

AMARYLLIS RADIATA, Wildde, the Yuk-lan of the Chinese; a native of China, blossoming during the rainy season. —Roxb. ii. 140.

AMAS, SANSK., TEL. Moonless period of the month. See Amavasya.

AMATSA, JAYAN. Hydrangea Thunbergii. AMATUM, TEL. Spondias mangifera, Pers.; S. dulcis, Forsk.

AMAVASYA, or Amasi, or Amas, SANSK., TEL., TAM. The conjunction of the sun and moon; the interm of the month, also called Arcendu Sangama (written Aria Indu); Ama and Darsa Tithi are names given to the lunar day, on which the conjunction occurs, which in the Hindu calendar is always reckoned the 30th of the lunar month. Amavasya Tithi, the lunar day of the moon's change. The Amavasya is observed as a fast-day by all Brahmins and strict Hindus, during which they perform various religious ceremonies for their deceased parents. —Captain Edward Warren's *Kala Sanhita.*
AMAWATURA, a book of legends in Singhalese.

AMAZON STONE, a compact felspar of an emerald green colour, opaque, with micronic reflections. It is hard, and takes a high polish.

AMBAGARI CHAUKI, a zamindari on the N.W. frontier of the Chanda district. Gonds, with a sprinkling of Gauli, inhabit it; the languages spoken are Gondi and the Chhattisgarhi dialect.

AMBAKAPI, the Akamatis of Ptolemy, a town in the Eastern Punjab.

AMBA KURB. MAHR. Cupania canescens.

AMBALA, a large military station in the Punjab, in lat. 30° 21' 4" N., and long. 76° 48' 88" E., and 1026 feet above the sea.—See Umballa.

AMBALA CHETTU. TEL. Spondias mangifera.

AMBALAKAREN, the tribal titular appellation of the Kollari tribes of Madura and the Tondaman country.

AMBALAM. MALEAL. Spondias mangifera.

AMBALAM. TAM. A public hall in Malabar; a Hindu temple. Ambala Vasi, a caste in Travancore who make garlands; they are attendants in temples, and rank between Brahmans and Nairs.

AMBALAY. MALEAL. Carica papaya.

AMBALIKÂ, mentioned in the Mahabharata was the younger widow of Vichita Virya, and mother of Pandu by Vyasa. Ambi or Ambika, her sister, was the elder widow, and was mother of Dhrita-rashtra.—Dowson.

AMBALITA, a small tree of Ganjam. The juice of the leaves is mixed with mercury, and taken internally for rheumatism and other diseases.

AMBALU. MALEAL. Lac.

AMBARA. TEL. Spondias mangifera.

AMBAR-BATTI. HIND. A perfumed paste, made from frankincense, used in India.

AMBARI. HIND. A howdah with a canopy or umbrella cover; a canopied seat on an elephant; a litter borne by a camel.

AMBARI. DUK., MAHR.

Mesta pāt, BEN. Full munāj, COMBÂTARE. Valātī sunn of MUTTRA.

Ambaya pāta in Purneta. Sunl. of SAHARUNPUR. Beng. Gong kura, TEL.

This fibre is manufactured from the Hibiscus cannabinus, largely used in India, and exported as one of the hemp's. Ambari kī bhajī, DUK., greens of Hibiscus cannabinus.—Lin. ; Riddel; Roye.

AMBASHTHA, or Ambghāste, a Hindu of the medical profession. They are numerous in Behar, and are said to be Sudras in caste.

AMBASSADOR.

Balyus, ARAB. Elchi, HIND., PERS.

In Mahomedan traditions, it is mentioned that An-Rāfa was sent as an ambassador to Mahomed by the unbelievers of Mecca. But when he had Mahomed preach, he embraced Islam, and refused to return to Mecca; whereupon the Prophet spoke of the sacred character of ambassadors, declined to sanction An-Rāfa's breach of duty, and persuaded him to go back. On another occasion, an ambassador who claimed to be a prophet, and was an enemy of the new faith, expressed his contempt for Islam in the presence of Mahomed; but the Prophet merely replied that but for the respect with which Islam regarded ambassadors, his presumptuous language might have cost him his life. Respect for the representatives of other nations was enjoined upon his followers by Mahomed in the last moments of his life.

AMBATCH, a wood seldom larger than a man's waist, and, as it tapers naturally to a point, canoe rafts are quickly formed by lashing the branches parallel to each other, and tying the narrow ends together. It is a curious combination of raft and canoe; the Ambatch wood is so light, that the whole affair is portable.

AMBATTI MADDU. TEL. Trianthema cordatum, Roxb.

AMBATTI. TAM. Barber.

AMBATTEYYO, an outpost race in Uvah in Ceylon, deemed so degraded that even the Rodiya prevent their dogs from eating the fragments of food cooked by them.—Tennent.

AMBAYA-PATA. BEN. Crotalaria juncea.

AMBEL. MALEAL. Nympheæ pubescens.

AMBEM. MALEAL. Crotalaria adenocarpa, in lat. 26° 58' 45" N., and long. 75° 52' 50" E., the early capital of Jeypore, built by Jey Singh, and a city of great architectural beauty, situated in a rocky mountain gorge, where there are several Hindu temples, and the palace is still kept up. According to Tod, Amber gave its name to a Rajput dynasty, of the Surya Vansa race, a secon of Nirwar, and, according to Prinsep, the ramus of Amber are of the Ghushwa race of Rajputs, who claim descent from Cush, second son of Rama, king of Ayodhya, who migrated, and built the fort of Kotas on the Sone, Authentic history commences in A.D. 294, with Raja Nola, who founded Narwaz or Nishidh. The political power of this family dates from Hanayun, the son of Baber.—Thomas Prinsep's Antiquities, p. 259; Tod's Rajasthan, pp. 299-331; Imp. Gaz. AMBER.

Amber is first mentioned in Ezekiel i. 4, 27, and vii. 2. Thales noticed it b.c. 600, and Theophrastus b.c. 300. It has always been held in estimation by eastern nations for medicinal use and for ornament. It is found on the shores of the Arabian and the Adriatic, on the eastern coast of England, and on that of Sicily; and in Prussia it is obtained by sinking shafts to the depth of 100 feet, to a stratum of fossil wood, in which the amber is found in rounded pieces from a few grains to five pounds in weight. It is also obtained along the coasts of America, Africa, and the Archipelago islands. Dr. Smith mentions that the Chinese market is supplied from Annam, the Indian Archipelago, and, according to Dr. Wight, from Africa; but Corea, Camboya, and Japan, are also said to yield it; small pieces of an indifferent colour are brought from Li-kang-fu and Yung-chung-fu in Yunnan. A dark jade-like amber comes from Tangut. The best pieces are all made into court-beads and ornaments. The Chinese name Hu-pee is from a legend that the soul (pee) of the tiger (hu) is changed into this substance after death. The Burmese, perhaps more than any other nations, use it. In every bazaar of India, medicine vendors

88
of a small whale. It occurs in lumps from three to twelve inches thick, weighing from 4 oz. to 182 lbs., and mixed with vegetable and animal remains. It is softened by heat in which state it has a powerful smell, which to some persons is very disagreeable. Indeed, when taken from the intestines, its fetid smell is disgusting. It is often found floating in the Red Sea, on the east shores of Africa, on the ocean south of Asia, and the countries it surrounds export it largely to China. Some sorts met with in Japan resemble coarse bitumen, or asphalt, or black naphtha dried, consequently more or less black and heavy, and all differing in consistence. Other sorts are whiter in various degrees; and some sorts are exceedingly light, and not unlike a mushroom, which induced Scaliger to concur with Scarpion, that it might well be a sort of a fungus marinus, or sea mushroom. The Chinese test its goodness by throwing some of it, scraped very fine, into boiling hot tea, when, if pure, it will diffuse itself equally through the fluid. It swims on water. A factitious article appears in the Chinese market, pure white, and apparently smooth and homogeneous. García-ab-Oria tells (A. H. I. c. 1) of two large pieces; and when Thunberg was in Japan, a very good piece of a fine greyish ambergris was found upon the coasts of Kijnozumi, which weighed upwards of a hundred catti Japanese, that is, 130 lbs. Dutch weight, and, being by much too large to be purchased by one person, it was divided into four parts, in form of a cross, and one of the four parts was tendered to him. In 1059, after he had left Japan, a tortoise-shaped piece, weighing 185 lbs. Dutch, was sold by the king of Tidore to the Dutch East India Company for 11,000 rixdollars, or upwards of £2000 sterling. It was sent to Amsterdam the year after, and was kept in the Company’s museum. It was of a greyish colour, and of a very good sort. It was bought on condition that if it should be discovered to have been in any way adulterated, the money should be restored. Dr. Valentine, professor at Gissen, figured it in his Museum Museum, lib. 3. c. 28, as did Rumph in his Ambosche Barricaterammer, t. iii and iv, from which, it seems, Valentine took it. Lane tells of a piece weighing about 125 lbs.—Bingley—Thunberg’s History of Japan, p. 48; Plowden’s Hindostan, p. 148; Lov’s Sarawak, p. 99; Tavernier’s Travels, p. 152; Bennet, Whaling Voyage, ii. p. 226; Lane.

AMBER, LIQUID; Liquidambar.

Mia-Salath, . ARAB. | Liquidambar, . ENGLISH.
Nan-tu-yok, . BURM. | Rasa-Malay, . MALAY.

A resinous fluid, obtained from trees that grow in North America, Mexico, the Levant, in the Tenasserim Provinces, and Java, and used to mix with balsam of Peru. The bark of Liquidambar altingia is bitter, hot, and aromatic, and when wounded affords this balsam. A similar substance is obtained from L. orientale of the Levant islands, and L. styraciflua of Mexico.—Mason’s Tenasserim; O’Sh. pp. 255, 610. See Liquidambar.

AMBHA, a goddess worshipped by the Káthi race. Ambha-matla, a goddess of the Jain sect, worshipped in many parts of India.

AMBHOJ, Unti; Badhinia, species.

AMBI-HALDI, a black Trench mustard.
Hyderabad contingent. It has some ancient Brahmanical temples.

AMBIKA, a name of Parvati; also the patron goddess of Nemeth. Ambika is one of the Ginnar guardian deities. Her temple occupies a prominent position. See Ginnar.

AMBISACES, king of the Indian mountaineers, who sent ambassadors with presents to Alexander, on his crossing over to Taxila. Rennell supposes his tribe to have been the ancestors of the Gihkar.

AMBLYCEPHIDÆ, the family of blunt-headed innocuous snakes. See Reptiles.

AMBLYRHYNCHUS CRISTATUS, a sea-shore lizard of the Galapagos, from 3 to 4 feet long, with a crest on its head, which is short and obtusely truncated, and broader than long. The mouth can be opened to a very small extent. It is common on all the islands on that archipelago, on rocky sea-beaches, is never found ten yards in shore, and lives on sea-weed. It is a hideous-looking creature, of a dirty black colour, stupid and sluggish in its movements.

AMBONG, in Borneo, a small town in lat. 6° 18' 26" N., long. 116° 15' 33" E. The famous mountain Kina Balu lies in an E.S.E. direction from the head of the harbour, distant 27 miles, and adds much to the beauty of the neighbouring scenery. The Orang Dusun aborigines reside close to the coast. Bullocks of a good breed are obtainable.— *Jour. Ind. Arch. iv.*.

AMBOORESA. TAM., Tel. Women's coloured cotton cloths. See Cloths.

AMBOYNA, the name of a high island in the Eastern Archipelago, 33 to 36 miles long, and the largest of the Moluccas group, and also its chief town. In this island, on 16th February 1629, the Dutch put eighteen Englishmen to the rack, and afterwards beheaded nine of them. One Portuguese and nine Japanese were put to death at the same time, as accomplices with the English, a deed known in English history as the Massacre of Ambaya. Amboya was captured by the British, 16th February 1796. The Amboynese are of the Malay race, short, squat, and darker in complexion than the Javanese. They are gentle, brave, easily managed, and make good mounted and foot soldiers; a considerable number of them have embraced christianity. They are good-tempered, though impetuous, and generally very sober. Amboya, like the other spice islands, is volcanic; and with Banda, Ternate, Tidore, and smaller islands in their neighbourhood, are fertile in fine spices. But the Dutch nation, to secure a monopoly of this class of products, for years rooted up and destroyed, at a great cost, often by force of arms, every nutmeg or clove tree not required for the production of that quantity of spices which they calculated they could dispose of. Rosingain, near Banda, was almost abandoned after the extinction of its spice trees, its people emigrating to the neighbouring islands in search of a livelihood. The volcanic soil of Amboya is rich in the finer woods; and a Dutch botanist presented to a Duke of Tuscany a cabinet inlaid with 400 specimens, all obtained in the island.

On the 17th February 1674, according to Valen- tyne, Amboya suffered from a heavy earthquake, and Mount Ateti or Wawanu on Hitu, west of the village of Zyt, poured out a great quantity of hot mud, which flowed down to the sea. The west side of the island is called Hitu, and the east side Lai-Timur.

In 1815, during the eruption of Tombororo, on Umbawa, an earthquake was felt at several parts of Amboya.

On the 1st November 1835, earthquake shocks of great violence began, and continued for three weeks, during which the whole population left their houses. The island, previously healthy, then began to be subject to a gastrick fever, which continued till 1845.

On the 20th July 1845, another heavy earth- quake occurred, when the gastrick fever gained fresh strength, and, after other shocks on the 18th and 20th March 1850, the disease again reappeared.

Amboya and Banda are supposed to have been discovered by Antonio d'Abreu, a Portuguese captain, who left Malaca in 1511, but Ludovica Bartheima (Vartoma) of Bologna claimed to have been there in 1506.— *Wall. ii. pp. 79-90; Hogen- drop, Coup d'ceil sur Java; St. John's Indian Archipelago; Crawford's Malay Grammar and Dictionary,* i. p. 131; *Horsburgh; M. Farlone, Japan,* p. 44; *Bikmore,* pp. 129, 169. See India.

AMBOYNA WOOD, or Lingoa, or Kayu-boka, a fragrant and very beautiful wood of various colours, used in cabinet work in Great Britain, supposed to be from the Pterospernum Indicum. It is beautifully mottled and curled, of various tints from light red to dark yellow, and is always in lumps, evidently excrescences or burrs cut from trees. The several varieties of this wood are principally used for inlaying, and by the makers of ornamental snuff-boxes. It is brought from Caram and Amboya, and at the Great Exhibition of 1851 it was sent from Singapore. — *Archer; Faulkner; Lond. Ed. Journals' Reports.* AMBUJ. HIND. Lotus; Nelumbium speci- sum.

AMBUL-BEL. Beng. Pythium bulbiferum. AMBUNG. MALAY. Basket, a measure.

AMBUPRASA-DANA. SINGH. Strychnos potatorum, clearing nut, for purifying water.

AMBUR, in lat. 12° 50' 25" N., and long. 78° 44' 30" E, a town in the Kaorman, on the right bank of the Palor river, elevated above the sea 1053 feet. A battle was fought here, 23rd April 1749, the British supporting Anwar-u-Din on one side, the French supporting Muzaffar Jung on the other, in which Anwar-u-Din was slain. It was the first pitched battle in India in which Europeans were engaged.— *Schl.; imp. Gaz.*

AMBUSI. HIND.

Green mangoes sliced lengthways, salted, and sun-dried, and used in curries.— *Faulkner.*

AMBUYACH LASSAN. In Hindo belief, four days in Ashar (June-July) when the earth is unclean, and agriculture is prohibited.— *W.*

AMDHUKA. HIND. Vitis Indica, Linn.

AMDOAN, a Tibetan nomadic race who dwell in tents of linen, hexagonal, and without frames— *Latham.*

AMERI. MALEAL. Indigofera tinctoria, Linn.

AMERICA has been supposed to have been peopled from Phoenicia, Asia, Africa, and Iceland, and to have been the haunt of Northmen centuries before Columbus. There are physiological resem- blances amongst some of the tribes, but differences.
in language, physiognomy, and modes of existence. Mr. Logan, in the Journal of the Indian Archi-
pelago, mentions that the prevailing types of phys-
ique amongst the Chinese have relation to the
Mongolian and Tibetan and American forms, and
adds that the American heads in plates 30 to 37
of Pritchard's Natural History of Man, are Chinese.
Abbe Domenech supposes their origin to have
been from Sceytians, Hebrews, Tartars, Scandi-
avians, and Welsh. M. de Guignes, in his Re-
cherches sur les Navigations des Chinois du Cote de
l'Amerique, states that, under the name Fu-Sang,
America is accurately described in a Chinese
work of the 5th century as a land in the far east.
According to M. Paravey, the Fu-Sang of the
Chinese is Mexico, which, he says, was known to
the Chinese as early as the 5th century of the
Christian era; and carved figures, representing
Buddha of Java seated on a Siva's head, were
found in Uxmal in Yucatan. According to
Sandoval, a succession of emigrations went from
Ceylon, and from the south of India, to America
many centuries before Columbus. Marco Polo
and John Banking state that Manco Kopae, the
Inka of Peru, was the son of the great Kablan
Khan, and Montezuma the grandson of Askuan,
a noble Moghul of Tangut. Humboldt was of
opinion that the Tatars derive their origin from
the Huna. The American practices of raising
umuli or mounds over the dead, of scalping, and
of circumcision, were common throughout Sceytia
or Tartary. Herodotus mentioned the scalping
of the Amurs as common in his time.—Kennedy's
Ethnological Essays, pp. 23–25; Priest's American
Antiquities, Albany, 1838; Abbe Domenech;

AME-SA. BURM. Anona squamosa.

AMETHI DUNGAR, a town and district in
Oudh, held by the Bandhgaloti, who claim to be
Kshatriya, but are said to be descendants of a
female bamboo-splitter, and that they periodically
worship the banka, or splitting-knife.

AMETHYIA, a tribe of Chohan Rajputs in
Gorakhpur, originally from Amethi in Oudh.—W.

AMETHYST.

Martas,.... Arab. Amethystus, Lat.
Ametiste,.... Fr. Amethyste,.... HIn.
Ametista,.... IT. Suganti kalli,.... Tam.

Under this term two different minerals are
now known, viz. occidental or common amethyst,
a quartzose mineral found in amygdaled trap
rocks in all countries, but in quantities amongst
the volcanic rocks of the Dikhan. Beautiful
amethyst crystals occur in dykes of quartz near
Bowenpilly, at Secunderabad. Its colour is of
every shade of purple violet; some of these are
valued, for it is almost the only stone that can
be worn with mournings. When the colour of
a specimen has to be equalized, it is placed in
a mixture of sand and iron filings, and exposed
to a moderate heat. The oriental amethyst is
also of a purple colour, but is an extremely rare
precious stone, and belongs to the corundums.
Its colour can be destroyed by heat, and its purity
then resembles that of the diamond.

AMGOOLEE. Hind. Eleagnus conferta.

AMHARA, a Semitic race in Africa. See
 Abyssinia; Africa.

AMHERST, a small town and pilot station in
southern Maine on the left bank of the mouth of
Moulmein river, in lat. 16° 4' 40" N., and long.
97° 35' 36" E. It gives its name to a revenue
district of British Burma, lying between long.
97° 50' and 98° 25' E., and lat. 14° 59' and 17°
51' N. In the roads, the greatest rise and fall
occurs in two days after full and change, is 21 to
23 feet. The velocity of tide at springs is 65
knots per hour. It was proposed to be formed
into a sanatorium for the European soldiers
in Burma, but the ailments there are of a kind
needing a cool or a dry climate. A dangerous
reef of rocks runs across the mouth of the Moulm-

in river, from Amherst lighthouse, which the
British Government has tried to remove. The
district has many Buddhist pagodas. Up till
British annexation, it was a theatre of con-

tinuous wars between the Siamese and the Pegaur.
Its population in 1872 was 239,940, Talain,
Karen, Tong-thu, Arakanese, Shan, Burmese,
Chinese, Malay, Hindus, and Mahomedans. Its
towns are Amherst and Moulmein; its rivers,
Salwin, Gyaing (Gwyn), and Ataran, and it has
valuable teak forests.

AMHERST, Lord, left England on the 8th
February 1816 as ambassador to China. He

disembarked in the Gulf of Pe Chi Li, and
marched to the capital; but as he refused to
follow the Chinese ka-tou or ko-tou mode of
reverence, his visit was refused. Lord Macartney,
and the Russian ambassador, Count Galowkin,
acted similarly; but the Dutch ambassador,
in 1795, had performed the ko-tou. In 1817, he
re-embarked on the 'Aleceste,' which was wrecked
on the 18th February in the Straits of Gaspar.
On the 1st August 1823, Earl Amherst became
Governor-General of India, and held that office
until he re-embarked on the 10th March 1828.
During his administration, the British waged a
successful war with Burma, the army being led by
Sir Archibald Campbell in 1824–25; Bhruptur
fell, in 1826, to the assaults of the army under
Lord Combermere, and the fortress of Deeg was
stormed and taken.

AMHERSTIA NOBILIS, Wall., the finest
indigenous flowering tree in Chin-India, has very
large pea-blossom-shaped flowers of brilliant red
and yellow, which hang down in clusters more
than a yard long. It was discovered by Dr. Welch
on the Salwen near Trockla, and named by him
after Lady Amherst. There is scarcely a
Burmese monastery near which one or more of
these trees is not found planted. The tree is not
known to grow wild. Even the finest trees, which
attain a height of 30 or 40 feet, and in growth of
perhaps four feet, produce seed very sparingly
indeed. It flowers in March.—Mason; Voigt.

AMIDAM. Tel. Ricinus communis.

AMIL. Panj. Cucuaba reflexa.

AMIN, a revenue officer of government; a con-

fidential agent. Under the Oudh Government,
the Amin was a judicial officer presiding over a
court of first instance, called Murafa-i-Awala,
for the hearing of cases in all departments that
might be made over to him from the royal office.
They usually held their courts at Lucknow.

AMIN RAZZA, uncle of Nur Jahan, was
the author of the Haft Aklim, a.H. 1592 (A.D. 1594).

AMIR, Arab., Hind., Bactrian, Amale; also a
title of nobility equivalent in some Asian
countries to king, like the Amir of Kabal. Also
an official designation, as Amir-ul-Bahr, admiral,
or in some places harbour-master; Amir-us-Sooq, chief of the marketa, equivalent to the Indian Kotwal. Amirzadah, literally a born chief or prince. This word reappears abbreviated as ‘Mirza,’ which is always suffixed to the individual name in designating a prince of the blood, as Abbas Mirza, who was the king of Persia’s son, but is a prefix when honorific, like the English Mr., as Mirza Abdul Baki Khan. Amir-ul-Muminin, literally prince of the faithful, is a title adopted by the khalif Omar, and retained by his successors. Amir-ul-Umara, a Mahomedan honorary title or title of the commander-in-chief of an army. Pt. Umra.

AMIRANTE ISLANDS, the S.W. group of the Seychelles, consisting of several detached small islands, coral reefs, and banks. —Horsburgh.

AMIR AZAN DELEM, in the tenth century, constructed the Band-Amir over the Araxes, and from whence the river Kun Firoz, after its junction with the Murghab, derived its name. See Bendameer.

AMIRKOT, a town on the border of the desert of the Gharra. Babar was born here whilst his father Humayun was flying from India.

AMIRTA KAVIRAYAR was the court poet of Reghunath Setu Pati, who reigned at Ramnad between a.d. 1649 and 1685. He composed an erotic poem, the Oruturani-Khovai, in honour of his patron.

AMIRTA KARAR, a Jain who was famed as a Sanskrit and Tamil scholar. He wrote a grammar in Tamil verse.

AMIR YAHIA, a native of Kasvin, hence his patronymic Kasvini; died there a.d. 1552. He wrote the Lubb-ut-Taurik. See Abdul Latif Kasvini.

AM-KALANG. TAM. Physalis somnifera, var. P. flexuosa, Nees.

AMKUDU, Wrightia tinctoria, R. Br.

AML. Arab. An act, a reign, a rule, carrying into effect; hence Amil and Amildar, a revenue officer. Pl. Amla. Amli, in Bengal, the revenue year, the same as Fashi; also assessment or land rent paid in kind.

AML, also Amlaki, SANSK., pronounced Aonla. Emblica officinalis, emblic myrobalan.

AMLAL, of Sutlej. Zizyphus vulgaris.

AMLAK. Posnir. A tree of Afghanistan, producing a small edible berry.

AMLANCH. Panj. Ribes grossularia.

AMLALA VETASAMU. SANSK. Calamus fasciculatus, Roxb. The compound signifies ‘sour-cane.’

AMLLEA PAT. BENG. Corchorus, sp.

AML or Imli. HIND. Amlika, Tintili. SANSK. Tamarindus, Tamarindus indica.

AML-KAR. HIND. —In the shawl manufacture, needle- or hand-worked, as opposed to Kanikar or loom-woven; of shawls.

AMLOK. Panj. Diospyros lotus.

AMMA, in almost all languages, mother; in Tamil and Telugu, it is added to the names of Hindu women, as Sitamma, Vangamma. It is also a title of non-Aryan goddesses, as Mari-amma, Yagath-amma, supposed by some to be the Virgin Mary and St. Agatha. Ammal is a name of Parvati, and more especially of her image in the pagodas. Ai, Em, Amma, Ma, Mamma, Amman, are the natural terms amongst many races for mother, as in the ‘Em of the Hebrews, the Ma of the Egyptians. The most high god, Elion, or Helyun, the creator of man, seems to have been worshipped under various names, all meaning Lord; and a wife was given to him, also known under various names—Baltia, i.e. mistress, queen; Hastoreth, i.e. in the Greek form, Astarte, who as Balts was worshipped at Byblus with her husband Adonis. But the secret worship of the mother of God, also called Amma, was especially celebrated in the shrine of Aphaka at Byblus, near the river of Adonis. The Amman of the southern Tamil Hindus may therefore be a cosmographic term indicative of the great Creator’s power, the most high God’s will. In the Tamil part of the Peninsula of India, the Amman is an idol worshipped by the non-Aryan races in every village, is identified with Amma, and in some places with Ammanam Amma. It is one of the many village deities of which neither the Vedas nor Puranas make any mention. Every hamlet has its own, always supposed to be a goddess, and it is usually a stone turned black by oil offerings and time. This word is understood by the villagers to mean mother. The Tamil villagers style their deity by many affixed names: —Ankal- Amman, Mang-Kali-Amma, Poni Amma or golden mother, Kani-Amma, Mutial-Amma or pearl mother, Paleri Amma or great goddess, and other local affixed names, the meanings of which are not apparent. The Mahatta villagers have the same female village deity, whom they name Ai, or mother. The villagers offer sacrifices of sheep, goats, fowls, cacao-nuts, dial, palm wine, and fruits; and frankincense, camphor, and ghi are burned. The villagers believe that the village goddesses protects them from sickness and from losses, or mitigate these. A pujali or pujari, a worshipping priest, of the sudra caste, is appointed for the daily worship. He anoints it with ashes on its head, or rather on the top of the stone, for it is no image, but a mere shapeless stone. In a small pot he cooks the rice, which he collects from the hamlet people in rotation, presents it to the idol, and then takes it to his own house. He breaks a cocoa-nut in front of the idol, and offers it also, but the one-half he keeps to himself, and gives the other to the family from whom he obtained the fruit. The village offerings are in fulfilment of vows, or offerings, are made of fowls and sheep, praying the goddess will grant their desires; and once a year the villagers collect money by subscriptions, and celebrate a festival in honour of their deity, during which many fowls are largely sacrificed. The sudra Hindus, and the entire non-Aryan tribes in the south of India, have the fullest faith in their respective village goddesses. When they or their children are overtaken by sickness, they seek the idol, and consult the pujari, who sings songs, affects to hear the Amman’s voice, and then announces to the worshipper the offering that must be presented. If cholera break out, it is not unusual for some neighbouring village deity suddenly to rise into great importance, and the sacrificial rite is then almost unceasingly performed. The Hindus have even personified that pestilence into a goddess, whom they have named Maha-Kali, and believe
that if they neglect her worship she destroys them by the disease. Indeed, gods are still in process of establishment, and smallpox and cholera have thus been personified, Maha-Kali of Ujjain being the goddess of cholera, and Mari-Amman of the Tamils a smallpox deity. In South India, the village deity is invariably female. The Amman is brought out from time to time, and carried around the village or town. The protecting goddess of Madras town is one of these Amman, and her temple is in the middle of Black Town. Once a year it is carried around the city bounds, and into the fortress, halting for a week or two at certain recognised resting-places. See Ammavar; Hindu; Sacrifice.

AMMA KODAGA, a high class of the Coorg or Kodaga race, who do not intermarry nor associate with the other Coorgs.

AMMINI AMMA, the Tamil term for the image of the Virgin Mary. See Hindu; Amman.

AMMANNIA VESICATORIA. Roxb. 
Ben marachi. 
Beng. Kalar vanachi, 
Malegal. 
Dad marat. 
Hind. Agni vendrapakul, Tel.

An annual found in India in wet land under the rains, 6 to 36 inches high. It has a strong smell like muriatic acid; leaves exceedingly acrid, employed by the natives as blisters in rheumatism.

Dr. O'Shaughnessy tried them in eight cases. The bruised leaves had been removed from all after half an hour; blisters were not produced in less than 12 hours in any, and in three individuals not for 24 hours, and the pain occasioned was agonizing until the blister rose. These leaves cause more pain than cantharides, and are far inferior to the plumbago (lil chitra) in celerity and certainty of action. The Telugu name, indeed, means fire-leaf. Dr. Stewart says that in the Punjab the leaves of A. arunculata, Willde, are similarly employed and similarly named; both plants grow in the hills up to 5000 feet. Other species mentioned by Roxburgh, Wight, and Vogt are A. indica, multiflora, nama, setandra, pentandra, rotundifolia, and vesicatoria.

-OSh.; Voigt; Roxb. i. 427; W. Jc.

AMMUNA VARU. Tel. Literally, honoured mother; a cruel sacrificial rite, practised among the Hindu sudras and low-caste non-Aryan races of the southern part of peninsular India, on occasions of a cholera, epidemic, or other calamity; a bullock was impaled alive to appease the angry goddess Devi.

AMMON, an oasis in Egypt on which stood the temple of Amun-Ra, whose figure was that of a man having the head and horns of a ram (Sharpe's Egypt, i. p. 222). He was displaced afterwards in favour of another idol, in the reign of Tuthmosis III. He is the hidden god of the Thebaid, supposed to be the Zeus of the Greeks, and was styled Ann or Ammon, Amo-ram or Ammonra. He originally corresponded with the Sun-god, and was high in the first order of gods, and was the ruler deity. He was styled the son of Isis, and his son was Khuns. The origin of this worship is supposed to have been Semitic, and amongst northern people was directed to the warm sun, and to the earth in the sunny south.—Bunsen, iv. 232.

AMMONIA, liquid ammonia, volatile alkali.

This is a limpid colourless fluid, exceedingly volatile; has a pungent smell and a caustic taste, and in medicine is a useful stimulant. Its name is derived from the oasis of Ammon in Upper Egypt, where the hydro-chlorate was gathered as the product of animal remains. It is now obtained in Europe from coal in the process of gas-making, and converted into several compounds by other processes.

Carbonate of ammonia was known to the Hindus, who obtained it by mixing one part of sal-ammoniac with two parts of chalk. It is now obtained in Europe by a subsequent process after the manufacture of coal gas.

Hydrochlorate of ammonia, sal-ammoniac.

Sohag; Noabar, Hind. Navasaran, | Tam, Tel.

Salmiak, . . . Ger.

This is met with in great abundance in every bazar of India, obtained from brick kilns. It is, however, also a volcanic product. It is the Nashadar of Avicenna and Serapion. It was obtained in Egypt by sublimation from the soil of the dung of pigeons, cows, canals, and other animals, mixed with chopped straw and made into cakes as firewood. It is now manufactured largely in Europe, from the ammoniacal salts contained in the liquor resulting from the distillation of coal in the gas-wars. During its solution in water, the temperature falls several degrees. It is used by tinner to clean the surface of their metals, and to facilitate the soldering of iron and copper, also prevent the oxidation of the copper; it is also sometimes employed by dyers to brighten the colour of wool dissolved in nitric acid, it forms the aqua regia of commerce, used for dissolving gold, instead of nitro-hydrochloric acid. It is also used in small quantities in steam boilers, to prevent the formation of calcareous deposits; and is likewise used to adulterate tobacco.—Tomlinson; Ainalie; Beng. Pharma.; Bingley; Royle; Niebuhr's Travels, i. p. 90; Peacock's Description of the East, i. p. 259.

AMMONIAC, GUM, Gun ammoniac.

The Dorema ammoniacum of Don (Linn. Trans. xvi. 601) yields this product from its stem and fruits. According to Lindley, the plant grows in Persia on the plains of Yazde Kast and Kumish, in the province of Irak, growing in very dry plains, and gravelly soil exposed to the sun. It was imported into ancient Greece from the desert of Egypt, from near the temple of Jupiter Ammon, hence its name, as well as from the confines of Cyrene. The gum resin is now imported into India via Bombay from the Persian Gulf, and re-exported to different countries. It is obtained by incisions in the plant, and occurs in masses of yellowish-white dissolve in nitric acid, it forms the chronic catarrhs and asthma of old persons. It is also applied externally as a warm and stimulating plaster.—OSh.; Faulkner; De Bode's Tr. p. 63; St. John's Ancient Greece, p. 383.

AMMONITE, Shih-shieh of the Chinese, a genus of fossil mollusces, which seem to have existed extensively in all parts of the world during the period that the chalk formations were being
deposited. They occur in great abundance and of great size, some three feet across, in the supracretaceous strata between Trichinopoly and Pondicherry, and were described by Mr. Brooke Con- 

life, Captain Newbold, and Mr. Kayes. Dr. Gerard 

found them in the Himalayas, at an elevation of 10,000 feet. Amongst those discovered in India are A. Madrasianus, Kandi, Kali, *Emiliana* 

Bhina, Bhawani, planulatus, Denisomianus, Ben- 

danti, Vaju, perampulus, Durga, Cala, revelatus, 

garuda. The Hindu specific names so frequently 

applied were so in consequence of Hindu sects wor- 

shipping several species of ammonites under the 

name of Saligranna. See Saligramma.

AMMONITES, the children of Ben-Ammi, the son of Lot, by his younger daughter. They were 

dispossessed by the Hebrews, and afterwards, for 

18 years, strove to reconquer their lands, greatly 

oppressing all the Israelites who dwelt beyond 

the Jordan river. They were ultimately driven 

back by Jephthah the Gileadite. See Judges x. 

8, 9, xi. 1, 4, 27.

AMMU INGUROO, SINGH. Zingiber officinale. 

AMMA. BENG. Spondias mangifera.

AMNAK, a general term for a large class of high- 

cane Hindus, Brahmans, Kshatriyas, and Kay- 

asts,—cultivators in Oudh and in Sind. Numbers 

of them were until recently liege men or military 

retainers; all had a sword ready at their land- 

lord's call. They employed a working ploughman 

or Halwaha, because to plough with their own 

hands would have been to the Annak indigible 

disgrace. They held their lands at a remission 

(Kur) to meet the pay of the ploughman.

AMOHYERSHA, king of Tonda Mundalam, 

in the south of India, in whose reign, in the 9th 

or 10th centuries, the Jain faith was introduced.

AMOK, also Amuck. MALAY. A furious reck- 

less onset, the muck or the 'run-a-muck' of the 

English. It occurs amongst men of Malay race 

and with Bugis men, and is often followed with- 

out any apparent provocation, or to be relieved 

of the feeling of indebtedness, but the usual cause 

is some personal affront. The person thus 

rushed through fields, kites, or cutting down 

all whom he meets, till he is overpowered and 

slain. The Singapore Free Press relates a case 

which took place at Salatiga, on the island of Java. 

The regent of Salatiga, Raden Tunengong Pra- 

wiro Kusumo, had been celebrating the mar- 

riages of two of his daughters, and everything 

had passed off smoothly, when, on the morning 

of the 23d September, about half-past six o'clock, 

the brother-in-law of the regent, named Raden 

Prawiro Direjo, who was coffee mantri of Tengaran, 

suddenly began to stab every person he met in 

the palace. The regent, being disturbed by the 

up roar, came from his sleeping place to see what 

was the matter, when he was at once stabbed in 

the heart by the amoker, and fell down dead. 

The brother of the regent then ran the amoker through 

the back with a spear, and he was soon despatched. 

Besides the regent, nine of his relations and 

followers were killed, and six were more or less 

severely wounded. The amoker was much given 

to the use of opium, and had at one time lost 

a valuable employment under government on 

account of his indolence and carelessness. Through 

the intercession of the regent he had received 

another appointment, but he was not satisfied 

with this, and appears to have conceived an ill-will 

towards his relation for not supporting his claims 

more strongly. See Bugis.

AMOMUM, a genus of plants of the natural 

order Zingiberaceae. The paradise grains, or Malau- 

gueta pepper, the A. grandis-grandis, is not of 

India, but of the Guinea coast, as is likewise the 

A. grandiflora. Several plants formerly classed 

in this genus have been removed to the genera 

Elettaria, Alpina, Costus and Curcuma. A 

species brought from the Chinese provinces of Nan- 

tau-chau and Kwang-si has thin tapering rhizomes 

called san-tashi (threes and sevens), also kwang- 

san-tashi. It has an extraordinary reputation 

amongst military and fighting men, from which 

its root sells there at about 12s. 6d. an ounce, and 

is on this account often called jin-san-san-tashi, 

also kin-puh-hwan. It is deemed by the Chinese 

to possess powerful medicinal properties, vulnera- 

typtic, astringent, and discintent. A. aculeatum, 

Roeb., of the Malay Archipelago, has crimson 

spots on deep orange flowers. A. corynostaichyum, 

Wall., a plant of the task forests of Martaban, 

with large white flowers. A. dealbatum is the 

Barniilachi of Silhet, according to O'Shaughnessy. 

A. Roxb. says that the seeds are insipid. It 

grows in Chittagong and Silhet. A. maximus, 

according to Pereira, yields the great winged car- 

damoms referred by Lindley to Elettaria. It is a 

plant of the Malay islands. Its seeds are warm 

and pungent, with an aromatic taste, not unlike 

that of cardamoms, but less grateful. A. sericicum, 

Roeb., a plant of the Khassia mountains, with 

large white flowers, lip yellow with pink veins in 

its centre.—Roeb.; Voigt; O'Sh.; Smith.

AMOMUM AMARUM, Smith, Yih-chi-tse of the 

Chinese, a bitter-seeded cardamom growing in 

Cochin-China, and in China in Qwan-lun-kwoh and 

Kau-chau-fu. The Chinese believe that it increases 

knowledge, as it benefits the stomach, with which 

the Chinese connect the disposition and the wits 

of an individual. The seeds are very bitter, aromatic, 

with a flavour like myrrh, and are said to be used 

like a condiment in pastry.—Smith, p. 13, 14.

AMOMUM ANTIQUEFOLIUM. Roeb. A 

native of Madagascar, cultivated in the Mauritius 

and India; the fruit is the greater cardamoms of 

the old writers. Its flowers are pretty large, 

blood-red, yellow, spicy and fragrant; and every 

part of the plant, when bruised or wounded, diffuses 

a strong pleasant aromatic smell.—O'Sh. p. 650; 

Roeb. i. 30; Voigt, 567.

AMOMUM AROMATICUM. Roeb. Morung- 

lachii, Hind. Has middle-sized flowers, with lip 

tinged with red down the middle. It is a native 

of Chittagong and the valleys of the eastern 

frontiers of Bengal; the fruit has similar properties 

to those of the true cardamoms, for which they 

are often sold to the druggists of India.—O'Sh. 

650; Voigt, 568.

AMOMUM CARDAMOMUM. L. Cardamonum. 

Cardamomum minus, Rumph. 

Ben. . BUR. Kapa laga, . MALAY. 

Peh-tau-kau; CHIN. Yelaksi. 

Tam-pun-ka, Yelakuth, 

ELACHI, DUK., HIND. 

Su-tung-po, of the Sung dynasty, a celebrated 

poet, gave his name to this plant. This seems the 

round and clustered cardamom of the shops. It 

grows in China, Java, the Atteren forests, Suma- 

tra, and the Moluccas, and is cultivated in India 

It has middle-sized peleoid flowers, with a yellow
middle line on the lip. Its seeds are agreeably aromatic, and are used by the Malays for the true Malabar cardamoms, from the Elettaria cardamum.—Amissie; Roxb.; O'Sk.; Voigt; Smith.

AMOMUM GLOBOSUM. 

Loovere. 

Tsaw-kau, 

CHIN. | Tsaw-tsu-kau, 

CHIN. 

Native of the provinces of Foh-kien and Canton, also of Cochín-China. It resembles the Alpinia galanga in appearance, and bears a magnificent red flower in the axis of the leaves, which are compared to those of the wild ginger. The large capsules are oval, roundish pointed, and usually pedicellated. The three-lobed mass of seed has a pleasant smell. It is chewed to correct offensive breath, and, like the flowers of the plant, is said to counteract the fumes of wine. The unripe capsules are the small round China cardamom of Guibourt, devoid of much flavour, and used by the Chinese as a salted condiment; and the large globular capsules furnish the large round cardamom of English druggists.—Smith, p. 14.

AMOMUM MEDIUM. 

Loovere. 

Tsaw-kwo, 

CHIN. | Ovoid cardamom, 

CHIN. 

Grows in Cochín-China and in the Kwang-si and Yunnan Provinces. The seeds are in a reddish mass, large, hard, angular, with a warm turpentine flavour, and are used similarly to those of A. globosum.

AMOMUM SUBULATUM. 

Roxb. 

Bengali 

fachi, BENG. —A large-flowered species of the Khassia hills.

AMOMUM VILLOSUM. 

Smith, Yang-chun- 

sha of the Chinese, grows in the western part of China. The seeds are used like cardamoms.—Smith.

AMOMUM XANTHOIDES. 

Wall., Schomburgk. 

Shui-sha-mih, 

CHIN. | Si-sha-jin, 

CHIN. | Shu-sha-jin, 

CHIN. 

A plant of the province of Canton or Kwang-chung of Burma and Siam. Its seeds are said by Hanbury to be substituted in the London market for those of the official Elettaria or cardamom of Malabar.—Smith, p. 16.

AMOOKANAM VAYR. 

Tam. Root of Phy- 

alis somnifera.

AMOORA CUCULLATA. 

Roxb. 

Andersonia cucullata, 

R. | Amoora, BENG. 

A timber tree of the Sunderbans, with small yellow flowers.—Voigt.

AMOORA JAWII. 

Wight. 

Nimmonia Lawii, Wight. | Nimneda Nimnodi, Dal. 

Boorumb, 

MAHR. 

A middling-sized tree of the Bombay and Canara 

ghat forests.—Beddome, FL Syl. p. 133.

AMOORA POLYSTACHIA. 

W. and A., 

the Asgila polystachia, Wall., is a tree of the Khassia 

hills, with pale yellowish fragrant flowers.—Voigt.

This small, or middling-sized, tree is met with sparsely throughout the Western Ghat forests, and is rather common in the Anamally hills of the Madras Presidency up to 3500 feet elevation. It grows in the central province of Ceylon, where it is called Hingoot, in Moulmein, and in the Tongchoo forests. The wood is white- 

coloured, and adapted to every purpose of house-

building. The seeds yield an oil, which is used for various economic purposes.—Roxb.; Voigt; 

M'Clelland, Cat. Cat. Ez., 1862; Useful Plants; 

Thwaites, Zeyl. i. 60; Beddome, FL Syl. part 

xi. 132.

AMOOS. ARAB. Pycnistosajowain; Ajwainseed. 

AMOQUID. 

Bicol. Musta textiles. 

AMORITES, an ancient mountain race who 

joined with the Hittites to oppose the Hebrews, 

but were driven by Joshua from their positions 

near Hebron, and their kingdom and country to 

the south of Jabbock captured.

ENG. | Kanda, Kalla, 

SANSK. 

OL, Jamkund, 

HIND. | Mauchi kadagadala, 

TEL. 

This species of the Araceae is much cultivated in 

the Northern Circars, being highly esteemed for the 

wholesomeness and nourishing quality of the roots. 

The usual time of cultivation is immediately after 

the first rains of June. A very rich loose soil 

suits it best, where the swelling of the root meets 

with little obstruction, and where they draw the 

greatest nourishment, for which reason it requires 

to be very well and repeatedly ploughed. The 

small tuberosities that are found in the larger 

roots, are what they employ for sets, and are 

planted in the manner as potatoes are in England, 

and about the same distance from one another. 

In twelve months they are reckoned fit to be 

taken up for use. The larger roots will then 

weigh, if the soil has been good and the season 

favourable, from four to eight or more pounds 

each; they keep well if they are kept dry, and are 

boiled or roasted. It is very acrid when raw.— 

Roxb.; Wight's Icones; Voigt; Hogg's Veg. King. 

796; Irving's Amur, 207; Hongh.

AMOY, called by the fisherman Haenun, also 

Hia-men-seu, is an island on the S.E. of China, 

about 22 miles in circumference. The town of 

Amoy is situated on the S.W. part of the island, 

opposite the small island of Ku-lung-su, which 

affords protection to the town anchorage or inner 

harbour. On the western side of Amoy island is 

that of Woo-seu-shan, also that of Woo-an. 

Amoy was taken 26th August 1841, and 9th June 

1842, and delivered over to the British after the 

first Chinese war of 1841-42, and forms one of 

the consulates with Shanghai, Hong-Kong, and 

others. Amoy means Summer gate.—Horsburgh.

AMPANA. MALEAL. Borassus flabelliformis. 

AMPHIBIA. See Reptiles.

AMPHICOME ARGUTA. 

Royle. 

Inemodi, 

Royle. | Incarvillea emodi, Royle. 

A. avillea arguta, "

These names are supposed by Dr. Stewart to 

be applied to the same plant, the Chali of the 

Sutlej, where it grows up to 8000 feet. It has 

perhaps the finest flowers of all the Panjab herbs, 

and generally occupies striking habitats, hanging 

with its handsome green leaves and pinkish 

trumpet flowers from the face of perpendicular 

ciffs.—J. L. Stewart.

AMPHIDESMA, a genus of marine bivalve 

shells, which are found in the sand on the sea-

coast of tropical climates. The shells are oval 

or rounded, sometimes rather twisted and slightly 

gaping behind. They have two hinge teeth in
each valve, and often distinct compressed lateral ones. The elastic cartilage is placed in a small triangular cavity just behind the hinge teeth. The cartilage has opaline reflections; and those of some large shells, as the mother-of-pearl shells, are sold by the jewellers under the name of Peacock-stone, or Black Opals. They are much sought after in Europe, especially in Portugal.—Eng. Cyc. p. 185.

AMPHIDONAX KARCA. Lind.

Arundo karka, Retz., Roth. | Trichon karka, Roth.

" Roxburghii Kunth. | Calamagrostis karka, Gm.

Nal, Nul; Darma, Beng. | Kikkasa gaddi, Tel.

Munia fibre, Sind. | Puvvu-gutti gadda, "

This plant is one of the Panicaceae. It grows in Bengal and Sind, and from its split stalks are made the common Durma mats of Bengal, used there as ships' dunnage; the fibres also are made into ropes. A bifaria and A. Bengalensis are also known.—Voigt, 714; Roth.

AMPULLARIA, a genus of molluscs with globose-formed shells, many of which are found in the Indian ocean, seas, rivers, and tanks of India. Their colours are usually tame.

AMRAH SUNN. Beng. Corchorus olitorius.

AMRAN, a hill, so named by Mr. Rich in his Memoir on the Ruins of Babylon, and who designated it by that appellation, from its supporting a small tomb erected to the memory of a son of the khalif Ali, who fell at the battle of Hillah.

AMRANI, a Beluch tribe. The Amran mountains of Beluchistan bound the table-land of Shal and Peshin on the west, as the Hala range does to the east. The highest part, in lat. 30° 30' N., and long. 66° 30' E., is about 9000 feet. The Kojak pass, 1451 feet.

AMR-ul-AAS, who joined Mahomed in the 8th year of the Hijra, conquered Egypt.

AMRITA. Sansk. From a priv., and mrita, death, in Hindu mythology, the beverage of immortality which, by churning the ocean, was produced along with fourteen other precious gifts to man. The Vishnu Purana relates that the gods (Sura), on being discomfited by the Daitya, fled to Vishnu, who advised them to make a temporary peace with the Daitya, and with their aid to churn the ocean, using Mount Mandara as a churning rod, the serpent Vasuki as a thong, and the tortoise Vishnu as a prop. Hindu legends relate that this advice was followed. Chitra-Ratha describes, in song, how—

'Whilom from the troubled main
The sovereign elephant Airavan sprung;
The brahman hill, that peaks the conquest rang;
The patient cow, whom none implores in vain;
The milk-white steed; the bow with daftening clang;
The goddesses of beauty, wealth, and wine;
Flowers, that unfading shine;
Narayan's gem; the moonlight's tender languish;
Blue venom, source of anguish;
The solemn leech, slow moving o'er the strand,
A vaze of long-sought Amrit in his hand.—
To some who lurk the dread Siva drank
The poisons food that staint'd his azure neck;
The rest, thy mansions deck,
High Sverge, stored in many a blazing rank.'

The word Amrit has been carried into the Teutonic; and the Immurt'-hal, or 'vale of immortality,' at Neufchatel, is of good Sanskrit as German. According to another legend, the Amrita was the occasion of the war between the Sura and Asura, in which the gods took a part. This indicates the occurrence of the first solar eclipse on Indian record. Modern European commentators conjecture that it fell on the 25th October, B.C. 945.—Sir W. Jones' Hymn to Indra, vol. xii. p. 273; Tod's Rajastan, i. 71; Warren's Kala Sankita; Coleman's Hindu Mythology; Williams' Nala.

AMRITSAR, a town of the Panjab, in lat. 31° 37' 15" N., and long. 74° 55' E., nearly half-way between the Beas and the Ravi, and 32 miles E. from Lahore. Ram Das, the fourth Sikh Guru, formed a reservoir here in 1581 (the Imperial Gazeteer says 1761), to which he gave the name of Amarita Saras, or fount of immortality, from amrita, the water of life, and saras, a pool. This became the name of the town, which was also called Ram Das Pur, and in the midst of it the piece of water stands the chief temple of the Sikhs. It is the principal place of worship, and the town is the chief commercialemporium of Northern India. The reservoir is a square of 150 paces, containing a great body of pure water, and multitudes bathe in it. On the edge is a small structure, in which Ram Das is said to have passed his life in a sitting posture. In the centre is a small island with a temple of Hari or Vishnu, richly adorned with gold and other ornaments. In it the Sikh guru sits, and 500 or 600 acoli are attached to the temple. The temple is reached by a bridge; and, when visited by Baron Hugel, two large banners were waving before the entrance of the bridge, on one of which were the words, 'Wah! Guru-ji ka fattah,' and on the other the name of Ram Das. In the 18th century (1761), Ahmad Shah blew up the shrine with gunpowder, and desecrated the spot by slaughtering kine in it. On his return to Kabal, the Sikhs repented it, and commenced the struggle which ended in the overthrow of the Mogul rule. The town is strongly built and fortified, but could not stand a siege with guns of a large calibre. The annual value of the imports is 2 millions, and of the exports 1½ millions. Its chief manufacture is, by Kashmir men, of shawls, to the value of £200,000 from the fine Tibet wool, which occupy about 400 looms. Its population is about 138,925 Hindus, Mahomedans, and Sikhs. The area of the division is 5335 square miles, with a population of 2,748,880 souls. The Baba Atal is a lofty column erected over the tomb of a son of Har Govind.—Baron Hugel's Panjeb, i. pp. 125—6; Thomas' Prinsep's Antiquities, p. 130; McGregor's History of the Sikhs, i. p. 19; Imp. Gaz. See Panjak; Sikh Shawl.

AMRU, a son of Saba or Abd-u-Shamas, and a grandson of Joktan. He first imposed a khit-tax on Egypt. See Joktan.

AMRU also Amritra? a tree alluded to in the mythic tales of Krishna and Radha, whose dalliance was in groves where the Amritra trees with blooming tresses is embraced by the gay creeper atimita; again, 'delightful are the flowers of the Amritra trees on the mountain-tops while the murmuring bees pursue their volup tuous toil;' it has not been identified.—Coleman p. 39.

AMRU-BIN-LAIS, one of the Arab governors of Khorasan whilst the capitals were Merv, Nasa
AMUR.

In 1720 a Dutch geographer speaks of the river as having two branches, one flowing into the Caspian, and the other into the Aral. Anthony Jenkinson, and English officers employed in the 18th century in Persia, and Russian explorers of recent date, all agree that the Amu Darya up to very recent times flowed into the Caspian Sea. Like to other great rivers, the Indus, Ganges, Yang-tze-Kiang, and Pei-lo, this river never confined itself to any particular outlet, but during a series of centuries scored one opening and then another in the soft, sandy cliffs that stretch between Persia and Krasnovodsk. Efforts have been made by the Russians to confine the river to a former bed. Both Strabo and Pliny mention that in the early days of the Christian era the merchandise of India used to come down the Oxus to the Caspian, whence it was convoyed up the river Kurr on the one side of the Casusces, and down the river Rion on the other, till the Black Sea and Europe were finally reached.—

Trotter, Central Asia.

AMURPU CHETTU. Biechams communis. L.

AMULETS.

Amulets are worn by almost all eastern nations. They are specially prized by Mahomedans, of whom both young and old wear them. They are usually put on the young to ward off disease and to guard from the evil eye, and consist of figures with numbers on pieces of paper, or Arabic words engraved on potstone, or silver, or gold, and worn from the neck,—often extracts from the Koran. They are also put over the door porch or on the house wall. Amongst the Malays of Java, the amulet is always some very scarce product. The Mustika Kerbo, or Buffalo amulet of the Malays, is quite white, and round like marble, nearly an inch in diameter, and semi-transparent; it is stated to be found at Panggun. The Mustika Waringin, a scarleaneous concretion, found at Ngadi Rejo; it is mould black, and a little smaller than the Mustika Kerbo. Waringin is the name of the Ficus Benjamina tree, which always adorns the open plain in front of the houses of Javanese chiefs. The Burmese formerly used to insert pellets of gold under the skin in order to render them invulnerable. And Marco Polo, in a story about Japan, specifically speaks of these consecrated stones in the arm between the skin and the flesh,' and Conti mentions the amulet, so used in Java Major, as a piece of an iron rod which is found in the middle of certain rare trees.—Journ. Ind. Archipelago, 1883, p. 274; Mission to Ave, 1855, p. 208; Polo, iii. 2; Conti (Hak. Soc.), p. 32; in Yule, Cathay, 1. p. 94.

AMULGUCH. Pan. Cerasus pudum.

AMUL KUCHI. Beng. Cesaapinua dugyna.

AMULLA. SinoX. Berry anamomilla.

AMUR, a river in Manchuria; the Manchus call it Sagalin, also Sagalinoua, or Black Dragon river. The Russians under the treaty of Aigun ceded great tracts of little peopled country on the north banks of this river, and arranged them into the Amur Province, 164,000 square miles, Usuri, Sofyevsk, Nikoloyevsk, 179,000 square miles, and Russian Sakalin, 18,000 square miles. In 1858, Count Mounavieff Amoosky, and again in 1859 Count Ignatieff, obtained further cessions,
and by the second convention Russia secured the lower Ussuri region and the bay on which Vladivostock is now situated, and thus obtained a magnificent naval station in the Pacific. The river rises in lat. 50° N. and long. 110° E., by two sources, and flows from the centre of Northern Asia into the Pacific Ocean not far north of Japan. The length, including its many windings, is computed at 2800 miles. Its basin contains a surface of 900,000 square miles; the mouth is obstructed by a great bar over which there is not more than two fathoms of water at high tide, and by numerous sandbanks, which are yearly increasing in number and extent. Mongolia, Manchuria, Northern China, all the Tartaries, Tibet, and Siberia, with a population of 20 to 30 millions, are approached by this river. Irkutak, the capital of Eastern Siberia, can be approached with only about 300 miles of land travel. The Tungus races of the Lower Amur are the Yakunisek, Nerchina, Manyarg, Manchuc, and Orochi, small nomad or fishing tribes. All the Ussuri and Amur rivers of this northern and due north of Pekin is a Mongol tract which nearly separates the true Tungus part of Manchuria. Other small nomad tribes on the Lower Amur include the Goldi and Gilyak. Further north to Behring Straits are Tanguz, Lamootti, Noryak, and Kamtschatdales, in all about 44,189 souls. They are all shamanists and polygamists, and purchase their wives.—Staunton's Travels; Atkinson's Siberia.

AMYGDALUS. BENG. Ardisia colorata.

AMUR NATH, a place of Hindu pilgrimage in the Kashmir state. It is a cave among the mountains, in lat. 34° 15' N., and long. 75° 45' E., in a rock of gypseum, and is about thirty yards high and twenty deep. It is held to be the dwelling-place of Siva. Qu. Amarnath?

AMURTA GUDUCHI. SANSK. Tinospora cordifolia, Miers.

AMURYA. GUI. Slices of mangoes.

AMUS ARAB. Ajwain seed.

AMUSADA NELLI. SINGH. Emblica officinalis.

AMUTHO. MALAY. Cocculus cordifolius.

AMYGDALUS COMMUNIS. L. Almond tree.

The almond tree is cultivated for its fruit, and for the oil expressed from it. Botanically, there is but one species, though there are many varieties and sub-varieties; the most important of these are the sweet, and the bitter almonds of commerce—the latter the talkh or karwa badam of India. The sweet almond contains 24 per cent. of albumen and 54 per cent. of fixed oil, the latter forming the principal product of the tree. The bitter almond trees are smaller than those of the sweet almond, but in every other respect the structure and appearance of the trees and fruits seem to correspond. The taste, composition, and properties of the fruits are, however, totally different. It has been asserted that the sweet and bitter fruits have been gathered from the same tree, and that culture will change the bitter to the sweet, as it has changed the sour crab to the sweet apple, and the bitter, half poisonous, potato to its present state. The sweet and bitter kinds are imported into the northern parts of India from Ghorbund, and into the southern parts from the Persian Gulf.

The oil is colourless, very slightly yellow, with a very difficultly congealed; taste sweet, smell light, agreeable, and resembling that of the seeds. In all its processes and uses it is nearly identical with olive oil. It is obtained for native use in India, but does not form an article of export. The fruits are imported into England at from £2, 10s. & £2. 10s. 0'd. in the cwt.—O'Sh. pp. 319-322; Hodg. 286; Voigt. 200; Faulkner, St. of Com.; Bingley; Riddell's Gardening, p. 97; Clegern's Punjab Report. So. Almond.

AMYGDALUS CORDIFOLIA. R. A native of China, and, as Roxburgh's time, common in gardens all over Calcutta, where it is known to very polygamous trees. He says that it was cultivated for its small yellow succulent acid fruit, of which tarts were often made. Flowing-time in Bengal, the cool season; the fruit ripens in the hot season.—Roxb. ii. p. 500.

AMYGDALUS PERSICA. Linn. The peach.

Percica vulgaris, Mill.

A native of the Himalayas, abundant in Kashmir, the Hindu Kush, Persia, Taurus, and the Caucasus, also in Barbary, whence it has spread into all the countries of the south of Europe. Several varieties are extensively cultivated in China, also in several parts of India, as in Ahmednagar and Poona in the Dekhan, also in Mysoor at Banagore. Three varieties of this fruit are cultivated with in the Dekhan; large, hard, distinctly bitter, of a delicious flavour; the flat China; and small thin-skinned description, more resembling an apricot in appearance, and much harder than the others. The peach is easily cultivated by seeds or layers. A seedling will throw out blossom in the second year, and be ten or twelve feet in height; it requires to be carefully pruned wintered, and watered. No branches should be allowed to grow on the stem closer than three feet from the ground; all spurious and misplaced shoots should be rubbed off before gaining strength to exhaust unnecessarily the juices of the tree; and all distored leaves, the work of insects, of parasitic plants, mildew, etc., should be picked off and destroyed. The kernels of the peach should be carefully removed from the shell, and in no way injured, if required for planting; they should be sown in small beds at the commencement of a rainy season, about eighteen inches apart, and, as soon as the trees are fit for removal, a good-sized ball of earth must be taken up with the roots, to prevent the root fibres from receiving injury. The time for opening the roots of the peach tree is after the close of the rains; remove the earth with care, so as not to injure the roots, for the space of three feet round the stem; pull off all the leaves, and cease to water the tree until the blossom buds appear; then cover up the roots with good loam mix.
with old rotten manure; water freely every third or fourth day, until the fruit begins to ripen, after which be guided by circumstances. It is necessary sometimes to thin the fruit, and also to put the peaches in bags, as they begin to ripen, otherwise the birds destroy them. In the Dekhui peaches first come in about February, and with care may be continued until the rains commence, after which the excess of moisture received by the leaves and roots causes the fruit to swell and burst. The flowers are purgative, but also narcotic. The leaves and kernels, on distillation, yield abundance of prussic acid. The fermented fruit gives an excellent brandy, chiefly manufactured in the United States of America. The bark gives a large quantity of gum during the hot season. In Persia there is a kind of peach tree intermediate between the almond and the peach. In Europe also there are varieties of peach almonds.

The nectarine, the downy peach variety, is much cultivated in parts of India and in Afghanistan. The natives of the Panjab believe the fruit useful in worms, Ascaris lumbricoides.—Smith, p. 8.

Clough's Panjab Report, p. 65; J. L. Stewart, Panjab Plants; Riddell on Gardening.

AN, in Mewar, the oath of allegiance. Three hings in Mewar were royalties: a subject cannot meddle with the An, or oath of allegiance; the Dan or transit dues on commerce; and the Kan, or mines of the precious metals.—Rajasthan, i. p. 172.

This little fish, of the family Anabatidae, is very common in the marine lagoons and near the mouths of the rivers of southern and south-eastern Asia. It is about five inches in length, mottled orange and yellow. They may be seen hanging up to the mangrove trees in Ceylon, by spines arranged along the margin of the gills, three and our feet above the level of the receding tide, from which elevated position they drop into the water when disturbed by a boat or a steamer passing.

oligolepis, Bleeker, occurs in Ceylon.—Tennent's Ceylon, p. 364.

ANAB-us-SALEB. ARAB. Solanum nigrom.

ANACARDIACEAE, A natural order of plants, rees, or shrubs, which abound in a resinosous, acrid, green poisonous juice. Its genera in S.E. Asia are the anacardium, Buchanania, Cambesieda, conio-tena, glutta, holigaria, mangifera, odina, melonec-tesa, pegia, pistacia, phlebochiton, rhus, rumpah, cemecarps, solenocarpace, stagmaria, symdesmis, thyssanus, and triceros.

Sansk.

This is a small tree, sixteen feet high, very ornamental when in leaf. It was introduced into the East Indies from the West Indies, where, at the first, cultivation was begun in Ceylon, all over India, Burma, Pegu, and the Tenasserim Provinces eastwards to the Moluccas. In Pegu it is much cultivated about. Hgroene houses, and in groves near towns. The wood is dark brown, and is not generally esteemed for carpentry, but, in Java, Captain Dance says it is used in boat-building, and it forms a charcoal, which the iron-smiths there consider the best for their trade. It bears sweet-smelling flowers, succeeded by a peach-shaped fruit of a yellow or of a red colour, very acid, and with an astringent juice. The cashew nut hangs at the end of the fruit outside, and is about an inch long, of a kidney shape, edible and wholesome when roasted. It is found in every bazaar in India. The nuts are used for imparting a flavour to Madeira wine. Also, ground up as mixed with cocoa, they make a good chocolate, are said to yield a spirit by distillation, superior to rum or arrack, and are described as possessing powerful diuretic properties. They are also said to yield, by expression, an edible oil, equal to olive or almond oil. The cashew nut has two shells, between which there is a thick inflammable oil, called cardole or cashew apple oil. It is a powerful vesicating agent, and, owing to its caustic properties, is sometimes applied to ringworms, warts, corns, cancerous ulcers, etc., and to floors or wooden rafters of houses to prevent the attacks of white ants. It is a very dangerous drug, and ought never to be used. Exposure to the vapour of the oil, when under preparation, will produce violent swelling and inflammation. An astringent gum is exuded from the trunk of the tree to the extent of 5 to 12 lbs. weight annually, which should be collected when the sap is rising. It makes a fair substitute for gum arabic, forms a good varnish, and is particularly useful where the depredations of insects require to be guarded against.

The milky juice which flows from incisions in the trunk of the tree imparts an indelible stain to linen.—Dr. Ainslie, Roxb., Voigt. | McClelland, Riddell, Mason; Mr. Jaffrey, Useful Plants; Hogg's Vegetable Kingdom; M. E. Jur. Report; Captain Dance.

ANACHANDRA. Tel. Acaica ferruginea.

ANA-CH'HATRA. HIND. A charitable institution from which food is distributed.

ANA-CHUNIDA. MALE., TAM. Solanum ferrox.

ANACOLOSA DENSIFLORA. Bedd. A very lofty tree in the moist forests of the Anamalais, at 2000 feet elevation; it flowers in November and December, when the boughs are a perfect mass of very fragrant flowers.—Beddome, Fl. Syl. p. 138.

ANA-DEVI, a Hindu goddess, the nourishing deity to whom the Rajputs offer the first portion of repast.

ANAGALLIS. Linn. A genus of plants of the natural order Primulaceae. A. arvensis, var. a carulescens, with light blue flowers, is a native of Kamaon, Nepal, and Khassya, and is cultivated as a flowering plant in India. It is the Gah surkh gul of the Persians, and Anasul kala banghra of Kashmir, is said to be poisonous to dogs, producing inflammation of the stomach. It is used by native doctors in epilepsy, mania, and hydrophobia, also occasionally in dropsy. Wight figures, also, A. latifolia.—Riddell; Voigt; Poellert, i. p. 368; W. Jc.
ANAGAMI PALI, in Buddhism, the third of the four paths leading to nirvana.—Hardy, p. 433.

ANAI. MAIAY. Termites; white ants.

ANAI PULIA MARAM. TAM. Adansonia digitata.

ANAITIS, an Assyrian deity introduced into Egypt. See Ken.

ANAJ. HIND. PERS. CORN; grain.

ANAK. ARAB. Lead.

ANAKALA BHIRTA. SANSK. One of the 15 kinds of slaves in Hindu law; a man who has become a slave voluntarily, for food during famine.

ANAKAN. MALEAL. A low person.

ANAKI BIRI KULIT. MAIAY. Lamb-skins.

ANAKONDA of Ceylon, is the Python reticulatus, Gray. It is occasionally of great size, but perhaps rarely exceeding 20 feet, though Mr. Scurr mentions that when full grown it is said to measure from 17 to 25 feet long, with a circumference of 21 feet.—Scurr's Python.

ANAKURU. TAM. A tree of Western India, about 30 feet long and 18 inches in diameter; the natives make small canoes of it, and use it in house-building.—Edge, M. and Con.

ANA-KUTA-YATIRA, a Hindu festival on the 9th of November, in which they make a pile of boiled rice to represent Gowardhan. In Rajputana, this festival was held annually in honour of Krishna, at which the seven statues were wont to be assembled from the different capitals, and food in great quantities (Ana food, Kuta mountains) prepared for the multitude who collected. On one occasion, about A.D. 1740, most of the Rajput princes were present.—Rana Ursi of Mewar, Rajas Beeji Singh of Marwar, Guj Singh of Bikaran, and Bahadur Singh of Kishangarh. Rana Ursi presented to the god a tona or massive golden anklet, Beeji Singh gave a diamond necklace of value Rs. 25,000; and an aged woman from Surat placed at the foot of the god a Heri, a bill of exchange for Rs. 70,000. Wilson; Tod, Rajasthan, i. p. 547.

ANAL. BENG. A reed; Amphidanon bifaria.

Coques de Levant, Fr. Kakkari, HIND.

Bacca orientalis, LAT. Hina.

Tan bisali, MAIAY.

This one of the Menispermacae is a strong climbing shrub, with the bark coryck, ash-coloured, and deeply cracked into fissures; leaves roundish, hard, and leathery. It grows throughout S.E. Asia, in Ceylon, in Malabar, the Konkans, the Cirar mountains, Orissa, Assam, Burma, the Moluccas, and Timor. The seeds are about the size of a cherry; the kernel is oily. They are devoid of smell, of extremely bitter taste, and poisonous in moderate doses to animals, and to vegetables. Twelve grains of the seeds given to a dog killed it in five minutes; a solution prepared from an extract made with the seeds killed a bean plant in twenty-four hours. Cocculus indicus was largely employed in Australia in destroying the parasitical animals which attack the skins of sheep. It is also used for stupefying fish; mixed with crumbs of bread and thrown into ponds, the fish which eat the crumbs become intoxicated, float on the surface, and are easily taken. Fish thus caught are exceedingly dangerous. The only use of the Cocculus indicus in medicine is as an external application, as a powder or ointment, to destroy vermin in the hair, and in the treatment of some cutaneous diseases. It imports into England largely and rapidly increased.—Dr's. Ainslie, Materia Indica; Roxb. Voigt, O'Sh., Mason; Hook. et T. 185; Poole, Statistics of Commerce; Simmonds; Hogg, 31; Useful Plants.

ANA MULU. TEL. Lablab vulgaris.

ANAN. BURM. (Bur) is the Fagraea fragrans, or Cyrtophyllum fragrans, Falconar, of Burm and stands pre-eminent in its characteristics as a forest tree of the largest dimensions, for its straightness and freedom from internal decay, and in its indestructibility under all circumstances of useful appliance. A specimen of this wood was brought to Mr. O'Reilly's notice, which for 60 years had formed the supports of a native bridge over a creek in his vicinity; embedded in mud, and exposed to the alternations of wet and dry during each tide, it had undergone no change beyond the decay of the sap parts immediately below the bark; the posts of the bridge consist of young trees cut on the spot and so applied a once. The supplies to be obtained from these forests are unlimited. It would be found admirable for such ship-building purposes as require extra strength and durability, and would afford the finest keel-pieces in the world.

The pine-apple is a West Indian plant, which has been domesticated in hothouses in the colder places of Europe, but in the warm moist localities of the Indian Peninsula, of Bengal, Ceylon, the Tenasserim Provinces, the Straits, Moluccas, Philippines, and China, it grows in great abundance, is even wild, forming hedges; but the flavour of the fruit, which is a general favourite, is greatly improved by cultivation in rich soil. The native women of Bombay believe that eating the pine-apple injures their fertility. The leaves yield a very valuable fibre, from which, in the Straits and in Japan, a much-prized delicate fabric, the pinu silk of commerce is manufactured.

The leaves are gathered, and, in the same way as the aloe, are placed on a board and scraped with a blunt knife. The fibres that are loose are drawn out, the leaves turned over, and from four to six inches of the stem end scraped before, and as soon as the fibres are loosened by the removal of the pulp in that part of the leaf the fibres are taken hold of by the fingers and drawn out. These fibres are again laid on the board, and any remaining portion of the pulp generally scraped out with the aid of water, where they are gathered and dried in the sun. By another mode of treatment, the leaves are laid i
ANANDA.

the sun, so as to dry up a portion of the sap, when, on being taken up and bruised by the hand, the fibres become loosened, and may be taken hold of and drawn out. But a great loss of fibre results, so that this method cannot be recommended.—Annie: Voigt, Hogg, 764; Mad. Ex. Jur. Report.

ANANDA, the nephew or cousin and favourite disciple of Gautama; he was a hero (presbyter) in bhikku (monkhood), and did not attain the purity of the monkhood, or qualification for final emancipation without birth, till the synod held at Rajagriha, in Magadhâ, soon after the death of Buddha. He was Sakyâ Muni's personal attendant. At Ananda's intercession, female devoees (Bhikshunis) were admitted into the ranks of the Buddhist community, and permitted to embrace in ascetic life, and those at Mathurâ paid their devotions chiefly to the stupa of Ananda because of this intercession.—Yule's Embassy, p. 26; Hardy's Eastern Monachism, p. 433. See Buddha.

ANANDA IN Sanskrit means joy, and hence Ananda-nâtha, from ananda, joy, and nâtha, a lord, the lord of joy. Ananda is an appellation of Isâ, also of Bala Rama. Ananda, a cowherd, husband of Yasû, a couple who fostered the infant Krishna.

ANANDA BHIMA DEVA, a Hindu author of epope, who wrote the polêmic work Sankara Digâyana, on the modifications of religion, celebrating the victory of Sankarachâria over his opponents. He is said to have introduced the râkta worship into Puri.

ANANDA TIRTHA. About the early part of the 13th century, Madhâvachârya, called also Ananda Tirtha, established a new subdivision of the vaisnavâ sect.

ANANDRAVE, MALEAL. In N. Malabar, amongst the polyandric races who follow the custom of Marumaka tayam, or descensus ab uto, he is a term for the more distant relatives of Thârâwdâ, or united family. See Aka Podwal; Òyandry; Nair.

ANANI. Sansk. Earth, worshipped amongst the Kol under the designation Isana (Isa, goddess; naini, earth). See Kol.

A-NAN-PHO. BURM. Gordonia floribunda.

ANANTA. Sansk. Infinity, eternity, time, endless. In Hindu mythology, a name of Sêsha, the king of the serpents. Sêsha means duration, and Ananta, endless; in Hindu theogony, Ananta the serpent on which the deity reposes in the intervals of creation. See Kâla; Lakshmi; Sêsha; tahâva.

ANANTA, author of the Vîma Charita, a book of the tales of the descendants of Vikramaditya and Salivâhana.—Downson.

ANANTA-CHATURDASI, a Hindu festival honour of Vishnu, held on the 14th of Bhadraad (about the beginning of September), when figure of Anant Dora is made of silk and gold color.

ANANTA-MUL. BENG. Indian sarsaparilla; emícosmus indicus.

ANANTA-PARATI Aiyangar was born in Òunjore, A.D. 1786. After remaining for a few years as temple accountant, he retired to Tiruvâmarur, and devoted the remainder of his life to the composition of poetry, chiefly in honour of lâva shrines. He died A.D. 1846.

ANANTA YARMA, a prince mentioned in the inscription on the Buddha-gaya vaulted cavern or Nagarjuni cave, of about the 9th or 10th centuries.

ANANTI, Anati, or Anti chettu. Tel. Musa paradisiacae, L.

ANANTI, a name of the town of Òujai.

ANAPA CHIKKUDA KAYA. Tel. Lablab vulgaris, Stiri. Anupa kaya, Lagenaria vulgaris, Ser.

ANA-PRASANAM, amongst the Hindus, is a social and sacred rite, of giving rice for the first time to an infant when six months old, at which, as also at the Choura rite, relatives and friends are entertained. On the first occurrence of the birthday, the child is anointed and decorated with jewels; relatives and friends are entertained; and in the evening the child is carried to a temple, and presented to the deity of their sect. As the second anniversary draws near, or about that time, the boy's head is shaved on a propitious day, which affords another opportunity for feasting friends.

ANAR. HIND. Punica granatum, pomegranate.

ANARADHAKA MUNDA, one of the pârîccal Bhâtiya family; reigned 8 years from B.C. 478. See Bhatiya.

ANARAHAPURA, an ancient city in Ceylon, now in ruins. It is the Anuromannam of Telomy. This seems to be described by Baker as Anaraj or Anarajpoora, with several Buddhist daghâpas, the heights of which vary. They were built at from B.C. 307 to A.D. 376. The ruins are 16 miles square, comprising a surface of 250 square miles. Those of Pollanârâm are much smaller, but they are nevertheless of great extent.—Hardy's Eastern Monachism, p. 433; Baker's Rite, p. 99.

ANARKALLI. See Labore.

ANAS, a genus of birds, teal, ducks, many of which are widely distributed in the world. A. strepura, the Gadwall of northern regions, in Barbary, and tolerably common in India. A. acuta, the Pintail Duck; norther regions, Barbary; very common in India. A. borealis, the Mallard; norther regions, Barbary to Sind, Punjab, and the Himalaya and its vicinity; replaced southward by A. Pappuloryncha. A. querula, the Gargany; Europe, Asia, N. Africa; very common in India. A. crecca, Teal; Europe, Asia, Barbary; common in India. A. Penelope, the Widgeon; Europe, Asia, N. Africa; common in India. Cygnus atratus is the black swan of Australia. A. cygnoides is domesticated in China. A. cenerus, common in India, and A. brachy- rynchus in the Punjab.—D'Arcy. See Birds.

ANAS or Anome. MALAY. Arenga saccharifera.

ANASANDRA or Chandra. Tel. Acacia ferrarigina, D. C.

ANA SHORIGENAM. MALEAL. Girardinia Leeschnautiiiana, Urtica heterophylla, Roxb.

ANASHOVADI. MAL., TAM. Elephantopus scaber, Linn.

ANA-SHUNDA. MALEAL. Solanum ferox.

ANASI. TAM. Ananas sativus, Pine-apple.

ANAS PIHOL. HIND. Anasi-pu, TAM. Ilicium anisatum, Star anise.

ANASUYA, wife of the rishi Atri, and mother of the Hindu sago Durvasas. She dwelt with her husband in a hermitage in the forest south of Chitra Kuta, and befriended Sita.—Downson.

ANATID.E, a family of water birds. See Birds.
ANAU ANANDAT.

ANAU ANANDAT, a name of Lake Manasaro-vana.

ANAVALOBHANA, a domestic ceremony amongst the Maharrattas, to ward off miscarriage.

ANA-VINGA. MALEAL. Casarea canaliculata.

ANAXAGORAS, a Grecian who reputed followers were Damon and Pythis, supposed by Major Cunningham to be the words 'druma,' virtue or practical morality, and buddha, wisdom. See Damon and Pythis.

ANAYAN. TAM. A cowherd or shepherd.

ANAY VAI MYR. TAM. Hair of elephant's tail.

ANCHA or Anche. TAM., TEL., KARN. A letter post, or for travelling. — W.

ANCHAL. HIND. Very broad gold or silver ribbon, or edging.

ANCHAR. MALEAL. Antiarcis toxicaria, Upanantar.

ANCHOR.

Langar, BENG., HIND. Labia, GUL.
Ly-ouk-su, BURM. Ancora, IT.
Anere, FR. Sawuh, Jangkar, MALAY.
Anker, GER. Anela, SP.
Ankura, GR. Langar, TEL.

Of this article of ship's furniture there are many kinds,—sheet, bower, stream, kedge, and grapnel. Those for smaller vessels are manufactured in India of wrought iron, but many are of rude construction, and every coast has its own form, and a particular mode of using it. The Indian fisherman's mooring anchor is generally of stone, from four to five feet in length, four-sided and pyramidal, the apex cut off. At base it is from six to eight inches square, and from four to six at top. At the top is a hole, through which a cable or hawser is passed. Near the base are two holes at right angles to each other; through these pieces of wood are thrust corresponding to the prongs or flukes of the anchor. The whole weighs from 80 to 150 lbs., according to the size of the vessel, and answers very well the purposes intended. These anchors are most commonly made of limestone, and are on the whole suitable.

ANCHOVY.

Anchois, FR. Acieughe, Anchonhe, TR. Anchove, Anchove, GER. Anchova, PORT., SP.

The anchovies meet with in commerce of India are wholly imported. The true anchovy is the Engraulis encrasicholus Cuv., a small fish about four inches long, with bluish-brown back and silvery white on the belly. It is very abundant in the Mediterranean, where, though occurring in other seas, they are chiefly caught at night by nets, their heads immediately taken off, and gutted. Another Mediterranean species, E. melletius, is largely substituted for and mixed with the true anchovy, but they are from four to seven inches long; and other fish, Dutch and Sicilian, are also employed to adulterate anchovy paste and sauce. The Madras coast has three species of Engraulis; the Netelli or Teran Goomie, E. alb us, is caught in great nets in immense numbers, and by Europeans is highly esteemed for the breakfast table; and one about six inches long is very delicate eating. The Tamil names of the others are Pota Netelli and Maper Netelli. The Gna-ping-mai-say of the Burmese coast and Tenasserim Provinces was considered by Dr. Mason to be the E. meleta.—Faulkner; Mason; Hassall; Eng. Cyc.; Poole, p. 9; Bingley, lit. 221.

ANDAMANS.

ANCHUSA, a genus of plants belonging to the Boraginaceae. A. italicus is mentioned by Nicander, v. 38, and is called Bugloss, from the supposed resemblance of its leaves to a cow's tongue (ἐ βοβατός). In India, the Greek synonym, bauklosus and foogheus are assigned to Onosma bracteatum Royle. In the Bombay bazaars, the Calacal Klein is similarly termed Gao zaban, or cow's tongue. Anchusa tinctoria (Alkanet) is a native of Europe for which root those of the Onosma echoides and O. tinctoria have been substituted. The Onosma emolli, Wall., of the Himalaya is close allied to this, and is called Maharanga, from the intensity of its colour. The alkanet of Constantinople is produced by the root of the Alcanah vera. It is imported into England in very small quantities as dye.—Poole, St. of. Com.; Voigt; O'Sh. p. 496—Hog., 541.

ANCHUSA TINCTORIA. Smith.

Ts'e-t'a, Th-hueh, CHIN. | Ts'ao-tan, ... GR.

Its root is brought from Hu-peh, Honan, Peking, chih-ii, Kwei-chou, and Shan-si. It is cultivated by the Yan or Tung tribes of Man-tze, who live in Li-foo-hien, in Kwei-chou, and Long-chao, in the Canton province. The red root is employed by the Chinese in smallpox.—Smith, 16.

ANCISTROCLADUS HEYNEANUS. Wall.

Kural, Mahr. | Mall, VALI Modigam., MA.

Grows at the Parr Ghat ravines at Khandala but not common. The Modin, valli, usually quoted for Arhatbry's odoratissima, has a great resemblance to this plant. This is a very pretty shrub A. Vahlii, Arn., the Gona wel, or Gona porta-wel, of the Singalese; grows in the central and southern parts of Ceylon, up to 2000 feet.—Thouret, p. 188; Gr. Cat.

ANCISTROLOBUS CARNEUS. Wall.

Hypericum carneum, Wall., Cat. Zin-ga-la., ... TAVOY. | Zong-ga-la., ... BURM.

This tree attains a maximum height of 30 feet, it rarely exceeds 3 feet in girth, and its maximum is 3 cubits. It is plentiful in the Pegu and Toungoo forests, and is widely scattered all over the Amherst, Tavoy, and Mergui Provinces, but in none abundant. It is also a native of China. It is a dark-brown wood, when seasoned, floats very well. It has a long fibre, tenacity, durability and sufficient lightness, and is very free from knots. It is used by the Burmese for building for ploughs, and for utensils of all kinds, and recommended for handles of chisels, hammers, and tools generally.—Captain Dance; Drs. M'Clelland; Mason; Voigt.

ANCISTROLOBUS MOLLIS, M'Clelland, the Yin-bya of the Burmese, is a tree plentiful in the Pegu and Toungoo forests. The timber grows very tall, but seldom exceeds three feet in girth. Wood dark brown.—M'Clelland.

ANCORUTTAY. TAM. Trichosanthes palmat., ANDAGU KYOUK, BURM., or image stone. Long Island in the Bassein river, is a peculiar very fine, white or greenish, argillaceous san stone, which the Burmese carve into images Buddha.

ANDAL. PANJ. Cuscuta reflexa.

ANDAMAN RED-WOOD, Pterocarpus d bergioides, Roxb.

ANDAMANS, a cluster of four larger islands with several islets, in about long. 92° 15' to 93° E., and extending from lat. 10° 32' to 18° 40
The islands are mentioned by Marco Polo as the Ongaman. They are indentured by numerous bays and inlets, and are covered with forests of lofty trees. These islands were surveyed in 1789 and 1790 by Lieutenant Archibald Blair, and from 1791 to 1796 settlements were formed by the Indian Government, but, proving unhealthy, they were abandoned from 1796 until 1857, when the East India Company again re-occupied them. They are inhabited by a race the least civilised perhaps in the world. Professor Flower has mentioned that the largest skulls he had measured were those of the flat-headed Indians of North America, and the smallest those of the Andamanese and the Vedas of Ceylon. Marco Polo mentioned them as savages who killed and ate all strangers. As present their colour is of the darkest hue, and their aspect uncouth. Their limbs are ill-formed and slender, their bellies prominent; and they have woolly hair, thick lips, and flat noses. They go quite naked, the women wearing only a kind of tassol or fringe round the widdle, which is adorned merely as an ornament, as they do not betray the least traces of bashfulness when seen without it. The men are 5 ft. 2 in. and 5 ft. 3 in. in height. The Andamaner has in appearance a small-sized Negro race, like others in the south of the Peninsulas of India and Malacca, in the Great Nicobar, as the Kadar, he Senang, the Negroes and Negroes of the Philippines and New Guinea. Some have become familiarized to Europeans, and in 1875–76, 79 of them had settled in Viper Island; but formerly they would affect to enter into a friendly conference, and, after receiving articles presented to them, they would set up a shout and discharge their arrows at the doners. They were cunning, crafty, and revengeful; frequently expressed their version to strangers in a loud and threatening voice, exhibiting various signs of defiance, and expressing their contempt by indecent gestures; a skirmishes they displayed much resolution, and would plunge into the water to seize a boat, and discharge their arrows while in the act of swimming. The women bear the greatest part of the drudgery in collecting food, repairing to the reefs at the eves of the tide to dig them, while men are hunting in the woods, or wading in the river to shoot fish with their bows and arrows. They are very dexterous at this, which they allow also at night by the light of a torch. In their excursions through the woods, a wild hog sometimes rewards their toil, and affords them a more ample remant. They broil their meat or fish over a kind of girdle made of bamboo, and Uses salt or other seasoning. A canoe, a moderately-sized one, capable of accommodating about 20 persons, is used for the purpose of obtaining food for about 30. It is scooped out of a tree by the men, who take their turn, working with a sort of adze. The canoe is very fragile, and rarely lasts above year, for they are constantly making its sides longer, by ornamenting and scooping out its interior. It is ballasted by stones, and has a prow projecting about two feet, on which the fisherman sits. They are more especially useful for turtle fishing, and the spearing of sharks. The bamboo pole has a sharp movable spear which the gahips at one end, and to this is attached a long line. When the bamboo is thrown, and the spear comes imbedded in the prey, it slips away from the bamboo, but remains attached to the line. Should the fish be large, some of them dive down under water, attacking the victim with knives and spears, whilst others endeavour to pass a line over the captive. For their small nets they use a fibre as thread, which they neatly work up, employing their fingers as a mesh, gradually enlarging it as required. When turtles are scarce, a large net is used. Just before the tide begins to eb, this is attached to stakes which encircle the whole of a reef where turtle resort for food. As the tide recedes, they are penned in, but they fight most desperately to break through the net. The Andamanese now use spears, and but few, as a rule, escape. Their bows and arrows are used principally for shooting fish in shallow water. The upper two-thirds of the arrow is a hollow reed, the lower a piece of heavier wood, armed with a piece of iron or a nail. They throw stones with considerable accuracy. The Andamaners display much colloquial vivacity, and are fond of singing and dancing, in which amusements the women also participate. Their language is smooth, and their melodies and nature of recreation and chorus, not unpleasing. Their language is very limited as to the number of words; but by a marvellous power to imitate which these people possess, every vocal sound was repeated instantly, and with a wonderful precision. Andaman and Fugian widows wear the skin of their deceased husbands hanging from their neck by a cord.—

ANDHRA.

ANDHRA, a moped or priest of the Parsees.

—W.

ANDEH KOH, about a mile east of the village of Mothur in the Mahadeo hills, running to the Denwa valley, is a ravine, with steep, precipitous sides, believed by the inhabitants to harbour a great snake. Opposite it is the Jambo-Dwip, another great ravine.

ANDERE, SINGH. Accia arabica.

ANDGERI, Can., the 3rd Yezor or Yeru of the Mahrattas. It is supposed to be a species of Sapindus Naphelium. It is found in the Canara and Sunda forests, above the ghat, chiefly at Nilcood and in the southern jungles. The wood is serviceable in house-building.—Dr. Gibson.

ANDH, a hill tribe, formerly predatory, who, with the Gond, Kurku, and Kolamb, inhabit the Mailghat and the southern skirts of its hills. These four tribes resemble each other in physical appearance, but they each speak a different tongue, and they are quite distinct in features from the inhabitants of the villages.

ANDHER, a little village 10½ miles south-west of Bilsa and 5 miles west of Bhojpur. It contains remains of Buddhist topes.

ANDHI. Hind. A tempest; a circular storm.

ANDHRA, the ancient name of the country in which Telugu was spoken, now called Telangana; also the Telugu language itself, and likewise a man of that country. Sanskrit writers call the Telugu language Andhra; and there is a division or race of Brahmans called the Andhra or Dravida. The Andhra dynasty ruled from B.c. 31 to A.D. 429 or 436. Pliny speaks of the Rox Andarum as a powerful Indian prince. They were known as the Andri to classical authors. The Purana
designate them Andhrabritiya, and the inscriptions style them Satakarni and Satavahana. The Penti
gerian Tables speak of Andra Indi. They are
mentioned in the Vishnu, Vayu, Matsya, and
Bhagavata Puranas. Pliny and Hiuen Thsang (A.D. 690) mention them and the Kalinga king-
dom; and at the latter date Andhra was one of
the six great Dravidian divisions. Wilson, Tod,
Jones, and Ferguson have each calculated their
eras, but doubts still surround their history. An
Andhra dynasty ruled at Magadha about B.C. 18.
The first was Sipraka (B.C. 21), a powerful
servant of Suserman, and whom he killed, and
then founded the Andhra Bhritiya dynasty.
Their last powerful sovereign was Gautamiputra
(A.D. 312-333). Professor Wilson arrived at
the conclusion that the race of Andhra kings
should not commence till about 20 years B.C.,
which would agree with Pliny's notice of them.
They established their authority in Magadha only
in the first centuries of the Christian era, and
ended in A.D. 436. Warangal, Chichecule, and
Rajahmundry were the capitals of the territory
which is now known as Telingana, and also the
Northern Circars.

ANDHRADRAVIDA BHASHA. is the term by
which the Tamil and Telugu languages are
designated by the learned nations of the south of
India. Shen Tamil (Sen Damir) is the ancient,
classical Tamil language, and is usually called
High Tamil.

ANDI, a religious mendicant of the saiva sect
of Hindus in the south of India.

ANDI, PANDU. Tel. Banana.

ANDI-PULAVAR was born near Gingee. He
wrote verses on the Asriya metre; a comment-
ary on the Nannul called Uraiary Nannul; and
Asriya Nikaloo, a dictionary of Tamil synonymns.

Andkhoo or Andkhui, in lat. 36° 54' N., and
35° 23' E., in Afghan Turkistan, 100 miles
west of Balkh, has a population of 15,000, of
Turkman, Uzbek, Tajik. In Balkh and near
Andkhui, the harvest is at the beginning of June;
in the oasis countries, in July; in Kurratge and
in the north of Kohkand, not till the beginning of
August. Of the rivers in that central region,
the Oxus is the most important, and the Zaraf-
shian, Shahr-Sabz, and Jaxartes follow. See
Afghanistan.

ANDRACHNE TRIFOLIATA. Rozb., Stylidosce tri., Bennett. | Psychodendron tri., Wall. |
This tree of quick growth, the Urian of Assam,
is found in Java, Ava, Peninsula of India, at
Hurdwar, Chittagong, Nepal, and Assam. Wood
and bark red; employed for masts and spars of
small vessels. — Voigt; Cat. Cal. Exz., 1862.

ANDRADA. Anthony Andradia, a Jesuit, passed
through Kumaon to the Manasarawala lake, and
thence went on to Rudak, on the western confines
of Tibet. His journey was made in 1624, and is
discredited by commentators and geographers
because of his mentioning this lake as the source
of the Ganges and Indus, instead of the Stutej.
There is no doubt, however, that the voyage is
genuine, though we have not details of it.

ANDROGRAPHIS ECHOIDES. Nees.
Justicia echoides, Rozb. Chavalapuri Kada, Tel. | Gorre Chimiridi... Tel. | This plant grows in Ceylon, in the Peninsula
of India and Malacca, and in the Himalaya. It
has two varieties, a, Lumarakiana and b, Lirmanna.
—Voigt; W. fc.

ANDROGRAPHIS PANICULATA. Wall.

Kriat, CAN, DUK, HIND, Kalpa,
Hwanglen, CHIN, Kriat, Nela Vembu, TAM,
Kalupnath, HIND, Nels Vemani, Kari,
Kriat, MALEK, VOMU, Kari | This valuable annual grows in dry ground,
under the shade of trees, and it flowers in the
cold season. The roots have long been a popular
febrifuge and stomachic. It is the basis of the
'Drooge amere,' or a compound of mastic, frank-
incense, resin, myrrh, aloes, and krisi root,
steeped in brandy for a month, and the tincture
strained and bottled. According to Ainslie, it
was originally brought from the Isle of France;
it is cultivated in Tinnevelly and other dis-
tricts, and is now found wild in Bengal, Ceylon,
the Peninsula, and Java. It is the true Chireta,
but it is only one of the plants from which the
Chireta of the bazaars is obtained. — Rozb.; Voigt,
p. 493; O'Sh. p. 482; Beng. Ph. p. 210; Indian
Annals, No. 6.

ANDROMEDA LESCHENAULTII. D. C.
A. kotagherrensis, Hook. | Gualtheria leschen., D. C. | The Indian winter-green grows abundantly on
the Neigherries. The oil procured from it is
identical with the Canadian oil of winter-green.
—Drury's Useful Plants, p. 37.

Fran, Elia, | BEAS, Elian, Eliar.. RAVI,
Arur, Rattankat, CHENAB, | SUTLEJ,
Ayar, Eiyun, | PANJ. Sar-lakte, TAK.
A small tree abundant in many parts of the
outer Panjab Himalaya, often growing along
with Rhododendron arboreum, at from 4000 to
7000 feet. The seeds and young leaves are
poisonous to cattle, goats, etc., in the spring months
only. Rattankat means blood-cutter. Madden
states that the honey got from the flower is
poisonous. The wood is soft and weak, and used for
fuel and charcoal only. A. fastigata, Hook.,
grow

104
ANDROMEDA PILIFOLIA. 
abundantly on Mor Lepeha at 13,000 feet.—J. L. Stewart, M.D.; Hook. i. 343.

ANDROMEDA PILIFOLIA. Smith.
Yang-Chih-Chu, CHIN.; Nau-yang-hwa, CHIN.
In China, its flowers, and those of the Azalea, are mixed with other substances to form benumbing applications, which, in Chinese surgery, take the place of chloroform, ice-bags, and ether spray.—Smith.

ANDROPAGON. Eighteen species have been brought under this genus from the genera anthericum, phalaris, anthosteria, cymbopogon, calamus, melos, and saecularia. A. arundinaceus, punctatus, Bladhii, triscipatus, pertusus, glaber, Roxburghianus, conjugatus, and binatus, are of Bengal; A. Cymbarius is of the Coromandel mountains; A. prostratus and A. scandens, of the Indian Peninsula and Bengal; and A. miliformis, of Lucknow. A. contortus, as also A. aculeatus, are spear grasses. A. Annatus, Forsk., the Palwan and Minyar of the Panjab, is abundant in many parts of the Panjab plains. It is considered excellent fodder for cattle and for horses, when green.—J. L. Stewart's Panjab Plants, 248; Roxburgh; M‘Clelland; Jaffrey; Mason. See Vegetables.

ANDROPAGON GLABER. Roxb. 
Gundshe-goana, BENG. | Tambut, DEC. 
Grows in the higher parts of Bengal.—Roxb.

ANDROPAGON INVOLUTUS. Stend. 
Munjii, BEAS., SUTLEJ, Baggar, JH LUM.
Common in many parts of the Siwalik tract and outer Himalaya, at from 2300 to 4000 feet, up to and beyond the Indus.—Panj. Pl.

Iwarancus, BENG. | Gaechha, Guetchha, SANSK.
Ghat Yari, HIND. | Allupa kommuvela.
Gkar, PANJ. | vantigadda, TEL.
J. This fragrant grass is a native of the low hills along the base of the Himalaya, at Hardwar and the Kheeree pass, and is also found at Asirghur and in Malwa generally. The roots are used by the natives in northern India in intermittent fevers. In habit and taste it comes remarkably near A. schoenanthus. The oil is used as a stimulant, internally and externally, much in the same manner as cajaput oil.—Roxb. i. 275.

ANDROPAGON MARTINI. R. 
Rooasa grass.
A. Nardoideae, Nees. 
| A. Calamus aromaticus, R.
Grass oil of Nenam, ENG. | Chor-pullu, TAM.
Chapel; Ganjia, HIND. | Mandaipullu, TAM.
Kamakha-pullu, TAM. | Kamakshi, TAM.

This plant grows in the Balaghat, in Central India, and northwards to Lucknow and Dehli. It has a strong aromatic and pungent taste, and the milk and butter and flesh of animals which feed on it become impregnated with it. It yields the grass oil of Nenam, known in southern India as the roosa grass oil, which differs but little either in appearance or quality from the lemon grass oil; they are used for the same purposes, and form a good substitute for the more expensive cajaput oil, and are sold in England under the same name, oil of rose-scented geranium. The oil is also called ginger grass oil, and is also erroneously termed oil of spikenard. The plant is supposed by Dr. Royle to be the Calamus aromaticus of the ancients. The true spikenard of the ancients is supposed to have been obtained from the Nardostachys jatamansi, a plant of the Valerian family. Grass oil is never taken internally by natives; but they have a great faith in it as a stimulant to the functions of the several organs, when rubbed on externally. They also use it as a liniment in rheumatism and neuralgic pains, and place great reliance on its virtues, but its cost prevents it being used generally. It has a fragrant aromatic smell, persistent, and very agreeable at first, but after a time the odour becomes unpleasant, and gives many people a feeling of nausea with headache. The natives use it for slight colds, also to excite perspiration, by rubbing in a couple of drops on the chest before the fire or in the heat of the sun. At Saugor, twenty seers of the grass, which grows wild over the station and district, are mixed with two seers of sesamum oil, and then slowly distilled. The oil thus becomes highly impregnated with the peculiar roosa flavour, and this spurious article is sold as such at four rupees a seer. It has an odour distinct from that of lemon grass and citronelle. For the 1862 Exhibition, every endeavour to obtain unadulterated oil failed. The following comment is said to be pressed at Ajmir.—Voigt. p. 777; Roxb. i. 275; Can. Coat. for Ez. of 1862; Gen. Med. Topography, p. 176; M. Ex. J. Rep.

ANDROPAGON MURICATUS. R. Cuseus. 
Anthericum muriacatum, B. | Phalaris ziziana, Linn.
Khor! Khor! | Assam.
Paneyer. | Vatis, SANSK.
Rottl, J. | Bium, Vatt-ven, Viral-ver, TAM.
Bina, Itla, Usir, HIND. | Hla-mitcham-ver, TAM.

Akor-wangi, MALAY. | Kuru-veru, Kassuu, TAM.
Ramicham, | Malay.
Jalasayah, SANSK. | Avuru gaudi veru.
Lamajakamu, | Vadamali-veru, TAM.

Grows in most parts of India and in Burma; its roots, the Khas-khas, are used for making the fragrant fans and tatties in general use. The grass is used for thatch. It seeks a low, rich, moist soil, especially on the banks of water-courses. It covers large tracts of waste land in the province of Cuttack, and plentifully in all the jungles of Oudh. It is locally used for much the same purposes as sarsaparilla, and its roots and oil are used in native medicine for other purposes. Khas-khas attar, an essential oil extracted from the roots, sells in the bazar at two rupees per tola. It is probably merely a perfumed sesamum oil.—Roxb. i. p. 266; Voigt; Mason; Ainail; Manarith. Ezr.

ANDROPAGON NARDUS. Rotti. 
Gand bel? | HIND. | Wassana-pullu, TAM.
Bhustris, | Allupa kommuvela, TAM.
Gucecha, | Vanti-gadda, TAM.
SANSK | Tel.

There seem to be grave doubts as to the right of this plant to be separated from A. iwarancusa, Blume, and the A. nardoides of Riddell seems identical. It makes a very pleasant-tasted tea and valuable diet drink. In infusion it is a stomachic, and it yields an essential oil.—Ainailie, Mat. Ind., p. 258; Voigt.

ANDROPAGON NIGER. Kunth. In 1853, this was introduced into France from China; and, under the term sorgho, its many varieties are now extensively cultivated in the United States. It produces an abundant crop of grain. The husk or rind yields a superb dye of a violet red.—a colour which, combined with acids and alkalies, gives a variety of tints, such as deep red, orange red, brown red, etc. This dye has been recently applied to cotton wool and to silk.
ANDROPOGON SCHENOANTHUS.

This plant is a native of Arabia, but is now cultivated in the West Indies, Ceylon, in the north of India, all over Burma, and in the Moluccas. It grows to a height of three or four feet. The active principle of the leaves seems to reside in the essential oil which they contain, and which is obtained by distillation. This is known in commerce as lemon grass oil, and forms an important article of export from Ceylon, amounting in value to nearly £7,000 annually. It may be cultivated on all the Kandian hills; and so long as it is young, it is the best possible pasture for cattle. It has a strong but extremely pleasant acid taste. It derives its name from having, when crushed, an odour like that of the lemon, so strong, that after a time it becomes quite heavy and sickening, although grateful and refreshing at first. A decoction of the leaves is deemed by the people efficacious in colic. An infusion of the leaves is used in India as tea, and deemed tonic and slightly stimulant, and is given to children as a stomachic. It is also diaphoretic. Mixed with butter-milk, the leaves are used in cases of ringworm; and the white centre of the succulent leaf-culms is used to impart a flavour to curries. The oil is of a light straw colour, but becomes red if kept long. It is much used in perfumery, as the oil of verbena. In Ceylon it grows abundantly on the Ambawelu mountain, which overhangs Gampola on the road to Navegra Elia. Almost annually in the dry season, the plant is burnt down; but the roots are uninjured, and after a few days’ rain young shoots burst forth.—Sirr’s Ceylon ; Roxb. ; Voigt; O’Sh.; Hogg; Ainslie; Dr. Mason, Useful Pl. ; Bird., Bot. Pro.; Sim.

ANDU, a system of dates in use on the Dravidian inscriptions. The term has not received any probable explanation.—Dr. Burnell.

ANDUGA. TEL. Boswellia glabra, R.

ANDUSI. PANJ. Prichodesma indicum.

ANETHUM SOWA.

ANE or Ani. KARN. Ani, TAM. A dam, a dyke, a bridge, a bank. Kall-ane, a stone embankment. Ancakti or Ancakate, an anient, a dam, or dyke; also a channel to direct irrigation.—W.

ANEMARHENA ASPHODELOIDES, Smith, the Chi-mu of the Chinese, is a plant of the provinces of Honan, Shan-si, Shen-si, Ngan-hwui, and Kiang-su. Its rhiוזme is used as a substitute for squills.—Smith.

ANEMONE CERNUA, according to Siebold, is in repute among the Chinese as a tonic bitter, under the name of Huk-too-wo, and many species which Fortune imported from China found their way to the principal gardens in Europe. Drs. Hooker and Thomson name A. albana of Central Asia; A. biliora of Beluchistan, Kashmir and Afghanistan; A. rubicola of the inner Himalayas and Sikkim, and A. vitifolia of the Himalaya generally. At Lahore is a species known to the people as Brami, which has a much divided stalk, and is cultivated, and for gout and rheumatism.—Powell’s Handbook, p. 323; Fortune’s Wanderings, p. 405; O’Sh. p. 160; Riddell; Hogg’s Vegetable Kingdom, p. 14; Hook, f. and Thou.

ANETHUM GRAVEOLENS. Linn. Dill.

This plant grows in the south of Europe, in Egypt, Astracan, and India. Dill water is a commonly used carminative for the relief of flatulence, flatulent colic, and the hicouagh of infants, and may be advantageously combined with a few grains of magnesia or aromatic confection. In Pegu, dill seeds are constantly for sale in the bazaars. The Burmese do not distinguish it from caraway. The Hakims of Northern India believe the use of dill seed promotes the secretion of milk.—Dr. Honig, O’Sh.; Mason, Roxb., Voigt, p. 22; Birdwood.

ANETHUM PANMORI. Roxb.

Fumiculium panmori, D. C.; Sonf, Panmohri., HIND. A native of various parts of India, root white, nearly fusiform, and almost simple. Used in India as an aromatic, in food, and in medicine.—O’Sh. p. 360.

ANETHUM SOWA, Roxb., Bishop’s weed.

This plant is cultivated in the cold season in Bengal, in the Peninsula, Burma, etc. Its seeds are aromatic and carminative, and are used by the natives in their curries, and medicinally to relieve flatulence; the green parts also are used as a vegetable both by Musalmans and Hindus. The seeds are the Shubit of Ariecena, which is usually translated Anethum; by the Arabs it seems to have been considered the Anethum of Dioscorides. By distillation, the fruits yield a pale yellow volatile oil, sp. gr. 851, soluble in alcohol, ether, and in 144 parts of water.—Eng. Cyc.; O’Sh.; Birdwood, Bot. Pro.; Roxb. ii. 96; Voigt.
ANGA. Sansk. A section, a portion. For example, there are six Anga of the Veda, viz. Sikha, rules for reciting the prayers; the accents and tones to be observed; Kalpa, ritual; Vya. Varana, grammar; Nirukta, glossarial comment; Chhandos, metre; Jyotish, astronomy. The four Vedas, the six Anga, with Mimamsa, theology, Nyaya, logic, and Dharma, the institutes of law, and the Puranas, with the Hindus, constitute the fourteen principal branches of knowledge. —Garret; Williams' Story. See Veda; Vidyā.

ANGADA, the son of Bali, a fierce monkey chief, one of Rama's confederates.

ANGAHARAWA, also Angaharuwada. Singh. The planet Mars; Tuesday.

ANGAKARA GADDA. Tel. Momordica dioica.

ANGAM, a rude pagan tribe on the range of hills in Upper Assam, on the eastern frontier of the Mikir and Cachar. They speak one of the Naga dialects. See India; Mozome; Naga.

ANGAN. DUKU. The open enclosure of a Mahomedan or Hindu house in British India; a small courtyard, called compound from the Malay Kampang.

ANGARI. Sind. Smot, a blackness in ripening corn.

ANGARKHA. Hind. A long coat or tunic, fitting tight to the body, and hanging down below the knee. It is worn by Hindus and Mahommedans.

ANGANGA. Hind. Perquisites from the threshing-floor to the brahman, purohit, guru, grazer, and village god. From the time of distributing to the time of weighing, profound silence is maintained, and many ceremonies observed.

ANGDES, Ongdes, or Ondes, adjioins Tibet. The inhabitants call themselves Hungia, and appear to be the Hong-niu of Chinese authors, the Hum (Hoon) of Europe and India. —Todd's Rajasthan, p. 196.

ANGEL is a term which, in the Hebrew and Græco-Latin, relates to a messenger. Angels are noticed in the Jewish, Christian, and Mahomedan religions. Mahomedans say the angels were commanded to prostrate themselves before Adam. Mahomedans believe that every particle of matter in the universe is entrusted to the care of an angel (Malak, ferishtah). They believe also in a hierarchy of angels. The four of highest rank support God's throne, as in the Apocalypse, in the likeness of a man, a bull, an eagle, and a lion, to whom, on the day of judgment, four other orders will be added. After these come Ruh (spirit), Israfil, the messenger, Jabril (Gabriel), and Mikail (Michael). —Lane; Koran.

ANGELICA GLAUCa, the Chura of the Panjab, growing at 8000 to 10,000 feet; on Hatto, etc., near the Sutlej; is found also in the Dhaul Dhar range above the Kangra valley. —Stewart.

ANGELLY WOOD, Artocarpus hirsutus.

ANG-GAYTHEE. Houng, a large chafing dish. Ang-Gaythee Shah, a Mahrum fakir.

ANGHREMNIKA. Sansk. Uvaria lagopodiotes. —D. C.

ANGA CHINENSIS, a tree of China and Siam; produces a varnish.

ANGIRI. Sansk. Divinity. See Brahmadiea.

ANGIRASA, a grota or family of brahmanas derived from the rishi or sage Angirasa, to whom many hymns of the Rig Veda are attributed. He was one of the seven Maha Rishi, also one of the ten Prajapati. A later Angirasa was an inspired lawgiver. —Dorson.

ANGLER FISH, Lophius, 7p.

ANGOLAM. Mal. Alangium decapetalum; A. hexapetalum.

ANGOLA WEEED, Ramalina furfuracea.

ANGOORE-R-GACH. Beng. Vitis vinifera.

ANGRIA is a name applied to the more elevated part of a great bank off the west coast of the Peninsula of India. Surveys have shown that the bank is a great submerged table-land, perfectly flat, its greatest breadth, about 100 miles, being a little west of Bombay.

ANGRIA. About the middle of the 17th century, Kanhoji Angria, who had been a Mahratta soldier, was made governor of Severndrug. He soon assumed independence, obtained possession of nearly all the Mahratta fleet, and conquered territory on the mainland. In 1722, the British and Portuguese made an unsuccessful attack on his strong fort of Colahab; in 1724, an attack on Vizaddrug or Gheria failed, and when he died at the close of 1728, his sway extended over a hundred miles of the coast line. He was succeeded by his illegitimate son, Tullaji Angria. In 1755, the E. I. Company's marine, under Commodore James, in concert with a Mahratta army, captured Severndrug and Bancoute; and in 1756, Admiral Watson destroyed Angria's fleet (11th February), and the following day Gheria surrendered to Colonel Chive. The last descendant died about the middle of the 19th century, and the territory was annexed. —Orme.

ANGUL, in Orissa, is a hilly district, which was conquered in 1847, because its raja attempted to make war against the British. The population of 63,506 souls is chiefly Brahman, Rajput, and Khassa Hindus, with the aboriginal Kandh (5425), a tribe of Tallua (341), and Kharia (2743). The Talcher coal-field embraces a considerable portion of Angul. —Impr. Guz.

ANGULA. Hind. A long measure, a finger's breadth; the standard measure for carpenter's work, 8 barley corns = 1 angula, 12 angula = 1 span.

ANGULI - TORANA. Sansk. Three semi-circular lines drawn across the forehead by saiva Hindus. They are made of sandal-wood powder or the ashes of burned cow-dung; and are usually called tri-pundra. —IV.

ANGULI. Pers. Grapes.

ANGUSHTRI or Anguthi. Hind. A finger-ring.

ANHENTHA. Singh. Datura fastuosa.

ANHILWARA. ANHILWARA, the dynastic name of three races who ruled in Guzerat from a.d. 696, till, in a.d. 1309, Guzerat was annexed to Delhi by Ala-ul-Din Mahomed Shah. The title was taken from the town Anhilpur, which rose to great distinction as a commercial city, and with Cambay its seaport, from the Tyré of India. At its height, Anhilpur was 12 cos (or 15 miles) in circuit, within which were many temples and colleges, 84 chak or squares, 84 bazars or 107
market-places, with a mint for gold and silver coin. Col. Tod thinks it not unlikely that the Chaoa, the name of the tribe of the first dynasty of Anhilwara, is a mere corruption of Sturua, as the ch and s are perpetually interchanging.—Tod's Tr., pp. 147, 152, 156; Rajasthan, i. p. 31. See Balhara; Guzerat; Kattywar.

ANIHONI, in the Hussahangad district, has a hot spring nearly due north of the Mahadeo hills, at the edge of the outer range which divides the Denvwa from the Nerbudda valley. It is said to be good for boils and skin diseases, and is much visited.

ANI. TAM. Elephant.
ANI-ANI. MALAY. White ants.
ANICUT. ANGLO-TAM. Literally dam-built; a dam or weir thrown across a river to dam up the water. The grandest is that across the Godavery river, about 7 miles long; but others dam up the waters of the Kistna, the Palur, the Colerun, the Tumbudra, and the Pennar. See Ane.

ANI-GUNDA/MANI. TAM. Adenanthera papyracea. Its seeds are the munti or bead seeds.

ANIP/KAHILAY. TAM. Agave Americana.

ANIL-KA-KHAND, a sacred well in the bed of the Aghor river, under the temple of Hinglaj, in Beluchistan. The people believe it has never been fathomed.

ANIMAL CHARCOAL, prepared from bones, is used as a filtering material for clarifying oils, and in the processes of sugar-refining.

ANIMAL FOOD is not absolutely forbidden to the priests of Buddha, and Burmese followers of this faith eat quantities of fish, reptiles, and crustacea. Even the more strict of them, though they may refuse to take life for food, eagerly use meat when they can get animals killed for them, or find them dead from accident or disease; and the cow, buffalo, tiger, and horse are all partaken of in Burma, tiger flesh selling for five annas a pound. Many Hindus of the Brahman, Rajput, and Vaisya castes, as a rule, will not eat animal food, and no Hindu can eat the cow without ceasing to be a Hindu; but all other Hindus eat goats, fowls, mutton, fish, and the aboriginal races eat nearly all quadrupeds.—Harley, E. Monach.

ANIMAL KINGDOM, a scientific term, comprising all living animals. Many commercial products are obtained,—horns, skins, furs, bristles, wool, hair, bones, teeth and tusks, fins, shells, air-blisters, quills, feathers, oils, etc. The animal oils are in frequent use as medicinal substances amongst the people of India for external application, such as that from the pea-fowl's fat, from the newt's foot, the crocodile and the iguana.

ANIMALLY, literally Elephant hills, a mountain range in the collectorate of Coimbatore, in the southern part of the Peninsula of India, and in the Travancore dominions, extending from lat. 10° 18' 45" to 10° 31' 30" N., long. 76° 32' 30" to 77° 28' E., with peak up to the height. These are small scattered colonies of the Kader, the Malai Arasar, Pulyar, and the Maravar races. The Kader are open, independent, straightforward men, simple, and obeying their Mopens or chiefs implicitly. They are of small stature, strong built, active, with woolly hair, and something of the African features, and file their teeth to points. The women wear enor.-R. circles of pith in the lobes of their ears, which hang down to their shoulders. A black monkey is their greatest dainty. The Malai Arasar are taking to agriculture. The Pulyar are demon-worshippers. The mountains are covered by valuable forest trees, and at one time were worked with an annual profit of about 60,000 rupees a year, and there are many beautiful woods suited for turmeric. The wild animals are the elephant, tiger, leopard, bear, hyena, wild dog, bison, sambur, spotted and barking and hog deer; also the wild goat.—L.-Col. Hamilton, in litt.eris ; Imp. Gaz.

ANIMISHA. SANSK. Hindu gods are supposed by the Hindus to be exempt from the momentary elevation and depression of the upper eyelid, to which mortals are subject, and to be able to look with a firm unimpeachable gaze. Hence a deity is termed Animisha and Animisha, one whose eyes do not wink. Various allusions to this attribute occur in poetry. When Indra visits Sita, to encourage her, he assumes at her request the marks of divinity,—he treads the air, and suspends the motion of the eyelids; when the god and Vanara, and Indra and the demon Nag are the marriage of Damayantî, she distinguishes her mortal lover by the twinkling of his eyes, whilst the gods are stambha lochana, fixed-eyed. And when the Aswini Kumara practised the same trick upon the bride of Chyavana, she recognises her husband by this amongst other indications. The notion is the more deserving of attention, as it is one of those coincidences with classical mythology which can scarcely be accidental. Heliocorus says: 'The gods may be known by the eyes looking with a fixed regard, and never closing the eyelids'; and he cites Homer in proof of it. An instance from the Ilkad may be cited perhaps as an additional confirmation; and the marble eyes of Venus, by which Helen knew the goddess, are probably the stambha lochana, the fixed eyes of the Hindus, full, unveiled even for an instant, like the eyes of a marble statue. Other places: the latter bodies: they cast no shadow, they are exempt from perspiration, they remain unsoiled by dust, they float on the earth without touching it, and the garlands they wear stand erect, the flowers remaining unwithered.—Hindu Theatre, i. 137 ; Williams Story of Nala, p. 248.

ANIMUS. The interpretations of the ruh and nafs of the Arabs, of the nefesh and rach of the Hebrews, of the pnuma of the Greeks, and animus of the Romans, applied to the breath, the life, the soul of man, are philosophical points. Mahomedans style Jesus the Messiah, Ruh-Allah, the Spirit of God. This view identifies the everlasting soul with the Holy Spirit and the breath of life. In the English tongue there is no settled mode of speaking of these, for a man is said to die; in a shipwreck, every soul is said to perish, and a person ceasing to live is described both as dying and as departing, the departed equivalent to the West Indian rahib or intigal, causing away and departure.

ANIP/ARI/ M. Malai. Hibiscus rosa sinensis.
ANIP/IPUL. DUKH. Ficus religiosa, Linn.
ANIP POOLIA MARM. TAM. Adansonia digitata.
ANIPULLI. TAM. The tree squirrell.
ANIRUDDHA, the son of the incarnate Indian Cupid.
ANKLES.

ANKLETS. Pimpinella anisum. Anise.

The plant producing these small, aromatic, pungent, fragrant, sweetish seeds, is the Pimpinella anisum, one of the Apiaceae of Lindley, which is cultivated in the Levant, all over Europe and in China. They are an agreeable carminative, and yield on distillation a volatile spirit of aniseed, the Bali and Javanese terms may possibly designate the star anise. — Drs. Voigt, O'Sh., Riddell and Mason; Vegetable Kingdom, 376; Faulkner; Poole.

Star anise is the fruit of the Illicium anisatum of Linnaeus, a shrub or small tree, which grows in the countries extending from China to Japan lat. 23° 35' to 35° N. The name is given from the clustering star-like form assumed by the capsules or pods, five to twelve in number, joined together at one end, and diverging in rays, usually five. These are used all over the cast as a condiment. They are prized for the volatile oil obtained from them, and for their aromatic taste. The bark has a more aromatic flavour than the seeds, but is not so sweet. In China, their most common use is to season sweet dishes. In Japan, they are placed on the tombs of friends, and presented as offerings in the temples. They are chiefly exported direct to India, Great Britain, and the north of Europe. In India, they are much used in seasoning curries and flavouring native dishes, and large quantities are used in Europe in the preparation of liqueurs. In Britain, it is from this fruit that the oil of anise is prepared, and it imparts the peculiar flavour of the Anisette de Bourdeaux. — Morrison; Simmonds; Faulkner; O'Sh. Beng. Phar.; Vegetable Kingdom.

Aseki, Duk. Karruwali, Tel. Pindi bando, Tel. Pindi bando, Tel. Bawa it, Tel. Gula bhattu, Tel. Karpurawali, Tam.

This is used in native medicine. It has small purple flowers, and grows among the Bhir mountains, and as Taung Dong. — Roeb.; Voigt: Ainslie; Useful Plants.

ANISODUS LURIDUS. Link. A tincture of its leaves is recommended as an anodyne and edative.

Aseki, Sib. Madhori, Tam. Moga biraku, Tel. Chinna ranabheeri, Tel. A plant of the West Indies, Mauritius, the Peninsula of India, Malacca, and Java. It has a very fetid odour. In the West Indies, the entire plant is deemed cemenagogue, and natives of India use the leaves internally in dysentery. — Roeb. iii. 1; Voigt; O'Sh.; Veg. King.; Ainslie.

ANISOPHYLLA ZEYLANICA. Benthi. This tree, the Tetracrypia cinnamomoides, Gard. and Champ., and the Illicia-pyanna of the Singhalse, grows in the southern and central parts of Ceylon, up to an elevation of 1500 feet. The wood is used for building purposes. — Mendis; Beddome, Fl. Syl. part xvii. p. 195.

ANIYATA-DILAMMA, a class of priestly misdemeanours of the Buddhists of Ceylon. — Hardy's Eastern Monachism, p. 433.

ANJALI. SANSK. One of the Hindu forms of respectful obeisance; it is the Dandhawat of the south of India. The head is slightly bowed, the palms of the hands are brought together and raised laterally to the middle of the forehead, so that the tips of the thumbs only are in contact with it. — Hind. Theat. ii. p. 108.

ANJAMAN, among the Parsees, a constituted council or assembly. — W.

ANJAN. HIND. A grass of the N. W. Provinces of Bengal, used as fodder. — W.

ANJAN, HIND. or Anjana-kahloo, also Unjunee, Tam. Sulphuret of antimony; also manganeso, used in pottery as a glaze.

ANJANA, an Indian era, which began b.c. 691. ANJENGO, a fishing village in Trivancore territory, on the Malabar coast, in lat. 8° 40' N., and long. 76° 47' 50' E. The name is a corruption of two Tamil words, Anji Tenga, or five cocoa-nut trees. The place was for many years an English factory. The ruins of the Portuguese church and fort still exist. Orme, the historian, was born at Anjengo, and Eliza Draper, the object of Sterne's affection, lived here. — Forbes' Oriental Memoirs, Abd'RLayn's History of the Indies; H. Drury, Cochin; Horsburgh.

ANJIL. ARAB. Malva sylvestris, Linn. ANJILL MARAM. Tam. Artocarpus hisurata. ANJIR. PERS. Figs.

ANJUN. MAHL. Hardwickia binata. Anjuna, also Kurpa, Meneccyn tinctorium and M. raniflorum, Linn.

ANKADOSA. Tel. Leon staphylia, R. ANKAL-AMMA, one of the tutelary village goddesses of the Peninsula of India. See Amma.

ANKAM. MAHEAL. In Malabar, a duel, or single combat, formerly frequent among the Nair race; each combatant had to pay a sum for permission to fight. The duel was sometimes fought by hired champions. — W.

ANKHI. PANJ. Rubus sp.

ANKLETS. Kahl-Khal, Arab., Hind. Karyalu, Tel. Kapi, Tam.

Anklets of gold, silver, brass, copper, deer horn, the metals being solidly massive, also as chains, are in use in all eastern countries. Occasionally a grown man of the Hindus may be
seen with a small gold or silver ring, but in general they are restricted to women and children. The custom has doubtless been through all ages, and they are alluded to in Isa. iii. 16, 18. Some, and particularly those of the Marwari women, are inconveniently massive; and heavy rings, usually of silver set with a fringe of small bells, are often worn by other Hindu ladies. The other loose ornaments, one above another, on the ankles, at every motion of the feet produce a tinkling noise.—*Toy Cart.*

**ANNESTON.**

MALAY. The musical bamboo of Java. See Bamboo.

**ANKOLAMU.** Tel. Alangium decapetalum.

**ANKO-RUTE.** Tam. Trichosanthes palmata, Roxb.; *T. bracteata*, Lam.

**ANKUS.** Pers., Hind. Elephant good.

The goad and guiding rod of an elephant-driver, in shape resembling a small boat-hook. It is figured in the medals of Caracalla of the identical form in use at the present day in India.

**ANKAIL.** Pavo cristatus, Linn.; a British-Indian coin, sixteen to a rupee, and equal to about three-halfpence. It is applied to indicate a rateable share, as 4 or 5 annas in the rupee, similar to the percentage.

**ANNA BUGDI.** Tam. Green copperas.

**ANNA DEOTA.** See Chank.

**ANNAI KARAI MARAM.** Tam. Odina woodier.

**ANNAM.** The Annamitic group of peoples in habit Cochín-China and Tonkin, and are a section of the division of the human race to which the Chinese belong. The Chinese form of Annam is Ngannam; the Tonkinese call the Cochín-Chinese, Kuang and Ke-kuang; the Cochín-Chinese, on the other hand, call the Tonkinese, Kepak. Two centuries before Christ, the Chinese found the Annam race in possession of the basin of Sang Koi. The first migrations from the northern side of the E. Himalaya is now best represented by the Annam, Kambojan,—Mon, and Lao tribes, who appear to have hatched a large straight faces, flat from the Tibeto-Burman tribes to the eastward and southward. The Mon-Annam, or E. Himalaya tribes occupy the territory bounded on the north by the left side of the valley of the Brahmaputra as far as the head of Assam, and a line drawn thence eastwards along the range in which the Irrawadi has its sources, and across the converging meridional chains, beyond, to the most eastern, the Mangi, which separates the Lient from the M-Kong. In physical appearance, the Annam race, in size, form of the head and person, expression, and temperament, have a close resemblance to some Indoneisan tribes. The Javan group has a larger admixture of the Annam type than the Sunnatran or Borneon. Annam heads are common in eastern Java, and especially among the Bawian and Maduran peoples. The Malay and western Javan have frequently a more Siamese form. The Annam race want the large straight faces, flat occupant, lowness of the hairy scalp, comparatively small and firm mouth, hard staring eye, and grave expression of the Siamese. The Annamese are of low stature, the men with long arms and short stout legs. They are very light coloured. The men are hardy and active. The women, still fairer, are well formed and graceful. The higher classes are solemn and decorous, like the Chinese; the lower, lively and talkative. The dress of both sexes consists of loose trousers and loose frock with large sleeves. In their persons, their dress, and their food, they are very unlearned. They are about 14 millions. Their religion is Buddhism, but Shamar superstitions also prevail. A Cochín-Chinese marries when he has the means, and among the poorer classes the age of the female is from 15 to 20. The wife is purchased; polygamy is habitual. Abortion is often had recourse to. Unmarried women are not all chaste; but adultery in the married woman is punished with death. The Annam, Kambojan, Siamese, Mon, Burman, and the other ultra-Indian languages are all characterized by strong complex sounds. The Annam and Siamese abound in complex vowel sounds, and the Burman family in complex consonantal sounds, which are harsh in Singhpo, less so in Rakhoin, and much softened in Burman.— Bouvier's *Siam,* i. p. 683, ii. p. 464; *Crawfurd's Emb.* p. 499; *Lubbock, Origin of Civ.* p. 243; *Latham's Ethnology; Crawfurd's Dictionary,* pp. 321-485; *See Cochín-China;* India.

**ANNA R shocking.** A **PUNA DEVI,** of a brilliant form of the Hindu goddesses, and. She is described as of a deep yellow colour, standing or sitting on the lotus, or water lily. She has two arms, and in one hand holds a spoon, in the other a dish. In her dress she is decorated like the other modern images of Durga. Anna Purna is a household goddess, and is extensively worshipped by the Hindus. Her name implies the goddess who fills with food, and they believe that a sincere worshipper of her will never want it. She is possibly the Anna of Babylon; and she has been considered as the prototype of the Anna Perenna of the Romans, whom Varro places in the same rank with Pallas and Ceres, and who was deified and held in high esteem by the Roman people, in consequence of having supplied them with food when they retired into Mount Aventine. Besides the great similarity of names, there is a singular coincidence in the times of their worship, the Alessians, or Anzians, being a part of the increase of the moon in the month Choitru (partly in March), and those of the Roman goddess on the Ides of March. To make the chain complete, Anna travels east from Babylon to India; west from Babylon to Phoenicia, accompanies her sister Dido to Carthage, flies thence to Italy, and then the Anna Purna of the Hindus becomes the Anna Perenna of the Latians. Such is the Roman legend. In India she is known simply as Anna, also as Anna Purna or Anna Devati. In his hymn addressed to her by the rishi Agastya, she is personified as Pitru or material food.—*Coleman's Mythology,* p. 91; *Wilson's Hindu Theatre.*

**ANNEE, A Tibetan nun.**

**ANNELIDA,** of Ouvier, from annulus, a ring; an example of this class of animals is the ringed form of the common earthworm.

**ANNESLEY, Sir James,** a medical officer of the Madras Army, who rose to be the head of the Medical Board, author of Sketches of the most prevalent Diseases of India, comprising a *Treatise of the Epidemic Cholera of the East,* and Reports of the Diseases in the Madras Army. London, 1825; Researches into the Causes, Nature, and Treatment of the more prevalent Diseases of India, and of Warm Climates generally. London, 1828.
ANONIUM PLICAMUS. See Hippophae.

ANOCA DEPRESSICORNIS, the saiqi utam, or wild cow of the Malayas. It approaches the ox-like antelope of Africa and India, but is smaller and less of a buffalo, and antelophe. It is found only in the mountains, and never occupies places where there are deer.

ANOCH. Hind. Fraxinus xanthooides.

ANOHESSUS ACUMINATUS. Wall. Anacardus acuminatus, Roxb. ii. 435.

Yoong, ... BURM. | Pachi manu, Padi, Tel.

This lofty tree is met with in several parts of India. Its timber is good and durable. That of the Godavery is described as very hard and strong, and very ornamental, and much resembles the wood of A. latifolius. It has a purple heart-wood; it is much used for building purposes, but will not stand exposure to water.—Roxb.; Voigt; Bidetome.

ANOHESSUS LATIFOLIUS. Roxb. Anacardus latifolius, Roxb.

Dhauri, Dhoutha, HIND. | Chiriman, Sheriman, Tel.

Dawu, SINGH. | Yella Maddi, Tel.

Vellaynaga, TAM. | Dhou, Dhn.

Veokalle, ... "" A very valuable timber tree grows to an enormous size. It is common throughout the Madras Presidency, Mysore, Bombay, Bengal, and Ceylon, in the plains, and it ascends the mountains to an elevation of about 3000 feet. It grows at Chillatun, Islamabad, in the Kengeri jungles, the valleys of the Konkan rivers near their sources, the inland Dekhan hills, and in the Dehra Doon. Its wood is light-coloured, with a purple heart; it is close-grained, and very durable when properly seasoned; it is much used in house and ship building, and is one of the best woods for poles and axle-trees of carts, and for agricultural implements. If left in the forests exposed to the weather, the wood rapidly deteriorates, and is soon attacked by insects and white ants. The wood from small trees wants the dark-coloured heart, and is anything but durable. Near the Godavery, the wood is said to be one of the hardest in the forests. The leaves are used by tanners. A gum exudes from the bark, which is sold in the bazaars. A. pendula, Edge., is a tree of Ajmir and Nimar.—Roxb.; Voigt; Bidetome.

ANOINTING, a form of installation and initiation. It is the "mahapal" of the Hindus, hence their Al-Mashe and the Hebrew Messiah. In Rajputana, anointing appears to have been, in all ages, the mode of installation. The unguent used is of sandal wood and attar of roses made into a paste, or very thick ointment, of which a little is placed upon the forehead with the middle finger of the right hand, and then the jewels, the earring and necklace, are tied on. Amongst the earliest notices of this ceremonial is that in Genesis xxviii., when Jacob rose up early in the morning, and took the stone that he had put for his pillow, and set it up for a pillar, and poured oil upon the top of it. The Brahmins anoint their stone images with oil before bathing them, and some anoint them with sweet-scented oil. This practice probably arises out of the customs of the Hindus, and is not necessarily to be referred to their idolatry. Anointing persons, as an act of homage, has been transferred to their flocks. There are resemblances between the Jewish and Hindu methods of, and times for, anointing. Oil is applied to the crown of the head, till it reaches all the limbs; it is called abhyanga, and is noticed in Psalm cxxxiii. 2, Mark xix. 3. At the close of the festival in honour of Durga, the Hindus worship the unmarried daughters of Brah- juniis, and some of the other ceremonies pour sweet-scented oils on their heads. Amongst the Hindus, this ceremonial is attended to after sickness, which Psalm xiv. 7 mentions. And Hindus, when fast- ing, in sickness, or sorrow, abstain from the daily anointing of the body with oil, but again anoint on recovery, as 2 Samuel xii, 20, where 'David arose from the earth, and washed and anointed himself, and changed his apparel, and came into the house of the Lord, and worshipped.' Bathing, anointing the body with oil, and changing the apparel, are, among the Hindus, the first outward signs of coming out of a state of mourning or sickness. The abhyanga sh'hanam, or bathing on the wedding day of a Hindu couple, is part of the marriage ceremony. This practice of anointing all the body with oil is wholly confined to the Hindu community; the Mahomedans, whether of India or Western Asia, do not practise it. It is probable that the Hebrews learned the custom in Egypt or from their Assyrian neighbours, and that the anointing of kings, which European nations have adopted, was handed down through the Old Testament. The Masah of the modern Arabs is the canonical mode of performing the smaller ablutions or purifications.—Toł, ii. 568.

ANOLA. HIND. Fruit of Embica officinalis, the embico myrobolan. It is roundish, blackish, grey, very wrinkled, obscurely six-sided; nut three-celled, each cell with two shining seeds.

ANOMA, a river famous in the history of Buddhism, as the scene of prince Siddharta's assumption of the dress of an ascetic, where he cut off his hair, and dismissed his attendant and his horse. Its distance from Kapila is said to be 60 yojanas.—Cunningham, Ancient Geog. p. 423.

ANOMADASSA, according to the Singhalese buddhists, a Buddha previous to Gautama.—Harrow, Eastern Monachism, p. 433.

ANONACEAE, the custard apple order of plants, natives of the old and new worlds. The order includes about 15 genera and 250 species, more than half of them occur in the Indies, of the genera uvaria, guatteria, copra, miliusa, lobo-paris, Patrinia, senna, arbutus, polyalthia, hyalostemma, saccopetalum. The anaona are trees or shrubs, with a powerful aromatic taste and smell, furnishing esteemed edible fruits, of which the custard apple, sour sop, sweet sop, and bullock heart may be named.—Voigt; H. and T.

ANONA CHERIMOLIA. Mill. A tree of Peru, with a succulent fruit of a dark purple colour, containing a soft sweet muciage. It was introduced into India in 1820. There are two varieties of the cherimolla, one smooth, the other with a tubercle on the middle of each scale.—Dr. Weddell, Bolivica; Riddell; Voigt.

ANONA MURICATA. Linn. The Sour sop tree of the West Indies, but cultivated in India and Tunesia. It has large yellowish green flowers, with a vinous smell, and bears only once a year. The fruit resembles the custard apple, ripens in March, and grows to about the same size as the bullock heart; it is of a greenish colour when ripe, and has a rough, thorny appearance; the flavour is very peculiar, differing from the other species of
the Anonaceae; the scent resembles that of black currants; the seeds are similar to those of the custard apple. The wood is inferior.—Riddell; M. E. Faries Reports; Voigt; Hook. f. et T. p. 114; Vegetable Kingdom, 28.

ANONA RETICULATA. L. Bullock heart.

Lavindo? BENG. HIND. Anona maram. SINGH. Ram-Phal, DEKH. HIND. Rama sica maram. TAM. Nona, HIND. MALAY. Rama cheto. Tel.

This fruit tree derives its specific and English names from the appearance of its dark brownish and red fruit. It is to be met with in all parts of the tropics, and grows to a large size. It is soft, sweetish, and pulpy, and is not much esteemed by Europeans.—Dr. Ainslie, Riddell, Mason, Birdwood, Bombay Products; M. E. J. Rep.; H. f. et Th. 115; Crawford's Diet.

ANONA SQUAMOSA. L. Custard apple.

Dawua Moaa.

This small tree, originally from tropical America, grows freely, even wild, in the south-east of Asia. The fruit is wholesome and pleasant, and, being perfectly free from acid, may be used by such delicate people as dare not venture on others of a different nature. It is delicious to the taste, and, on occasions of famine, has been useful. This and similar subacid fruits, to the Burmese, serve as substitutes for flesh meat, being eaten with rice as an ordinary article of their daily provisions. The tree, when cultivated and pruned during the hot season, produces fruit afterwards of double the usual size. The leaves have a disagreeable odour, and the seeds contain an acid principle fatal to insects, on which account the natives of India use them, powdered and mixed with the flour of Bengal gram (Cicer arctium), for washing the hair. A few leaves and some seeds put into a bed infected with bugs, have been said to dispel these pests immediately, but their use is over-praised.—Boyle, Gibson, Useful Plants; McClelland; Riddell; Crawford; Ainslie; Malcolm's South-Eastern Asia, i. p. 180; Voigt; Hooker and Thomson; Cal. Cat. Ex. 1862; Birdwood, Bombay Products.

ANORATHA SAUMEN established Buddhism at Pagan, in Burma, and built all the temples there.—Yule, p. 9. See Pagan.

ANOSPORUM MONOCOEHALUM, Nees, one of the Cyperaceae, is the Gothobi of Bengal.

ANOUL, MALAY, of Sumatra, the coarse, black, bristly Ejo or gomuti fibre, from the Arenga saccharifera, or gomuti palm.

ANSA, or Ansana. SANSK. Portion of a portion of Krishna, as Paramatma, or supreme spirit. See Chaitanya.

ANSARRI, a tribe of shahikh mahomedians in the N.W. Provinces, who seem to have come to India from Herat in the time of Firoz Shah. They claim to be descendants of the original Ansari, an Arab tribe who became auxiliaries of Mahomed, and adopted his views at Medina.—W.

ANSARI, a numerous and powerful people, occupying a large territory in Karamania and Syria. They are a shiah sect, who worship Ali, son of Abu Talib, and son-in-law of Mahomed. One of their sections, called Ansariyeh, is divided into five tribes, who reverence the moon, the stars, the air, and the sun. In religion, as in blood, those Ansariyeh appear to have much in common with the famous sect of the Assassins, whose chief was known in the crusading chronicles as the Old Man of the Mountain. To this day, like the Jews, the Ansariyeh keep themselves apart from their neighbours, by whom they are despised and detested. Burekhlard calls the Ansari sects Kelbai, Shamsus, and Mokladja.—Robinson's Travels, i. pp. 68, 69; Oliphant; Catta-fayo.

ANSEB, the goose, the hansa of India. A. alibifrons, A. cincera, and A. brachyrhynchos, are known in India and the Punjab. A. Indicus occurs at Siligiri. A. cygnoides of China is domesticated. The wild species is still extant. A. cincera (Anser ferox), 'Greyleg goose,' Europe and Asia, is common in India. A. brachyrhynchos, 'Pink-footed goose,' Europe, N. Asia, Punjab (rare)? The domestic goose of India is a hybrid between A. cygnoides and A. cincera.—Hooker, Journal, i. p. 399; Catalog. Cal. Museum. See Birds.

ANSEQUI, MALEAL. Arctocarpus hirsuta, L. ANSUS. some land in the Eastern Archipelago, inhabited by Papuans. The houses, built upon piles, are placed entirely in the water. At very low water only is the beach partially uncovered. This beach consists of mud, in which the mangroves grow luxuriantly, and completely obstruct a landing. The gardens, from this cause, are situated on the surrounding islands, principally on an island with a high beach, lying opposite to the kampong. The Papuans of Ansus have their hair growing in tufts. Their appearance is good-natured, faces regular, eyes beautifully black, mouth broad, with beautiful regular teeth, and the forehead high but narrow. Many have thin lips and finely curved noses, which give them a more European physiognomy. The men are generally handsome and well formed, stout, without being too thick, strong and muscular; the women very good-looking; and some children with very regular soft faces, and long pendent curving hair. Four. Ind. Arch., June 1852, p. 380-3.

Lamut... MALAY, PERS.

Ants have attracted attention from the earliest ages, on account of the singular economy and extraordinary industry manifested by the different species. Dr. Jerdon, a Madras medical officer, in a series of papers in the thirteenth volume of the Annals of Natural History, described forty-seven species of Southern India. M. Nieter, of Ceylon, forwarded to the Berlin Museum upwards of seventy species taken by him in that island, chiefly in the western province and the vicinity of Colombo. Dr. Jerdon, in the Madras Lit. Soc. Journal, arranges them according to St. Fargeau, who, in the first volume on the Hymenopteres in the Suites à Buffon, divides ants into four tribes, viz. 1st Tribe—Les Myrmecides, females with a sting, first segment of abdomen of two knots. This includes the following genera—Cryptocerus; Atta; Ococoma, differing from
ANTAKA.

Atta in its larger head, and the presence of spines; Ecton, and Myrmica. 2d Tribe—Ponerites, females with sting, first segment of abdomen of one knot only. It includes the genera Odontomachus and Ponera. 3d Tribe—Les Formicites, females without a sting, first segment of the abdomen of one knot only; and it contains the genera Polyrugas and Formica. But many Indian ants cannot be well referred to any of these genera.

The black ant of India is the Formica compressa, and the red ant is F. smaragdina. The genus Polyrugas is plentiful in all eastern forests. It is remarkable for the extraordinary hooks and spines with which the bodies of the species are armed; and they are also, in many cases, beautiﬁcally sculptured or furrowed. One species has processes on its back just like ﬁsh-hooks; others are armed with long straight spines. They generally form papery nests on leaves, and, when disturbed, they rush out and strike their bodies against the nest so as to produce a loud rattling noise. They live in small communities. Their curious hooks, spines, points, and bristles adhere to their enemies.

The green ant of the Malay Archipelago, Eobryllna smaragdina, is a rather large, long-legged, active, and intelligent-looking creature. It lives in large nests formed by gluing together the edges of leaves, especially of the zigzag leaved plants. When the nest is touched, a number of these ants rush out, apparently in a great rage, and erect, and make a loud rattling noise by bipping against the leaves. Their jaws are blunt and feelable.

Many of the Myrmecidae sting most acutely, they are very abundant, and destroy greatly, devouring every edible thing. See Insects.

ANTAKA. In the Hindu religion, an attribute of Yama or Dharmraja, in the character of the under, the Destroyer. See Yama.

ANTAMOOL, or Anantamoool. Beng. Hemi- smus Indica. The roots largely used as a substitute for saraspalira, price three annas per round.

ANTAPUR. Near this is a knoll fifty feet high, and four hundred in circumference, surrounded by still higher hills. Captain Newbold, as opinion of it, that it is an ancient furnace, it others think that volcanic agency is the cause this curious elevation. One local tradition as it, that a Rakshasa or giant, named Edim, assali, who had objected to the marriage of a sister with a son of king Pandian, and was therefore murdered, was buried here. But another story is, that a great battle was fought here, and that the dead were burned on an enormous funeral pile. The ashes, or whatever they are, efervesce when treated with dilute nitric acid.

ANTAR, author of a famous Bedouin romance. He grand words the aged sheikah pronounced over a dead body of this Arab hero were:—Glory thee, brave warrior! who, during thy life, hast on the defender of thy tribe, and who, even after y death, hast saved thy brethren by the terror thy corpse and of thy name! May thy soul e for ever! May the refreshing dew most the ground of this thy last exploit! The Antar or Antaryeh, in Cairo, are a class who recite chant poetical war tales, and take their name from the Antar romance.

ANTAKA TAMARA. Tel. Any floating, large-leaved water plant, as the Villarsia Indica, Vent.; Menyanthus Ind., L.; Pista stratiotes, L. Antara Valli Tige is the Casyaea filiformis, L.

ANTAHAVEDI, a Hindu shrine on the coast of the Godavery district, one of seven sacred sites on that river, at each of which pilgrims bathe, to complete the saptasagam yatra. During the ﬁve days’ ceremony of the Kalayamam, about 20,000 pilgrims visit it.—Imp. Gaz.

ANTAI-BED or Antarved, the ancient name of the lower part of the doab from Elawa to Allahabad, but sometimes taken as the name of the entire doab between the rivers Ganges and Jumna.

ANTARJALI. SANSK. A Hindu rite of taking a dying person to the river-side, or, at the moment of death, immersing the lower part of the body in water. This cannot but hasten the fatal event. The Pioneer newspaper related two instances of this in April or May 1875, one near Calcutta, the other near Lahore:—On Thursday last, the victim was carried to the river-side, amidst a crowd of people, with the usual accompaniment of tom-toms and other discordant noises, etc. His head dangled over a stretcher much too short for him; and as he raised his hand to shield his face from the glaring light, his son and heir opened an umbrella and held it over him by way of protection. Arrived at the river, he refreshed himself with a draught of milk and a smoke, chatting meanwhile with his sympathizing relatives. Last Saturday still found the man quite equal to his milk and tobacco, and his friends carried him off to another spot on the river, and immersed him until he was drowned.

ANT-EATER, Manis pentalactyla, Pangolin. Badjar-kita, ... Beng. Tarang-giling, ... MALAY. Sealy Ant-eater, ... ENG. Pang-giling, ... Tanggilin, ... MALAY. Aiarler, ... Tel.

The Pangolin of India, belonging to the Edentata, gets that English name from its Malay designation. The genus is common to Africa and south-eastern Asia, and in India is not rare, though, from their habit of appearing abroad after sunset, they are not often seen. Manis Javanica of Desmarest inhabits the Malayan peninsula, Penang, Borneo, Java; M. crassicaudata of Tickell (the M. pentalactyla of Linnaeus is the M. macoura of Desmarest) and found in several parts of India, and in the lower part of the Himalaya. This species has been known ever since the expedition of Alexander the Great, and is mentioned by Albian under the name Zartwary.—Tickell; Elliot; Ogilvie; Cantor; Jerdon.

ANTELOPE is the name usually given by the British in India to the Antelope cervicapra of Pallas, A. bezoarteria, Blyth. An antelope only 15 inches long was obtained in Sinnamur by Mr. Carl Bock, about 1880. See Antilopine.

ANTELOPE HORN, Ling-yang-koh of the Chinese. In pregnant and puerperal cases, the horn in powder is given, partially calcined.

ANTEN, a district in the island of Banka, containing the richest of the tin mines.

ANTENNARIA. Don. The jhoola of the N. W. Provinces; its tomentum is used.

ANTHELIA. This phenomenon is common in the Khasiya hills and in Ceylon. Sir J. E. Tennent mentions that at early morning, when the light
is intense and the shadows proportionally dark, when the sun is near the horizon and the shadow of a person is thrown on the dewy grass, each particle furnishes a double reflection from its concave and convex surfaces, and the spectator sees the shadow of his own head surrounded by a halo as vivid as if radiated from diamonds.—Sir J. E. Tennant, *Hooker, Hist. Journ.*

**ANTHISTIRIA CILIATA.** Linn. *f.*

A. Australis, *B. Br.* | Kangaroo Grass.

A grass of south Asia, Australia, and all Africa; its growth should be encouraged by every means. It grows abundantly in the Konkans, where it is largely converted into hay for horses; *A. polystachia, A. heteroclita, Roxb.,* and *A. scandens, Roxb.,* are also made into hay.—*Von Mueller; Mason; Voigt.*

**ANTHOCAPHALUS CADAMBA.** Bth. and *Hooker.* A timber tree of Darjiling Terai, one of the Rubiaceae.

**ANTHOGONIUM GRACILE.** Wall. One of the Orchiseae growing in Nepal and the Khassya mountains, with large blood-coloured flowers.

**ANTHOOZA,** a natural order of polype found within the tropics. The Corallium rubrum, *Lam.,* the red coral of commerce, is obtained from this order, and the coral is the axis of the polypodium.

**ANTHIBID.** See Insects.

**ANTHUS OBSCURUS,** A. petrosus, *Rock Pipit,* of Europe, Siberia, Japan, is replaced in the Himalayan region by *A. cavernus,* which is likewise found in Europe. *A. Pratensis,* *Meadow Pipit,* is of Europe, North Asia, Japan, Asia Minor, West India (Gough), Nepal (Hodgson, Gray), and Pegu.

**ANTIHIPLUM.** Also Syly. A necklace made of coloured threads, worn by fakirs.

**ANTIALCIDAS,** one of the Greek successors to a part of Alexander's kingdom. Antialcidas succeeded Lysias in the Paramus, about n.e. 150, also in Nysa. See Greeks of Asia.

**ANTIARIS.** There are six or seven species recognised of this genus of trees, viz. *A. toxica,* *Lesch.,* the genuine ups tree of Java, the *A. inoxia, Blume,* and the *A. macrophylla, R. Br.* A fourth species (ramis foliisque utrinque velutinis) is cultivated in the Kew Gardens; the *A. saccidora, Dalz.,* of the western coast of peninsula India, is a fifth; the sixth is the *A. Zeylanica,* *Thevalis,* of Ceylon, which, like *A. saccidora,* yields sacks, but this author now refers it to *A. inoxia, Blume,* and a seventh is *A. Bennetti, Seemian,* the *Mau-nui* or *Ma-vmu-ni, Taga of the Tonga Islands; all are trees of great height.—*No. 58. Vol. 0, Ann. Mag. Nat. Hist.; Hook's Vegetable* p. 68; *O'Sh. p. 282; Thevalis Pl.; Zeyl. p. 268.*

**ANTHARIAS INNOXIA.** Blume. Sack tree. *Lepuranda saccidora, Nimmo.*

A stately forest tree, not uncommon in the drier parts of Ceylon, indigenous on the west side of India, in the ravines at Kandalla, and in the jungles near Coorg, and very common, and the most gigantic of all the trees in the Wynne jungles. The wood is good, although not much used; but Kurumbur bags or the Liber or inner bark by a very simple process is made into cloth. A branch is cut, corresponding to the length and diameter of the sack wanted. It is soaked a little and then beaten with clubs until the inner bark separates from the wood. This done, the sack formed of the bark, is turned inside out, and pulled down until the wood is sawn off, with the exception

**ANTHEREA MYLITTA.** Drury. This is a Tusseh silk moth of Ceylon, which feeds on the Terminalia catappa and Palma Christi. A. Papilia, *Linn.,* called Baghey in Northern India, is found in Assam, Bengal, Birbhum, and Behar, and feeds on the Zizyphus jujuba or Ber, and on the Assam. It has not been domesticated. Other species are, *A. Assam,* *Hesper, A. Fritibi, Moore,* *A. Helferi,* *Moore,* *A. Royley,* *Moore,* all of the Himalaya; and *A. Perottetti, Gner.,* of Pondicherry.

**ANTHERIUM,** a genus of the Liliaceae. A. anuum, canaliculatum, exuviatum, filifolium, fragrans, graminifolium, glaucum, Liliago, Nepalese, Nimmonii, physoides, ramosum, revolutum, tuberosum, vespertinum, grow or are cultivated in India.

**ANTHIA.** Some carnivorous insects are found ranging far to the north in the Himalaya, an example of which is *Anthia g-guttata,* a well-known native of the tropics. The specimens, however, are mere dwarfs compared with those of peninsular India, a fact which may be regarded as a proof that *Anthia* has here reached its extreme limits, and consequently will soon disappear, as is the case, and be represented by another type, fulfilling the same functions, only under a difference of form. See Insects.

**ANTHISTIRIA ANOTHERA.** Hooker, *Nees.*

This is one of a genus of grasses of the order Paniceae. It is abundant in parts of the Salt Range, Trans-Indus, and in the outer hills, from 2500 feet to 8600 feet. Madder mentions that in

Kamoan its roots are frequently luminous, whence it is there called jyotishmati.—Dr. J. L. Stewart.
ANTIALPINE.

A quick-growing, middle-sized branchy tree, common in Ceylon up to 3000 feet above the sea, also on the Coromandel and Malabar sides of the Peninsula of India, and found in Assam and in Nepal. It attains rather a large size in Assam, with a girth of two to three feet, a height of fourteen inches, but the wood, by immersion in water, becomes heavy and black as iron. The bark is used for making ropes. Its leaves are acid and diaphoretic, are used as decoction in snake-bites, and, when young, are boiled with pot herbs, like sorrel, and employed in syphilitic cachexia.—Rodh. iii. 758; Wight: Useful Pl.; Veg. King, p. 683; Thw. Zeyl. p. 299.

ANTIDESMA DIANDRUM. Roxb.

Stilago diandra, Wild. | Tella-gomoodoo, Tel.

This tree grows on the Northern Circars, in Ceylon, and Travancore; for various uses.

ANTIDESMA PANICULATA. Roxb.

Kholoo jami, ... BENG. | By-it-zin, ... BURM. | Kyet-tha-hen, ... BUM. | Boo-ambilla gas, ... SINGH.

This is a low, ramous tree, common in Ceylon up to 2000 feet above the sea; common in Bengal jungles, and found in the Rangoon, Pegu, Tungoo, and Tharawaddy forests. It has a light ash-coloured bark. On the same plant are notched, round, and pointed leaves. It flowers in April and in July, and bears a red, sour fruit, resembling the barberry. It furnishes a small crooked timber of a close grain, with the wood of a red colour, and adapted to cabinetmaking.—Drs. Mason, 'M'Clelland, Roxb. iii. p. 770.

ANTIDESMA PUBESCENS. Roxb.

Jeriam kotam, MALAE. | Jana palascha, Tel.

This small tree is a native of the Northern Circars; its bark is used for making ropes. The berries are eaten by the natives.—Roxb. iii. 770.

ANTIGONUS. Seleucus Nicotor, B.C. 305, gained a great victory over Niconor, a lieutenant of Antigonus. Seleucus, B.C. 303, crossed the Indus to wage war on Chandragupta, but, after a series of defeats, Antigonus, whom he defeated and slaying, was himself defeated and slain, B.C. 301. The name of Antigonus appears in the edicts of Asoka on the rock temples.

ANTILOPINE, the antelope, a sub-family of the Bovidae, is classed by Jerdon with the Bush antelopes or Tragelaphus of Blyth, and Desert antelopes, as under:—

Bushi Antelopes.

Portax pictus, Jerdon, The Nil-Gai.

Antilope tragocamellus, Plut. | Tragelaphus hippelaphus, Damalis rusa, H. Smith, Spitaly.

Maravi, ... CAN. | Ru-i, ... MAHI.

Guraya, Guriya, GOND. | Manu-pota, Tel.

Roz, Roh, ... HIND.

This is supposed to be the Hippelaphus of Aristotle. It is found from the foot of the Himalaya to the extreme south of Mysore. It does not occur in Ceylon, Assam, nor in the countries east of Bengal. It frequents the forests and low jungles, associating in small herds of seven to twenty. When caught young it is easily domesticated.—Jerdon.

Tetraoceros quadricornis, Jerd., 4-horned antelope.

Antilope chiekeha, Hardw. | Tragelaphus cristianus, Lecch.

A. sub-quadricornis, El. | T. iodes, pacecores, Hodggs.

Bhirul, ... BHILS. | Chouka; Chousingha, H. Kurus, ... BUSTAR. | Jangli Bakra.

Kend-guri, ... CAN. | Iheka, Bhiriki, ... MAHL.

Bhirikuru (male), GOND. | Konda-gori, Tel.

Bhir (female), Tel.
Throughout all India, Western Punjab, Sind, the Mulhad, and the lower hills and forests of the Himalayas, but not in Ceylon nor in the valley of the Ganges, nor the countries east of Bengal. It lives in jungly hills and open forests. It is strictly monogamous, and is always met with singly or in pairs. It is of a uniform bright bay colour. Mr. Elliot says the spurious young are so small as rarely to be met with in adult individuals. They arise from bony swellings immediately in front of the true horns. They are about two feet high, and the colour is various shades of brown. — *Opilg; Elliot; Jerdon.*

The common antelope frequents the plains on the cotton soil of India. When they move off to avoid some object of which they have doubts, they often bound to surprising heights. Their swiftness is such that dogs have never, or only rarely, it is believed, captured a healthy one, but they are often run down by wolves, who drive and surround them, and the cheetas kill great numbers of them, usually selecting the bucks. About 1838, great herds of very many hundreds, with many outlying bucks, were to be met with in the Dekhian, but the hunting leopard, the cheeta, and the sportsman have so weeded out the bucks, that only small patches of three to twelve are now (1871) to be seen, and these all does, who, without the males, easily fall a prey. The bucks are of a dark black colour, and the younger bucks are driven off by the buck of the herd as soon as they begin to turn black, but fierce combats ensue before the buck of the herd is selected. The horns are from 19 to 25 inches long, with 4 or 5 flexures, and up to 50 rings or annuli.—*Elliot; Jerdon; Pers. Obs.*

The Indian gazelle is not known in Bengal or Malabar, but occurs in all other parts, and abounds in Hurriana, Rajputana, and Sind, preferring the open bare plains, or rocky plains or sandhills. It abounds in the Indian Peninsula, in the valleys of the sandstone formation, and generally among the jungles of the red soil to the eastward of the southern Mahatta country, in small herds of three, five, six, or more, but commonly a buck with two does. Mr. Elliot says the gazelle of Arabia is found in the islands of the Red Sea, particularly in Dhalak and on the western shore about Massowa, and all along the Abyssinian coast. The gazelle of Hauran and Syria are probably the same. The Dabi is the same as the Hebrew word in Deuteronomy xiv. 5, translated the Roe, and is the gazelle of the Arabian poets, who say, *'The eyes of the Dabi are the most beautiful of all. The ordinary height is about 2 feet, and its horns 10 or 11 inches.—*Elliot in Mad. J. Lit. and Sc.*

**Gazella Dorcas, Blyth.**

Anjana, Katuka,

This is obtainable in most eastern bazaars, and is used medicinally by native physicians, and by Mahomedan men for an eyelid application. Bases of iron and manganese and lead are often sold as surma. It is obtained in Coromandel, Saxony, Spain, Mexico, Siberia, Chin-kung-fu. China, the Eastern Islands, Siam, Pegu, Martaba, Amherst, and Beluchistan? but the best is from the Sarawak, in Borneo, and from Vizianagaram. The value of antimony is said to be found in the Salt Range near the Kali salt mine. Var quantities of antimony have been found by Major Hay in the Himalayan range of Spiti. A sulphide of antimony is found at Jagogglesh Kuhl in the Kangra district, and specimens were sent from Bajaun, and it has been found near Belaya by Major Boyd; it occurs massive in Beluchistan. Mr. O'Reily found it at the sources of the Atrax and large quantities of the ore have been dug up in the neighbourhood of Moulin. The first metal was found for the first time in Borneo in 1823, on the north-western coast of that island. It exists in several places there, but mines of it have been worked only in Sarawak. This ore is generally a lead-grey colour, possessing considerable spiciferous, and is met with, compact, and in rhomboids of considerable size, and variously modified. Pellet of antimony is a substance sometimes used with sulphate of copper for bronzing gun barrels, the iron decomposing the chloride, and depositing a thin film of antimony on its surface. The chief alloys of antimony are type metal, consisting of 3 lead and 1 of antimony; stereotype metal, lead and 1 antimony; music-plates consisting lead, tin, and antimony; Britannia metal, co
ANTIMUN.

ANTIS, WHITE.

W. D. Hitchcock.
destroy their cells and dig up their queen, a large shapeless white mass in the centre of the mound. A composition of lime, tar, and soap, in equal parts, boiled together and smeared over places where white ants appear, is a very effectual bar to their further progress. To protect the beehives, the ends are now usually laid on the wall, and the sides left unenclosed, so that the approach of these insects can be detected; and this opening also prevents dry-rot. The earth-oils of Burma are thought to be effectual preventative for their encoaches. In British Burma and Port Blair, where the majority of buildings are wooden structures, the whole of the timber is coated with earth-oil, which is laid on warm before the timber is put into the building, yearly coatings being also laid on prior to the rains. Sets of sugar-cane and other substances can be protected by steeping them for half an hour in a mixture of asaföxidla, 8 chittacks; mustard seed, 8 seers; putrid fish, 4 seers; bruised butch root or monkshood, 2 seers; with sufficient water to mix them in; the thick coating of the oil prevents the influence of the butch on vegetable life is known, and cannot be recommended where the product is to be eaten. Small quantity of arsenic, mixed with flour or oatmeal and moistened with molasses, made into a dough and placed near their tumuli, is said to ensure their destruction. The wood-oils from the various species of Dipterocarpis, applied to wood, prevents, it is said, the dry-rot, as also the attacks of white ants; and the addition of catechu to the oil greatly increases its preservative powers. To check their ravages, Captain Man recommends that timber be smeared over with a mixture of 3 of gambier and 12 of dammer oil. Captain Fraser advised that from ½ lb. to 4 lb. of hartal, the yellow sulphuret of arsenic, should be mixed with the concrete. Sulphate of copper or of arsenic mixed with the lime in immediate contact with timber, offers a ready method of preserving it from insects. A mixture of arsenic, alcohol, gum, and dhobia has also been recommended. Pound the arsenic and aloes, scrape the soap, mix with mud, and boil for an hour in a large pot half-full of water; when cold, fill up with cold water. It is applied as a wash. The practice which obtains in Rohilkhand is to char the ends of all rafters slightly, and then coat them over with coal-tar.

ANTUMORA. Beng. Isora coryfolia.

ANU, in Hindu legend, one of the sons of Yagati, one of the old fathers of mankind. Anu was the founder of one of the five great Turanian tribes, the Yadu, Turvasa, Druhyu, and Anu. He refused to exchange ages with his father. Among his descendants were Anga, Banga, Kalinga, etc.

ANU. Sum. Hair of the Arenga saccharifera.

ANUGA KAYA. Tel. Lagenaria vulgaris.

ANUGAMANJAP. In Brahmanism, the per-formance of sati by a woman whose husband has died in a distant country; a sandal, or any article of his clothes, may then represent him. It seems also to have the name of Anu-Marma. See Sahamanan; Sati.

ANULOMAJA. SANSK. In Hinduism, the offspring of two persons of different social position, of whom the father is of the superior class in the regular succession, as of a Brahman, and the woman of the Kshatriya class; when the order is inverted the progeny is termed Pratilomajaa.

ANULULU. Tel. Lablab vulgaris, Sari.

ANUPSHAHR, founded in the reign of Jahangir, is in the Bandalshahr district of the N.W. Provinces, on the west bank of the Ganges. About 100,000 Hindu pilgrims visit it on the full moon of Kartik.—Imp. Gaz.

ANUSASANAM, a quinquennial republication ordered by Asoka, of the great moral maxims inscribed in the Buddhist creed, viz. 1. Honour to father; 2. Charity to kindred and neighbour, and to the priesthood (whether Brahmanical or Buddhist); 3. Humanity to animals; 4. To keep the body in temperance, and (5) the tongue from evil speaking.

ANUVANSA, a Sanskrit list of ancient Indian kings.

ANUTLA. MAHR. Averrhoa bilimbi.

ANWARI, one of the most famous Persian poets. He lived in the 12th century. AFWAR-DUHUALLI, the Persian version of the Pariyāt Sūtra, q. v.

ANWAR-ud-DIN, a nabab of Arcot, with whom the British entered into alliances against the French, who were in alliance with Muzaffar Jung. See Ambur.

ANYANKA BHIMA, a prince celebrated in Orissa, who unfortunately killed a Brahman, and who raised numerous temples in expiation. He also endowed Juggurnath (Yoganna).

ANZARUT. ARAB., PERS. Sarcocolla.

AOD. ARAB. Aloes-wood or Eagle-wood. The eastern nations distinguish several kinds:—

Aod-i-Bahoor, Eagle-wood.
Aod-i-Baleasan, supposed to be the wood of Balsamodendron Kafa, Forsk.
Aod-i-Ghine, Chinese Eagle-wood.
Aod-i-Hindi, Indian.
Aod-i-Kamari, Mountain

Aod is used generally, in India, to designate the frankincense of the Boswellia, the Olbanum of the ancients, it is throughout the east, with Arabic and Persian suffix, it is also employed to name varieties of Eagle-wood, from the Aquilaria agallocha. Lane says Al-Aod is the source of the English lute, the French luth, and Italian lutes. Aod-us-Salib, or wood of the cross, is an ornament worn by Arab. women. It is a little round slender bit of wood, enclosed in a case of gold; supposed by Lane to be of Christian origin.—Lanie.

AODHYA, the modern Oudh.

AODIYA. HIND. A predatory tribe in the Cawnpur and Futehpur districts. They made remote excursions at particular seasons, in different disguises.—Wilson's Dictionary.

AOGRAH. FUSH. Rice boiled dry, and then mixed with buttermilk and eaten like porridge.

AOKHAL. HIND. Land reclaimed from waste and brought under cultivation.

AOLANIA, a Jat tribe residing in the Panipat district, following Hinduism, but they claim the Arabic appellation of Malik, or king, conferred upon them, they affirm, by some ancient prince to denote their sovereignty over other Jat tribes.

AOOS. HIND. Dhw. Aous-dhan, autumn rice a second crop of rice.

AORNOS. Military colonies of Macedonian, were established at Alexandria ad Caesaren Argeaeum and Bazira, and garrisons at Nysa, Ora.
Massaga, Peneclota, and Aornos, a mountain supposed by some to be Mahaban in the Pir Panjal or Mid-Himalayan range. General Court says that opposite Attock is a rock with all the peculiarities described. Quintus Curtius says, on a mountain that is topped by a castle, attributed to Raja Hody. Alexander the Great (leaving a corps of 10,000 infantry and 4000 horse to stand fast), in the spring of 327 B.C., led an army of 120,000 foot and 15,000 horse, composed of Asiatic mercenaries and Greeks, through the Hindu Kush to Kabal. Despatching thence a strong division by the Kabal valley to the Indus to prepare a bridge, he marched by the upper road into the Yuzufzai country, according to his usual policy of leaving no enemy behind him. Driven out of their other fastnesses, the highlanders took refuge in Aornos, which was believed in the Greek camp to have three defied Hercules himself. Winter was at hand, or had actually come on, but, discovering the one difficult path which led to the fort at the top, Alexander and Ptolemy, at the head of two divisions, each following the other, drove out the enemy in four days, by making a mound across a broad and shallow hollow which separated them from the besieged. Leaving all the hill country subdued behind him, the invader crossed the Indus, probably in March 326 B.C.

General Cunningham’s chief objections to the Mahaban hill as the representative of Aornos, are—1. It is a vast mountain of comparatively easy access, and of which no spur presents a very steep face towards the Indus. 2. The Mahaban hill is not less than 80 miles in circuit, whereas Aornos was not more than 200 stadia, or about 22 miles, according to Arrian, or 100 stadia or 11 miles, according to Diodorus. 3. The Mahavana hill was visited by Hwen Thsang in A.D. 630, and he describes it simply as a great mountain, which deriv’d its name from the Mahavana monastery, in which Buddh’a dwelt in a former existence from the name of Sarvada Raja. He says the only other possible positions are—the ruined cities of Takht-i-Bahai; the lofty isolated hill of Kurnar; the hill of Panjpir; the ruined fortress of Ranigat. Ranigat is situated on a lofty hill above the village of Nogran, which is just 12 miles to the S.E. of Bazar, and 16 miles to the N. of Obind. Its position, therefore, is strongly in favour of its identification with Aornos.—Cunningham, Ancient Geog. of India, p. 72.

AOU, a Tartar nomade village or camp. AP. HIND. A respectful term of address to Mahomedans, and Hindus, and Europeans, equivalent to ‘worship,’ you or thou being never used, only such terms as Ap, Janah, Pir-o-Mushrid, Sirkar. APA. TEL. Bauhinia diphylla, Buch. APAMARGAMU or Apamamra. SANSK. Achyranthes aspera, L.

APAMEA, daughter of Artabazus the Persian, married Seleucus, who gave her name to three towns. Koonnah, one of the three Apames, is situated at the point of a triangle formed by the confluence of the rivers Eniphrates and Tigris, and although now divided into a part town, it was formed a place of consequence. Koonnah is situated on a low flat, with apparently a rich soil, and along the river are low banks to prevent the country being flooded. At this spot some oriental traditions have fixed the garden of Eden.—Malcolm’s Persia, p. 141. See Koonnah.

APANDA or Astynges, son of Iasandria, one of the Kuianian dynasty of Persian kings.

APANG. BEN. Achyranthes aspera.

APARAJITA. BEN. Clitoria ternatea. Apa-rajita, in Hindisum, a form of the goddess Bhau-wani. The name is doubtless derived from the flower of the Clitoria. Aphrodite of the Greeks is supposed by Mr. Paterson to be the Aparajita of the Hindus. See Sacti.

APA SAHIB, a raja of Nagpur, who was defeated by the Indian army at the battle of Soeta-Baloochee, on the 26th December 1817. His real name was Mudaji Bhonsela, and he had succeeded by power to strangling Parsaji. Apa Sahib with his two chief ministers were finally ordered by the Governor-General to be sent to Allahabad, but on the night of the 12th-13th May 1818, Apa Sahib escaped, and took refuge in Gondwana, where the people protected him against all offers for him to be delivered up. Whilst in Gondwana, Chgim Shah and other of the Goud chiefs, and many parties, to the extent of 20,000 Pindari, Malrattas, and Arabs, joined him, or acted against the British in small parties in the valleys of the Nerbudda, the Tapti, and the Purna rivers; but a large plan of operations was matured by Lieut. Col. J. W. Adams, who in February 1819 penetrated into the mountains from the Nerbudda, took Chgim Shah prisoner, and Apa Sahib fled to Asirghur, from which he again fled to Ranjit Singh’s protection, and finally to that of the raja of Jodhpur, where he died, almost forgotten, in 1840. See Bhonsla.

APASTAMBA, an ancient writer on Hindu ritual and law, author of Sutras connected with the black Yajar Veda and of a Dharma-Sutra. These were translated by G. Buhler. Two recensions of the Taittiriya Sankha are ascribed to him or his school.—Dawson.

APASTAMBA, a Hindu ascetic mendicant, follower of the doctrines of Patanjali. He is said to have retained a posture so immovable, that the birds built their nests in his hair.—Ward, iv. p. 30.

APATE. See Insects.

APAYAATRITA. SANSK. One who has lost caste, and cannot therefore inherit.

APE. Keph. . . . ETHIOP. Kubbi, Keibi, . . . PERS. Kephos, Kepos. . . . GR. Kaki, . . . SIND. Koph, . . . HEH. Korangi, . . . TAM. Band’r, . . . HIND. Kothi, . . . TEL.

Apes form the sub-family Simiinae of the family Simiidae or Monkeys, of the natural order Primates. Apes are represented in Borneo and Sumatra by Simia morio and S. satyurs. The ancient Egyptians are said to have worshipped monkeys, and some of them in India are still reverenced by Hindus. Various kinds of Apes seem to have been made known to the Hebrews, Greeks, and Romans, by specimens brought from Africa and India; those known to the Hebrews probably from India, the Hebrew name Koph being almost the same as the Sanskrit Kapai.—Harris. See Mammals.

APHIS, a tribe of insects; one species of China is supposed to produce oak-galls. Aphis coca, the coffee-louse, is found in small galls on the young shoots and on the under side of the leaves of the cocoa-nut tree, but the injuries it occasions are insignificant. Firminger says (p. 45) a species of Aphid is the most injurious of all the
many insect enemies of the sugar-cane. It usually appears after long-continued dry weather, and disappears on a downpour of rain. Moore notices A. kakrasingha and A. pistaceae. See Insects.

APHORISMS or Sutra are the usual mode of instruction followed in the Hindu Vedas, liturgical books whose sacred character Hindus still acknowledge. Sutra were adopted in the fourth period of the Hindu progress, about B.C. 1000, and the ceremonial prescriptions were reduced to a more compact form, and to a more precise and scientific system. The aphorisms of the Nyaya philosophy, of the Mimansa and Yoga, were reprinted in Sanskrit and English about the middle of the 19th century, by Professor James Ballantyne of the Benares College.—Max Müller.

APHRODISIACS. Several oriental races eagerly search for substances of this nature, and parts of fishes, insects, molluscs, and plants have a high reputation. With the Chinese, the gelatinous fins, air-bladders of fish, the nests of a species of swallow, and some molluscs, are greatly esteemed, also musk-rats' tails.

APIACEÆ of Lindley, the Umbellifere of Jessieu, are the celery tribe of plants. They number above 1000 species; upwards of 120 belong to the S. and E. of Asia; several are used medicinally.

APIS, the sacred bull of Egypt, was chosen by the priests of Memphis for its black and white spots; and Mnevis, the sacred bull of Heliopolis, had nearly similar marks. The Jews, in preparing their water of purification, were ordered, in Num. xix. 2, to kill a red heifer without a spot. Amongst the Egyptians, the solemnities at the burial of Apis were entirely Bacchic. The priests did not wear the nebris or deer skin, but they wore the panther skin, and carried Thyrsus staves. The sacred bull of the Hindus, Nandi, the vahan of Siva, is carved in black stone, seated, looking at the lingam.—Bunsen, i. 432. See Sacrifice.

This temperate climate plant, acrid and poisonous when wild, is much cultivated wherever Europeans settle, and is grown in India in the cold weather. Its seeds are sold as medicine in every bazaar of India. Its essential oil, dissolved in strong spirit, forms an essence a drop of which suffices to flavour a tureen of soup.—Voigt, 29; O'Sh. 357; Stewart.

Cultivated in gardens in Bengal for the seed, which is used in diet and medicine. Its fruit very hot and carminative, good in dyspepsia, much used in all usalas.—Roxb.; Dr. Irene; O'Sh.

The root is exported from India to China, where it is used as incense. There are two kinds, viz. Kust-i-shirin and Kust-i-talkh. It has been referred to Aucklandia costus, Falconar, also to Costus arabicus and C. speciosus.

APOCYNACEÆ, a natural order of trees and shrubs, including nearly 100 genera, with about 400 species, about half of which are found in the S.E. of Asia, Arabia, Ceylon, the Peninsulas of India and Malacca, Bengal, Nepal, and Java. The Apocynaceae abound in a milky juice, with which some acrid principle is frequently combined, rendering the whole suspicious and many highly dangerous. Of the milk of the Hya-hya, or milktree of Demerara, and of a species of Tabernanthe, Arnott, are said to be innocuous. In Sumatra, Urcecola elastica yields caoutchouc, as A. Veaha does in Madagascar; and bird-lime is prepared from the Vocaenga, as in India, from species of Ficus. Nerium pisiculium yields a strong fibre, etc. Willoughbeia edulis also yields caoutchouc. Several yield good timber, as Wrightia coecinna, which for its lightness and strength is used in making palanquins in the south, while in the north of India that of W. mollissima is used by turners. Holarrhena pubescens (kooma) yields a light wood, and species of Strychnos, some of superior quality. The bark and seeds of Wrightia antisyenthera have long been employed by the Asians, and are the Tiwaj and lissan-ul-asafir of the Arabs. The Hindus call it indurjup, and distinguish the seeds by the name of indurjup shireen (mild) from those of Holarrhena antidysenterica and H. pubescens, which they call indurjup talkh (bitter). Ichnosperma frutescens is sometimes used as a substitute for sarsaparilla; and Ophioxyylon serpentina has derived its specific name from its employment in snake-bites. One of the orders furnishes the lacewood of Moulmein, a tree found all over the provinces. The Karens make bows of it, but prefer Cassia fistula. Mr. Mason says the tree belongs to the dogbane tribe, and is not at all related to Guatteria virgata, the lacewood of commerce. The principal genera of the E. Indies are:—

APOCYNUM JUVENTUS, Smith, the Ho-shau-wu of the Chinese, grows in Su-chau-fu, Kang-su, Kwang-tung, and Kwang-si. Its root is believed by the Chinese to prolong life, and it is used internally medicinally.—Smith.

APOLLO The Greeks is the analogue of the Hindu Krishna, whose favourite place of resort was a tract of country around Agra, and principally the plains of Muttra, where Krishna and the nine Gopias, evidently the nine Muses, usually spent the night in dancing. Krishna, Hindus call it, and the Apollo of the Greeks was so named Nomios, or the pastoral, and Opfer in Italy, who fed the hero of Admetus, and slew the serpent Python. The Apollo of Edessa also was called Monimos. He was identical at Babylon with the Phoenician god Esmun. Krishna and his Gopias are represented as well in their characters of Apollo and the Muses, as in those of the sun and the planets in harmonious movements round him.—Coleman.

APOLLODOTUS. Of the Greek successors to Eucritudes, Apollodotus and Menander alone are
mentioned by classical authorities. Apollo was ruling at Patalene, Syracusae, and Larissa about
C. 165. According to Colonel Tod, the Yavan, or Greek princes, who apparently continued to
rule within the Indus after the Christian era, were either the remains of the Bactrian dynasty, or the
independent kingdom of Dementius or Apollothotus, who ruled in the Punjab, having as their capital
Sagala, changed by Dementius to Euthymedia. Beyer says, in his Hist. Reg. Bact. p. 81, that,
according to Claudius Ptolemy, there was a town within the Hydaspes, yet nearer the Indus, called
Sagala, also Euthymedia; but he scarcely doubts that Dementius called it Euthydemia from his father,
after his death and that of Menander. Sagala is conjectured by Colonel Tod to be the
Salamboppura of the Yadu race when driven from Zabulistan, and he supposes that the Yu-chi or
Yu-ti, who were fixed there from Central Asia in the fifth century, and if so early as the second
century, when Ptolemy wrote, may have originated the change to Yuti-madia, the 'Central Yu-ti.'
Numerous medals, chiefly distinguished by the probable
nature of the currency of Sagala, either
belong to these princes or the Parthian kings of
Mingara on the Indus. The legends are given in Greek on
one side, and in the Sassanian character on the
reverse. The names of Apollothotus and Menander have been deciphered, and the titles of 'Great
King,' 'Saviour,' and other epithets adopted by the
Arsacideae, are perfectly legible. The devices,
however, resemble the Parthian. These Greeks
and Parthians must have gradually merged into
the Hindu population.
—ToD's Rajasthan, i. p. 233.

See Greeks of Asia; Kaba.

APOLLONIUS OF Tyana, lived about A.D. 50.
It is related in his Indian travels that Phraotes,
who ruled over the kingdom which Porushad
swayed, spoke Greek, and was versed in all the
literature and philosophy of Greece. In his life
by Philostratus, he is stated to have visited the
brahmans on the hills north of Sri-nagar, now
called Triloci Narayana, near the Kedara Ganga.
Their chief, Jarchas, stated that Ethiopians had
resided here under a ruler, Ganges, and that
this was the place where the gods of Egypt
visited Apollothotus having visited India, or Ethiopia, or Babylon.

APONOGETON MONOSTACHYON. Willde.
Sarna Kalanga, Can. | Kotti Kalang | TAm. | Beechoo; | HInd. | Kutli Gallida | Tel. | Kakangi; | SANSK. | Name Dampa; | "
A perennial aquatic plant of the Bengal
India, growing in shallow standing water and the
beds of tanks, flowering during the rainy season.
The natives are very fond of the small tuberous
roots as an article of diet. Several species grow
still, sweet watery places of India. Roxburgh,
i. 211, mentions A. echinatum, A. microphyllum,
growing in the Bhutan mountains, A. undulatum
in Bengal. A. crispus, Thunb., of India and N.S.
Wales, has tuberous roots, small but starchy, and
of excellent taste.—Von Mueller; Atiassee; Rox-

APOROSA LINDLEYANA. Wright.
Seacca Lindleyana, W. IC.
This tree is abundant throughout Coorg and the
Vynad, up to 4000 feet elevation; is met with
throughout the Madras western forests, in Bombay,
also in Ceylon, up to 2000 feet; and it is also
found in Sikkim. The wood is in use for building
and other purposes. A. acuminata, fusiformis,
latifolia, and lanceolata, are small trees of Ceylon.—

APOSTLE. A term sometimes applied in
European literature to Mahomet, but his followers
only recognise the appellations of Paighambar and
Rassul Allah, the Messenger of God.

APPA. TAM. Apupa, Tel. Unleavened cakes
of rice flour and coccus-mil nut, called Hoppers.

APPA. Tel. Appan, TAM.; APA, MAH. A term
of respectful address, a father, as Rangappa;
Govind Apa. Apa in Tulva means mother.

APPEL. MEALEAL. Premna integrifolia, Roxb.

APPER, one of three celebrated votaries of
Siva, who composed a portion of the poem Deva-
ram, which forms part of the Tamil Veda.

APPLAGARAM. TAM. Barilla.

APPLE. A term applied in India, to the
fruits of several plants,—Cashew apple, Custard
apple, Love apple, Pine apple. Rose apple, Greater
wood apple, Lesser wood apple, the apple proper,
Pyus malus. The apples of Solomon's Song are
the quinces or the Cydonia sativa. The apple-
tree of Australia is the Angophora lanceolata.
The common apple, Pyus malus.

Tuffah, ABAR. Sal, Seco, | HIND, PERS. | Pin-kwoh, | CHIN. | Poeno, | IT. | Hwa-hung, | CHIN. | Malus, | LAT. | Pomme, | FR. | Soba, | PERS., SANSK. | Melea, | GR. | Manzana, | SP.

This is naturalised in several parts of India.
In China, it is cultivated in Honan, Feh-chih-li,
Hup-ch, Shun-te-fu, and Ho-ki-en-fu.

APPOCOVAY. TAM. Bryonia rostrata.

APPROVERS. in India, are criminals who
have been tried and convicted as having been
bound to a band of Thug murderers or Dacoits,
but who, having made a full confession of their
crimes (in some individual cases amounting to
the murders of as many as eighty persons), and having
denounced their associates, have received a condi-
tional pardon.

APRANG, also Rangbhurat, Dam-ual-akway,
and Hira-dakan, a gum resin, a beautiful kind of
kino, brought to Ajmir from Bombay; con-
sidered very astrigent. It is given in intestinal
hemorrhages, and is also used in enamelling on
gold; four tola one rupee.—Irvine, Ajmir, p. 126.

APRICOT, Prunus Armeniaca.

In India the tree has been naturalized. The
fruit is greatly esteemed in Persia, Syria, Arabia,
Afghanistan, etc. Moorcroft mentions ten varieties
grown in Ladakh, all of them raised from seed,
except one, which is budded. The stones are sold
as 'Sari' in the Himalaya, and called also 'Magh
khumbi.' Apricot oil (Raughan-i-khubani), of the
finest kind, is made by expression from the kernels.
It is clear, of a pale yellow colour, and smells
strongly of hydrocyanic acid, of which it contains
usually about 4 per cent. This is a hill product
next Simla, and near Kanaur, as also near Kangra.

—Powell's Handbook, i. p. 422; Dr. Royle;
Birdwood, p. 154; Moorcroft's Darwin, Var., etc.

APSARAS. SANSK. In Hindu mythology,
nymphs of Swarga, the celestial court of Indra, celestial dancers, celebrated for their beauty.
AQUILINE.

Amongst them is Remba, the popular Venus of the Hindus, and some others are described to be of inconceivable loveliness. They symbolize the floating clouds of the upper sky, or personifications of the vapours extracted by the sun. In Indra's court they are forty-four in number,—thirty-four worldly and ten divine,—and arranged in fourteen gada or bands. They are the types of the swan maidens of German folk-lore. They answer also to the Pari of the ancient Persians, and the damsels called in the Koran, Hur-ul-ayn, the antelope-eyed Huri. Sir William Jones thus describes them in Swarga:—

'Now, while each ardent Cinnar persuades
The soft-eyed Apsara to break the dance,
And leads her loth, yet with love-beaming glance,
To banks of jasmine and champaca shades,
Celestial genii toward their king advance,
So call'd by men, in heav'n Gandharvas named.'

According to Kshatriya belief, Kshatriya warriors slain in battle are transported to Indra's heaven by these Asparases. Manu, v. 89, says, 'Those rulers of the earth, who, desirous of defending each other, exert their utmost strength in battle, without ever averting their faces, ascend after death directly to heaven.' And in Book ii. 19 of the Nala, Indra says, 'Why are no warriors slain now-a-days, that I see none arriving in heaven to honour as my guests?—'—Coleman, Hind. Myth. ; Sir William Jones, Hymn to Indra, vol. xii. pp. 270 and 273 ; Williams' Story of Nala, p. 140.

APTA. MAHR. Baulinia parviflora, B. racemos.

APTERA. Example, fleas and lice. See Insects.

APTIMUN, HIND. Also Amr-Bel. A yellow-coloured parasite creeper, often seen on babul trees all over India. The entire plant is used in native medicine, in 'munj,' or musil, a diluent form of medicine, employed preparatory to giving a purge. The Aptimun Wilayti is an extract of the Aptimun plant from Bombay, and is used in the same way as the plant.—Irene, Ajmir, p. 125.

AQUA MARINE.

Seing, BURM. Patsa kallu, TAM. Zamarrud, PERS.

This is found in the south of India, where it is classed as an inferior emerald. Chrysoberyl is often found among the Tora hills near Rajmahal, on the Burman, in irregular rolled pieces, small, and of a light green colour. These stones are sold as emeralds by the natives under the name of punna; but the native dealers are aware that they are softer than the real emerald of India, which is generally green-coloured corundum. The oriental emerald is often seen in Burma, but beryl and emeralds are brought from the north of Ava.

AQUEDUCTS, in S.E. Asia, are chiefly known as underground tunnellings, designated throughout Persia, Beluchistan, and India as Kanat and Karez.

AQUARIUM ALGALLOCHA. R. Alces-wood.

Yellaujju, ARAB. Agar, HIND.

Ayloogi, Ayulugin, Ayabureli, Bos, A. vau, A. agallochum, KALAM, MALE.

Ugoor or Ag' r, BENJ. Kalamba, MALAY.

Eagle-wood, ENG. Kaya gahru.

Calambe, SANSK. Agaru.

Bois d'Aigle, Fr. R. Krishna agaru, Tel.

Ag' r, HIND.

This is an immense tree, a native of the mountainous tracts E. and S.E. from Silhet, in lat. 24° and 25° N. Roxburgh mentioned that the real Calambe or Agallochum of the ancient

is furnished from this tree; and though, in his time, small quantities of the fragrant resinous wood were imported from the eastward, the imported articles were always considered inferior to that from Silhet. Dr. Mason also is of opinion that the Ag. algallchum produces the fragrant ligna-ales, or wood-ales, which is offered for sale in all the bazaars on the Tenasserim coast, and is the produce of a tree that grows on the Mergui islands. It is imported into Mergui by the Selung race, who, as they profit from the trade, endeavours to keep all in ignorance of the tree from which they obtain it. The Hebrew and Greek names are 'derived from the Indian name of the tree, agil, Sanskrit agaru and agamu.' The chief consumption of aloe-wood is in Siam and China, where it is burned in the temples. It was used in Napoleon's imperial palaces as incense. The wood is heavy, yellowish—white, shaded with green—brown, spongy, and resinous; its taste aromatic, its odour in combustion very agreeable.—O'Shaughnessy ; Mason ; Malcom's Tr. p. 191 ; Taylor's Ill. Ind. Bot. 173 ; Roxb.; Voigt; Vegetable Kingdom; Mad. Ex. Jour. Reports. See Aod.

AQUARIUM MALACENSIS. Linn. A. ovata of Botanists. —Bois d'Agle de Malacca.

This tree, a native of Malacca, China? and Ceylon? It has a whitish timber. Roxburgh seems to regard this as identical with A. algallchum of Silhet, but others recognize it as a separate species.—Roxb. ii. 422; Voigt, 306; Veg. Kingdom, 629.

AQUARIUM SECUNDARIA? This tree has a white and inodorous timber, but when dried, it secretes a resinous matter said to be the true Eagle-wood.

AQUARIUM SINEHIS. Spreng. Ophiop-spillum Sinense, Lowyreio.

Pa-mou, CHIN. Pah-mu-yang, CHIN. A tree of China.—Voigt.

AQUILEGIA. In India, several species are known as ornamental flowering plants. Their name, literally, the Water Gatherer, is because the leaves collect water in their hollow.—H. f. et T. p. 44; Veg. King. p. 18; Voigt; Riddell.

AQUILIN.E, a sub-family of the family Fal-conidae, comprising the True Eagles, the Kite Eagles, the Hawk Eagles, the Serpent Eagles, Fishing Eagles, as under:—

1. TRUE EAGLES.

Aquila chrysaetos, Linn., The Golden Eagle.

Falco chrysaetos, Linn., Gould, Blyth, Horstf. nugor, Gmelin.

melenanota, Lath. Aquila daphneina, Hodgson.

nobilis, Pallas.

Burkut, TARTAR. Bear coote of Atkinson.

It inhabits the greater part of northern and central Europe, Asia, America, and has been found in the Himalaya. In Central Asia, it is trained by the Kirghis and other nomades to kill antelopes, foxes, wolves.

Aquila imperialis, Bechst., Imperial Eagle.

Falco imperialis, Bechstern, Gould, Blyth, Jerdon.

Aquila moghilnik, Gmelin.

helacca, Sav. bifascieta, Gray and Horsw., Skey, Jerd.

Nepalensis, Hodgson.

chrysaetos, Jerdon.

Frus, BEN. Jumiz, Jumbliz, HIND. The imperial eagle ranges in the south of
AQUILINÆ.

Europe, North Africa, West and North Asia; it inhabits the Himalaya, is not uncommon in central India and on the table-land of India, but is rare in the Dehkan.

*Aquila nevia*, Gmel., The Spotted Eagle.

Aquila melanoaetus, Sauv.

" clanga., Pullos.

vittata, Hodg.

Bukyari Jiyadha., Beng. Kal-janga., HIND.

Black kite., ENG. Nella-godha., Tel.

It is found in the south and west of Europe, North Africa, and West Asia, and throughout India, especially in the neighbourhood of cultivation, tanks, marshes, and paddy fields, and common in the Sunderbunds.

*Aquila fuscens*, Gray, The Tawny Eagle.

Aquila punctata, Gray and Hardw.

" fusc., ENG. Franklin, Jerdon.

" vindiana., Franklin, Jerdon.

" clanga., Pullos.

Wokhah., HIND. Salwa., Tel.

Ali., TAM. Dhohwa of the WAGH.

Alawa., Tel. Bursawul of the YERKALA.

It is found throughout the greater part of India, except in the more moist and wooded portions, but is unknown in Bengal and the Malabar coast, and does not extend into the Indo-Chinese countries. It is a very noisy, shrill-screeching bird. It builds on high trees.

*Aquila hastata*, Less., The Long-legged Eagle.

Spisaetus punctatus, Jerd. | Limmnaetus unicolor, Blyth.

Jiyada., Gutimarr, HIND. | Pahari Tisa., HIND.

A small, handsome eagle of Bengal and the south of India.

*Aquila pennata*, Gmel., The Dwar Eagle.

Aquila minuta, Brehm. | Spisoetus milnoides, Jerd.

Dutaqua striphata, Hodg.

Garden eagle., ENG. Gilri mar., HIND.

Field kite., TAM. Punja Pranala., Tel.

Baghati Junia., HIND. Odadal godha., Tel.

This eagle is found in the south of Europe, North Africa, West Asia, and throughout India, frequenting groves of trees, gardens, and cultivated land. The crows readily distinguish it, and pursue it clamorously.

2. KITE EAGLES, viz.

Aquila, Blyth., Jerd.

Aquila penniger, Hodg.

*Heteropus*, Hodg., Horsf.

Nisaetus ovivorus, Jerd.

Heugoung., BLOT. Adavi nulla godha., Tel.

Lumkonh Bong., LEP.

It occurs in the hilly and jungly districts of India, in Malabar, Wynad, Western Ghats, Nilgriefers, Central India, and Himalaya.

3. HAWK EAGLES, viz.

*Nisaetus Bonelli*, Temm., Crestless Hawk Eagle.

Aquila, Temm.

Aquila, Blyth.

Aquila, Horsf.

Eutolmesmus, Blyth.

N. nivens., Jerd.

Peacock killer., ENG. Rajali., TAM.

Hare do., Kunding salawa., Tel.

Mohr-angah., HIND.

This magnificent eagle is found throughout India in hilly and jungly districts.

*Limmnaetus niveus*, Temm.

Aquila limmaetus, Vigors, Horsf., Blyth.

Nisaetus pallidus, Hodg.

The Sadal of Bengal has been found in the tracts between the Himalaya and Calcutta.

Limmnaetus cristatus, Temm., Crested Hawk Eagle.

Aq. Elliott, Jerd. | F. cirrhatus, Gmel.

Falco Lathami, Tickell.

Shah Daa., HIND. Juta Bhashi., Tel.

Found throughout central and southern India, Bengal, East and West Ghats, and Himalaya.

*Limmnaetus Nepalis*, Hodg., Spotted Hawk Eagle.

Nisaetus Nepalis, var. cristata, Hodgs., Blyth.

N. pelcheri, Hodgs.

Falco orientalis, Temm. and Schlegel.

Koch., BLOT. Kanaha., CHIL., LEP.

This splendid hawk eagle has been found in the Himalaya, Darjiling, the Khasaya hills, and Ceylon.

*Limmnaetus Kienieri*, De Sparer.

Astur, De Sparer, Blyth., Horsf.

Spisetaus albogularis, Tickell.

This beautiful rufous-bellied hawk eagle has been found in the Himalaya, Darjiling, and Central India. Another species is *L. Caligatus*, Horsfeld.

4. SERPENT EAGLES.

*Circaetus Gallicus*, Gmel., Common Serpent Eagle.

C. brachyacutus, Meyer, Sykes, Jerd.

Falco, Gmel., Blyth., Horsf.

Sap mali., BENG. Pamula-godha., Tel.

Mal-patar., CAN. Rawul of the WAGH.

Samp-mar., HIND. Kondaste of YERKALA.

Pamu prandu., TAM.

Found all over India, generally in open plains. Its chief food is snakes, guanas, and lizards, but it eats also crabs, rats, wild birds, frogs, centipedes, and large insects. They have been caught on the ground with their claws on the snake’s head, its body coiled round the bird’s wings.

*Spilornis cheela*, Gray, Crested Serpent Eagle.

Falco, Daudin, Blyth., Horsf.

" albidus, Can., Temm.

" plumbeus, Hodg., Blyth.

Circaetus undulatus, Jerd.

" Nepalis., Hodg.

Buteo bachen, Franklin, Sykes.

B. melonotus, Jerd.

Tilai baj, Sam chehr, BENG. Botta Genda., COND.

Furj Baj., HIND. Murahy, MAC.

Goom., CAN. Nalla pamula godha., Tel.

It is found all over India, in jungly districts; also in Assam and Burma. It lives on snakes, lizards, frogs, and large insects; it has a plaintive, wild cry.

*Spilornis bachea*, Daudin, the F. bido, Horsf., inhabits Java and Sumatra.

*Spilornis spliogaster*, Blaine, India and Ceylon.

*Spilornis holospilus*, Vigors, inhabits the Philippines.

5. SEA EAGLES or FISHING EAGLES.

*Pandion haliaetus*, Linn., The Osprey.

P. indicus, Hodg.

P. fluvialis, Sm.

Mach morol, Bala., BENG. Macharang., NEPAL.

Mach mungo., HIND. Verali, adjid pong, TAM.

Macharyara., KORAMAN godha., Tel.

Panting., LEP. Heggulu of the YERKALA.

The fish-hawk of Europe, Asia, and Africa, is spread all over India; it is frequently robbed of its prey by the Haliaetus leucocephalus.

*Poleutoxus ichthyatus*, Horsf., White-tailed Eagle.

Falco, Horsf., Blyth.

" albidus, Hodg.

" plumbeus, Hodg.

Pandion, Horsf.

Haliaetus, Jerd.

" Horsfieldi, Hodgs.

Pandion leucurus, Jerd.

" lucarius, Hodg.

Mach morol., BENG. Madhury., HIND.

It is spread over most of India, Sangor, Bengal, Burma, and all the Malay countries. Its chief
food is fish, but it carries off birds, as teal and ducks.

_Polioetus, sp._
Pandactes humilis, _Temm._ | Ichthyoborus musius, Blhth.

A native ofMalacca and the islands.

_Haliatus fulviceenter_, Vieliot, Ring-tailed Sea Eagle. Falco Macc, _Temm._

_Haliatus Macc, Blhth, Hor._

" Albipes, Hodgs., 

" lanceolatus, Hodgs. 

" unicolor, Gray, Hardw. 

_Bala koral, _ | _Beng._ Macha mang. | _Hind._

_Machikoral, _ | _Kokas, Ugan. | _Kol._

_Machikang, _ | _Hind._

This fine fish eagle is abundant in Bengal, and found in all the north of India, ascending the Ganges and the Indus rivers. It lives on fish, but eats also snakes, turtle, etc.

_Haliatus levecoaster_, Gm., Grey-backed Sea Eagle. 

_Diagrus levecoaster_, Blhth.

_Falco diagrus, Daudin, Jerd._

" dimidiatus, Max._

" Martius._

" cultrungis, Blhth.

_Kohassa, Samp-dhar, Hind._ | _Ali._ | _Tam._ | _Tel._

Found all over India, Burma, Archipelago, but chiefly on the coasts, and up some of the larger rivers; lives on sea-snakes, fish, rats, crabs. It habitually robs the osprey._—_Jerdon, Birds, i. pp. 64, 84._

_AR. Tam._ A river; a common postfix in Tamil countries, as Pal-ar, Ady-ar, etc. Ar, a river, is early Scythic or Kushite Babylonian, and the word is found in the Ar-Melah of Pliny and the Ar-Macales of Abydenus, terms used to designate the Nahr-Melah, or royal river of authors._—_Raeul._ i. 2._

_AR._ An ancient word entering very extensively into the language of the Indo-Germanic races, and supposed to be the source of the term Aryan. It seems to be connected with the original term for one of the first of avocations, namely, ploughing and the plough. In the western hemisphere, the answer will be remembered which was said by the Delphic oracle to Myson, when Anacharis inquired who was the wisest man in Greece: 'He who is now ploughing his fields.' Into the Indo-Germanic languages the word has been adopted in various ways connected with the earth, the fields, ploughing, and field implements. The root ar means to plough, to open the soil; and from it we have the Latin ar-are, the Greek ar-on, the Irish ar, the Lithuanian ar-ti, the Russian or-ti, the Gothic ar jan, the Anglo-Saxon er-jan, the modern English to ear. Shakspeare says (Richard II. iii. 2), 'To ear the land that has some hope to grow.' From this we have the name of the plough, or the instrument of earing—in Latin, ara-trum; in Greek, aro-tron; in Bohemian, orato: in Lithuanian, arkla; in Cornish, aradar; in Welsh, arad; in Old Norse, arthr. In Old Norse, however, arthir, meaning originally the plough, came to mean earnings or wealth, the yor, being, in early times, the most essential possession of the peasant; in the same manner as the Latin name for money. The act of ploughing is called aratio in Latin, arosis in Greek; and Max Muller believes that aroma, in the sense of perfume, had the same origin, for what is sweeter or more aromatic than the smell of a ploughed field? A more primitive formation of the root ar seems to be the Greek era, earth; the Sanskrit era; the Old High-German ero; the Irish ire, ironn. It meant originally the ploughed land. Besides, the simple ar in Old Norse means ploughing and labour, and the Old High-German art has likewise the sense of ploughing. Arwose and arvum, a field, would certainly have to be referred to the root ar, to plough. The English word plough, the Slavonic ploug, has been identified with the Sanskrit playa, ship, and with the Greek plion, ship._—_Mullers Lectures, p. 242; Taylor's Words and Places; Muller's Chips, 1864._

_ARA_. SCYTIC. A mountain. The word is not to be found in any Sanskrit dictionary with this signification, yet it appears to be a primitive root possessing such meaning, as we have Ar-budha, hill of Buddha; Aravalli, hill of strength; Aravinda, hill of limit.

_ARABIA_. In the S.W. of the continent of Asia, is about 1430 miles long and 1200 miles broad. The ancient Greek and Roman geographers divided Arabia into A. Felix, A. Petraea, and A. Deserta. The first nearly corresponds to the modern Yemen, but included Mahraw and Hadramaut; the second, the modern Hejaz; the third extending N.E. from A. Felix as far as the Egyptian deserts. The Arab authors, however, have included the whole peninsula under Yemen and Hejaz; while others, into Yemen and Hejaz, Nejd, the Tehama and Yemena. Hadramaut, Mahraw, Shehr, and Oman have also been reckoned independent provinces by some, while others include them in the two great divisions, Yemen and Hejaz. It is also known to the people as the Balad-ul-Arab and Jazira-ul-Arab. It has a central table-land surrounded by a desert ring, sandy to the south, west, and east, and stony to the north. This outlying circle is in its turn girt by a line of mountains, low and sterile mostly, but in Yemen and Oman of considerable height, breadth, and fertility; while, beyond these, a narrow rim of coast is bordered by the sea. The middle table-land occupies half the peninsula, and the whole of Arabia is about two-thirds cultivated or cultivable, the remaining third being ir reclaimable. All the western parts of the Arabia peninsula, from Suez to Aden, including Palestine, the Hejaz, Mecca, and Yemen, are often spoken of as nominally subject to the Othoman Empire; but at Mr. Palgrave's visit, the more northerly parts, from lat. 26° to 32° N. into the Syrian desert, and eastwards to the Euphrates, were subject to the king of Shammar, the more important of whose territory surrounded Jabil Shammar; and the Wahabi king owned the tract from the shores of the Persian Gulf westward to the Hejaz, with Shammar on the north, and the great desert on the south. The sway of the king of Oman extended along the eastern shores from Bahrein to Dostra. Mesopotamia, Iraq, and the plains north of Palmyra are part of Arabia, forming with the Hadad a region uniform in its physical features and in the race which inhabitants it. The Shammar, Anazeh, and the Jelif tribes are as purely Arabia as their kinship of Nejd, and the villagers of the Euphrates and the Jof as those of the Hejaz and Yemen. The lands of northern Arabia, since the 15th century, have, however, been repeatedly fought for by Bedouin tribes. But up to 1880 the Shammar were supreme in Mesopotamia, and the more powerful Anazeh in the Hamad and as far north as Aleppo. Since 1862, the Turkish Government have marched.
down the valley of the Euphrates, and taken military possession of Jaber and Deyr; and several towns have been taken to suit culture. The Shemmar Bedouin of Mesopotamia have above twenty sections, in all about 12,000 tents. Their allied tribes, nine in number, have about 30,000 tents. The Anazeh Bedouin have nine sections, in all 27,500 tents, with four allied tribes possessing 2400 tents. The Amur, Aduan, Aluin, Beni Sakkhr, Lehep, Sherarat, and Saleb are independent tribes of the upper desert and Hamad. Under the partial control of the pashalik of Bagdad are six tribes, amongst them Montefik, with 8000 tents, partly Bedouin, partly Fellah, inhabiting Irak.

The present Arabians, according to their own historians, are sprung from two stocks,—Kah- tan, whom they claim to be the same with Joktan or Yoktan, the son of Eber; and Adnan, descended in a direct line from Ishmael, the son of Abraham and Hagar. The Arabs of the south are regarded as descendants of Kahitan, and those of the north, of Adnan, of the blood of Ishmael. Yoktan, according to Bunsen, was one of the two sons of Nimrod, and was the chief of the first Arabian emigration that proceeded southwards. Tradition, he says, points to the mountains of Armenia as the birthplace of the Arab and Canaanitish races. It is supposed that they travelled along the banks of the Tigris into Mesopotamia, from which a portion of them commenced a great migration southwards, the result of which was the foundation of the primeval kingdoms of southern Arabia, the kingdoms of the Adites in Yemen, who believe that they came from the sacred north, and once lived in a glorious garden of the earth, which they were to restore. In southern Arabia, Yemen, Hadramaut, and Oman, the people are more or less Himyarite in blood, history, and civilisation. The people now occupying the peninsula are regarded by Captain Burton (Mecca, 41, 43) as of three distinct races, viz. the aborigines of the country, who have been driven into the eastern and southeastern wilds bordering upon the ocean; second, a Syrian or Mesopotamian stock, typified by Sheem and Joktan, that drove the indigenes from the choicest tracts of country. These invaders still retain their conquests, Arabia about the 2600, Arabian people. And, thirdly, an impure Egyptian-Arab race, well personified by Ishmael, his son Nebajoth, and Edom (Esau, the son of Isaac), that populated and still populates the Sinaic peninsula.

The indigenes, he says, are sub-Caucasian tribes, which may still be met with in the province of Mahrah, and generally along the coast between Muscat and Hadramaut. The Mahrah, the Jenaabah, and the Gara especially show a low development, for which hardship and privation only will not satisfactorily account. These are Arab-el-Arabah, for whose inferiority oriental fable accounts as usual by thauamaturgy. Dr. Carter, likewise, has remarked the similarity between the lowest type of Bedouin and the indigenes of India, as represented by the Bilh and other jungle races (Burton, iii. pp. 29–31). The principal immigrant race, Burton says (iii. p. 31), were the Noachians, a great Chaldean or Mesopotamian clan, which entered Arabia about the 2900, drove before them the ancient inhabitants, and seized the happier lands of the peninsula. This race would correspond with the Arab-el-Muta-Arabah, or Arabicized Arabs of the eastern historians. The third family, an ancient and a noble stock, dating from n.c. 1900, and typified in history by Islam, still occupies the Sinaic peninsula.

These Arabs, however, do not, and never did, extend beyond the limits of the mountains. As a race, the Arabs have well-marked characters. The ideal of the ancient Arab was a fiery-souled, irresistible warrior, always in sight of his tribe, bold in speech, rapid with song and repartee, indulging in wine, feasting, gambling, and love of women, holding tears to be disgraceful, with limbs as iron as his armour, supporting without suffering the heat of the desert under an Arabian sun, delighting in the beauty and swiftness of his steed or of his camel, impassioned for the chase, a match unarmed for the lion, indefatigable in combat, and routing like Antar whole armies with his single spear and shield. From the impulse and unity given by Mahomed, the world saw the Arabs issue from their naked deserts. At all times impetuous, their energies were then concentrated to enforce belief at the point of the sword; and within twenty years they mastered Syria, Palestine, Egypt, and Persia, the conquest of Persia being merely a prelude to further extension in the east. Mahomed's death occurred at Medina on the 8th June 632. Abu Bakr succeeded as the temporal and spiritual head, with the title of Khalifah. The fall of Bosra opened the way to that of Damascus. The battle of Aiznadin, in 633, in which 50,000 Christians are said to have fallen, decided the fate of the capital of Syria. In 634, Emessa and Balbec were taken, and Jerusalem capitulated to Omar. Aleppo fell 638, and the capture of Antioch completed the conquest of Syria. The battle of Kadesia and the fall of Madain made the Arabs masters of Persia to the banks of the Oxus, and Alexandria fell to the forces of Amrun. But from this time intrigues and great dissensions occurred. Omar was assassinated; his successor, Usman, during an insurrection, was slain in his palace, at the age of 82 and the 35th of his rule. All, the cousin and son-in-law of Mahomed, the fourth Khalifah, had a troubled rule, which ended in his assassination in a mosque at Kufa at the age of 30. Indeed, for three centuries the blood of the Khalifs flowed in the streets of Kufa and Madain, and the capital, as the assassinated Khalifah's residence, became known as the city of blood.

But of this first century of the Moslem world, little need be said; the Moslem world being precisely a Mohammedan world; its religion, its law, its custom, all being fixed by the Prophet, and all being directed to that end. What is to be said of the Mohammedan world of today? Has it furthered or hindered the progress of the human race? No more, and no less certainly than has the Christian world. There is as much of good as of evil, but on the whole the Moslem world is as poor, as weak, as degraded as the Christian world. It is a hanging cloud, a presentiment of what the world will be when the modern Greek-German spirit has its prey.
by arms and policy, conquered the entire valley of the Indus. He landed his conquests to Tenmin, who governed for 36 years till the downfall of the Omnimad Khalif, on which event the Arabs were expelled by the Sumra race in A.D. 750, and all the Arab conquests in India were restored to the Hindus. Sindh, from Bakkar to the sea, was ruled by the Sumra Rajputs till the end of the 12th century. At an early date after the Hijira, they established a factory at Canton; and their numbers were so great by the middle of the 8th century, that in A.D. 758 they attacked and pillaged, and fired the city, and fled to their ships. From periods dating back to many centuries before the Christian era, the Arab race were keen traders, and to the present day they continue to settle wherever commercial transactions can be made profitably. Throughout eastern Africa, they and their descendants from mixed blood, occupy a prominent position, also in the western parts of British India, and numbers of them are spread throughout the Eastern Archipelago. They are prone to excitement, and particularly on matters of religion. Ever since the time of Mahomed, they have sent forth keen missionaries, and their proselytizing efforts have been, and continue to be, largely successful, and at present they are working in Africa. In their own country, the towns on the sea-coast have an admixture of other Asiatic and African races; and as Arab Bedouin life is ever changeable, quarrels and wars have greatly modified the tribes, dispersed some, and amalgamated others, so that to the present day the Mozelina and Suleim are said to have alone maintained their individuality from the time of Mahomed. How far sooner they have spread, they continue to designate themselves with their tribal name as a cognomen, as, for instance, Amirud-Din, Koroshi; or with the name of the district or country in which their forefathers had settled, as, for instance, Mir Kadar Ali, Kirmani. And the descendants of Mahomed are styled Mir, prince, or Syed, lord; those of Ali by his other wives are Alavi Syuds; the offspring of a Syudani with a husband of another tribe being honoured with the title of Sharif, or noble. The Walajah family, who ruled in the Karmatic from the middle of the 18th century, claim descent from Umar.

The population of the Arabian peninsula, vaguely estimated at 12,000,000, consists of many independent tribes, chiefly engaged in pastoral pursuits. In this respect it is in the same state now as in ancient times, when the Kushite and Joktanite occupied A. Felix, when the Ammonite and Ishmaelite dwell in A. Deserts, and the Moabite, Edomite, Nabathean, Midianite, and Arabalekite in A. Petraea. None of the Arab cities are large. According to Captain Burton, the population of Ed-Dschah is from 12,000 to 18,000. Mecca contains about 45,000 inhabitants, Yambu from 6000 to 7000, Jedda about 2500, and Taif 8000. Many tribes exact blackmail from the villagers. It is the ‘khwot,’ (brotherhood), the tribute claimed from time immemorial by the Bedouins, in return for their protection, or rather forbearance, in not touching the harvest or driving off the cattle. Each village pays ‘khwot’ to one shahil in every tribe, who then acknowledges it as his ukhta or ‘sister,’ and is bound to protect the inhabitants against all the members of his own tribe.

The maritime states are independent, but acknowledge the feudal supremacy of the Wahabi ruler whenever his power, or their dissensions, may place him in a position to exercise it. Their chiefs are expected to afford military aid in his expeditions. The territorial possessions of the maritime states are confined to the inhabited spots on the sea-coast, and may be said to be bounded by the walls of their towns and the date-groves in their vicinity. They are each of them closely related to nomade tribes in the interior, over which the chiefs of the former exercise a limited control. The maritime tribes are dependent for their subsistence on the pearl and common fisheries. They engage also extensively in the coasting trade of the Gulf, and in the carrying trade to India and Zanzibar. With the exception of Koweit and the Bay of Kalef, sheltered by reefs, the maritime coast possesses no harbours, and for a lee shore they are prevailing N.W. winds. The character of the coast of Arabia from the mouths of the Embrates to the range of mountains in Oman, and which joins the sea near Ras-oool Khynn, is low, sandy, and barren. Water is everywhere more or less brackish. The desert passes close up to the walls of the towns, and except the scanty date plantations, the produce of which is altogether inadequate to the supply of the inhabitants, precludes cultivation. The towns are built on the banks of deep creeks or backwaters, into which the larger boats can enter only when unladen. The average fall of rain does not probably exceed four to six inches in the year. The heat during summer is excessive. In 1799, the British thought of occupying Perim, and in 1802 they engaged in political and commercial alliances with the chiefs on the coast; and, on the 19th January 1839, Aden was taken by the British, and has since been extensively fortified. The tribes around Aden are the Abdali, Foodoli, Akrahi, Oulaki, Hushahi, Yafaifi, Subahi Alawi, Amir, and D`bene. The Oulaki occupy about 55 miles of the coast from the borders of Hadramaut westwards, and about 200 miles inland. Since 1848, Mocha and all the east coast of the Red Sea has been under the Turkish Government.

Many of the Arabs, between the rise of Christianity and the time of Mahomed, became Christians. Niebuhr (v. ii. pp. 178, 179) supposed the tribe of Abu Salibah, near Damascus, to be Christians, because of their name, literally Children of the Cross. In the days of Mahomed, the people of Mecca upheld the worship of their idols from motives of gain, but Arabs in general had little respect for them, and treated them worse than Neopolitans have ever treated a refractory saint. If the prophecies of their kalim, or holy men, did not concur with their wishes, they often put them to death. When Amir-ul-Kais commenced an expedition to avenge the death of his father, he entered, according to custom, the temple of the idol Zu-ul-Khullas, to obtain his approbation by means of the divining arrow. Drawing the wrong arrows three times in succession, he broke them all and threw them at the head of the idol, saying, ‘Wretch! If your father had been killed, you would not forbid revenge for his death!’ There was also an idol-worship in which bloody sacrifices were offered.

The Arab family, now, is largely Mahomedan.
except the Christian Arabs of Malta. But the Bedouin have the least religious sensibility of any known race; at the present time they are Mahomedans merely in name, and never utter a prayer, or if they perform any religious rites at all, these may possibly be some lingering relic of the old Sabean adoration of the rising sun. Captain Burton mentions that in most places, even in the heart of Mecca, he met with debris of heathenry proscribed by Mahomed, yet still popular. Several sites in Palestine and Arabia are held sacred by Jews, Christians, and Mahomedans. In the north is Jerusalem, and Tour or Tor, the Sinai and Mount Horeb of all these sects. On the S.W. are Mecca and Medina; and to the S.E. is Karbila, reverenced by Mahomedans of the Sunni or the Shia sects. Karbila was taken in 1802 by the Wahabi, and Medina fell in 1804.

Differences in their modes of life constitute the great distinction between the different tribes. The genuine Bedouin disdains husbandry, as an employment by which they would be degraded. They maintain no domestic animals but sheep and camels, except perhaps horses and asses. Those tribes which are of a pure Arab race, live on the flesh of their buffaloes, cows, and horses, and on the produce of some little ploughing. An ordinary Bedouin family has a tent, a few camels, goats, and poultry, a mare and her saddle and bridle, a lance 16 feet long, a matchlock or musket, a hand mill, a cooking-pot, pipe, and leather bucket.

Burton tells us that sharifs and other great men sometimes bind a white turban or a Kashmir shawl round the kherchief, to keep it in its place. The Aakal varies in every part of the country. Here it is a twist of dyed wool, there a bit of common rope, 3 or 4 feet long; some of the Arab tribes use a circllet of wood, composed of little round pieces the size of a shilling, joined side by side, and inlaid with mother-of-pearl; the eastern Arabs wear a large circle of brown wool, almost circular in shape, on the head, they twist bright-coloured cloth round a rope, and adorn it with thick golden thread. The dress of the women is a wide cotton gown of a dark colour, blue, brown or black, fastened by a leathern girdle. Over their heads they wear a kherchief called chaurar or mekroune, the young women having it of a red colour, the old, black. All the women puncture their lips and dye them blue; this kind of tattooing they call bestoun. Round their wrists they wear glass bracelets of various colours, and silver rings both in the ears and nose. Both in summer and winter they go barefooted. The females of Oman are tall and well made, with a roundness and fulness of figure, not, however, approaching to corpulency. Their complexion is not darker than that of a Spanish brunette, and in the towns they preserve their complexion with care. Mahomedan ladies in Oman enjoy more liberty, and at the same time are more respected, than in any other eastern country. During civil promotions, they often take a part in public affairs, and in some instances have displayed the utmost heroism. In Arabia, slavery of the Negro race is common, and concubinage of the master with the slave women universal. They are all fond of songs and stories, and this has been a trait of their character from pre-Mahomedan times. A copy of the Kabir-ul-Aghani, a book of songs composed in the 10th century by Abul Faraj Ali of Isfahan, for which he got 3000 drachms of silver. As historians and physicians, they were pre-eminent for several hundred years. Amongst other famous names, mention may be made of the Abbassi, Abul Farag. Ibn Zohar, Avicenna, Al Biruni, Baizawi, Mir Khond, Khondamir, Masudi Ibn Haukul, and many others, and wherever they continue eminently literary.

The Arabic language, as written in the Koran, is the most developed and richest of the Semitic tongues. It is not now spoken in any part of Arabia, as there written. Probably it never was so, any more than the Latin, the English, the German, or Italian have ever been spoken as written in their respective bounds; and Burton quotes Claudius, in his Arabic Grammar, as saying that the dialectus Arabum vulgaris tantum differt ab erudit, quantum Socratos dictio ab hoc eran lingua Greca. Arabs divide their spoken and even written language into two orders, the Kalam Wati, or vulgar tongue, sometimes employed in epistolary correspondence, and the Nahwi, a grammatical and classical language. Every man of education uses the former, and can use the latter. Palgrave tells us that the Arabic language of the Koran, the Ishmaelitic Arabic, is current in Jabl Shomer, and throughout Upper and Central Nejd, Nasseem, Hoshem, Severy, and the northern half of Aared, and at Riad. Southwards of these limits, the Kahtanie Arabic begins to prevail, till in Oman it wholly supplants the other. As now spoken by the middle and higher classes in Egypt, it is generally inferior in point of grammatical correctness and pronunciation to the dialects of the Badawi of Arabia; but the dialect of Egypt is much to be preferred to that of Syria, and still more to the dialects of the Maghrabi or western Arabs. In Persia and India the Koran is almost the sole Arabic work studied by the learned, and with them it is written in ordinary Arabic. The differences in the dialects of Arabia are well illustrated by the presence in the language of many synonyms, one being in common use in one country, and another elsewhere. After the first great success of the Arab arms, up to the founding of the Baghdad empire, the various dialects became fused into the language of Hejaz, and the old dialect confined to literary compositions. The most flourishing age of Arabic poetry and general literature and science, commenced with the Baghdad empire, and extended to the conquest of Egypt by the Othman Turks. But even in the present declining age of Arabian learning, literary recreations still exert a magic influence on the Arabs. Modern Arabic is written in the same dialect in Egypt, in Syria, in Baghdad, in Constantinople, at Algiers, and at Zanzibar, whether it be a mercantile letter, a state proclamation, an advertisement, or a letter in a newspaper, and it is understood by everybody. The learned men who write novels or other books of belles-lettres may be aiming to bring back a classical style, but their dialect is less trustworthy, as actually modern. Poetry also may be very so antique, just as in the decline of Greece the learned wrote poetry in Homeric dialect. Similarly to Italy, which has local dialects strongly distinguished, though the language of literature is but one, so is it with Arabic. The local dialects of Algiers, of Cairo,

This species of the leguminose, indigenous to South America, is extensively cultivated in the East Indies for the sake of the oil yielded by its seeds, and for the fruit. With the exception of the cocoa-palm, it is, of all the oil-yielding plants, the most extensively cultivated in the Malay Archipelago. Two varieties are grown in Malacca, also in Java, one with white, the other with brown seeds. It is sown in September and gathered in February. The young fruit, instead of being placed at the bottom of the calyx, as in other kinds of pulse, grows at the top and in the inside of a long slender tube, which looks like a flower-stalk. When the flower has withered, and the young fruit is fertilized, nothing but the bottom of this tube with its contents remains. At this period a small point on the summit of the young fruit, and gradually elongates, curving downwards towards the earth. At the same time the stalk of the fruit lengthens, until the point strikes the earth, into which the now half-grown fruit is speedily forced, and where it finally ripens in what would seem a most unnatural position. When mature, it is a pale-yellow wrinkled oblong pod, often contracted in the middle, and containing two or three seeds the size of a hazel-nut. The fruit is generally toasted before it is eaten, is extremely palatable, and is sold in the streets and bazaars of every town in India. In flavour the nuts are as sweet as an almond. Its clear, pale yellow oil is most valuable in commerce; in the neighbourhood of Calcutta, it is used for pharmaceutical purposes, and for lamps and machinery. The kernels in London are sold at about 16s. the ton; they yield 44 per cent. of oil, which has been estimated at about 42s. the ton. This useful oil is good for every purpose for which olive or almond oil is used.—Rech.; Riddell; Voigt; Hogg, Veg. King; Crawford, Dis., O'Sh.; Simmonds' Veg. Prod.; Birdwood's Bombay Prod.; Ainsle; M. E. Reports Cat. Es. 1862; Mason's Tasmaniin.

ARACHOSIA of classical writers is the Arak-haj and Rokhaj of the Arab geographers. The latter form is also found in Arrian's 'Periplus of the Erythraean Sea.' In Hindu mythology it is the country of the Rachos, with whom the immigrant Aryans came into conflict, and have been turned to the fearful Rakshasa of popular Hindu belief. General Cunningham seems to regard Arachosia as Ghazni. According to General Ferrier, Arachosia can be distinctly shown by the Greek measurements, to have been at the mouth of Shah-Zohak or Olan Robat, between Kilat-i-Ghilji and Mokorej. According to Ch. Bunsen, to the south of Kabal is Harau-quatii, denominated the fortunate, the Harau-watis of the cuneiform inscriptions, the Arachosia of the classics. It was the tenth people whom the Aryans conquered. It was here that the Aryans commenced to inter their dead, which the Zend-avesta strictly prohibits, as being the greatest
the mountains to the coast, and their considerable elevation, the rainfall is very great, amounting to 160 and 180 inches annually.

The Arakanese and Burmese are of the same race, and have the common national name of Myanmar, which is changed to Burma in European tongues. It is, however, a comparatively modern appellation for the several tribes which jointly form the nation. The difference between the dialects spoken by the Burmese and Arakanese is mainly in pronunciation, the written languages of both countries being for the most part alike. Some tribes reside on the banks of the mountain streams, and are distinguished by the name of Khyoung-tha. Their language proves that they do not belong to the Yuma group, but are intruders from the north; and their own traditions recognise the Ku-mi as the tribe in possession of the seaboard when they entered Arakan. Mug is a term which the Mahomeds gave to the Arakanese, but that people restrict it to the descendants of Arakanese by Bengali mothers. The Mug form six-tenths of the native population of Arakan.

The Arakan hill tracts, lying between long. 92° 44' and 93° 52' E, and lat. 20° 44' and 22° 29' N, commence about 100 miles from Akyab, and terminate on the northern confines of British India, in a country occupied by independent wild tribes. The hill tracts of Arakan have an area of 5000 square miles, are separated from Cachar on the N. by the territories of independent tribes, chiefly the Looshai and Shando; on the E., between Arakan and Upper Burma, lie the countries of the Shando and the Chin; on the S. is the Akyab district, and on the W. is Chittagong and hill tracts. The hill tracts of Northern Arakan in 1878-79 had a population of 18,329—

Khyoung-tha, or Chin, 1,559
Chongtha, 1,580
Knhami, 10,800
Chaw, 219
Choo, 100
Mro, 3,722

Bengali, Telugu, Mahomeds, Hindus, Burmese, Manipurians, and Siamese or Shan, make up the remaining 130.

The trans-frontier independent tribes are the Looshai, Shando and Pooi, the Khyun and Khongsbo. Kami number about 22 clans. Ka-mi means 'man.' The Chin are much scattered through Burma and Arakan. They tattoo the faces of their wives at puberty. They have muskets, also bows and arrows. They make koung or rice-beer. The Mro tattoo. The Kami, Shando, and Upper Pin Mro do not tattoo. The Ku clan of the Chin, as their sole apparel, have a girdle of rattan cane, dyed red, coiled round and round their waists.

The Choung-tha (choung, a river, and tha, a son) or Ra-kainge are of the Myanma (Burmese) stock, and have seven clans, all situated on the Koladyn. They tattoo.

The Chaw are a small tribe, who are supposed to be descendants of Hindus taken in war. The Koon bury their dead; their language resembles that of the Ka-mi.

They all practise the jhum or kumari cultivation. They grow tobacco largely. They all have slaves, captives and debtors; and the graves in their burial-places, especially of the Chin, are marked by a stone slab lying across 4 or 6 hewn

ARAD.

ARAD. GUL. Phaeandia mungo

ARADHYA, a class of Brahman who profess the Jangam creed, but adhere to their caste views. In other sects of Hindus, the Brahman uniformly takes precedence of other castes. But among the Vira Saiva or Jangam sect, he is degraded beneath all others. Hence there is a perpetual feud between the Arudhya Brahman and the Jangam, who (unless at funerals, where all are bound to assist) treat these Brahman with contempt. —Brown on the Jangams, p. 8; Wilson's Glossary. See Jangam; Basava.

ARADOONDA. Tel. Capparis horrida.

ARAFAT, anciently called Jakab Ilal, the Mount of Wrestling in Prayer, and now Jakabil Rahmat, the 'Mount of Mercy,' is a low pointed hillock of coarse granite, split into large blocks, with a thin coat of withered thorns, about one mile in circumference, and rising abruptly from the low gravelly plain—a dwarf wall at the southern base forming the limit of the temination—to the height of 180 or 200 feet. It is about a six hours' march or 12 miles on the road, due east of Mecca. Near the summit is a whitewashed mosque with a minaret, looking like a small obelisk; below is the whitened platform, from which the preacher, mounted on a temoreda, delivers the sermon, to be present at which is an essential part of the Mahomedan pilgrimage to Mecca. —Hamilton's Secai, p. 131; Burton's Meccia, iii. p. 252, 257.

ARAFURA. See Allofera.

ARAHAR. Beng. Pigeon pea; Cajanus Indicus.

ARAK. According to Leon de la Borde and Correa, two trees are known in Arabia by this name, one, in the interior of Oman, the Saladora Persica; the other, shorter and smaller, the Avicennia nitida. —Delille, Voyage en Arabie (Leon de la Borde); Weller's Travels, i. 416.

ARAD-KADU. Tam. Literally, the jungle on the river; the modern Arect.

ARAKAN was ceded to the British by the treaty of Yandabo, dated 24th February 1826. Its districts are now Akyab, An, Ramri, and Andoway. It is called by the natives Ra-khaing-yee or Ra-khoing country. There are three principal rivers, the Mayn, the Koladyn, and the Le fyo. The inhabitants of Arakan proper are the Buddhist Burmese, known there as Ra-khaing-tha, the Kola mahomedans from Bengal, and the Dom, also from Bengal, in the plains; and in the hills, the Chyang-tha, the Ku-me or Kwe me, the Doiing, and the Mroong. Its chief ports are Chittagong and Akyab, and rice is its great export. The Koladyn is a narrow belt of land, hemmed in between the sea and the Aeng or Youmading range of mountains, which runs very near the coast. It is traversed from north to south by the Koladyn, a large river navigable for a considerable distance into the interior; and has numerous small rivers, all of which have tidal channels, and form a sort of delta along the coast, which is skirted by many islands. From the proximity of the

---

ARAKAN.

---
pillars. The widows are re-married to the brother of their deceased husband.

The Shandoo or Pooi are a powerful tribe. They have eleven septs,—the Boukhee, Bwa, Hakka, Lallian, Moungdoo, Rumppee, Saypee, Saybong, Tanglang, Toungsat, and Yaillian. They dwell in villages of 80 to 700 houses. They were all till lately inveterate raiders, plundering and enslaving. They swear friendship in sacrificing a bullock or other animal. The Shando are known to the Burmese and the Yaw of Upper Burma by the name of Myouk-Chin, also as Boungshay, but usually as the Aying or barbarian.

The powerful tribes claim 'ata,' or protection tribute, from the weaker bodies, and they enforce it by raiding. —Huges' Hill Tracts; Lubbock, *Origin of Civilisation*; As. Soc. Journ.; Treatise ARA KOORA. Tel. Malayale quadrifolium.

ARAL, an extensive inland sea in the Aralo-Caspian depression, from lat. 45° 35′ to 46° 45′ N., and long. 58° 22′ to 61° 46′ E. Its length from N.E. to S.W. 265 miles, its breadth in the centre 165 miles, and its area 17,600 geographical miles. It is 117 feet above the Caspian, and 33 feet above the ocean. The Amu Darya and Syr Darya, the Oxus and the Jaxartes of the Greeks, empty themselves into this sea. It is called by the Kirghiz tribes Aral Tenghiz, Sea of Islands. The water contains 13 per cent. of salt, but is drinkable. It has many islands and reefs of rocks. Its depth varies up to 37 fathoms; rain rarely falls. Its surface is supposed to be lowering. The Greeks, writing of the Jaxartes and Oxus, asserted that both these rivers disenbogued into the Caspian. From this opinion has been entertained that in ancient times the Sea of Aral formed a part of the Caspian.—Cotter, C.; Khiva.

ARALIA CACHEMERICA. Dne. Dunak, Chanamri, Chenab. | Bana-khor, Churial, Panj. A rank plant growing to 6 or 8 feet high; is abundant in some places in the Jhelum and Chenab basins, at 5200 to 9000 feet. It is said to be eaten by goats.—J. L. Stewart, M.D.

ARALIACEAE, the ivy family, a natural order of plants, generally trees or shrubs. The genera panax, dimorphanthus, aralia, and hedera occur in the East Indies. The natives of Sikkim collect the leaves of many Aralias as fodder for cattle, for which purpose they are of the greatest service in a country where grass for pasture is so scarce; this is the more remarkable, since they belong to the natural family of ivy, which is usually poisonous. The use of this food, however, gives a peculiar taste to the butter. In other parts of the Himalayas, fig leaves are used for the same purpose, and branches of bird-cherry, a plant also of a poisonous family, abounding in prussic acid. Aralia cordata, Thunb., a plant of China; its young shoots provide an excellent culinary vegetable.—Von Mueller; Hooker, Journ. i. p. 359; *Hogg's Vegetable Kingdom, 390."

Grows in the Chinese provinces of Kan-suh and Shan-si. Its root is used in hemorrhages, fluxes, dyspepsia, menstrual and puerceral diseases. Chinese women believe that it makes them turn to their husbands. The young shoots and roots are eaten in China and Japan. It greatly resembles celery.—Smith.

ARALIA PALMATA, Smith, the Wu-ki-a-pi of the Chinese, grows in Shen-si, Hu-peh, and in the valley of the Yang-tze. Its root is made into a tincture, and prescribed in rheumatism and tertiary ailments.—Smith.

ARALIA PAPYRIFERA. Hooker. Rice paper. *Tung-ts'au, CHIN. T'ung-toh-muh, CHIN.* This plant grows in King-chau-fu in Hu-peh, and is cultivated in Formosa. The ordinary size of its pith is about that of a man's thumb, but larger sizes are obtainable. It furnishes the rice paper of commerce, which is so largely consumed in the provinces of Canton and Fok-kien, that it is estimated 30,000 dollars' worth of it is annually made use of in Fu-chu-fu alone, where every lady wears a paper fan. It is used also to make in embroidery. One hundred sheets, each about three inches square, can be bought for three half-pence. The pith is sometimes ½ inch in diameter. It is not grown from seed, but from young shoots; when these appear above ground early in spring, and are a few inches high, they are carefully separated from the parent roots and transplanted into pots, in which they remain until about a foot high, when they are removed to land prepared for them. They are said to attain their full growth of 10 or 12 feet at their tenth month; they are cut down, the twigs and leaves removed, and the stems left to soak for some days in water, to loosen the bark and wood, and facilitate the removal of the pith. This last, after being cleaned and made into a cylindrical shape, is cut into convenient lengths, and is now ready for the hands of the paper-cutter, who, with a sharp broad-bladed knife, makes a slight longitudinal incision in the pith; the knife is then turned round gently and regularly on the edge of the knife until the whole available material is planed off in thin even slices. Much care and dexterity are requisite to produce sheets of even thickness.—Bennett, pp. 299-304; Hooker; Smith.

ARALIE. Maleal. A tree about forty feet in height, and two feet in diameter; used in Malabar for planks in vessels.—Edgew. Mal. Can.

ARALU. Sing. Terminalia chebula.

ARAM. The highland south-west of Armenia (Arminn); the country between the sources of the Euphrates and Tigris, and Mesopotamia proper, is Aram Naharain. The Arameans were a Semitic race of highlanders who first settled on the upper part of the Euphrates and Tigris districts, and then passed through Mesopotamia proper (Aram of the two rivers). The name of Us, in Nejd, proves that its offsets extended as far as northern Arabia. The Arameans, according to Chevalier Bunsen, are the historical nations of Syria, Aram, Mesopotamia, and Babylon, speaking Syrian in the west, and the so-called Chaldaic in the east. In the gradual diffusion of mankind, the western provinces of Iran seem to have fallen to the share of the Arameans and Elamites; and the Semitic people and language displaced the Kushite. From their primitive language two distinct branches sprang, the original Arabic, with the Musnad, Korieh, and other dialects of that tongue, being one, and the Aramaic the other. The latter had two grand subdivisions, from one of which, known as the Western Aramaic, were derived the Ar-
ARAN-KOWAL. HIND. The lotus of the desert, from aranya, a waste, and comba (pronounced kowal), a lotus.

ARANYA. SANSK. A forest, a wood. Aranya-bhashti, a Hindu festival on the 6th (shaṣṭi) of Jeyesth (May-June), observed by Hindu women in the hope of obtaining handsome children. Part of the ceremonial is walking in a wood. Shashhti is also the name of a Hindu goddess.

ARANYAKA. SANSK. Treatises relating to Hinduism, to be read in a forest. Part of one is said to have been written by Asvanyalaya, another part by Sayana. They are religious and philosophical writings, which expound the mystical sense of the ceremonies, discuss the nature of God, etc. They are attached to the Brahmans. Their names are often prefixed with the word the, i.e. the Shaṭa-brahmana; the Taiṭṭiriya, the Aitareya, a part of the Aitareya Brahmana; and the Kanshitaki. Here are passages in these books unequaled in my language for grandeur, boldness, and simplicity.—Garrett; Dowson.

ARARAT, a volcanic mountain, in lat. 39° 42' N., long. 43° 38' E. It consists of two peaks.—Great peak, 17,323 feet, on the north-west; Less peak, 13,093 feet, on the south-east. An eruption occurred on the 2nd July 1840. It is called by the Persians, Mountain of Noah; Aghridagh, by the Turks; by the Arabs, Jabal-ul-Igdi; and by the Armenians, Masissar, or Mountain of the Ark. All unite in revering it as the haven of the great ship which preserved the father of mankind on the waters of the deluge. Some planks of the ark are said to have remained on this hill at the date of the accession of the Abbasid Khilifs, A.D. 749.—Porter's Travels, i. 183; Gen. Montet's Report; MacGregor.

ARAS, a modern name of the ancient Araxes, the Averma of the Parthians, now called Kum Feroz. It laves the foot of the rock Istakhr. The Araxes, at its commencement, owing to its many alluvions, bears the Persian appellation of Hazara; it springs from the sides of the Bin Gol, or mountain of thousand lakes, about 30 miles south of Erzerum, and nearly in the centre of the space between the eastern and western branches of the Euphrates. Its course, from its first spring near Jabal Seihan, is almost north-east for about 145 miles through Armenia, when it turns eastward, being then near the frontier of Kars; this proximity continues for 110 miles. The sources of the Aras and those of the north branch of the Euphrates are about 10 miles from one another. In modern times, the north-eastern districts, along the banks of the Araxes, intervening between Aderbian and Georgia, have been in general subject to the sovereigns of Persia.—Malcolm's History of Persia, ii. p. 212; Jour. Roy. Geo. Society, vi. part ii. p. 206.

ARASA. BENG. Solanum verbascifolium. ARASA. KARN. Arasan, TAM. A king, a ruler; a variation from raja.

ARAS-MARAM. TAM. Ficus religiosa. Aras-Nar, a fibre obtained from this tree.

ARASHTAR, SANSK., or the kingless, the republican defenders of Sangala or Sakala. They are the Adraste of Arrian, who places them on the Ravi. They were known by the several tribal names of Bahika, Jartikka, and Takka, from which last is the name of their old capital of Taxila or Takka-sila, as known to the Greeks. The people still exist in the Panjab hills; and their alphabetical characters, under the name of Takri or Takni, are now used by all the Hindus of Kashmir and the northern mountains, from Simla and Sabathu to Kabal and Bumian.—Elliot. See Chandragupta; Takka.

ARASINA-GURGI. CAN. Garcinia pictorina. ARATI. SANSK. An enemy. The Arati ceremony amongst Hindus is practised on the birth of a child, to avert the evil eye. See Cureuma longa.

ARATNI. TAM. An ell; the short ell measure.

ARACURIA BIDWILLI. Hooker. The Bunya-bunya of the natives of Australia, grows about Sydney and on the mountain ranges between Burnett and Brisbane rivers. It attains a height of 250 feet, with a circumference of 25 feet. Its branches are 9 to 12 inches long, and 5 to 9 inches in diameter; and as these form an important article of food at certain seasons to large tribes of aborigines, the trees are preserved. Each tribe has its own group of trees. Araucari Cookii, R. Br., of New Caledonia, rises 200 feet; A. Rulei, F. v. Mueller, is a large tree; and A. Cunninghamii, the Australian or Moreton Bay pine, forms vast forests along the shores of Moreton Bay, in lat. 14° to 29° S., and on the alluvial bank of the Brisbane river, lat. 27° to 30° S. It attains from 100 to 130 feet in height, with a circumference of upwards of 14 feet, having a clear stem to 80 feet, with a circumference of 25 feet.—Jeffrey; Von Mueller; G. Bennett, pp. 325, 326.

ARCHERY.

The Norfolk island pine grows also in New Holland, New Caledonia, Botany Island, and Isle of Pines. It is a majestic tree, attaining to heights of from 60 to 228 feet, with a circumference of 33 feet. Its wood is useful for carpenters' indoor work, but is too heavy for naval purposes, as spars. Admiral Keppe1 says that its timber soon rots when exposed to the weather, and the auger worm makes fearful ravages in the fences made of it. It is generally used for building purposes, flooring, partitions, etc.; and when kept dry, and not exposed to the weather, it is more durable.—Keppe1's Voyage of the Meander, p. 82; Keppe1's Ind. Arch., ii. p. 282; Von Mueller.

ARAVA, the Dravida people, commonly called Tamil, who speak the Arava or Tamil language.

ARAVALLI, a chain of hills connected by lower ranges with the western extremity of the Vindhyas mountains on the borders of Gujarat, and stretching from S.W. to N.E. up to a considerable distance beyond Ajmir, in the direction of Delhi, between lat. 25° and 26° 30', and long. 75° 20' and 75° E. The range forms the watershed of the Indus and Ganges valleys. Its highest peak is Mount Abu, about 5550 feet. It divides the Rajputana into two nearly equal parts, forming the division between the desert on the west and the central table-land. It would be more correct to say the level of the desert, for the S.E. portion, including Jodhpur, is a fertile country. Except this tract, all between the Aravalli mountains and the Indus, from the Sutlej or Hyadudris on the north to near the sea on the south, is a waste of sand, in which are cases of different size and fertility, the greatest of which is around Jessalmir. The narrow tract of Cutch intervenes between the desert and the sea, and makes a sort of bridge from Guzerat to Sind. Central India is a table-land of uneven surface, from 1500 to 2500 feet above the sea, bounded by the Aravalli mountains on the west, and those of the Vindhyas on the south, supported on the east by a lower range in Bundelkand, and sloping gradually to the N.E. into the basin of the Ganges. It is a diversified but fertile tract. The patar, or plateau, of Central India, is distinct from the Vindhyas to the south and the Aravalli to the west, and its underlying rock is trap. Aravalli means the hill of strength; and these hills have afforded protection to the most ancient sovereign race in the east or west,—the ancient stock of the Suryavans, the Heliade of India, or children of the sun, the princes of Mewar, who, when pressed, retired to its fastnesses, only to issue again when occasion offered. The people who occupy the Aravalli are the Meena mountaineers, a predatory race. The hills are rich in mineral products, and enabled the Mewar family long to struggle against superior power, and to raise the magnificent structures which ornament their kingdom. The mines are royalties, and a monopoly. 'An-Dan-Kan' is an expression which comprehends the sum of sovereign rights in Rajasthan, being allegiance, commercial duties, mines. The tin mines of Mewar were once very productive, and yielded, it is asserted, no inconsiderable portion of silver, but political reasons, during the Moghul domination, led to the concealment of such sources of wealth. Copper of a very fine description is likewise abundant, and supplies the currency; surma, or the oxide of antimony, is found on the western frontier. The garnet, amethystine quartz, rock crystal, chrysolite, and inferior kinds of the emerald family, are all to be found within Mewar. —Elphin, i. p. 2; Tod's Rajasthan, i. pp. 10, 12.

ARAYA-ANJELI. MALEAL. Antiniris sacciferus.

ARAY KEERAY, TAM. Butytneria herbacca.

ARAZI. AR. From Arz, land. In N. India, Arazi-abadi, the village site, which is unassessed. Arazi-bag, grove lands. Arazi-behan, or beehnay, seed beds.

ARAB, the title of the chiefs of the Khali, Monnad, and other tribes on the Peshawar frontier. It is the plural of the Arabic rab, lord.—MacGr.

ARBABI, a branch of the Naurui tribe of Baluch, now tributary to Persia.

ARBAMIAL OF Jielum. Hodera helix ; ivy.

AR-BAND. HIND. The loin-cloth or choli of the Hindu men, passed between the thighs.

ARBELA. On the site of this great ancient city of Assyria, the modern town of Ervil has been built. A Turkish fortress is built on the top of the great mound.—Mignan's Travels, p. 594.

ARBOR ALBA, the cajuputi tree. A translation of the two Malay words, Kayu-path.

ARBOR SECCO, the dry tree of Ezek. xxvii, 24, is repeatedly spoken of by Marco Polo as existing in N.E. Persia.—Yule, Cathay, i. p. 48.

ARCA. SANSK. One of the names of the sun.

Arca Bahu Phala, in some mss. is written Arca Bahoota and Arca Bughbah.

ARCS. SANS. The arc which a planet describes during that part of the equation of time which arises from the inequality of the sun's motion in his orbit being an equation to which all the planets are subject, but the motion of which it differently affects.

Arc Endu Sangana, the instant of true conjunction of the sun and moon.—Warren's Kala Sanshita.

ARCENTHOBium OXYEODII, Biob. Shekoar of Chenab. A pretty little mitelecole, common on Juniperus excelsa, at some places 5000 to 9000 feet in Lahoul. It frequently kills the trees which it attacks. It is said to flower generally in winter.—J. L. Stewart, M.D.

ARCHA, in Hindism, objects of worship, as images, etc. See Sri Sampadaya.

ARCHALWA, of Sutlej. Coriaria Nepaleniscus.

ARCHANGELS. Mahomedians reckon four viz. Jibril or Gabriel, who is God's messenger; Mikhail (Michael), who is the protector of the Jews; Israfil, who will sound the last trumpet at the resurrection; and Azrail, the angel of death. In the book of Enoch, six are named, Uriel, Raphael, Raguel, Michael, Sarakiel, and Gabriel.

ARCHER FISHES. The Chelmon rostratus, Linn., Chelodon rostratus, Shaw, is, according to Sir E. Tennent, the archer fish of the fresh waters of India. On seeing a fly settle overhead on a leaf, it propels a drop of water and brings it down. See Cheloton toxotes.

ARCHERY. In Sanskrit, Dhanurvidya, is always put for military science in general. Archery was the predominant branch of the military art among ancient Hindus, as is evident from this use of the term, and from all descriptive accounts of heroic education. Rama, his sons, the Pandava, Ayus, and all other princes, are represented in the Ramayana Mahabharata, and in all poems and plays, as making archery a principal part of their education, furnishing a remarkable analogy, in this respect, to the
practice of the ancient Persians and Scythians. Throughout south-eastern Asia, the bow has almost disappeared, the only people using it constantly in war and for the hunt being the Bhs, Sontals, and the Mincopi; but at the annual "fângar" of the Nizam of Hyderabad, there continued to the latter part of the 19th century to be seen a few soldiers in the procession armed with bows.

ARCHIL, a violet dye, obtained from several species of lichen, the most important of which are Roccella tinctoria and R. fusiformis. Also from Leccana pericha, or Orselina de terre, and L. tartarea or callbear. — Tomlinson.

ARCHIPELAGO. In the south and east of Asia, there are several great groups of islands to which this term is applied. The Maldives, Changos, and Laccadives are of Madrepore origin.

The Maldives islands are in 17 groups called Atolls. They extend from 0° 40' S. to 7° 6' N., separated from each other by narrow channels. The population is about 200,000, supposed to be of Arab descent.

The Laccadive group extends between 10° and 12° 40' N., and consists of fifteen smaller clusters of two or more islands. The people are of Arab origin.

The Eastern or Indian Archipelago consists of an immense labyrinth of islands, among which are at least twenty of considerable size, and one which nearly equals Europe in extent. Its clusters of islands and islets, scattered in irregular profusion over the Southern Ocean, commence at the S.E. extremity of the Bay of Bengal, and stretch eastward far into the Pacific, through 30 degrees of longitude and 31 degrees of latitude, from 11° S. to 19° N., and from Sumatra to New Guinea, in an area of five millions of square miles. It comprises islands and groups of islands, inhabited by races differing widely in character, estimated at 35 millions. Many of them are under the control of Holland, Spain, and Great Britain.

Five-sixths of the whole Archipelago are claimed by the Dutch as their own possession, or as feudatories (Moniteur des Indes), Sumatra, Babi, Nias, Minato, the Pora Isles, Poggi, and the Lânganos; Java, Madura, Bawean, the Kangang, Banka, Billiton, Bintang, Linga, the Natunas, Ambangas, and Tambelan, the kingdom of Sambas in Borneo, with the great Pontianak and Banjar-mass island residences, and the Karinata Isles; Celebes, Sumbawa, Bontou, Saleyer, Ausbonya, Jeram, Buru, Siam, Sangir, Talant, the Xilla and Bangani groups, Halmahera, Obie, Batchan, Ternate, Tidor, Wâgin, Battana, Salawatte, Miysole, the Bandas, the Ki, Arru, and Tenimmer; part of Timor, Rotti, Saru, Sumba, Ende, Ademear, Solor, Lombata, Paro, Ombai, Bel; and Lombok, with the western part of New Guinea. — all these truly form a magnificent colonial empire.

Physical Features. — The monsoons regularly occur, blowing over the ocean and over forests and swamps which remain in a state of primitive nature. Abundant rains fertilize the soils, and produce a magnificence of vegetation which no country but Brazil can rival. It has been, and till continues, the theatre of prodigious volcanic action, to which it owes much of its unequalled fertility and beauty; for ashes and scoria, if they blast and destroy for a time the luxuriant tropical flora, are afterwards the basis, and become the cause of a most exuberant vegetation. The limits of the volcanic band which crosses the Archipelago are distinctly defined by the active volcanoes with which it is studded. There appears a great volcanic stream in the neighbourhood of Kantschata, from which it can be traced in a south-west direction through the Kurile Islands, Japan, and Loo-choo, skirting the coast of Asia to Formosa, where it meets another coming from the south and south-west through the Philippines and Mindanao to the Moluccas, embracing the eastern extreme of Celebes and the western peninsula of New Guinea, and then another curved from the westward along the trans-Javan chain to the Straits of Sunda, where it meets one from a north-westerly direction through Sumatra and the Andamans to Cheduba Island, in the northern part of the Bay of Bengal. From the western extreme of New Guinea, however, along the north coast of that island to New Britain, although its volcanic character has been decided by recent French navigators, there remains a tract including 15 degrees of longitude in which no active volcano has been seen. In Java there are forty-six volcanic peaks, twenty of which still occasionally emit vapour and flame. The eruptive forces operate with violence, and the great eruption of Tombo, in the island of Sumbawa, about 200 miles from the eastern extremity of Java, was a notable example. This volcano had been for some time in a state of smouldering activity, but in April 1815 it burst forth with tremendous violence, and did not cease to eject lava until July. The sound of the incessant explosions was heard in Sumatra, distant 970 geographical miles in a direct line; and at Ternate, in the opposite direction, at a distance of 720 miles. Out of a population of 12,000 in the province of Tombo, only twenty-six individuals survived. On the side of Java, the ashes were carried to a distance of 300 miles, and 217 towards Celebes; and the floating cinders to the westward of Sumatra formed a mass two feet thick, and several miles in extent, through which ships with difficulty forced their way. The finest particles were transported to the islands of Amboyna and banda, 800 miles east from the site of the volcano; and the area over which the volcanic effects extended was 1000 English miles in circumference, including the whole of the Moluccas Islands, Java, and a considerable portion of Celebes, Sumatra, and Borneo. But if the disruptive forces in these regions have been great, the creative and constructive power is active. The zoophyte is adding silently and incessantly to the number of the island groups; coral-reefs are constantly emerging from the waters; seeds, deposited by birds, or wafted by winds, quickly vegetate; verdure spreads over the waste; and palm trees rise in tufted groves, as if by enchantment, from the ocean. The hidden but ever active energy of the coral insect makes the navigation of this Archipelago exceedingly difficult, for charts and soundings do not long form safe guides where an unseen power is always at work, reducing the depth of seas, and converting water into dry land.

Mountains. — A mountain range, prolonged through Arakan, halts at Point Negros, to reappear through the Andamans and Nicobars; and, after extending along the S.W. coast of
Sumatra, terminates at its S.E. point. Another range runs along the Malay Peninsula, is lost for a time, but appears again in the high peak of Lingin, and terminates in Bancea and Biliton; and a branch from this separates at Pulo Timoao, on the east coast of the Peninsula, and ends at Carmata, in the strait between Billiton and Borneo. Two ranges traverse Cambodia and Cochin-China in the same direction, and these perhaps traverse Borneo. Between the Cambodian range and the mountains at Sarawak, on the north-west extremity of Borneo, the Natunas Islands and Pulo Condor form the connecting link; and as the Sarawak hills run to the southeast, the range is probably continued, either by a connected line, or by isolated mounts, until it terminates in the Gunong Ratos, near Cape Selatan. This range, after traversing the western part of Borneo, terminates on the south coast, a little to the eastward of Kotaringin. The Annam or Cochin-Chinese range can be traced distinctly across the Archipelago to Australia, and the multitude of islands which are now to be seen, are either masses upheaved by volcanic action, or the tops of great volcanic outbursts which have appeared above the ocean; and where the earth has not risen above the water's surface, great submarine banks are to be traced from one island to another. The depth of water on these banks averages about 30 fathoms, deepening rapidly as the edge is approached, and shoaling gradually towards the land. The chain which extends along the Malay Peninsula, and is continued at intervals to Bancea and Billiton, abounds in metals, and mining operations are pursued with great success. Its tin mines and those of Bancea are well known. This range may be considered as the backbone of the Great Asiatic Bank, which extends into the Archipelago from the south-eastern extreme of Asia to a distance of nearly 1000 miles,—in fact to within 50 miles of Celebes, perhaps to the south-west extremity of that island also, but there is a space of nearly 50 miles across which no soundings have been carried. Sumatra, which lies on its western verge, has never been subjected to volcanic action, but not to so great an extent as to disturb the direction of its mountain range, which runs parallel to that of the Malay Peninsula. The third range that can be traced into the Indian Archipelago is the one that traverses Laos and Camboja, at the southern extremity of which it disappears for a time, showing itself only at Pulo Condor and Natunas, until it emerges under the north-west extreme of Borneo, and is continued along the entire west coast of that island. Here it again disappears, and only shows itself again on the north coast of Java, where it ceases entirely, the remaining portion of this island being either of volcanic formation or of alluvial deposit. The teak tree, which abounds on the Cambojan part of this range, but is not found in Borneo, is again met with here, the projecting part of the north side of Java, between Samarang and Semarang, being a vast teak forest, from the timber of which the greater portion of the shipping employed in the Archipelago is constructed. Java is the only island in the eastern seas in which the teak tree is indigenous, nor will it thrive in the volcanic parts of the island where its cultivation has been attempted. This, which may be called the Cambojan range, is also rich in minerals, gold and diamonds, especially the Bornean part of it. The volcanic islands of the Archipelago also contain metals, gold-dust being found at the bottoms of many of the mountain streams.

Ethnology.—In the Archipelago there seem to be the Malay race proper, and varieties of Negro races, viz. the Minocytes of the Andamans; the Semang or dwarf Negroes of the Malay Peninsula; the Negrito or Acts of the Philippines; the larger Negro race or Papuan of New Guinea; and a race whom Crawford styles the Negro Malay, intermediate between the Papuan and Malay. Mr. A. R. Wallace, however, indicates only two very strongly contrasted races, Malays and Papuans.

The Malay inhabit the great western islands of Sumatra, Java, Borneo, and Celebes; the latter, New Guinea and the adjacent small islands. The Malays are superior to all the others in intellect and civilisation. They occupy nearly the whole of the Malay Peninsula, half of Sumatra, and all the sea-coast of Borneo. Their numbers are estimated at 1,500,000 in Borneo, 1,250,000 in the Malay Peninsula, and 1,000,000 in Sumatra itself. The typical Malays are of a light-brown colour, resembling cinnamon or lightly roasted coffee; they have, constantly, straight, black, and rather coarse hair, little or no beard, and generally smooth, hairless bodies; they are of a low stature, rather strongly made, with short thick feet, and small delicate hands. The face is broad, the eyebrows flat, the nose small, well formed, with the nostrils somewhat exposed, the lips broad and well cut, the mouth large but not projecting. In his character, the Malay is impassive, reserved, and somewhat bashful. His feelings of surprise, admiration, or fear are not readily manifested, and he has little appreciation of the sublime or beautiful. He is somewhat taciturn, is deliberate when he speaks, but seldom laughs, nor does he openly express his gratitude for a favour. He revenges an insult more quickly than an injury. He is honest and trustworthy in money matters, but prides himself upon his capacity for lying. His intellect is but small, and he has never had the opportunities to acquire knowledge, and his mind seems incapable of following out more than the simplest combinations of ideas. He is quick in acquiring mechanical arts, and therefore makes a good servant for simple routine duties.

The Papuan is, in many respects, the opposite of the Malay. In colour he is a deep sooty brown or black, his hair is harsh, dry, and frizzly, growing in little tufts, which in youth are short and compact, but which in adults often grow out so as to form a compact frizzy mop nearly a yard in diameter. He is bearded, and his arms, legs, and breast are more or less hairy. The Papuan is taller than the Malay; the face is elongate, and the hands and feet rather large; the forehead is flat, the brow very prominent, the nose large, long, and arched, with the nostrils hidden by the overhanging lip. The face has thus a Semang character, which is deficient in the energy of the children. The Papuan is impulsive and demonstrative in speech and action, expressing his emotions and passions in shouts and laughter, in yells and frantic leaping. He is noisy and boisterous in speech and action, both at home and before strangers. Of his intellect little is known, though it is supposed to be not inferior to that of the Malay. He has a love of art, decorating his canoe, his house, and
and almost every domestic article with elaborate carving. The Papuas of New Guinea are true Negroes, and have made some advances in civilization.

The inhabitants of the Moluccas and Timor may be classed either with the Papuan or Malay. The Negro Malay are fairer than the Negro, darker than the Malay, but intermediate between Malay and Papuan.

The Negritos of the Philippines, the Mineoipe, and the Semang of Malacca differ in important characters from the Papuan races. The Mineoipe and Semang are a small Negro race. The Negritos are short, but well made, active, with soft frizzled hair, nose slightly flattened, features more regular and skin less dark than the African Negro.

The inhabitants of all the Pacific Islands, as far west as New Guinea and Australia, have much in common, while they differ greatly from other races. A vertical waving line may be drawn through the Moluccas, so that all the tribes of the Archipelago to the west of the line will be of Malay or Asiatic origin, and all to the east of Papuan or Polynesian origin.

Island Groups and Languages.—Three islands of the Archipelago—New Guinea, Borneo, and Sumatra—are of the first class, inferior in size only to Australia. Java takes a second place. Three are of third size—Celebes, Luzon, and Mindanao. And those of a fourth size are at least sixteen—Bal, Lombok, Sumbawa, Chandana, Flores or Mangarai, Timor, Ceram, Bouru, Gilolo, Palawan, Negros, Samar, Mindoro, Panay, Leyte, and Zobu, most of them with spacious alluvial tracts, navigable rivers, and much natural riches. The groups and chains in which they are distributed are dispersed over narrow seas, with the greater islands intervening. Innumerable channels and passages, therefore, open in every direction to the mariner, tortuous, intricate, full of rocks, reefs, and shoals, which render them in some parts difficult of navigation (Groot, Moniteur, i. 58). They are made less dangerous, however, by the prevailing view of the winds, the regularity of the currents, and the steadiness of the winds. Tremendous storms, indeed, called typhoons, occasionally visit the Straits of Malacca (Bermont's Voyage, i. p. 274), and blow over the China Sea; but they are rare, and the islands of the interior region may be said to lie amidst perpetual calms.

The groups known as the islands of the Aru Fura sea consist of the Tenameri, the Ki, and the Aru islands, with others of inferior significance. They are scattered over a considerable space of sea, and vary in size from very small islands in Ceram to mere tufts of verdure floating in the sea, like baskets of grass and flowers, crowned by tall clumps of palm, and dispersing through the atmosphere a fragrance like that of the cinnamon gardens in Ceylon.

The Tenameri group consists of many islands, inhabited by a curious race of people, half savage in manner, whose villages, built on limestone hills near the shore, combine with the varying outlines of the surface, the fresh and green aspect of the interior slopes, and the blue water in the channels between, to present a grateful prospect to the navigator's eye, rarely equalled in brilliance.

Timor is a word which means the east, and was probably imposed on this island by the Malays, to whose language it belongs, because this was the extreme limit of their ordinary commercial voyages to the south-east. Its principal inhabitants are of the Malay race, but it contains also Papuans, and tribes of the intermediate race. The two languages of Timor are the Manatoto and the Timori, the first spoken at the north-east end of the island, and the last used by many of the tribes as a common medium of intercourse. No alphabet has ever been invented in Timor; but, judging by the specimens of its languages, the vowels are the same as those of the Malay and Javanese.

From Timor to New Guinea there runs a long chain of islets, forming, as it were, a wall or barrier to the south-eastern portion of the Archipelago. In these islets the inhabitants are of the same race with the Malays, and speak many languages. Mr. Windsor Earl says that in the south-eastern parts of the Indian Archipelago, where opportunities of social intercourse between the various petty tribes are of rare occurrence, every island, every detached group of villages, has its own peculiar dialect, which is often unintelligible even to the tribes in its immediate neighbourhood. In some of the larger islands,—Timor, for example,—these tribes are so numerous, and the country occupied by many of them so extensive, that it becomes impossible to form even an approximate estimate of their number. Of one language, the prevailing one, among several languages of the island of Kisa, one of the Sarawati group, in the chain of islets already mentioned, Mr. Earl furnished a curious and instructive vocabulary of 539 words. The Kisa is an unwritten tongue, but its vowels are the same as those of the Malay and Javanese.

The Spice Islands, in the Molucca and Banda Seas, consist of many islands, with numerous languages. Next to Java, of which they form a sub-government, the Moluccas are the most important of the Dutch possessions in India. The islands to which this term is applied are Ambonaya, Banda, Ternate, Tidore, and smaller islands in their neighbourhood. The islands are small, volcanic, unproductive in grain, but fertile in fine spices. But the Dutch nation, in order to secure a monopoly of this class of products, for years rooted up and destroyed, at a great cost, often by force of arms, every nutmeg or clove tree not required for the production of that quantity of spices which they calculated they could dispose of. Rosingain, near Banda, was almost abandoned after the extirpation of its spice trees, its people emigrating to the neighbouring islands in search of a livelihood. The people are of the Malay race, short, squat, and darker in complexion than the Javanese. The Ambonese are of a middling height, and well formed. They are gentle, very sober, brave, easily managed, and make good mounted and foot soldiers, and a considerable number of them have embraced Christianity. Banda is very unhealthy, and is subject to frightful earthquakes. When first discovered by Europeans, the inhabitants had made considerable advances in civilisation, although still much inferior to that of the Javanese. Sir Stamford Raffles furnished specimens of three of the languages of this furthest east portion, viz. those of Ceram, correctly Serang, of Ternate, correctly Tarnate, and of Saparua, one of the Banda isles. Of 28 words of the language of Ceram, 9 are Malay, 2 Javanese, and 17 are common to these two languages. Ceram Laut was the great place
to which the Bugis carried the Papuan slaves whom they stole from New Guinea.

The great group of the Philippines, although contiguous to the proper Indian Archipelago, differs materially in climate and in the manners of its inhabitants. It extends over fifteen degrees, from near latitude 5° 40' to 18° 40' N., and consists of ten principal islands, of which only Luzon and Mindanao are of great size, and about 1,200 smaller islands and islets, with a population approaching three millions. The bulk of the people are of the same tawny-complexioned, lank-haired, short and squat race, as the principal inhabitants of the western portion of the Indian Archipelago. The focus of the aboriginal civilisation of the Philippines, as might be expected, has been the main island of the group, Luzon. This is a corruption of the Malay and Javanese word lasung, meaning a rice-mortar. The Spaniards are said to have asked the name of the island, and the natives, who certainly had none, thinking they meant a rice-mortar, which was before the speakers at the time, answered accordingly. In the Philippines are many separate nations or tribes, speaking distinct languages, unintelligible to each other. The principal languages of Luzon are the Tagala, the Pampanga, the Pangasinan, and the Iloco, spoken at present by a population of 2,250,000, while the Bisaya has a wide currency among the southern islands of the group, Leyte, Zebu, Negros, and Panay, containing 1,200,000 people.

Mr. Crawford tells us that it does not appear, from a comparison of the phonetic character and grammatical structure of the Tagala with those of Malay and Javanese, that there is any ground for fancying them to be one and the same language or languages sprung from a common parent, and only diversified by the effects of time and distance; and an examination of the Bisaya dictionary gives similar results.

The great islands of Mindanao and Palawan, and the Sulu group of islets, forming the southern limits of the Philippine Archipelago, contain many nations and tribes, speaking many languages of which little has been published. Mr. Crawford, on the information from Mr. Dalrymple, informs us that even in the little group of the Sulu islands, a great many different languages are spoken and he gives a short specimen of 88 words of one of those most current. Sulu was for many years the market where the Lamun and other pirates disposed of much of their plunder, and in former times itself was decidedly piratical. The Mahomedan religion has made much progress in Mindanao and the Sulu islands, as has the Malay language, the usual channel through which it has at all times been propagated over the islands of the Indian Archipelago. Mr. Crawford remarks that whether the principal languages of the Philippines be separate and distinct tongues, or mere dialects of a common language, is a question not easy to determine. Certainly, he adds, the phonetic character of the Tagala, the Bisaya, the Pampangan, and Iloco are, sound for sound, or letter for letter, the same.

Mincopi, spoken in the Andaman Islands, is dissyllabic. In phonology, the Mincopi is fundamentally opposed to Silongi, Nicobari, and Semangi; Niasi to Acehian, and Tilanjani to the rude Malay dialects which appear to have prevailed, and are partially preserved in the adjacent portion of Sumatra. The vocalic element is found in all the Sumatran and peninsular languages, strong in Batten and Lampongi, less so in the Malayan dialects, and comparatively weak in the Acehean and Semangi. In the Mincopi, Tilanjani, and Niasi, the consonantal element is very slight.

Bessi, a dialect of the Malayan Peninsula. 

Bhin.—The ruder Bhina dialects of the Malayan Peninsula, when compared with Malay, present the same aspect as the uncultivated Sumatran. But having been, comparatively with the more civilised and powerful Batten and Achin races, almost completely subjected to Malay influence, the indigenous peninsular vocabularies are rapidly disappearing. The languages of the Bhina or Sakai of Pera appear to resemble the ruder dialects to the southward.

Nicobaris, spoken in the Nicobar group, has a phonology allied to that of the Silong and Simang. Silongi, a dissyllabic language spoken in the Mergui Archipelago.

Semang.—The most northern of the old Indonesian languages of the Malay Peninsula, are those of the Semang tribes of Kidah and Pea. They are mainly dissyllabic, but they have more monosyllables; and a dissyllabic tendency may still be detected in the contraction of some Malay words. The phonology of the Semang has some strong peculiarities, the vocalic element being considered to contain a primitive quality different from that of the Sinic, and is compared with that of the Bhina and Malay tribes.

Sumatra.—The Malayan language, in its more ancient form, partook in a considerable measure of the general character of the W. Indonesian of Sumatra, as is evident from the phonology of its ruder dialects. With the purer phonology of E. Indonesian, it combined the consonantal, aspirate, and guttural tendencies of the Malacca basin.

Traces of this earlier character are still found in the centre of Malay civilisation, Menangkabau, where the language received its greatest culture, and attained the form which, with some phonetic improvements and a few glossarial changes, it has preserved in its dissemination throughout the Archipelago. The Malay of Menangkabau is distinguished from all the other Sumatran languages, by its higher culture, purer phonology, wider prevalence, and greater influence on other languages. The phonology of the Peninsula and Sumatra, but also, to a large extent, Javan. The principal languages of Sumatra are the Batten dialects and the Malayan, these being spoken by the largest populations and over the widest extent of territory.

In Sumatra are found at least three well-marked languages, each occupying its own area, and a fourth still preserving its peculiar character and location, although much affected by foreign influence. In addition, the western islands contain at least three other distinct and stable languages. It has, however, only the diffusive language the Malay. The chief Sumatran tongues are the Batten, Acehean, Korinchi, Lampong, Rejang.

Batten. In the Batten dialects of Sumatran an Indonesian element predominates, and they have the closest affinity with Malay. The basis of Batten is similar to that of Niasi, the latter language having spread into Sumatra, and modified the W. Indonesian character of Batten.

The Achin language is distinguished from all others in Asiasia, by having the accent on the terminal instead of the penultimate syllable.
other respects its phonology has the prevailing Sumatran character.

Montuwai is the language of a race who inhabit the Pera and Pagai groups. Its phonology is considerably more Batten than that of Nias, purer than the ruder Malay, and apparently free from Sumatran aspirates.

Jawa, an island of 40,000 square miles in extent, and by far the most fertile of the Archipelago, contained in 1880, with Madura, 19,797,977 inhabitants. In the eastern and central parts there may be said to be three Javanese languages,—the popular, the polite (which is a kind of fictitious dialect of it), and an ancient tongue, found only in old books and ancient inscriptions. The modern and popular language, as well as the polite dialect, is written in a peculiar character, of which the substantive letters amount to twenty. In Java, in addition to the Javanese, is the Sunda language, which is spoken over about one-third of the island, extending from Cheribon across the island down to its western extremity. This tract is more mountainous than that inhabited by the Javanese, and the people somewhat less advanced in civilization, but possessing the same amiable and docile character as that nation.

Sundan has some peculiarities which separate it from the other languages of the Javan group, and ally it to some of the W. Borneon and S. Peninsular dialects. Formatively, Sundan is more simple than the Javan or even the Malayan, and approaches to the ruder Peninsular, Sumatran, and Borneon languages.

Maduran.—The industrious, peaceful, and numerous people who speak the Madurese language, with its dialect the Sumanap, occupy the island of Madura, divided from Java by a strait, and form in some districts the bulk of the population on the opposite shores of Java, to which, depopulated by long wars for the past two hundred years, they have been emigrating.

Bali.—In the adjacent island of Bali, which is small but fertile, well cultivated and populous, is the Balinese, with its ceremonial dialect and sacred language, and it is one of the most improved languages of the Archipelago.

Lombok.—The fourth language, which Mr. Crawfurd considers to have a strong affinity with the Javanese, is that of Lombok, a fertile and populous island, divided from Bali by a narrow strait. This is the termination in an easterly direction of the group of tongues which begins with Sumatra. According to Mr. Logan, Javan has a much broader, more forcible, aspirate, and primitive phonology than Malay, and the Javan group embraces Sundan, Maduran (with its dialect Bawai), and Bali.

Kawi.—The Kawi language preserves some evidence that, at the era of its formation, the Javan language was less removed from the adjacent languages than it afterwards became, through the continued development and influence of Kawi, and a disposition to a factitious and pedantic culture. The Javan language participates to a certain extent in the peculiarities of the Kawi, and the K is a frequent sound in both. Indeed, it would appear that most of the peculiarities of the Javan, or those phonetic traits which distinguish it from the general N. Indonesian phonology on the one side, and from E. Indonesian on the other, may be referred to the influence of Kawi.

Borneon Languages.—The Ngaju, Kahayan or Kayan of the south coast, and that of the Landshki of the west coast, inland of Pontianak, are entirely Malay in their structure and formatives. The Kayan must be considered as the most southerly of the N.E. projection of Borneo, a position which brings it into proximity with the Bissayan and E. Nussean languages. This is assuming the correctness of Mr. Barn’s statement, that the Kayans have spread from the basin of the Tidung over the watershed into the north-western lands extending from the Bruni to the Rejang.

Alphabets.—In the Archipelago are nine distinct alphabets, every one of which appears to be a separate and a native invention. But they are not only distinct from each other, they differ equally from all foreign alphabets. These nine alphabets of the Archipelago are the produce of five large islands only out of the innumerable ones which compose it.

The Javanese is certainly the most perfect alphabet of the Archipelago, and the rest, although they differ in form, bear it, in principle, a common resemblance. It has a distinct and invariable character for every sound in the language, and so far, therefore, it is a perfect system. The consonants amount to 19, and can be represented in Roman letters as follows—b, d, d, g, j, k, l, m, n, p, r, s, t, w, y. Besides these, there is the aspirate which always follow a vowel, and never aspirate a consonant. The vowels are 6, a, e, i, o, u. The diphthongs are 2, viz., ai and au, but have no characters, being expressed only by their elements. The Javanese alphabet, like all the others of the Archipelago, is written from left to right. In the character thus described are written the proper Javanese, the Sundan, the Batai, and occasionally it is believed the Lombok. The Sundan and Batai alphabets, however, want the palatals d and t. Altogether, including Palembang in Sumatra, it is probable that the Javanese alphabet is current among no less a population than twelve millions. It is the most perfect, and has obtained the widest diffusion. But in prior times, other characters, to the extent of twelve in number, have prevailed in Java.

In Sumatra, beginning from the west, the first evidence we have of a native written character is found among the Batak, and it is singular enough that a nation of cannibals should possess the knowledge of letters. There was assuredly nothing of the kind in Europe or continental Asia until long after men had ceased to eat each other. The form of the Batak letter is horizontal. The substantive characters of the Batak alphabet are the same as those of the Javanese, with the exception of the letter c and the palatals d and t, which it wants.

The Korinch alphabet, among the people of this name in Sumatra, who border on Menang-kabau, has 29 characters, and consists of horizontal or slightly raised scratching.

The Rejang is the alphabet of Lemba and Pasumman on the western side of Sumatra. It consists of 23 substantive characters, formed of upright scratches or strokes, and on the whole it is more complete than either the Batak or Korinch.

The Lampong nation occupies that portion of the S.W. side of Sumatra which lies opposite to Java, divided from it only by the Straits of Sundan.
ARCHIPELAGO.

It has its own peculiar alphabet, which consists of 19 substantive letters, the vowel a and the aspirate being included among them, with double or treble consonants making them up to 44. It has a great deal of that angular linear and mengre form which characterizes the other Sumatra alphabets. The consonants correspond in power exactly with the Javanese, the palatals d and t excepted, which the Lampang does not contain. The Lampang, like the Rejang, has the Hindu classification, but it is not so correctly followed; the vowel a and the sibilant are found out of place, and thrust in among the liquids.

The Acheean and Malay of Sumatra are written in the Arabic character.

In Celebes are two distinct alphabets, one of them the Bugis, at present in use over the whole island, and which extends to Bouton and Sumbawa, and wherever the Bugis nation have settled or colonized. The modern Bugis has 23 substantive characters, consisting mostly of small segments of circles running horizontally. The Bugis letters have no resemblance to those of Sumatra or Java, or even to the obsolete alphabet of Sumbawa. The other alphabet of Celebes is no longer used.

The Bima alphabet, formerly in use amongst the Bima people in the island of Sumbawa, east of Sumatra and Java, has now given way to the alphabets of the Celebes.

The ninth and last alphabet of the Archipelago is the Philippine, that of the Tagala nation of the great island of Luzon or Luzonias, and consists of thirteen characters. It is the only one existing in the whole of this group, and seems at one time to have been used among the civilised tribes of the neighbouring islands, having spread even to Magindanao and Sulu. The forms of the letters are rather bold and more complex than that of the Sumatran alphabets.

The main characteristic of the Archipelago letters, their differing among themselves, and their differing equally from all foreign letters, leads to the conclusion that each alphabet was originally separate and independent, and in all likelihood, in the localities in which we at present find them. What caused this early invention of letters among these nations, and at so many different and distant points, it is not very easy to say. The Malayan Peninsular and Borneo, extensive as they are, have never given rise to an indigenous civilisation, sufficient to raise their inhabitants beyond the condition of small and miserable communities, and hence no indigenous alphabet can be traced to them. Their more civilised inhabitants are invariably stranger immigrants. The Borneo coasts are occupied by the Malay race and by the seafaring Orang Laut and Bugis, but in its interior are about sixty nations, and with distinct names, speaking distinct languages. The most powerful are the Dyak and the Kayan, wholly illiterate.

No kind of native writing can be traced to the Spice Islands, which, notwithstanding their rich native productions, are incapable of yielding corn, iron, or cattle, the rough staples of early civilisation, and without the presence of which, letters have never been invented or existed. In the great island of New Guinea, with its savage Negro population, and with the same deficiencies, the presence of any kind of writing is not reasonably to be looked for. No trace of a written character has been found in the wide extent of the islands of the Pacific. Most of them are probably too small to have furnished a population at once sufficiently numerous and concentrated to generate the amount of civilisation requisite for the purpose. In the great islands of New Zealand, with their comparatively energetic race of inhabitants, the discovery of letters would most probably have been made, as among some rude nations of Sumatra, had the civilisation necessary not been precluded by the absence, as in the smaller islands, of the larger animals for labour, and of all the cereal grasses for food.

The facility with which materials to write on are obtained in the countries occupied by the Malayan nations, has probably contributed something towards their early discovery of the art of writing. The want of them on the contrary, is known to have proved a great obstacle to the progress of letters, and probably was to their invention in temperate regions. The absence of a good material in ancient Europe hindered the invention of printing; while its presence in China no doubt contributed largely to its early discovery in that country. Like the Hindus and the Buddhists of Continental Asia of the present day, the Archipelago islanders write on palm leaves, which have received no other preparation than that of being dried, and cut in slips; on the inner bark of trees a little polished only by rubbing; on slips of the bamboo cane, simply freed from its epidermis; and on stone, metal, and finally on paper. The palm leaf ordinarily employed is that of the lontar, or Borassus flabelliformis. The Malay word is most likely a corruption of two words,—ron, a leaf in Javanese, and tar or tal, the proper name of this palm in Sanskrit. This seems corroborated by the Javanese name, which is written rental.

From the use of this word, the practice of writing on palm leaves may have been derived from the Hindus. This word, with many others wholly or partly Sanskrit, belongs to the ceremonial and fictitious dialect of the Javanese language, a genuine native name, kroyate, existing for it in the old dictionary.

The instrument for writing with the palm leaf, bark, and the bamboo, is an iron style, and their writing is, in fact, a rude engraving, which is rendered more legible by rubbing powdered charcoal over the surface, which falls into the grooves, and is swept off the smooth surface.

The Javanese, however, understand the manufacture of a kind of paper from the gluge, Broussonetia papyrifera, and the article itself dalawan, changed into dalanian for the polite language. The process is not the ingenious one of China, India, Persia, and Europe, but greatly resembles that of making the Egyptian papyrus, and still more closely the preparation of the South Sea cloth, the raw material being, indeed, exactly the same. The true bark, cut in slips, is long macerated and beaten, and, after being thus treated, slips of it are joined to each other over a smooth surface, and defects made good by patching. The fabric thus obtained is of a brownish grey colour, unequal in its texture, rigid, but strong. With the exception of the Javanese, it does not seem that the natives of the Archipelago ever wrote with ink, before they were instructed by the Arabs, no doubt from the absence of paper. The Javanese have a native name

188
ARCHIPELAGO.

for 'pen' and 'ink,' sun and mansi; but with the other nations the only ones are Arabic, kahun and dowat, often indeed greatly disfigured, as in the example of the Bugis, who convert them into kalah and dawak. The pen generally used is not reed as on the continent of Asia, or a quill as in Europe, but a stub obtained from the Aen palm, Arenga acaccharifera. Even paper is generally known to the Indian islanders by the Arabic name of karta, so that it is probable that a true paper was imported long before the arrival of Europeans, although the natives were never taught the art of preparing it. At present, European paper is in general use by all the more civilised nations, to the exclusion of Asiatic material.

Animal Kingdom.—Mr. A. R. Wallace tells us that the distribution of the existing forms of mammals throughout the Indian Archipelago may thus be indicated. Commencing with the species common in Asia at the present day, and excluding those which may have been introduced in a domesticated state, such as the horse, dog, kine, and deer, the common brown monkey has penetrated farthest from the continent of Asia, as it extends through Sumatra and the trans-Javan chain to the eastern extremity of Timor; but the 30 miles of Strait which separate this island from Letti seems to have stopped its further progress, for it is not found in a wild state in the Serwatty group. To the north, it extends through Borneo and Celebes, and is found in a single island of the Molucca seas, Batchian. This animal, from its habit of frequenting the banks of rivers, is very liable to be carried out to sea in the masses of drift which are sometimes detached from the banks by the current, and its extensive distribution may be attributed to this cause. In Borneo, the elephant co-exists with the black bear (Ursus malayanus), the Felis macropus, or Sumatra gigantic tiger cat, and so many varieties of the quadrumanes that their introduction can scarcely have been accidental. In Java, the rhinoceros, the royal tiger, the wild ox of the Malayan Peninsula, and several varieties of the smaller quadrumanes, still exist in the jungles. Sumatra and the Peninsula contain every form of mammal found in Java and Borneo, with the addition of the tapir. These facts would go to prove that Java, Borneo, and Sumatra continued attached to the continent of Asia at a comparatively recent epoch. The common brown monkey is the only member of the family of quadrumanes that has reached Celebes and Bali, although the strait which separates the latter island from Java is barely 20 miles wide.

The marsupialia range from Australia towards the continent of Asia. A variety of the kangaroo (macropus), two varieties of the opossum (didelphis), one of which closely resembles the ring-tailed opossum of New South Wales (Phalangista Cookii), one variety of the Dasyurus, the native cat of the colonists of New South Wales and Port Essington, and one variety of the small flying opossum, have been found in the south-west part of New Guinea; and, singularly enough, the kangaroo has adapted itself to the half-drowned nature of the country by inhabiting the trees. A variety of the kangaroo still exists at Arru Island, which seems to be identical with the small grey or 'brush' kangaroo, found in the thickets throughout Australia. This is the 'Flinder' of Valentyn. The name by which it is known in the Moluccas is 'Plandok.' In Ceram, the ring-tailed opossum, the native cat, the flying opossum, and the little flying squirrel, all marsupials, and identical in appearance and habits with those which extend throughout Australia, hold undisputed possession of the forest trees. The ring-tailed opossum, which is the most numerous, as in New South Wales, is a common pet throughout the Moluccas. The opossum, more especially the ring-tailed variety, which inhabits trees, is the most hardy of marsupials, that is to say, its geographical range is farther extended than that of any other pouched animal. The tree opossum and the native cat (Dasyurus macoronus) are the only varieties of this ancient form of mammals which have not retreated before the European quadrupeds that have been introduced into the southern districts of Australia, the mere presence of a flock of sheep, without their usual attendant the dog, being sufficient to drive the kangaroos from the 'runs.' The tree opossums are not liable to be disturbed by any animals less agile than the monkey, as they are never seen on the ground except when thrown out of the trees while fighting, and then they scramble up again as fast as they can. The consequence is that the tree opossums now abound in the settled districts of Australia to an extent that could not have happened previous to the arrival of Europeans, when the aborigines kept down their numbers by dragging them out of their nests in the hollows of trees to serve as food. Even the presence of the monkey is not fatal to the tree opossums, as is evident from their co-existing in Timor and in part of South America. The musang or mungoose of the western parts of the Archipelago will prove fatal both to the tree opossum and to the native cat, whenever it comes to be introduced to Australia, as it can enter the hollows of the trees and destroy them in their nests. The tree opossums of Australia feed on the leaves and tender shoots of the Eucalyptus. In the Moluccas, where the Eucalyptus is rare, if found at all, the tree opossums feed on the leaves of the Warringin and Lingoa trees, and on the outer bark of the Kanari. As the two first exist in the Malay Peninsula, the latter under the name of Angsannah, the absence of the tree opossum from this part of the Archipelago cannot be attributed to want of suitable food. The Malayan name is 'kunai,' which has been Latinized by the old Dutch naturalists into 'Cuscas,' and adopted by modern zoologists. In Timor, the ring-tailed opossum, the same as in Celebes, is found on the island. The only marsupial that has yet been traced in Celebes is the flying opossum. The zoological connection of Java, Sumatra, and Borneo with the continent of Asia is as distinct as that of Timor, Ceram, and New Guinea with the continent of Australia. Probably Celebes will be added to the Australian group. The inferences to be drawn from these facts must be self-evident. The distinct character of the mammalian forms existing in the countries lying on the Great Asiatic Bank, show that Borneo, Java, and Sumatra were attached to the continent of Asia by an unsubmerged range at a period long subsequent to the separation of Australia, which would imply that the curved land that passes from Formosa through the Philippines, the Moluccas, Java, and
Sumatra, is the most recent line of volcanic action.

Productive Character.—The mountain ranges in south-eastern Asia and the Indian Archipelago are all more or less metalliferous. Lead mines are worked in that part of the Malayan range which traverses the kingdom of Ava; and copper mines have been opened in the Annam or Cochín-Chinese range, the produce of which is equal in quality to South American copper, but inferior to that of Japan. Iron is also smelted from the native ores on the western side of the Annam range, and it is likewise said that silver mines are worked. The tin of the Malay Peninsula, Banka, and Billiton, and the gold of the Peninsula, Borneo, and Celebes, are all collected from the deposits in which the projected metal has been deposited. Lodes have been discovered and followed up, but they are found to fine away. Lead and antimony ores are found in the Cambodian range to the north of Kampot. Maize, upland rice, yams, and other esculent roots here attain perfection. The wheat grown in the uplands of Timor is remarkably rich in gluten, although the small size of the grain gives it an unfavourable appearance in European eyes. The coffee, cotton, cacao, and hemp (Musca textilis) growing on the upheaved areas are the best produced in the Archipelago. Coal has been found. Iron ore of excellent quality is abundant where the line of upheaval has crossed primary ranges; so necessary is a flux in smelting the metal, is found everywhere. In the island of Celebes, copper was found, but the strata had been so broken up, that mining operations could not have been prosecuted with advantage (Journ. Ind. Arch. iv. p. 495). Reputed gold deposits lie on the south side of the island. Quicksilver in a pure state is sometimes brought to Coupang by natives from the interior. The gold deposits in the western parts of the Archipelago are supposed to be now pretty well exhausted; and in the more remote regions—Timor, New Guinea, and possibly Sumba—are the only spots in which the steady course of industry is likely to be interrupted by the search for precious metals. The native chiefs of the former island, terrified by the rapacity of the early European navigators, are said to have combined in establishing a law which made searching for gold a capital crime, except on occasions in which it was thought proper to propitiate the deity by the dedication of a Bulan Mas or golden moon, when a human being was sacrificed to the spirits of the mines before the gold could be collected. This ceremony is probably alluded to in the Account of Timor, published in appendix, p. 6, Moor's Notice of the Archipelago.

Commerce.—Intercourse between continental Asia and the islands of the Archipelago dates from a very remote period. Their rare products were in request in China and India long before they were heard of in Europe. Camphor and spices, two of the most esteemed productions of these islands, were used by the Chinese 2000 years ago, the one for diffusing an aromatic fragrance through their temples, the other as indispensable condiments in their feasts. In the volcanic area, a surpassing richness of the soil is produced from the volcanic rock, which decomposes rapidly before the influence of the atmosphere. The natural productions are unimportant.—the nutmeg, which is scattered over that portion of the band which approaches the continent of Australia, being almost the sole exception. But the docility of the native inhabitants proved to be such, that they were easily coerced to labour, and the curved volcanic band which traverses the Archipelago became studded with European settlements throughout its length and breadth, which now yield the great bulk of the produce exported from the Indian Archipelago. In the northern part of the Philippines, the famed Manila tobacco is the chief product; sugar plantations occupy the centre; and the Musca textilis, which yields the Manila hemp, is the chief product of the south. Spices are almost the sole productions of the Dutch settlements of the Moluccas. Some islands east of Java yield products suited to the wants of the natives to such an extent as to give rise to an export trade with all parts of the Archipelago. In Java, coffee, sugar, rice, cinnamon, and tobacco are the most important articles, the two first being exported to Holland in immense quantities. Coffee and pepper are the chief products of Sumatra, where the soil is less fertile than in some of the other islands of the band. The volcanic agency here becomes comparatively weak, and is confined to the outer coast of the island, which, being backed by an area of upheaval, the greater portion of the alluvium descends into the sea and sea-cliffs.

The edible nest, which is constructed by the Colloclasia nidifica in the caverns of the limestone cliffs, is found throughout the areas of simple upheaval. Agar-agar, a marine lichen extensively used in China, trepang or sea-slug, and mother-of-pearl shell, are common to both banks, but the Australian bank is by far the most productive.

Ocean Traffic.—There are five different seas recognised by European geography within the limits of the Eastern Archipelago, viz. the wide expanse between Borneo and the Malay Peninsula; another between Borneo and Java, called the Java Sea; another between Celebes and Timor; the Sea of Celebes, between that island, Sulu, and Mindanao; and the fifth, a basin of considerable extent, between the Philippines, Palawan, and Borneo. Around all these flow, on the west, the Bay of Bengal and the Indian Ocean.

Atmospheric Phenomena.—The transparency of the atmosphere is so great, that sometimes Venus can be discovered in the sky in the middle of the day. Especially in the rainy season, the land looms very greatly; then we see mountains which are from 5000 to 6000 feet high, at a distance of 80 or 100 English miles (Jansen). Waterspouts in many parts are very frequent. The height of the spouts is usually somewhat less than 200 yards, and their diameter not more than 20 feet; but when the opportunity of correctly measuring them has been favourable, as it generally is when they pass between the islands, so that the distance of their basis could be accurately determined, they have never been found higher than 700 yards, nor thicker than 50 yards. In October, in the Archipelago of Rhio, they travel from south-west to north-east. They seldom last longer than five minutes; generally they are dissipated in less time. As they are going away, the bulbous tube, which is as palpable as that of a thermometer, becomes broader at the base, and little clouds…
like steam from the pipe of a locomotive, are continually thrown off from the circumference of the spout, and gradually the water is released. In the north-east part of the Archipelago, the east monsoon is the rainy monsoon. The phenomena in the north-east part are thus wholly different from those in the Java Sea. In the Archipelago there is generally high water but once a day, and, with the equinoxes, the tides also turn. The places which have high water by day in one monsoon get it at night in the other.

Religion.—Wherever western civilisation has reached the indigenes, they have conformed to the religions of the new-comers. The brown or Malay race are largely Mahomedan in Sumatra and in the Malay Peninsula; in Sumbawa the Mahomedans take a high place, and are largely proselytizing the mountainers, who, however, secretly trust in their idols. Bali is still Hindu, and the Balinese burn their dead, and the widows and some slaves of rajas burn with their husband's corpse, but other widows burn or are despatched with a kris. Hindus now and again found in Java, where many magnificent ruins still attest its duration and greatness. The Arabs subsequently gained a footing there, as well as in the other islands of the Archipelago, and gradually supplanted the religion and governments of India. The Philippines have become largely Christian. Mahomedan Malays inter without coffin or shroud. Kayan Dyas are idol-worshippers, keep their dead for some days, and inter in a coffin made of the hollowed trunk of a tree. The Javanese give picturesque names to the various places in the island, such as Prosperity, Country of Ghosts, Unlucky, Heroic Difficulty. The Javanese are skilful workers in metals, gold, iron, brass, cutlery, and in carpentry. Their kris has a hundred forms. Javanese and Sumatrans are both of Malay race, but the amok is almost unknown in Java.

Johore Archipelago is formed by the prolongation of the zone of elevation of the Malay Peninsula from Singapore to Billiton. It is so closely connected geographically with Johore as to appear a continuation of it, partially submerged by the sea. These islands (with the exception of a few of the most southerly) formed the insular part of the kingdom of Johore from the 13th century to the British occupation of Singapore in 1818. There are several hundreds of islets, besides the considerable islands of Batam, Bintang, Kriman, Gampang, Gallat, Linga, and Sinkep, and Banka and Billiton may also be considered as included in it. They are geologically and ethnologically, although not geographically the same, thinly inhabited by several interesting tribes. Some of these have been slightly noticed by Dutch writers, but the greater part still remain undescribed. The more important of the tribes are those termed collectively Orang Perakun, literally the people divided into tribes. They are all vassals of the king. Those of the highest rank, to whom distinct services are appropriated when the king goes to sea or engages in war, are the Bentan under an Ulubashing; the Singgera under a Batin, the Kopet under a Jinnang, the Bulo, and the Linga. The other tribes, some of the land and some of the coasts or creeks, are the Gilam, Bekaka, Sugi, Muro, Tambus, Mantung, Kiling, Timiang, Mua, Pulo Boya, and Silat. Beside these, there are some wild tribes in the interior of the larger islands.

ARCHIPELAGO.

Mergui Archipelago, on the coast of Tenasserim, extends in a triple line from 8° 39' to 13° 13' N. The Suyer islands and King Island are the principal islands. Other islets are known as St. Matthew, Russell, Phipps, Hastings, and Barwell. They are inhabited by the Seling race, a seafaring fisher people, using the trident and bows and arrows in their fishing. Dr. Hefner thought their hair archetypal of Negroes. St. Matthew rises to 3000 feet. In 1881 the British Indian Government made arrangements for their colonization.

The Chagos Archipelago, belonging to Great Britain, between 5° and 7° S., about 74° 30' E., and the great Chagos Bank. They are coral islands, the chief being the Great Chagos. To its N. W. is a group of six islands, and the Pescos Bankhos group has twenty-seven islands of small extent, their produce being cocoanut oil, cotton, salt fish, and tortoiseshell. —Crawford's Malay Grammar; Crawford's Ind. Arch.; G. W. Earle's Papuans; Earle's Ind. Arch.; Jour. Ind. Arch. from 1847 to 1858; Suppl. to No. 5, J. Ind. ARCHITECTURE.

From the early part of the 19th century, the architectural remains and sculptures left by the races who in bygone times have ruled in India and its neighbouring countries, have been receiving more and more attention from the Government of India, and from Europeans residing there; for the Hindus were a strangely non-recording race, and, prior to the advent of Mahomedan conquerors, the rocks, the temples, the caves, the tombs, and the inscriptions on these, furnish almost the sole record of the many Hindu, Buddhist, and Jaina dynasties who held sway. Amongst those who have been thus engaged in their investigation, may be mentioned Colonel Mackenzie, Mr. James Trussef, Colonel Sykes, Mr. Edward Thomas, Major Gill, General A. Cunningham, Mr. A. Burgess, Mr. Burnett, and pre-eminentily Mr. James Fergusson, F.R.S., who has devoted a long life to these researches, traveling the various countries, and publishing the result of his inspections in his

Age.—The oldest architectural remains in British India belong to a race who, at the advent of the Aryans, occupied the country between the Himalaya and Vindhyah mountains. They consist of square tower-like temples, with a perpendicular base, but having a curvilinear out-
line above. Throughout the north-west of India, the earliest material in use was timber. It was not till after the arrival of Alexander that stone was worked by the Indian architects; and although soon after Alexander's time stone became the material employed, construction long retained the forms which were needed in the employment of wood. The Indians are supposed to have learned from the Bactrian Greeks how to make use of stone; and Mrs. Manning is even inclined to believe that Alexander had left artists in India, B.C. 323, and Dr. Hunter says (p. 267, vol. iv.), what the Buddhists were to the architecture of northern India, that the Greeks were to its sculpture; Greek faces and profiles constantly occur in ancient Buddhist statuary. The purest specimens have been found in the Panjaban. Proceeding eastward from the Panjaban, purity of outline gives place to lusciousness of form. In the female figures, the artists trust more and more to swelling breasts and towering chignon, and load the neck with constantly accumulating jewels. In Ceylon, the Buddhist temple of Anuradhapura seems to have been erected prior to the Christian era. At Ruhunugala, a temple of the Chola dynasty, there are towers in their colossal dimensions, but the dwelling-houses and religious buildings generally in Burma are all of wood, and do not permit the display which can be attained with stone, or even with brick and mortar. The architecture and ornamentation of the temples of India are by far the most interesting and complete memorials of the ancient sacerdotal and regal grandeur of India which are in existence, and give a striking impression of the former splendour of the ruling empires. The Dharwar sculptures are the records of Chalukya, Ho! Sala, Belal, and other dynasties. The Nizam's territories comprehend the seats of some of the greatest and most powerful sovereignties of the Dekhan, such as Kalyan, the capital of the Western Chalukya and Bijala Raya dynasties; Devagiri, or Deoghar, the capital of the Yadava; Varangaal of the Kakateya, and the great Mahomedan principalities of the times of Golconda, subsequently split into the subordinate principalities of the Bijapur Adil Shahi, the Ahmaddaggar Nizam Shahi, Golconda Kutub Shahi, Bener Inauid Shahi, and Beder Birud Shahi, etc. The great religious institutions now in the south of India, are Sri Sisaim in Cuddapah, Conjeeveram, Chellambaram, Srirangam, etc. There are also many religious edifices of great architectural merit, very worthy of being depicted and preserved for the beauty of their sculpture and elegance of their design, such as the stone mantapam in the fort at Vellore, latterly used as an arsenal, the temples at Tanjore, Gangondaram, and Tribhuvanam, the pagodas at Lepichil in Bellary, and of Tarpatry in Cuddapah, with many others equally worthy of admiration, in secluded and desert places, little known beyond their immediate neighbourhood.

Materials.—India owes the introduction of stone for architectural purposes to the great Asoka, who reigns from B.C. 272 to 236. In the twelfth century, after his consecration, the sixteenth from his inauguration, which was B.C. 255 or 257, he published his rock-cut edicts, in which he mentions his allies, Antiochus and Antigonus, Ptolemy (Philadelphos), Magas of Cyrene, and Alexander of Macedonia. But although the use of stone for sculpture had been general, the date B.C. 250 commences its history for architectural purposes, and for at least five or six centuries after that time all the monuments now known to us are Buddhist. Mr. Ferguson tells us that, in the south of the Peninsula of India, nearly all the finest buildings of early times have been constructed of stone, while the edifices erected within the past five hundred years, comprising some of the most stupendous piles at present to be met with, are of brick. In the Dekhan, the most massy structures are carved from greenstone rock, with a delicacy and correctness quite astonishing. The vaults and domes of tombs and temples are commonly bolted with iron from top to bottom, and in many cases, instead of scaffolding, the structure is surrounded with a high wall ten or twenty feet off, the interval between being filled up with earth; a long inclined plane having served for raising the stones. A magnificent structure of this sort, the tomb of one of the Gwalior princes, stood half finished near Poona for some thirty years, and native architecture could there be seen in perfection in all stages of advance. Since the Indian railroads commenced, with their great spanning bridges, the rocks of all their neighbourhoods have been largely utilised; and having, formed of greenstones, granites, blue slates, limestones, and sandstones, where to be seen. Throughout the great volcanic district of the Dekhan, the various kinds of greenstone have been largely used. Amongst the blue slate formation along the valleys of the Kistna and Tumbadora, and the compact limestone formation on each side of these rivers, houses have ever been constructed of these materials, but the favourite rock for ornamental purposes in the Buddhist and Hindu temples and Mahomedan mosques of peninsular India is the dark greenstone, often, from its polish, being called black marble. The Buddhist caves of Ellora, and the smaller caves at Malerk, Mominabad and Ajunta, are excavated out of the greenstone and greenstone amygdaloid; those at Ellora, about twenty in number, are in the face of the ghat, almost scarped as it falls into the valley of the Godavary; and about a similar number are at Ajunta, in a ravine near the scarped ghts overlooking the Kandivali. These temples are at the Irawadi, near Prone, lock on the river. In Madras and Calcutta, and in S. India generally, brick is now an ordinary building material. The blue slates and limestones of the valleys of the Godavary and Kistna and their affluents are utilised, and several imposing structures are built of laterite. But in the whole of Burma and the Tenasserim Provinces, the people's houses are built of wooden planks, with shingled roofs. Buddhist and Jain dynasties were of longer duration, and the vast cave temples, etc., of Prone, Karli, Elephanta, Ellora, and Ajunta testify to the stability and power of their projectors, for some of them must have been in progress for hundreds of years, and their commencement dates from prior to the birth of Christ. Those Indian sovereigns who have longest possessed territories, the Rajput races of Rajputana, and the Solair dynasty of Mowar, have erected numerous magnificent structures in their capitals. The little permanency, since 800 years, of most Indian dynasties, has left the result only of spasmodic efforts of Hindus and Mahomedans, such as still exist at Agra, Bijapur, Aurangabad, Gogi, Golconda, Keluranga, Dowatabad, and Hyderabad, in the form of tombs, mosques, and Jain temples. Around Delhi red sandstone is largely used.
ARCHITECTURE.

Character.—In architecture and in sculpture, the greatest efforts of the dominant races were directed to the formation of religious structures, many of them objects of wondering amazement, and are greatly in contrast with the humble and scattered or wattle and daub structures in which all the people of India continue to dwell, and sadly to indicate hundreds of years of instability and turmoil. In the 2000 years that intervened between the 8th century before and the 12th century after the Christian era, the religious tenets of the Buddhists, of the Jains, and of the Brahmanas alternately prevailed, and many towns have remains of these religions, and many of their temples have been utilized by the different sects, as they alternately became predominant. Baduani, for instance, has both Buddhist and Brahmienical caves; and Buddhist remains are seen at Aiwalli, five or six miles to its north, and at Purukul or Pittrasoundkul, as far on its south.

Mr. Ferguson (p. 441) supposes that the caves at Ellora were of the following religions:—

Buddhist, Viswakarma to Das Avatar, A.D. 500-600.
Jaina, Indra, Jiganath, Subhas, etc., A.D. 550-650.
Hindu, Kameswar to Dhummar Lena, A.D. 600-750.

Dowlatabad, A.D. 725-900.

Khajuraho, in Bundelkhand, has about thirty important temples, all, except the Chao-sat Jogini, of nearly the same age, A.D. 950 to 1050, one-third Jaina, one-third Vishanwara, and the remainder Saiva, the last with indecent figures.

The temples in the south of India, he says (pp. 40-54), are of the same form for Siva or Vishnu worship, the idols or images or emblems worshipped, or the sculptures adorning them, marking the religious sect to which they belong.

The Vimana is the principal part, the actual temple itself. It is always square in plan, and surmounted by a pyramidal roof of one or more storeys; it contains the cell in which the image of the god or his emblem is placed.

The Mantapa or porches always cover and precede the door leading to the cell.

The Gopura are the principal features in the quadrangular enclosures which always surround the Vimana.

The Choutries, Chattras, or pillared halls, were used for various purposes, and are invariable accompaniments; there are, besides, tanks or wells for water for sacred purposes or the convenience of the priests, dwellings for all the various grades of the priesthood attached to it, and many other buildings designed for state or convenience.

The Stambha, or Lat, are pillars common to all the styles of Indian architecture. With the Buddhists they have been employed to bear inscriptions on their shafts, with emblems or animals on their capitals; with the Jains they were generally leopards or lamp-bearing pillars; with the Vaishnava Hindus they generally bore statues of Parvada or Hanuman; with the Saiva sect they were flagstaffs. But whatever the object of their erection, they were always among the most original, and frequently the most elegant, productions of Indian art. The most noteworthy are the Chnab Minar at Delhi, and the Jaya Stambhas 4 Ceil, Dowlatabad, and Gaur.

Rails are an imposing feature of later Buddhist architecture. Generally they are found surrounding tops; but they are also represented as enclosing sacred trees, temples, pillars, and other objects.

Chaitiyas, or assembly halls, in Buddhist art correspond in every respect with the churches of the Christian religion; their plans, the position of the altar or relic casket, the aisles, and other peculiarities, are the same in both, and their uses identical.

The Viharas, or monasteries, like the chaitiya, resemble very closely the similar institution among Christians. In the earlier ages they accompanied, but were detached from, the chaitiyas or churches. In later times they were furnished with chapels and altars, in which the service could be performed independently of the chaitiya halls, which may or may not be found in their proximity.

Lats.—The oldest of these with which we are acquainted, are those set up by king Asoka, in the 27th year after his consecration, the 31st of his reign, to bear inscriptions, conveying to his subjects the leading doctrines of the new faith he had adopted. They have shafts averaging twelve diameters in height. The rock-cut edifices of the same king are dated in his twelfth year, and convey in a less condensed form the same information, but inculcating respect to parents and priests, kindness and charity to all men, and, above all, tenderness towards animals. The best known of these lats was re-set up by Firoz Shah at Delhi. A fragment of a second was found lying on the ground near Hindu Red wall for the city of Delhi. Two others exist in Tirhut, Radhia, and Mattiah.

The most complete lat was found in 1837 lying on the ground in the fort at Allahabad, and was then re-erected with a pedestal. In addition to the Asoka inscriptions, it contains one by Samudra Gupta (A.D. 380 to 400), detailing the glories of his reign, and the great deeds of his ancestors. It seems to have been thrown down, but to have been re-erected by Jahangir (A.D. 1605), with a Persian inscription to commemorate his accession. It has lost its crowning ornaments, but the base is 7 feet 7 inches long, and the shaft 33 feet. — Beng. As. Soc. Jo. iii. and vi. pp. 794, 969.

There is a shorter pillar at Sankissa in the Doab, with a honeysuckle crowning ornament, and surmounted by an elephant. Half-way between Muttra and Kanouj (Canouj), and at Bettah in Tirhut, is another pillar of a similar nature, surmounted by a lion. There are two built pillars among the tops of Kabal, and evidently eoeval with them. They are known as the Surkh Minar and the Minar Chakari and are ascribed to the time of Alexander. The lats of Asoka are supposed to have been erected in front of, or in connection with, a stupa or other building since disappeared, and the lats themselves have been moved from their original sites. At Karli there is one surmounted by four lions in front of the great cave, and two in front of the great cave at Kenheri, which is an exact but debased copy of the great Karli cave. The two lats at Eru, and the iron pillar at Delhi, seem certainly to belong to the era of the Guptas of the 4th or beginning of the 5th centuries of the Christian era, and to be dedicated to the Vanishnava faith. The lat at Pathari may also be of the Gupta time.

Gopura.—Buddhists, Jains, and Hindus have directed an almost equal attention to the Gopura or gateways of their towns and temples. These, both in form and purpose, resemble the pylons of the Egyptian temples; the courts with pillars and cloisters are common to both, and very similar
in arrangement and extent. The great mantapas and halls of 1000 columns reproduce the hypostyle halls, both in purpose and effect, with almost minute accuracy. The absence of any central tower or mina, over which the sanctuary is universal in Egypt, and only conspicuously violated in one instance in India; and the mode of aggregation and amount of labour bestowed on them is common to both.

Domes.—The Buddhists in their structural buildings always employed circular roofs, and in all ages built topes with domical forms externally, but never seem to have attempted an internal dome, in stone at least. The dome is essentially a feature of Jain architecture, and almost exclusively so among the northern Indians. It was an essential feature of the Mahomedans before they came to India, and from the Jaina dome they worked out a style of their own. Hindus occasionally tried to imitate the Jaina dome. Many of the domes over the tombs of the Mahomedans who have been dominant in the Dehkan, and those to be seen at Bijapur, Beder, Gogt, Kulpurga, Goleconda, Ahmadabad, and a few others in the Dehkan, are examples of this style.

Buddhist Caves.—In western India, the earliest architectural remains are those of the Buddhists, ranging from about B.C. 250 to the 7th or 8th century of the Christian era. They are chiefly in the form of rock-cut temples and monasteries. The best known are at Ajunta, Ellora, Karli, Kanheri, and Junagarh, but there are others in British territory, in the Hyderabad dominions, and along the borders of the two provinces, and in the ghat. The dahogons, large cylindrical structures, with a domed top surmounted by a capital, and the arched roofs of the chaitya or temple caves, are characteristic of Buddhist caves, so also is the prevalence as an ornament of the chaitya window or arch in the shape of a horseshoe, though this is also found in early Brahmanical buildings and caves. The viharas or monasteries have usually cells around them, often with stone benches or pillars central.

The Jaina caves are sometimes so like the later Buddhist caves at Ajunta, as to be difficult to distinguish. Those at Dara-sinha are of this character. Generally the nudity of the images, their snakes, and their ringlets, at once mark them.

The Brahmanical caves are fewer than the Buddhist. They range probably between the 5th and 8th centuries of this era. Saiva caves are to be seen in Elephanta and Jogeswari near Bombay, at Ellora, and at Aihole and Badami in the Kaladgi district, and two fine Vaishnava caves, one of them at Badami. So far as yet known, Brahmanical caves consist of halls, with a single cell or shrine, and occasionally, as at Elephanta, with one or two small cells for utensils, etc., but without rooms for monks along their sides. The sect to which a cave belonged is indicated by the sculptures,—the linga, Ganpati, Siva, Bhairava, Ard-dha-nari, Ravana, Bhavani, Sarasvati, Maheswari, etc., figuring prominent in Saiva caves; Vishnu, Varaha, Narasinha, Virabhadra, Garuda, etc., are prominent in Vaishnava caves. The sculptures over the entrance and shrine door indicate better than anything else, by, or for, what sect the temple was originally built. Thus, if Ganpati is on the lintel, it may be concluded that the temple was a Saiva one; nine figures (nau graha) in a line, the eighth being a large face only, indicates a Sauriya temple, or one dedicated to the worship of the sun; a winged figure (Garuda) marks a Vaishnava temple; and a sitting figure (Jina), with the legs turned up in front, and the hands resting in the lap, a Jaina shrine. In some instances, where the Saiva sect have appropriated the Jaina shrines, the Jina has been metamorphosed into a Ganpati. Where no change in the dedication of the shrine has taken place, the figure in the shrine will confirm the above. Surya, however, may easily be mistaken for Vishnu, their images being nearly alike, only Surya holds in one or both his hands a large sun-flower. Sometimes he is represented in a chariot drawn by seven horses.

Styles.—The Dravidian style of architecture is characterized by its massiveness in walls, pillars, etc. The principal architectural lines in the roofs and shrines are horizontal, making the latter resemble storeyed pyramids; and the vertical breaks in the wall line are of but slight projection, sometimes set off with slender pilasters, or with or without sculptures between. In the earlier remains of this style, the pillars are generally very thick, and square or polygonal, while those of the later, are sometimes round, and generally remarkable for the number of horizontal members on the shafts and bases; the capitals, except the abaci, are circular, with bracket sur-capitals. The remains in this style belong to the period between the 14th and early part of the 13th century. The Kailas temple at Ellora, the seven pagodas at Madras, belong to this style, which prevails in the southern parts of the Bombay Presidency, and in the Hyderabad territory. Only one at Pattadkal has a spire in the Chalukya style.

The Chalukya style prevailed between the 9th to the middle of the 14th century, and is characterized generally by more elaborateness of ornament, by balconies and roofings supported by richly carved brackets, by the outer faces of the walls of shrines being broken up into a series of projecting corners, with equal faces, and by pillars square in section with a projecting face or fascia. At the base of a square pillar with a slightly narrower but very thin pilaster added to each side. These latter, however, while the typical section was retained, were liable to great modification, from the large amount of sculpture often lavished on them. The spires are proportionately higher than those of the southern style, with a couple or more of successive projections on each side. The faces and lines of projection are vertical at first, but higher up they fall inwards with a gentle curve towards the summit, which is crowned by a kala or finial, varying in form and size with the form and age of the building. The walls are often elaborately carved with belts of figures, and the stones are carefully fitted and clamped inside, but without mortar. Some of the finest examples of this style are to be seen in the gates of Jhinjiwada, the gates and Hira temple at Dabhol, the temple of Mudhera, and Rudra Mala, at Siddhpur in Gujarat; in the Jaina temples at Mount Abn, in the small temple at Amarnath, near Kalyan, and at some shrines at Pattadkal and Aihole in the Kaladgi collectorate. To these two there seems to have succeeded what may be called a medieval style, combining some of the features of each, and covering the period from about A.D. 1150 to 1600. To it belong most of the Jain temples, and the later Hindu temples in Gujarat; and those temples
Jainism seems to have disappeared. There seems also to have been a pause, at least in the north of India; but a revival occurred in the 16th century, especially under Rana Khumbo of Mewar, a.d. 1418-1468, who made his capital at Chitora. Though deficient in the extreme grace and elegance that characterized the earliest examples, those of the middle style are bold and vigorous expressions of the art.

Mount Abu, says Mr. Ferguson, p. 234, rises from the desert as abruptly as an island from the ocean, and presents on almost every side inaccessible scarp up to 5600 feet high, the summit being reached only by ravines that cut into its sides. When the summit is reached, it opens out into a lovely valley six or seven miles long by two or three miles in width, with the little Nahi Talao or Pearl Lake, and near to it, at Delwara, the Jains selected a site for their pilgrimage or birth. During Jaina supremacy, it was adorned with several temples, two of which are of white marble. The more modern of these was built by the two brothers Tejpal and Vastupala, who erected a triple temple at Girmar (a.d. 1197-1247), and for minute delicacy of carving and beauty of details it stands almost unrivalled. The other, built also by a merchant, Vimala Sah, about a.d. 1032, is simpler and bolder, and is the oldest and most complete example of a Jaina temple. It is dedicated to Parswanath, who is seated within.

The slender and elegant pillars, and the richly carved horizontal domes of the Jain structures, he says, pp. 203-8, were easily destroyed or utilised by the Mahomedans. The great mosques of Ajmir, Dehli, Kanouj, Bhar, and Ahmadabad are all reconstructed temples of the Jains.

The Aiwulli temple, a few miles north of Badami, has an inscription on its outer gateway mentioning Vikramaditya Chalukya, who began to reign a.d. 650, and died 680. South of Badami is a temple at Pittaialkul.

The sacred hill of Sutrunjya, near Palitana in Gujerat, about 30 miles from Gogo, illustrates the Jaina custom of grouping their temples. They are in hundreds of thousands, covering over the summits of two extensive hills. The smaller shrines line the streets; the larger temples are enclosed in ‘tucks,’ or separate enclosures, surrounded by high fortified walls. A few yati priests and a few servants are there to perform the daily services and keep the place clean, but there are no other residents there. The pilgrim goes up and returns. It is a city of the gods. The shrines are almost all the gifts of single wealthy individuals. Some are as old as the 11th century, but the largest number have been constructed since the early part of the 19th century.

The Chan-mukhi, or four-faced temple at Palitana, Mr. Ferguson describes (pp. 253, 274, and 279) as very grand. The temple of Arishur is the largest single temple on that hill.

Girnar, on the south coast of Gujerat, not far from Somnath Patan, is a sacred hill of the Jains. The hill rises 2500 feet above the sea, and the temples are built on its side. A rock outside the town of Junagarg, at its foot, has a copy of the cincta of Asoka (b.c. 250); and on the same rock is an inscription, a.d. 151, by Rudra Dana, the Sah king of Saurashtra, mentioning his victories over the Sat-karui kings of the Dekhan. It contains also a record, a.d. 457, of the repair of a

ARCHITECTURE.

usually described as Hemadpuri, in Kandesh, Berar, and the Hyderabad dominions, dating from the 12th to the middle of the 14th century.

In the Hindu styles from the 17th century there is considerable variety. The Mahomedan curved arch is often introduced; forms derived from the Dravidian appear, and plaster and mortar take the place of sculpture and careful jointing. In some cases very beautiful wood-carving is introduced, as may be seen in temples in Gujerat.

The ceilings and domes of Hindu and Jain temples are sometimes of singular excellence of execution. In the western side of India, the cased arch and the dome characterize the Mahomedan style of architecture; but that of Ahmadabad and that of the Bijapur buildings present points of difference. Perforated stone-work occurs in old Hindu buildings; but specimens remarkable for the variety of beautiful design are chiefly to be found in the Mahomedan works of the 15th and following centuries at Ahmadabad and Aurungabad.

Silasasamin, or inscriptions on stones, are the most numerous in the Canarese country.—J. Burgess, Archæological Surveyor and Reporter, in No. 6, Archæological Survey of Western India, Bombay, 1877.

Jaina.—Mr. Ferguson tells us that the principal Jain works are in Rajputana, Gwalior, and Bundelkhand. Their sculptures almost entirely are restricted to the representation of their twenty-four hierarchs, whom they call tirthankara, to each of whom a symbol is attached,—generally some animal, fish, or flower, in one instance a crescent, in another a thunderbolt. Some of the Jaina temples are of great beauty. Brahmansical sculptures are countless, and consist of temples, with representations of the Hindu divinities. Jains, says Mr. Ferguson, p. 240, have their shrines on the hills of Palitana, Girnar, Gwalior, Mount Abu, and Parisnath, but also in deep secluded valleys. One of these, at Muktagiri near Gwighur, is in a deep, well-wooded valley, traversed by a stream with several waterfalls. At Sudi there is a group of fortresses, the walls of which have been destroyed by Khumbo, rana of Udajipur, in a lonely silent den, below his fort of Komulmur, dedicated to Adinatha or Reshabdeva, the first and greatest of the Jaina saints. It covers 48,000 square feet. The rock at Gwalior, in Central India, has one remarkable Jaina structure, dedicated to Padma-nath, their sixth tirthankara, and the rock on all sides has a series of caves or rock-cut sculptures, most of them mere niches to contain statues, all of them excavated between 1441 and 1474. One of the figures is 57 feet high. He mentions that their temples the saint is very numerous presented by images in cells or niches. At handraravi, a few miles southward from Mount Abu, is a ruined city, with extensive remains of Jain temples of the same age as those on the mount.

Parisnath is the highest point of the Bengal range of hills south of Rajmahal. It is one of the Jain pilgrim shrines, and nineteen of their twenty-four tirthankaras are said to have died and been buried there; amongst others Parswanath, the last but one them. The temples on it are numerous, at Jainism, he tells us, p. 254, never seem to have been a firm place in Bengal; and when the Pala dynasty of Bengal, about a.d. 1208, left Buddhism and accepted the Vaishnava and Saiva superstitions,
bridge by Skanda, the last of the Gupta kings. The temple of Neminatha is the oldest of a group of sixteen temples, 600 feet below the summit. Behind it is a triple temple, erected A.D. 1177, by the brothers Tejpal and Vastupala. Not far from Givar, on the sea-shore, is the temple of Somnath, captured by Mahomed, A.D. 1025.

Khajuraho, the ancient capital of the Chandel dynasty, is about 125 miles W.S.W. of Allahabad, and 150 miles S.E. from Gwalior. It is now deserted, but has in and around it about thirty temples, the most beautiful in form as well as the most elegant in detail of any of the temples now standing in India. They were erected simultaneously in the 11th century, and are nearly equally divided among three religions,—Jaina, Saiva, and Vaishnava. Each group has one shrine greater than the rest, round which the smaller ones are clustered. In the Saiva groups it is the Kundarya Mahadeva; in the Vaishnava it is the Rama Chandra; and in the Jaina group it is the Jinaanatha. The Parsvanatha Jaina temple has a rich base, the Gomathai, or Bear temple, and Chittorgarh Jompra, which has sixty-four cells.

At Gyasperur, near Bhilsa, 140 miles S.W. of Khajuraho, is a group of columns, supposed to be Jaina, and there are others in the Mokundra pass. In the Ulwar territory at Bhangur are some very beautiful Jaina temples. One called Nan Gungi has an image 20 feet in height. The fragment of a little temple at Aweh, near Ajunta, shows it to have been a Jaina shrine of Sri Allat, the twelfth king mentioned in Tod's Rajastan (p. 802).

Chitore.—The elegant Jaina tower dedicated to the first of the Jaina tirthankaras, Adinath, was erected about A.D. 806, on the brow of Chitore. It is about 80 feet in height, and is adorned with sculpture and mouldings from base to summit, among which the figure of Adinath is repeated a hundred times. Another tower, of later build, was by Humbo, son of Malwar, A.D. 1458, as a Jaya Stambha, nine storeys high, as a pillar of his victory over Mahmuud of Malwa, A.D. 1439, like that of Trajan at Rome. It is 30 feet wide at its base, and more than 120 feet in height, in nine storeys, and the whole is covered with architectural ornaments and sculptures. The Chinese nine-storeyed towers are almost literal copies of these Jaina towers.

Sonaghur, near Duttach in Bundelkhand, and Muktagiri, near Gwailghur, in Berar, show the most modern styles of Jain architecture. Sonaghur is a granite hill covered with large loose masses of rock, among which stand 80 to 100 temples of various shapes and sizes. The sikra is rare, and the foliated pointed Mahomedan arch is the usual opening. Muktagiri is a deep romantic valley, and its largest group of temples are on a platform at the foot of a waterfall, that thunders down from a height of 60 feet above them. The temples are only remarkable from showing their adoption of the Mahomedan style. At Delhi is a Jaina temple of much beauty. The background of the strut of its porch has pierced, foliated tracery, of the most exquisite device. At Khandagiri, near Cuttack, are Jaina caves, and there is one at Badami without any inscription. But there are three Brahmanical caves, one of which has the date 500 Saka (A.D. 579). The Indra Subha and Jaganath Subha groups at Ellora are supposed to be of the same age as the Badami cave temple. At Ajmir the Arhais-din-ka Jompra has been described as a Jaina temple. So also is a great part of the mosque at the Kutub, Delhi.

Some of the Hoysala Belalla kings were Jains; but their buildings at Somnathpur, Bellur or Hulilabad belong to the Vaishnava or Saiva faiths. The Basli temples of the southern Jains, like the Jaina temples of northern India, always have a tirthankara as the object of worship. The Bettu temples of southern India are open courtyards, containing images of Gomati, who possibly may be Gautama Buddha. There are two hills at the village of Svarana Belula, 33 miles N. by W. from Sringeripatnam. On one of these, a mass of yonite 500 feet high, a Jaina image, 70 feet 3 inches high, has been carved out of the solid rock. The expression of its features is pleasing, with curly hair; and at Kurkala, the image, 41 feet 6 inches, and weight 80 tons, has been moved to its present site, and was erected A.D. 1432. The third, and supposed oldest, at Yannur, is 55 feet high. They belong to the Digambara sect of the Jains, being entirely naked, but with twigs of Bo Tree twisted round their legs and arms, with serpents at their feet. In the Jaina cave at Badani, the figure has two snakes twisted around its legs and arms, and the Bo Tree is placed behind. On a shoulder of the other hill at Svarana Belula, called Chandragiri, are the Basli temples, fifteen in number, all of the Dravidian style, raised into storeys. The Jaina temple at Moodbidri, and all others in Canara, resemble the temples of Nepal, and many of them are built of wood. The interiors are richly and variedly carved, with massive pillars. A large number of the tombs of the priests, some of them five to seven storeys in height, each with a sloping roof, like the temples of Khatmandu, Tibet, and China. The Stambhas, or free standing pillars of the Jainas in Canara, are very graceful.

The Jaina temples are Martand, Avantipore, Payech, Bhaniyar, and Wanyat. Martand, 60 feet by 38 feet, is now in ruins. It is 5 miles east of Islamabad, and is built on an elevated plateau that overlooks the valley. Its enclosing courtyard is 220 feet by 142 feet. The enclosure was erected by Lalitaditya, who reigned A.D. 725 to 761. General Cunningham, however, thinks that the temple was erected by Ranaditya, who reigned A.D. 578 to 594. The courtyard of this, and of all the Kashmir temples, was constructed to admit of it being filled with water. The principal Naga figures in the niches have three or five headed snake hoods at the back of their heads. The Avantipore temples were erected by Avantivarma, who was the first king of the Utpala dynasty, and reigned from A.D. 875 to 904. He was a zealous Saiva. The style is rich in detail.

Nepal, at the present day, has three religions—Buddhist, Saiva, and Vaishnava—flourishing side by side. Its three capitals are Patan, Bh具ghat, and Khatmandu; and its religious state resembles the condition of India in the 7th century, when the buddhist and brahmanical religions flourished side by side. By the oldest records, the valley seems to have been occupied by the Kirata, the Bhot, and the Newar races, of Tibetan origin, who had early adopted the buddhist doctrines, and still adhere to them. The oldest and most important monuments in the Nepal valley are
those of Swayambunath, beautifully situated on an eminence about a mile from Kathmandu, and Bouddhama, at Kasacihel, some distance off. Their most beautiful temples possess many storeys, divided with sloping roofs. At Patan it is one with Sakyamuni in the basal floor, Amritabha the second storey, a small stone chaitya the third, the burial pyramid of Mahendra the fourth, and the fifth or apex of the building is a small Churamani or jewel-headed chaitya. Mention may also be made of the Bhwani temple at Bhagaon, of Mahadeo and Krishna at Patan.

Temples in Kulu, Kangra, and Kamaon are numerous, and all of wood, usually the timber of the deodar.

Rajputana.—Mr. Ferguson says, p. 473, that the palace at Udaipur of the rulers of Mewar, those of Duttiah and Orcha in Bundelkhand, the Gwalior palace, and that at Amber in the Jeypore state, are all worthy of notice; and the palace at Deeg, which is quite a fair structure, was the work of Sura Mall, founder of the Bhurptur dynasty, who began it in the year 1725, though unfinished when he was killed in battle by Najif Khan, A.D. 1763. Every native capital in Rajputana, he tells us, has a cenotaph, or maha sati, where the sovereigns, their wives and nearest relatives, are buried. The most magnificent of these are the hundreds at Udaipur, all crowned by domes; and that of Singram Singh, to twenty-one of his wives, is the most. He was buried A.D. 1733. He built that of his predecessor, Amar Singh II. The tomb of Bakhtawar Singh at Ulwar, erected in the 19th century, and the tombs of the Bhurptur rajas at Govardhan, are also noteworthy. The temples at Orissa are more numerous than those of all Hindustan. They were erected between the years A.D. 500 and 1200. That at Bhuvaneswar was A.D. 637; that at Puri was A.D. 1174; and, with the exception of that of Jagannath at Puri, the ancient Dantapura, all were erected under the great Kesari dynasty, or Lion line of kings, who reigned A.D. 473 till 1131, when they were succeeded by the Ganga Vansa, the third of whom built Jagannath. That called Parasuram Esvara is 20 feet square and 38 feet high, and its sculptures are cut with a delicacy seldom surpassed, and of the most elaborate character. It is supposed to have been built A.D. 450 or 500. Those of the Mukt Esvara shrine are even richer and more varied in detail. Bhuvaneswar temple is supposed by Mr. Ferguson (p. 420) to have been built by Lekal Indra K. Mani, who reigned A.D. 617 to 657. It is the finest example of a purely Hindu temple in India, 300 feet long and 60 to 75 feet in breadth. Every inch of the surface is covered with carving in the most elaborate manner, and the effect is marvellously beautiful. Its Nat Mandir, or dancing hall, was erected by the wife of Salini, between A.D. 1099 and 1104. Besides this, there are the Raj Rani temple, and many others.

The Canarac temple is known to the British as the Black Pagoda. The Jagannath temple at Puri is said to have been erected over an image of Vishnu, which had been concealed from the favana. Externally it measures 670 to 640 feet, and is surrounded by a wall 20 to 30 feet high, with four gates. An inner enclosure measures 20 by 315 feet, and is enclosed by a double wall with four openings. Within this last stands the Baja Dewul, and the great tower rises to 192 feet.
line its galleries extend to nearly 10,000 linear feet. On the inner face of the second gallery is portrayed, in 120 bas-reliefs, the entire life of Sakya Muni. In the galleries above this are groups of Buddhas, bodhisattwas, and saints, and many crested snakes. The temple at Mendoet, two and a half miles from Boro Buddh, has three colossal figures, supposed to be Buddha, Siva, and Vishnu, with a figure of Lakshmi. The temple of Toonampang also merits mention, and that of Pan-taran (A.D. 1416) is called the serpent temple, because its base is made up of eight great crested serpents. There are temples at Matjampontik; and on the Djeing plateau there are five or six small temples, also temples at Suku.—Fery. pp. 637-662.

In China, Pailoo are erected as honorific distinctions of eminent men, or of virgins or widows who have remained unmarried. Pekin has the temple of the Great Dragon, a circular pyramid, and a buddhist monastery; the pagoda, and a pavilion in the summer palace, and the Tung Cheu pagoda, all merit notice. The Buddhists of Burma, at Prome and Rangoon, have erected magnificent temples for their worship, with much detail, but with a magnitude of dimensions that prevents the thought of purity. The great colossal figures of the pagodas at Rangoon and Prome are magnificent structures. That at Rangoon, built on the most elevated part of a great laterite ridge, towers majestically above all surrounding objects. The Chinese joss-houses there are simple structures, but ornamental from their pleasingly contrasted colouring.

The finest architectural remains in Burma are to be seen in the deserted city of Pagan, but many of the most magnificent have been greatly shattered by earthquakes. The bow and the pointed arch, as well as the flat and the circular, have been in use long before their employment in India. Modern buildings are chiefly of wood. Palaces and monasteries, carved with extraordinary richness of detail, and often gilt all over, present an aspect of barbaric splendour. The dogabas, relic chambers, which form at once the objects and the localities of Buddhist worship, are almost the only brick structures now erected, and these are often gilt all over.—£40,000 are said to have been expended on a single temple. The ordinary buildings are chiefly built of bamboo and thatched with grass, and well raised from the ground on piles. In carving, the Burmese artisans give full scope to the working of a luxuriant and whimsical fancy.

Islam.—Relics professing Islam have been great builders. The pastoral Arab races from Arabia extended their sway from the banks of the Gudal-ququiv to those of the Indus. The pastoral Turk and Moghol races, issuing from Balkh, Bokhara, and Samarkand, at times under Constantine to Cuttack, and covered the whole intervening space with monuments of every kind. In 1683, the Turks were encamped under the walls of Vienna. In India they adopted some styles of the Hindus, but there are at least fifteen different styles in Mahomedan architecture, of which the most prominent are those of Ghazni of the Pathans, that of the Shardj of Jompon (Jamnapur), of Malwa and Bengal, in the north of India; and in the south, that of the Bahmani, Adal Shahi, Kutub Shahi, Moghulai of Baber and Sind, Oudh and Mysore. Some of the mosques, as the Jamma Masjid of Hyderabad and the mosques at Bijapur, are grand imposing structures; but one of the prettiest to be met with is the little Damri Masjid at Ahmadnagar, built from the farthing or damri donations made from the wages of those workmen who erected the fort at that place. Of the tombs of Mahomedans, the usual shape is a vast cupola on a square pedestal. These, commonly called Gumbaz, are to be seen wherever Mahomedans have ruled; but those at the fortress of Golconda, of the Kutub dynasty of Hyderabad in the Dehcan, are only surpassed in magnificence by the tombs of the Adal Shahi family of Bijapur. Some of the Adal Shahi kings of Bijapur are buried at Gog, south of Kuburga; and there is a Langar Khanah near, with arabecausaes surpassing anything to be seen in the south of India. The tombs of Kuburga are of little merit. The tomb of Aurangzeb's daughter at Aurangabad is said to have been in imitation of that at Agra over the queen of Shah Jahan, Arjumand Banu Begum, Mumtaz Mahal.

The Arch.—Hindus, up to the advent of the Mahomedans, do not appear to have known the arch, nor to have been able to construct vaults or domes otherwise than by successive layers of stone projecting beyond those beneath, as in the Treasury of Atreus in Mycene. Prior to the reign of Akbar (A.D. 1556), the only examples of the arch in Hindu architecture are in some brick buildings of the Pala dynasty at Nalanda in Bengal. In India, flat arches of stone and brick are not uncommon. In Burma, Captain Yule (Embassy, p. 48) discerned two brick, in windows in the Dhamayangyee temple at Pagan, where no suggestion of European or Indian aid could have helped. There is one flat stone arch in the northern gate of the fort, and another in a tomb, at Kurnool. There is one in the mediaeval building of Roshan Castle, and in the magnificent Saracen gateway of Cairo, called Bab-el-Fitour.

Hindus erect columns and arches, or rather gateways, in honour of victories. There is a highly wrought example of the column at Chitour, 120 feet high. A fine triumphal arch (if that term can be applied to a square opening) has been erected at Barnagar, in the north of Gujerat. It is among the richest specimens of Hindu art. The streets and squares of Chinese cities have monumental arches erected in honour of renowned warriors, illustrious statesmen, distinguished citizens, learned scholars, virtuous women, or dutiful children. They are in the form of a triple arch, the largest in the centre richly sculptured.—Gray, p. 11; Elphinstone, p. 163. The latter author also tells us, p. 430, that the unfinished mosque near the Kutub Minar presents specimens of the pointed arch, which, besides for their height and the mah or ornamental inscriptions with which they are covered, merit mention as early examples of this form of arch. The centre arch appears by the inscription to have been finished in A.D. 1197, A.H. 594. Many of the buildings of the later princes before Akbar have small pointed arches. The mosques are composed of a collection of small cupolas, each resting on four pillars; so that the whole mosque is only a succession of arches between ranges of pillars, with no clear space of any extent. The Black Mosque at Dehl, however, is in the ancient style, though built in A.D. 1387 under Firoz Taghalah; and the tomb of Ghiaus-ul-Din Taghalah, who died
in A.D. 1325, is covered with one cupola of considerable magnitude. The arches are different at different times. The early ones are plain Gothic arches; the latest are ogee and horseshoe arches, feathered all round. The domes at first are low and flat; they gradually gain elevation till the time of Jahanigir, when they take in considerably more than half a sphere, and are raised upon a cylinder. Through the constant use of the pointed arch, the nature of the tracery and some other particulars create a resemblance between the Gothic and Indian architecture which strikes every one at first sight, yet the frequency and importance of domes, and the prevalence of horizontal lines in the Indian, make an essential difference between the styles. The more ancient buildings, in particular, which in other respects are most like the Gothic, are marked by a bold and unbroken cornice formed of flat stones, projecting very far, and supported by deep brackets or mudekons of the same material. In the 10th and 11th century, says Mr. Ferguson, p. 506, Mahmud of Ghazni inspired his nobles with a taste for architecture; and Ferishta says his capital was in a short time ornamented with mosques, porches, minars, fountains, aqueducts, reservoirs, and cisterns beyond any eastern city. Of the Turk and Pathan rulers who succeeded to the dominion in India, we have left to us the mosque at old Delhi and that at Ajmir, also the Kutub Minar, the tombs of Ala-ud-Din and his successors, down to the accession of Baber, A.D. 1494.

The Kutub at old Delhi was erected from the pillars and other parts of Jaina temples, and many of them retain the sculptured figures. The minar at the Kutub is 48 feet 4 inches in diameter at the base; and in 1794, though its capital was then ruined, it was still 242 feet in height. Its present height is 258 feet 1 inch, deducting the modern pavilion. It has four ornamental balconies, respectively at 97, 148, 188, and 214 feet from the ground, between which are richly sculptured raised belts containing inscriptions. It is lower by 30 feet than the Campasule at Florence. It is a tower of victory and a seat of the Koran. The dates of the ruins in old Delhi are from 1196 to 1235. The inner court was enclosed by Shahah-ud-Din. The central range of arches was built by Kutub-ud-Din; the wings by Alatamsh, whose tomb is beyond the northern range, and who also built or founded the Kutub Minar. The iron pillar at the Kutub in the centre of its courtyard stands 22 feet above ground, and extends 20 inches under ground; total, 23 feet 8 inches. Its diameter at the base is 16 feet 4 inches, and at the capital it is 12'05 inches. There is no date on it, but Mr. Ferguson says (p. 506) that Mr. Prinsep supposed an inscription on it to be of the 3d or 4th century; but Dr. Bhu Daji supposed the 6th century. It is forged iron. An inscription on it says it was dedicated to Vishnu; but its real purpose was a pillar of victory to record the defeat of the Mahrattas near the seven mouths of the Sind or Indus. Behind the N.W. corner of the mosque is the tomb of Alatamsh.

**Mosques, Tombs.**—The mosque at Ajmir was commenced A.D. 1200, and completed by Alatamsh 210-1296, and is called the Arhai din ka jhoompra. It was constructed from a Jaina temple. Its courtyard has a screen of seven inches, on which Cufic and Togara inscriptions are interwoven with architectural decorations. A mere mention must be made of the tomb at Sikri near Gwalior; and that of Sibar Shah near Saseraon in Shahbad; at Jumpon (Jumpar), the Jamn Masjid and Lai Darwaza Masjid; at Ahmadabad, the Jamna Masjid and other mosques; and tombs and mosques at Sirkej and Butwa; the Jamna Masjid at Cambay, erected A.D. 1325, in the time of Mahmud Shah Ghori; the tomb of Mahmud Begurra near Kaira; at Mandu, the great mosque, the Dharmasala, the Jahan Mahal; in Bengal, the Kadan Rasul mosque, the Minar at Gaur, and the Adinah mosque at Mahall.

In the Dekhan are the mosques and bazaar at Kalbarga. At Beder, the Madrasa erected by Mahomed Gous, minister of Mahmud II., and the tombs of the Berid Shahi who ruled there 1492 to 1609. At Bijapur are the Jamna Masjid, the tomb of Ibrahim II.,—the whole of the Koran is said to be sculptured on its walls,—the smaller tomb of his successor, Mahmud, and the great Audience Hall. In the vicinity of Tatta, in Sind, are a series of tombs erected during the Mogul dynasty by the great men of the province, from 1572 to 1640. Akbar’s reign, 1556-1605, was conspicuous for the many structures he erected. Amongst these are the mausoleum over his father at old Dehi, the old or Red Palace in the fort, built of red sandstone, 249 feet by 260 feet; the palace at Futtapour Sikri, and the three small pavilions which he erected for his three favourite wives, the daughter of Bir-Bul, the Rumi Sultanah, and the Christian Miriam, and its mosque, hardly surpassed by any in India. He commenced his own tomb at Secundan near Agra, and it was finished in Jahanigir’s reign.

Wherever Pathan dynasties ruled in India, their architectural remains are of a magnificent character. At Dehi, Agra, Mandu, and Burhanpur, ruins of palaces, mosques, and mausoleums attest the magnificence of their founders, and their noble, scientifically constructed fortifications attest their skill. Of the early Pathans of the Ghori and Khipli dynasties from A.D. 1193 to 1305, the most important is the Minar of Zulminar, of majestic beauty, erected A.D. 1200, and the stern grandeur of Taghalaquebad, A.D. 1321. The style is different of the late Pathan, of the Taghalaque and Sadiq dynasties, A.D. 1321 to 1451, the Afghan of the Lodi and Suri dynasties, A.D. 1451 to 1554.

Mr. Ferguson tells us, p. 384, that the notable civil buildings of the rulers of southern India are all of dates subsequent to their occupants coming in contact with Mahometans. The palaces, the cutcheries, the elephant stables, and the dependencies of the mahals of the rajas at Vijnanagar and Madura, rival in extent and splendour the temples themselves, and are not surpassed in magnificence by the Mahomedan structures of Bijapur and Boder. The civil buildings are all in a different style of architecture from the tribarate style employed in the temples. The Swarga-Vilasam, or throne-room of the palace at Madura, is an arcade octagon covered by a dome 60 feet in diameter and 60 feet in height. The greater part of the buildings of the palace at Tanjore belong to the 18th century, and some to the 19th. The palace buildings at Vijnanagar consist of a number of detached pavilions, baths, harem.

The usual form of a Pathan tomb was an
octagonal apartment, surrounded by a dome, the apartments surrounded by an arched verandah, the arches rising from square columns.—As. Soc. J. iii. and vi. pp. 794, 909; Gray's China; Elphinstone's History of India; Ferguson's History of Architecture; Memoirs. Ferguson and Burgess, Mr. Ferguson to p. 236, and Mr. Burgess to p. 132; Gen. A. Cunningham's Report of Archeological Survey of India, 1871-74; Gen. Cunningham's Bhilsa Topes; Imperial Gazetteer; Rev. J. Burgess, Arch. Survey of Western India, Bombay, 1877.

ARÇOT, a small town about 65 miles W. from Madras, taking its name from two Tamil words, Ar-n-Kudru, the six jinglers on the river Palar; Sanskrit, Shad Aranya. It is in 12° 55' 23" N., and 79° 24' 14" E., and 590 feet above the sea. It is the Arkaton Basilica of the Greeks, and the capital of the nomade Sorai (Sarai), the whole of the neighbouring territory for several centuries after the Christian era having been occupied by shepherd Kurumbars, and then formed the centre of the Chola kingdom. But it must have been a place of great antiquity, by its being taken notice of by Ptolemy as the capital of the Sore of Sorranandalum, from whence corruptly Coromandel. The Chola dynasty was about thirty years in the beginning of the 12th century, by Adonai, an illegitimate son of Kuluttunga Chola. The country, however, again lay waste, until Nala Bonma-Naidu and Timma Naidu built, or rebuilt, the town of Arcot, which was occupied for generations by their successors, who again were put aside by Aurungzeb's general, Zu-ul-Figaran Khan, who took Ginji a.d. 1698, and settled many of his co-religionists in the country. Their descendants are still numerous. Arcot town, in 1712, was made the seat of government by Saadatullah Khan, the first Nawab of Arcot. Clive, in 1751, with a small detachment, took Arcot, but it was immediately invested by a force 10,000 strong, sent by Chanda Sahib. Clive's force consisted of 120 Europeans and 200 sepoys, with four officers, and their food supplies were very scant; yet for fifty days, and though the walls were breached, they withstood every effort of the besiegers. During the Mahometan attack they repulsed an attempt to storm the place, in which they lost five or six men, but the assailant's loss was 400. The struggle lasted for an hour, and in the night the enemy withdrew. Clive was then reinforced from Madras with 200 British and 700 sepoys. He took the fort of Timmery, effected a junction with a division of Morari Rao's army, and marched against and defeated the French and Chanda Sahib's army; after which Conjeveram surrendered, and the governor of Arnee declared for Muhammad Ali, who assumed the title of Walajah, was recognised as Nawab of Arcot; and until a.d. 1833, the British, at the Madras mint, continued to issue coins as struck at Arcot. The N. Arcot district lies between lat. 12° 21' and 14° 10' 45" N., and long. 78° 14' 45" and 80° 13' E. Area, 7130 square miles; and population, 2,015,278. The Parish or Malas-Vandlu are 20 per cent., and form the great body of agricultural labourers. The wandering tribes are the Banjara, Lambadi, Sugali, and Dumar; and the forest and hill tribes are the Irular, Yanadi, Yerkala, and Maleali. The two great zamindari estates of Kalastr and Kavetunnagar are in the N. Arcot district; also the Pollam of Kongundi. The jaghir of Arnee is hereditary in the family of a Mahratta brahman held under a sumund from Lord Hobart, dated 10th May 1796. The Chittur poligars claim descent from officers of the Vijianagar government; months old when that dynasty was overthrown, these were assumed into it, until Muhammad Ali was firmly assumed as nawab. When the British as sumed the government in 1801, they again became refractory, and were subdued by a force. Three poligars were forfeited, one was continued, and five were taken under government management until 1826. The principal river is the Pal: smaller rivers are the Poinye, Cheyar, and Surnamukhi. There are about 40,000 tanks, the chief of them being that of Kaveripak, ten miles east of Arcot, the bund of which is four miles long.—Imp. Gaz.

ARÇOT SOUTH is a Madras district, lying between lat. 11° 10' 30" and 12° 38' 30" N., and long. 78° 33' 30" and 80° 12' 15" E., with an area of 4873 square miles, and a population of 1,785,813 souls. South Arcot has been under British administration permanently since the year 1801. Towards the W. are the Coorebbo Govwden and the Jeldyan Wenden, which run on the N.W. the Cunchun range separating the Cullacooroch taluq from Salem, some parts rising 5000 feet high. Parts of the southern hills are under a poligar, and the Chenganna hills are occupied by the Maleali race. The chief river is the Culerun across which dams have been constructed to obtain water for irrigation. The Vellar river rises S. of the Shevaroy hills, in Salem, and disembogues at Porto Novo. The Penum river in Nundur and enters the sea N. of New Town, Cuddalore. The Veeranum tank, in the Managudi taluq, is one of the largest tanks in S. India, its dam being ten miles long; it is supplied chiefly from the lower dam across the Culerun. The Walajah tank dam is six miles long. Cuddalore has been occupied by the British since 1682. In the strife for supremacy between the British and the French, Tipu Sultan, and Nawab Muhammad Ali, Cuddalore, Port Novo, Ginji, Pandyal, and the Chenganna hills were firmly changed hands. His forces, 95 5 per cent.; Mahomedans, 2 per cent., with a sprinkling of Christians and Jains. The Valalar are the cultivators; the Vyan are the land-holding cultivators; the Pariah, labourers and menials; and the Chettaya are traders. The Kora, a predatory race, are swineherds and basket-makers. In the forest tracts are the Irular, Villeyar, and Maleali. The Padyal, a section of the Pariah, are field labourers.

ARCTIC TISTIS BINTURONG, the black bear cat occurs in India. It is of the sub-family Viverrinae, family Viverridae, tribe Digitigrada.

ARCTOCEPHALUS LOBATUS, the Australian sea-bear, is amongst the largest of the seal family. They occasionally congregate in vast numbers on various parts of the coast of Australia. A. ursinus, when full grown, is 8 or 9 feet long, and weighs 800 lbs. When young four to five feet long they have fine black hairy hair, and their fur is sold in China at considerable prices. Their favourite summer haunt is the island of St. Paul one of the Pilibrow group. The hunters of the American Fur Company are Aletes, and only young males of about four months old are killed. The males are polygamous, with about forty or fifty females.—Hartwig.
ARCTOMYDIN.E.

ARCTOMYDIN.E, a sub-family of mammals; the marmots, of the natural order Rodentia, and family Sciuridae. Two species of the Arctomys occur in India, A. bohae and A. hemachalanaus, the Tibet marmot and the red marmot.

ARDANDA. HIND. Capparis horrida, Linn. ARDASHIR. There were several Persian sovereigns of this name, viz. Ardashir Babeghan bin Sasan, Artaxerxes, the first of the Sasanian kings, A.D. 226–240; Ardashir (Artaxerxes II.), the tenth, A.D. 380; Ardashir III., the twenty-fifth Sasanian, in A.D. 629, under whom anarchy prevailed. Ardashir-daraz-dast, or of the long arm, was Kai Bahman, the Artaxerxes Longimanus of the Romans. Ardashir I. is supposed to have been平淡, Babeghan, from his father Babek; in A.D. 226, he defeated and slew Artabanus on the plains of Hormuz, and was proclaimed emperor. He was a religious enthusiastic. He caused the sacred books to be translated from Zend to Pehlavi. He used to remark that there can be no power without an army, no army without money, no money without agriculture, and no agriculture without justice.—Malcolm's History of Persia, p. 73.

ARDAWAL. PAK. Rhododendron arbor-etus.

ARDEA, a genus of birds of the family Ardeidae. A. cinerea, the common grey heron of Europe, Asia, N. and S. Africa, is common in India. The young, in Tamil, Nari, sometimes Pamboo nari, or snake-crane, has a nest built of twigs, containing sometimes two, sometimes three eggs. The young are fledged from January to April, according to the time of depositing their eggs, which some do earlier than others. The eggs are of a light-green colour; they are not so large in circumference as a large-sized hen's egg, but are longer. The purple heron of Europe, Asia, and Africa, A. purpurea, in Tamil the Cumbly nari or blanket-crane, deposits two to three eggs, and seems to rear only young. The young are fully fledged in April. A. griseus, the Nycticorax griseus, Linn.; in Tamil, Wuuka; nests contain five eggs; hatches four or five young; eggs the size of a fowl's, and of the same shape. The young are ready in April. Other species are A. goliath and A. Sumanis. Dr. Shortt.

ARDEBIIL, in lat. 38° 14' N., and long. 48° 21' E., 5000 feet above the sea, is a place of shiah pilgrimage. It contains the tombs of shaikh Sai-ud-Din, and of his descendant, Shah Ismail, the founder of the Safavi dynasty. — MacGregor, Persia, p. 26.

ARDÉLAN, a province of Persia. Wooded mountains, separated by narrow valleys and occasional plains, producing excellent pasture, cover its northern portion, which is a nominal dependency of Persia. The wall of this district is also the principal Kurdish chieftain. He claims to be the lineal descendant from the great Salah-ud-Din (Saladin). He holds his court at Schnah, his capital, 60 miles from Hamadan, and 77 from Kirmanshah. A semi occupies the summit of a hill, round which is the town, containing about 4000 Sunni, 200 Jews, and 50 Nestorian Catholic families. The Kurdish districts of Ardelan and Kirmanshah occupy the western limits of Persia, in the region between Azerijan and Luristan, and the space between Elwand and Zagros range. — MacGregor; Rich's Kurdistan, i. p. 209; Euphrates and Tigris, Colonel Chemey, p. 215.

ARECA.

ARDETTA MINUTA, the Botaurus minutus, is the little bittern of Europe, all Africa, W. Asia, Hindukush, Kashmir; replaced in Lower Bengal by A. Sinensis, and more abundantly by A. cinereina, which is common throughout India. Botaurus stellaris is the common bittern of Europe, Asia, all Africa, and is common in India.

ARDHA. SANSK. A half. Dina arsha, half the day; ratri arsha, half the night.

ARDHANARI, also written Ardhanareeswara, the androgynous form of Siva, half man, half woman, representing Siva and Parvati. — Ferguson and Burgess.

ARDHAWA. HIND. A mixture of grain and barley meals, either in equal proportions, or two to one, as the buyer prefers, used in N. India for feeding horses. Both grains are parched and ground before being mixed together. Ardhawa is thought very fattening food for horses; but, owing to the loss of weight and substance in the parching process, and the extra labour required, it is more expensive than plain grain.

ARDI or Artai, the name which Herodotus gives to the ancient Persians. Baroo, de Bode supposes the town of Arka in Fars, near the mountainous region of Ardekan, to have been one of the chief towns of the ancient Persians.

ARDIBEHEST - JASAN, a festival of the Parsees or Zoroastrians, maintained in honour of Ardibehest Amsaspand, the controlling angel, according to their theology, over their sacred fire. On this day the Parsees crowd their fire-temples to offer up prayers to the Supreme Being.—The Parsees, 61.

ARE. TEL. Baouinia racemosa.

AREALU. MALEAL. Urostigma religiosum. ARECA, a genus of plants of the natural order Cococaceae. A Chinese species, called Chu-pin-lang, yields the Ta-fuh-pi, a fibrous rind or fine coir-like fibre.

A. Dicksonii, Roxb., is a tree of the Malabar mountains; the poorer people use its nuts as substitutes for the true betel nut.

A. gracilis, Roxb., is a tree of Sikkim, Silhet, Chittagong, and the S. Konkan; the Ban-gua, or wild areca of Bengal.

A. vinduara, the Ram gua of Bengal, grows as a tree in Chittagong.

The cabbage palm, a native of the West Indies; the wood used the same as Areca catechu, the bud forming the centre of the leaf-crown being the eatable 'cabbage.' It might be extensively cultivated in India.

A. sapinda, the cabbage-tree of New Zealand. Its young unfolded leaves rise perpendicularly in the centre of the crest, and in this state they are used for making brooms; those still unprotruded, and remaining enclosed within the sheaths of the older leaves, form a white mass as thick as a man's arm, and are eaten raw, boiled, or pickled. In a raw state they taste like a nut, and boiled they resemble artichoke bottoms. This palm is of interest as the most southern representative of the palm order.

A. vocaria is so called from clothing being made of its fibres.—Roxb.; Voigt; J. Backhouse, | Visit to Norfolk Island.
A slender, graceful palm, of remarkably erect growth, attaining a height of 30 to 60 feet, with a tuft of feathery leaves at the extreme top. Its cylindrical stem is only a few inches in diameter. It is an object of extensive culture in many parts of tropical Asia, in N. Bengal, Nepal, Malabar, and the S.W. coast of Ceylon; also with the Burmese, and to a smaller extent by the Karens, and in all the islands from Sumatra to the Philippines. It is perhaps the most elegant of all the palms. It is much prized by the natives of Borneo, on account of the delightful fragrance of its flower, which, taken just before opening from the sheath of a pod in which it is borne, is called kalang or kalang. It is requisite in all their medicines and conjurations for the purpose of healing the sick; it is also used, with other sweet-scented flowers, at bridalts and all occasions of festivity. In the arid climate of the central Dekhan, it requires to be protected from the dry winds, either by matting or straw tied round it to prevent it splitting. When this happens, it immediately decays. In gardens, when mixed alternately with the eucalyps, it presents a very striking appearance. The wood is hard and peculiarly streaked, and might be used in turnery for small ornamental work. In Travancore, it is employed for spear handles and bows, for which it is well suited, being very elastic. This palm yields the betel nut of commerce, which, mixed with lime and the leaf of the piper betel, is largely used in use as a masticatory in all the countries of South Asia. The nut is about a foot long, cylindrical in shape, and peculiarly streaked, and in its natural state, is of small ornamental work. A strong decoction of the nut is used in dyeing. Roasted and powdered, they make an excellent dentifrice. Young nuts are prescribed in decoction in dyspepsia, and they are considered to possess astringent and tonic properties. Their use, with betel leaf and lime, discolors the teeth, but the people imagine that it fastens them and cleans the gums. The nuts yield two astringent preparations known as catechu, respectively called, in Tamil, katha kambu and katho kathath, in Telugu, kans; and in the Dekhan, xhrab katha and acha katha. The katha kambu is chewed with the betel leaf; the katho kathath is used medicinally. The tree will produce fruit at five years, and continue to bear for twenty-five years. Unlike the cocoa-nut palm, it will thrive at high regions, and at a distance from the sea. In the Eastern islands, the produce of the tree varies from 200 to 1000 nuts annually. The nuts form a considerable article of commerce with the Eastern Islands and China, and are also one of the staple products of Travancore. They are gathered in July and August, though not fully ripe till October. In Travancore, those that are used by families of rank are collected while the fruit is tender. The husk, or the outer pod, is removed; the kernel, a round, fleshy mass, is boiled in water. In the first boiling of the

ARENGA SACCHARIFERA.

This is one of the genus Arenga, five species of which chiefly inhabit the islands of the Eastern Archipelago. They are all handsome trees, their favourite localities being dense shady forests and the neighbourhood of rivers and rivulets. This one was so highly thought of by Dr. Roxburgh, that he introduced it largely into India, where the natives have taken kindly to them. It is growing now near Madras, in Bangalore, at Hyderabad, and largely in the Nuggur division of Mysore. It occurs in abundance in a wild state throughout the islands of the Eastern Archipelago, and yields a horsehair-like substance, which has given the name to the tree. It is the only one of this genus of any commercial importance. It comes into bearing about the seventh year, and continues to flower from two to five years, continuing in blossom all the year through, but flowers only once and dies. In general appearance it much resembles the sago palm, but the pinnae of the leaves, which are erect in the latter, droop in the former like those of the niong and many other palms. The gomuti or eju is a black fibrous substance resembling coarse horsehair, which protrudes itself in large tufts from between the corticous scales of this palm. The length of the fibre runs from one to two feet, and each tuft contains about 6 lbs. of the eju. Eju cable is said to be considerably stronger than coir, and it undergoes a longer exposure to sun and rain alternately without experiencing any effectual damage. It is chiefly used by the Malayas about the Straits of Malacca. It is also used as thatch, and a quantity of it is wrapped round the ends of timbers and posts to be put in the ground. Marsden saw a thatch of it fifty years old. Of all vegetable substances, it is the least liable to decay, and is of great service to the Dyaks in their house-building, on account of its durability. This substance is also plaited into ornaments for the arms, legs, and neck, and its deep black and neat appearance render it, to the eye of a European, a much more agreeable ornament than either the brass or beads with which they abundantly adorn their persons. The fibre is considered superior to all others yet made use of for the manufacture of artificial bristles for brushes, imitation horsehair for stuffing, and such-like purposes. The palm wine is extracted from the plant by cutting off the large lateral bunches of fruit. When these are about half-grown, they are severed close to the division of the peduncle or stem, and bamboos are lugged to them. A good tree with two incisions will produce about a gallon of palm wine per day. The plant has constantly kept on the severed part by a thin slice being daily cut off the stem or peduncle, so that at the end of the above-named period it has altogether disappeared. The palm wine is taken from the bamboo twice a day, and when fresh has a very agreeable taste, and is a refreshing drink; the Dyaks, however, always impart a flavour to it by placing a piece of a bitter plant into the bamboo in which it is collected. The tree is mentioned by Marco Polo. The fleshy outer covering of the fruit yields a highly stimulating and corrosive juice, which, when applied to the skin, occasions great pain and inflammation. The inhabitants of the Molucess were in the practice of using, in their wars, in the defence of posts, a liquor afforded by the maceration of the fruit of the gomuti, which the Dutch appropriately denominated devil water. A tree cut down in the Calcutta Gardens yielded 150 lbs. of good sago meal. Its leaves, when very young, are eaten like the American cabbage palm, Oreoidea oleacea, Eadul. The seed, or rather the albumen, when freed from its noxious covering, is made into a sweetmeat by the Chinese. It therefore yields sugar, palm wine, gomuti, sugar, and rum.

ARENGA ARGENTAN.

ARENGA ARGENTAN, a Tahiti people, who formerly buried their friends alive, when from their infirmities they became burdensome. A hole was dug in the sand on the sea-beach; then, under pretence of taking their aged or sick relative to bathe, they would carry him on a litter to the spot, and, tumbling him in, instantly heap stones and earth upon him, and trample all down with their feet; or they would rush into his house and spear him. Jenkins describes the Areco as a sect, institution, or society, in the Pacific Islands, the members of which were allowed to marry; but if children were born, they were required to put them to death. —Jenkins American Expedition, p. 161; Montgomery, p. 82.

ARENGA ARGENTAN, Tel. Dioscorea oppositifolia, L. Aregetti. Tel. Musa sapientum.

ARENGA ARGENTAN, a king mentioned in a copper plate found at Kaira in Gujerat, of date A.D. 1059; his son was Udina Ditya, and his grandson Salivahana.

ARGAS PERSICUS. Fisch. The argas are arachnida, closely allied to the ticks. The argas of Persia is the bug of Minna, a town in Persia. Its size is about that of the common bug; the body is rough, of a blood-red colour, and covered with some elevated white spots. The bite gives severe pain, even giving rise to consumption and death. —Moquin Tandon.

ARGAUM, in Berar. A battle was fought here on the 29th November 1809 (the Imperial Gazetteer says 28th November), in which the army of the Bhonala raja of Nagpur, commanded by his brother Venkoji, was defeated by General Wellesley. On the 13th December, General Stevenson captured Gwaltiur, which led to the treaty of Deogoa on the 19th December.

ARGEMONE MEXICANA. L. Mexican poppy.

This plant, a native of America, grows wild in over-abundant luxuriance in many parts of India, and its large, yellow, thistle-shaped flowers appear January to March. Their seeds and milk-like sap are used in native medicine, but they seem useless. The round corrugated seeds yield a large quantity of pale yellow clear and limpid oil, called Coorakoo, and in Hind. Faringi datura ka tel, nearly as much as the common mustard-seed. It is readily procurable, and cheap. —Madras Ex. Jur. Rep.; Cal. Col. Est., 1862; Roxb.

ARGENTAN, the Peh-t'ung of the Chinese, is an alloy, called white copper, made of copper,
ARGUS

ARGHAN-AB, a river near Kandahar, in the hills, the Gurgan river, the Venkana of the Vendid. On its left bank is the famous grotto, the Ghar-i-Jamshid, sixteen miles S.W. of Kandahar. The Panj Ila hills overlook the river. The whole of the roof of the grotto has the appearance of having been beautifully carved.

ARGHAWAN. Hind. Bauhini variegata, also Edwardsia mollis. An arghawan tree is often mentioned in the verses of Persian poets. The branches and stem in spring are suddenly covered with pink blossom. Botanists have named it Arbor Judae, or Judae’s tree, on account of some very apocryphal tradition, that on a tree of this kind Judas hanged himself. The proper botanical name of this tree is Corynanthes arghawan, quite different plants, the red and the yellow. The yellow is common on all the plains of Central Asia, also on those of Beluchistan and Persia. In the latter region it is named Mahak. It is a shrubby plant, bearing clusters of yellow pea-like flowers, with compound alternate leaves. The red arghawan is a small tree.—Masson’s Journey.

ARGHEL of Egypt. Solenostemma argel, a native of Syria. The leaves are purgative, and are employed in Egypt to adulterate senna.—Hogg, Veg. King. ii. p. 5; Simmonds. See Cassia.

ARGHIAN, a Sind dynasty from A.D. 1521 to 1654–55, during which Shuja Beg and his son Mirza Shah Husain reigned. This tribe came to Sind in the time of the Summa dynasty, whom they overthrew and succeeded, about A.H. 927, and ruled for thirty-four years, being overthrown by the Turk Khans in A.H. 962. Arguhn Nama, also called the Turk Khan Nama, a history named after the Moghul families of Argun and Turk Khans, by Ayd Jalal ud Din Husaini of Shrinaz, who composed this work A.H. 1065, A.D. 1654-5.

ARGHUN KHAN of Persia was Kabal Khan’s great nephew. His wife was Zibilkinna, the Khutun Bulugan, daughter of the Greek emperor Palaeologus, a lady of great beauty and ability. She had been married to Abaka, but on his demise, according to the marriage customs of the Mongols, she passed to the Urga of her step-son, Argun. On her death, Argun, with his brother, Khi-Khu, went to a great house where a wonder was brought out by the great Khan, and he was received with the utmost honours, and was given a horse and riding outfit. He then went to the court of Bayaut, but Argun died before the lady Kuka-Chin was brought out, and she passed to Ghazan, the nephew of Argun, for Argun had been succeeded by Khi-Khu, his brother.—Elliott, p. 498; Quart. Rev., July 1868.

ARGHYA. Sansk. A present or gift, indicative of respect to a superior. It matters not of what it consists, and is often of flowers.—Hind. Th. i. p. 312. See Argha.

ARGILLA, also Hargila. Hind. The adjutant bird, Leptoptilus argilu.

ARGILLACEOUS EARTH. Hwah-shih, , , , CHIN. Fei-hwoh-shi, , , , CHIN. Kwang-fen, , , An unctuous friable earth from Kwang-si, Hunan, and Shan-tung, of a pale yellowish colour, used as a chalk for drawing, and internally as an alternative remedy.—Smith, p. 23.

ARGO, A. Argus, Argoun, mahomedan Kashmir emigrants, or the descendants of such who have settled in Ladakh, Yarkand, Chang-tan, or in any part of Chinese Tartary, for policy and security. They usually have establishments with agencies at the principal towns and cities they frequent and trade with. Thus the Argon of Ladakh, besides his original or primary establishment at Ladakh, has another at Yarkand, and also perhaps, according to his means or extent of trade, at Aksu, Ilchi, Turfan, etc.; while the Argoons of Yarkand, as also the Kochjas of Andejan, are known to have establishements in many towns and cities of Russian Siberia. They are also described as a mixed race resident at Le, half Kashmiri and half Boti. The same term, in Yarkand, also is applied to half bloods.—Powell’s Handbook, p. 182, 183.

ARGONAUTA, the argonaut, or paper sailor, a genus of mollusces of the class Cephalopoda, family Octopoda, order Dibranchiata, underclass and family Argonautidae. Several species occur on the seas on the south and east of Asia, viz. A. Argo, cornu, cymbium, gondola, hians, thannura, turbucula, and vitrea. See Mollusca.

ARGUS, analogue of Indra, who is depicted with a thousand eyes, like the Argus of the Greeks, and is hence called the thousand-eyed god.

ARGUS PHEASANT. Lungi, Hind. Cerionis satyra, Linn. In the Malay Peninsula, called Coo-ow by the Malays. It occurs in India, China, Java, and Sumatra. See Phasianidae; Pheasant.
ARGYREA BRACHTEA. Choisy.  
Ipomoea bracteata, Hayne.  Samudra patta, SANSK.  
A twining shrub growing in Madras and Coromandel, filled with milky juice. Decorations of the leaves are used by the natives as fomentations in cases of scrofulous enlargement of the joints; the boiled leaves are used as poultices at the same time.—Wight; Useful Plants.

ARGYREA MALABARICA. Choisy.  
Katu Kalango, MAL.  Paymoostey, TAM.  
Grows in Mysore, Malabar; common on the ghats. Root cathartic; considered by ferriers a good horse medicine.—Andlue.

ARGYREA SPECIOSA. Ser.  
Convolvulus speciosus, L. Lettisia speciosa, Roxb.  
" nervous, Bum.  "  Lettisia nervosa, R. 483.  
Hich-tarka, BENG. Samudra-patra, Tel.  
Samudra Shoks, HIND. Chandra-pala, Tel.  
Guli, Gu.  "  Kakitta, kokkita, Tel.  
The Elephant Creeper grows all over India in forests and hedges. It has large deep rose-coloured flowers. Leaves are used by native practitioners in the preparation of emollient poultices, and also in cutaneous complaints, being applied externally to the parts affected,—upper side as a discentient, and the under, white, side as a murtanant.—Roxb.; Voigt: Ainsl., Useful Plants; O'Sh.; Wright, 1e.  
ARHAR. HIND. Cajanus Indicus; pigeon pea.  
ARHAT. HIND. A lifting water-wheel.  
ARHAT, the highest rank in the buddhist hierarchy; a buddhist saint who has attained to the fourth grade in the scale of perfection, also a perfected Jaina saint. Arhata, religious buddhist councillors who assembled at Pataniputra with Asoka. After nine months' consultation, they sent out nine teachers, viz., one to Kashmir and Peshawar; a second to the country of the Nerbdda; a third to Mewar and Bundi; a fourth to Northern Sind; a fifth to the Mahrrata country; a sixth to the Greek province of Kabal, Arachosia; a seventh to the Himalaya; the eighth to Ava or Siam, that is, the golden land, the aurea regio or the aureas chersonesus; and the ninth to Lanka or Ceylon. Some circumstancies of which we are uninformed, must have prepared these regions for the reception of the ascetic doctrines of Sakya Muni, which still prevail throughout Ceylon, Burma, Siam, Tibet, and China, amongst about one-fourth of the human race. See Buddha.  
ARHI-PATA. SANSK. Lord of the day; a name of Surya, the sun.  
ARI. TEL. Bahushin racemosa, Lam.  
ARIA BEFON. MALEAL. Azadirachta Indica.  
ARI-ALU. MALEAL. Ficus religiosa, Linn.  
ARIAMANUS, from Ari, a foe, and Manus, a man, the Ahriman of the Parsees.  
ARIANA (Iran) was the generic name for the country east of Persia and Media as far as the Indus, and Arian Abakhafasa is supposed to have been an Aryan territory near Kabul and the Paropamisus.

ARIA PALUS, of the ancients, is a lake formed by the accumulation of the waters of the Helmand at the southern extremity of its course, and called the lake of Zarrah by Europeans. This is a contraction of Zarrenj, the ancient capital, and this again represents the Zarangi or Drangi of the Greeks. In old Persian books it is called 'Daria-Reza, or little sea.' The present inhabitants of Seistan call it Meshila-i-Rustum, also

Moshila-i-Seistan. The ordinary name of the lake is Hamun, or the expans.—Ferrier's Journ.

ARIA VELA. MALEAL. Cleome viscosa.

ARIG,EUM, a town near the territory of the Siah Pash Kafris, at which the Greeks in their advance on India established a military colony.—ARIKELU. Tel.  Paspalum frumentaceum.

ARIKELU. TAM. Marsilea quadrifolia.  
ARIKOTE. Tel.  Pointea Roxburghii, D.C.  
ARIPO, a small town 11 miles S. of Mangar, built on a low sandy beach on the south side of the river, in lat. 8° 46' 30" N. and long. 79° 55' 30" E. Its chief importance is connected with the pearl fishery.

ARIS. HIND. Adhatoda vasica.

ARIS.EMA, a genus of the Araceae or Arum tribe of plants. A. gracile is mentioned by Dr. Honieberger as occurring abundantly in the Himalaya, on the south side of the Pür Pandjáli, from the top to the bottom. Its juice very acrid; the roots are considered by the Hakims to be an excellent remedy against every description of animal poison. A. dracontium and A. tripheylum are introduced plants. Dr. Stewart mentions A. curvatam, A. speciosum, and A. tortuosum as Punjáb plants. A. tripheylum, Endl., the Pwan-hwa of the Chinese, is a very acrid and caustic plant, and, along with species of Pythionium, Pinella tuberifera, and Arum macerorum, it forms part of the compound for destroying the sensation of parts to be operated on.—Smith; Honiey; Stewart; Voigt.

ARISHITA. SANSK. A savage bull killed by Krishna. It approached the place where he was dancing with the Gopin sheepdresses, when he seized it by the horns, one of which he tore off, and with it slew the bull.—Garrett.

ARISHITA NEMI, a name of Ksasyapa. He was the near kinsman of Krishna, they being the sons of Basdeo and Samudra, the eldest and youngest of ten brothers of the Yadu race.

ARISHITA PHENILA. SANSK. Soap nut.

ARISI. TAM. Husked rice of Orzya sativa.

ARISINA. CAN. Cureuma longa, Roxb.

ARISTIDA, a genus of plants growing all over India, in dry, barren, binding soil. A. depressa, Retz, and A. setacea, Retz, are common in many dry parts of the central and western Punjab and Trans-Indus, and in parts of the outer hills towards the west up to 2500 feet, and said to be a favourite food of cattle. In Madras, A. setacea, Shipur gadi, Tel., the broom grass, is used for brooms and tatties.

ARISTOLOCHIA, a genus of the Birth Wort tribe, with about 12 species in India. A. acuminata is in many places cultivated as a flowering plant, for its large dark greenish purple flowers. A. angucida, odoratissima, labiosa, cymbifera, elecamitis, foetens, and Braziliensis are introduced plants. A. longa and A. rotunda, natives of the south of Europe and Kashmir, are found in the medicine bazaars of India, under the names of Zurawund taweel (or daraz, the long), and Zurawund moadaruj (or gird, the round), with Aristolochia as the Greek name. The roots of A. longa are given by the Hakims in diseases of the womb, ulcers and affections of the gums; the latter in itch, lues, for drying up sores, destroying lice and intestinal worms, also for promoting the renal and menstrual secretions. A. longa, Zurawund taweel, occurs in whitish twisted pieces, the

ARIOLOCHIA.
ARISTOLOCHIA BRACETEA. Retz.

Gundata, Kira-mar, Dekh. Gaalida-gadda-pu, Tel. Birthwort, Eng. Purugu pallay, Pattra-hanga, Sansk. Gaalida gadapara, Additapale, Tam. Gardi Gavupa. Tel.: A small creeping plant; flowers nearly all the year; grows on the Coromandel coast in cultivated places, and in Travancore. Every part of this plant is nauseously bitter. In cases of torments, two of the fresh leaves are rubbed up with water, and given once in 24 hours. Infusion of the dried leaves given as an anthelmintic; fresh bruised and mixed with castor oil, they are considered a valuable remedy in obstinate cases of itch. The fresh leaves applied to the navel of a child are said to have the effect of moving the bowels. The same, fried with castor oil, and made into a ball the size of an orange, relieves horses when suffering from gripes. The leaves beaten up with water are given internally in cases of snake-bites; also, in infusion, in boils and inflammatory attacks. — Ainal, Lindl., Useful Plants; Fanik.; O'Sh.; Rozh.; Voigt; Cat. Cat. Ez., 1862.

ARISTOLOCHIA CONORTA. Smith. Tu-ta'ng-muh-hiang, of the Chinese. Their roots are obtained in Shen-sa and Hu-pi. They are powerfully purgative, emetic, and anthelmintic; and in snake-bites are used both internally and externally.—Smith.

ARISTOLOCHIA INDICA. Linn. Birthwort.

A perennial twining plant, growing everywhere in the copses and jungles of India and Ceylon, flowering in the wet season. The root is nauseously bitter, and is given in decoction as an emmenagogue, in lues, in paroxysms of gout, in the diarrhoea of children proceeding from dentity. Also criminally used, to procure abortion, and as an antidote to snake-bites.—Rozh.; Voigt; Cat. Cat. Ez., 1862; O'Sh.

ARISTOLOCHIA KEMPFFERI. Smith. Ma-tan-ling, Chinese. Its fruit is obtained from Wuting-fu in Shan-tung, and its seeds are used in pulmonary ailments.—Smith.

ARISTOLOCHIA RECURVILABRA, Hone, the green patchouli of China; a medicinal plant largely exported from China. It is obtainable at Ningpo.

ARISTOTLE, B.C. 384—322, the Aristoum of the Arabs and Mahomedans of Asia, a native of Greece, one of the ablest men in science and philosophy. He was born at Stageira, in Macedonia, B.C. 384; both his parents died while he was young. At the age of seventeen he became a pupil of Plato, and remained in the school till Plato's death, B.C. 347. He became the teacher of Alexander the Great, on whose departure for Asia Aristotle returned to Athens, where he taught and wrote treatises on Natural History, Medicine, Generation, Destruction, Metaphysics, Philosophy, Ethics, Rhetoric, Poetry, Physics, Political, Economical, and Mental Science. He is supposed to have died of a disease of the stomach, at Chaleis, B.C. 322, aged 63. His fame in India is wholly confined to the Mahomedans. His pupils and followers were the historians of India after Alexander's time.—See Ind.; Sylax; Veda.

ARITA, MAHR. Sapindus emarginatus.

ARITHMETIC. The rules of the Hindus are in verse. The question is usually propounded with enigmatical conciseness; the rule for the computation is given in terms somewhat less obscure. But it is not till the example, which comes in the third place, has been studied, that all ambiguity is removed. No demonstration, nor reasoning, either analytical or synthetic, is subjoined; but, on examination, the rules are found not only to be exact, but to be nearly as simple in their new form as in the old; a state of analytical investigation. The same observation is applicable to their algebra. In arithmetic and algebra the brahmans attained to a high degree of proficiency. To them we owe the invention of the numerical symbols on the decimal system; the Indian figures 1 to 9 being abbreviated forms of the initial letters of the numerais themselves; and the zero or 0 representing the first letter of the Sanskrit word sunya, meaning empty.—Imp. Gaz.; Ed. Rev. vol. xxix. pp. 147, 151.

ARITI CHETTU, Musa paradisiaca, L.

Ikan Sahadu, Malay. Ikan Surduda, Malay.

This fish inhabits the Gangetic estuaries near Pondicherry, and the estuaries near Penang, the Malay Peninsula, and Singapore. It is 1 foot 10 inches long, forms an article of food, and more than any other fish to Siluridae contributes to the islinglass of commerce. Book 1, chapter 3, he has pointed his eggs in its mouth. A. militaris, Linn., 1 ft. long, inhabits the Coromandel and Malabar coasts, the Gangae, Irawadi, and the seas and estuaries of the Malay Peninsula. Its air-vessel is preserved as islinglass.—Cantor.

ARIUS TRUNCATUS. Cuv. and Val. This is under a foot in length. It occurs in the seas of Penang and the Malay Peninsula, but is so rare that it furnishes little of the islinglass of commerce.—Cantor.

ARIVAN. Hind. With Hindus, the first cuttings of the harvest; they are not taken to the threshing-floor, but are brought home to be presented to the household gods and brahmans, and to be eaten by the family. The grains are taken out of the ear, and eaten with milk and sugar; also called Nawan, from Nawa, new, and Ann, food.—W.

ARIVITA. Tet. Eugenia bracteata, R.

ARIYAPORIYAN. Mal. Antidesma bunias.

ARJA. Hind. A class of women mendicants in Central India, respected for their knowledge, not their conduct. Women who have adopted the vagrant life which this class pursue, are never allowed any intimate intercourse with families.—Malcolm's Central India, ii. p. 193.

ARJAMAND BANU, daughter of the vizir Asof Jah, was the wife of Jamali Khan, but
ARJAN.

subsequently married Shah Jahan, emperor of Delhi, and received the title of Muntaz Mahal. He erected a tomb near Agra, over her remains, known to Europeans as the holy Mahal.

ARKA also Arzhan and Arzhaney. Pers.

According to Ouseley, this tree is a species of the Badam-i-Kobi, or Badam-i-Talkh, the mountain or bitter almond.—Ouseley's Travels, i. p. 306.

ARJANNA. Hind. A tribe of Kumbi cultivators in W. India.—Wilson.

ARJUN. Beng. Terminalia glabra, Roxb. 

ARJUNA, third son of Pandu by his wife Kunti or Pritha. He was skilled in arms, and appeared disguised as a brahman in the swayamvara of Draupadi, whom he won, and she became the wife of the five brothers. She dwelt with each alternately for two days, the arrangement being that no other brother should approach, under pain of banishment. Arjuna broke the agreement, and he was banished for twelve years. During his banishment he visited Hardwar, Manipur, Prabhasa near Dwarka, where he married Subhadra, sister of Krishna, with whom at the close of his sentence he returned to Indraprastha, and rejoined his brothers. The eldest brother, Yudhisthir, the raja or king, resolved to perform the imperial rite of rajasauna. It was successfully accomplished, but it excited the anger of the Kuru race, and revived the old feud between the Kaurava and the Pandava; and Duryodhana, chief of the Kaurava, engaged the Pandava in a gambling match, in which the Pandava staked their kingdom, and, losing, went into exile. Subsequently Arjuna and his brothers engaged in the great war of the Mahabharata, at Kurukshetra. Arjuna induced Krishna to join the Pandava side, and Krishna promised to drive their chariot in the war. On the first day, Arjuna engaged Bhishma in single combat; on the second day he rallied the Pandava, whom Bhishma had thrown into disorder. He again fought with Bhishma, and rescued his son Abhimanyu from Duryodhana. Subsequently, he mortally wounded Bhishma, defeated Susarma and his brethren; again fought Susarma, but while so engaged his son Abhimanyu was slain by six Kaurava chiefs. Arjuna on this vowed to take the life of Jayadratha, which he accomplished, and shortly after killed Karna with an arrow. After the war he died, with the other Pandavas, among the Himalaya mountains. The Bhagvat Sita is a philosophic discourse between Krishna and Arjuna, presumed to be at the time of the great battle; and this epic poem also contains an account of the twelve months' roaming of the white horse let loose by Yudhishthira, before performing the Aswa Medha sacrifice in token of political supremacy. His grandson Parikshita succeeded to the throne of Hastinapura.—Bunsen, p. 555; Wheeler's History of India.

ARJUNO. Beng. Lagerstroemia regina.

ARK. Arab. Hind., Pers. A citadel, or smaller inner castle constructed within a larger fortress. But as princes in the east generally lived in the Ark, the word from thence often came to be applied to a palace, as the Latin arx, comprising the palace (Dewan-Khana); and that the ancient kings placed their habitation in the ark or citadel or citadels, we learn from Suraiah (in Virg. Æn. v. 410): "Regium enim habitabere in areabis proper turbam."—Malcolm's Persia; Ouseley's Travels, ii. 18; Fraser's Khorasan, p. 85.

ARKA, a town in Carnara, where brahmans say Sri Yen, the holy spirit, is worshipped.

ARKA RANDHU, a name of Buddha, meaning the kinsman of the sun.

ARKALU. Tel. Harnaola ruta.

ARKANTA. Beng. Alangium hexapetalum.

ARKATOU BASHEON, of the Greeks, is the present Arcot. See Arka-kadu; Arcot; Kurumbar.

ARKOLA. Kasm. A poisonous tree of Kashmir, which when green blisters the hand. In the Panjab, Bhus acuminata, buckiamela, and vernicia.

ARMAGAM, Armagon, or Durgunaz-putnam, on the Coromandel coast, was an early settlement (1625) of the English, from which they removed to the present site of the chief city, Madras, in about 1728. It has a lighthouse in 39° 55' N., 80° 70' E. Off it is a shoal of the same name, and the still water inside the shoal is called Blackwood's harbour.

ARMAITI, in the seventh strophe of Zoroaster's hymn, is named as the mother of the corporeal world, as coming with power, and with truth, and with purity of heart, to succour this life. Armaiti is known to the Vedas, and is therefore older than Zoroaster. It is the Espanardarmad or Saropandol of the Parsees. But Armaiti came to be regarded as something material, and this was deemed the earth. Armaiti had three companions, viz. Kshathra-Vaiyra, Pre-eminent Power, from which the Persians have their Shah River; Asha, or Truth, the Parsee Arda Behest; and Vohumano, good pious mind or Piety, whence the Parsee Bahunm.—Bunsen, God in History, i. p. 283-5.

ARMAK. Hind. Pandanous odontissimius.

ARMENIA. The Upper Euphrates is nearly in the centre of that great range of territory called by the ancients Armenia, which extended eastward from that river to the Caspian Sea, and again westward over a part of Asia Minor. At the present day, the general limits of this territory will probably be best understood by considering the Euphrates to be its western boundary from Sumeisiat until a few miles south of Erzingan, where the boundary quits the river and preserves that direction to Tabriz, till it meets the mountains southward of Gumish Khanah. Armenia has now no political existence, and the territory is divided between Turkey, Persia, and Russia. Its lakes are Van, Gokeha, Sevan, and Urmia. The towns are Amadia, Bayazid, Bitlis, Diarbark, Erivan, Kars, Mush, Nahakshan, Sart, and Van. The people are industrious traders, its prosperity powerful and robust. They live in good houses. Their women are on an equality with the men. Armenians adopted christianity in the fourth century. In A.D. 536, they separated from the Greek Church. They have had many martyrs. The catholic or patriarch resides at the Echmiadzin monastery, 13 miles E. of Erivan, in the valley of the Aras. The old Armenian language is called Haikan; and in A.D. 406, Mesrop Masdor invented an alphabet of thirty-eight letters, with eight vowels, which is still used along with a modern alphabet. The populations call themselves Haik or Haikan, and their country Haikesthan; the term Armeni is said to be from Aram, the sixth in descent from Haik, a grandson of Japheth. Haik
ARMENIACA VULGARIS.

is said to have been a brother of Belus. Armenians are found in all eastern countries. In their charity to one another, combined with their eager toil for wealth, they have much in common with the Jews. They evince great commercial aptitude, and are bankers and merchants. In Armenia, however, they cultivate the soil. Before their conversion they were fire-worshippers. Many of them now are Nestorians, some are Romanists. The language of the present day has affinities with the Iron, Persian, Arabic, Syrian, and Turk. In the 5th century, the great Mesrob translated the Bible into the Armenian tongue; Mosos Vocazer, Chorinazi the historian, and Isaac, are their celebrated writers. In the 11th century, they had the great patriarch Nerses Shinor-Haideh, and Archbishop Nerses Lampronazi. General tradition and the formation of language point alike to the mountains of Armenia as the birthplace of the Arab and Cazaanish races; and there is especial native evidence to the same effect as regards Edom, consequently also the Phenicians.—Col. Chesney's Emphrastes Expiçd. p. 94; Bunsen's Egypt, iii. p. 431; Wolf's Bokhara; MacGregor's Persia; Polgrave.

ARMENIACA VULGARIS. Lam. Apricot.

Prunus Armeniaca, Linn.

Bin-kuk, ... ARAB. ... Bar-kuk, ... PERS.

Tuffa Armina, ... " Bakur-khani, ... PERS.

Zard Ahu, Chulu, HIND. ... Mishmish, ... PERS.

Art, Khabani, Chinara, ... " Juklara, ... PANJ.

A native of Kaghman, China, and the west of Asia, but grown in the gardens of India. It is found also in the Suliee valley, between Rampur and Sungaun, at an elevation of 7000 to 13,000 feet, but does not ripen above Shalaker. It is there a common article of food and source of wealth. The plantain is last seen below Kogursh, and the mango near Rampur. The apricot is a staple produce in Kulu, and common article of food. They are small and firm fleshed, so that they dry well. It is common about villages in the Himalayas, and oil of the finest kind is made by expression from the kernels, which are sold separately in the bazaars, under the name of Badam kohi, or hill almonds. The oil is clear, of a pale yellow colour, and smells strongly of hydrocyanic acid, of which it contains usually about 4 per cent.—J. D. Cunningham; O'Sh.; Rozáb; Voigt; Vegetable Kingdom, 299; Cleghorn, Panj. Rep. pp. 65, 80.

ARMENIAN BOLE.

Wu-shih-shih-chi, CHIN. Wu-sih-fu, ... CIN.

Uctitious earths of various shades of red and other colours.

ARMIES are retained in British India by the British and by the Foudatory sovereigns. That of the British comprises, of Europeans, artillery, cavalry, and infantry, in all, ordinarily about 65,000; and another larger body, raised from the populations under British sway, chiefly Hindus, but about one-third Mahomedans, number about 149,000. The Hindus, including the Sikhs, consist of the Brahman and Rajput and Jat of Hindustan and the Panjabin, the Mahatta, Teeling, and Tamil races of the peninsulas. The Mahomedans consist of the descendants of the races, Pathan, Moghul, Syud, and Shaikh, who were dominant prior to the British, also largely of the Afghan or Pathan races of the N.W. borders of India. It has been calculated that the strength of the armies and armed retainers of the native States amount to 100,000 men. The Maharaja Sindia of Gwalior, the Maharaja Holkar, the Nizam of the Dekhan, have the largest and best appointed forces. During the revolt and rebellion of 1857-59, both Sindia and Holkar experienced the bitterness of the defection of their troops.

The army of British India, up till the year 1859, when the Queen of Great Britain assumed, from the East India Company, direct control of that country, was composed of European cavalry, detailed from the army of Britain; native cavalry recruited amongst the people of India, and officered and drilled like European regiments by natives of Great Britain, but with fewer officers; and of other regiments of native cavalry, also raised amongst the natives of India, but with still fewer European officers generally—only a commander and adjutant. The last-named troops were usually styled irregular cavalry; they were contractors, supplying their own horses, horse-furniture, and horse food, and were classed as the sirdar and bargir, according as they were owners of horses or servants, for certain sirdars had the privilege of supply of two or more horses and horsemens, styled assani. The artillery, both horse and foot, were wholly servants of the East India Company, the whole of the officers and the soldiers of the European artillery being natives of the United Kingdom of Great Britain and Ireland; but the native artillery, horse and foot, called the kala or black troop, and also golanuz, were recruited from amongst the same classes of natives as supplied the native cavalry and native infantry, and had both European and native officers. The infantry, similarly to the cavalry, were in part the servants of the Company, in part of the Regulars; of British regiments taking a tour of duty in India; and in greater part they were native regulars or foot. These troops were arranged in the three commands of Bengal, Madras, and Bombay, and their numbers in times of peace and war varied between 200,000 and 300,000 armed men, ready for war. In the Bengal native army, there were Mahomedans; but the bulk of the soldiers were Hindus, many of them of the Brahmanical and Khatriya castes, brave, buoyant, and jaunty, but proud, vain, and conceited. The Madras native cavalry were almost entirely Mahomedans, with a few Mahrattas from around Arcot; the Madras native infantry was about 2-5ths Mahomedans and 3-5ths Hindus, chiefly Teeling and Tamil Sudras, with a mere sprinkling of higher or lower castes and Christians; while the Bombay army was recruited partly in Northern India and partly from the Madras; chiefly from the Mahrattas of Maharashtra, and had a sprinkling of Jews, low caste men, and Christians. The duties of the Bengal and Bombay native armies were chiefly amongst people speaking their own or allied tongues; but the Madras soldiers, besides the Tamil, Telug, and Canarese countries, held Travancore, Hyderabad, and the Central Provinces, and took the entire duties of China, Borneo, Singapore, Malacca, Penang, the Andamans, Nicobars, Moulmein, Rangoon, Prome, Thayet Myo, Toungoo, and at times held Aden, Klyoukh Phyo, Canton, and Hong-Kong, and have come westward to Egypt and Malta. The engineers were officered by natives of Britain, but had under them a large body of native sappers and miners, who, in Madras,
were Tamil and Telugu Sudras and Christians, with a few Mahomdeans. In 1857, however, the regular native army of Bengal, composed of Hindus and Mahomdeans, revolted in the North-West Provinces, and it took all 1858 and 1859 to subdue the mutineers and restore order, for many chiefs and races rose in succession. A few regiments of the Bombay Presidency also failed, but one of these, the 21st Native Infantry, had formed part of a regiment of the Peshwa, Baji Rao, commanded by Captain Pott, and had come over to the E. I. Company during the middle of the battle that ensued on the attack on the Residency at Poona, and the corps had continued, as in the Peshwa’s times, to be recruited in Northern India. From 1858, the entire European soldiery of India were obtained from the British army, amongst whom those previously belonging to the East India Company were enrolled, and great reductions were then made amongst the regiments of native infantry, their organization was changed from the regular to an irregular system, i.e. with fewer European officers; and by degrees, nearly all the native artillerists were eliminated. All the reasons that led the British Indian Government to give so decided a preference to the irregular system are not known, but it has been stated that the principal was the noble and loyal behaviour of the brave Gurkha and Panjabi irregular regiments. Other irregular regiments, composed of men of the same caste and country as the rebellious sepoy, such as the Gwallor, Kotah, and other contingents, did mutiny, and join with the men of the regular army in their attempts to throw off the British rule. In 1858, the Panjabi Government, acting on the principle of divide et impera, ordered that certain regiments about to be raised in that province, should be organized in companies of different races,—Sikh, Panjabi, Dogra, Pathans, and others. The number of officers now attached to irregular regiments is, however, still very nearly as great as the average present with the old regular regiments of the Bengal army. The North-west frontier of British India has been extending to the countries of the mountain tribes on the borders, and including several of them. While this has been in progress, another British Indian army, above 14,000 strong, has been raised. It is the Panjabi Frontier Force, consists of artillery, cavalry, and infantry, about half of them Mahomdeans, with a sprinkling of Afghans and tribes from beyond the borders. It has been kept under the orders of the Governor-General and Council.

In Northern and North-West India, the country is occupied by the Bengal Army, the Panjabi Frontier Force, 13,957; the Central India Horse, 1,007, and the small bodies, 5702, comprising the Bhopal, Erinpura, Deccal, Mairwarra battalions, and the Bih corps of Malwa and Mewar.

The Bengal native army, 50,451 strong, is almost wholly recruited from the British and Independent States of the Panjabi, Oudh, Delhi, N.W. Provinces, Cis Sutlej, and Nepal, only about 2000 of its number being from Bengal and Assam.

The Peninsula of India and Central Provinces have the Madras and Bombay armies located in them, and the Hyderabad Contingent is in the centre of the Peninsula.

The Panjabi Frontier Force, 13,957 strong, a famed body, was recruited as under—

The Central India Horse, 1097 strong, are of various races, half of them from Oudh, Delhi, and the N.W. Provinces, 214 from Panjabi Proper and Hazara, 118 from the British and Independent territories in the N.W. Frontier and Cis Sutlej, and 156 from the Central Provinces. The Bhopal battalion, 902 strong, is almost wholly from Oudh, Panjabi, Central Provinces.

The Madras army, 30,448 strong, is composed in almost equal proportions of men from Telugans in the Northern Circars and parts of the Karnatic, about 4000 being from the Ceded Districts and Mysore; and the Nair Brigade and Mysore troops of the allied States of Travancore and Mysore are obtained from the same localities.

The Bombay army is 25,885 strong. It is recruited chiefly from the Konkan and the Dekhan, but also from countries wide apart, viz.—

The Hyderabad Contingent, 7495 strong, is provided by the Nizam of Hyderabad under the treaty of 1853; 3550 of their number is from the N.W. Provinces, Rohilkhand, Delhi, and Oudh, and 8414 from the Dekhan. The Contingent comprises six regiments of infantry, four of cavalry, and four batteries of artillery.

The provinces from which, in 1851, the three armies, numbering 138,305, had been recruited, were as under—

Besides the regular European and native military forces, the Europeans and Eurasians of civil life have formed volunteer regiments. These change from time to time, but recently they numbered twenty-nine, besides four cadet companies, and 311 officers, 736 non-commissioned, and 4871 privates, or 6018 in all, which were at Agra, Akhyab, Allahabad, Bangalore, Behar, the Berars, Bombay, Calcutta, Cawnpore, Darjiling, Ghazepore, Lucknow, Madras, Moulmein, Mussoori, Nagpur, Naini Tal, Poona, Rangoon, Simla, and Tirhut. The East India Railway Volunteer Rifle Corps muster—1063; next comes the Great Indian Peninsula Railway Corps, with 963 enrolled, and 813 efficient; then follow the Ist Panjub Corps, with 667 enrolled, and 527 efficient; the Madras Volunteer Guards, 640 and 468; the Bombay Volunteers, 620 and 440; the Agra Volunteers, 385 and 263; the Calcutta Volunteers, 385 and 355; the Bangalore Volore Corps, 365 and 183; and the 2d Panjub (or Simla) Volunteers, 238 and 222. The remaining corps number less than 200 members each.

The British Indian forces under the Commander-in-Chief and Viceroy, are—

ARMIES.

ARMORIAL BEARINGS.

A. Commander-in-Chief

Native Cavalry, 19 4 7
Infantry, 49 49 80
Sappers and Miners, 1 1 1

Panjub Frontier Force, 17
Central India and Rajputana, 8
Hyderabad Contingent, 10

Panjub Frontier Force, 2 regts. Central India Horse, 4 regts. Cavalry, 4 regts. Artillery, 1 Guide Corps 1 Malwa corps, 6 Infantry, 6 regts. of Sikh (Bhopal Sind Horse, as proposed.

5 regts. of Panjub 2 regts. Central India Horse, 4 regts. Cavalry, 6,973 7,191
1 Guide Corps 1 Malwa corps, 6 Infantry, 6 regts. of Sikh (Bhopal Sind Horse, as proposed.

1 Duraga, 1 Erinpura, 1 Moyer.
1 Gurkha regt. 1 Mahurwar.

The annual pay of an infantry regiment of—

Bengal, Rs. 1,51,244. Madras, Rs. 1,70,583. Bombay. Rs. 1,62,600.

Bengal Irregular Cavalry Regiment, Rs. 2,62,158. Madras Regular... 2,52,545.

The three armies are at all times complete. Most European armies are filled up by conscription of men on or other terms. In Britain, the term enlistment prevails. But the Indian recruit is merely permitted to enrol himself in the Emperor's army, if he is found to be a fit and qualified man, and the vacancies are filled up nearly as they occur. Nor is this due to the fact that the regiments are serving in their own particular districts, where the men in the ranks might tempt brothers and cousins to join them. The army is dispersed over the country, and not one corps in twenty is stationed in the district from which the majority of its men are drawn. Again, there is no complicated recruiting establishment, no bounty to the young soldier on enlistment, nothing for him to expect but his pay and his very remote pension. At the outset of his career, instead of getting a bounty, he incurs a debt to the Government for some articles of his kit, and is under stoppages for a year or so before this is paid off. Altogether the spontaneous eagerness for military service which among their native fellow-subjects exhibit is a phenomenon of which the British Indian Government has every reason to be proud.

ARMILTS are worn by Hindus and Mahomedans, by men and women; of gold or silver, ivory, deer-horn, and brass, some in the form of massive carved rings, some as lockets; the more expensive, worn by royalty, are the bazu-band, literally, arm-binder. They have been worn as ornaments since the most ancient times, like earings (Gen. xxxv. 4; Exod. xxxix. 3. 4.; Hosea xi. 13; Judg. viii. 24). The picture in aures often of gold, like those of the Ishmaelites. But they are often caskets containing, as with the Mahomedans, their taziy, charms, or, like the Jangam sect of Hindus, the phallic lingam. The last are often worn round the neck, like the golden bull and leather torus of the Roman youth, or as in Proverbs vi. 21; and most women have frontlet ornaments, such as are alluded to in Deuteronomy vi. 8.

ARMORIAL BEARINGS belong to the cast, and were little known till the period of the
ARMOSIA DASYCARPA.

The twelve tribes of Israel were distinguished by the animals on their banners, and the Hebrew writings frequently allude to the 'Lion of Judah.' The peacock was a favourite armorial emblem of the Rajput warrior; it is the bird sacred to their Mars (Kunam), as it was to Juno, his mother, in the west. The feather of the peacock is used to decorate the turban of the Rajput, and the warrior of the crusade adopted it from the Hindu through the Saracens. 'Je paou a toujours été l'embleme de la noblesse. Plusieurs chevaliers ornaient leurs casques des plumes de cet oiseau; un grand nombre de familles nobles le portaient dans leur blazon ou sur leur cinier; quelques-uns n'en portaient que la queue.'

ARMOUR AND ARMS.

The Andrea Ferrara, is not uncommon; nor is the Khanda, or double-edged sword. The matchlocks, both of Lahore and Rajputana, are often highly polished, and inlaid with mother-of-pearl and gold; those of Boondi are the best. For the shield the rhinoceros hide offers the best resistance, and is often ornamented with animals, beautifully painted, and enamelled in gold and silver. The bow is of buffalo-horn, and the arrows of reed, and barbed in a variety of fashions, as the crescent, the trident, the snake's tongue, and other fanciful forms. The custom of engraving incantations or verses of the Koran on weapons is eastern, thence adopted by the Mahomedans, as well as the use of phylacteries.

The name of the goddess guarding the Rajput tribe is often inscribed, and an entire copy of the Bhagvat Gita has been taken from the turban of a Rajput killed in action; in like manner, the Mahomedans place therein the Koran. The devotions of the Rajput are still paid to his arms, as to his horse. He swears 'by the steel,' and prostrates himself before his defensive buckler, his lance, his sword, or his dagger. This worship of the sword (asi) prevailed amongst the Scythic Getae, and is described exactly by Herodotus. To Daecia and Thrace it was carried by Getic colonies from the Jaxartes, and fostered by these lovers of liberty when their hordes overran Europe. The worship of the sword in the Acropolis of Athens by the Getic Attila, with all the accompaniments of pomp and place, forms an admirable episode in the history of the decline and fall of Rome; and had Gibbon suggested the worship of the Khanda, double-edged sword, by the prince of Mowar and all his chivalry, he might have further embellished his animated account of the adoration of the seimitar, the symbol of Mars.

For protecting the person, the shield has been in use from the most ancient times. In the south and east of Asia, they are made of rhinoceros hide, elephant hide, wood, iron, and steel, many of them with knobs to prevent an opponent's weapon sliding past, and many with beautifully inlaid work of gold. It is a tradition with Arabs, that the prophet David was the first person who manufactured coats of mail. Hence an excellent coat of mail is often called by them 'Daoodee' or 'Davidian, and this is worn in the desert at the present day. The zara, or zirra, is a finely woven chain armour,—kurta, paijama, and kulla,—coat, leggings, and helmet, the last surmounted by a plume, and protected all round, except over the face, by a curtain of chain-work. The khod, steel helmet, has slitting bars which can be slipped out to protect the nose. The char-ainan, which is worn over the zara, are four plates, for the breast, back, and each side, and the armlets also are of steel. These are often beautifully inlaid with gold. Amongst the Arabs the zara is of two sorts, one covering the whole body like a long gown, from the elbow over the shoulders, down to the knees; this is the sergh. The other, called kemibiz, covers the body only to the waist,—the arms, from the elbows downwards, being covered with two pieces of steel, fitted into each other, with iron fingers. Thus clad, the Arab completes his armour by putting on his head an iron cap (taj), which is but rarely adorned with feathers. The coat of mail is sometimes worn within the ordinary outer tunic. Scale armour is another form of the zara, the scales overlapping each other, and in
ARMOUR AND ARMS.

At the Madras Exhibition of 1855, there was exhibited a coat of mail of steel, the whole riveted together, with the exception of the collar, which was composed of small brass and steel rings, merely looped one into the other; the helmet, also of steel, inlaid with gold, was surrounded with a curtain of brass and steel rings, of a sufficient depth to cover the back of the neck. Also two sets of plate armour of steel, beautifully inlaid with gold, the helmets surrounded with a beautiful fringe of steel and brass rings looped together, and the gauntlets fringed with gold lace. The shield belonging to these two sets of plate armour was composed of fine steel, beautifully inlaid with gold. There was also a shield made of the hide of the rhinoceros, beautifully studded with gems set in gold; gauntlets made of copper, richly chased and perforated, also gilt and fringed with gold lace; plate armour for an elephant, composed of iron plates intermixed with rings of the same material, the plates riveted, but the rings only linked together, the pieces of a horse, composed of small plates of wrought iron, intermixed with small iron rings, linked and riveted together, the whole lined with cotton cloth padded; iron chain armour, composed of small iron rings ½ths of an inch in diameter, riveted together; the turban, of long strips of sheet iron riveted and brazed together; and in front of the turban was a plate of iron to protect down as far as the mouth (intended to protect the face from the cut of a sword), and this piece of iron was richly chased.

The sword, in different forms, has been the weapon on which, in all countries, most reliance has been put, as is evidenced by the number of forms and names which the various nations have given to it. The native military officers of India, when calling on a person of rank, gracefully present their sword, as evincing their readiness to obey his orders, and at the durbar of native courts they do not present nazzars, like others, but, partially drawing, receive on the blade a drop of attar. These are pretty sights to see. The need for defensive armour suggested the shield; and the attack has required the blow, the thrust, and the cut. For these, the swords of southern Asia are mostly all curved, either outwardly, or incurvated, sickle-shaped, and with very short handles, to compel the drawing cut and blow, by which great feats are done,—such even as cutting a bullock in two.

The mountain tribes carry weapons for short quarters. The bahbudhi (the strong) is the Afghan knife, for cut or thrust; it is straight-backed, broad near the handle, and fining to a point. The kuki or the Gurkha has a short handle, and an incurvated, sickle-shaped blade, widening at the middle, and drawing to a point. The mohlap knife also has a very incurvated blade. The Burmese dha is a short, straight-bladed knife, cut off at every purpose at home and in battle abroad. Arlya katti is the sword of the Coorg mountaineers. For the cutting blow is the abassai. It is a heavy, broad blade, with an outward curve, and suitable for a mounted soldier. The Shanmsher or talwar has a slight curve and a side-guard; the shah-bakha has a basket guard; the farangi (European) is for cut and thrust; the kichh also is a straight sword; the gauntletted lata or snail is a long weapon used in athletic exhibitions.

Arabian arms are distinguished by their fine filigree work, and the absence of gems; those of the Persians by their superb damascening, enamelling, and carving, and the rare employment of gems in their decoration; while the Indian are characterized by the high relief of their elaborately hammered and cut gold-work, and the unsparing use of the precious gems. The sword blades are frequently inlaid all over; but a workman will not spoil the appearance of the water of a fine blade by working it over, and any good inlaying on such is just below the hilt. For the thrust, the dart and the javelin are but little used; but the spear, lance, and pike, the bala and barcha, and the dagger, are to be seen throughout the south and east of Asia. The dagger is worn by all classes of a military, or semi-military reputation; and in British India and Persia the blades are often prettily inlaid with gold, in the manner described as kof or kot-kari, and kar-i-tali. The forms of the dagger, each with its own name, are manifold, and originate from the diversity of the countries; one of the most varied of them. In British India are to be seen the bichwa or scorpion, with a waved blade; the farisi; the jambiya; the katara, a triangular, heavy-bladed dagger, with a peculiar handle of steel; the khanjar has a short blade, and the pesh-kabz with blade straight at the back, sloping to a point in front, its handle the horn of the rhinoceros or bone of some cetacean. It resembles the Afghan knife in form, but is shorter. At present, the club form of weapons, the gurz or mace, and bladed mace, the tabar or battle-axe, are rarely seen.

The bag-nak'or wag-na'kh of the Maharratas is famed because of its use by the great Sivaji, when he treacherously seized with it and slew Azaf Khan.

Of offensive weapons, there were, at the Madras Exhibition of 1855, swords with two edges; the pattern or basket-hilted sword; the grooped or sword-stick, with a shaft of two edges, or four square; also straight and curved swords; the chilta or steel club; spears of kinds; bichu or dagger, with one, two, or three blades; kattar or dagger, with plain or fluted blades; bhalaparas or battle-axe; the jazal or gingal wall-piece six feet or more in length.

Of curious weapons, there were exhibited the charkh of steel, discs or quirts which are thrown from the hand with a circular swinging motion. Bows with quivers, arrows made of bamboo, gilt, and the quivers of crimson velvet fringed with gold lace, and embroidered all over with gold, the arrows being of light bamboo, tipped with steel; the goopum or sling; the marudo, two deer's horns tipped with steel spikes, fastened together with the points projecting outwards, and a short dagger in the centre. The varf or the mid-rib, composed of some hard wood, fixed on the knuckles or bones; the handi or parakramchak, or iron discs, made to slip over the hand with a strap behind; in the centre is a steel knife projecting to the front, and round the edges are also placed a number of short knives. Iron claw nails, made to fix on the fingers; they are formed of separate iron rings made to fit each finger, with a steel claw attached to each, and would prove most dangerous weapons in close quarters, though of
ARMUGAM.

no use in any other way. Tiger's claws, the big-nak, made to fit on the hand, and disagreeable instruments to come in contact with.

In the Dekhan and Kandeh, three kinds of spears are in use,—the bhal for a horseman, barchi for a footman, and the halda or broad hunting spear. Spears are borne as marks of royalty before the raja of Tringanu. In the ashr sword, the curve commences from the handle. Raja Sivaji's sword Bhawani was a Gionoa blade. Besides these are the korah, and the zaffar-takia, the Koolung battle-axe, etc. Projectiles of the most ancient forms continue in use as weapons. Amongst them the blow-pipe, used with pellets and with blunt and poisoned arrows, is to be seen throughout India and the Malay regions; the boomerang is still thrown in the country of the raja Tondaman Bahadur, around Trichinopoly, where it is made of wood and ivory, and in Gujerat of wood and iron; and the Kanganar and Tiggar, makers of bows and arrows, are in every bazaar; the bows, often of great strength, but frequently of bamboo, strung with a bamboo slip, or with the silk of the cocoon, or cord of the bowstring hemp, Sansciviera Zeylanica, and the arrows with barbed heads. Slings are in use in every village. But all these, in the strivings of nations, have been displaced by the cannon, the musket or bandug, the matchlock, banduq toradar, and the rocket or ban, with the jadal or gingal wall-pieces. The earliest mention of the introduction of cannon in India was A.D. 1368, when Mahmud Shah Bahmani, at the siege of Bijapur, is related to have captured 300 guns and 3000 baggeons. The arm astray, fire weapon mentioned in ancient Hindu writings, is not supposed to have been of an explosive material. The races following mahomedanism who have ruled and fought in India since the 14th century, have placed great reliance on their parks of artillery, on their jadal (gingal) or wall pieces, and on the long breech-loader carried by two men in the field. A great cannon, cast at Ahmadnagur by Rumi Khan, and which is now on the ramparts at Bijapur, permits a full-grown man to crawl into it with ease. There are, at Woolwich Arsenal and the Tower of London, several beautifully cast guns, brought from China. On the summit of Gawilghur hill, the fortress on which was taken by General Stevenson on the 15th December 1803, is a welded gun 27 feet long; and another welded gun, 21 feet long, is on the southern wall of Beder.

—Surgeon-Major Bidie, Lecture; Tod's Rajasthan, p. 616, 628; Royle, Arts of India, 400; Ezih. 1851; Lane's Arabian Nights; Dureckhard's Victories, ii. Bedowins and Wakhig, iii. p. 55.

ARMUGAM, a son of Siva, largely worshipped by the Hindus and non-Aryan races of Southern India, and used as a name for Hindu men.

ARMURA of Bens, Coriaria Nepalensis, Wall. ARNA. SANSK. A male buffalo; Arni, female. ARNAKUNDA, or Warangal, a town in ancient Telengiana, about 70 miles from Hyderabad. A slab obtained from there had an inscription in Telugu and Uria, with Sanskrit slokas, dated Saka, 1054, or A.D. 1132, being the year of the abhunanu of the Vrshabhapatii Chakara, or sixty years' cycle of Jupiter. Ganesha, Saraswati, Siva, faheswar, are mentioned, also Raja Rudra Deva. The inscription contains a long account of Rudra Deva's genealogy and of his battles. There is no mention of Brahmans. From the mention of Gangesha, his worship must have been used in the 12th century.—Beng. As. Soc. vii. p. 901.

ARNAMANOPANDU. TAM. Sida acuta, Bum. ARNAUT, or Ata, largely employed as soldiers by Mahamud Ali of Egypt, and known in Europe as Albanians.

It grows in Central Asia, and is common in the northern Trans-Indus. It is held in veneration by Afghanis, as the five dark marks on the corolla are said to be those of Mahomed's fingers, honor his name, Prophet's Flower.—J. L. Stewart.

ARNEE, a town in the North Arcot District of the Madras Presidency, celebrated for the muslins it produces, though the first kinds are now only manufactured to order. A piece of the Arnee Sullah for ladies' dresses exhibited at the Madras Exhibition of 1855, priced Rs. 1224., attracted much attention and praise.—Jur. Rep.

ARNELLI PALLAM. TAM. Cicea disticha. ARNI. HIND. Clerodendron siphonanthus. ARNIYA, a dialect of the Dardu language, spoken by the Dards in Yusan and Chitral.

ARNOTTO. Annotto; Anotto.

The plant producing arnott, the Bixa orellana, is naturalised in India, Burma, and the Eastern Archipelago, but its native country is Cayenne, from which its name, Prophet's Flower, is derived. A tree of South America and the West Indies, where it is extensively cultivated on the banks of rivers, likewise to the Hawaiian Islands, Tongataboo, and Zanzibar. The arnott is a thick extract, obtained, it is said, from the seeds as well as from the soft sticky rind of the plant, and it is met with in commerce of two sorts. Flag or cake arnott is furnished almost wholly by Cayenne, from which it is brought to Britain. A superior kind, called roll arnott, is a harder and more concentrated extract. In Burma, dyers obtain a red dye from its fruit. In Britain, dyers obtain the red colour called arrora; and the liquid sold under the name of Nankin dye is a solution of arnott in potassa and pure water. A solution is also made in alcohol, and used in varnishing and lacquering. In Britain, it is used for giving more or less of an orange cast to the simple yellows, as an ingredient in varnishes. In the Madras Exhibition of 1855, a specimen of cake arnott, of a thick pasty consistency, prepared by macerating the seeds, gave an orange colouring matter. It is mixed with chocolate, oils, spirits, and varnishes, as a colouring material. It is soluble in alkalis, by which means it is fixed to silk or wool. The colour obtained from fresh pods of the plant is so superior to that of either the flag or cake arnott, as to lead to the conclusion that the method of preparing these, which is by a great degree of heat and fermentation, is injurious to the colour. It is used to impart a bright orange colour to silk goods. The dry, hard paste is also found to be the best of all ingredients for giving a golden tint to cheese or butter; and a convenient liquid preparation is now sold to dairy-men. The Spanish Americans mix it with their
ARRACK.

ARRACK, in Ceylon, a form of Buddhiam, the superior form of Samadhi restraint.

ARRACK.

Arag, Arq. . ARAB. Sura, . . SANSK.

Arora, . OHN. Saraiam, . TURK.

Arshi, . HIND. Sarai, . TURK.

Arak Ap, . MALAY.

Like the European words Eau-de-vie, arrack is a term applied in most parts of India and the Indian islands, to designate every sort of spirituous liquor, however obtained. The use of intoxicating fluids and drugs is considered by Mahomedans to be forbidden by the Koran. In chap. ii., Mahomed tells his followers that people "will ask thee concerning wine, and lots. Answer in both there is great sin, and also something of use unto men, but their sinfulness is greater than their use." Also, in chap. xvi., entitled the Bee, Mahomed, giving proofs of the resurrection, says "And of the fruit of palm trees, and of grapes ye obtain an inebriating liquor, and also good nourishment." The use of spirituous liquors is always affected by the northern races, reaching the maximum of excess under the Mongolian rule. Under the Karzimans, drunkenness was common amongst the most distinguished men; and under the Chingizides and Tumirdies delirium tremens was an ordinary malady. Baber's memoirs give some idea of the large prevalence of this vice in his time. The quantities of alcoholic fluids still used in all eastern countries is great, and there is much open drunkenness. But half of the Asiatic races—Arab, Persian, Hindu, Burman, Malay, Siamese, Buddhists, Christians, Mahomedans and Hindus—are abettors. Arrack to a small extent is imported into Britain from Ceylon and Java, in leers or large casks holding 150 to 156 gallons, and sells at 1s. 6d. to 2s. the gallon, exclusive of duty. Alcoholic liquors in Europe, when distilled from grape wine, is known as marc; when from malt liquor, it is called a corn spirit; when from molasses, as in the West Indies and America, it is a rum. But from Turkey in the west, through all the countries on the south and east, arrack from the Arabic Arab, is the term applied to all ardent spirits from whatever source obtained whether from the sorghum, or palms, or cane, from flowers, or fruits, or rice, or barks, or mixtures of all these. Alcoholic liquors are produced from the cow's milk or mare's milk in Tartary; from sheep's milk in Afghanistan; from lamb's flesh in China; and, as formerly in Britain, from honey, where mead was the only strong drink known for centuries. Ardent spirits of various kinds are prepared also by distillation from various grainhexes, as also in the form of liqueurs, with rosebuds, jasmine flowers, orange-peel, and Indian fenel seed. Along the seaboard of certain countries, among various palms most abound, the toddies,—the sap or palm wines of the cocoa-nut (Cocos nucifera), of the date-palm (Phoenix dactylifera and P. sylvestris), the Palmira (Borassus flabelliformis), the Gomuti or Arenga saccharifera, or the Caryota are, the materials chiefly employed for making arrack. These are fermented, distilled, and rectified, and usually yield about an eighth
ARROWROOT.

ARROWROOT.

part of pure spirit. The three principal kinds known in commerce, however, are the arrack of Batavia, Goa, and Colombo. That from Batavia is the strongest, and is distilled from a mixture of 62 parts of molasses, 3 of toddy or palm wine, and 35 of rice. The last of these items Crawford states to be boiled, and, after cooling, a quantity of yeast is added and the whole pressed into baskets, in which condition it is placed over tubs and left for eight days, during which time a liquor flows abundantly from the rice. This liquor is distilled, and then mixed with the molasses and toddy, which is all left to ferment for a week in large vats; after the fermentation is over, the arrack is distilled one, two, or three times, according to the strength required. When toddy is collected for the purpose of making arrack, it is brought from the trees and poured into wooden vats, in which fermentation rapidly advances. If attention be not paid to the fermentation, acetic acid is formed, and this often causes the arrack to take up lead from any portion of that metal with which it may be brought into contact. In many parts of British India, a very intoxicating spirit is prepared from the large Mahua flower of the Bussia latifolia, the fleshy petals of which contain sugar. This is largely distilled in Bhandoop, about 20 miles from Bombay, as well as at many other places; and the flowers, with the inner bark of the white keekur tree (Acacia leucophloxa), ingredients in the manufacture of the spirit, are sold in every bazaar. In Sind, the bark of the Acacia arboresc is always an ingredient, and in Upper India that of A. ferruginens. When prepared from jagari and the bark of the Acacia leucophloxa, which is rich in tannin, the tannin combines with the albuminous and nitrogenous substances in the jagari, and decomposes them. In most of the native stills, composed of clay pots or chatties, with bamboo pipes, ten per cent. of the sugar is wasted by the loss of its resulting alcohol. Arrack in Madras is made from the Velvelam pattai or Acacia leucophloxa bark and Palmyra jagari, the quantity required for one still being 1 viss of the bark and 13 of the sugar, the produce being 43 gallons. Its cost of manufacture to the Government is 5 annas a gallon, and it is sold to the retail dealers of that city and within the boundary of 10 miles at 3 rupees per gallon, but to all beyond the limits from 1 to 8 rupees per gallon. The jagari is usually imported from Tinnevelly and from the Northern Circars. Pariah arrack is a term employed by Europeans in India to designate a highly pernicious liquor, said to be produced in the banks of the Ganges; but it contains an alkaline, and other intoxicating drugs.—Copper in Az., Soc. Jo., 1856; Dr. Smith in Ed. Phil. Jo., 1856; Faulkner; O'Shaugh.; M. E. J. R.

ARRAH, in the Shahabad division of Bengal, n lat. 25° 38' 46" N. and long. 84° 42' 22' E.; population 39,386. It is the ancient Ekachakra. It was the scene of a brilliant defence in the mutiny of 1857, when a dozen British, with 50 Sikhs, for 8 days (27th July to 3d August) held two houses, until relieved by Major Vincent Eyre.

ARREMUNE. SING. Cassia Suuustrana.
ARREMUTI. TAM. Pentapertana coriaceae.
ARRIAN lived in the times of the emperors Hadrian, Antoninus Pius, and Marcus Aurelius. He was a native of Nicomedea in Bithynia, where he studied. He was born about the end of the first century of the Christian era. He was one of the most eminent disciples of the famous Epictetus the Stoic, graduated to a priest in the temple of Ceres and Proserpine, and distinguished himself as a historian and in philosophy. His account of the expedition of Alexander the Great is based on the lost works of Aristobulus and Ptolemy, the son of Lagus, both of whom accompanied the king during the expedition. He also wrote the Iohene, a treatise on India in the Ionic dialect, and a Perihus, or voyage round the coasts of the Black Sea. Descriptions of the coasts of the Sea of Azof and of the Red Sea are also ascribed to him, but these are by some supposed to be of a later date. His Iohene gives the reports of Megasthenes, ambassador from Seleucus at the court of Chandragupta. It is generally supposed that there have been more than one of this name, and the Arrian whom Colonel Tod may be correct in mentioning as the author of the Perihus of the Erythraean Sea, and a commercial agent at Baroach, living in the second century, may be one of them. He says that Arrian, the author of the Perihus, resided at Baroach, or, as he called it, Barungaza, as a commercial agent, in the second century of the Christian era; Baroach was then within the Balbara sovereignty.—Weber; Eucy. Brit.; Tod's Travels, p. 145.

ARROWROOT.

Pen-bwa. . . . . BURM. Tikhub. . . . . HIND. Ngep-fen. . . . . CHIN. Jau-ihrisi, Kua mao, TAM. Kua-ka-nashastah, HIND.

The name was originally applied to the rhizome or root of Maranta arundinacea, in consequence of its supposed efficacy in counteracting the effects of wounds inflicted by poisoned arrows. Of late years, however, the term has been employed to designate almost every feuca or starch which bears any resemblance to the true Maranta arrow- root. In the West Indies, arrowroot is obtained from the Maranta arundinacea, M. allongia, and M. nobilis; also from the Cana glauca and C. cocinea, to both of which the local name of tous les mois, or tulema, is applied. In the East Indies, arrowroot is prepared from the Maranta arundinacea, also from M. ramosissima, a Silhet species. Mahabaleshwar arrowroot is obtained from Curcula caulina, Graham. The feuca of C. angustifolia and of the cassava meal from the Jatropha manihot is likewise sold under that name; and the tubers of C. rubescens, Roeh., also yield an arrow-root in Travancore and Bengal; those of C. leucorrhiza, Roeh., in Behar; and, as to tork, the Hind- dium term for such feucal, that from the tubers of Batacas edulis is sold at Patna and Bhagalpur. Ratangherry arrowroot is obtained from C. pseudo-montana, Graham, as also from Alpinia galanga, Swartz. Many households in India make their arrowroot for home consumption from products of their own gardens.

In the Cuttack and Sambalpur districts, the Palooa, a plant growing abundantly in the jungles, is collected in the cold season by the Sahar race, the tubers pounded and mashed, and the sediment dried in the sun. By these people it is sold for the manufacture of Abhir; also made into cakes, or boiled with milk, and thus used as an article of food. The cultivated arrowroot at Cuttack is of excellent quality. The tubers are taken up in the cold season, washed, put into a large wooden mortar, and mashed. The mash
ARROWS.

ARSENIC.

is then taken out, and well washed in cold water, the water drained off, and set to stand in large flat vessels, in which it deposits a large proportion of the arrowroot flour, which is re-washed in cold water, and set to dry in the sun. A starch sent from Chittagong to the Exhibition of 1862 was prepared from a plant which grows wild everywhere in that district; the yield was estimated at one ounce of starch from one pound of the root. An arrowroot is also made by the Chinamen by grating the root of the Lotus, Nelumbium speciosum, called Ngau-ken. It is an article in the food called San-koh-fen, used in rearing infants. A coarse kind of arrowroot, called Math-fen, is made from the tubers of Eleocharis (scirpus) tuberosus. The edible fern, Pteris esculenta, also yields a farina, called Kiuch-fen; and the Shan-yoh is a starchly februa from tubers of a species of Dioscorea.—Smith; Mason; Hassall; M. E. J. Russ. Reports; Simmonds; Faulkner; Cat. Cat. Exh., 1862.

ARRUB-us-SALIB, Arab. Solanum nigrum, S. dulcamara.

ARSCIDAE. This name was given to the Parthin kings, whose family name was Arsaces. The Arsacidian kings of Armenia, according to Moses of Chorene, reigned from B.C. 130 to A.D. 450, when the Armenian kingdom was extinguished (Thomas' Prinsep, p. 300). But Thomas' Prinsep, ii. p. 76, gives sixty kings from Arsaces i. in B.C. 255 till the succession of Artaxerxes as king of Persia, the first of the Sassanian.

Arsaces i., B.C. 254–250, the first of the Arsacid kings, a native of Balkh, revolted under Antiochus Theos, is supposed to have been killed in action with Ariarathes of Cappadocia about B.C. 220. He is described by some as a native of Sogd, by others as of Bactria, but by Moses of Chorene as of Balkh; and Moses adds that the dynasty was called Balkhavensis or Palhavian. He used Greek only on his coins, and in his public letters and correspondence, with the head of the sovereign on one side. Only one coin has a lingual inscription.

Arsaces ii. (Artabanus?), son of Arsaces i., about B.C. 220, at first extended the Parthin empire, but was afterwards driven into Hyrcania by Antiochus Magnus in B.C. 212; allying himself with the Scythians, he recovered Parthia.

Arsaces iii., B.C. 196, called Priapitatis, or Phriatadius, son of Arsaces ii., reigned fifteen years, left three sons, Phrahatres, Mithridates, and Artabanus.

Arsaces Mithridates i., B.C. 177, made Balkh his capital, subdued Media and Persia, and captured Babylon; brought under his dominion Western Bactria, Arin, Seistan, and Arachosia, and made a successful expedition into India.

Arsaces Phrahatres ii., B.C. 139. In his reign Bactria seems to have been subjugated entirely by Scythians. He was defeated and slain in B.C. 130, when restraining the Parthians from ravaging the country.

Arsaces Artabanus, B.C. 126, uncle of Phrahatres, and youngest son of Priapitatis, died of a wound received in action from the Tochari Scythians. The Greco-Parthian or Arsacid dynasty ended with Arsaces Artabanus in A.D. 215, who was involved in a war with Rome, but was ultimately slain in battle at Balkh by one of his Parthian officers, Arshesh Babakan or Artaxerxes, who established his own, that of the Sassanians, in A.D. 226. He lasted five years. A.D. There is no mention in the time of the Caesars was at Seleucia on the Tigris. The system of government was Asiatic, by satraps, or rulers possessing full power over the persons and properties of all the subjects of the state.—Thomas' Prinsep, p. 300.

ARSENIC is a metal resembling steel in colour, crystalline, volatile below a red heat, vapour of a strong garlic odour, readily oxidized. With one equivalent of oxygen, it forms the arsenious, with two equivalents the arsenic, acid; with sulphur it forms the yellow sulphuret, orpiment, and with red, realgar. These are to be obtained in every bazar in India, and the native medical practitioners, painters, etc., considerably employ them. Dr. Helfer reported the existence of ores of arsenic in the Mergui islands, Mr. Fielding found some in the antiquum ores, and Profcssor Mitchell in lead ore that he analyzed. Arsenic is principally employed in trade to produce a peculiar lustrous showy shade, which has superseded the less decided tints, and this dangerous material is often used to colour children's toys and sweetmeats. Papers coloured with this green line fruit-boxes, wrap up confectionery, chocolate line books, house walls; and is used for tinting food articles, and colouring articles of dress. The white oxide, Safaiid Sambul, has long been used in India for the cure of intermitents. Dioscorides Pliny, Celsus, and Galen used this substance, in which they were followed by the Arabian physicians, Rhazes, Scripion, and Avicenna. But none of these appear to have employed it in fever; and it was not till the end of the 17th and the commencement of the 18th century that the treatment of intermitents by arsenical preparations became known in European practice. Arsenious acid has real febrifuge properties in intermitents, the product of marah misama. It succeeds in tertian, quinsy, and is called Avelina. The arsenical treatment is less powerful and less sure than quinine.

Red Sulphuret of Arsenic, Realgar.

Zurnick surkh, Ar., Pers. Mornil, ... Hind. Bi-sulphuret of... Eng. Warangan,... Malay. Sandarach,... Manahalsia, Sansk. Red orpiment,... Kudire-pal-pashua,... Lat-sambul,... Hind. nam,... Tam. This is found native in Saxony, Bohemia, China, Persia, and, according to Mr. Elphinstone, 166
in Balkh. According to Mr. Rohlde, a coarse description is common in the bazaars of India, and is used as a pigment. Realgar, bi-sulphuret of arsenic, occurs native in brilliant red crystalline masses of a beautiful orange colour. It is used in the preparation of white Indian fire, which consists of 24 parts of saltpetre, 7 of sulphur, and 5 of realgar, finely powdered. This composition burns with a white flame of great brilliancy.

White Oxide of Arsenic: White Arsenic.
Zarnik, ... ARAB. arsenioz, ... HIND. Asenioz, ... Turab-ul-ha'il, 
Sume-ul-Far; Shuk; Warangan putli, MALAY. Tota, Sumbul-far, ... PERS. Dahi, Srutishan, ... SANSK. Arseni, ... ENG. Velle pashanan, ... TAM. White oxide of arsenic, ... Tela pashanan, ... Tel.
Sufed sambul-khar, DUK.

Arsenic acid, or white oxide of arsenic, is abundant in every bazaar in India. It is brought from the Persian Gulf and China, in the latter country being obtained by sublimation from hortai, or native sulphuret of arsenic. Kwang-sin-fu, in Kiang-si, furnishes the greater part of the arsenic of commerce, and gives to this mineral its Chinese name of Sin. It is white, brittle, faintly sweetish in taste, more or less translucent; sometimes it has a yellow, reddish, or bluish tinge, owing to the presence of arsenious oxide, and other impurities. It is used in the manufacture of glass, dyeing, medicine, etc. The arsenic sold by chemists is obtained from England, and is generally in the form of powder.

Yellow Sulphuret of Arsenic; Orpiment.
Ursanik, ... ARAB. Zernie-zard, ... PERS. Huay-dan-shwaywa, BURM. Zarni, Zarna, ... CHIN. Bh, ... JAPAN. Ter-sulphuret of Ar, ENG. Arriddrom, yeelidur, ... TAM. Warangan, ... MALAY. Doshi pashanan, ... Tel.

This is found native in S. America, Saxony, Persia, and in China in the Kiang-si province. It generally occurs massive and lamellar of a bright lemon or golden colour, inodorous, and insoluble in water. It is also prepared by the action of sulphuretted hydrogen or hydro-sulphurets in a solution of arsenious acid. It is brought to Bombay from the Persian Gulf, and is an article of trade from China and Burma, where the red is also procured, and from Japan. In China it is sometimes cut into ornamental figures, in the same manner as prehnite and agatnolite. It is used in Burma in the ornamental work of their lacquered ware, and is much used by the Tamil painters in preparing a pigment of a brilliant yellow colour; also in dyeing and calico printing. The paint called king's yellow is usually adulterated with lime and sulphur. It is now known that arsenic, sulphate of copper, verdigis, and other poisonous minerals, when employed to steep grain previous to sowing, with the view of preventing smut, prove injurious to the health of the sowers and to those who eat the bread made from it. A preparation of sulphate of soda and lime answers with equal effect. — Ainslie; Tomlinson; Sium; Faulk. 
Williams' Middle Kingdom; Rohde, MSS. ; O'Sh. 
Ind. Arms. Med. Sci. 1856; Mason's Burma.

ARSENEOE, called also Myos Hormos, a port in the Red Sea, the enporium for Indian articles during the time of the Greeks holding Egypt.

ARSHA, one of the eight forms of Hindu marriage described by Mauu.

ARSI. HIND. A small mirror worn by Mahomedan women in a thumb-ring.

ARISINA. CAN. Turmeric.

ARTA, according to Herodotus, the town of Herat, whence the term Artai for the ancient Persians. Arta Bhaga, lord of Herat; in Hindu mythology, one of the rishis. Artochana, from which Alexander set out to the city of the Zarangai in pursuit of the murderers of Darius, is also believed to be the modern Herat.

The peduncle has a curious hook, which lays hold on any support near hand, and assists in bearing up the clusters of fruit. It is a scandent shrub with shining leaves, and very sweet-smelling flowers; grown in gardens as an ornamental plant. A. Burmanicus, D. C., is of Burma and Mengut, A. eudatus, Wall. of Silhet, A. suaveolens, Blume, of the Archipelago, and A. Zeylanicus of Ceylon.—H. f. and T.; Graham's Cat.; Williams' Middle Kingdom; Voigt; Thee.

ARTAMUS FUSCUS, the todyk shrike; feeds on the flies and insects that hover near to the juicy fruits of the Palmyra palm. It is the Tal-Chatok of Bengal, Assam, Arakan, and in India generally.

ARTAXEÊXES. This is the Greek and Roman mode of pronouncing Ardashir. Ardashir Baha-kan, the son of Sassan, was an officer of the Parthian king, Arsaces Artabanus v. He murdered his sovereign, and assumed the Persian throne as the first of the Sassanian dynasty in a.d. 226; his successor was the Shapur or Sapor, who captured the emperor Valerian. There were others bearing the name Artaxerxes, the first in a.d. 381, and the second a.d. 629. The Sassanian dynasty ended in a.d. 641, when Yezejird or Izdejerd iii. was overthrown by the Mahomedans.

Artaxerxes Longimanus was the Kai Bhahan, or Ardishir daraz-dast of the Kaianian dynasty of Persian kings.

Ar taxaeres Mmemon, a Persian king, b.c. 426, at whose court Ctesias resided for some years. After Scylax, Ctesias was the next historian of India; and in his Indica, cap. iv. p. 190, he mentions that Artaxerxes Mmemon and his mother Parasatys presented him with two iron swords, which, when planted in the earth, averted clouds, hail, and strokes of lightning. This is the first notice of the lightning conductor. The Tee on the top of every Buddhist pagoda in Burma shows its acquaintance with one means of protecting from lightning.

ARTE. PANJ. Rheum emodi.

ARTEE, a musical bell, borne by Bal Govind. ARTEMISIA, a genus of plants of the natural order Matricarinae: nine species occur in the East Indies, China, and Japan. A. abrotanum, or southernwood, A. Indica, A. vulgaris, and A. grata, are cultivated in India. The European Abrotanum, though not growing in India, furnishes part of the (Afsatin) absinth used in Asiatic medicine; and the A. Chinensis of China and Siberia supplies the materials for the moxa. According to Dr. O'Shaughnessy, A. Judinica is the Saheba of Avicenna, and a native of Judea, Arabia, and Cochinn China, and is known as the Indian wormseed, or Indian Senun contra, 167
which, finely powdered and sifted, is a popular worm remedy, especially in the round and long worms of children; the dose is three to ten grains given in honey or milk. A. acetica, a Persian species, is said to have a strong odour of vinegar. A. cina, Berg, a plant of Kurdistan, furnishes the genuine Santonicia flowers and fruits, long famed as a verminuge. A. Maderaspatana and A. Indica are used by the Indian medical practitioners. The flower-heads of A. Sieberi, Lercheana, contra, and paniciflora constitute drugs called Semen contra, or Semen cinac, which are used as vermifuges. The same part of A. Vahliana yields the Persian wormseed, or Semen cinae Levanticum; and that of A. cordeulescss, the Semen seriphii or Barbotine. A. santonica, Wood., maritima, Linn., A. var. b. suaveolens, Dec.; Semen santonici; wormseed. This substance has long been employed as an anthelmintic, being intended for the Aiphiex a nololio ofDISCOERIDES, the Semen sanctum and santonicum.  A. Stenocorys, or A. stenocor, or sternutatoria, or semen cinae, is the Nak-Chikin or Hachihi of India, and the Affar of the Arabs. The powdered plant is used as a sternutatory.

Artemisia abrotanum, Yin-chin-han of China, where the young shoots are made into cakes with meal, and the herb is made into a broth, and given inague, feyes, catarrh, jaundice, and dysuria. 

Artemisia Chinese, Smith.

Ngai, Ki ngai, CHIN. | Ts`au, Tel-ngai. CHIN.

The down of the plant was formerly largely used in China as the moxa cutery, but has been displaced by the teng-ho or lamp cautery, and the pa-kho-kwan or cupping glass.

Artemisia dracunculus, Smith, Tarragon.

Tarchon, ARAB. | Ts`ing-hau, CHIN.

When green, it is eaten in China as a vegetable, and used in skin diseases, worms, fluxes, arthritic ailments.

Artemisia elegans, Rozb.; A. scoparia, W. and A.

Tila jan, CHIN. | Biur; kingkahk, SUT. Jhau; Lajaj, KANGRA. Durunga, TB. IND. Churi; Sorej, Danti, PANG. Lawange, ...

Is uncommonly elegant when in blossom, particularly when young. It is found up to 9000 feet in the Himalaya, and abounds in many parts of the Punjab plains. The odour in brushing through masses of it is at times very powerful, and not unpleasant.

Artemisia indica, Wild., wormwood.

Artemisia grata, D.C.

Afisant, ARAB. | Buri, Duran-jasif-i-kohi, PERS. Kashas-Rut, ARAB. | Chamba, RAVI. Mustar, DUK., HIND. Duna, Marwa, HIND. | Chamara, Damanar, SANSK. Machli-parna, ARAB. | Walko-Gundo, SINGH. Mustar, Gung-mat, UBUSHA, SUTLEJ. Tutaur, KANGRA. Machli-patri, TEL. Tiru-niti-par, MALE. TIRTA, TR. IND.

Common in Indian gardens, and can be substituted for the A. absinthium of Europe. It contains volatile oil and bitter extractive matter. Used as a tonic in fever and debility, in asthma, in diseases of the brain, and also in dyspepsia, and as an antispasmodic in hystera; also to flavour spirits and essences. That used in India comes via Kabul. The leaves are much used in scents for its strong odour.

Artemisia vulgaris, Linn., wormwood.

Artemisia, Artimissaya, ARAB. | Madf patre, HIND. Magwort, | ENO. Biran-jasif, PERS. Nagdowa, ARAB. | HIND. Adramah. This is a native of Europe, and, according to Thunberg, of Japan. He says that the Japanese use the woolly part of the leaves for tinder, which is prepared so as to form a brownish-coloured wool. This substance catches fire much quicker than moxa. But Dr. O'Shangnessy says that the moxa of Japan is prepared with the leaves and stalks of a neighbouring species.—Rozb., Cat. Ex., 1862; Powell, Handbook, i. p. 358; Voigt; O'Sh.; Bombay Products; Smith, Ch. Mat. Med.; Thomb. Travels, iii. p. 71; L. J. Stewart, M.D.

ARTEIN FIRE-SPRINGS. According to the missionary Imbert, the fire-springs, 'Hosing,' of the Chinese, which are sunk to obtain a carburetted hydrogen gas for salt-boling, are very commonly more than 2000 feet deep; and a spring of continued flow was found to be 31 feet deep. This natural gas has been used in the Chinese province Sech-uen for several thousand years; and 'portable gas' (in bamboo canes) has for ages been used in the city of Khiung-tchow.—Cur. of Science.

ARTHA, a race of fishermen whom Parsu Rama raised to the rank of Brahman, to occupy a strip of country which he had recovered from the ocean on the Malemal coast. Their conduct displeasing him, he replaced them by a body of pure Brahman.

ART'HA, ESWARA. Siva, as Ardhaniari, is represented with his own form on the right hand, and Parvati on his left.—Gurrett.

ARTICHOK, Cynara scolymus. Kharshuf, ARAB, PERS. | Kanjir, HIND., PERS.

Cultivated in some gardens of India; the cultivation is expensive. Jerusalem artichoke, Helianthus tuberosus, is cultivated for the tubers attached to the roots; may be lifted annually, after flowering, and kept like potatoes for three months; or they may be allowed to remain in the ground for years, in the same situation, if kept clear of weeds, and the ground annually top-dressed with manure. Jof.

ARTICULATA, a division of the animal kingdom; the following is a classification:—

1. Rotiferia, wheel animals; examples, animals with ciliated jaws.
2. Cirripedia, cirripeda; examples, barnacles, sea acorns.
3. Crustacea, ten-legged aquatic family; examples, crabs, lobsters, shrimps, prawns.
4. Insecta, six-legged, air breathing, articulate animals; examples, the wasp, the bee, the butterfly, the beetle, the flea.
5. Arachnida, eight-legged, air breathing, articulate animals; examples, mites, spiders, scorpions.

ARTBE, in Madras, timber of various sizes, 12 to 15 feet long, from 1 to 1½ feet in breadth.

ARTISANS of British India, a class of industrious Hindus, and classed by Brahman as the Saiva. In the Peninsula of India, the goldsmith, iron-smith, coppersmith, carpenter, and stonemason, form a caste or guild, and the goldsmiths claim to be of ancient Brahman descent. A considerable number of Mahomedans are carpet-weavers, blacksmiths, and farriers. A few Parsees are carpenters and carvers. The skilled artisan is now earning monthly from 7½ to 25 rupees. But
ARTOCARPUS.

ARTOCARPUS INCISUS.

This is the true bread-fruit tree of Dampier, Anson, Cook, and Ellis, growing in the South Sea Islands, especially Onatehe; also in the Moluccas, Java, Sumatra, at Mergui, in Ceylon, Mauritius, and Bourbon, in the W. Indies, and on the western coast of South America. The fruit is terminal, round, not muricated, but marked with reticulations, whose areoles are flat or but slightly prominent. It is this seedless variety that has given the name to the tree, and in some islands of the Pacific it is much used.

The fruit has an unpleasant smell. It is often larger than a man's head, and weighs sometimes as much as fifty pounds; is round, greenish, and covered with prominent papille, enclosing a white fibrous pulp, which becomes yellow and succulent at maturity. The pulp contains much starch.

The natives of the Polynesian islands, before eating the unripe fruit, cut it into quarters and
roast it in the ashes. The ripe fruit requires no preparation. The bark, when stripped, and then beaten and prepared, makes a kind of cloth with which the South Sea Islanders make their garments. At Trincomalee, cloth made of it, and worn chiefly by the common people, was more common than that made from the paper mulberry, though inferior to it in softness and whiteness.—Crawford’s Dict.; Riddell; Juries’ Reports, M. E.; Roy.; Voigt; Mason.

This valuable fruit and timber tree is found more or less abundantly all over S.E. Asia, growing rapidly to about 2½ feet in diameter. In Ceylon, its fruit, weighing from 50 to 60 lbs., is used in various ways for food, and its timber, which weighs 42 lbs. to the cubic foot, is in general use for building boats, and for all kinds of furniture. Dr. Gibson has seen pillars of it in the interiors of the buildings of the old forts at Sevardenrug, having four feet on each side. In Burma it occurs abundantly, in Rangoon seemingly indigenous in the forests, and in Monimein its wood is used to dye the yellow cloths that the Buddhist priests wear. It yields an excellent and valuable timber, at first yellow when cut, but afterwards changing to various shades of brown. When made into tables and well kept, it attains a polish little inferior to mahogany in colour and appearance. It is there used for musical instruments and ornamental work. It is imported into Britain in logs from 3 to 5 feet diameter, and also in planks, and is used for cabinet work, marquetry, and turning, and also along with satinwood for hairbrush backs. In Cuttack, the glampa or oil mill is made from this wood, and its sp. gr. is 0·750, and cost 1s. the cubic foot. The roots, cut into chips and boiled in water, produce a yellow dye. To strengthen the tint, a little turmeric is mixed with it, and alum to fix it; but as the yellow does not hold well, the operation of steeping and drying has to be frequently repeated. The fruit is not relished by some people, owing to its peculiar strong smell; others are partial to it from its luscious sweetness. It grows direct from the branches and trunk, to which it hangs by a peduncle, and only in aged trees from the roots, where they are detected by the cracking of the soil. The fruit is covered with a very thick, rough green skin, and is full of white kernels the size of a pullet’s egg, the fleshy parts around which are eaten both unripe and ripe. The kernels of the ripe fruit, boiled or roasted, resemble in flavour the Spanish chestnuts. The green fruit, after removing the outer rind, is used in curries, and when ripe the pulp and seeds are used similarly. As with all cultivated fruits, there are many varieties. From the juice of the unripe parts of the fruits and tender parts of the trees, a good bird-lime is prepared. In Trincomalee, the entire fruit is planted, and when the various seeds germinate and grow up, the shoots are tied together with straw, and they unite into one stem, which bears fruit in about 6 or 7 years. —Roy.; W. T.; Mason; Crawford; Marsden; Thouwates.

ARTOCARPUS LACOCHRA. Royh. Dephal, ... Beng. | Kannana-gona-gas, ... Singh. | My-ook-loke, ... Burma. | Kanna-rega, ... Tel.
Lacochra bread-fr. Eng. | Laku-chamama, ... Laos, ... Ma strive.
 dosi, ... Nakka-renu, ... Laos.

The Small Jack tree is occasionally grown in gardens or near houses, in S. Canara, Bengal, Burma, and the Tenasserim Provinces; two varieties of it grow in Ceylon, near Ratnapura, and in the south and centre of the island. It occurs in Kamaon also. Its roots are used in dyeing yellow. Dr. Brandis says the wood is used for canoes; a cubic foot weighs 40 lbs. In a full-grown tree on good soil, the average length of the trunk to the first branch is 50 feet, and average girth measured at 6 feet from the ground is 6 feet. The whole tree and unripe fruit contain much tenacious milky juice. The fruit is prized by the Burmese, and is eaten in Bengal. The male spadix is acid and astringent, and eaten by the natives in their curries.—Royh.; Th., Zeyl.; Voigt; Royl.; M’Clell.; Mason; Wright; Brandis; Useful Plants; Flor. Andh.; Von Mueller.

ARTOCARPUS MOLLIS, Wall., the town-bein of Burma, is an immense tree; wood used for canoes and cart wheels. On the hills, large trees rather scarce. A cubic foot weighs 30 lbs. In a full-grown tree on good soil, the average length of the trunk to the first branch is 80 feet, and average girth measured at 6 feet from the ground is 12 feet.—Dr. Brandis.

ARTOCARPUS NOBILIS, Th., the del-gas of the Singhalese, is a large tree not uncommon in the southern and central parts of Ceylon, up to an elevation of 2000 feet. It was long confounded with Artocarpus pubescens, Will., but is quite distinct from that, and apparently from any other hitherto described species. Boats are hollowed out of single trees. The wood is of very good quality, but not considered of equal value with that of Artocarpus integrifolium. The seeds toasted are a favourite article of food with the Singhalese.—Th., Zeyl.; Beddome, Fl. Sylo.

ARTS AND MANUFACTURES. In several parts of the East Indies, as in British India, Ceylon, Burma, Siam, China, and Japan, the arts, in many of the branches and applications, attained a high position in very early ages; and they have been fostered by generations of diligent men, who from father to son have dedicated their hearts and minds thereto, completing their work with tasteful and fitting details; their colouring sombre but rich, with blended tints, softened hues, and modulated effect, is relieved with just enough chastened and harmonious brightness as wins the admiration of all who appreciate the application of true principles to human industry. The great Exhibition of 1851 gave Europe the first opportunity for ascertaining the value of many of the products of India, and numerous articles were then selected for the schools of art of Europe to imitate; and the subsequent exhibitions held in India and in the chief capitals of Europe have still further diffused the knowledge of the arts of those eastern countries.

The artisans of India excel in anything requiring patience or accuracy of detail; their patterns are
tasteful and original. They are expert in executing elaborate and tasteful designs in stucco or chimney, as solid ornaments for gateways, in alto-relievo for cornices, in perforated tracery for mosques and minarets, in florid ornament or in the drawing of bold scroll patterns for interior decoration on a flat wall, with a broad continuous line of uniform thickness. This is a branch of art in which the natives of India far surpass European plasterers or decorators; it is confined to a few localities in Southern India, and, like the celebrated old stone sculptures of the Ceded Districts, Mysore, Canara, and the Southern Mahratta country, it is an important branch of the fine arts of which very little is known, and the practice of which is gradually dying out from the want of proper encouragement. In the carving of wood, the chasing of metals, filigree work, weaving and embroidery, they excel; and specimens of these in the Exhibition of 1851 were deemed of sufficient importance to be purchased as models of taste in design, care in execution, skill in the manipulation, and knowledge in the arrangement and harmony of colours. Their drawings on tale are characteristic, though out of proportion. There is considerable talent displayed in their modelling of toy figures of the different castes, and they have long been celebrated for their dexterity in founding bronze images. In the spinning and in the weaving and dying of cotton and silk stuffs, of such kinds as are suitable for the clothing that they wear and to their habits, the weavers and dyers of S. E. Asia are not approached by any European race. Though machinery makes cheaper articles, the labour of the hand is much more durable; and their muslins, checks, and gingham are not only greatly more lasting, but the colours are far more permanent. In field and garden cultivation, in the economy of water, and the utilisation of manures, there are several races skilled in varied degrees, though none excel the Chinese in their acquaintance with these subjects, to their acquisition of which they are stimulated by the example of the imperial family, the emperor annually ploughing the first field, and the empress and her attendants watching the silk-worms and their produce. Every European artificer and artist alike might well take the handicraftsmen of India for an example in the patience, perseverance, and thoroughness which are the ground of their excellency, and by which the inspirations of art are wrought into reality and life. The welfare of the arts is important both to India and to Europe, and the loss of them would be a serious blow to civilisation, and an injury to the pleasure and dignity of life.

Rapidly growing, this branch of manufacture, embroidery, enamelling, filigree work, ivory-carving, lacquer ware, pottery, Boder-ware, koft-gari, jadlpuri work, Bombay work, shawls, and sculpture, will show that the arts of S. E. Asia are indissolubly bound up with the popular institutions of the country; and the patient Hindu handicraftsman's dexterity is a second nature, developed from father to son, working for generations at the same processes and manipulations. The 19th century has seen changes in British India which have greatly affected some branches of its arts and manufactures. While wars were unceasing, the tramorner's trade occupied numbers of artisans, and as an art it was carried to a high degree of beauty, but with British supremacy the manufac-

The houses of the people are humble; but the constructive capabilities of the races find opportunities for display in the erection of religious edifices and tombs, wells and tanks, for which woods, limestones, marble, sandstones, and greenstones are utilized. The polished chunam walls of the Madras houses are the admiration of all travellers. The presents received in India by the Prince of Wales were exhibited in London in 1876. Skilled artistic labour was worthily represented by the gold and silver wares of Trichinopoly and Cuttack, the gold and silver lace of every large town, the brass, copper, tin, and zinc work; their chasings and carvings, their trappings and caparisons; the mother-of-pearl work of Ahmadabad; the inlaid work of Agra, Multan, Sind, and Bombay; the horn and ivory work of Vizagapatam, Ceylon, China, and Japan; the carved horn and tortoiseshell work of these countries; the carpets, pottery, porcelain, and enamels,—all bear comparison with the work of former times. The porcelain of China has been famed for centuries; but the Japanese egg-shell ware surpasses for transparency any seen in that country; and there are other kinds of porcelain, rarely seen in England, and which are, though perhaps less curious, quite as beautiful as the egg-shell. Among them, the rarest is lacquered porcelain. This branch of manufactures is much neglected in India, owing to the caste views of the Hindu races preventing them using articles of value. The ivory carvings of the Chinese artisans have never been equalled in Europe; and their lacquer work, their dyeing, their silk fabrics, are all excellent.

The art of enamelling is in the first rank of the handicrafts of the world, and at Joyporo is pursued to the highest degree of perfection yet known. The art there is exclusively Hindu, and the specimens presented to the Prince of Wales were the master art of the enameller. The lacquer work of Burma, China, and Japan; the marble work of Burma; the lac work of Kurnul; the tatanague work of Boder; the wood work of Nirmul and of Hyderabad in Sind; the
shawl and woollen work of Kashmir and the N.W. of India; and the paintings on ivory in Delhi and the Peninsula.

The shawls of Kashmir have for ages been esteemed for their matchless colouring, due in part to the peculiar qualities of the air and water of that wondrous valley, but also to the appropriateness of the peculiar elaboration in the designs. Their art urgently needs encouragement, for European agents have interfered with the Kashmir workmen's designs, only to lose their characteristic loveliness.

Koftgari work, or steel inlaid with gold, was in former days carried on to a considerable extent in various parts of Northern India. It was chiefly used for decorating armour; and among the collections at the 1851 Exhibition, were some very fine specimens of guns, coats of mail, helmets, swords, and sword handles, to which the process of koftgari had been successfully applied. Since the revolt in India of 1857, the manufacture of arms has been generally discouraged, and koftgari work is consequently now chiefly applied to ornamenting a variety of fancy articles, such as jewel-caskets, pen and card trays, paper weights, paper knives, inkstands, etc. The process is exactly the same as that pursued in Europe, and the workman can copy any particular pattern required. The work is of high finish, and remarkable for its cheapness. Koftgari is chiefly carried on in Gujarat and Kothi, in the Scalkote district.

The tutangue work of Beder finds a ready sale, and admirable specimens of inlaid metal work by the native artisans of Bhooj are found in collections of arms.

The inlaid work of ivory, white and dyed, the ebony or coloured woods known as Multan or Bombay work, have become familiar to all Europe by the several exhibitions; and the carved black-wood or rosewood furniture of Bombay is to be seen in many parts of India.

The splendour of Indian jewellers' work, in jewellery proper, and as seen on arms and armour, is due to the free use they make in it of diamonds, rubies, emeralds, and other gems. Their art permits them to use flat gems, mere scales, so light that they will float on water, and rubies and emeralds full of flaws,—stones, in fact, which could only be used for the artistic effect that they produce when combined.

The inferior gems—garnets, chalcedonies, and other silicious minerals—are in extensive use; and lapidaries find work in polishing and engraving them, and in forming potstone, figure-stone, and jades into useful and ornamental articles. Illustrated Japanese books show much artistic talent. A group of trees, a branch of Japan bamboo, a bunch of leaves, a cottage and turn in a road, and such simple subjects, form, each of them, a perfect picture in itself, though appearing only to have been drawn with one stroke of the pen. The latter is in fact a brush, but is made quite hard with gum or glue, except at the extremity.

Sir John Davies is of opinion that the art of printing, the composition of gunpowder, and the magnetic compass, which are justly considered in Europe as three of the most important inventions or discoveries of modern times, had their first origin in China. He tells us also that their printing is by a system of stereotype, the types being made from the pear-tree wood, called by them by up. Their paper is made from refuse paper, rag of silk and cotton, rice straw, and the liber of a species of morus, but principally of bamboo. In 1880, Mr. C. P. Clarke was sent to India by the Art and Science Department to make purchases of the metal work of Madras and Kashmir, the wood carving of Ahmadabad and Canara, the pottery of Madura and Multan, and the textile fabrics of Masulipatam, Jeypore, Daean, Lucknow, Delhi, Ahmadabad, Sind, Bangalore, Malabar, and Central India.—Morrison's Compendious Description; Fortune's Chinese Books; Sir R. Temple's India in 1880; Sir George Birdwood's Report on the Paris Exhibition.

ARU. HIND. Amygdalus Persica; the peach. Mundahl-Aru is the nectarine variety. Aru-Bokhara, Prunus domestic; garden plum. Aru, Tel., Bauhinia racemosa. Aru tree of the Archipelago, Caesaurina equisetifolia.

ARU ISLANDS extend from lat. 7° 0' to 5° 52' S., and in long. 133° 56' E., and lie between the Treny and the S.W. coast of New Guinea. They are a closely packed group of very low islands, and about 80 in number, forming a chain 100 miles long from N. to S., and about 50 broad. The population is about 14,000. Trepang or sea-slug are found in great abundance on the banks, which also furnish the large mother-of-pearl shell of commerce, and the smaller shell in which pearls are found. Some of the more eastern islands contain limestone caverns, within which the swallow constructs the edible birds' nests of commerce. The group is a great resort for traders from the western parts of the Archipelago, including natives of Java and Celebes, Chinese, and even Europeans. Vorkay, an island lying exposed to the ocean at the south-eastern extremity of the group, is of great importance from its pearl fishery. At a distance of eight miles to the eastward lie several small islands, between which and Vorkay the trepang banks are situated. At low water, hundreds of men, with their wives and children, may be seen wading from Vorkay towards these isles, carrying a basket at their backs, and having in their hands a stick provided with an iron point, for lifting the trepang. For fishing on the banks situated at a greater distance, the Alfoers use a prahu, constructed for the purpose, in which they embark their entire families. These vessels have great beam, and the stern runs up into a high curve, while two planks project forward from the bows. The family resides in three or four huts composed of atap, or Nipa fruticans leaves, erected within the vessel, and a raling runs entirely round it, apparently to prevent the children from falling overboard. The prahu is propelled by a large sail made of rushes, which folds up like a fan (in a similar manner to the sails of a Chinese junk), and is set upon a good mast of bamboos, while it is steered with two rudders. Two other masts are also erected, for displaying several small flags. The pearl oysters are mostly small and black, in from twenty-four to thirty feet water.

The Ara insurgents bear a strong personal resemblance to the aborigines of Port Essington; indeed, on several occasions in which natives from that neighbourhood visited the islands in European vessels, they were considered by the Aruans as belonging to some remote part of their own group. But the Aruans also possess many characteristics.
in common with the Outananus of the opposite coast of New Guinea. They attach much value to elephants' tusks, brass gongs, and huge porcelain dishes. On the death of a man, all the chattels which he has collected during his life, including tusks, gongs, and precious China dishes, are thrown into the sea. The gold in pieces and thrown away; and in the villages may be seen heaps of these fragments of property. In the north-western part of the group, the people are evidently of a mixed race, the natural result of strangers from the west having married and settled among them, during an intercourse which appears to have extended over several centuries. Their hair is usually black and strongly curled. Like the African Somali, they wash it with wood-ashes or lime water, which imparts to it a lightish colour, and causes it to appear rough, both these peculiarities being considered very tasteful by the Alfoeras, as well as by the Papuans. The Aruans are taller and more muscular than the Malays and Bugis of Celebes. The usual height of the men is from five feet four inches to five feet eight inches; and there is a great inclination to slimness about the lower extremities among the taller men, some of whom attain the height of six feet. According to Bickmore, Papuans are said to live in the most easterly island, but the people, he says, resemble those of Haruku, Saparua, and Nassau.

The Halicore dugong visits the Aru waters. Amongst their birds are Monarcha chrysemela, a fly-catcher of black and bright colours; M. teleocephalum, the spectacled fly-catcher; Paradisa rama, the red bird called the Boring rajah; also Goby-goby, a very beautiful bird, first described by Linnaeus; the great paradise bird, P. apoda, whose call is wawk-wawk, wawk, wok, wok, wok; the black cockatoo, Microglossum atterrimum, which delights in the canari nut; the raquet-tailed kingfisher Tansyiptera hydrocharis; Alcedo lea, the goddess kingfisher.

The great wingless cassawary bush turkeys, the King-hunters, Dacelo guadchandali; the fly-catching wren, Todopsis; the great crown pigeon, Coura coronata; and the small wood doves, Cilouonous perlatus, P. aurantiifrons, and P. coronalatus. Amongst mammals are Cuces maculatus, a true kangaroo, also a small marsupial animal, Perameles doreyanus. The butterflies are numerous, and amongst them Hestia d'Urvillean, the spectre butterfly; Drusilla catops, the pale-winged peacock butterfly; Coetia d'Urvillean, clear-winged moth; Ornithoptera poseidon, the great bird-wing butterfly, one of the most magnificent insects in the world. Its wings are velvet black and brilliant green, 7 inches across. The due-winged Papilio Ulysses. Spiders, and particularly the web-spinning and little jumping spiders, are numerous. Lizards very numerous; hermit crabs abundant. Platypus and Tesserocrus are wood-boring insects of the Aru islands.

ARUKZYE, an Afghan tribe of the Khilair pass; herdsmen, who pass the winter in the lower levels of the Kohat and the Tiri hills, and in summer drive their flocks and herds to the mountain-tops.

ARUM, a genus of plants of the natural order Araceae. Many species are edible or being cooked, and some of them greatly prized; others are poisonous. A. lyratum, Roeb., of the Circars, needs to be carefully dressed to remove its hurtful qualities. A. montanum, Roeb., also, the Kunda rakasi of the Circars, is so poisonous that its root is employed to poison tigers.—Roeb.; W. Le.

ARUM ODORUM. Roeb. The fragrant arum, Peing-ma ha-yaw, Burm., has a stem one or two feet high and six inches in diameter, resembling a low palm, with gigantic cabbage leaves, three or four feet long by two or three wide. The flowers are said to be fragrant. The natives cultivate it, not for food, like the other species of arum, but, as they say, for medicine.—Mason, 436; Roeb. ii. 499.

ARUN or ARUNA, in the Sabeyeen system of the Veda, is the charioteer of the sun, driving his six-horsed car, corresponding with the Aurora of the Greeks. The emblem or vahan of Vishnu is Garuda, or the eagle; and the sun-god both of the Egyptians and Hindus is typified with this bird's head. Aruna, in Hindu mythology, the son of Kasaya and Vinata, is the brother of Garuda, and the charioteer and harbinger of Surya. He is therefore described as the dawn, and pictured as a handsome youth without thigs or legs. His two sons, Sumpati and Jatayoo, attempting in imitation of their father to reach the sun, the wings of the former were burnt, and he fell to the earth; of this the Greeks may have made their fable of Icarus. Aruna's imperfect form has been supposed to be allusive to his partial appearance; his head and body may be seen, but his legs are yet in invisible maiden, under the names Arjun, Brisaya, Dahana, Ushas, Sarama, and Saranyu, for whom the Greeks had Argyronis, Briseis, Daphne, Eos, Helen, and Erinyes. In the Veda, Paris, a wicked monster, is said to have tempted Sarama to be unfaithful to Indra, and, among the Greeks, Paris tempted Helen.—Moore, p. 447; Cole, Myth. Hind. p. 374; Tod's Travels; Taylor's MacKenzie MSS. See Garuda; Surya; Vahan.

ARUNA. Beng. Rubia cordifolia, Linn.

ARUNACHALA, or Aruna Giri, also called Trinomali, is a rocky hill of a reddish colour, about 100 miles S.W. of Madras. According to a legend, it was in this spot that Siva appeared as a fiery linga to Brahma and Vishnu, and desired them to seek his base and summit, which they attempted in vain; in commemoration of which the gods requested Siva to remain in a reduced form as a linga, and here erected the temple. A conical piece of rock on the top of the hill is considered the linga. Once a year it is pretended that a fire is miraculously lighted on the summit. Puranam promises great benefits to be derived for worshipping at the temple.—Taylor's Cut. iii. p. 140—1.
ARUNAKIRI NATAR, about the 16th century, was a Saiva ascetic, who spent his life at Tiruvannamalai. His principal works are in praise of Skanda, viz. Tiruvakappu, Tiruppukadal, Kanyakabramham, and Kantan Anupathi. He also wrote a short poem, Udakurram Vannam, on the stages of human life.

ARUNASA LA KAVIRAYAR, born near Tranquebar in 1712 A.D., was the author of the dramatic Ramayana. His minor writings are Asomuki Nadakam, Sirkali Puranam, Sirkali Kovai. He died at Shiyally in 1779.

ARUNDIKKY, Prinsepia utilis. ARUNDIKKY was the daughter of Kudama, and became the wife of Vasitha, one of the Picalades. Amongst Brahmins, a newly-married couple have this star pointed out to them by the Purohit or astrologer. She became a resident of Swerga. The devoted sati woman invokes her before mounting the pile. See Sati.

ARUNDINARIA FALCATA. Nees. Hill bamboo. Engl. Nagala, Ringal. This is found in the Sutlej valley between Rampur and Sungnam, at an elevation of 9000 feet. Used for wicker work, and for lining the roof of houses. Shepherd's pipes, baskets, and mats are made of it. Clos. Pray. Rep. p. 89.

ARUNDO, a genus of the Gramineae. Several Indian species are not defined, as the Pyo, Loi, Phoung, Kyoo, and A-loo of the Burmese. A. bifaria, Putu-oudur, Telu, grows as bushes on the banks of rivulets, lakes, etc. A. Bengalensis, gala-nul, Beng., grows in ditches and low places in the vicinity of Calcutta, where it blossoms during the months of October and November. A. japonica grows 12 feet high. A. phragmites and other reeds grow on the banks of the Yangtsze, commencing where the bamboo stops. -Rozb.

Von Mueller.

ARUNDO KAIKA. Retz. A. donax, Linn. A. Roxburghii, Kth. Arokhonkai, Rozb. A. Rohini, Kth. A. Nel, Nau, B. Nuda, Nula, Sansk. A. Nul, Nuthara, Hind. Sur, Sind. A. Bag-narri, Nalu, Panj. A. Drumh, Dwrena, Ths. Ind. Arokhonkai, Tribhunthu, Rozb. This grows in Bengal, Sind, and the Punjab. Its culms, suar joo jane, are made into chairs, and its flower-stalks beaten to form the fibres called Moonyah. These are made into string or twine (Moonyah joo naare), and ropes (Moonyah joo russa). The culms are also made into baskets, and the common door-mats of Calcutta are made of the stalks split open. Ships generally use them as dammu.-Rozb. i. 347; Royce, Fih. Pl. p. 32; Hosie, Veg. Kingdom, 821.

ARUNELLI. Tam. Ciccia disticha, Linn.

ARUNG-ANGAMI, a Tibeto-Burman tribe that has intruded on the Bodo and Mikir tribes in Assam. See Angami; India.

ARUN TUTA. Pans? The insipissated juice of a bulbous plant, supposed to be a species of Colchicum. It is sold at a high price, and is much sought after by the people of the Hazarajat, in Central Asia, being of high repute in diseases of the eye. It is sold in small pieces of a dark brown colour, but is indiscriminately applied, and must often act injuriously.-Mason's Journey, ii. p. 338.

ARUS. BENG. Solanum verbascifolium; also Adhatoda vasica.

ARUZ, ARAB., properly Araz, rice.

ARVANUS or Aruanus is supposed to be the emperor Valerian (Valerianus); for he is described by Tabari as one of the Roman sovereigns (Malki bud Arzian), who, having been conquered by Shapur in a fort near Antioch, was led into Susiana, where the Persian monarch, undertaking some extensive structures (at Shushter), obliged his captive to assist in the work, by procuring experienced artists from Rome or Greece, and he promised that liberty should be the reward of this co-operation. The task was performed, and Shapur observed his promise, but first cut off the Roman chieftain's nose, to brand him with an indelible mark of captivity.—Ouseley's Travels, i. p. 287.

ARVELA, a caste of Smartha brahmins in Mysora.

ARVI. HIND. Colocasia antiquorum. ARVI, a town in the Wardha district of the Central Provinces; it contains the shrine of Arvi Teling Rao, who founded it in the 16th century. Hindus and Mahomedans worship at his shrine.

ARWAN. HIND. In Rohilkhand and the upper Doab, used for Newam, the first cuttings of corn, made at a fortunate moment. They are not taken to the threshing-floor, but brought home to be eaten by the family (every member of which tastes it seven times), and presented to the Lacs and to Brahmins. In the kharif or autumn crops, the shamakh is used, but in the Kabi crops barley is employed as the grain for the Arwan. It is quite a festival, as beginning the harvest. Phula-phula kyun phire?—Ghar arwan aya. Jhuka jhuka kyun phire?—Pyuda aya. Why so happy?—Because the Arwan has been brought home. Now, why so downcast?—Because the tax-gatherer has come. It is also called Awasi, Dadri, Kawal, and Kawari.

ARYA, a word supposed to be from the Sanskrit root ri = ar, and to have relation to agriculture and agricultural implements. It has been noticed under 'Ar,' q.v. Er or yer, Tam., in Sanskrit, hala or hara, in Telugu, araka, a plough; Erai or Irai, tax, tribute; Erai-vari or Irai-vari, Tam., dues payable by a tenant to his landlord; Erumate of Assam, land abandoned from cultivation; Eri, Tam., a reservoir with water for irrigation; Eru, hind., manure, in Latin, arare, to plough.

ARYA, in Ceylon Buddhism, the rhatship, the last of the four paths leading to Nirvana—Hart's Eastern Monachism, p. 138.

ARYA BHATA, a celebrated Hindu astronomer, who, according to Captain Warren, flourished in the 4425d year of the Cali yug, answering to A.D. 1322. He left several mathematical tracts, some particularly relating to the properties of the circle. Another account says he was born about A.D. 476, at Kusumapura, near the modern Patna. His chief work is the Arab-hatiya Sutra, which includes two other works, the Dasagiti Sutra and the Aryashta Sutra. He is the earliest known writer on algebra, and if not the inventor, is the improver of that analysis. He composed his first astronomical work at the early
ARYAHICHTA.

The Aryans, a term restricted by some writers to a family of languages, which includes all the idioms of the ancient Medes and Persians, who named themselves Aria, and their country Eriene or Iran, and likewise the Sanskrit, with all the Prakrits and Pali. Thus they have been arranged into two branches, the Iranian and the Indic. The Iranian branch, there is the Avosta or old Bactrian, with its descendents the Pahlavi, Huzvarash, Pzand or Parsi. Of the Indic branch, there is the Sanskrit or its two forms, the Vedic and the Literary, and the Prakrit dialects.—(1) The Pillar Inscriptions; (2) the Dramatic; (3) the Gathas of Nepal; (4) Atrapansi; (5) Saravasti; (6) Sarasvaci; (7) Maharastri; (8) Pysachi; (9) Magadhi, or in their term, Pali, which again appears to have variations in Ceylon, Burma, Siam, and Cambodia. The Aryan or Bactrian character is that sed in the inscriptions at Jalalabad, Munkhyala, and at Kapurdirgi, on tops or tumuli, said to be numerous for about 300 miles around. Later inquirers have agreed upon the contrasted terms, Aryan-Pali, i.e. Bactrian, and Indo-Pali, i.e. the soka Lay and rock inscriptions, or the home-created writing of the Indian continent before emirates or Sanskrit Brahmanas approached its soil.

ARYAN, the name given by ethnologists to a unity of the human race, also designated Indo-European, Indo-Germanic, Sanskritidiot, Japhetic, and Caucasian. There was a time, says Professor Max Mlller, when the ancestors of the Celts, the Germans, the Slavonians, the Greeks and Italians, the Persians and Hindus, were living together in the same fencings, separate from the ancestors of the-Semitic and Turanian races. They separated, and the Hindu was the last to leave the central home of the Aryan family. The researches of Chevalier Bunsen, and Professors Wilson, Hug, and Max Mlller, seem to prove that much of the earlier history of the Aryans is enshrined in the Vendidad of the ancient Persians and present Parsees, and in the Vedas of the Hindus, according to Dr. Hug, the ancient to the Vendidad, or Code of the Fire-worshippers of Iran, is the most ancient, and its contents are the reminiscences of the passage of the Aryans into India on the south, and into Persia on the south-west. Major Cunningham also, his learned work on the Bihisa Topes (p. 15), is the term Aryan in allusion to the race of Aryan whose migrations are recorded in the Avesta; who, starting from Ercene Vaejo, actually spread to the south into Aryavartaha or Aryadesa, the northern plains of India, and to a south-west over Iran or Persia. The original naming of their name is said to have been equi-

ARYAN.

valent to upper noble or dignified, and this is doubtless the origin of the epithet Aryan, which, as we learn from Herodotus (vii. 62), the ancient Medes assumed. And for this designation, again, as a national name, it has been suggested that the Arians were originally and essentially an agricultural and therefore a peaceful race, in order to distinguish them from the nomadic Turanians, they may have derived their tribal name from their plough; and words relating to agriculture, and its derivatives, are found in several Aryan tongues. Aryan, in Zend, means venerable, and was at the same time the name of the people. In the old Sanskrit, in the hymns of the Veda, Aryan occurs frequently as a national name, and as a name of honour, comprising the worshippers of the gods of the Brahmins, as opposed to their enemies, who are called in the Veda, Dassya. It is a Sanskrit word, and in the later Sanskrit it means 'noble of a good family.' It was, however, originally a national name; and we see traces of it as late as the Law-book of the Manavas, where India is still called Aryanthaha, the abode of the Aryans. To the present day, the districts on the plains of the Ganges in which they are chiefly remaining still continued to be called after them; Aryanvarthaha pinnia bhumi hi, Madhiam Vindhyai Himiyai yoh yo, i.e. the Aryan country, the sacred land, lies between the Vindhyas and the Himalayas. The investigations of the learned place the primeval seats of the Aryans on the slopes of the Belur Tagh, in the highland of Pamir, between the 40th and 37th degrees of N. latitude, and 86° and 90° of longitude, about the sources of the Oxus and Jaxartes. On this western slope of the Belur Tagh and the Mustagh (the Tian-Shan or Celestial Mountains of the Chinese), the Harberezaiti (Albordah) is to be looked for, which is invoked in the Zendavesta as the principal mountain and the primeval source of the waters. The reason why they left their earliest homes, and the account of their subsequent migrations, are recorded in the opening of the sacred code of the Vendidad, which, Chevalier Bunsen remarks, as certainly contains an historical tradition of the Aryans, as does the 14th chapter of Genesis an historical account of the oldest recorded war between Mesopotamia and Canaan. The Fargard is divided into two great parts, one comprising the immigration from the eastern and north-eastern primeval countries to Bactria, in consequence of a natural catastrophe and climatic changes, the other, the subsequent extension of the Aryan dominions through eastern and central Asia, which terminated in the Panjrab. A vast climatic change had taken place in the northern countries, which is attributed in the Bible to the action of water. In the Fargard, the sudden freezing up of rivers is the cause assigned. Both may have resulted from the same cause, the upheaving of the land by volcanic action, elevating portions and depressing into basins, such as the Caspian Sea. The following passage contains a genuine description of the altered climate of the primeval land of the Aryans, Iran proper. 'Thero Ingromanniyanos (Ahirmfan) the deadly, created a mighty serpent, and snow, the work of Deva; ten months of winter are there, two of summer.' And ten months of winter is now the climate of Western Tibet, Pamir, Belur, the Altai country, and the
district cast of the Kuen Lun, the paradise of the Chinese. The fathers of the Aryans, therefore, left the country at the sources of the Oxus and Jaxartes in consequence of a convulsion of nature, by which a great alteration in the climate was caused; and in their course from the primeval country to the Sutlej, they formed, by the conquest of fourteen countries, as many kingdoms in Central Asia and in the country of the Indus and its confluents. In the intervening region, they passed amongst the Turanian (Scythians and Turkomans), and there is evidence that the inhabitants whom they afterwards found in India were likewise Turanians. Professor Max Müller gives, as follows, their successive settlements:

Sogdiana, in Samarqand, formed the first settlement of the Aryans; Sogdian, afterwards spelled Sugdian and commonly Sogdiana, is pre-eminently the country, as being the home of the fire-worshippers. It is in the 38th degree of latitude, where Mara Kanda (Samarqand) is situated, a paraisacal land, fertilized by the river Sogd, so that Sogd and Paradise are used synonymously by the later writers. The Vendidad (ii. verse 5) says it was created as the second best of the regions and countries.

The second settlement was in Mouru (Merv, Margiana). This is Margiana (from the river Margus), now Marghab (Margus-water), Margush in the cuneiform inscriptions, a fruitful province of Khorasan surrounded by deserts. In the Record (ii. verse 6) it is described as 'the third best land, the mighty and pious (Mouru, Marv) . . . Ahriman created there wars and marauding expeditions.'

The third settlement was in Bokhdi. It (iv. verse 7) was the fortunate Bokhdi, with the lofty banner. Here Ahriman created buzzing insects and poisonous plants. Bokhdi is certainly Bactria (though Burnouf had doubts about it), the land of the Bactrians. The 'tall plumes' indicate the imperial banner (mentioned also by Firdousi), and refer, consequently, to the time when Bactria was the seat of empire. Up to this time nothing is said about Media, though she conquered Babylon b.c. 1294.

Their fourth settlement was in Nisaya (Northern Parthia). It (v. verse 8) says 'the fifth best land is Nisaya; there Ahriman created unbelief.' This is the Nisay of Ptolemy, famous for its breed of horses, commonly called Nisa, the renowned district of Northern Parthia, bordering on Hyrcania and Margiana. The city of Nisa is situated on the upper Oxus. The term 'unbelief' in the Record signifies the apostasy from pure worship. Here, therefore, the first schism takes place.

The fifth settlement in Haroyu (Aria). Haroyu is Horat, of which frequent mention is made subsequently, and the Harva of the cuneiform inscriptions. Its name comes from the river now called Heri, abounding in water. The Greek district Aria comprises the larger portion of Segestan, and forms part of Southern Khorasan. In the Record (vi. verse 9) it is mentioned that the fifth best land was Haroyu, the pourer out of water; here Ahriman created hail and poverty.

The sixth settlement in Vekereta (Segestan). This country is the home of Rustam. Dushak is the capital of Segestan. To the south-east of it is the land of the Parikani, known to the ancients as a part of the Sakon country (Sakan). This greater part of it is now a desert, but it has once cultivated. Here, again, in the words of the Record, there may be allusion to a schism, which in that case would be the second historical one.

The Record runs (vii. verse 10). 'Vekereta, in which Duzhaka is situated; there Ahriman created the Pairii ka Khmathaiti' (Herod. iii. 94, comp. Ritter, viii. 59), worship of the Peris (fairies).

The seventh settlement in Urva (Kizbul). The Record (viii. verse 11) alludes to Urva, proved by Hang to be Kabal, the identity of which was previously unknown.

The eighth settlement in Khuneta (Kandahar) (ix. verse 12). 'Khuneta, where Vehrkana is situated.' According to Hang, by this country Kandahar is to be understood. Vehrkana cannot be Hyrcania, as is generally supposed, but is the city now called Urghanbad, situated in Kandahar. The curse of Ahriman was pederastism, a very well known historically to be un-Aryan and Turanian.

The ninth settlement in Haraquaita (Arachosia) (x. verse 13). Haraquaita, denominated the fortunate; the Harauwatis of the cuneiform inscriptions; the Arachosia of the classics. The word of Ahriman here was the burying of the dead,—another apostasy, therefore, from the true faith.

The tenth settlement in Hesmata (district of Helmand) (xi. verse 14). 'Hetumat, the wealthy, the splendid,' is the valley of the present Helmand and the Etyman of the classics. The mischief inflicted here by Ahriman was the sin of sorcery.

The eleventh settlement in Ragha (Northern Media) (xii. verse 10). 'Ragha with the three races is doubtless the Rhage of Strabo and Poltomey, the greatest city in Media,' south of Tehran. This north-eastern portion of Media includes the passes of the Caspian. The possession of these passes was a protection to the other Aryans, and at the same time the key to the whole of Media, and therefore Persia. The district is called also Choana (Qwan). Ahriman established here unbelief in the spiritual supremacy of Zarathustra,—another schism, at all events another portion of ancient Aryan history.

The twelfth settlement in Khorra (Khorasan) (xiii. verse 17). Khorra is held by Spiegel and Lassen to be the district of Khirm mentioned in Firdoussi. Hang identifies it with the cities of Karkh in Khorasan. The evil done by Ahriman here was the burning of the dead. This was therefore an illegal practice, like the sin of the Arachosians, who were so profane as to bury their dead. All this implies the organization of an hierarchic power in Sogd and Bactria, although not a sacrificial casta.

The thirteenth settlement in Varena (Ghilian) (xiv. verse 18). 'Varena with the four corners.' Hang has shown it to be Ghilian. The curse of Ahriman was irregular menstruation.

The fourteenth settlement was in Hapta Hindu (Panjab) (vi. verse 19). The Land of the Seven Hindu, that is, the country between the Indus and Sutlej. In the Vedas the Panjab is also called the land of the Seven Rivers. The traditional Greek names also are seven. The Indus and the Sutlej are each formed by the junction of two arms, which in their earlier course were independent. According to this view, it stands thus:
ARYAN.

I. Indus.  II. Hydaspes.  III. Akesines.  IV. Hyarotis.  V. Hyphasis.  

The Vedas show that the Aryans passed the Sutlej at a very late period, and settled in what is now British India. In India, the term Aryan as a national name fell into oblivion in later times, and was preserved only in the term Aryavarta, the abode of the Aryans. It was more faithfully preserved by the Zoroastrian Aryans who migrated to the N.W., and whose religion has been preserved in the Zendavesta, though in fragments only. In the first chapter of the Vendidad, where Ahuramazda explains to Zarathustra the order in which he created the earth, sixteen countries are mentioned. A line drawn from India along the Paropamisus and Caucasus Indicus in the east, following in the north the direction between the Oxus and Jaxartes, then running along the Caspian Sea, so as to include Hyreana and Ragha, then turning south-east on the borders of Nisaen, Aria (i.e., Hara), and the countries washed by the Eymandrus and Arachotus, would indicate the general horizon of the Zendavesta world. It would be what is called the fourth card of the west of Mithra, ‘the whole space of Aria,’ vespem ariyaosayanem (totum Arum situm). Opposed to the Aryan, we find in the Zendavesta the non-Aryan countries (anairyan lain-havo) ; and traces of this name are found in the Aryanavai, a people and town on the frontiers of Hyreana. Greek geographers use the name of Ariana in a wider sense even than the Zendavesta. All the country between the Indus in the south and the Indus in the north, the Hindu Kush and Paropamisus in the north, the Caspian gates, Karamania, and the mouth of the Persian Gulf in the west, is included by Strabo (v.2) under the name of Ariana; and Bactria is thus called by him ‘the ornament of the whole of Ariana.’ As the Zoroastrian religion spread westward, Persia, Elymnia, and Media all claimed or themselves the Aryan title. Helioacians, who wrote before Herodotus, knows of Aria as a name of Persia. Herodotus (vii. 62) attests that the Medes called themselves Arii; and even for Aryotape, the northernmost part of Media, the name of Ariana (not Aria) has been preserved by the Stephano Byzantinus. Manu, speaking of the Alava tribe of Khatriya, who had neglected to reverence Brahmins, styles them Dasya, whether they speak the language of the Miclea or that of the Aria; and the people to whom he thereudes seem to have been Medes occupying the valley of the Indus. The name Elymnia had been derived from Alama, a supposed corruption of Aryanma. The Persians, Medians, Bactrians, and Sogdians all spoke, as late as the time of trago, nearly the same language; and we may well understand, therefore, that they should have aimed for themselves one common name, in opposition to the hostile tribes of Turan. And then, after years of foreign invasion and occupation, Persia rose again under the sceptre of the Sassanians to be a national kingdom, we find the old national kings the worshippers of Masdanes, dwelling themselves, in the inscriptions dechristened by De Saety, ‘kings of the Aryan and un-Aryan races,’ in Pedlevi Iran va Aryan; in Greek, Ἀριάνος καὶ Αριανοῦς. And in the valleys of the Caucasus we meet with an Aryan race speaking an Aryan language, the Os of Ossethi, and they call themselves Iron.

The Aryan type generally is characterized in its purer forms by height, bulk, and symmetry, with an oval face, a prominent and well-shaped nose, devoid of the open nares which characterized the African-Semitic type, and with the ridge continued until it passes on to the forehead; the lips and cheekbones are not prominent; the ears are expressive, and moderately large, with eyebrows arched and the forehead high. The Vedas furnish much information regarding the origin and early state of the East Aryan people, who are now called Hindus. See Hindus. On the northern border, the great range of the Himalaya now separates the Aryan Hindu family of India from the Bhot Buddhist races of Tibet. The tendency of the migration is southwards; and on the south of the chain are some alleged mixed races, such as the people of Lahuli and Kanawar on the west, and the Gorkhan and Bhotani on the east. On the S.W. border, the Lower Indus separates many tribes of Turanian and unknown origin in Beluchistan and the ancient Gedrosia.

Beyond the N.W. frontier, the old indigenous inhabitants of Kashgar, Yarkand, Khotan, Turfan, and the adjacent highlands, are Tajaks, who speak Persian, and who are all agriculturists, as are also all the Tajak of Central Asia and Afghanistan. The people of the Hindu Kush and higher Indus are Aryans of a high and handsome type. Their languages are allied to those of the Hindus, and those hills have no other race. The Aryans seem to be the aborigines; indeed, Sir George Campbell believes those on the hills north of the Panjab to be the purest Aryans in the world. They are extraordinarily handsome, with marvellously acute intellects, are good agriculturists, and skilful artists, but are not very hardy or personally courageous.

The Kashmir people and those near them are the old Aryan stocks. The bulk are now Ma- lomedans, but they are a Brahman race. Their original name is Ksh, Kauh, or Kash; and we meet it in Kashgar and Hindo Kush, and hence also Caucasus and Caucesian. The Kashn seem to have at one time extended towards the Indus. It is the commonly received opinion, that south of the Himalaya the Aryans were first in the Panjab and Kashmir, and afterwards in Sind, Guzrat, and Dehli, and that the seat of Vedic power, faith, and learning was between the Jumna and the Indus. It is also admitted that the Vedic Aryans dwelt chiefly on the banks of the Indus and its confluence, as high up as Kashmir, and as low down as Cutch and northern Gujarat. There is nothing in history to show, nor is there in the physical appearance of the races to the east of the Ganges and of the Bay of Bengal anything to warrant the belief, that these Aryan immigrants ever advanced in masses beyond their present locality in the northern parts of India, north of the Vindhyal range. It is generally recognised that most of the Brahmans and Khatriya, some of the Vaisya Hindus, and all the Kayasth tribe, are Aryans; but that many of the Gopa or Ahir, of the Sad-Gopa or Goala, the Gareri shepherds,
the agricultural Kurmi and Lodha, present forms only approaching the Aryan type. Mr. (Sir George) Campbell (p. 125), however, says that in Hindustan the Aryan element has quite prevailed in feature over the aboriginal type, and the population are almost as Aryan as European, but dark in skin, and usually smaller. He says (J.E.S.) that in the lower doab of Hindustan the Aryan are extremely numerous.

In the Cawnpur district the majority of the cultivating ryots are Brahmans; and they largely entered the British armies. North of the Gogra they are again numerous, and in Kasi or Benares are still more so. South of Benares the Brahman is called Bamun or Bhaban, and Sir George Campbell supposes an intermixtiture with the aborigines. In the swampy river-protected country of Bengal, Brahmans are quite the influential race, holding offices and lands; good-looking, intellectual, but darker than the northern or western Brahmans.

There are many Vaisya Hindus in the Peninsula of India, whose almost diminutive form precludes the idea that they can be of the Aryan stock, although in the later Sanskrit writings Arya is applied to a Vaisya or member of the third caste. But, on the other hand, in the northern parts of Telingana are many of the Sudra Hindus with forms of the Aryan type. But Professor Max Müller tells us (Lectures, p. 225) that in the later literature of the Vedantic, the name of Arya is distinctly appropriated to the three first castes,—the Brahman, Kshatriya, and Vaisya, as opposed to the fourth, or the Sudra. In the Satapatha Brahman it is laid down distinctly: 'Aryas are only the Brahmans, the Kshatriyas, and Vaisyas; for they are admitted to the sacrifices. They shall not speak with everybody, but only with the Brahman, the Kshatriya, and the Vaisya. If they should fall into a conversation with a Sudra, let them say to another man, 'Tell this Sudra so.'

British India, amongst its Aryan tribes, is now largely Brahmanical in its religion. Chevalier Bunsen is of opinion (iii. p. 564) that about B.c. 5100 or 5000 the Aryan power on the Indus appears to have been broken, in consequence of some unexpected invasion from the lands of the Indo-Aryans, and from the latter date, India east of the Satlej, up to the extent of the Aryan conquests, adopted Brahmanism. From that time, the religious views, forms, and habits of Bactria were for ever abandoned by these Aryan immigrants, and between B.c. 3000 to B.C. 1900 they extended their Brahmanical religion from the Sarasvati to the Doab. At a later date, the Brahmans became a learned body; and the higher civilization of the Brahmanical Hindus is now indicated by the circumstance that in the Hindu, Bengali, Gujarati, Marathi tongues, and to some extent in Telugu, Canarese, and Tulu, all words relating to science, literature, and mental refinement, all that relate to an advanced civilization, and all words pertaining to religion, the soul, and the invisible world, are in the language of the Brahmans; whilst all words that relate to the ordinary arts of life, the face of nature, the wants, feelings, and duties of a rude and almost a savage people, are non-Aryan.

At present, in India, the bulk of the Aryans hold to two great religions—Brahmanism and Zoroastrianism; and many followers of the Jain and Sikh beliefs are also of this race. In Persia, Kashmir, and Afghanistan, most have become Mahomedans. In British India, out of its population in 1871 of nearly 200,000,000, the percentage of Hindus was 73 01; of Mahomedans, 21 41; of Buddhists and Jains, 1 48; Sikhs, 62; and Christians, 47. Rajputana is still partly Hindu, and in part occupied by non-Aryan races; but in British India there are tribes of Rajput descent who profess the Mahomedan faith. —Wheelers Hist. of India; Bensusans Egypt, iii. pp. 462, 467, 499-601, and iv. pp. 40, 487, 561; Prof. Max Miller's Lectures, pp. 69, 108, 201, 226, 229; Calcula Review, 1859; Edinburgh Review. This gum resin is the product of the Feronia asafoetida, a synonym of the Narthex asafoetida, and has perhaps also the produce of other umbelliferous plants mixed with it. The plant is an annual, and attains a height of 8 or 10 feet. It grows wild in the sandy and gravely plains of the western part of Afghanistan, but chiefly in the Anardava and Helmand districts; also in the neighbourhood of Herat, on the Hindu Kush at an elevation of 8000 feet; it is found growing in

178
the Dandak-Shakoh pass, and in Panji, in the valley high up on the Sutlej river, and in the mountains of Daristan and Beluchistan. Moorcroft tells us that the chief article of the commerce of Sykant beyond Baniyan was azaferata, of which about 200 mounds are gathered annually from plants that grow wild upon the mountains. Sir A. Barnes believed this plant to be the Sphilmum of Alexander's historians. Four or five weeks after the new leaves have sprouted from the aerial root, which occurs in April, May, and June, many of the Kakarr tribe spread themselves over the country from Kandahar to Herat. The roots are removed; and a trench 6 inches wide and deep dug round the root; three or four incisions are then made in the top of the root, and repeated every third or fourth day, and while the white milky juice is exuding, which is for a week or so, the root is covered over with dried leaves. According to the size of the root, from a few ounces to two pounds are obtained from each root. The juice turns yellow and hardens, in which state it is put into bags and exported, and is met with in commerce in shapeless masses of a waxy consistence, with small transparent brittle and white tears. The fracture is vitreous, at first white, and passing to red by contact with the air, a property which distinguishes it from all other resin. Its leaves are used as greens in western Afghanistan; and the people eat its white inner stem, which attains 5½ feet of height. Azaferata is often an ingredient in the curries of the Hindu races of India. It is a powerful carminative and stimulant tonic. It produces a sensation of heat, and increased secretion in the alimentary canal, with emesis; and the urinary and genital organs seem to be sometimes materially excited.

ASAL. TURK. Honey.

ASAL. AR., PERS., HIND. Principal, original, sati Tus, in Kashmir, the under fleece of the himalayan Ibex, Capra Siberica. It is woven into fine cloth called Tus. No wool is so rich, so soft, or so full. Asal-us-Sun, the root of Glycyrrhiza glabra. See Tusi; Ibex.

ASALOO. HIND. A small plant cultivated about Ajmir; the seeds are heating, and promote secretions; they are also taken in milk to strengthen the body; much used in masalih for animials. To the taste they are bitter, and considered to be heating.

ASAM. MALAY. Tamarind fruit.

ASAMI. HIND. A tenant, a hired servant, a warly trooper; in the N.W. Provinces, a cullory; these, in Oudh, are of two kinds, one with a right to till or provide for tillage; and called hapar-band, qadimi, khud-kasht, maurusi, and edjar; the other, tenants at will, called Kach'ha ami, or pahi kash.

ASAN. SANSK. Terminalia alata, and T. totecosa; MAHRI, Bridelia spinosa.

ASAN. One of the solar months. See Fasli.

ASAN. HIND. A small pile carpet to kneel at prayer-time; also a form of the Fatiha ayer. Asana, SANSK, a seat, from As, to sit; the third stage of Yoga.

ASAN'ELA MARAM. TAM. Angely wood tree; Arctopus hisura.

ASANYASATTA, in Sinaeghese Buddhism, an unconscious state of being.

—Harby's Monachism.

ASA-PURNA, the Hindu deity Hope.

ASA. ARAB. Relics. Asar-i-mubarak, or Asar-i-sharif, blessed or noble relics; amongst Mahomedans, relics of their prophet, such as the hair of his beard, etc.

ASA or Athar. ARAB. The Alim-ul-Athar, the knowledge how to trace footsteps in the desert of Arabia; it is the Peggi of the Kama.

ASA'R, the third Hindu solar month. It is the first month of the rainy season, and consequently of cultivation.

ASARI POOLI MARAM. TAM. Stilago diandra.

ASARUM EUROP.EUM. L. Asarabacca.

Asarun, ARAB. Tuckir, Tuggur. HIND. Foal foot. ENG. Upana, LEAF. CABARET, ASARAT, FR. Mucltianjyvi, TAM. Haselkraut, GER. Choppa tataku, TEL. Incahuas, thre.

The leaves and roots of this European plant are met with in all the bazar's of India; 40 to 60 grains of the fresh plant infused in eight ounces of water act as an emetic, in large doses as cathartic; the powder of the leaves causes violent sneezing. Until the introduction of ipecacuanha into Europe, the Asarum was used for most of the purposes for which the South American drug is now employed, and other virtues are attributed to it. The dried plant is sold in the Indian bazars under the name of Asarun. Royle states, however, that a hill plant, called Tuggur, is generally substituted for it, and the Asarum of the bazars of India is not unusually the root of the Valeriana Hardwickiana, Wall. —O'Sh., p. 569; Hope's Veg. King; Birdwood's Bombay Products; Royle.

ASARU, a village in the Gujranwala district of the Punjab, containing ruins of great antiquity, with two mounds from an ancient stupa identified by General Cunningham as Tso Kia or Ta-Ki of Hwom Thang, the capital of an extensive kingdom. Numbers of Indo-Sythetic coins are annually washed out of the soil after heavy rains.

ASA-THOR. SKAND. The Lord Thor. See ES. ASAUJIC. HIND. Ceremonial uncleanness.

ASAYB-WALA. HIND. An insane person, a demoniac.

AS-BARG, also Aswarg. HIND. Delphinium saniculoifolium; Datisca cannabina; a yellow dye.

ASBESTOS, amianthus, tremolite.

Pah-lunmul, CHIN. Sang-i-Pamba,PERS.,PANJ. Yang-Ki-shih, " " " reshadar, " " "

Common asbestos is found in several parts of India, largely in Salem and Mysore, and indurated asbestos abundantly. It is found in a bed at Putta Marpuhili, near Rayalehern, in the Ceded Districts. The tremolite variety is brought from Tsi-nan-fu, in the northern part of Shan-tung, where there is a hill called Yang-k'i-shan. It is supposed by the Chinese to stimulate the uterine system. The silvery amianthus is found in Shan-si, Sech-n'en, and Shan-tung, and is used to make lamp wicks, fire-stones, fire-bricks, and crucibles. It occurs in flat beds or veins above the Khost valley. It is said to be twisted into rope by the hill people of those parts. It is also found at Jalalabad. Its most curious property is indestructibility at a red heat. On this account it is utilised in Europe in gas stoves. The long and
silky fibres of amianthus have been employed in the manufacture of a fire-proof cloth. For ordinary paper from this mineral, the present market prices are too high. The ancient Egyptians wrought it into a soft and flexible material to be used as shrouds to burn their dead in. There are several varieties of this fibrous stone.—Powell's Handbook: Econ. Prod. Panjab, p. 46; Smith.

ASCETINES, one of the rivers of the Panjab as known to the Greeks, now called the Chenab.

ASCETICS, amongst Buddhists, Christians, Hindus, and Jains, have ever been numerous, though under a variety of rules. Siddartha, a prince, a married man with wife and child, forsook all to follow the life which led to his attainments of a Buddha; and with Hindus and Buddhists of the present day such desections of home and wife and child are continually recurring. All Buddhist monks of Burma, and many Hindu devotees, to obtain their daily food, perambulate the streets, walking rapidly, soliciting from no one. Three centuries after the calling of the apostles, St. Anthony led the first Christian monks to the wilds of the Thebaid; and the next migration was taken by Pacomius to the island of Taburnea. St. Anthony is supposed to have lived to the patriarchal age of 105; and before he died, in Oxyrhynchos alone, within a very few years from the foundation of the monastic community there, an assembly was held at which as many as 10,000 female and 20,000 male ascetics were gathered together. Eunapius ascribes to the monks the overthrow of the ancient gods, and the revolution of religion in Rome and Constantinople. After once this great change was accomplished, the monasteries became training schools for the great statesmen of the empire; and the high places in the state were attained with most facility by those who had served most eagerly in the largest and most ambitious orders.

Amongst the Christian sects, the anchorites or anchorites avoided the intercourse even of those who had renounced the world like themselves. Perpetual silence was required to him who had already been self-imposed; and even independently of the famous Simon, who isolated himself on a pillar, there were soon thousands of zealots who lived for years without opening their lips in speech. Up to the 19th century there continue ascetic sects of Christians living in lone places, as those of St. Catherine on Mount Sinai; and the priests of the Romish persuasion abstain from marrying. Amongst Hindu devotees are several ascetic sects, but the more common are the various sects of the Gosain, Jogi, and Viragi or Sanyasi, who live in monasteries; and the Pandarams, who live in the temples as the pujari or worshipping officials, also are celibates. Since 2600 years, the Buddhists have both monks and nuns; Dr. Campbell gave a list of twelve monasteries at Lhassa, inhabited by 18,500 Lama priests; and in Ladakh there were 12,000 Lamas in a population of 158,000 souls. Amongst the Zoroastrians, all the young men and all the Ploumyge priests live in monasteries. Amongst the Jains, all the teachers are ascetics. Amongst the Mahomedans, some are anchorets, trusting to chance gifts of food; all the fakirs are mendicants, but the Kalend darvesh or dervis alone practice celibacy. One sect in the Dekhan voluntarily become eunuchs, and dress like women, visiting the houses of Mahomedans on the birth of a son or daughter, and exacting a money dote.

Some of the Hindu ascetics used to carry their austerties to the extremes of bodily torture, sitting for years over a hot fire, or with eyes open looking at the sun, exposed to summer heats and winter colds; naked, and maiming their persons by suspending heavy weights; holding their hands closed until the nails would grow through; holding their arms upright till the joints became fixed, or lying on beds with iron spikes, or with iron collars so placed on their neck as to prevent repose or making vows that they will not take food till they have accomplished some act of devotion or charity. Under British sway, all such classes are fast disappearing; few Europeans, and few natives even, have seen the more pretentions of them. Yet in 1866, in the Elephant cave of Ellora, a Hindu Viragi was sitting naked, smeared with ashes (vibudhi), who had then so sat for five years. He was in robust health, with a sleek skin; yet the people believed that he abstained from food. Suliman, the Arab traveller, writing A.D. 851, mentions that some Hindu ascetics go about naked, wander in forests and mountains, live solely on herbs and fruits, stand naked with the face turned to the sun, with only a pantheer skin as a covering; he mentions having seen a man standing so, and on returning sixteen years afterwards, found him still in the same posture. Col. Tod had seen one of these objects, self-condemned never to lie down during forty years, and there remained but three to complete the term. He had travelled much, was intelligent and learned, but, far from having contracted the moroseness of the rechuse, there was a benignity of mien and a suavity and simplicity of manner in him quite enchanting. He talked of his penance with no vainglory, and of its approaching term without any sensation. The resting position of this Druid (vana-purust) was by means of a rope suspended from the bough of a tree, in the manner of a swing, having a cross bar on which he reclined. The first years of this penance, he said, were dreadful; afterwards, the devil—called, it was thought—gripped his movements till that degree that he expected death; but this impression had long since worn off. ‘Even in this there is much vanity;’ and it would be a nice point to determine whether the homage of man or the approbation of the divinity most sustains the energies under such appalling discipline.

Even yet, amongst the Hindu community, the behoists of such ascetics are secondary only to those of the divinity, whose organs they are deemed. Like the Druids of the Celts, the vana-purust jogi, from the glades of the forest (vana), or recess in the rocks (gopha), issue their oracles to those whom chance or design may conduct to their solitary dwellings. It is not surprising that the mandate of such beings proves compulsory on the superstitious Rajput. We do not mean those squalid ascetics who wander about India, and are objects disgusting to the eye, he who, as the term imports, mortifies the flesh till the wants of humanity are restricted merely to what suffices to unite matter with spirit; who has studied and comprehended the mystic works, and pored over the systems of philosophy, until the full influence of main (illusion) has perhaps unsettled his understanding, or whom the rules of his sect have condemned to penance and
solitude,—a penance so severe, that we remain astonished at the perversity of reason which can submit to it;—to these, the Druids of India, the prince and the chiefest resort for instruction.—

Elliot's Hist. of India; Tod's Rajastan. See Aghora; Anthropophagi; Buddhists; Darvesh; Fakir; Hindu; Jogis; Mustants; Sanyasi; Viragi.

ASCHARA. SANSK. According to Munn, the syllable O'M. All rites ordained in the Veda, oblations to fire, and solemn sacrifices, etc., pass away; but that which passeth not away is the syllable O'M., hence called Aschara, since it is the symbol of God, the Lord of created beings. See Gayatri; Hindu; O'M.

ASCIDIAD.E, a family of the mollusca, of the class Tunicata or Tunicaria. The Ascidiads have five genera, viz. Molgula, Cynthis, Peloneas, Chelosyma, and Boltenia. See Mollusca; Tunicata.

ASCLEPIADE.E. Several genera and many species of this natural order of plants occur in south-eastern Asia, in Arabia, China, Japan. There are upwards of 220 species in India, Ceylon, and the Archipelago, fifty in the Himalaya, the Khasyin hills, and Assam. The more important are the Dogbanes,—Pergularia odoratissima, Tweedia, Cryptostegia grandiflora, Cynanchum, Marsdenia tenacissima, Stapelia Buffonia, Gymnema lactiferum; Tylophora asthmatica, Secamone emetica; Calotropis gigantea; Hoya; Sarco-lobus; Holostemma, Hemiedemus. The roots of the whole order appear to be acrid and stimulating, and some of them, as Tylophora asthmatica and Secamone emetica, are employed as emetics. The cow-plant of Ceylon, or Kiriaghuma plant, is the Gymnema lactiferum. Species of Cynanchum act as purgatives. The leaves of Solenostema argel are used in Egypt for adulterating senna. Several species yield caoutchouc, whilst others afford indigo. Many species of the genus asclepias has now been clased by other authors under other genera.

A. acida, Rozb., and A. aphilla, Rozb., syn. of Sarco stemma brevistigma, Wight.

A. anularia, Rozb., and A. convolvulacea, Herb., Eeyne, syns. of Holostemma Rheedii, Spre.

A. asthmatica, Rozb., A. pubescens, Will., and the A. vomitoria, Koom., syn. of Tylophora asthmatica.

A. eгинata, Rozb., syn. of Demina extensa, R. Brown.

A. gigantea, Wild., syn. of Calotropis gigantea, Brown, also of C. procera.

A. microphylia, Rozb., syn. of Pentatropis microphylla, W. and A.

A. montana, Rozb., syn. of Gymnema tinengas and A. tangius, Rozb.

A. pseudosara, var. latifolia, Rozb., syn. of Hemi deus indicus, R. Brown.

A. tenacissima, Rozb., and A. tomentosa, Herb., Mad, syns. of Marsdenia tenacissima, W. and A.

A. tunicata, Rozb., syn. of Gymnema paeoniforum, R. Brown.

Many of the species possess powerful medicinal properties, and others are handsome border flowers, and worthy of cultivation; the buds of A. stipitacea are eaten by the Arabs. The whole plant of A. aphilla may be eaten. Calotropis gigantea is poisonous. The milky sap of A. lacte- lera is said to be used as food, while the milky juice of A. laniflora and A. procera is acrid and irritating, and is used with butter and lard as an

ointment for itch; while that of A. procera is applied to hides for removing the hair before tanning. As flowering plants, the genus thrives well in any good light soil, requiring room to spread and show their blossoms. They are readily grown from seed, which are produced in abundance. A. Currae- via, Linna., is the wild or bastard ispecamahna, Indian root or yellow milkweed, and the kakhudi of the Hindus. It is a native of the West Indies, but now found in most parts of tropical America and India, and is cultivated in China as a flowering plant; it is a pretty milkweed, with a small saffron and orange-coloured flower, and is quite common in the Tennesseum Province. The root is acetic, and is so used by the Negroes of the West Indies. The juice is made into a syrup, and is used as a vermiculate.—Williams' Middle Kingdom; Eng. Cycz.; Rozb.; Voigt; Riddell; W. ic.

ASEES. HIND. A form of Hindu benediction, only bestowed by women and priests. It is per- formed by clasping both hands over the person's head, and waving over him a piece of silver or other valuable, which is bestowed in charity. The Tamil people similarly wave a fowl or sheep's head around a sick man. This is a very ancient ceremony, and is called Nachraval. Col. Tod frequently had a large salver filled with silver coin waved over his head, which was handed for distribution amongst his attendants. It is most appropriate from ladies, from whom also he had this performed by their proxies, the family priest or female attendants. It resembles in form the Mahomedan rite called Bulain Lena. Jutjasthan, i. 618.

ASPIDAD. ARB. A large number of the species of the root.

AS-GANDH. SANSK., DEKB. Physalis somnii- ferum and Ashadatoda vasica; roots medicinal.

ASGUHI, a town in the Panjab, on the Indus, where there are gold washings.

ASHAR, a son of Joktan. See Joktan.

ASHAB. ARAB. Companions of Mahomed. The Astuwana-ul-Asbhab, the Column of the Companions, whose graves are at the El Bakia. Ashab-i-Kuluf, i.e. Companions of the Cave, the Seven Sleepers.—Burton's Pilgrimage, pp. 301, 396.

ASHADH PURVA, SANSK., the 20th, and Ashadah Uttara, the 21st, lunar mansions, also the 4th lunar month. Also the 3d solar month, Hindu denomination, when the sun is in the sign Muldhana II, answering to the Tamil month Audi.

Ashadi Ekadasi is the eleventh of the light half of the month Ashad, and is dedicated to Vishnu. It falls about the 12th July, and refers to the summer solstice, and in this feast day commences the night Rama and Vishnu, during which he reposes for four months on the serpent Sesha.—Warren's Kola Shakti.

ASHAKA-BASH. See Youkharee-bash.

ASHAR. ARAB. The tenth or tithe. By Maho medan law, land is liable only to two impose, viz, the Ashr or tithe, a poor rate due only on the actual produce of the soil; and the Khiraj or tithe, generally imposed on land within reach of running water or means of irrigation. A land can be subject both to Ashr and Khiraj at the same time. See Khiraj.

ASHARA, from Arabic ‘ashar; a tenth part, meaning the first ten days of the Maharram, or the ceremonies observed during that part of the month. Houses are appropriated, in which the Mahomedans of India set up alams, Taboots, Shah-nasheens, Booraq's, etc, and some-
times screens made of mica. These places are called the Ashar Khana (ten-day house); Tazeen Khana (the house of mourning); and Astana (a threshold or fakir's residence). In Upper Hindustan, opulent Mahomedans erect an Imambara, and the Shiah Mahomedans generally follow a similar practice. They are dedicated to the commemoration of the deaths of Ali and his sons.

The Ashar Khana, or the Ten-Day House, is called by the Shiah sect the Imambara, the Imam place. It is a building in which the Shiah sect dig a pit and kindle fires in it. At night the people fence across the fire with sticks and swords, and circle round it, calling out, 'Oh, Ali! noble Hasan! now to Hasan! bridegroom! alas! fate! stay!' etc. They form themselves in circles, and beat themselves with chains in the most frantic manner. The women repeat a funeral eulogium, and the mulvis read the Rouzat-us-Shahid. The bier, the banners and insignia, used at the Mahar-ram, are lodged in it.—Herklots.

ASHARHA. Sansk. This Hindu month is named from the stellar mansion Asharha.

ASHARY or Ashary, in Malabar, the carpenter caste, who, in common with the brass-founder, gold and iron smiths, continue the practice of polyandry, but in civil inheritance follow from father to son, and not the old Indian practice of maternal descent, descentus ab utero. The elder brother marries, and the wife is common to all the brothers. If a junior wish to marry, he must live apart and set up business apart; but if any of his younger brothers reside with him, his wife is common to them. See Polyandry.

ASHAZAI, a section of the Iliazai Yusufzai, who inhabit a portion of the plain of Buner, west of the Daulatza.—MacGr. 1. i. 108; N.W. Fr.

ASHBUTCHEGAN. Arab. Castor; civet.

ASHES.

Rakh, . . . . HIND. Sambool,. . . . TAM.
Tirconoot Oendi, . . . . TAM.

Wood ashes are useful for cleaning metals; enclosed in a bag, and dusted through it by striking it on a knife-board, it is a good substitu- tute for bath-brick for cleaning knives. Balls of cow dung ashes are sold in the bazaars of British India for cleaning military appointments and brass mountings of harness, etc. In commerce, the term applies to such vegetables as the alkaline salts are extracted from.—Mr. Robde, M.S.S.

A-SHET. BURM. Shame, sensibility of their honour. Burmese often commit suicide for trifling causes; for this, Burmese girls disappointed in love use opium.

ASHKAL-ul-BILAD, a geographical book by Ibn Haukal. It was also called Kitabul-Malasik wa-l-Mamalik. The author's name was Mahomed Abu-l-Kasim. He was a native of Bagdad, which he left A.H. 331, A.D. 943, and, after travelling through all the existing Mahomedan countries, he returned to it A.H. 558, or A.D. 968, and went to Africa 976.—H. Elliot.

ASHKANIAN, written also Ashgian, a name given by the Persians to a number of petty kings which followed after Alexander. They are the successors of the Greeks, and are described as the Muluk-ul-Tawif. See Arashan; Persian Kings.

ASHLESHA, in Hindu astronomy, the asterism of the serpent.

ASHOK. Sansk. Joneesa asoca, TAM. Ter- minalia longifolia; T. tomentosa.

ASHOO-KUUCHO. BENG. Colocasia anti- quorum.

ASHPHUL. MALAY. Longan, Nephehium longan, or Seetalia longan.

ASHIR. Arar. Calotropis gigantea; C. procera. ASHRAF. This poet dates his history of Sekander or Alexander, entitled Zaffar Namah, the Book of Victories, A.H. 1444.—Ouseley's Travels, ii. p. 391.

ASHRAF. Arab., Hind., Pers. Noble. In Behar and Hindustan, cultivators, both Hind and Mahomedan, who consider themselves soldiers and gentlemen, and are averse to manual labour. ASHRAFFI, a gold coin of India, no longer current, value 15 and 16 rupees, called a gold mohur. See Silver Coinage.

ASHRE. A grove; the groves in which the ancient Sabeans worshipped.—De Bode.

ASH-SHUFAAH, Ar., the Mahomedan 'right of pre-emption,' is a survival of the early stage of society known as the village community. The early village was simply an association of persons—usually blood-relatives—banded together for mutual assistance. Out of this arose various privileges and duties, and among the former the 'right of pre-emption.' In Germany the right is shown by Von Maurer, in his Dorfverfassung, to have extended not only to houses and lands, but to the produce of the soil. In India, village property cannot be divided without the consent of all the members of the family, and, in some places, of all the village heritors. The right of pre-emption was exercised by the Hebrew next of kin, or 'goel,' and the feeling that prompts the rule is indicated in Burekhardt's remark, that in Arabia a man usually marries his deceased brother's wife in order to keep the family property together.

ASHITA. Sansk. Eight. Asha Dika, the eight points of the compass, including the cardinal.

Ashas, the bones of the Agreeah tribe of Hindu cultivators, exhumed and taken by their near relat- ives to the Ganges. See Agareah.

Ashas-bisogam, in Hindu law, the eight products to be enjoyed of an estate, viz. the Siddhi, land cultivated; Sadhya, the produce of such land; Pashana, uncultivated land, rocks, minerals, etc.; Nikshapa, property deposited on land; Niddhi, treasure trove; Jalannitam, waters and their products; Akshini, actual privileges; and Agami, prospective rights and privileges.—Wilson.

Ashas-bhuj Devi, the eight-handed goddess, represented as standing on the back of Nandi. Ashadasha-bhuj Devi, the eighteen-handed goddess who destroyed Mahesha.

Ashata Lakshmi, the eight forms of Lakshmi.

Ashatamatrika, according to the Tantra, eight divine mothers. They are represented each with a child on her lap.

Ashtanga Danda; Dandawat, a Hindu rever- ential salutation, consisting of the prostration of the body, with the application of eight parts—the forehead, breast, hands, knees, and insteps of the feet—to the ground.

Ashta Sahariika, a book on Buddhism. See Praja.

Ashta Vasu, the eight Vasu chiefs among the Devas.
ASHTAGRAM.

Ashataka, a book or chapter of the Vedas, a series of which forms a Sakta. See Aryan, Veda.

ASHTAGRAM, a revenue division of the Mysore Kingdom, comprising the districts of Mysore and Hassan.

ASHTI, in the Dekhan, 30 miles S.E. of Ahmadnagar, the site of the battle with the last Baji Rao, 20th February 1818. The mean height of the village is 1460 feet.

ASHTOLLA, also SungadEEP island, is a small desolate island on the Mekran coast, in lat. 25° 7' N. and long. 63° 40', called Karmnna? by Naurehs; the Ashtae of Ptolomy, Asthi-1al of the Arabs, and called by the Indians Satadupw or Sata island, also Astula and Kali. It is a breeding place of the turtle. It was much resorted to by the Jussani pirates. —MacGregor.

ASHTORETH, АСHТОH, was the principal female divinity of the Phoenicians, as Baal was their principal male divinity. Her worship seems to have gone with the Phoenicians to all their colonies. Astarte of the Syrians, Ishtar of the Babylonians, Ken of the Egyptians, Hera of the Assyrians, Venus of the Greeks and Romans, the Mylitta of the Arabs, and Astara of the Huns, are all one and the same divinity, with modifications to suit the views of the different nations who followed the worship of the female generative principle. The worship was based on a physiological theory. The Hindu Durga stands erect upon a lion and holds a serpent in her hand, as does Ken in the Egyptian tablet, or Hera in the Assyrian bas-reliefs. See Astarte; Mother.

ASH TREE.

Aran, Arm, Arab., Oren, H. Е. H., Chin., Ormus, Lat.

The genus Fraxinus; two species grow in the Western Himalaya,—F. floribunda, or large ash, and F. xanthylloides, or crab ash. In the Mehra forest, near Abhotaband, Hazara, and in the valley of the Sutlej, there is abundance of yew and olive, and a considerable quantity of box and ash, the ash and olive near the river, but the box and yew on the higher slopes, 2000 feet or more above the Sutlej. The larger ash and yew are much esteemed for jampan poles, hefts, and tool handles, etc.; and the larger, in colour, grain, and toughness, resembles the English ash, and makes good walking-sticks. Some species of ash are remarkable, like the sugar maples, to which in some respects they are allied, for the sweetness of their sap, which, on concreting by exposure to the sun, is known as manna. To the two species, F. rotundifolia and F. floribera, and probably also to other species, we owe the manna of the European druggists. The wood of the common ash, Fraxinus excelsior, L., is the toughest and most elastic British timber, greatly valued by the cart and wheelwright, cooper, machine framework and agricultural implement makers, and was in request in olden time for spears. Ormus floribera, the flowering ash tree, grows in the mountains of the south of France, and F. rotundifolia (Ormus rotundifolia), the round-leaved manna ash tree, is a native of Calabria and Sicily. The wax insect tree of China, Mr. Fortune found, is a species of ash; it grows abundantly on the banks of ponds and canals in the province of Che-kiang. Mr. M'Cartee of Ningpo gave him some beautiful specimens of the fresh insect upon the branches of this tree. This insect, Ch'u of the Chinese, has been named Coccus pelif. by Mr. Westwood. When fully developed on the trees, they seem as if covered with flakes of snow. The wax is an article of great value in Chinese commerce, and a small pardon is exported. It is an excellent timber tree.—Fortune' s Histor. p. 146; Cole, Cat. Emb. Ex., 1862; Cleghorn, Pheet, Report; Pope, Hist. Hin. Bot. p. 266; O'Shaughnessy, p. 434; Smith.

ASHWA GANDHA. Beng., Physalis sonnifera, var. P. flexiflora, Nees.

ASHWERTHA, Beng., also Ashwath, Ursigna religiosa, Miy.

ASI was the term applied to the Gete, Yeut, Yuti, or Jut, when they invaded Scatandavia and founded Jutland. The Asi seem to have been a northern race with several divisions, some of which appear to have been conquered by the Egyptian king, Seti III. Colonel Tod considers that Scandinavia was occupied by a tribe of the Asi. He says that the Suevi or Sivones erected the celebrated temple of Upsha, in which they placed the statues of Thor, Woden, and Friya, the triple divinity of the Scandianavian Asi. He regards the Asi and the Hindu race of Aswa as the same, and to have been descendants of Deimun and Bajuswa, who spread over the countries on both sides of the Indus, and probably gave their name to Asia. Asi is said by Remusat to have been applied by the Chinese almost promiscuously to the nations between the Jaxartes and Oxus, as far south as Samarcand, and in one of his quotations it is applied to a people of Kohjand, and in another to people of Bokhara. Mr. Prinsep considers the Asii or Asiain nomades who took Bactria from the Greeks, to have been Scythians of Aes, who overpowered the Greek dynasties in Sogdiana and Northern Bactria between 140 and 130 B.C.

ASIA. The southern and eastern portion of that part of the Old World which may be noticed in this Cyclopaedia, may be indicated as lying S. of Siberia. Travelling from the E. of Bengal to Herat, we find S. Asia everywhere bounded on the N. by a chain of mountains, which is covered with perpetual snow for almost the whole of its extent, and from which its great rivers appear to issue. This chain commences near the Himalaya, and runs nearly N.W. as far as Kashmir. During this part of its course it is called the Himalaya, from Hima, the Sanskrit for snow, and alaya, abode. From Kashmir its general direction is a little to the S.W., as far as the high snowy peak of Hindu Kush, nearly N. of Kabul. From this peak its height diminishes, it no longer wears perpetual snow, and is soon after lost in a group of mountains, which stretch in length from Kabul almost to Herat, and occupy more than two degrees of latitude in their breadth. Some ranges issue from this mass on the W., and extend so far into Persia as to justify, if not completely to establish, the opinion of the ancients, which connected this range with Mount Caucasus in the W. of Asia. From Kashmir to the Hindu Kush the whole range is known by the name of that peak. From thence to the meridian of Herat the mountains have no general name among the natives, but that of Paropamias was long applied to them by European geographers. The principal range of the Indian Caucasus is conspicuous from Bactria and the borders of India, and is seen from places far off in Tartary.
Elphinestone says that the ridge of Imaus or Hinalaya is seen from a distance of 150 and even 250 miles. The Paropamisan chain, which bounds the Kohistan on the W., extends 350 miles from E. to W. and 200 from N. to S. The whole of this space is a maze of mountains; and though it affords a habituation to the Aimak and to Hazara tribes, who became his patrons, with which and so little frequented, that no precise accounts of its geography are to be obtained. It is certain, however, that the Hindu Kush range is there no longer so lofty as to be conspicuous among the mountains by which it is surrounded, and that no continued line of perpetual snow can any more be traced. The eastern half of this elevated region is inhabited by the Hazara, and is cold, rugged, and barren; the level spots are little cultivated, and the hills are naked and abrupt. The western part, which belongs to the Aimak, though it has wider valleys and is better cultivated, is still a wild and poor country. The northern face of these mountains has a sudden descent into the province of Balkh; their acticity is less on their other extremities, except perhaps on the W. of the S.W. On the N.W. they seem to sink gradually into the plains which border on the desert. The slope of the whole tract is towards the W. To the N. of this, extending eastwardly and to the W., are the elevated plains of Tartary, the Asiatic dominions of Russia, Chinese Tartary, and China, and the regions occupied by several Turkoman nations; to the S.E. is India, with its two peninsulas and its archipelagos on the E., with the dominions of Persia, of Turkey in Asia, also Asia Minor, and the peninsula of Arabia, on the W. See India.

ASIAN SOCIETIES are found in almost every country of Europe, and in each of the presidency towns of India. Most of them publish journals. That of Bengal in Calcutta was instituted by Sir William Jones on the 15th January 1784, during the administration of Warren Hastings, when he was patronized by Sir William Jones and Charles Wilkins on the committee. Their Researches concluded with its 20th volume in 1839, but were continued in the Journal of the same society. Since the formation of this society, every Governor-General of India has held this office, with the exception of several years when the Governors-General were the presidents of the society. Even Warren Hastings was for a few meetings president of the association. The Royal Asiatic Society of London was founded by retired members of the Asiatic Society of Bengal, and it founded, in its turn, the branches at Bombay and, in 1843, in Ceylon. In 1819 the Madras branch was affiliated, and produced Transactions and a Journal.

ASIL. G. HIND. A female servant amongst Mahomedans; a free woman.

ASIL-DURGAH or Asilghar, supposed by Prinsep to be the town of Junaghal, q.v.

ASINUS, the ass. A genus of quadrupeds, one species of which has been domesticated (see Ass). The wild ass of Cutch, the Gorkhar, is known to exist in those western parts of India (see Equus onager), and another in Tibet (Equus hemionus, Pallas), the kiang. A third, Asinus hemippus, I. Geoff., inhabits Syria, Mesopotamia, N. Arabia, and is the wild ass of the Hebrew Bible. In Africa, the wild asses are known as the zebras and quaggas. Asinus quagga, the quagga of the Cape of Good Hope; A. Burchelli, Gray.

ASIO BRACHYOTUS or Otus brachyotus, short-eared owl, of Europe, Asia, Africa, N. and S. America, is migratory, and common in India. A. otus, Otus vulgaris, long-eared owl, of Europe, N. Africa, Asia Minor, N. Asia, N. America; India, confined to the Himalaya.

ASIR, an Arab tribe, of whom the Berekede are a branch. The Berekede are said to allow strangers to visit their wives, like the Jakuri Hazara.

ASIRGARI, a strong fortress situated on an isolated hill in the Satpura range, height 850 feet from the base and 2300 feet above the sea level, in lat. 21° 28' 19" N., long. 76° 20' E. It was a stronghold of a Shepherd race, from one of whom, Ahir, it obtained its name. It was occupied afterwards by Rajpots, and is frequently mentioned in the poetry of that race, but Ala-ud-Din took it from the Chauhan tribe, a.d. 1295. It fell into the hands of the Farukhi princes of Kandesh about a.d. 1400, and was by them greatly strengthened, the lower fort called Maligarah, having been entirely constructed by Adil Khan I., the fourth of the dynasty. Asirgarh was frequently the safe retreat of the Farukhi princes when their territory was invaded by the different independent Mahomedan kings of Gujerat and the Dekhan. It remained in their possession for 200 years, till, in a.d. 1600, Akbar, emperor of Dehli, conquered Malwa and Kandesh, taking the last of the Farukis, Bahadur Khan, in Asirgarh, after a siege. It fell into the hands of the Mahrattas, but in 1805 it yielded to the British.

ASKA, a town in India, in lat. 84° 42' E. and long. 19° 36' N. It is in the district of Ganjam, and sugar is its chief product.

ASKALANDA, a town mentioned by the ancient Arabic writers; has been supposed to be the Alexandria built at the confluence of the Aeessines with the Indus. But it was also called Askalands Usu, and may be the Uch of modern times.—Eliot.

ASKALON lies to the westward of the road to Gaza, and near the sea. It was once a satrapy of the lords of the Philistines, but at the present day is without a single inhabitant within its walls. Askalon was taken by the crusaders, who strengthened the fortifications, but it was subsequently retaken by Salah-ud-Din, who destroyed the works made by the Christians.—Robinson's Travels, i. p. 22.

ASKHAR. ARAB. Jatamansi; lemon grass.

ASKUTA. PANJ. Ribes leptostachium.

ASLESHA. SANSK. The mansion, sign, or asterism of the serpent, called also Sarpa.

ASMAN. PERS. The sky, the seven firmaments of Mahomedan belief.

ASNEA. MAHR. Felis pardinus, Linn.; the larger panther.

ASOF JAH, a title of the founder of the present dynasty of Hyderabad in the Dekhan, hence their title Asof-Jali; another of their titles is Nizam of the Dekhan. His name was Chin Kileh Khan, son of Ghazi-ud-Din Khan, of a respectable Turk family. Father and son both served as officers of Aurangzeb, and distinguished themselves; and Chin Kileh Khan subsequently served under Jahandar Shah, Bahadur Shah, Ferokhair, and Muhammad Shah. He was viceroy of the Dekhan,
from which, during the reign of Muhammad Shah, he was removed to be governor of Malwa, where he revolted April 1720, and seized Asirgarh. At Aurungabad he defeated Dilawar Khan, a Syud of Barh, who had been sent against him from Hindustan; and at Ballapur, in Borar, he defeated Alam Ali, another Syud, who fell in the action. In January 1722, he returned to Delhi to take up the office of vizir. After a few months, he was sent against Haidar Kuli, governor of Gujarat, of which he took possession, and again returned to Delhi; but in October 1723 (Maharram 1136) he resigned his office and marched off to the Dekhan, and, after defeating Murbar Khan, who fell in battle, he resumed possession of his Dekhan territory (October 1724), from which time he was virtually independent of Delhi. He was with his troops at the battle of Karnul (A.D. 13th February 1739), in which Nadir Shah totally routed the imperial troops, but Asaf Jah took no part in the action, alleging want of orders. A story became current that the invasion of Nadir Shah was on the invitation of Asaf Jah and Saadat Khan, and that the loss of the battle was concerted between these chiefs. Asaf Jah was sent by Muhammad Shah, after the battle, to tender submission and arrange terms. Asaf Jah was recalled from Delhi A.D. 1741, by the revolt of his second son, Nasir Jung; and when that was suppressed, he was involved in disturbances, in the subordinate government of Areot, till his death, in June 1748 (A.H. Jamadi-us-Sani 1161). His death led to contentions among his sons, chiefly occasioned by the French and British in their strivings for supremacy in S. India.—Elphinstone, pp. 659, 645.

ASOJ. The last day of this Hindu month ushers in the Hindu winter (sard rit). On this day nothing but white vestments and silver (chandi) ornaments are worn, in honour of the moon (Chandra), who gives his name to the ‘Pala and common drudge’

An intercalary month is this mode followed by Hindus to adjust the annual seasons, their ordinary calculations being by lunar months, and such are called lunar. At Udaipur, on the Asoj, there is a procession of all the Rajput chiefs to the Chougan, and on their return a full court is held in the great hall, which breaks up with ‘obsequies to the lamp’ (jote ka moopir), whose light each reverences. When the candles are lit at home on this day, every Rajput, from the prince to the owner of a ‘skin (charsa) of land,’ seated on a white linen cloth, should worship his tutelary divinity, and feed the priests with sugar and milk.

—Tod’s History of Rajasthan.

ASOK, TAM., in the south of India, is the name of the Guatteria longifolia.

ASOKA, SANSK., from a, not, and soka, sorrow, is the Jonesia asoka, Rozh., which yields a beautiful flower diversified with orange, scarlet, and bright yellow tints, and is consecrated to Siva, as the lotus flower, called kaunahl or padma, is to Vishnu and his wife Lakshmi; a sweet-scented jasmine (Jasminum) to Vishnu and Mariana, the goddess of the Pariah race; the superb crimson, IXora bandhua, is offered at the shrines of Vishnu and Siva; and the Nauclea cadamba, a stately tree, yields, in Hindu belief, the holiest flower in India. Sir W. Jones observes that the vegetable world scarcely exhibits a richer sight than an Asoka tree in full blossom. It is about as high as an ordinary cherry tree. The flowers are very large, and beautifully diversified with tints of pale yellow and of bright orange, which form a variety of shades according to the age of the blossom. In spring, it bears beautiful red blossoms. The Asoka being sacred to Siva, it is planted near his temple. It grows abundantly in Ceylon. In some places in India it is more esteemed than at others. Women bathe in some holy streams with the blossoms floating in it. Hindus say that the contact of the stem of the Asoka tree with the foot of a woman of superior beauty, makes it blossom. This tree is often alluded to in the drams of the Hindus. In the Toy Cart, Maitreya, describing a garden, says, ‘Here the Asoka tree, with its rich crimson blossom, shins like a young warrior bathed in the sanguine shower of the furious light.’ Captain D. L. Richardson (Flowers and Flower Gardens, p. 189) says the flower is eaten by young men as a medicine. The colour of the flowers changes during development. When they first expand, they are of a beautiful orange colour, gradually changing to red, forming a variety of beautiful shades. Coleman says that men and women of all classes ought to bathe, on a particular day, in some holy stream, especially the Brahmaputra, and drink water with buds of the Asoka floating in it. Sita is said to have been confined in a grove of it while in captivity by Ravana; other legends say she was confined in a place, or house, called Asokan.—Coleman’s Mythology; Lady Faulkland’s Choiw-Chow; Rozh. ii. 218: Richardson’s Flowers and Flower Gardens; Williams’ Story of Nala, p. 117.

ASOKA, grandson of Chandragupta, or Sandractuss, began to reign B.C. 255–6, and for the next few years he was styled the ‘Ferocious.’ Immediately on his father’s demise, he seized the government, and gave orders to save Tashya, who was born of the same mother, and immediately applied his whole energies to the achievement of military glory. In the short space of four years, he reduced the whole of N. India from the mountains of Kashmir to the banks of the Nerbudda, and from the mouth of the Indus to the Bay of Bengal. He afterwards became a convert to the Buddhist religion. His conversion occurred B.C. 257, and thenceforth he was known as the ‘Pious;’ but in his conversion he carried his fiery character into his new faith, and in four years compiled the whole of N. India, from the mountains of Kashmir to the banks of the Nerbadda, and from the mouths of the Indus to the Bay of Bengal, to receive his own Buddhist views. He distributed throughout the chief cities of India the relics of Sakyamuni, which had been collected by Ajatasatru and deposited in one large stupa at Rajagriha, and he erected a great number of Vihara, or Buddhist monasteries. He also issued numerous edicts, which he engraved on massive rocks and stone pillars or columns, evidently in imitation of Egyptian obelisks, in which Buddhist doctrines are earnestly inculcated. The oldest of these are found at Dhauli in Cuttack, at Ginran in Gujarat, and at Kapurdiri near Peshwar, and in all these they styles himself PriyadarsI, ‘the beloved of the Devas.’ Professor Wilson, however, doubted
this identity of Asoka with the Priyadasiri who published the edict. The name is also read Pyradasi, or “loving-minded.” Asoka defeated Antiochus, and graveled in the Pracrita on certain rocks an account of his victory. His conversion from the Brahmanical to the Buddhist religion seems to have been affected by the son of his brother-in-law, the mad monarch Prasenajit. He is said to have erected 84,000 Buddhist sanctuaries or chaityas, partly temples and partly tumuli, called stupa or topea, which to the present day continue to be the greatest monuments of the Buddhism of Central and W. India and Hindustan. In B.C. 244, he held a third Buddhist council at Pataliputra (Palimbatha). In his rescript to the council he mentions a collection of several hymns or gatha of Buddha, as also of aphorisms. Asoka died B.C. 223, after a long and prosperous reign. The Asoka era has been ascertained to be B.C. 250. Asoka was contemporary of Seleucus Nicator. He sent ambassadors to the rulers in Egypt, Cyrene, Syria, and Macedonia. He was to Buddhism what Constantine was to Christianity. He removed the royal residence from Rajgriha in the S. to Pataliputra. He was succeeded by his eldest son, Nimmohan, and his nine brothers in succession. But immediately after his death, the Magadha dominions were broken up, and anarchy followed. The Chinese Pilgrims make mention of many pillars that bore records of Asoka,—six have inscriptions, five of which present the text of a series of six edicts that were promulgated by Asoka in the 27th year of his reign, or B.C. 256, viz. (1) at Dehli, three edicts, now known as Firoz Shah’s lat, brought by Firoz Taghalaq from Topur Suk in the Siwalik country; (2) at Dehli, brought from Mirat by Firoz Shah; (3) at Allahabad, inside the fort, three edicts; (4) at Lauri, 27 miles N. of Patna, near the temple of Aranaj Mahadeva; (5) at Lauri, 15 miles N.W. of Bettia, and 10 miles E. of the Gandak river, near the lofty ruined fort of Nagarjuni, now called Sarnagarjuni. Asoka was a contemporary of five Greek kings whose names are entered in the edicts, viz., Antiochus II. (Theos of Syria), B.C. 263—246; Promeley II. (Philadelphos of Egypt), B.C. 285—246; Antigonus Gonnatas of Macedonia, B.C. 276—243; Magas of Cyrene, B.C. 258; Alexander H. of Epirus, B.C. 272—254.

General Cunningham has enumerated 13 rock inscriptions, 17 cave inscriptions, and 10 inscribed pillars.

The 13 rock inscriptions are—
1. Shahbazgarhi, in the Yusufzai country, 40 miles N.E. of Peshawar on the W. bank of the Jumna.
2. Kharmel, on the W. bank of the Jumna.
3. Girnar, in Kattiywar, 40 miles N. of Somnath.
4. To 7. Dhauili, in Cuttack, midway between Cuttack and Puri and Jangaod, in Ganjam district, 18 miles N.N.W. of Berhampur,—two inscriptions at each, virtually identical.
5. Sasseram, at the N.E. end of the Kaimur range, 70 miles S.E. of Benares.
6. Rupnath, a famous place of pilgrimage, 35 miles N. of Jobulpur.
8. To 12. The Khangidri hill, near Dhauili, in Cuttack.

The 17 cave inscriptions are—
1. To 3. Barabar; and 4, 5, 6. In Nagarjuni hills, both places 15 miles N. of Gaya.
7. To 15. In Khangidri hill, in Cuttack.

The 10 inscribed pillars are—
1. The Dehli Siwalik at Dehli.
2. The Dehli Meorut at Dehli.
3. The Allahabad pillar.
4. The Lourvra-Arauj at Lourvra, 77 miles N. of Patna.
5. The Lourvra Navandgarh at Lourvra, 17 miles N.N.W. of Bettia.
6. To 9. Two additional edicts on the Dehli Siwalik not found on any other pillar.
10. A short mutilated record on a fragment of a pillar at Sanchi, near Bhilsa.

The following have been given as the principal events of Asoka’s reign:—

His 1st edict prohibits the sacrifice of animals for food or in sacrifice, and enjoins Buddhist virtues. The 2d edict provides medical aid throughout his dominions; orders planting of trees, and wells to be dug, along the sides of roads. The 3d edict is in the twelfth year of Pyradasi’s inauguration, and enjoins a quinquennial humiliation. The 4th edict of the twelfth year of Pyradasi compares the past condition of his country with that then existing. The 5th edict records the appointments of ministers of religion or missionaries. The 6th edict appoints pativedaks, custodes morum, also criminal magistrates. The 7th edict contains the king’s desire to oblige the diversity of religious opinions. The 8th edict contrasts the carnal enjoyments of former rajahs with the harmless amusements of the king,—visits to holy people, amusing, respites to elders, etc. The 9th edict continues the thread of a moral discourse, the Dharma Mangalam, happiness of virtue, benevolence, reverence, charity. The 10th edict comments on Yasoda Kiti va, the glory of renown, founded on the wise and transitory deeds of this world, and the higher objects of life. The 11th edict, at Dhauili and Girnar, upholds that the imparting of Dharma is the chiefest of charitable donations. The 12th edict is addressed to all unbelievers with extraetly. The 13th is imperfect. The 14th edict is summary of the preceding, and is complete in itself.
The inscription at Kapurdirigi is in the Pali character, and written from right to left; all the others are in the Indian Pali character, and written from left to right. The name Asoka does not occur in them. One passage refers to the Greek king Antiochus, calling him and three others, Turamayo, Antakana, Mako, and Alika-nunari, which represent Ptolemy, Antigonius, Magas, and Alexander. Dr. Burnell says the characters used in the Kapurdirigi inscription are of Phoenician origin, and exhibit the system of marking the vowels used in the other, and which is also used in the old Tamil character.—Ferguson, p. 18; Bunson, Egypt, ii. 542, 544; Thomas' Prinsep's Ind. Antiquities; Cunningham's Ilhalia Topes, p. 87-91; Cunningham's Inscriptions of Asoka; Burnell; Dowson; Elphinstone, p. 208; Journ. Roy. As. Soc. iii. xvii.; Tod, Rajasthun; Cal. Review; Mr. Robert Cast; Imp. Gaz.

ASOK-TAMI. SANSK. The 6th day of the light fortnight of the month Chaitra (April—May), when a festival in honour of Vishnu is observed, and water with Asok barks in it is drunk. In the south of India, this is the festival of Asoka Sapamulu, celebrated by Hindus on the 7th of the waxing moon in the month Chaitra. In the Ramayana, Sita is described as having been confined in an Asoka grove (Jonesia asoka), and there subjected to great oppression and harshness, to compel her to yield to the wishes of Ravana. Hindu women accordingly associate the idea of constancy and chastity with the Asoka tree, eating its blossoms and offering it adoration.—Garrett.

ASOPURA-MATA has a square shrine on the very summit of a hill near Gumli. ASP, Boten of the Arabs, and Peten of the Hebrews, is mentioned repeatedly in the Hebrew Bible, but naturalists have not determined the particular reptile alluded to. The word is probably very ancient, and is possibly the 'Oub' serpent worshipped in Chaldea and Egypt; and Obion is still used in Egypt, as Ifa is in Arabia, to designate a snake, and the Greek has the term φιε. Perhaps the English Ouf and Scotch Ouf are also connected. The asp of the ancients, celebrated as having caused the death of Cleopatra, is supposed to be the Naja haje, Schlegel, Coluber haje, Linn. See Serpent.

ASPA or Aspa, a plant of Indo-Syrieh origin, asp being the Persian and aswa the Sanskrit term for *horse.* It was a habit amongst the old tribes of Central Asia of assuming the names of quadrupeds. Thus, besides the Aspa or *horse,* we have the Noomri or *foxes,* a great branch of the Getae or Jit of Transoxiana, and the Varacha or *hogs* of Multan and the Upper Indus. Besides the horse, fox, and hog tribes of the Indus and Oxus, we have the hare, Sceodica, properly Sussod, the Cuchwaha or tortoise, with many others. In the Sythian names, Aspabata, Aspakara, and Asparatha, we recognise the same element. Even the name of the Aspashan mountains, placed by Ptolemy in Sythia, indicates a similar origin.—Miller's Lectures, p. 231.

ASPALATHUM WOOD is supposed to proceed from the Aquilaria in a state of decomposition, but of this nothing is known with certainty. Rhodes wood, from one of Convulvaceae, has also been called Aspalath. —O'Sb. p. 314.

ASPARAGUS. Of this genus of the Liliaceae, eleven species are known in India. A. acerosus,
apparently occasionally to Thanesar, as well as in the Salt Range, and on the Sutlej to 5500 feet. It is frequent in Trans-Indus. Dr. Bellem mentions a species growing high near the Safed Koh, which is there eaten as a vegetable; and in some parts of the plains the young shoots are thus employed. In the Salt Range the twigs are used for scrubbing metallic vessels; and on the Sutlej a sprig of it is put in the hand of small-pox patients. The leaves are official at Lahore.—Dr. J. L. Stewart.

**Asparagus Racemosus.**

*Wildlife.*

Vinjanhors, Salt Range. A shrubby struggling climbing plant, a native of various parts of India and of Ceylon. It is furnished with sharp spines; it is common in parts of the Salt Range, Siwalik tract, and outer hills, up to 5000 feet. The root boiled in milk is given in bilious affections. It is necessary to remove the bark previous to administering it, as it is considered poisonous. The leaves boiled and mixed with ghee are applied externally to promote suppuration in boils and tumours. Dr. Stewart thinks it supplies part of the official sitawar (see Asparagus ficinum) as well as the bozidan. Its flowering time is the cold season, when it perfumes the air to a considerable distance with the delightful fragrance of its flowers; seeds ripe in March.—Roeb., Ain... Useful Plants; J. L. Stewart.

**Aspatria.** Sank. An emperor, meaning perhaps Aswapi, 'Lord of steeds.'—Told's *Rajasthan.*

**Aspergilium.** A genus of curious mollusses; A. Javanum occurs in the Indian Ocean, and A. vagum in the Red Sea.

**Asperuck.** Hind. Mellotus officinalis, Linn. *Asphalte, Bitumen, Maltha.*

Halul Mus... Arab... Mineral pitch... Eng... Jew's pitch... Eng... Momial, Peri.

Asphalte is found on the shores of the Dead Sea, at Arlona in Albania, at Coxinbbo in Cuenca in South America, and abounds in Barbadoes and Trinidad, forming on the leeward side of the latter island a lake or plain, called the Tar lake, and by the French Le Brû, from its resemblance to, and answering the purposes of, ship pitch. It is found near ancient Babylon; and the cement used for the walls of that city, as also for the temple of Solomon, was a preparation of asphalt. Herodotus mentions that it was heated and mixed with reeds and so used. It is supposed to be the substance translated in the Bible as pitch; and it seems to be the substance known in Central Asia and in the north of Persia under the name of Momial. See Petroleum.

**Asphodelus Clavatus.** Roeb. A native of the interior parts of Bengal, where it appears to blossom and ripen its seed during the cold season. A fibrous material furnishes the seed Bangarbij of the Panjab.—Roeb., Fl. Ind. ii. p. 148.

**Asphota.** Beng. Jasminiun sambac; jasmine. Also, Hind., Clitorea ternata.

**Aspidium.** Linn. This genus of ferns is of the order Polypodiaceae. Several species are known in India,—the A. splendens, and A. parasiticum, described by Mr. Graham, the A. unicum and A. flagelliferum in Voigt's Catalogue; and Dr. Hooker mentions that both in Sikkim and Nepal the watery tubers of an Aspidium are abundantly eaten. Aspidium baromeze, the Tasik of the Chinese, is the Sikkim or Tartarian lamb. The tufts of this fern simulate the form of animals. It has long been celebrated in China, where the ingenuity of Chinese gardeners, taking advantage of the natural habits of the plant, form it into shapes resembling sheep or other objects. The Chinese name indicates resemblance to a dog. It is there deemed a tonic, and to act on the reno-spermatic functions. The Tartarian lamb is enthusiastically described by Darwin in his Botanic Garden.—William's *Middle King.* p. 275; Smith; Hooker, *His. Journ.* i. p. 292; Voigt, 734.

**Asplenum.** A genus of ferns of the Polylopodiaceae. A. nigus, *Linn.,* is a native of Ambayna. A. lucidum, of Australasia, is regarded by the New Zealanders as a sacred plant; the priest, when he is praying over a sick person, and endeavouring to avert the anger of the gods, waves a frond of this fern over the patient, and, should it happen to break, it is regarded as a fatal omen. It is also used as a badge of mourning; when a wife mourns for her husband, she sits in her hut, with a frond of this fern bound as a fillet about her head.—Dr. Bennett, Australasia.

**Asr. Arab.** Noontide; a time for Mohamendan prayer. Owing to the Mohamendan divisions of time into watches of the day and night, appor- tioning the whole day and the whole night into stated watches, all the periods of the day change with the varying length of the time that the sun is above the horizon, the Asr or noonday watch excepted, it being always when the sun is at the meridian; other prayer times are—Zohr, Subah, or Fiqah, of Barnad, morning.

**Asrama.** Sank. A condition or order of life among Hindus, of which four should be passed through in succession, viz. Brahmacari or student, Grahastha or householder, Vanaprastha or hermit, and Bhikshuka or Sanyasi, religious mendicant. Asrama is the fourth or mendicant stage of life, into which the Hindu should enter after passing through the previous stages of student, householder, and hermit. Asrama is a name borne by the Dandi sect. See Dandi.

**Asraya.** In the Buddhian of Ceylon, four modes of evils so called.—Hardy.

**Asreno.** Called also Sarug, towards which Terah, father of Abraham, journeyed in his route from Ur of the Chaldées towards Horan (Karra) on his way to Canaan. See Terah.

**As.** Donkey, Jack Ass, Jenny Ass.

Khamar... Arab... Gadda,... Hind... Ezhmir... Eth... Hymar... Turk... Athon (she-ass)... Heb... Kala... Tam... Chamor (he-ass)... Gardi... Tel.

The domesticated ass is descended from the Asinus tessitopous of Asia. In Syria are four domestic breeds,—a light, graceful animal, with a pleasant action, used by ladies; an Arab breed, kept for the saddle; a stouter animal, for ploughing and other purposes; and the large Damascus breed, with a peculiarly long body and ears. The ass can with ease be greatly improved in size and strength. The ass is occasionally striped or barred, as in the parent form, A. teni-
ASS.

pus; that on the shoulder is the most constant, sometimes even triple-barred, but bars also occur on the legs. Albinino asses are occasionally seen. It is a patient, steady-going, sure-footed beast of burden, and easy-tempered, and has been domesticated from ancient times. In ancient Jerusalem the ass was the favourite of the upper classes and the priests. Deborah describes the greatest men in Israel as those who rode on white asses; and we are told that Abdon, a judge of Israel, had forty sons and thirty grandsons who rode on seventy asses. Nevertheless the ancient Israelites considered the ass unclean, and to yoke an ass with an ox in the same team was an offence against the law of Moses. The ancient Egyptians even entertained a fierce hatred towards the ass, and regarded it as a symbol of all kinds of misfortune. They were the first to symbolize a stupid person by the head and ears of an ass. In British India, the washermen, the vagrant Yerakha, and other wandering tribes alone use the ass, and the breed is small and unfit for the saddle. The Dibhi purposely cripple the hind legs to prevent them straying, and their nostrils are often slit up. The ass has a large head, and a large body on very slim and somewhat short legs, unanimated, therefore, to move rapidly. Its hoof has exceedingly sharp rings, with a hollow in its centre, to fit it for travelling on slippery ground, and for ascending the precipitous sides of hills. The ass is a beast of burden for the mountain, as the camel is for the sandy desert, the elephant for the jungle, and the horse for the level plain. He will carry a reasonable burden without a murmur, and he will trudge on for miles over the roughest roads, patiently and steadily, without showing any signs of fatigue. Niebuhr mentions the smaller or lazy ass of Arabia, being as little esteemed there as in Europe; and a larger and high-spirited breed, much valued, and sold at a high price, and which he thought fitted for a journey than horses. In Oman they are large, well trained, and endure great fatigue. The Arabs take considerable care of them; and some of the better kind fetch from forty to fifty dollars. Those which traverse the Jabel Akhdar, in point of size, sturdiness, and sureness of step, are almost equal to mules, crossing the most difficult passes, over a smooth limestone rock, without a single false step. A great many asses are shipped from Oman to the Isle of France, where they are highly valued. Some seen by Burton (iii. 339) resembled mules in size and speed. He considers that Pliny is certainly right about this useful quadruped and its congeners, the zebra and the wild ass, in describing it as "animal frigoris maximo impatiens," for he says that it degenerates in cold regions, unless, as in Afghanistan and Barbary, there be a long, hot, and dry summer. Aden, Cutch, and Baghdad have fine breeds, whereas those of India and south-eastern Africa are poor and weak. The best, and the highest-priced come from the Maghreb, and second to these ranks the Egyptian race. At Mecca, camels and fezzok and kid usage transform the dull slave into an active and symmetrical friend of man; he knows his owner's kind voice, and if one of the two fast, it is generally the bided. The asses of the Holy City are tall and plump, with sleek coats, generally ash or grey coloured, the eyes of deer, heads gracefully carried, an ambling gait, and extremely sure-footed. They are equal to great fatigue. The stallions have been known, in their ferocity, to kill the groom. The price varies from 25 to 120 dollars. — Burton's Meccan; All the Year Round, September 1864; Plowfair's Yemen; Niebuhr's Travels; Davrin, p. 63; Animals and Plants. See Asinus.

ASSALIA. Hind. Lapidium sativum.

ASSAM. A province in the N.E. frontier of British India, comprises the districts of Cachar, the Khassya, and Jaintia hills, Darrung, Goalpara, Kamrup, Luckimpar, Naogong, Silbagar, Silhet, and the Naga and Garo hills. In 1873, it was formed into a chief commissionership, with part of Koch-Behr added to it. It comprises the valleys of the Brahmaputra and of the Barak or Surma, together with the mountainous watershed that separates these rivers. It is situated between lat. 25° 55' 30" and 28° 17' N., and long. 96° 46' and 97° 5' E. The area is 55,381 square miles, and the population 4,815,157 in 1851. It is bounded on the north by the eastern section of the great Himalayan range, the frontier passes from W. to E. being successively the Bluitia, Aka, Daphla, Mii, Abar, and Mishmi; on the north-east by the Mishmi hills, which sweep round the head of the Brahmaputra valley; on the east by the unexplored mountains which mark the Burma frontier, by the hills of the independent Naga tribes and the Manipur dominions; on the south by the hills occupied by the Kuki or Lushai, by the State of Hill Tipperah and the Bengal Tipperah district; and on the west by the Bengal districts of Mainainsinh and Rangpur, the Koch-Behr territory, and Jalpaiguri district. The districts of the Naga, the Khassya, Jaintia and Garo hills are in a central hill tract, a long projecting outwork of the mountain system that intervenes between the watersheds of the Brahmaputra and Irawadi in a series of ridges and plateaux, the highest point of the Naga hills being 10,000 feet, of the Khassya hills 6449 feet, and of the Garo hills 4700 feet, and the Jaintia in the Khassya hills in 1861, 805 inches of rain fall, 366 inches of it in July. In 1876 it was 306 inches.

Assam was long held by the Ahom race, who gave it its name; afterwards, by the Burmese. But by the treaty of Yandaboo, 24th February 1826, it was ceded to the British. The valley is continuous at its western extremity with the plains of Bengal, but gradually contracts to the eastward, till the mountains at last approach so close together that no level country remains between them. The width of the lower valley is about 30 miles. It is in general level, with a gentle uniform slope, but low ranges of hills project occasionally from both sides, almost to the Brahmaputra; and isolated granite hillocks, of no considerable mean elevation, scattered here and there over the surface. The atmosphere is very humid, and dense fogs are frequent in winter. The rainfall ranges from 69 to 159 inches, and earthquakes are frequent, and those of 1869 and 1875 were severe. In Upper Assam there is but little cultivation, and much forest, which is often almost impervious from rank underwood. It is the ancient Kamrup, and its history ('Assam Buranji') has been written by Huliram Dhakiyali Phukan of Gohati, who, after bringing down the genealogies to the Khatriya dynasty of Dravir (Dhrampala), says Dravir invited Brahman
from Gaur to his court north of the Brahmaputra, and he gives the following dynasties:

a. Brahmaputra dynasty, reigned 240 years. After a.d. 1478, Assam was divided into twelve petty states, and in 1498 was invaded by Dulal Ghazi, son of Husain Shah.

b. The Indrayana (India) dynasty reigned from a.d. 1540 to 1726. With an interregnum caused by the invasion of Husain Shah, Chukapa became independent in 1320, and spread conquests, and was named Assama (inequaled), hence Assam.

This is to be regarded as a history of the invasions from Bengal.

Population.—The valley and its bordering hills are remarkable for the variety of populations which they contain. Captain Butler (Travels, p. 1) gave the following as names of the tribes in and adjoining the valley, viz. Abor and Bor Abor; Aka of the Hazari Khawa and Kappas Chor tribes; Angami, Arung, Assamese, the Bhot, the Bintia, viz. the Sath Bhatia Rajas, the Char Doar Raj, and the Bhilinga Bhatias; Bodo or Borro of Assam and Cachar; the Changlo; Dofla, Dooaniah, Goro; Jil; Khanti and Bor Khanti; Khari, Khassya; Koreng; Kuki; Latu; Loba; Lubup or Lushai, Maram; Mechee; Mikir; Miri, Mishmi, Marla, Mulung; Mu-thun; Metutuk, Naga; Namsang; Singpho, Tang-Khol, Ta-blung, and Tang-Khol. The most numerous are the Naga, Khassya, Goro, Mikir, and the Cachari, the last identified with the Mech of the E. and W. Dwaras; the Ahom (128,980); the Chutia (51,482); part of the Koch or Rajbansis; Chandal (122,457); Kambart (128,525); Kolita (179,000); Khanti on the frontiers of Lakhimpur. See India.

Half the population is Hindu, and a fourth part are Mahomedans. The Hindu religious tribes of Assam, including races of mixed descent and prosetytes, now consist of Brahman, Ganak, and Kayasth, all of comparatively modern importation; Kolita, who appear to be the only remnant in it of the early Aryan colonists; Koot, who are partly of Hindu extraction, and partly prosetytes raised to that position; Dom, who are boatmen and fishermen; the Hari, low caste immigants; and converted Ahom, Chutia, Lalong, Koch, Mech, and Cachari. The Shans became prosetytes to Hinduism at an early period, and, having adopted the language and customes of Hindus, they have now nothing but their features to mark them as of different origin. Indeed, it is stated that the Shans brought no women with them into the country. The principal tribes on the frontier of Upper Assam are the Muttuk, the Khamti, and the Singpho. At the eastern end, near Saddiya, the tribes are very much mixed, and numbers of them are gradually coming lower and lower down; many Mishmi now actually live in the plains. There seems to be a pressure on the people from the Burmese side of the Patkoi, which is forcing the 1390s to take their place. From being confined within the British boundary, the nominal boundary being the crest of the Patkoi. It is from the Ahom branch of the Shan or Tai or Thai race that Assam (Assam) received its name. This powerful race are the people of Siam, called by the Burmese Shan-gyai, or eldest branch of the Shan. The first to assume the title of Ahom, or peerless, is said to have been Chun-ku-phha, A.D. 1228, in the kingdom of Pong, which touched Tipperah, Yunnan, and Siam. The Pong kingdom was finally broken up by king Alompra of Burma, in the middle of the 18th century. Before the incursions of the Burmese, Assam had its roads, bridges, cities, and civilisation. The Mahomedans found its people hardly and courageous in Upper Assam, but towards the middle of the 19th century they had become pacific and amiable, though those of Kamrup were less so.

The first British treaty with any of the Assam chiefs was a commercial agreement made in 1783 with Raja Surjy Deo. But the Indian Government never ratified or published it, on the ground that the raja's government was not sufficiently strong to ensure its observance. The country subsequently relapsed into anarchy, and fell under the Burmese. It was invaded by the British when the first Burmese war broke out, 1824-26, and the province was annexed to British India, 31st July 1829. In 1833, Upper Assam was granted to Raja Poorunder Singh, with whom a treaty was made. The Bur Senaputtee, or chief of the Muttuk, entered into an engagement, in May 1826, whereby he acknowledged the supremacy of the British, and bound himself to supply 100 soldiers in time of war. The management of the country was left in his own hands, except as regards capital offences. In January 1835, the obligation to supply troops was commuted to a money payment of Rs. 1800 a year. In 1826, similar agreements were made with the Khamti chief of Saddiya; but in 1839 the Khamti attacked the town of Saddiya, and many persons, as also Colonel White, the Political Agent, were slain. Agreements were also made in May 1836 with the Singpho. These tribes were implicated in the Khamti rising in 1839, but they were allowed to surrender under conditions. Many of the Singpho clans have become extinct, and the main body left Assam for Hukong, in Upper Burma.

The Phaki or Phakhil race on the Dihing river, the Kamjang of Saddiya, and the numerous settlements of the Khamti race, are all Shan colonies, and retain the customs, costume, and religion that they brought with them into the valley. Of these the Khamti are the most numerous and important. They immigrated into Assam since the middle of the 18th century from the country known to the British as Bor-Khamti, which they had occupied for many centuries. When Captain Wilcox visited them in 1826, two great clans had been at feud for fifty years, and, owing to these dissensions, horde after horde flowed into Assam. After their rebellion against the British in 1839, they were expelled Saddiya, but later on were permitted to re-occupy lands near their former sites. They are Buddhists, and have a literature.

The hills of Assam possess coal, gold, iron, lime, petroleum, tea, caoutchouc, rice, jute, lac, and ivory. Its two principal indigenous varieties of silk had become muga and the emoo. Of its woods, thirty-six species are useful to various useful purposes, were described by Major Hannay as belonging to Upper Assam. Most of them are light, strong, and durable; while not a few combine with these qualities, a fine grain, which renders them well adapted for articles of furniture. The spices of the country comprise, in addition to such as are commonly cultivated in Bengal, black pepper, long pepper, cardamoms, 190
tejipatra or mahabathnum leaf, and jubrang, the capsule of a species of xanthoxylum, peculiar to the country, and described as aromatic, fragrant, and highly pungent. It is a very fertile province. The whole population, from the baby at the breast to the very few old men, used opium, and in 1864-5 the population consumed £113,543 worth of that drug; but the Government introduced stringent prohibitions, and tea cultivation has since greatly added to their wealth. Among its wild animals are the elephant, rheoceros, tiger, leopard, bear, buffalo, deer, and wild cow.—Yule's Catby; Hamilton's E. Indies; Taylor, in Reports on Great Exhibition of 1851, p. 141; Butler's Travels; M'Culloch's Report; Schlagante's India, ii. pp. 95-98; Princep's Antiquities by Thomas, p. 275; Dalton's Ethnol.; Aitchison's Treatises, p. 127.

ASSARA REWARD. Arar. Hebradendron gambogoides, Graham; Gambogs.

ASSAHRADDON, king of Babylon, was the son of Sennacherib. The latter resided at Ninevah, the capital of a great empire, and Sennacherib displaced the satraps, and invested his son as king of Babylon, B.C. 675.—Ch. Bunsen, iii. See Assyria.

ASSASSIN, a term applied in Europe to the Al Hasani, a heterodox Mahomedan sect, whose successors now believe that the deity is incarnate in their chiefs. The first of the sect who arrogated these divine pretensions was Hasan Saba, a man of domineering passions, consummate subtilty, and persevering spirit of enterprise. He lived about the year 1090, and by various intrigues, a singular mysterious deportment, as well as an invincible courage, he attained to great power. Christians, Jews, Mahomedans of the Sunni or Shia sects, all were alike the objects of his exaction; and he sold his dagger, or rather that of his followers, to whatever party were vile enough to buy the blood of their enemies. Al Jabal, literally, the mountain, was the old Arabic name for the whole of the very mountainous quarter of Irak-i-Am, which lies between Hamadan and Kirmanshah. It stretches far to the south-west of the Caspian range, and comprises Mount Elburz, the Orontes of the ancients, this branch also bearing the name of Elburz; and the chief was designated Shaikh-ul-Jabal, rendered the Old Man of the Mountain. For about 200 years the sect held Milice, amongst the Elburz mountains, about 20 miles north of Kasvin, but they were destroyed by Hulaku A.D. 1260. A colony, under the leading of one of Hasani's representatives, settled themselves amongst the heights of Lebanon, and have been variously called Isma'ili, Bat'ani, and al-Hasani, or the Isma'ilians, Batenians, and Assassins; during the crusades, one of Hasan's successors was known to the Europeans as the Old Man of the Mountain. A chief of the Isma'ilis for many years resided at Bombay, and in 1865 or 1866 instituted a civil suit in H.M. High Court for some matter connected with his faith. The term Assassin has also been derived from Hashishin, a person given to the intoxication of hemp (Hashish, Alc.), but the accepted derivation is from Al Hassani—Porter's Travels, i. p. 286-298. See Alamut; Hasani, Hash, Hatun; Shaikh-ul-Jabal.

ASSAYE, a small hamlet in long. 75° 56' 15' F., and lat. 20° 15' 15' N., on the borders of Kandesh. A battle was fought here on the 23d September 1803, by the Indian army under Sir Arthur Wellesley, against the confederate Maharrattas. Colonel Wellesley, with 4600 troops, of whom 2900 were British, captured the combined forces, 50,000 strong, of the Maharattah chief Sindha and the raja of Barer, and they had 1500 infantry under French officers. One in three of the British forces was killed. Sindha's artillery rested on the right bank of the rivulet. In 1868, the potal of the village, who was a lad at the time of the battle, and a subahdar, Papadu, of the 21st M. N. I., who was a soldier present in the battle, were still alive, the former at Assaye, the latter at Secunderabad. The hamlet is built near the bank of the rivulet; and the spirit of one of the French officers who fell in the battle has been deified, and at his tomb worship is performed by the Maharrattas of the village and neighbourhood.

ASSAY MASTER. An officer with this designation is in each of the Indian mints, at Calcutta and Bombay. He conducts the chemical analysis of the precious metals brought for sale, and determines the quantity of gold or silver in any mixture with the base metal. He also determines the puz coins prior to issue, to ascertain that they are up to the standard. The process was formerly by cupellation, but latterly the humd mod has been followed.

ASSES' GLUE, the O-kiau of the Chinese, a gelatinous substance obtained by boiling down the waters of a celebrated well, situated sixty li to the N.E. of the district city of Yang-kuh, in Kwan-chau-fu (Shantung), but Yun-ching-hien in Ts'an-chau-fu is also said to supply this substance. It is sold in flat rectangular cakes, and the best is clear amber coloured, free from dump or smell. It has all the properties of, and is used as, glue. The well water probably resembles that of Barèges in France.—Smith, p. 28.

ASSIA, a range of hills in the Cuttack district, containing interesting Buddhist, Hindu, and Mahomedan remains of ancient temples, caves, sculptures, and forts. Udayagiri hill has two large figures of Buddha, and extensive Buddhist ruins, as also has Mahabharata Naligiri, an elephant's cave, and Amuravati hill two beautiful images of Indrani.—Imp. Gaz.

ASSU. PAXIL. Brassica eruca.

ASSU, in Hindu tradition, giants who made war on the children of the Diti. In these Assur possibly are typified the Assyrian conquerors. But it has also been surmised that the Assur of the Mahabharata may be the Harsaures or Asi of Indo-Germanic history. See Asur.

ASSYRIA, an ancient sovereignty in the upper part of Mesopotamia. The heart of the country was a district on either side of the Tigris, between lat. 35° and 37° N. Its people were, however, a race with martial proclivities; and about 650 B.C. their dominion attained its highest limit. Herodotus, Pliny, and Strabo included within its bounds countries over which their sway had at times extended, such as the country of Babylonia, all Mesopotamia had a portion of Mount Zagros (the modern Kurdistan), and all Syria as far as Cilicia, Judea, and Phoenicia. During the 7th century B.C., it had Lydia, Cyprus, and Egypt on the west, Elam and part of Media on the east, with Babylonia and part of Arabia on the south. Portion of it are named in the Hebrew Scriptures as Padan-aram, Aram Naharin, Gozan, and Halah. On the west of Assyria proper are the Karajah...
Dagh (the Mount Masius of Strabo), and on the east the Jabal Tur. The Sinjar, a solitary limestone ridge, divides western Assyria into a northern and southern portion. Its more important rivers are the Kurnib or Eastern Khabour, the greater Zab, which washes the ruins of Nimrud, the lesser Zab, the Adhem, and the Diyala. There were many large towns, but Ninevah, Calah, Assur, and Bit Sargina were seats of government during the flourishing period of the empire. About 607 B.C., Assyria lost its independence, and in the subsequent revolutions its cities and palaces were destroyed, so that till lately a knowledge of their sites even was lost. The most extensive of the Assyrian ruins are opposite Mosul on the east bank of the Tigris, and are without doubt those of Nineveh. Since the middle of the 19th century, learned men—Layard, Botta, Henry Rawlinson, George Smith, Professor Sayce, Mr. Rassam—have been searching the mounds for remains of the ancient cities, their sculptures, their libraries and works of art, in the region around Mosul, and towards Baghdad, Calah or Kalah being 20 miles south of Nineveh, and Assur, the modern Shergah, 60 miles south of Mosul. George Smith discovered there a Chaldean legend of the flood; he recovered the cosmogonic legends of the priests of Babylonia; gave histories of Sennacherib and Assur-Bani-pal; and the most important of the documents relating to the reigns of Esarhaddon, son of Sennacherib, have been found and translated.

The physical type of the Assyrian people, their moral characteristics, and their languages, all belonged to the Semitic family. Their written language was in the cuneiform character; and in the more simplified form of later times, the wedge was almost the sole element of the writing. In 1851, Sir Henry Rawlinson gave a list of 240 characters and 120 variants. Since then, M. Oppert has given 318 as the number of the forms in more frequent use. The Assyrians had many gods, but Assur was their chief deity through all their history, and was called by them Sadi-Matati, or Mountain of the World. Nebu, with his consort Urmitu, the gods of Kalah and Nineveh, presided over learning; Shamash and Sin were the sun and moon gods; Merodach, also styled Bel, and his consort Zirrat-Banit, or Succoth-Benoth, emanated from Babylon; Ishtar, the analogue of Venus, was a favourite of Nineveh and Arbel; Nergal and Ninip were gods of war and the chase; Vul, the storm deity; Ann, the king of heaven; and Hca, the lord of hell; with many minor gods. They were a literary people, and gave great encouragement to the arts. Libraries of clay tablets were formed in each of the large cities; and art developed itself on the side of architecture and sculpture. They were skilled in metallurgy, workers in iron, copper, and bronze, and they excelled in many crafts, particularly weaving and pottery. Their knowledge of metallurgy was derived from the Akkadians, from whom also, in common with the Hebrews, they obtained their poetry.

George Smith, in his 'Assyria from the Earliest Times till the Fall of Nineveh,' gives a list of the Assyrian kings, with their approximate dates. The following portion of it is from 1450 to 607 B.C., and enumerates 37 rulers:

Sargon, who formed a great library at Calah, was murdered 705 B.C. His successor, Sennacherib, was also murdered by two of his sons, but his youngest son, Esarhaddon, defeated these brothers, and succeeded to the throne. In 670, he raised his son Assur-Bani-pal, or Sardanapalus, to be co-regent. At this time, Nabopolassar, king of Babylon, B.C. 625, declared for independence. In B.C. 606, Nabopolassar sent his son Nebuchadnezzar, who expelled Necho of Egypt from it. His son Nebuchadnezzar ruled there from 604 to 561 B.C., and Babylon for a brief period became mistress of the world. Nabu Nahid was defeated in Borsippa, 555 B.C. Babylon city was taken by Cyrus, and Nabu Nahid died in Carmania. The succeeding dynasty was that of the Medes. For 200 years they had been partially under the Assyrians; Shalmaneser II., VI-Nirari III., Tuglath-Pileser II., Sargon, Esarhaddon, and other Assyrian monarchs had compelled them to pay tribute. But, after the death of Assur-Bani-pal, Dejoice, son of Pharaoh, invaded Assyria, but was driven back, and fell in battle on the plain of Rhages. His son Vakistar, the Cyaxares of the Greeks, subsequently made an inroad on Assyria, but had to return to his own dominions, to succour the Scythians, who overran Media, Assyria, and Syria up to Askelon; but Vakistar (Cyaxares) recovered his authority, and combined with Necho of Egypt, Nabopolassar of Babylon, and the king of Armenia. They overran the country, and sat down for two years before Nineveh. A heavy flood broke down a part of its wall, and the Assyrian monarch gathered his wives and all his valuables in the palace, and set the building on fire. —Smith's Ancient History; Assyria; Layard's Nineveh; Rawlinson's Ancient Monarchies. See Babylonia.

AST, in N. India, is the west or setting sun. Ude ast tak tumhra raj he,—May your rule extend from east to west,—a Hindu form of benediction.

ASTA, or Patoo, a bast in use in Birbhum.

ASTACUS, a genus of long-tailed crustaceans, including the common lobster. A. fluvitilis is the crawfish.

ASTAK. HIND. Dried apricots with the kernels. Astak-be-maghza are without the kernels.

ASTARAK. Arab. Storax.

ASTARKHI. Arab. Red orpiment.

ASTARLAB. Arab. An astrolabe.

ASTARITA, the Ashtaroth of the Bible, and Astarte of Greek authors, according to Chevalier Bunsen, is derived from the Egyptian word Hestoreth, the throne or seat of the Cow, i.e. the

ASTEII, A SURNAME OF ARSEAS, SUPPOSED TO HAVE BEEN A DESCENDANT OF THE ANCIENT PERSIAN KINGS.

ASTER, A GENUS OF PLANTS BELONGING TO THE NATURAL ORDER MATRICARIACEAE. THESE ARE NAMED FROM ASTER, A STAR, AND FURNISH NEARLY EVERY VARIETY OF COLOUR.

ASTERACANTHA LONGIFOLIA. NEES.

Grows in wet places all over India, and is a valuable medicinally diuretic in urinary diseases and dropies, and causes of gravel. — AIINSTEY; POtEILL, I. P. 368: ROEB.; BIRDIE, BOMBAY PRODUCTS: VOIGHT.

ASTERIA, OF PLINY, THE STAR RUBIES OF THE MODERNS, ARE FOUND AT RATNAPURA IN CEYLOK.

ASTERIASTIGMA MACROCARPA. BEDD.
THIS VERY FINE TREE GROWS ON THE GHATS (2500 FEET ELEVATION) LEADING UP TO PEERMODE IN THE TRAVANCORE HILLS FROM COOTYAM; IT FLOWERS IN MARCH. THE FRUIT AND LEAVES, EXCEPT THAT THE LATTER ARE ENTIRE, ARE EXACTLY THOSE OF HYSDROCARPUS, BUT COLONEL BEDDOME THINKS IT DIFFERS TOO MUCH TO AUTHORIZE ITS BEING REFERRED TO THAT GENUS; IT MAY, HOWEVER, BE CO-GENERIC WITH THE LITTLE KNOWN TARAKTOGENES OF HASEK.—BEDD. FL. SYLE. P. 266.

ASTHAN, ASTANA. HIND. A THRESHOLD, A FAKIR'S RESIDENCE. ASTANA-DAR, A PLACE-HOLDER, A HOME.

ASTHENOSOMA. GROVE. A SEA URCHIN OF THE PHILIPPINES. ITS SHORT SPINES ARE TUBULAR, AND WHEN PENETRATING THE FISH, PRODUCE A SHARP, STINGING PAIN.

ASTHIL SINCHANA, LIT. BONE SPRINKLING. THE HINDU CEREMONY OF SPRINKLING THE BONES WITH WATER A FEW DAYS AFTER BURIAL. — W. SEE ASHTA.

ASTMABAYDA. SANSK. BLEECEBRUM LANATUM.
ASTOR, A MOUNTAINOUS DISTRICT ON THE BORDERS OF LITTLE TIBET, TO THE WEST OF LADAKH. THE PEOPLE SPEAK A DIALECT OF THE DARDI LANGUAGE.

ASTRAKHAN. HINDUS PRACTISING THEIR FAITH EXTEND TO ASTRAKHAN AND THE EASTERN PARTS OF THE RUSSIAN EMPIRE.

ASTRAGALUS, A GENUS OF PLANTS BELONGING TO THE NATURAL ORDER FABACEAE. AMONG ITS SPECIES ARE A. ARIATATUS, A. CRETICUS, A. DICKSONII, A. GUMMIFER, A. VERUS, AND A. STROBLIFERA, OF MOUNT LEBANON, CRETE, IONIA, AND THE HELLENIC PROVINCES, PRODUCING THE GUN-TRAGAHCNT OF COMMERCE, WHICH IS USED AS AN INGREDIENT IN DYE-STUFFS, AS A GLAZE FOR CALLIC AND SILK, AND IN MEDICINE AS A STYPTIC POWDER, AND IN LOZENGES. ITS PRICE IN ENGLAND IS 4£ TO 8s. THE POUND. IT IS LARGELY PRODUCED IN PERSIA, AND EXPORTED TO BAGHDAD, BASSORA, AND INDIA. TWO SPECIES IN KAGHAN ARE CALLED BACHAIL AND KENCHIRUNGA, AND THE HINDI TERM MAZHNAI IS GIVEN TO A. SPINOSUS, BUT NONE OF THESE HAVE BEEN ASCERTAINED TO YIELD TRAGAHCNT. A. HAMOONAS, LIZA, THE PLANT, TAJ BADSHAHI; THE PODS, AGILIK-MALIK, IS A COIN OF THE PERSIAN. A. SPINOSUS, ATNIL, HIND. AND IN A HARD, TUBULAR ROOT-STOCK, WITH NUMEROUS LONG, THIN, SPINOUS BRANCHES. — POCKET; HANDBOOK; VOIGHT; SOGAUGHNESS; HOGG, VEG. KING; POOLE; VON MUELLER. SEE TRAGAHCNT.

ASTRAGALUS MULTICRIPS. WALL.
KANDEE, KANDIARA, CHERN. Didani, Tinaha. RAVI. MUCH KANTA GAGAR. JANDI, . . . . .
KAND, LAD-PI SAR. SPINAGHAI. T. IND.
BUTA-LEE-MAWAK. HIND. SNARIL, PISHKAN.
ATNIL, KIUTU. FASJ. BAN-DA, KHAN.
A VERY SPINOSA PLANT, WITH YELLOW FLOWERS, SOMewhat RESEMBLING GORSE.

ASTRAK. HIND. GUM AMMONIA.
ASTRANG. HIND. ARTHRO ACUMINATA. ROYAL.
ASTRONOMY.

of all, except the very lowest, are written out, and consulted on occasions of any importance. Before setting out on a journey, or commencing to plough, sow, etc., the astrologer is asked about a lucky time. Hence favourable opportunities are often lost. Indeed, never does a Hindu take any step of importance without first consulting the stars. This is usually done by reference either to a Brahman astrologer or to the astrological almanac. When business will not admit of delay, a Hindu will consult either the Sivagyanamut, or ‘advice of Siva,’ or the Cuenums, or ‘sayings’ of Khons, the wife of Varahamihira, the great astronomer, who was one of the nine gems in the court of Vikramaditya, the great monarch of Malwa. The planets are invoked in the Vedie books, and their worship is prescribed in the Gajnaralkya. Chand, the moon, was from the time of the Brah- mans the centre of numerous legends and the object of divine honours. In Ceylon, the preparation of the ephemeris predicting the weather, and other particulars of the forthcoming year, appears to have undergone little or no change since this custom of the inhabitants of India was described by Arrian and Strabo. But in later times the Brah- mans and the Buddhists have superadded to that occupation the casting of nativities, and the composition of horoscopes for individuals, from which the sophistse described by Arrian abstained. It is practised alike by the highest and most humble castes of Singhalese and Buddhists, from the Vellala, or agricultural aristocracy, to the beaters of tom-toms, who have thus acquired the ‘title of Nakatya,’ or astrologer. The attendance on particular ceremonies, however, called Bali, which are connected with divination, belongs exclusively to the latter class. The Mahomedans of British India keep their calendar or Jantri, and the Hindu Joshi calculates the ephemeris. The Hindus also have their calendar or panjangam; but they all practise divination from books, for which the Chintamani pastakam is in use in the south of India.—Tennent’s Christianity in Ceylon, p. 184; Trav. of a Hind. i. xxi. See Almanac; Divination; Ordeal.

ASTRONOMY, the Jyoti Sastra of the Hindus, and Najm of the Arabs, is supposed to have been first known to the Chaldseans. It has, however, been attributed to the Egyptians, who probably derived their knowledge from a more ancient nation. The Chinese have no right; and when the claims are investigated of the Indians, Persians, and Babylonians, it is found that their systems of astronomy belong to a latitude considerably higher than Babylon. Persipolus in Babylon, but somewhere between 35° and 55° N. Brahmanical books teach that the longest day in summer is twice as long as the shortest day in winter, which is not the case in any part of India. Zoroaster taught the Persians similarly; and Ptolemy obtained ancient Babylonian records of star risings, belonging to latitudes not lower than the 40° parallel. Cassini, Bailly, and Playfair have stated that observations taken by Hindu astronomers, upwards of 3000 years before Christ, are still extant, and prove a considerable degree of progress already made at that period; but La Place and De Lumiere deny the authenticity of the observations, and consequently the validity of the conclusion. Yet all astronomers admit the great antiquity of the Hindu observations. The astro-
enumeration, so that the British six o'clock is their twelve, and the British seven is their one, etc.

The Chinese begin the day an hour before midnight, and divide the twenty-four hours into twelve parts of two hours each. Instead of numbering their hours, they give a different name to each period of two hours. The names and corresponding time, according to the British mode, are as follows:—

<table>

The word Koen is added when the first hour of each period is intended, and Ching for the last. Thus, Koen tsev, eleven at night, and Ching tsev, twelve at night; Koen Chow, one in the morning; Ching Chow, two etc. The word K'hih, 'quarter,' is used after the hour with the numbers; yih 1, urh 2, san 3 to subdivide the hours into quarters, which is the smallest division commonly employed. Examples: Ching maou yih k'hih, a quarter past six; Koen woo urh k'hih, half past eleven.

Both the Hindu and the Mahomedan of India divide the day into four watches, and the night into the same number, the day being considered to extend from sunrise to sunset. The watches are again divided into ghorie, which are 24 minutes each in length. As in the summer the days are longer than the nights, each day watch will then be longer than any watch of the night; though, from the necessity of each watch comprising an exact number of ghorie, there will generally be the difference of one ghorie between two watches of the same day. There is much variation in this respect, and although, in the latitudes of India, the difference is not so great as it would be in a country more towards the north, it is still so inconvenient that the natives of India rarely understand their own mode of dividing the day, and readily adopt the British mode.

A mode of denoting time has been adopted by the Hindu, which is called ghuriali. They provide a thin metal cup, a clypeus, through the bottom of which a small hole is drilled. This cup swims on the surface of a vessel of water, until the water, running gradually through the hole, fills the cup, which then sinks. The hole is made of such a size, that the water rising sinks it in 24 minutes. A sort of gong, or hollow bell-metal pan, called a glurial, is hung up near the vessel to be struck at the expiration of each ghorie, which is known by the sinking of the cup. A man, who is employed to watch the sinking of the cup, and to strike on the bell, is called a ghuriali. For the complete establishment of a ghuriali, six or eight servants are necessary, who keep watch in turns. Such an expense can of course be afforded only by the wealthy; but the right or title to use a ghuriali is regal, or granted by the rulers, and the sound of a gong is usually loud enough for a whole village, and serves the purpose of a church clock.

Monthly Division.—Almost all nations have regulated their months and weeks in a great degree by the revolution of the moon. Some have endeavoured to unite this division with the annual course of the sun by an augmentation of days at the end of each year, or by adding a thirteenth month at the end of every third year. The Jews and the Athenians followed this latter method; the Macedonians and some nations of Asia assigned their months 30 and 31 days; the Turks and the Arabs have 29 and 39 days.

Yearly Division.—A considerable variation prevailed generally amongst the nations of antiquity, and still partially prevails with regard to the commencement of the year. The Jews dated the beginning of the sacred year in the month of March; the Athenians in the month of June; the Macedonians on the 24th September; the Christians of Egypt and Ethiopia, on the 29th or 30th of August; and the Persians and Armenians, on the 11th of August. The Jewish civil year begins on the first day of the month Tisri, which year corresponds with the British 9th of September; that of the Mahomedans begins on the first day of the month Maharram, which goes round the year with the lunar months. Nearly all the nations of the Christian world now commence the year on the 1st of January; but, so recently as 1702, even in Britain, the year did not legally and generally commence till the 26th of March. In Scotland, at that period, the year began on the 21st January. The difference caused great practical inconvenience, and January and February, and part of March, sometimes bore two dates, as we often find in old records, as 1711—12.

The year, properly so called, is the solar year, or the period in which the sun passes through the twelve signs of the Zodiac. The period comprises 365 days, 5 hours, and 48 minutes, 51 seconds, 6 decimals, and is called the astronomical year.

The Calendar, the Jantri of the Hindus, is a table of the days of the year arranged to assist the distribution of time, and to indicate remarkable days connected with devotion or business.

The Romans called the first days of each month Calendis, from a word which signified "called," because the pontiffs, on those days, called the people together to apprise them of the days of festival in that month. Hence we derive the name of Calendrier.

The Roman Calendar, which has in great part been adopted by almost all nations, is stated to have been introduced by Romulus, the founder of this city.

Many of the festival days of nations relate to the sun, and those of the Hindus will be found under that heading. Suffice it here to mention Makar Sakranti, on the sun entering Makar or Capricorn; the Shoondoothi or ship festival, on its turning back from Capricorn; the Basant Panchami, and Rith Saptami, and Holi, in honour of the spring and vernal equinox; the Ashadi Ekadshi and the Karthik Ekadshi, relating to the beginning and ending of the S.W. monsoon, as also the Shrvan and Dassar, the ending of the monsoons.

Jai Sing, H. raja of Jaipur, was a celebrated astronomer. He directed observatories at Jeyapore, Delhi, Benares Muttra, and Ujijain, and he was able to correct the astronomical tables of De la Hire, published in 1702, before the French accepted the Newtonian astronomy. His observatory at Benares still exists. He left behind him lists of stars collated by himself, the Tij Muhammad Shah, so named because at the request of Muhammad Shah he had undertaken the reformation of the Indian
ASTRUC.

A STRUC, a brave officer commanding the French army when it was attacked on the 10th May 1758, by Major Lawrence, in the island of Sri Rangam. He was defeated at the battle of the Golden Rock, and again defeated and taken prisoner on the 21st September 1758, at the battle of the Sugar Loaf Rock.—Orme.

ASTRUK, GUJ. HIND. Gum ammoniac.

ASTUR TRIVIRGATUS. TEMM. Goshawk of Nepal, India, and the Malay countries. The other Indian goshawk is A. palumbarius, a native of Europe and Asia; in India it is confined to the sub-Himalaya.

ASTYAGES or Apanda, a Persian king of the Kaianian dynasty. He was son of Isfandiar.

ASUBHA CHAWANA, in Singhalese Buddhism, the meditation of misfortune.—Hardy.

ASUL, also Atul. HIND. Tamarix orientalis.

ASUR. SANSK. A demon, an enemy of the gods; an order of beings who reside under Maha-Meru. Asura, demoniacal, is a form of marriage recognised by Hindu law, in which the bridegroom gives as much wealth as he can afford to the bride, her parents and relations. It is also a term in general use in Hindu writings, to indicate a demon, a giant, an enemy of the gods, supposed to be derived from a, private, and sura, light; also from as, to be, and ura, living, spiritual. Dowson says it is the same as Ahura of the Zoroastrians. In the oldest parts of the Rig Veda it is used in the sense of demon; in the later parts it means a demon, and the Brahmanas relate many battles between the Asura and the gods. It is an epithet frequently applied to the ancient Nag or serpent race in the sacred writings of the Hindus. Colonel Tod (i. 559) believes it to have been applied to the Assyrians. In practice it seems to have been used to designate any of the enemies opposing the advancing Aryans. It is a term much employed in Hindu legends from a very early period down to the time of Krishna. But Daitya, Danava, Dasya, Rakshasa, are other names applied by the intruding Aryans to the races whom they found in occupation of India.—Eastern Monachism, p. 494; Tod; Garrett; Wilson; Dowson; Treglor.

ASURA DHRUVA, the South Pole, its inhabitants, opposed to the Sura of the North Pole.

ASWA or ASI, an Indu or Lunar race, the descendants of Drona and Bajaswa, who were spread over the countries on both sides the Indus, and probably gave their names to the region now called Asia. Aswa and Hya, synonymous Sanskrit terms for horse, the ass of the Persians, was applied by the prophet Ezekiel to the GETIC invasion of Scythia, b.c. 608,—the sons of Toparnax riding on horses;— and described by Diodorus, the period the same as the Takshak invasion of India. Amongst the Scythians, the horse was sacred to the sun, and in India, Sept-Aswa is the seven-headed horse of Surya, the sun. The Assa-seni, the Ari-apsi of Alexander's historians, and Aspsalna, to whom Arasces fled from Seleucus, and whom Strabo terms a GETIC race, have the same origin, hence Asa-garth, the fortress of the Asi (erroneously termed Haisi), and Asgard were the first settlements of the GETIC ASI. Alexander received the homage of all these GETIC races, at the mother of cities, Balkh, seat of Cat'h-hain Khan, according to Marco Polo, from whom Milton took his geography.

Hi, Hya, Hywor, and ASWA denote the steed in Sanskrit and its dialects. In Gothic, hyrs; Teutonic, horse; Saxon, horse. Of the three great branches of the Indu (Lunar), ASWA bore the epithet of Mida (pronounced mede), viz. Pooramede, Uja-mede, and Deo-mede. The ASWA invaders of Assryia and Media, the sons of Bajaswa, are expressly stated to have multiplied in the countries west of the Indus, emigrating from their paternal seats in Panchalica.—Tod's Rajasthan.

ASWAD. El-Aswad-ibn-Kaab, of the time of Mahomed, was the chief of the tribes of Ans, in Arabia, and a man of eloquence; he embraced Mahomedanism, and again seceded to set up a religion of his own. He was slain on the instigation of Mahomed, shortly before the demise of the latter.

ASWAGANDHIL. TEM. Physalis somnifera.

ASWALAYANA, pupil of Samaka, lived about b.c. 550, and was the predecessor of Katya-yana. He was the author of the Srauta Sutras, Grihya Sutras, and other ritualistic works; he was also a founder of a Saka of the Rig Veda, the Asvalayana Sutra, which contains the enumeration of the Gotras and their subdivisions, but in a very involved and unintelligible style.—Dowson; Garrett.

ASWA MEDHA, the sacrifice of the horse (Medha, SANSK., signifies to kill). It was practised in India on the Ganges and Sairjo, by the solar princes, 1200 years before Christ, but its occurrence within any recent period is not known. It seems to have been a Scythic rite, where often the horse, after certain ceremonies, was liberated, in fulfilment of a vow, and sacrificed on the deaths of chiefs. Up to the present day, in India, cows and bulls are let loose in fulfilment of vows, but the liberation of a horse is not now known. Col. Tod surmises that at the grand solstitial festival, the ASWA Medha, or sacrifice of the horse (the type of the sun), which was practised by the children of Vayvawata, the 'sun-born,' was most probably simultaneously introduced from Scythia into the plains of India, and west by the sons of Odin, Woden, or Boodha, into Scandinavia, where it became the Hi-el or Hi-ul, the festival of the winter solstice, the grand jubilee of northern nations; and in the first ages of Christianity, being so near the epoch of its rise, gladly used by the first fathers of the church to perpetuate that event. It was practised, he adds (Rajasthan, i. p. 63) by the Getes in the time of Cyrus; deeming it right, any Herodoteus to offer the swiftest of created to the chief of uncreated beings; and this worship and sacrifice of the horse has been handed down to the Rajput of the present day. The sanguinary part of this ceremony would, according to Mr. Colebrooke, appear, like that of the parushamedha, or human sacrifice, to be merely nominal, the horse, after certain ceremonies, being let loose. Mr. Ward, however, states that he was liberated only for a twelvemonth, when he was again taken, and, being magnificently caparisoned, was, after various preliminary proceedings, slain by the hota or priest. 'He who offers a hundred sacrifices of a horse is entitled to the throne of Indra.'—Cole, Myth. Hind. p. 374. And in the Rig Veda are two hymns describing the sacrifice of the horse, which leaves no doubt that the early ritual of Hinduism did authorize this
sacrifice as a burnt-offering to the gods. As, however, these two, in all the body of hymns in the Rig Veda, alone relate to it, it may be inferred that even then the rite was falling, or had already fallen, into disuse. As described in the Rig Veda, it appears that the horse was immolated, and afterwards cut up into fragments, part of which were eaten by the assisting priests, and part offered as burnt-offering to the gods. This sacrifice is described in the Puranas as one of the highest order, inso much that if it be performed a hundred times it elevates the sacrificer to the throne of Swarga, and thereby effects the downfall of Indra himself. In the Rig Veda, however, the object of this rite seems to be nothing more than the acquiring of wealth and posterity; and even in the Ramayana it is merely performed by king Dasaaratha as the means of obtaining a son by a universal monarch. It was also performed by kings in celebration of auspicious events, especially after marriage, in the hope of securing issue, when largesses were distributed to the Brahmans and officiating priests. It seems also to have been performed by kings in acquisition of supremacy, on which occasion their tributary sovereigns, as well as the officiating priests. On this point Col. Tod mentions that when Yudishta was firmly seated on his throne, he resolved to signalise his reign and paramount sovereignty by the solemn rites of Aswa Medha and Raja-Sn, in which princes alone officiate, every duty, down to that of porter, being performed by royalty. The 'steed of sacrifice' was liberate under Arjuna's care. He wandered whither he listed for twelve months; and none daring to accept this challenge of supremacy, he was reconducted to Indraprastha, where, in the meanwhile, the hall of sacrifice was prepared, and all the princes of the land were summoned to attend. The hearts of the Kuru burned with envy at the assumption of supremacy by the Pandu, for the prince of Hastinapur's office was to serve out the sacred food. Animate creatures and inanimate things have been objects of adoration amongst most of the nations of the earth; the sun, the moon, and all the host of heaven; the sword, the serpent, and the horse; and the last seems to have been worshipped as a type of the sun by all the Scythian races. The last year of Aswa Medha was undertaken by the celebrated Sowai Jay Singh of Amber, but the milk-white steed of the sun was not turned out. —Williams 'Story of Nala', pp. 119-209; Tod's Rajasthan, i. p. 63.

ASWA-PATI. Sansk. A title formerly borne by some of the ancient rulers of the south of India. It means lord of the horse. — W.

ASWATHIAMU. Tel. Ficus religiosa, L.

ASWATHIHMAN, a son of Drona and Kripa, who fought in the Kaurava ranks at Kurukshetra. After the last day's fight, he, Kripa, and Kritavarman alone survived. These entered the Pandava camp at night, found Dhrishta Dyunna asleep, and Aswathamman trampled him to death as he lay; he also killed Sikhandin, the other son of Draupada, also the five young sons of the Pandava, and carried their heads to the dying Buryodhana.—Dowson.

ASWICULAPA, in Hindu mythology, genii.

ASWINA, the first month of the Hindu lunar year. According to Warren, the 6th solar Hindu month, when the sun is in the sign Canya, answering to the Tamil month Pattasi. According to Ward, this word is named from the stellar mansion Aswini, the name of a mare. During the dark half of the moon in the month Aswin, when the sun is in Virgo, September and October, obsequial rites are daily celebrated.—Wilson, Gloss.

ASWINI, the Gemini of the Hindu Zodiac. In Hindu mythology, a form of Parvati, at times the earth goddess, as a mare, into which Surya, the sun, breathed, producing the Aswini Kumara.

ASWINI KUMARA, according to one legend, were two sons of Surya by Sanginya, who taught the art of medicine.—Taylor. In Hindu mythology, the physicians of the gods. Among the inferior deities, the Marut, or winds, hold the first place; and next to them, or nearly on the same level, the Aswini. These are apparently twins or brothers, and sons of the sea (Sindhu). But sometimes, as Dr. Wilson notices, they seem to be the preclusive rays of the sun; at other times, perhaps the sun and moon as rising out of the sea; so that the Vedic Hindus evidently had settlements on the sea-coast or on some water which they called a sea. The Aswini are almost invariably represented as having a triangular car with three wheels, drawn by asses; while their name appears to be derived from Aswini, a name which would seem to identify them with the two horses of the sun. Altogether, they are a perplexing pair; and the sakta addressed to them are richest of all in legend. Their connection with Indra (Jupiter), their patronage of mariners, their twin brotherhood, the two horses and stars found on their coins, identify them with the Grecian Dioscuri, Castor and Pollux.

ASYLUMS. 

Asyle, Refuge, . . . Fr. [Bast, . . . Pers. Asilo, refugio, . . . It., Sp. . . . ]

Refuge places, or sanctuaries, are known in Persia as Bast. The custom prevailing in the Mahomedan east, of having places of asylum, owes its origin probably to the Mosaic law concerning the six cities of refuge, which were allotted to such as had slain any person at unawares. 'Then shall ye appoint ye cities to be cities of refuge for ye; that the slayer may flee thither, which killeth any person at unawares. And they shall be unto ye cities of refuge for the avenger; that the manslayer die not, until he stand before the congregation in judgment,' etc. (Numbers xxxv. 11, 12). See likewise Joshua xx. 1-9 for the names of the six cities of refuge, and the rules laid down for them. A place of refuge, somewhat similar to the Persian 'Bast,' existed formerly in the city of London, where debtors could not be molested by their creditors, and were out of reach of pursuit. This place bore the name of Alsatia, and embraced the space between Blackfriars Bridge and Temple Bar, leading to the water-side. A similar place existed in Liverpool, and Holyrood precincts in Edinburgh were similarly free.

There was an ancient law of Athens analogous to the Mosaic, by which he who committed 'chance-medley' could fly to the courtships for a year, during which his relatives made satisfaction to the relatives of the deceased. The Greeks had asky for every description of criminals, which could not be violated without infamy. Gibbon gives a memorable instance of disregard to the sanctuary of St. Julian, in Auvergne, by the soldiers of the Frank king Theodoric, who divided the spoils of the altar, and
made the priests captives,—an impolicy not only unsanctioned by the son of Clovis, but punished by the death of the offenders, the restoration of the plunder, and the extension of the right of sanctuary five miles around the sepulchre of the holy marth A. at Aabukur or at the city, for aged men and women, for the blind, and for lepers. For the aged of both sexes, it is only those who have no relations, or whose relations are so poor as to be incapable of maintaining them, who seek admittance. There is an asylum in Bombay for animals, and another in Surat, called Pinja-pol.—Frere, Antipodes, p. 242; Tod’s Rajasthun, i. p. 527; Baron C. A. De Bode’s Travels.

ASYSTASIA COROMANDELIANA. Nees.

Ruellia Zeylanica, Roxb. | R. secunda, Vahl.
---|---
Middle-kire, | TAM. Tappeta, | Tel.
---|---
Mukku mangera, Tel. | Venna Katte-tige, Tel.

One of the Asystasia, a common weed in hedges; flowers either lilac or white; the leaves are used mixed with others as greens. A. Formosa abounds on the Coromandel coast; the flowers are purple, and it is readily grown from seed. —Riddell; Jaffrey.

ATAK, Tisi, and Tappeta, is found in China for aged men and women, for the blind, and for lepers. This shrub grows abundantly in Tenasserim, the Malay Peninsula, and Eastern Archipelago. The thatch is made of the fringe of this palm’s leaves, doubled down and sewed on sticks or lathes of bamboo.

ATARI, a ruined fort in the Malvan division of the Panjab, identified with the Brahman city taken by Alexander.

ATASH. Pers. Fire. Atash bahrain, a fire temple of the Parsees or Garb sect, or Zoroastrians. Six of these are in India. It is also known in Hindi as Atash-kada or Atash-khana.

Atash, also Atabek, in ancient Persia, an officer or petty prince, a ruler of a province. Luristan seems to have been the latest Persian territory so occupied, until Chengiz Khan, with his destructive horde of Tartar and Moghul, overwhelmed the land, spreading fire, slaughter, and pillage in every quarter. It was the title borne by various powerful Amirs at the court of the Selencides, which they retained after becoming independent in different provinces of Irak, Asarbijan, etc. The title means ‘the prince’s father.’ It was held at the court of Delhi under the translated form Khan Baba, and was given by Akbar to Bahram Khan, who had been an officer of Humayan, and was Akbar’s confidential minister.

ATASI. SINGH. Chiretta.

ATAI, Ate, Fara, Fata, Paori, Tiere, and Ton, trees of Tabith; their timbers are used for house and ship carpentry.

ATAK, a village and fort 56 miles from Rawal Pindi, known to Europe as Atook. See Atook.

ATALANTIA MONOPHYLLA. D.C.

Limonia monophylla, L. | Turrsas virens, Koen.
Wild-lime, | Eng.
Makhar limbo, | Mam.
Malvaregam, | Makal.
Konda nimma, | Tel.

This small-sized tree is found on the Malabar and Coromandel coasts, and is one of the most common trees in the greenwood jungles or ‘reese’ about the ghats of the Bombay Presidency, and at Mahabaleswuar; it is less common below and inland. Its hard, heavy wood is white or pale yellow, and is very fine or close-grained; it is, however, not procurable in pieces which would square more than four inches, and but for this it would be suitable for cabinet purposes. Wight also figures A. floribunda; and Voigt, with a note of interrogation, names A.? pubigerla as a shrub of Assam.—Jur. Reports, Mad. Ezchib.; Dr. Wight; Dr. Gibson; Hogg, Veg. King.; Voigt.

AT-ALARI. TAM. Polygonum barbatum. ATALIK is literally ‘one who fills the place of a father.’ It was in the earliest times among the Turko-Tartars the title of those nobles of the country who acted as counsellors of the princes. It has also the meaning of guardian, tutor, and instructor, and it is only in modern times that it is found in the sense of vizir or minister. The Shebiades and Ashtharkhanides had several ataliks, one forming part of the suite of each prince. The present Khan of Khiva has a definite number of ataliks. The rulers of Bokhara and Khokand confer it as a title of distinction. Atalik Ghazi was a title granted after the middle of the 19th century by the Amir of Bokhara, to Yakub Beg, who united Khokand and Yarkand and Kasghar under his rule.—P. Arminius Vambery, Bokhara, p. 380.

ATANDAY. TAM. Capparis hordra, L.

ATANGO, a Japanese deity whose temple is at the top of the Atango-yama hill. ‘Yama’ is the Japanese for mountain or hill, as ‘Fusi-yama,’ ‘O-yama,’ etc.—Frere, Antipodes, 428.

ATAP, MALAY. Leaves of Nipa fruitiana, used as thatch. This palm grows very abundantly in Tenasserim, the Malay Peninsula, and Eastern Archipelago. The thatch is made of the fringe of this palm’s leaves, doubled down and sewed on sticks or lathes of bamboo.

ATARI, a ruined fort in the Malvan division of the Panjab, identified with the Brahman city taken by Alexander.

ATASH. Pers. Fire. Atash bahrain, a fire temple of the Parsees or Garb sect, or Zoroastrians. Six of these are in India. It is also known in Hindi as Atash-kada or Atash-khana.

Pottinger says that at Yezd, styled Dar-ul-Ibadat, or seat of religion, the Guebres (Gabor) had an Atash-kada (which they assert has had the sacred fire in it since the days of Zoraster) in their own compartment of the city, but for this indulgence the Persian government taxed them at twenty-five rupees each man. —Wilson; Pottinger’s Tr., p. 127.

ATASH BAZI. HIND. Fireworks.

ATASH GULABI RANG. HIND. Amongst dyers, a bright rose colour, from atash, fire.

ATASH KHOR. Pers. Tetroa rufus, Linn. The two Persian words signify fire-eater. It is the chakor partridge of India.

ATASI. SANSK. Linn. usitatissimum, L.; flax.

ATAVI DEVI, the Hindu Diana, Saraswati.

ATCHA-MARAM. TAM. Bauhinia racemosa.

Diopsiphyes ebenaster; any of the ebony woods.

ATCHAR. HIND. Pickles.

ATCHEMPETTA, a town belonging to the Kallari race, 12 miles west of Tanjore.

AT-DEMMATA. SINGH. Gmelina arborea.

ATEES. HIND. The root of Acouium heterophyllum forms the true medicinal Atees of the Indian bazaars, employed as a tonic in fevers. But the substance is sold under that name in the south of India, perhaps over India generally, is quite inert, for two drams as a dose have been given. O’Shanghnessy mentions that the spurious Atees roots are the dry tubers of Asparagus sarmentosus; but the same term, in the south of India, is applied to linsed, also known as Alsi, Tisi, and Mashima. According to Ainslie, Atees is the Hindustani name of the bark of a species of Betula, used in the northern parts of India for dying chintz red, and which is sometimes, though
Atherina. Of this genus of fishes, several Indian species are known, A. Australis, A. Brownii, and A. Japonica. A. Brownii is the Chupah of authors. A. Forskal, Russell, is the white-bait of Malayar. Engraulis Russellii, Bleeker, is also so called.

Atherura, a genus of mammals of the family Hystriicidae, and sub-family Hystriini. Only one species of Atherura is known in India.

Ati-Kukuthi, a subdivision of the Nair race.

Ati-Malki, a tributary state in Orissa, with a chief with the title of raja. Its population, 14,536 in number, consists of the Gond, Khand, Pan, Chasa, Goada, Darnal Goada, Snd, and Mahomedans.—Impr. Gaz.

Ati-Mas. Ind. Lands repeatedly ploughed for eight months, from Ashbag to Magh, for sugarcane.

Atir or Asr. Arav. Footstep or footprint. Similarly to the Pag of Gujerat, the Arab traces thieves by the Atir.

Athun, the chief town of the Miar or Mera race, mountaineers of Rajputana; the country is styled Mairwar, or the region of hills.

Athur, the ruined city near the mouth of the Upper Zab, now usually known by the name of Ninurud, and called Ashur by the Arabic geographers; and in Athur we recognise the old name of Assyria, which Dio Cassius writes Atirya, remarking that the barbarians changed the Sigma into Tau.—Müller’s Lectures, p. 233.

A-thu-Ya, in the Buddhism of the Burmese, a fallen nat, a spirit.

Atiy, a goddess of the Assyrians. See Ken.

Atibala Chettu. Tel. Sida rhomboldea.

Ati Madhuramu. Sansk. Liquorice. If imported, it is the root of Glycyrrhiza glabra; if indigenous, it is obtained from the root of Abrus precatorius.

Ati-Marakam. Tam. Ficus racemosa, Linn.

Ati-Meralu. Ficus excelsa, Wall.

Ati-Muktamu. Sansk. Hiptage madabhotla, Gaertn., also Dalbergia Ojajnensis, Bt.

Ati-Nar. Tam. Fibre of Baulinia tomentosa.

Ati-Pala. Hind. Abutilon Indicum.

Atit. Hind. A Hindu religious mendicant, usually of the Vaishnava sect; a monastic order of Hindus. Jhaloco, one of their monasteries, is near Bhynsar, and was founded by the Bhynsar chiefs. Colonel Tod mentions that their monastery, in his time, was an isolated dwelling, on the terraced roof of which he found a party of the fraternity squatted round a fire, enjoying the warmth of the morning sun. Their wild appearance; their matted hair and beard had never known a comb; their bodies were smeared with ashes (bhlabot); and a shred of cloth round the joints seemed the sole indication that they belonged to a class possessing human fects. Their lives were passed in a perpetual routine of adoration of Chaturbhujah, the four-armed divinity, and they subsisted on the produce of a few patches of land, with which the chiefs of Bhynsar had endowed this abode of wild ascetics, or with what their patrons or the town’s people and passengers made up to them. The head of the establishment came forth to bestow his blessing on Colonel Tod, and to beg something for his

Athene, a genus of birds of the family Strigidae, and sub-family Atheneae; several species occur in S.E. Asia.

Atherosperma moschata, of the order Atherspermaeae, Lindl., a plant of Australia, where its bark is infused and partaken of as tea.—Hogg, Veg. King, p. 667.

Ateene Promachos. At a meeting of the Bengal Asiatic Society, there was exhibited an engraved figure of Atene Promachos on red cornelian of Greek execution, from the N.W. of India, being, according to Colonel Cunningham, a copy of the celebrated statue by Phidias in the Parthenon. ATERAN. Hind. A frame for winding off threads previous to forming skeins. ATETI, the feminine power of Wok, the supreme being of the Galla race of Shoa.

Ateuchus Sacer, the sacred beetle of the Egyptians, found in Egypt and western Asia.

Ath. Hind. Eight. See Ath-Bhaia; Ath-Cowrie.

Athaboo, near Tinnevelly, 3200 feet above the sea, with a rainfall of 40 inches. Tea trees grow luxuriantly.

Athamanta Macedonica, a plant used in the cast as a perfume for clothes. It is for Europeans over penetrating.—Hogg, Veg. King, p. 378.

Athambinana, seven great unburied relics of Saky, viz. 4 canine teeth, 2 collar bones, and the frontal bone. Princes erected pagodas and relic-temples (izdede) over them.

Athanasius Nikitin. A citizen of Tver, who, about the year 1470, in the time of Ivan III., visited the kingdoms of the Dekhan and Golconda, but is reported to have died on his return before he reached Smolensk. The record of his voyage was written by himself, and delivered to the Dink, a kind of secretary of state to the Grand Duke.—India in the 15th Cent.

Atharava, the fourth book of the Vedas. It comprehends the whole science of Hindu theology, metaphysics, and philosophy. It was arranged by Vyas, and it was taught by the sage Sumanta to his pupil Kabandha.

Atharvan. Sansk. A class of priests descended from a man named Atharvan, who seems to have been the first to institute the worship of fire before the E. and W. Iranians separated.—Monier Williams.

Ath-Cowrie, in Bengal, the distribution of eight kinds of perched peas, rice, sweetmeats, with cowries and pice, amongst the children of a Hindu house, on the eighth day after a child is born in the family.

Atthene, a genus of birds of the family Strigidae, and sub-family Atheneae; several species occur in S.E. Asia.
order. He, however, in the first place, elected Colonel Tod one of his chela or disciples, by marking his forehead with a tika of bhaaboot, which he took from a platter made of dhak leaves.

—Tod's Travels. See Ashes.

ATI-TIPII. TAM. Sciadapus officinalis, Schott.
ATIVIRA RAMA, A Pandiyian king who reigned at Madura about the 12th century A.D. The principal work attributed to him is the Naitadam. He is said also to have been the author of the Kassi kantam, Linga Puramam, Kurma Puramam; three antani in praise of the Saiva temple at Karurvar, and an ethical treatise, Vettiverka. It is supposed by some that he was merely the patron to whom the works were dedicated.

ATI-VISA. Tel. Acocitum ferox, Woll. The Sanskrit Aci visha is from ati, very, and visha, poison. The Telugu word is always understood as designating an active poison, which is the character of the Vishi, Bish, or Bikh of upper India.—O'Sh. 155.

ATKALA DESA, Cuttack or Orissa.
ATKE-KALAY. Beng. Arachis hypogea.
ATMA. SANSK. The soul. Paramatma, the supreme soul, God. Atma-bhu, self-existent, from atma, self, and bhu, existence. Atma-devata, from atma, and devata, a god, a guardian deity.

ATMAGUPTA, SANSK.; also Atmagupta-murkuti, Beng. Mucuna pruriata; Cowhage.
ATMAN. SANSK. Life, animal life.
ATMISA. ARAB. Artemisia vulgaris, L.
ATNAMUS. AR. Anthemis nobilis, the plant.
ATNUL. HINDI. Atragulos spinosus.
ATON. The nullus foment. The Atoll offers a rich variety of plants. An encircling barrier reef only in the absence of land within its central expanse; and a barrier reef differs from a fringing reef, in being placed at a much greater distance from the land, with reference to the probable inclination of its sub-marine foundation, and in the presence of a deep water lagoon-like space or moat within the reef. The polypes that make these are chiefly Antipathes galberrima, Madrepora corymbosa, M. pocillifera, Gorgonia tuberculata, two species of Astrea, Leioptases galberrima, and L. Lamarecki. Atolls sometimes constitute a great circular chain enclosing a deep basin, but opening by one or more deep breaches into the sea. Sometimes they surround a little island by a girdle of reefs, or form the immediate edging or border of an island or continent. Atolls occur in the Pacific, in the Chinese seas, and the Marianne and Philippine islands. Maldives and Laccadives, and Sund group, the Keeling, the Low Archipelago, Marshall Archipelago, and Caroline have atolls. The Maldives island atolls are the Addn, the Addu-mat, Ari, Malcom, Colomandu, Horahburgh, Heawandu, Pholo, Moluk, Nullandu, Phaidi-Pholo, Ross, and Sua-divah.—Figuier, Ocean World; Darwin, Coral Reefs; Macgillivray, Voyage. See Coral; Polype.

ATR, ARAB., written Attar, Otto, and Otar, a perfume, or essence of flowers; by Europeans the term is confined to that from roses. An Atr-dan contains the Atr, and the perfumer, druggist, or distiller is called Attar. The perfumes sold under the name of Atr are as various as are the fragrant flowers from which they are extracted; and the term Atr has the same extent in India as the word scent in English; and, like the European fancy names, the Indians have similar appellations, as Majnuah, all the fragrances; Râhât i Râh, hearts-case. Perfumes of flowers are usually obtained in India by enflourage or inflowering, less frequently by distillation. Oils are used, into which successive batches of flowers are placed, until the oil becomes impregnated with the aroma. Butter, grease, animal fat or oil, might all be used, by spreading it on the inside of a dish, and, after filling this with fragrant blossoms, placing over it another dish, also greased inside. After a day the grease has become fragrant, and the living flowers continue to give out their odour. To remove the odour from the fat, it is scraped off the plates and put into alcohol, which takes up the odour and becomes scented, and the grease again becomes odourless. The rose, orange, acacia, violet, jasmine, tuberose, and jonquil are treated in this way by the French flower farmers of the Var. Under distillation, a ton of rose flowers will yield about 40 ounces of Atr or Otto, worth £200 sterling; and the residuary water, highly saturated with odour, another £10. The Atr or Otto of roses is a highly valuable and delightful perfume. It is an essential oil, prepared in several countries in the East, and has this remarkable composition, that it is a compound of two oils, one liquid and the other solid, and inodorous. At Ghazipur in Bengal, the Atr is always made at the beginning of the season, when the nights are cool. To procure the oil, the roses are put into the still, and the water passes over gradually as in the rose-water process. After the whole has come over, the rose-water is put into a large metal basin, which is covered with wetted muslin, tied over to prevent insects or dust getting into the oil. Below, the rich oil is let into the earth, the basin is covered and the ground, which has been previously wetted with water, it is allowed to remain quiet during the whole night. In the morning early, the little film of Atr which is found on the surface of the rose-water during the night is removed by means of a feather, and carefully placed in a phial. Day after day, as the collection is made, it is placed for a short period in the sun, and after a sufficient quantity has been procured, it is poured off clear, and of the colour of amber, into small phials. Pure Atr has at first a pale greenish hue, but in a few weeks it becomes of a pale yellow. It is generally calculated that 100,000 roses will produce 180 grains of Atr, and the price of 100,000 roses varies from 40 to 70 rupees; and the tola, 180 grains, of the Atr is sold at 80 and 90 rupees. At this price, as may be supposed, it is rarely if ever used even by the wealthiest of natives, and the native courts employ the Atr or perfumed oil prepared by their own distillers from the jasmine (J. sambac and J. grandiflora), and bela, and lemon grass (Andropogon schoenanthus), the roosa oil, the oil of Nemaur (Andropogon iwarichanu), Atr of khuskhus. Newar oil, A. Martini, a volatile oil, erroneously called oil of spikenard, is met with in the shops, and obtained from a plant named by Dr. Royle, Andropogon calamus aromaties.

ATRACTYLODES ALBA. Smith.

Peh-shuh, Yu-shuh, . . . CHIN.

A plant of Ngn-hwui and Kiang-su, from the shoots of which a tea is made. Its root is strongly aromatic, and is made into a tincture, or given in powder or in pills as a warm stomachic in catarra, chronic dysentery, general dropsy, rheumatism, and profuse sweatings.—Smith.
ATRACYLODES RUBRA. Smith.

The root is met with in finger-shaped pieces, and is used like that of A. alba.—Smith, p. 28.

ATRACR or Atrek, a river which rises in Khorasan to the north of Bursiul, and flows west to the Caspian. Since 1881 it forms part of the boundary between Persia and Russian Turkestan. It gives Russia the command of the passes leading from the Akhal country into Khorasan. The country is occupied by the Tekke Turkomans.

ATRAPAXIS SPINOSA, a polygonaceous shrub of China; is said to yield a manna called Kih-poh-lo.

ATREYA, B.C. 1200? famed in Hindu legend as having imparted the knowledge of the Ayur-Veda to Agnibesa and others; and Agnibesa's work was corrected by Charaka, and received his name. Charaka's work is in the form of dialogues. It follows the division of the eight parts of the Ayur-Veda.—Garrett.

ATRI, a rishi of the Hindus, a mind-born son of Brahma. He was married to Anusuya (Charity), one of the 24 daughters of Daksha.

ATRIPLEX HETERANTHIA. Thoyah kecay, TAM. A common weed; the leaves, used as greens, make an excellent vegetable; found in abundance in southern India; also cultivated.—Jeffrey.

ATRIPLEX HORTENSIS, the garden arache, or red creeping spinach, occurs in Tarsary, and its seeds are described as enetic. One species is known in Sinds as the Jucare.—O'Sh. p. 466.

ATROPA ACUMINATA. Royle.

These names are of very doubtful correctness; grows on the northern face of the Himalayas.—O'Sh. p. 466.

ATROPA MANDRAGORA. Line. The mandragora, or mandrake, the root of which was so celebrated in the magic rites and toxicology of the ancients, is known in the bazaars of Central Asia and the north of India. Its properties are identical in nature with those of A. belladonna, but weaker, in consequence of drying and decomposition of the atropa.—O'Sh. p. 466; Hogg's Veg. Kingdom, 552.

ATSU. Panj. Rheum emodi.

ATTA. Guj. Hind. Meal, wheaten flour. When sifted, maida is the finer part of wheaten flour, and sooji the harder. In India, the unsifted wheaten flour, the Atta, does not readily leaven into wheaten bread, and the sifted sooji is used almost solely for that. The natives who eat wheat use the Atta or unsifted flour. See Farina.

ATTA, a genus of ants, A. destructor, dissimilis, domicola, florilora, occur in the Peninsula of India. The A. destructor prefer animal to vegetable substances, destroying dead insects, bird skins, etc., but also feed greedily on sugar. They are common in all parts of India. A. rufa lives in holes under ground, about gravel walks, and walls; and often appears in houses, coming through a hole or crevice in the floor or wall. From a colony of them, every now and then, vast numbers of the winged females (and males) issue forth just before sunset, attended as far as the window by swarms of the netters of both kinds. Its favourite food is dead insects and other matter, but it also carries off seeds like the Oozeloma, chauff, etc. It stings very severely, leaving a burning pain that lasts for several minutes.

ATTACUS RICINUS, Jones, and A. cynthia, Drury, silk moths of Bengal and Sub-Himalayas.

ATTACU-JAM. Beng. Olen dioica.

ATTALEA FUNIFERA. Seemann. A valuable palm of the maritime provinces of Brazil. A coarse black fibre is obtained from the dilated base of the petioles, and partly used for home consumption, partly exported to Europe, tied up in bundles of several feet in length, and sold in London under the name of Passaba fibre at about £14 the ton. It is manufactured into cordage in its native countries; and as it is light, cables made of it do not sink in the water. It yields the croqilia nuts of commerce, and might advantageously be introduced into southern Asia. These are excessively hard, beautifully mottled with dark and light brown, and capable of taking a very high polish; they are extensively used for turnery, especially in making the handles of bell-pulls, small tops, and the knobs of walking-sticks, umbrellas, and other articles. In 1850, about 250,000 nuts were imported into England, and sold at 30s. to 40s. the 1000. It should be grown in India.—Seemann; Holtsappel; Poole's Stat. of Com.

ATTA PATTI. Hind. Mimosa pudica.

ATTAR. Hind. A druggist, a perfumer, a distiller. Att-dian, a casket of gold or silver, fitted with vases for holding Attar or perfume essences. See Atr.

ATTARAN, a narrow, deep, and sluggish river in the Amherst district of British Burma, which joins the Salween river at Moullmein. There are several hot springs on its banks.—Imp. Gaz.

ATTAVEESY, a district in the west of India largely occupied by Koli. See Koli.

ATTHAKATHA or Atuwawa, a commentary on the sacred writings of the Buddhists.—Hardy. ATICA MAMMADI. Tel. Boerhaavia diam- dris, B. orache.

ATTLA. Etzel, known to Europe as Attila, was the leader of the Hiong-nu, a pastoral tribe, who had been expelled from the borders of China by the powerful dynasty of Han. They formed one of those pastoral tribes who roamed in the lands from the Altai to the walls of China. The Hiong-nu, after their irruption in the Gothic empire of Hermannich, made their way, under Etzel or Attila, into the heart of France. Hordes from the same regions, under Togrul Beg, Seljuk, Mahmud, Chengiz, Timur, and Othman, overwhelmed the khilifat and the empires of China, of Byzantium, and Hindustan; and lineal descendants of the Shepherds of High Asia still sit on the throne of Cyrus, and on that of the great Constantine.

ATTICK is a small town with a fortress in the Rawal Pindi district in the Panjub, and gives its name to a district lying along the left bank of the Indus. The town is in lat. 33° 53' 15' N., and long. 72° 16' 45' E. The meaning and origin of Attick are both doubtful. We learn from the Tabaqat-i-Akbari, the Tarih-i-Murassa, and other native works, and even from Hindus at the present day, that Atok was formerly called Atok-Benares. The name is said to be derived from Atk, a
barrier; and it was said that Hindus formerly hesitated to go by the west of the Indus, lest they lost caste. But Hindus from the most ancient times have been spread westward, as now, even to Russia in Europe, and to Africa. According to Fraser, Attok in desert tracts in Khorasan means the skirt or foot of the hills, and commencement of the desert, and it is commonly used for the desert itself in these parts. The fortress is built on a precipitous slope of bare and rugged hills overlooking the Indus river, close to the left bank on the road from the Panjub to Kábal. The Indus, when in flood, runs below in an impetuous torrent, foaming in whirls around the jutting rocks called Tel-Jalalia and Tel-Kamalia, from the names of two of the Raunshani sect who were flung from the summits during the reign of Akbar. At this place the Kábal river joins the Indus river. It is 56 miles from Rawal Pindi, and 45 miles from Peshawar. A tunnel 1505 feet long, under the Indus, was completed in June 1868, after eight years' labour. The level of the Indus, about 18 miles above Attok, is 1049 feet above the sea.

—N. W. Fr. J.

ATTU KARAN. TAM. A shepherd, goatherd.
ATTUKEDASÁ. MALEAL. Attu Natte, Tam. Æschynomene aspera.
ATTUN, the national dance of the Daurani.
ATULGAN. PANJ. Myrsine Africana.
ATUR, a talaq in the Salem district of the Madras Presidency, with a population of 164,600 souls. Great beds of magnetic iron occur in the hills. Kari Raman, a pagoda in the Periye Kálayán, is a shrine of great sanctity.—Imp. Gaz.
ATVI. SANSK. Forest, grove, wilderness.
ATWEN-WOON, Burmese privy councillors, of whom there are four. They are inferior in rank to the Woon-gyi, but between them and the Woon-dook precedence is disputed.—Yule.
AUBER, PETER, author of Analysis of the Constitution of the East India Company, with Supplement, 1826-28; Rise and Progress of the British Power in India, 1837; China: an Outline of its Government, Laws, and Policy, and of the British and Foreign Embassies and Intercourse with that Empire, 1834.
AUCHOO. BENG. Raspberry, Rubus paeoni-florus.
AUCKLAND, EARL OF, was Governor-General of India from the 4th March 1836 to 28th February 1842. India had never been in a more tranquil state than at the time of his arrival in 1836; but on the 1st October 1836 he declared war against Dost Muhammad Khan, ruler of Kábal. The great object stated for the war was that Dost Muhammad had attacked the ruler of the Panjub, Ranjit Singh, an ally of the British; that his military preparations indicated intended hostile attempts against India; and that Shah Shuja, then under British protection in India, was the rightful chief of the Afghans. The war with Afghanistan lasted until 1842, and though at first and at last successful, it was the most disastrous that the British had ever experienced in those regions. Shah Shuja was put on the throne; Jalalabad, Kábal, Ghazni, and Kundahar were taken; but the Kábal division of the army was driven out, and all but a few hostages and prisoners, and one officer, Surgeon William Dryden, were destroyed.

AUCKLANDIA COSTUS. Falconar. Apotaxis auriculata, De C.
or Baroq, who accompanied Augustus to Athens, and there, as Calanos had done, committed self-immolation before the emperor. His tomb, known as the Indian's tomb, was to be seen as late as Plutarch's time, which is

AULANTHA. MALEAL. Calasanthes Indica. A. U. M., three letters which, when combined, form the syllable O'm, held sacred by Hindus. Monier Williams supposes them to be the initial letters of the trinity of gods of fire, wind or air, and sun (Agni, Vayu or Varuna or Indra, and Mitra).—Monier Williams. See O'm.

AUMOO. HINNDI OF BANNOO. A desert soil.

AUMOOKEERA. TAM. Physalis somnifera.

AUNGA-ARULI, also Aungra, also Aunwer. HIND. Emibia officinalis. Gient.

AUNG KHAN of the Kairatai Mongols, celebrated in Europe under the name of Prester John. He was a contemporary of Chengiz Khan, whom, at the instigation of jealous enemies, he attempted, but failed, to destroy.—Elliot, p. 498.

AUN-LASAR. HIND. Vitreous sulphur.

AUNTHULUPABAY. TAM. Monordica dioica.

AUNY. TAM. Odina wodier.

AURANGBAD, in long. 19° 54' N. and long. 75° 22' E., in the Dekhan, a large city, greatly desired, and a military station. The mean height of the station is 1885 feet above Bombay, at Colahal. It may now have about 15,000 people. It is in the dominions of the nawab of Hyderabad, and has several times, for short periods, been resided in by his predecessors. The daughter of Aurangzeb is buried there; her monument is of white marble, in which elegant arabesques and flowers are carved with great skill, and the doors are ornamented with plates of metal, in which also are flowers and ornaments. Near the mosque is a handsome marble hall, and round it a neglected garden.

AURANGZEB, emperor of India, was the youngest of four sons of the emperor Shah Jahan. Shah Jahan fell sick when advanced in years, and each of his sons raised an army to seize the throne. Dara Shikoh, the eldest, was open-hearted, but impetuous and rash even to folly. Shuja and Murad were bold, ambitious leaders; Aurangzeb, the youngest, was of a remarkably mild temper, but cautious, designing, and a perfect master of dissimulation. He pretended to waive his claim to the throne in favour of Murad, and these two, uniting their forces, defeated Dara and Shuja in succession. Aurangzeb afterwards imprisoned Murad in the fortress of Gwalior until his death. Dara fled to Gujerat, meeting Bernier on his way, then on to Cutch and Sind, when an Afghan took him prisoner and sent him to Delhi, where he was killed by the order of Aurangzeb. Aurangzeb, taking advantage of his father's advanced age, compelled the emperor to sign his own abdication, and he remained till his death a prisoner in a palace. The eldest brother, Shikoh, fled westward, and his death was never ascertained.

Aurangzeb gained but an imperfect success over Afghanistan, and his wars in the Dekhan were protracted. In his habits and manners he was remarkably simple. He was an author and voluminous writer of letters, which almost invariably include some poetic quotation or some verse from the Koran. His system of government was a continual mistrust; he was cold-hearted, and owned no generosity. He excluded the Hindus from office, their fairs and religious meetings were forbidden, and their temples insulted and even destroyed. Yet he laid out no money on mosques or endowments of the Mahomedan faith, showed no sign of being under the influence of the teachers of his own religion, and often expressed his contempt of the faikirs or dervesh sects. He detested the Hindus, who detested him. Both his declared heir, Shah Alam, and Aurangzeb, as his favourite grandson, were the offspring of Rajputis; but his bigotry outweighed his policy, and he visited the Rajputs with an unrelenting and unwise persecution. Nevertheless this bigotry of Aurangzeb endeared him far more to his Mahomedan co-religionists than did the liberality of Akbar; and even to the present day the memory of Aurangzeb the persecutor is honoured by them far more that of that of Akbar the beneficent. Early in his reign he adopted harsh measures towards his Hindu subjects. Later on he renewed the capitation tax which Akbar had abolished, and he issued edicts against public dancers and singers, poets and astrologers. Subsequently he took prisoner the widow and son of the Rana of Udaipur as she was returning from Kabal, where her husband had died, but the Rani escaped; on which he sent a force to overrun Ajmir, to burn the villages, destroy the crops, and seize the women and children as slaves. His principal residence in the latter part of his long reign, was in the Dekhan, and he died at Ahmadnagar, where he was embalmed, and the body removed to the plateau of the hill overlooking Ellora. Europe was made more particularly acquainted with Aurangzeb by Bernier's mention of him in his Travels. The Moghul empire attained its utmost extent in Aurangzeb's reign. His authority reached from the 10th to the 25th degree of latitude, and nearly the same in longitude; and his revenue exceeded thirty millions of pounds sterling; in a country where the produce of the earth are four times as cheap as in England. Most Asiatic princes of the Mahomedan faith profess a trade. The great Aurangzeb was a capmaker, and sold them to such advantage on the 'nine day's fairs, that his funeral expenses were by his own express command defrayed from the privy purse, the accumulation of his private labours. His son, Mahomed Mazum, took the title of Bahadur Shah, and reigned about six years.—Elph.

AURANTIACE, the Citraceae order of plants.

AURASA PUTRA. SANSK. A begotten son.

AURASUS. Mount Aurusius is behind Tunis and Algiers. The native kabyle on that mountain are fair, red-haired men, and have been conjectured to be descendants of the ancient Vandals.

AUREA CHERSONESUS. The country thus named by the ancient geographer Ptolemy, has been supposed by d'Anville to be the Malay Peninsula, and his Sin-Hoa the western part of Cochin-China; Pegen also has been named; others have pointed to Galle and other places.—India in the 16th Cent. See Galle.

AUCICULA. A genus of shells or mollusces, Auricula auris Milius, which occurs in the Moluca, has been transferred to the genus Voluta.

AURORA. Phaeton in the Greek mythology was the son of Cephalus and Aurora. The former answers to Aruna, the Hindu bird-headed messenger of the sun. The Greeks have given the dawn a female character.

AUS. HIND. MALEAL. Rice sown in Chaitra
or Vaisakh (February—March), and ripening in Sravana or Bhadra (August—September).—W. AUVAIYAR. Parmelia peans, sents, customs, is further...rapid forward. Head or the bands have fourteen, who convicts...native; there...isles; to...AUSNEH. presumed...Pacific, and Vaiaakh use...slightest...south-eastern...Australians. The...of...Mongolian,...soft, chest. Even...gray hair. In...M. Indian...Malay, weapons. No...longer. It was...regions...It comprehends, therefore, almost...northern...maleal. Celebes, no...of...length, in...fat, mouth, and...tongue, and...hair, is...beard, and...beard and hair. This is a distinctive feature, and is not shared generally by the Mongolian, Negro, Malay, or the natives of the Celebes, the last of whom may be presumed to have enjoyed facilities for effecting an intermixture with the Australians. Native Australian women are met with, whose hair is comparatively soft, the head being covered with a profusion of loose natural curls. While possessing the wide-spreading nose, receding forehead, and rapid eye of the African, the thin and muscular limbs of the Zulu, and the long silky hair of the western Malay, with not a little of the latter's skill and daring—and to these types respectively the natives of north and north-west Australia approach nearer than to any other—they bear no further resemblance than their broad characteristics, in their language, or their weapons. The instruments of warfare in general use by the two contiguous races vary no less than their respective customs, language, and physique. The most remarkable weapon of the Australian, the boomerang, is entirely unknown to the Papuan, who in fighting use the bow and arrow. In many features of their superstitions they assimilate to the North American Indians, and to some of the tribes of the Pacific; strongly resembling the latter in their interments, and in the practice of piercing the septum of the nose.

From the period of the earliest discovery by Europeans, the Chinese, the Malay, and the Celebians have visited the south-eastern islands of the Indian Ocean, and had their stations on the Australian coast, trading with the inhabitants, and conveying from thence cargoes of trepang, shells, etc. Since the 17th century, it has been gradually taken possession of by the British, and since 1841 many brave efforts have been made to explore the country. Plains, forests, and rivers alike abound, with creatures of strange form. Each of its floral regions has a zoology peculiarly its own. The Banksian are everywhere tenanted by true meliphasagous birds, the Eucalypti by the Trichoglossi and Pitoti, the towering fogs by the regent and satin birds, the palms by the Carphophane or fruit-eating pigeons, and the grassy plains by the ground pigeons and grass parakeets. The birds represent many of the tribes found in Europe; but the Australian continent possesses genera exclusively its own, many of which are nocturnal, and many of them breeding three or four times in a season. About fifteen families of birds are confined to the Australian region, amongst which are the paradise birds, honey-suckers, lyre-birds, brush-tongued lories, mound-makers, and cossowaries. The mammals are different from all those met with in other parts of the globe; the Marsupials extensively prevail; and the Kangaroos, Wombat, Koala, Ornithorhynchus, Echiana, the Thalycone or Devil peculiar to Tasmania, Phalangers and flying opossums (Belides), constitute a fauna as interesting as remarkable. The only mammals of Australia and New Guinea are marsupials, the monotremes and mice. The marsupials are very numerous and varied, constituting six families and 33 genera, with about 120 known species. The seaweeds, about a thousand in number, have proved a fertile field of research, with many beautiful molluscs. Its economic plants are numerous species of Acacia, Albizia, Casuarina, Eucalyptus, Ficus, Panicum, Phaseolus, and many others yielding timber, gums, resins, tanning substances, and medicines.

AUSTRALIAN MOSS, Eucumea speciosum. AUTEUIL, M. d', a French officer who commanded the French forces at the battle of Ambur, and gained the battle. Anvar-ud-Din fell in that battle, at nearly 100 years of age.

AUTHOONDAY. TAM. Capparis brevispina. AUTMORA. BENG. Isora coryfolia. AUVAIYAR is the most noted Tamil poetess. This name simply signifies 'the matron.' She is said to have been exposed by her mother, and brought up by a minstrel; but many fables are related of her. Tamil writers call her the sister of Tiruvalluvar. She is said to have continued Tiruvalluvar's legacy; her life and works Bower remarks, 'She sang like Sappho; yet not of love, but of virtue.' Five books of moral aphorisms, much used in schools, are attributed to her, viz. Attisudai, Konrai ventan, Muturai, Nalvai, and Kalvijolukkam. The genuineness of the Muturai is considered doubtful by Dr. Caldwell. Other books attributed to her are the Vettriverkai, Avve-Kerao, Avve-Kool, Pillaiyar-Agaval, and Ganapathi-Asiria-Virutam, and a number of detached verses. The Muturai is also styled the Vakkundan. Her collection of brief moral aphorisms is unrivalled. She is called Kulikukkapani, i.e. she who sang for rice water. The Muturai is a collection of fine similes. Her works are read by every Tamil person, are greatly and deservedly esteemed, and are among the first books put into
the hands of children in every Tamil school. One tradition alleges that Auvaiyar was the daughter of a Brahman, who married an inferior caste woman, of whose low birth he was not aware. Auvaiyar was her second female child, and was deserted by them, and brought up amongst the Pamar bards. Auvaiyar seems to have lived about A.D. 900, during the reigns of three celebrated kings of the Pandyan, Seram, and Sorghini kingdoms.

—Tamil Authors; Garrett.

AVA or Ayun-wa, a town in Burma, in long. 96° 1' E. and lat. 21° 52' N., on the bank of the Irrawady, at one time the capital. Its state name was Ratnapura, or Gem-city. It is alleged to have been founded in A.D. 1364, by Thado-men-ya, prince of Tagoung, who mastered the kingdoms of Panya and Sagain, into which the country was then divided. The first mention made of Aya by any European traveller, is that by Nicolo di Conti, who was there about 1440 (Ramusio, i. 340). It continued usually to be the royal residence, with some intervals, till the end of the eighteenth century. In 1526, the Sultans of Gerawan and Mogoung took the city and overran the country, of which they held possession till 1554. In that year, the Tshen-byoo king of Pegu, Tshen-byoo-mya-yen (lord of many white elephants) conquered Ava and destroyed the city. The king Young-men-ta-ra, who re-established the city and kingdom after the fall of Pegu in 1601, appears to have been a natural son of the conqueror. Ava was taken by the Peguers during their resumption of independence in 1752. They were speedily expelled by Alompra, but he always resided at Mou-to-bo. In 1763, on the accession of Tshen-byoo-yen, Ava again became the seat of royalty. It was, however, abandoned on the founding of Amarapura in 1783, but reoccupied in 1823 by the king and queen, who entered in great state, accompanied by the white elephant, and by all the dignitaries of the court, only to be again deserted in 1837 by Tharawadi, who had vowed to make it a heap of ruins.—Yule's Embassy.

AVA. Tel. Sponian Wightii, Planch.

AVA, a drink of the South Sea islanders, prepared from the Macropiper methysticum. It was boiled, strain the liquid, bowled, and allowed to ferment, and drank. In the Southern island, the larger ava-bowl is made from the taman, Calophyllum inophyllum, and occupies a conspicuous place. Ava in Tahiti is a general name for ardent spirits. Ava is also a plant of Tahiti; its bark made into cloth.—Capt. Elphinstone Erskine, Islands of the Western Pacific, p. 46.

AVA ARDUI SUR JASAN. A Parsee festival held in honour of Ava, the angel, in their theology, who presides over the sea. On this day Parsees should approach the sea-shore or any stream of water, and chant prayers from the Zend; but these religionists now generally mix with their prayer several Hindu rites, such as offering flowers, sugar, cocoa-nuts, etc. In Bombay, a fair is held on the esplanade on this day.—Parsees.

AVADHUTA. Sansk. In the south of India, a religious ascetic mendicant of the Saiva sect, who, similarly to the Virakta Vairagi, has subdued the passions and estranged himself from the interests and emotions of mankind, abstaining from religious observances and worldly restraints.—Wilson. See Hindu; Sanyasi; Vairagi.

AVA GEM-SAND comes from the neighbour-

hood of Ava, and is sometimes one of the Shan articles of merchandise. It consists of small fragments of nearly all the precious stones found in the country; but garnet, beryl, and spinelle are its principal constituents, more especially the last, which seems to constitute nearly three-fourths of the whole mass. A single handful will contain specimens of every shade—black, blue, violet, scarlet, rose, orange, amber, yellow, wine yellow, and white.—Mason.

AVAGODA. Tel. Trichosanthes pulmatia.

AVALAMBANA, in China and Ceylon, a sacrifice among Buddhists for the dead in the 15th day of the 7th month; till redeemed, they are suspended by their heads, head downwards, from a tree in the inferior regions.

AVALI. Tel. Mustard seed.

AVAIUL. VULLI. Tam. Janipha manibot.

AVANAK, MALED. Icinitus communis, Linn. AVANEJANA. Sansk. Washing ablation; a Hindu ceremony prior to offering the funeral cake. It consists in pouring water, in which flowers and sandal paste are immersed, upon the head of the king and receiving the cake.—W.

AVANI AVATTAM. Tam. With Brahmanas, a festival at which the sacred thread is renewed; it occurs during the Hindu month Avani, which falls in with August. During the Utharyanam, or northern solstice, all devout Hindus are supposed to devote themselves to the study of the Vedas, and during the Thatchanayantham, or southern solstice, they are allowed a relaxation of their religious studies, or, as some eminent divines among them are of opinion, they are forbidden to open the Vedas. During the northern solstice, i.e. from Avani (August) to Thi (January), marriages and other auspicious rites are performed; all acts done are supposed to have some virtuous effect, and in some manner benefit the persons performing them. But during the southern solstice, which extends from Masi (February) to Adi (July), everything done, though virtuous in itself, is unprofitable in its effects. During this period sin is supposed to abound, in consequence of the months being bad months; and the period is past and the month of Avani ushers in the good months, the occasion is regarded a fitting occasion for the ceremony in which the Hindu is invested with the sacred thread, with multiform ceremonial rites. Into a hole which is dug and consecrated for the purpose, the Vedakni, or the three kinds of sacred fire, are cast, and over these the wood of the Arasu, or Aa-maram or Athi-maram. Incense and the Navathamian, or nine kinds of sacred grain, follow, and then the necessary quantity of ghee completes the ceremony. The sacred thread costs some Hindus a large sum, but to the poorer classes the Brahman priest sends the strings at reduced prices.—Madras Mail, 21st Aug. 1872.

AVANI-MUL.A. Hind. A fast observed in honour of Siva.

AVANTARA. Sansk. In the Brahmanical religion, a descent of the deity in the shape of a mortal; it is an incarnation of an inferior kind, intended to answer a purpose of less moment.

AVANTI, the ancient name of the modern Oojin; also called Ujjayani, Vaisala, and Pushpan Karandnini. This city is noticed in the Meghaduta, verses 28 and 31.—Williams' Story of Nala, p. 116; Captain Edward Warren.

AVANZOAR, the name given in western
AVARAI.

Europe to the two physicians called Ibn Zohar, A.D. 1072.

AVARAI. TAM. Cassia auriculata.

AVARO of Tahiti, fruit of Melastoma Malabathrica, used as a blue dye for Tapas cloth.

AVA-SARPINI, among the Jaina, one division of time; the other is Uta-sarpini.

AVATAR. HIND. From the Sanskrit, Avatara, a descent or incarnation, a term employed by the Hindus to designate the incarnations of Vishnu, usually arranged and named—1. Mataya, or fish; 2. Kurma, or tortoise; 3. Varaha, or boar; 4. Narasimha, or man-lion; 5. Vamana, or dwarf; 6. Parsurama, the name of a favoured person in whom the deity became incarnate; 7. Rama, the same; 8. Krishna, the same; 9. Buddha, the same; 10. Kalki, or horse. Of these, nine are past, the tenth is yet to come.

When the Hindus speak of the deity having been thus incarnate, we must understand it with some qualification; for, in fact, there is perhaps scarcely one point in their mythological religion that the whole race of Hindus have faith in. There are sectaries and schismatics without end, who will believe only certain points that others abjure; individuals of those sects dissent from the doctrine believed by the majority; other philosophical sceptics will scarcely believe anything, in opposition to their easy-minded brethren, who disbelieve nothing. Thus, some Saiva, or followers of Siva, admit the sacredness of the Avatara of Vishnu, but in different degrees of potency and sanctity. They generally admit the personified interposition of the preserving attribute of the deity in the affairs of the world, without yielding the point of supremacy in the prototype. And some zealous Vaishnavas, or followers of Vishnu, giving themselves up to his adoration in some incarnation, Krishna or Rama, for instance, reject all further application of divine terms. Hence may in part be discerned the liability under which inquirers labour, of being misled by sectaries into receiving schism as orthodoxy, and of forming general conclusions from individual or partial information.

1. The Mataya or Fish Avatara has been supposed to have immediate reference to the general deluge, and to be the same history, disguised in oriental fiction, of that event as is related in the Scriptures. Sir W. Jones (As. Res. vol. 1.) asserts to the opinion of Bochart, that the fable of Saturn, was raised on the true history of Noah; he shows that the seventh Mene, Satyavrata, corresponds in station and character. In his reign, the Hindus believed the whole earth to have been destroyed by a flood, including all mankind, who had become corrupt, except the pious prince himself, the seven rishi, and their several wives, who, by command of Vishnu, entered a 'bahitara,' or spacious vessel, accompanied by pairs of all animals. Vishnu, assuming the form of a fish, commanded the ark to be fastened by a cable, formed of a vast serpent, to his stupendous horn, secured thereby until the flood subsided; when he and Brahma slew a monster named Hayagriva, who, while Brahma was repos- ing at the end of a kalpa, stole the Vedas, and mankind had consequently fallen into the depths of ignorance and impiety. This mighty demon is called the prince of Danavas; his name means horse-necked. The Vedas having been recovered, the world was progressively re-peopled with pious inhabitants, descendants of the devout Satyavruta and his favoured companions. The history of this Avatara is the subject of the first Purana, or sacred poem, consisting of 14,000 stanzas, and is concisely told in the eighth book of the Sri Bhagavata, or life of Krishna.

2. The Kurma or Tortoise.—The second grand Avatara of Vishnu, in the form of a tortoise, evidently refers also to the flood. For the purpose of restoring to man some of the comforts and conveniences that were lost in this flood, Vishnu is said to have become incarnate again in the same form of a tortoise, in which shape he sustained the mountain Mandara, placed on his back to serve as an axis, whereon the gods and Amra, the vast serpent Vasoky serving as a rope, churned the ocean for the recovery of the Amrita, or beverage of immortality. Fourteen articles, usually called fourteen gems or chaterless ratana, in common language, chowda ratni, were obtained, viz.:

1. The moon, Chandra; 2. Sri or Lakshmi, the goddess of fortune and beauty; 3. Sura, wine, or Suradevi, the goddess of wine; 4. Oochisrava, an eight-headed horse; 5. Kustubha, a jewel of incensable value; 6. Parijata, a tree that spontaneously yielded everything desired; 7. Surabhi, a cow similarly bountiful; 8. Dhanwantara, a physician; 9. Iravat, the elephant of Indra, with three probosci; 10. Shank or Sanku, a shell conferring victory on whomever should sound it; 11. Damsha, an unerring bow; 12. Bikh, poison or drugs; 13. Renuha, the Apsara, a beautiful and amiable woman; 14. Amrita, the beverage of immortality.

3. Varaha or the Boar Avatara.—In this Vishnu is generally represented four-handed, armed as usual, and with the head of a boar, on whose tusks rests a crescent, containing in its concavity an epitome of the earth, which had been immerged in the ocean as a punishment for its iniquities. So that this, as well as the two former Avatara, seems to be a repetition of the story of the deluge.

The second combines with it a portion of astro-nomical allegory; and none of the other of the ten Avatara have any apparent reference to the universal catastrophe, so pointedly indicated by the third first, which are understood to have occurred in the earliest ages of Hindu history, if such a chaotic mass as their fabulous records may be dignified by such a term. There are many fables accounting for the shape thus assumed by Vishnu on this occasion; and the boar is in Hindu legend, as well as in the mythological romances of Greece and Egypt, an animal very frequently introduced. In an ancient legend relating to the destruction of the city of Mahabalipoorum, and the seven pagodas, on the coast of Coromandel, by an earthquake and inundation during an early period of Hindu history, it is stated that Hirancheren, a gigantic prince or demon, rolled up the earth into a shapeless mass and carried it down to the abyss, whither Vishnu followed him in the shape of a hog, killed him with his tusks, and replaced the earth in its original position.

4. Nara-Singh or Man-Lion Avatara.—In this Avatara, Vishnu took the form of another monster, to punish the wickedness of Hiranya Kasipa, a profane and unbelieving monarch, the shape of the gigantic demon mentioned in the third Avatara, and his successor on the throne, who also refused
to do homage to Vishnu. Quarrelling with his son Prahlad, the king boasted that he himself was lord of the universe, and asked wherein Vishnu was greater than himself. Prahlad replied that Vishnu was supreme over all, and was everywhere. 'Is he,' cried Hrinya Kasisa, 'in this pillar?' striking at the same moment with his sceptre. 'If he be, let him appear.' In an instant, the magnificent column was rent in twain, and Vishnu, in the form of a man with the head of a lion, issued from it and tore Hrinya Kasisa in pieces.

5. Vamana or the Dwarf.—The first four Avatars are said to have occurred in the earliest or Sataya age of the Hindus, corresponding in character with the golden or virtuous age of the fabulists of other regions. The fifth happened in the second or Tirtyayu. Maha Bali, a virtuous monarch, was still so elated by his grandeur, that he omitted essential ceremonies and offerings to the deities; and Vishnu, finding it necessary to check the influence of such an example, resolved to mortify and punish the arrogant ruler. He therefore condescended to become the son of Kasyapa and Aditi, and the younger brother of Indra, and assumed the form of a wretched Brahman dwarf; appearing before the king, he asked a boon, which, being promised, he demanded as much land as he could pace in three steps; nor would he desire further, although urged by Bali to demand something more worthy of him to give. Vishnu, on obtaining the king's promise, required a ratification of it, which is performed by pouring water on the hand of the applicants. As soon as the holy stream had reached his hand, the form of the dwarf began to expand itself, and at length became so enormous that it appeared to extend itself up to heaven, then with one stride he compassed the earth, with another, heaven, and with the third was about to obtain patala, when Maha Bali, convinced that the pretended dwarf was no other than the god himself, fell prostrate in adoration before him, and yielded it up. From this incident of Vamana, Vishnu is also called Trivikram, or three-stopper. It is maintained by some Vaishnavas that the ratifying stream, poured on the hand of Vishnu in this Avatar, was the river Ganga, which, falling from the hand of the miraculous dwarf, descended thence upon his, now Vishnu's foot, whence, gushing as a mighty river, it was received on the head of Siva. In M. le Gentil's Voyage aux Indes, a rough map or plan is given, from a native original, of the course of the Ganges, which is there made to issue from the foot of Vishnu, and, falling on the head of Siva, flows in the style commonly seen through the cow's mouth. This is the only instance recollected of the source of the river being delineated as proceeding directly from Vishnu.

6. Rama or Parasu Rama.—Among the Avatars of Vishnu are recorded three favoured personages in whom the deity became incarnate, all named Rama. They are distinguished by the names of Bala Rama, Parasu Rama, or Parasaram, and Rama Chandra, and are all famed as great warriors, and as youths of perfect beauty. The first-named, Bala Rama, was elder brother to Krishna, and greatly assisted him in his wars; so that, in this instance, Vishnu seems to have duplicated himself, as indeed may be also said of the others, for Parasu Rama and Rama Chandra, otherwise called patronymically Darat Rama, were contemporaries. But it has been made a question whether they be not three representations of one person, or three different ways of relating the same history; and whether any or all of them mean Rama, the son of Kush, Sir W. Jones (As. Res. ii. p. 132) says he leaves others to determine. He deems Rama to be the same as the Grecian Dionysos, who is said to have conquered India with an army of Satyras, commanded by Pan; and Rama was also a mighty conqueror, and had an army of large monkeys or Satyras, the general or prince of whom was Hanuman, a name said by this author to mean, with high cheekbones; others translate it, with bloated cheeks, alluding to his fabled origin from Pavan, regent of the wind. Rama is also found to resemble the Indian Bacchus; he is a descendant of the sun, and the husband of Sita; and it is very remarkable that the Peruvians, whose Incas boasted of the same descent, styled their greatest festival Ramasita. See As. Res. i. p. 426, iii. p. 68.

Krishna, describing himself to Arjun as the first of all things, says, 'Among those who carry arms, I am Rama.'—Gita, p. 86. Of Parasu Rama it is related that he was born near Agra; in the Tirtya yug, or second age. His parents were Jamadagni, whose name appears as one of the rishees, and Runeka.

7. Rama Chandra.—In this Avatar, Vishnu appears in the person of a courageous and virtuous prince, the son of the powerful sovereign of India (whose capital, Ayodhya, is said to have extended over a space of forty nilles), to punish a monstrous giant, Ravan, who then reigned over Lanka, or the island of Ceylon. The Ramayana contains the heroic description of the battles and lives of all three Ramas, although it more particularly details the exploits of Rama Chandra, or Parasu Rama, so distinguished from his royal father, Dasaratha. The name of this heroic Ramacchandra, whose horse had borne him to ten regions, that is, to the eight cardinal and intermediate points, the zenith, and nadir. He was a descendant from Surya, or Hel, which is a name of the sun in Greek and Sanskrit; and one of his ancestors, the great Raghu, had conquered the seven Dwipas, or the whole earth. But we cannot explain why a Suryavansa, or descendant of the sun, should be styled Rama Chandra, the latter patronymic referring contradistinguishingly to the descendant of the moon, Chandravansa. In the Hindu mythology, however, everything seems, directly or indirectly, to merge in, radiate from, or amalgamate with, the sun, or Surya, in one or other of his names or prototypes. All sects and tribes of Vaishnavas (excepting such deistical philosophers as sceptically deny the personal existence of inferior deities, attributes, or avatars) agree in stating that, with the exception of Krishna, the potentiality of the preserving power of the deity was never exhibited in such plenitude as in this avatar of Rama. In popularity, and in dramatic, historic, and poetical shapes, it rivals the avatara of Krishna. And as the Gocalathash sect adore Krishna as the deity himself, and draw rules for their religious and moral conduct from the Sri Bhagavata, so the sect called Ramanuj similarly clothe Rama in almighty attributes, and deem the Ramayana a complete body of ethics and morality.
AVERTHOA BILIMBI.

AVERTHOA TIGE.

8. Krishna.—In this Avatar, Vishnu is said by his sectaries to have manifested himself in a degree of power and glory far exceeding any other of his former, in which he assumed only an anas, or portion of his divinity, while Krishna was Vishnu himself in mortal mould. Other sects of Hindus call Krishna an impious wretch, a merciless tyrant, an incarnate demon, now expiating his crimes in hell. His mortal parents were Vasudeva (meaning the giver of wealth) and Devaki. A miraculous escape of the infant over the Yamuna is represented, conveyed by his father, and protected by Seshu, or immortality. The guards placed by Kansa over his pregnant sister having failed in their vigilance, Kansa, enraged, ordered all newly-born infants to be slain; but Krishna escaped his various snares, one of which was sending a woman, named Patnita, with a poisoned nipple, to nurse him. He was fostered by an honest herdsman, named Ananda, or happy.

9. Budh or Buddha. See Buddha.

10. Kalki.—This Avatar has not yet appeared. But Vishnu is to appear in this avatar in the form of a white horse.—Moore's Pantheon.

AVERTHOA TIGE. Tel. Dioscorea oppositifolia, L.

AVELAGA. Tel. Capparis, sp., like C. divaricata, but the leaves are emarginate.

AVE-MAVO. Tam. Careya arborea, Roxb.

AVENA FATUA. L. Wild oats.

Gozang, Kasammi, Chenab. | Ganer, Gandal, | PANJ.

Bromos. | GR. | Jei (Hl), " | Upwa, Yupo, | LADAK.

This is cultivated in Bengal, the Dekhan, and Gujerat, and the Panjubb. It is common as a field weed in cereal crops throughout the Panjubb plains, and in many places in the Himalayas, up to 9500 feet at Lahouib, and to 11,500 feet at least in Ladukh.—Dr. J. Stewart, Panjubb Plants, p. 250.

AVENUES lined with trees are, in tropical countries, of much importance for shade. Portia and banyan branches should be straight, neatly trimmed, and of a uniform size, and planted perpendicularly. A neat fence will be required to protect them from cattle. After the branches begin to throw out young shoots, they should be carefully pruned, selecting two or three of the strongest near the top as leading shoots, to form the future tree. The young trees require water regularly in the hot and dry weather; care should be taken that they do not get loosened at the roots; this will prevent the trees leaning to one side. When a Portia tree raised from seed is grown up, it will last for ages, whereas a tree grown from a large branch is always in a state of decay after a few years from the time it is planted, and it is useless as a timber tree. The natural habits of the banyan make it an exception to this rule. The whole of the Ficus tribe grow well from large branches, and they are not so apt to decay as other trees. The planting of young seedling trees requires more care and attention than the branches. A large pit should be made 3-4-3, and filled with good earth mixed with rotten manure. They will require to be fenced and watered regularly, and the earth should be dug up and kept clear of weeds, to keep it from getting hard and sour. In forming new avenues, the trees should be planted 30 feet apart, and when the space will admit of it, a double avenue should be planted; it looks well, and forms a shady path for pedestrians.

Ficus Indica, the banyan, is the largest and perhaps the most shady of all the avenue trees.

Ficus religiosa. Poplar-leaved fig-tree. A large and handsome tree, commonly distributed over India. It is frequently to be met with near pagodas, house and other buildings.

Ficus tsiela. Jovi or Pedda Jovi, Tel. A large and very handsome tree, it is generally planted by the road-sides for the sake of its shade, and from its not sending down roots from the branches, is in so far superior to either Ficus Indica (banyan tree) or F. Benjamina, the pendulous roots of which are often dangerous impediments on a road.

Tamarindus Indica, Tamarind tree, is one of the largest in India, with a very extensive large shady head.

Casuarina muricata. Casuarina tree or Tinian pine makes very pretty avenues, especially in narrow roads.

Casuarina equisitifolia. Similar to the above. Bignonia suberosa. Indian cork tree. A good tree for planting in avenues. The flowers are pure white, and very fragrant.

Parkia biglandulosa. This large and elegant tree was introduced into India from Africa. It is one of the best trees for avenues. It requires care and water regularly.

Poinciana regia is very pretty, and should be planted in mixed avenues.

Adenanthera pavonina. Red-wood tree, large and handsome.

Acacia speciosa. A large and handsome tree of rapid growth. There are many other trees suitable for avenues, when they are merely planted as ornamental trees, and not for shade. The palm trees are also very pretty when planted in avenues.

AVERAY KAI. Tam. Lablab vulgar.

AVERHOES, a philosophe and physician of great eminence, whose name was Ablul Wahid Muhammad.

AVERTHOA BILIMBI. Wilde. Bilimbi.

Bilbingun teres, Rumph.

Anvulla. ... BOMBAY. Bilbingin-bas, MALAY. Cucumber tree. ... ENG. Wilump, ... MANGAL. Kamaranga, HIND., SANS. Bilin. ... SINGAL.

A pretty little tree, about eight feet high, with timber of doubtful value, growing generally in gardens in S.E. Asia, and producing a beautiful green, smooth, fleshy fruit, about the size of a small cucumber. In Burma it bears profusely. The unripe fruit is intensely acid, and cannot be eaten raw; but the acidity becomes less as it ripens. Amongst the Malays, it is used like the citron, the gooseberry, the cucumber, and the eaper in Europe, but can be candied or made into pickles or preserves; a syrup is prepared with the juice, and a conserve with the flowers, or preserved in sugar. Its acid juice is useful in removing iron mould.—Birdwood's Bombay Prod.; O'Sh.; Ainsle;
AWNY KARAI.

AWNY KARAI. TAM. Odina woodier.

AWRI KEERA. TAM. Marsiles, sp.

AWUR. HIND. A stockade. Peshawur, the frontier fort, etc. The Aornos of the Greeks has been supposed to be the same word, with a Greek termination. Sir Alexander Burnes supposed Aornos to be the rock of Noagi in Bajawur. Mr. Vigne supposes it to be south of Atok, in the Waziri country. See Aornos.

AWUSADAN NELLI. SINGH. Emblic myrobalan.

AW-WAL. HIND. A shark.

AXE STONE. See Cerasinite; Jade; Nephrite.

AXIS, a genus of mammals of the family Cervide, known from the markings on their skin as the spotted deer. The species are three or four in number.—A. maculatus, the chief or spotted deer of India; A. oryzanus, the spotted deer of Ceylon; and A. porcinus, the hog deer of Indian sportmen. The cheetal is often domesticated. Mr. Hodgson mentions A. medius and A. minor. See Cervide.

AY or Ayu, also Indu, the moon. The Tartars claimed descent from Ayu, the moon; hence with them, as with the German tribes, the moon was always a male deity. Ayu had a son Juldus, whose son was Hya, and from Hya came the first of the kings of China. The Ay of the Tartars, the Yu of the Chinese, and the Ayu of the Poorans, according to Colonel Tod, indicate the great Indu (or Lunar) projector of the three Lunar races of India, the Hya, the Aswa or Aisi, and the Yadu, who people all the regions from Tartary to the Indus, and spread a common language over all western Asia. He tells us that the annals of the Yadu of Jessulan state that long anterior to Vikrama they held dominion from Ghazni to Samarand; that they established themselves in those regions after the Mahabhurata, or great war; and were again impelled, on the rise of Mahomedanism, within the Indus. As Yadu of the race of Sham or Sam (a title of Krishna), they would be Sana-Yadus, in like manner as the Bhatti tribe are called Shama-bhatti, the Ashambetti of Abul Fazl. The race of Joud was existing near the Indus in the emperor Baber's time, who describes them as occupying the mountainous range in the first doab, the very spot mentioned in the annals of the Yadu as their place of halt on quitting India, twelve centuries before Christ, and thence called Jadu or Yadu-ka-dang, the 'hills of Jadu or Yadu.'—Tod's Rajaasthan, i. pp. 71, 529.

AYAH. ANGLO-INDIAN. (Qu. Iyer or Aya, SANSK.) Used by the British in India to designate a lady's maid or child's maid. It is possibly derived from the expression Aya or Ayer, which a Hindu wife or husband employs to attract the attention of one another; and Ayer is doubtless the Sanskrit Ayarr, a noble. See Ayar.

AYAING. BURM. Wild; any wild tribe or thing; an independent tribe.

AYALUOGI. ARAB. Ayal-urchi, PERS. Aquilaria agallocha, Rox.ż.

AYA MARAM. TAM. Ulmus integrifolius.

AYA-MATA. VEN. The universal earth mother; the Ayi or Ai of the Mahrrata predial races, and the Amma or Amum of the races of the Peninsula. This goddess is worshipped by all the non-Aryan tribes of the south of India. Colonel Tod describes a lofty three-peaked mountain, on which is a temple dedicated to Aya-Mata, also called Isani, the tutelary divinity of the Koli. This and the effigy of the horse are the only objects of adoration among this aboriginal race. Isani, from Isa', goddess; and Anai, 'earth,' the universal nurse mother (aya-mata). He tells us of Oodi Singh, who died thirteen years after his inauguration on the cushion of Joda, and thirty-three after the death of Maldeo, that about A.D. 1645, when he was returning home from court, he beheld the daughter of a Brahman, an 'Aya-punti,' or votary of Aya-Mata, whose shrine is at Bhai-Bhilara. These sectarians of Maroo, he says, are very different from the aboriginal Brahmins of Bengal. They eat flesh, drink wine, and share in all the common enjoyments of life with the martial spirits around them. And as there was no other course by which the father could save her from pollution but by her death, on that he resolved. He dug a sacrificial pit, and, having slain his daughter, cut her into fragments, and, mingling them with pieces of flesh, made the 'Huna' or burnt sacrifice to Aya-Mata, and as the smoke and flames ascended, he pronounced an imprecation on the raja: 'Let peace be a stranger to him! and in three pahar, three days and three years, let me have revenge.' Then exclaiming, 'My future dwelling is the Dabi Baori,' sprung into the flaming pit. The horrid tale was related to the raja, whose imagination was haunted by the shade of the Brahman, and he expired at the assigned period, a prey to unceasing remorse.—Tod's Rajaasthan, ii. 35, 36. See Kol; Mother.

AYAMMA. HIND. A grant of land to religious persons at a small quit-rent.

AYANA. SANSK. A place of motion. In Menu, ch. 1, 10, the waters are called Nara, and as these were the first production of Nala, or the spirit of God, he is thence named Narayana.

AYANA, in Hindu astronomy, a term applied to the equinoctial and solstitial points.—Mesha Ayana, Tula Ayana, the vernal and autumnal equinoaxes; Uttara and Dakshan Ayana, the northern and southern solstices; Ayana Bhagaa (vide Ayamana); Ayana Kala, the time from one equinoax to the ensuing one. Ayanasana is the arc between the vernal equinoctial point and the beginning of the solar, sidereal, or fixed zodiac (or the first point in the solar sign Mesha), being one of the most important elements of Hindu astronomy, as it refers the sidereal to the tropical zodiac (Ed. Warren). Another writer says Uttara Ayana is the apparent course of the sun through the northern signs; Dakshan Ayana the southerly course; hence the northern and southern hemispheres seem to correspond with the two Ayana, and Ayana has come into the name of Mesha.

AYANA or Ayanar, in peninsular India, south of the Palar, a Hindu deity, worshipped in small fanes, with plaster horses and goats outside of gigantic size. Women desirous of offspring place pottery images near, as votive offerings. Ayana is said to have been born of Mohini by Siva, Mohini being the female form assumed by Vishnu when churning the milk sea.—Taylor.

AYANA-GOSHIA. SANSK. The husband of Radha, the favourite mistress of Krishna.—War. AYAPANA. BENG. Eupatorium syvarpum; E. repandum. The dried leaves and twigs used in medicine. An infusion is a very agreeable diaphoretic and mild tonic. Dose, two drachmas.

AYAPANA.
AYAR.

AYAR, also Ayar-tawar. Malay. Water.

AYAR or Ayargar. Tam. Pronounced Eyar.

An instructor, a father; a title added to the names of Brahmans of the Ramanuja or Sri Vaishnava sect in the south of India; an honorific or respectful word applied to superiors. It is often applied to Europeans of rank. It is the Aryar, from Arya; it may be rendered 'lord,' and is the title given to Esvara's image in the Hindu pagodas.

AYAR-AYAR. Malay. Lansium, sp. Duku.

AYASRA. Amboin. Sandal wood.

AYATTA. Panj. Andromeda ovalifolia.

AYEN. Mal. Arctocarpus hisrtusus.

AYER-ANAS. Hot springs in Naning.

AYER-i-NOSH, a place in Persia with uaphtha springs.

AYER-MADDOO. Mal. Honey.

AYESTREE. Beng. A married Hindu woman, a femme couvert. She wears the balla, bangle, which may be of gold, or iron, or even a red thread.

AYIN-ABAKI, the regulations of the emperor Akbar, by his minister, Abul Fazl. These contain a minute description of the establishment and regulations of every department of Akbar's government, from the mint and treasury, down to the fruit, perfumery, and flower offices, the kitchen and the kennel. The whole presents an astonishing picture of magnificence and good order, where unwieldy numbers are managed without disturbance, and economy is attended to in the midst of profusion.—Elphin. p. 480.

AYILMA, a Hindu race in Khammumet and Warangal, well made, tall, and rather good-looking. They are gallant soldiers, and dangerous enemies.

AYNI of N. Canara. Terminalia coriacea. W.

AYODHYA or Ayodhya, or the invincible, an ancient town on the right or south bank of the river Gogra (Ghagra) or Sarayu, adjacent to Fyzabad, in lat. 26° 48' 28' N., and long. 82° 14' 40' E. It is now a small town of 7518 inhabitants; but it is celebrated in all Hindu poetry as founded by Ikshwaku, the first king of the Solar dynasty. Making every allowance for exaggeration, it must have attained great splendour long anterior to Rama; and it was for many years the seat of sovereignty of the princes of the Solar line. Overgrown greatness characterized all the ancient Asiatic capitals, and that of Ayodhya was immense. In the Ramayana (book i. chap. v.) it is thus described: 'On the banks of the Sarayu (Sarju) is a large country called Kosala, gay and happy, abounding with cattle, corn, and wealth. In that country was a famous city called Ayodhya, built formerly by Manu, the lord of men. A great city, twelve yojanas in extent, the houses at which stood in triple and long-extended rows. It was rich, and perpetually adorned with new improvements. The streets were well disposed and well watered. It was filled with merchants of various descriptions, and adorned with abundance of jewels; crowded with houses, beautified with gardens and groves of mango trees, surrounded by a deep and impregnable moat, and completely furnished with arms.' In the Sakuntala (Act vi.) Ayodhya is called Saketa. The country of which Ayodhya (now Oudh) was the capital, and Rama the monarch, is termed, in the geographical writings of the Hindus, Kosala, doubtless from the mother of Rama, whose name was Kosula. Rama was born here. The first royal emigrant from the north is styled, in the Rama's archives, Kosulaputra, son of Kosula.

The identity of Saketa and Ayodhya has, in General Cunningham's belief, always been admitted. At the present day, the people point to Ram Ghat and Guitar Ghat as the eastern and western boundaries of the old city; and the southern boundary they extend to Bharatkund, near Bhadarsa, a distance of 6 cos. There are mounds of ruins, broken statues, and sculptured pillars, such as mark the sites of other ancient cities, but only a low irregular mass of rubbish heaps, from which all the bricks have been excavated for the houses of the neighbouring city of Fyzabad. Kosala is famous as the early home of Buddhism and Jainism, and claims to be the birthplace of the founder of both these faiths. When visited by Hiwen Thang in the 7th century, it had twenty Buddhist temples, with 3000 monks, among a large Brahmanical population.—Toil, Journals, i. 215; Williams' Nalu, 114.

AYOTHIA, the old capital of Siam. It was founded A.D. 1351, but was devastated by the Burmese in 1751, and Bangkok became the royal residence. The native name of Ayothia was Sijon Thejan, meaning terrestrial paradise.—Boering.

AYUB, of the family of the Ayubi, the ancestor of Abul Fada, sovereign prince of Syria. Ayubi is the tribal name of the family to which Salah-ud-Din (Saladin) belonged. See Abul Fada.

AYUL. For nine or ten months, this disease renders the Terai dangerous to man, so deadly are its effects even to the natives of the country.—Olivphant, Journey, p. 39.

AYUN MUSA, Arab., the Wells of Moses, are eight miles down the Red Sea from Suez on the eastern shore. Ain (Ayun, pl.) means a natural spring, and differs from the Ber or Bir, Arab., a cistern to hold rain-water. Jacob's well, Beer Yakub, or Bir us Samariah, is 9 feet broad and more than 70 feet deep. In 1855 it still had the stone over its mouth (John iv.).

AYUR VEDA. The oldest known medical book of the Hindus. Its date is supposed to be about that of Menu Code, or B.C. 900? The author is unknown, and only fragments have come down to us. Amongst Hindus it is regarded as one of the Upan-Visas or Supplemental Veda, and in their mythology is said to have been produced by Brahma or from Siva. Its name is derived from 'Ayus,' signifying the period of living, and 'ved,' to know, intended to teach the proper manner of living in this world, by preventing and curing diseases. It is said to have consisted of 1000 sections, of 100 stanzas each, or a lakh of verses (Sloka), but Brahma abridged and arranged it into eight parts (tantras):—

1. Salya, surgery.
2. Salakya, external ailments above the clavicles; diseases of eyes, nose, mouth, ears.
3. Kaya chikitsa, diseases affecting the whole body—the practice of physic—as fevers, dysentery, mania, diabetes.
4. Bhutavibhita, mental ailments, demoniacal possession, to be removed by prayers, offerings, medicines.
5. Kauamara bhritiya, infantile ailments and nursing.
6. Agala tantra, antidotes for poisons.

211
7. Rasyana tantra, chemistry, alchemy, medicines to cure diseases in general, and restore youth.

AYUSH, the Veda descriptive of the art of music. See Vidya. Ayudha-Puja, instrument worship. Ayugma Chadda, also Ayugma Parma, Sansk., Alstonia scholaris, R. Br.

AYYAM. Arab. Season, period. Ayyam-i-nahar, season of sacrifice. Ayyam-i-gur, day of rest.

AYYAN-KERE, also called Dodda Madaga Kere, an artificial lake studded with islands, and 7 miles in circumference, at the eastern base of the Baba Budan hills, said to have been formed by Rukmangada Rayya, about the 13th century.—Imp. Gaz.

AZAD. Arab. Solitary or free. A class of Mahomedan devotes.

Ka-ma-s-p, Sank. Takanahwa, Sing.

Ko-lie-ha-sha, Chin. Tetkohomba, Singh.

Asha leaved tree, Eng. Vepam maram, Tamil.

Indian lilae, Teln. Vepa, Yepa, Nims.

This beautiful tree is found in Ceylon, throughout India and Burma, and in some localities attains a large size. It yields a compact, hard, heavy, durable wood; when old, difficult to work, but beautifully mottled, and deserving attention for ornamental purposes. It is well fitted for shipbuilding and carts. Some samples exhibited by Mr. Rohde at the Madras Exhibition equalled the best fancy woods, and some of the finest furniture he had seen was from an old margosa tree. It is used for cart wheels, and in bare districts of the Bombay Presidency, for building and agricultural purposes. It would be of importance to increase this tree throughout the country. It comes into full foliage in the very midst of the hot weather. Every part of the tree is bitter; and its leaves, bark, seeds, and the oil from its seeds (karwa tel or bitter oil) are largely used in native medicine. Its leaves are applied to leech bites and blisters; also to promote the flow of the breast milk. The bitter oil of the fruit is a valuable anthelmintic; the seeds are used in the destruction of insects. The leaves, beaten into a pulp, and thus externally applied, act as a charm in removing the most intractable forms of pox and other pestilential eruptions. A decoction of the leaves is used for cleaning foul ulcers, and leaves are used for making poultices. The oil from the seed is used to kill vermin in the hair, and, mixed with illupu oil, it forms a hard vegetable wax. The bark has been recommended in fevers, but is only a bitter tonic. The tree is veneered by the Hindu people, who, regarding the small-pox as a goddess, employ the leaves in that disease, and, as with the shrew ash tree in England, it is often resorted to by the friends of the insane, who beat the sick person through a cleft of the tree, or through a stem which, having parted and reunited, forms a circular opening.—Roxb.; Voigt; Wright; Mr. Rohde; Cornish; Gibson; Elliot; C. Ez., 1862; Royce; Clegh.

AZALEA, a genus of plants yielding fragrant flowers. They are much cultivated in China, where A. alba, Indica, lateritia, Phoenicea, the yellow Azalea Sinensis, and A. variegata, cover the hill-sides, at least 1500 feet above the level of the sea. Few can form any idea of the gorgeous and striking beauty of these azalea-clad mountains, where, on every side, as far as the eye extends, the eye rests on masses of flowers of dazzling brightness and surpassing beauty. Nor is it the azalea alone which claims our admiration; clou de aises, wild roses, honeysuckles, the Glycine, and a hundred others, mingle their flowers with them. High up on the gorgeously painted hill-side grow the lovely Azalea Sinensis, with its colours far more brilliant, and its tusses of yellow flowers much larger, than they are ever seen in any exhibition in Europe.

A. aurantiaca has a great abundance of white, orange, purple, scarlet, and variegated flowers.
A. indica, Linna., is a bush two to six feet high, with drooping branches and purple and variegated flowers.
A. ledifolia, Hooker, has two varieties, the royal purple and the Phoenicean.
A. obtusa is highly prized by the Chinese for its brilliant, dazzling flowers.
A. amoena, Fortune, has a profusion of small, semi-double pink flowers.
A. ovata, Lindley, covers the hill-sides of Chin up to 1500 feet.
A. procumbens grows profusely on the hills in Hu-peh and Kiang-si, and is called Lau-hu-hw or Gan-chih-chuh.
A. pontica, called Hwang-tsu-kiuen, is very poisonous, and the smell of its fresh flowers is injurious.—Fortune's Residence; Fortune's Wanderings; Eng. Cye.; Riddell.

AZAMGARI, a revenue district in the Benares division, of 2665 square miles, and a population of 1,531,482 souls. It is well cultivated, but with many unais or reh patches. Its principal river is the Gogra (Ghagra), called also the Sarju or Sarvy, and the Debhi or Debra. The aboriginal inhabitants are the Rajbar, Siir, Sengaria, and Chara. But Rajput castes it from the Bhuih, a race known as the Bhuinhar followed, and as the Rajputs. The Dehli emperors took possession, but were expelled by the Dehli Raghash, and then again by the Tana Rajputs. It again became Dehli and Ooty territory, and finally British in 1801. The people are Brahmans, Kalabriya called Thakur, Bhuih, the Kuri, Kachi, and Lohla agricultural proprietors, with Arak, Chamar, Dom, and Pasi.

AZAN. Arab. The Mahomedan summons of prayer, proclaimed by the Muzaan. It is different from the ordinary call, and is peculiar to every orthodox Mahomedan nation. The Muzaan, with his face to Mecca, for the five daily prayers—

1. Allah ho akbar (four times).—God is great.
2. Ash-had-do-an, la-ilaha il-lil-la-ho (twice).—I bear witness there is no deity but God.
3. Wa ash-had-do-an, Mahomed-un-Rasul ol lahi (twice).—And I bear witness that Mahomed is the messenger of God.
4. Hy ul as-salwast (twice).—Come enliven your prayers.
5. Hy al ul Fallah (twice).—Come for refuge to the asylum. (Come to salvation.)
6. Us-sal-la-to khyrun min nun-nown (twice in the morning prayer).—Prayer is better than sleep.
7. Allah ho akbar, La-ilaha il-lil-la-ho (once).—God is great. There is no deity but God.
The Azan is proclaimed from the minaret of
AZAREH.

HIND. Achryanthes aspera.

AZEBIJAN, the chief commercial city of Persia. It owes its flourishing state to its position on the long-established route by which the goods of Great Britain and Europe are conveyed from the Euxine port of Trebizond, through Turkish Armenia by way of Erzerum, to supply Persia and Central Asia.

AZERBAIJAN, n.c. 130, one of the conquering Scythian kings, on whose coins are bilingual inscriptions, with plain, distinct Greek characters. In Ariam, Maharajasa Raja Rajaja Mahatasa Ayasa. The figures on the coins are various. Professor Wilson thinks he was an Indian Buddhist king, about B.C. 50. Professor Lassen regards him as a Saci Scythian, who conquered the Kâbul valley in the time of the second Mitridates, and finally destroyed the kingdom of Menander and Hermeus in about B.C. 120. He considers he was succeeded by Azilises, B.C. 115, who reigned with the same titles as Azes. On one coin the name of Azes is on the Greek obverse, and that of Azilises on the Bactrian reverse.

AZFUR ZUKKUM. AR. Euphorbia tortilis.

AZHZADAHA. PERS. A dragon. A rock in the valley of the Logar river, in the Hazarajat of Afghanistan, supposed to represent a pterified dragon slain by Ali.

AZIM. ARAB. Great. The word is part of the Arabic verb 'azm,' he was great; other parts of this verb are frequently met with wherever Mahomedans are spread, in the names of towns, of individuals, and in titles, such as Azim-ghrur, Azim-pur, Azim Jah, Moazzam-ud-Dowla, literally the Honoured of the State. Azim-us-Shan, splendid; Azim-ud-Dowla Bahadur.

AZIZ, the thakollus or literary name of Khan-i-Aziz, a man of great learning and a poet at the court of the emperor Akbar. He was the foster-brother of Akbar, and one of his best generals. He had been long absent from court, in the government of Gujerat, and his mother prevailed on Akbar to invite him to court, but he excused himself, and it appeared that his real objection was to shaving his beard and to perform the prostration. Akbar wrote a good-humoured remonstrance, but Aziz persevering, Akbar sent him a positive order to come to the capital, on which Aziz threw up his government, and, after writing an insolent and reproachful letter, in which he asked Akbar if he had received a book from heaven, or if he could work miracles like Mahomed, that he presumed to introduce a new religion, warned Akbar that he was on the way to eternal perdition, and concluded with a prayer to God to bring him back into the path of salvation; he embarked for Mecca without leave or notice. In a short time, however, he found his situation in that country irksome, and returned to India, where he made his submission, and was restored at once to his former place in the emperor's favour and confidence. —Elph. pp. 468-473.

AZKHAR. HIND. Anthropogon iarwancusa.

AZMA. GUJ. Ajwain seed.

AZMEI. PERS. Erya bovi.

AZORELLA SELAGO, one of the Umbrellifer of the islands of the South Pacific. It forms hummocks.

AZRAIL. ARAB. The angel of death.

AZUN. MAHR. Terminalia arjuna.

AZURE STONE, or lapis-lazuli, is said to be found massive with iron pyrites amongst the Ajmir hills, especially the N-pushar range. This stone is sold by all 'attars,' both as a medicine and a pigment. The native name in Ajmir is 'laj-wurd.' —Gen. Med. Top.

B

B. This consonant has letters with corresponding sounds in Arabic, Persian, Urdu, Sanskrit, Hindi, Marathi, Gujar, Bengali, Urya, Telugu, Karnata, Tamil, and Malasiam; and in all but the Tamil tongue the English bh is also represented. In the languages of different races, b, v, w are interchangeable letters; in Bengali, for instance, Valayat, a foreign country, becomes Balat; and the b of the Arabic and Persian is changed to f or ph in several of the Indian tongues.

BA. PERS. With, possessing; thus, ba-ulad, with offspring.

BAAL. and Astarte, the two chief divinities of Phoenicia, were unquestionably the sun and moon, which are still worshipped by all Hindus; and the minor deities appear to have represented objects of astral worship. Baal was Baal semen, lord of the heavens or sun. Bel, the chief god of the Babylonians, was also the sun. Baal, Bel, Belus, the sun, or lord of the heavens, almost assimilates in character and attributes with Kronos, Ouranos, Moloch. But, in time, Baal began to be regarded as the supreme lord, and the sun, in its physical character (2 Kings xxvii. 5), was worshipped separately; the Jews and the Israelites paid homage to the sun. The sect of the Esseniim everyday saluted the rising sun, and invoked him in the morning to appear. The Bible expressly forbids this idolatry, and commanded those who were found guilty of adoring the sun and the moon to be stoned (Deut. xvii. xviii.). In the book of Kings, chap. ii., this idolatry is related as the principal cause of the ruin of the kingdom of the Jews. Plutarch endeavoured to destroy this worship among the Greeks. He says, in his book of Isis and Osiris, that the elements are not to be adored; neither the sun nor the moon, because they are only mirrors in which may be seen some trace of
BAALBEC.

The Infinite Wisdom of the Creator, who has made them so brilliant and beautiful. The Brahmans and Hindus of India to this day address prayers to the sun every morning. Many explanations and interpretations are given of the meaning of the celebrated Gaithri Mantram, the text of the Veda used when initiating a young Brahman into the order, but that it is addressed to the sun, under the name of Savitri, there is no doubt; and much of the Hindu worship has an astral origin; and there are many ancient and modern sun temples. Every day, too, the whole Parsee race worship this luminary.—Bunsen, Egypt, iv. 350; Sonnerat’s Voyage, pp. 76–77.

Baalbec, the Ba-alith of Scripture, the Heliopolis of the Greeks, the City of the Sun, now a small Arab hamlet, but famed for its ruins. The place is built on the lower slopes of the Anti-Libanus, 43 miles N.W. of Damascus, in lat. 34° 11′ 30″ N., and long. 36° 11′ E. The date of its origin is unknown, but Antoninus Pius built one great temple. The city passed successively beneath the rule of the Persians, Greeks, and Romans, and was plundered by the Arabs in A.D. 748; suffered under various assailants during the crusades, and was sacked and dismantled by the Turks under Tamerlane A.D. 1400. But its name is handed down in the labour catches of the Madras Mahomedans; ‘Ya, Ali! ya, Baalbee! ya, Rasul Allah!’ are still heard. The temples of Baalbec stood upon an elevated platform raised 30 feet above the plain, having immense vaults underneath. Three of the stones in this foundation are each 63 feet long by 15 wide, and 13 deep. On the platform stood three temples,—the temple of the Sun, the temple of Jupiter, and the Circular Temple. The largest of these, the temple of the Sun, was 290 feet long by 160 feet broad, surrounded by fifty-four Corinthian columns 75 feet high, and 7 feet 3 inches in diameter at the base. A few only of these immense columns now remain. The space covered by these ruins is only 900 feet long by 600 feet wide. The magnificence and magnitude of the columns and the Cyclopean masonry have been the wonder of the world.

BAALIT, i.e. mistress, queen; the wife of the Egyptian Adonis. Identical with the Greek Hestoreth, Astarte.

BAALUT. Arab. An acorn.

BAATO. Malay. Black trepang.

BAB. Arab. A door. Bab Allah, ‘the gate of God;’ one of the gates of Damascus, so called from being that through which the Haj or pilgrim caravan passes on starting for Mecca. Bab-al-Ali, the sublime door or porte; the chief office of the Ottoman government; the respectful mode of designating the emperor of Turkey.

BAB. Arab. A section, a chapter of a book; a heading of accounts. Babat, an item of account.

Babati, revenue, a cess.

BABA, a title applied to Sikh ascetics. Both this and the titular designation Shah (King) were frequently employed by the Sikh historians when speaking of their founder. They even style him Nanak Narinkurn, or Nanuk the Omnipresent.—Malcolm; MacGregor’s Sikhs.

BABA, a term applied to the descendants of Oody Singh, raja of Mewar. He lived for four years after the loss of Chitore, and expired at Gegoonda, aged forty-two. He left a numerous issue of twenty-five legitimate sons, whose descendants, all styled Ranawut, pushed aside the more ancient stock, and form that extensive clan distinctively termed the Baba, or ‘infants’ of Mewar, whether Ranawut, Purawut, or Kanawut. His last act was to entail with a barren sceptre contention upon his children, by setting aside the laws of primogeniture, and proclaiming his favourite son Jugmait his successor.—Tod.

BABBASA. Tel. Hydrocotyle rotundifolia.
BABEER, the papyri antiquorum; it grows in the marshes of Egypt, and in the stagnant waters of the Nile.—Hogg's Veg. King, p. 806.

BABEGAN, the surname of Ardeshir.

BABEL of Scripture is the Babiru of the cuneiform characters, and the Beber of the Egyptians. Its age is uncertain, but, according to Genesis, it is older than Assur and Nineveh (Gen. xi.). The tower was a watch-tower, a fortified observatory or rallying place, in the midst of a great plain; and there can be no doubt that there was a tower of Nimrud in the early times before the Chaldean period. This tower is connected with the decline of the kingdom of Nimrud, and the dispersion of nations.—Bunyan's Bible, iii, pp. 182, 451, iv. pp. 373, 414. See Babylon; Kusra.

BABER was born at Farghana, on the Jaxartes, A.D. 1482. His name was Zahir-ud-Din Muhammad. He was, on his father's side, sixth in descent from Timur, and his mother was a Moghulian. His father, Umar Shaikh Mirza, a Chaghatai Turk, was the fourth son of Abu Said, whose extensive dominions were shared amongst his sons. He died, A.D. 1494, when Baber was only 12 years old. In 1497, Baber, after more than once failing, conquered Samarcand, only to lose it again after a reign of 100 days, and he was driven from it by his native kingdom. In 1499 he again recovered Samarcand and Farghana, only again to lose both of them, and he took refuge in the inaccessible mountains to the south of Farghana. From this, with 240 men, he set out for Samarcand, scaled the walls at night, and took the city, and all Sogdiana then declared for him. But he was again totally defeated and driven within the walls of Samarcand, by Shaibani Khan Uzbek; and, after sustaining a four months' siege, during which many of the inhabitants perished from famine, and the soldiers deserted, Baber evacuated the town. He passed nearly two years in the utmost poverty and distress, but again recovered Farghana, again to be driven from it by the Uzbeks; he was made prisoner, and with the utmost difficulty recovered his freedom. The whole of Transoxiana, except that annexed to Bactria, fell into the hands of the Uzbeks, and Baber bade a last farewell to Farghana, and set out to try his fortune beyond the range of the Hindu Kush. After all that he had done and suffered, Baber was yet only in his twenty-third year; adventurers gathered round him, and at the head of a well-equipped army he advanced on Kâbul, of which he took possession, A.D. 1504, without opposition. The next years were passed in the conquest of Kandahar, in expeditions into the mountainous regions of the Afghan and Hazara, and in a dangerous journey to Herat, to concert measures with that branch of the house of Timur for their common defence against the Uzbeks. On these occasions he underwent the usual risks, and more than the usual hardships of war, and had once nearly perished in the snow during a winter march through the mountains of the Hazaras. In A.D. 1506, his brother Jahangir revolted, was subdued and pardoned; next year, 1507, the Moghul troops set up one of his cousins as king, and he also was defeated and pardoned. In 1508, he had to meet a conspiracy amongst the Moghuls, who planned to seize Baber, and raise Ablîr Razak to the throne; but Baber by his personal courage and exertions retrieved his affairs. And when Shaibani Khan, in 1510, was defeated and slain by Shah Ismail Safavi, king of Persia, Baber made an alliance with Shah Ismail, retook Bokhara and Samarcand, only to be again defeated; and in 1514 he had lost all his possessions but Bactria, and he now turned his attention to India, claiming the Panjab as part of the conquests of Timur.

He was reigning at Kâbul when Daria Khan Lodî was proclaimed king, but Daulat Khan Lodî, governor of the Panjab, revolted, and called Baber to his aid. Baber totally defeated a combination of Afghans near Lahore, and that city was reduced to ashes, A.D. 1524, A.H. 930; Dibalpur was stormed, and the garrison put to the sword. Daulat Khan joined here, but after wards revolted, and Ala-ud-Din fled to Kâbul, while Baber was defending Balkh against the Uzbeks, and he sent Ala-ud-Din to India with orders to his own chiefs to assist him. Ala-ud-Din advanced to Delhi with 40,000 men, but was totally defeated. Baber at this time had settled Balkh, and had returned to Lahore. He followed Daulat Khan into the hills, and obtained his submission, and then continued his route through the hills to Rupur on the Sutlej, above Ludhiana, and moved from thence nearly by the direct road to Delhi. At Panipat he was met by Ibrahim Khan Lodî with a force of 100,000 men and 1000 elephants. The Indian troops fell into disorder, were completely routed, and Ibrahim was killed. Baber estimated that 15,000 or 16,000 lay dead on the field; and the Indians reported that not less than 40,000 perished in the battle and pursuit (21st April 1526). Delhi surrendered (10th May 1526), and Baber advanced and took possession of Agra. After taking Agra, he distributed the captured treasures to his adherents. He gave his son Humayun a diamond, which was esteemed the finest in the world; and he sent a present of one Shah-Rukhi to each man, woman, and child, slave or free, in the country of Kâbul. He occupied the district to the N.W. of Delhi, with a narrow tract along the Jumna to Agra, and Humayun subdued all the provinces ever possessed by the house of Lodî, including the former kingdom of Juânpur. The last places that submitted were Biana, Dholpur on the Chambal, and Gwalior beyond that river (July to October 1526, A.H. 932). He next subdued the combined forces under raja Sanga of Mewar, and fought and won the battle of Sikri on the 16th March 1527, A.H. 13, Jamâdi-ul-Sani 933, and afterwards reduced Mewat. About the beginning of 1528 (A.H. 934), he marched against Medni Rai, the Rajput chief of Chandeli. On the second day of the siege, the garrison gave up all for lost; they put their women to death, and rushed forth naked, not to conquer, but to die. They drove to the Mahomedans before them, leaped over the ramparts, and continued their charge till destroyed; 200 or 300 had remained to defend Medni Rai's house, most of whom slew each other, each contending who should be the first victim (20th January 1528). During this siege he heard of a rebellion amongst Afghans in Oudh, and he seems to have driven

215
BABER.

them into Bengal, taken Behar, and obtained the cession of the fort of Rintambor from the second son of raja Sanga. He subsequently moved against Sultan Mahmud, king of Bengal, who vainly attempted to defend the passage of the Gogra, and he sent a force in pursuit of a body of Afghans, who were destroyed in Bundelkhand. As Baber’s health had been on the decline, intrigues were got up as to the succession. Humayun left his government of Badakshah without leave, but was affectionately received by Baber. Humayun, however, fell very sick, and Baber carried out the superstitious custom of taking the ailment on himself as a self-sacrifice, by walking three times round his son’s bed. This he did solemnly, then knelt in earnest prayer, and rose exclaiming, ‘I have borne it away, I have borne it away;’ and so powerful was the impression on his own and his son’s minds, that the son began to mend, while Baber declined. In the midst of intrigues, he died at Agra, 20th December 1530, a.p. 507, in the 50th year of his age. The last words he said to his son were his desire, at Kâbul, in a spot about a mile from the city, selected by himself, to him the choicest in his wide dominions. It is a brick building. A running and clear stream yet waters the fragrant flowers of the cemetery, which is the great holiday resort of the people of Kâbul. In the front of the grave is a small but chaste mosque of white marble; and overlooking the tomb is a hill from which is a noble prospect. He was the most admirable, though not the most powerful, prince that ever reigned in Asia. He kept a diary in the purest Turki tongue, the Tuzak-i-Babari, or Wakiat-i-Babari, which has been translated by Mr. Erskine and Dr. Leyden; and his memoirs contain a minute account of his life. The unsettled nature of his life is shown by his observing, near the end of it, that since he was eleven years old he had never kept the fast of the Persian Sunæ or one day; yet he found time to compose many elegant Persian poems, and a collection of Turki compositions are mentioned as giving him a high rank among the poets of his own country. He left four sons,—Humayun, Kamran, Hindal, and Mirza Askari.

Baber’s army, when invading India, had a large number of the Kipechak from Andijan. The Kipechak are part of a family scattered all over Central Asia; and there are Kipechaks amongst the Uzbak and Kara Kirghiz. Their country lies between the Naryn and the Kara-darya. They have ever been a brave race. Baber spoke and wrote in the Chaghatai Turki, and that language continued in use at court until a late period. There were, however, two races, two languages, and two sorts of religions, in that court,—the nobles of Turan and of Iran, of Tartary and of Persia. The former were of the Sunni sect; the latter of the Shiæ sect, and spoke Persian. In the later days of the empire the contentions between these two sects were a cause of its weakness. He founded the long line of kings under whom India, in the 17th and the 18th centuries, rose to greatness. His reflections on success evince it was his due. ‘Not to me, O God! but to thee be the victory!’ says the chivalrous Baber. He obtained a translation of the Christian Scriptures; and his grandson Akbar, who in A.D. 1556, at the age of fourteen, ascended the throne, invited a party of Christian missionaries to his court. Amongst the princes from the Jaxartes are historians, poets, astronomers, founders of systems of government and religion, warriors and great captains, who claim our respect and admiration. Were we to contrast the literary acquirements of the Chaghatai princes with those of their contemporaries of Europe, the balance of lore would be found on the side of the Asiatics, even though Elizabeth and Henry iv. of France were in the scale. When not at war, he was travelling or hunting. On his last journey, when his health was failing, he rode 160 miles in two days, from Calpi to Agra, and swam across all the rivers in his route. He occupied himself largely in making roads, reservoirs, and aqueducts, and paid great attention to the introduction of new fruits. He was a poet, a historian, and a musician; elegant yet free in his manners, easy of access to his subjects, and fond of social enjoyments. He was an enthusiastic admirer of nature; and his memory dwelt on his native stream, the valley of Farghana, which the Uzbek Tartars had seized. —Elip.; Baber's Memoirs; Burves' Travels; Elliot's Hist. of India; Brigg's Periška; Tod's Rajasthan.

BABI, a sect founded by Syud, or Mirza, Ali Muhammad. He was born at Shiraz. His father was a merchant, who sent his son, when fifteen years of age, to study theology at Najaf. He settled for a short time at Abushahr as a merchant, but discontinued that and became a dervesh, and settled at Kazanim, near Baghdad, where he claimed to be a prophet, and assumed the title of Bab-ud-Din. Many people became his followers, and he was repeatedly imprisoned, and finally was shot at Tabrezz about A.D. 1550, and the sect largely destroyed. His doctrines were atheistic, under the guise of pantheism. Many Mulla and Mushtahid joined him. The title of Bab-ud-Din (door, porte, of the faith) was assumed to imply that he or his native shores were the way or gate to heaven. There are many of this sect in Baluchistan, settled at Kalat and Shal for purposes of traffic. Pottinger says of these: ‘The appearance of the Babi merchants is rather prepossessing; stout, well-made men, with good features.’ —Pottinger's Travels; Shiel, quoted by MacGregor.

BABI, an Afghan tribe.

BABI. MALAY. Hog. Babi-Alu, Tapirus Malayanus, Raffles. Babirusa alfurus, the Babirusa hog of the islands of the Archipelago; its eastern limit is Buru.

BABIKU, of the cuneiform characters, is the Babel of Scripture.

BABU-RUNG. BENG. Embelia ribes.

BABISARN. MALAY. Morus Indica.

BABLAH, also Neb-Neb. ARAB. The rind of the fruit of the Acacia ferruginea. It is used as a substitute for the more expensive dye-stuffs, and for commercial shirting of dyes to cotton. Also A. Arabica in Bengal.—Faulkner.

BABOO, amongst the Hindus, a respectful appellation equivalent to the English ‘esquire,’—your worship; or ‘your reverence,’—or to the Mahomedan; hazzat. It is still not infrequently applied to Europeans when addressed by a Hindu. In Calcutta, a baboo is a Hindu engaged in mercantile business, a native clerk who writes English; in Gorakhpur, any man of family or influence; in Benares, the near relatives of rajas.
BABOON.  

Quadrumanous mammals of the sub-family Papioninae. One has received its Latin name, Cynocephalus, from the dog-like shape of its head; also species of the genera Papio and Cercopithecus.  

BABBA, three marches from Jeypore, on the road to Dehli, has one of the edicts of Asoka on a block of rock on a hill, in old Pali, and of date a.c. 309. It is in the oldest Lat character. It differs somewhat in style and language from the pillar and rock edicts. The subject is the Buddhist commandment forbidding the sacrifice of four-footed animals. The Vedas are alluded to, but not named, and condemned as 'mean and false in their doctrine, and not to be obeyed.' The Scriptures of the Muni (which must be the Vedas) are spoken of as directing blood-offerings and the sacrifice of animals. Priests and priestesses, religious men and religious women, amongst the Buddhists, are commanded to obey the edict, and bear it in their hearts.—J. B. A. S. ix. p. 617.  

BABRI. Hind. A kind of peach.  

BABRIA, a tribe of Hindu cultivators in Kattyawar, giving their name to Babriawar. They have 72 divisions. It is one of the five southern districts of Kattyawar; its people, the Babria, are said to be the offspring of an Ahir with a Koli woman. See Kattyawar; India.  

BABUA, Sansk. Cordia myxa.  

BABU-TULSI. Beng. Ocimum basilicum.  

BABUL or Baboo, a Hindi word, applied as a generic term to some species of Acacia. The Babul proper, A. Arabica, in Sind is very abundant, grows to a large size, and is exceedingly hard and heavy. For agricultural implements and all native purposes, it is excellent. It was much used by the Indus Flotilla for paddle flats, rudders, stanchions, and boats' knees—in fact, for every purpose to which good wood can be applied. Its bark is employed in tanning, its pods form a valuable food for cattle; its young branches are the favourite food of camels and goats, its bark yields gum and lac; and for all these articles—wood, bark, pods, gum, and lac—a sale is always found. Drs. Gibson and Cleghorn have strongly advocated the extension of this tree by plantations; and sites indicated as suitable are the banks of the Indus in Sind, the Tumbudra, Bhima and Moota Moole, the Belhary, Nuggur, Ahmadnagar, Sattarah, Kuteh, and Kattyawar districts. Babul gum, largely produced, and well known in commerce, is the product of the Acacia arabica. It is largely used in India as a substitute for the true gum arabic, the produce of the Acacia vera.—M. E. Jur. Rep.  

BAB-ul-MANDAB, a strait at the entrance of the Red Sea, between Africa and Arabia, formed by Ras Sejan on the Abyssinian shore, and Ras Bab-el-Mandeb on the Arabian shore, the distance from point to point being 14½ geographical miles, but divided into north and south parts by the island of Perim. The north or small strait is 1½ mile in breadth, and it is formed by Perim and Pilot Island, a small rocky islet half a mile distant from Ras Bab-el-Mandeb, the soundings being 8 to 16 fathoms. The south strait is formed between the south point of Perim and Ras Sejan, and is 11½ miles in breadth, with soundings in mid channel at 100 to 185 fathoms. On the N.E. side of the entrance to the Red Sea, a prominent headland, with low land behind it, has the appearance of an island. Quoin Hill, Jabal Mia Aliy, is 865 feet high, and slopes towards the sea. Bab-el-Mandab is an Arabic term, meaning the gate of affliction, supposed with reference to the dangers which were anciently encountered in its navigation. It is the limit of the Turkish possessions to the north.—Findlay's Horsh. ; Playfair.  

BABUNAH, Pers. Anthropophagorachis. A chamois. Its root, under the name of Bombay-Surkh, is taken as an aperient and general tonic; sells at 1 rupee a seer.—Gen. Med. Top. of Ajmir, p. 128.  

BABU-PHALI. Hind. Species of Corychus; C. olitorius, depressus, acutangula.  

BABURI. Jhelum. Mentha Royleana, Benth.  

BABYLONIA. This ancient sovereignty comprehended a narrow tract along the river Euphrates, extending from the neighbourhood of Erech, the modern Warka, or from about the modern town of Seikh-ul-Shuyukh, to Babel, a distance of about 154 miles in a direction westward of north, and continuing from thence 287 miles further in the same direction to Kalneh, the modern Niffer, on the Khabur. The dominion extended eastward till it joined Assyria, including Akkad, and two other cities no less remarkable. One of them bears the name of El Kush, extensive ruins about 11 miles E.E. of Felujah; and the other is the proposed site of antediluvian Sippara, Siferah of the Arabs (Liet. Lynch), which is within the Medina wall, near the southern extremity. The greater part of what was called Mesopotamia in latter times, constituted, therefore, the territory of ancient Babel, the Aram Naharain, or Syria between the rivers, of Gen. xxiv. 10; Deut. xxxii. 4. The same tract also bore the name of Padanaram (Gen. xxxviii. 2), or Champagne Syria, both of which designations agreed with the description given of the country by Strabo. Babylonia is the modern Iraq-i-Ajam. Much light is being thrown on the history of this ancient and ruined city, its dominions, and its rulers, by the researches of learned men, who have been deciphering the cuneiform inscriptions found in the ruins of Nineveh. But the beginning of Chaldean history is lost in fabulous antiquity. Ten kings, whose reigns are stated to have occupied 432,000 years, are enumerated as existing before the flood; while in the ages that succeeded that event, a maritime race, described as strange composite creatures, half men, half fish, are made to ascend from the ocean to teach the tribes of Babylonia the rudiments of civilized life. Later legends, too, brought the instructors of Chaldea, in art and science and writing, from the waters of the Persian Gulf. At a very early epoch, the occupants of Chaldea, the 'Sumirians,' were conquered by the Akkadai, 'highlanders,' their kinsmen in speech, from the mountains of Elam, and the country became divided between the newcomers in the south, and the old population in the north. And it is probable that to the Akkadians is due the invention of the picture writing out of which the cuneiform characters were to spring. The earliest historical princes, however, whose inscriptions have come down to us, are those of Ur, on the western bank of the Euphrates. Here was the seat of the first monarchs of all Chaldaea,
who assumed the imperial title of 'kings of Sumir and Akkad.' The fall of the supremacy of Ur, and the final overthrow of Akkadian rule, seems to have been the result of a Semitic invasion. Assyria had become an independent monarchy in the 17th century B.C. About 1270 B.C., Tiglath-Pedar captured Babylon, and founded there the dynasty which Berosus, the Chaldean historian, called Assyrian, and for a time Assyria and Babylon were under the sway of one sceptre. Tiglath-Piileser I., whose date is fixed by later inscriptions at B.C. 1120-1100, is depicted as having made many conquests, and left a model for all future Assyrian kings to follow. The empire was handed down in succession from father to son, and established by the conquests of Assur-Nazir-bal and Shalmaneser II. in the 9th century B.C. But it was an empire of mere military occupation. No attempt was made to amalgamate the countries that had been subdued; and so soon as disorder broke out in Assyria, or when the monarch ceased to be a man of action, the empire was contracted to the neighbourhood of Nineveh itself.

The second Assyrian empire owed its origin to Tiglath-Piileser II., who seized the throne in B.C. 745, and inaugurated that system of satrapies which was afterwards perfected by the Persian Darius. Founded by a usurper, it was perpetuated by usurpation and murder. Its first three rulers, Tiglath-Piileser, Shalmaneser, and Sargon, were all successful generals unrelated one to the other. Tiglath-Piileser as well as Shalmaneser were probably assassinated; the inscriptions show that such was the fate of both Sargon and Sennacherib. Esar-Haddon ended by abdicating: while it was under his successor, Assar-Bani-pal, that the great revolt broke out which ushered in the decline of the Assyrian empire that had extended from the borders of India to Lydia and Nubia, had penetrated into the heart of Arabia and the Caucasus, and had made the ancient kingdoms of Babylonia and Egypt tributary provinces. Some interesting fragments of tables appear to relate to the closing period of the Assyrian empire. It was attacked by a great coalition of tribes from the north, its armies defeated, the frontier cities taken by storm, Nineveh itself fell, and its king, Esar-Haddon, the Saracens of the Greek writers, perished, if we may trust classical tradition, on the funeral pile of his own palace. With him fell the second Assyrian empire, after an existence of less than a century and a half.

George Smith gives from the inscriptions the following lists of the Babylonian kings after the deluge:

| (a) For a mythical period. |
| (b) Kings of Ur. | B.C. 3000 to 2000 |
| (c) Verocoy. |
| (d) Elamite kings in Babylonia. | 2290 |
| (e) Kings of Larsa. |
| (f) Kings of Karkuk. |
| (g) Kings of Ereh. |
| (h) Kings of Agae. |
| (i) Kings of Babylon. |
| (j) 1st Cassite dynasty. |
| (k) Kings of Babylon, 2d Cassite dynasty. | 1700 to 1300 |

The first with an approximate date was—

Cara-Indas, about B.C. 1450 | Curi-gala II., B.C. 1380 |
Burna-Burus II., | 1430 Melishak II., 1350 |
Cara Murugas, | 1410 Merodach Baladai I., 1325 |
Nazi-Bugas, | 1400 Nazi Muradas II., 1300 |

Babylonia.

Babylonia.

Rimmon-Isu, | B.C. 1270 |
Zamana Zaciridin, | 1200 |
Cara Bursa, | 1150 |
Merodach Nadin-akhi, | 1100 |
Merodach Sapik Zurat, | 1097 |
Sadna, | 1080 |

Sukamuna, son of Zab, reigned 17 years. Hea-mein-Ziri, son of Cuitmar (a usurper), for 3 months.

Cassu Nadin-akhi, son of Sappai, for 6 years.

(2) Dynasty from the Persian Gulf.

Ulanz-Nadin-akhi, son of Zab, for 15 years.

Nebuchadrezzar II., son of Bazi, for 2 years.

Sukamuna, son of Bazi, for 3 months. After these an Elamite for 6 years.

Nebu Zazura-Isun.

Merodach Baladai II., his son.

Sarherin in Assyria.

Suxu, B.C. 890
Merodach Zacira-Isun, 883
Merodach-Baladan-II, 820
Nabu-Isin, 747
Nabu-Yusapi, 733
Udl-Urin, 731
Tiglath-Piileser (Porus), 729
Assyria.

Yagina, chief of the Caldai, 726
Merodach Baladan III., his son, 721
Sargon of Assyria, 709
Merodach - Baladan, restored, 704
Bel-ilmi, 703
Assur Nadin sumu, 709

Babylonia.

Suzub, B.C. 893
Esar-Haddon of Assyria, 881
Saul-mercu, 668
Assur-Bani-bal, 648
Bel Zacira-Isun, 626
Nabo-Palassar, 620
Nebuchadrezzar II., 605
Amil Merodach, 562
Nergal Sarra Yuturu, 560
Nabu-nahid, 558
Merodach sarra Yuturu, 541
Bel sar uzu (Bel suazar), 546
Cyrus, 538
Daruis, son of Hys-taspes, 522

George Smith says Babylon is first mentioned in the inscription of Izlubar, probably the Nimrud of the Semitic races, at the time when the Babylonian monarchy was being formed by the uniting of a number of little states. The great-block of buildings in it consisted of the temples of Merodach and Zirait-bani, and the accompanying Ziggurat or tower. The date of their erection is lost, but they were first restored by king Agor or Agor-Kak-Ilumi, and afterwards by king Hammurabi, who made Babylon the capital of the whole of the country somewhere in the 16th century B.C. Babylon was captured by the Assyrians under Sennacherib, B.C. 1271, and again by Tiglath-Pileser I., B.C. 1110. In the 9th century B.C. it was considered a great sanctuary, and Shalmaneser II., king of Assyria, came to Babylon to offer sacrifice to Bel, B.C. 851. Babylon was taken by Tiglath-Pileser II., king of Assyria, B.C. 731, who made himself king of the country, and performed a great festival to Bel B.C. 729-8. The city was captured B.C. 722 by Merodach-Baladai, the Chaldean, who held it twelve years, until expelled by Sargon, who in turn ruled the city. On the assassination of Sargon, the city passed through various revolutions, and was several times captured by the Assyrians, when, at the close of the last war between Sennacherib and the Babylonians, B.C. 694, the Assyrian monarch captured the city, and destroyed it. It was restored and rebuilt by
BABYLONIA.

Esar-Haddon, son of Sennacherib, but was once more besieged and captured by Assur-Bani-pal, king of Assyria, B.C. 688. Again the city revolted, and Babylonia was conquered by Sennacherib, B.C. 684. In this year, Nabu-pal-uzur, the Nabo-Polassar of the Greeks, who commanded the army in this war, was appointed king of Babylon, and at once commenced the restoration of the country. Some time later, he sent and made an alliance with the Medes, and, having revolted against Assyria, took Nineveh in combination with the Medes, and towards the close of his reign sent his son Nebuchadnezzar to conquer Syria. While his son was on this expedition, Nabo-Polassar died, and Nebuchadnezzar succeeded to his throne. He entirely rebuilt the city of Babylon, and made it the most magnificent city in the world. The tower and temple of Belus, the hanging gardens, the magnificent palaces, and the walls of the city, were all his work; and scarcely a ruin exists. In the neighbourhood without bricks bearing his name. A few years after the death of Nebuchadnezzar, the Babylonian power declined, and Babylon itself was taken by the Medes and Persians under Cyrus, B.C. 539. After one or two fruitless attempts at revolt, the city finally settled down under the Persian dominion, and on defeat of their power, passed to Alexander the Great. From this time, whatever changes happened in Asia, only brought a change of masters, and Babylon sank gradually, until the city became a complete ruin.

Its capture by Cyrus is related in Isaiah xlvii., Jeremiah xxv., and Daniel viii. Its power must have been much detested, if the expressions alluding to its fall be considered. Isaiah xxi. 2-9 says, 'Go up, O Elam; besiege, O Media; Babylon is fallen, is fallen; and all the graven images of her gods he hath broken unto the ground;' while Jeremiah says, 'Babylon shall become heaps, a dwelling-place for dragons, an astonishment and an hissing, without an inhabitant' (Jeremiah li. 37). When Babylon was beset by Cyrus, B.C. 539, Nicotris, the queen mother, counsellor, resisted, and as there was an ample supply of food, with walls 350 feet high and 87 thick, it seemed possible to withstand a siege. But after it had lasted two years, Cyrus opened the head of the canal connected with the Euphrates, and allowed its waters to enter trenches which he had excavated around the city. This so drained the bed of the river where it entered the city, that by midnight the two bodies of soldiers whom he had posted at the points of its entrance and exit passed in and opened the gates for the army, who poured in and surrounded the palace; within a few hours, the city surrendered. It never recovered its ancient splendour, but from her fallen towers have arisen, not only all the present cities in her vicinity, but others which, like herself, are long ago gone down into the dust. Since the days of Alexander, we find four capitals at least built out of her remains, —Seleucia by the Greeks, Ctesiphon by the Parthians, Al Maidan by the Persians, and Kufa by the khalifs,—with towns, villages, and caravansaries without number. Ur or Uru is the modern Mugheir; Erech or Uruk is the present Warka; Nipur, city of Bel, is their modern Niffer; Larsa=Sen Kereh; or, by some, Babel=Hilla; Tigghaba or Kute is Tel-Ibrabin; Kisur or Kis is the modern Hymar; Sippara, city of the sun-god, is the present Sura; Agane, near Sippara, part of Surra; Zirgulla=Zerguhl; Dur or Diru, the modern Deyr. Babylonian history is of interest for the illustration of the Hebrew and Christian Scriptures, and the religions of the Hindus, Greeks, and Romans. Babylon was the oldest civilised dominion in Asia, and was the centre from which civilisation spread into Assyria, from thence to Asia Minor and Phoenicia, from thence to Greece and Rome, and from Rome to modern Europe. The Chaldean legend of the flood was in existence at least 2000 years before the Christian era, and their Xisitirhus, Xisuthrus, or Hasis Adra, was its Noah. Their inscriptions also make mention of a conqueror named Izilhabar, whose characters in several points corresponds with that of the biblical Nimrod, described in Genesis x. 9, 10, as a mighty hunter before the Lord, doubtless meaning a nomade, and 'the beginning of his kingdom was Babel, and Erech, and Accad, and Calneh, in the land of Shinar.' He was on friendly terms with Hea bani, an astrologer, and he visited Hasis-adra, who related to him the story of the flood. Many exploits and mythical adventures are related of him. Sargon, the greatest of the kings of Akkad, was the Moses of the Bible. He was adopted by Akki, a water-carrier. He conquered the Egyptians, Syria, and Babylonia, ravaged Sabarti, and founded the city of Dur-Sarrukin. The ruins near Hillah are still, by the Arab, designated Babel; and all historical records, as well as traditions, agree in representing these as the remains of the first city of Nimrud, the Babylon of Herodotus, Diodorus Siculus, and other historians. Four miles and a quarter N. 20° W. of the bridge of Hillah is the Majalibeh, near which are the remains of the Kasr, as well as those of the hanging gardens; and at rather more than six miles from Hillah, standing amidst and crowning the summit of extensive masses of ruin, is the Bars-i-Nimrud. This has been considered by Niebuhr, Rich, and others to be the celebrated temple of Belus, and, according to Herodotus, it was separated from the palace by the river (lib. i. e. cixx.). 'L'un [des quartiers] est remarquable par le palais du roi, et l'autre par le lieu consacré a Jupiter Belus.'

The pre-eminent mounds are three in number: 1st, the Amur Hill, so named by Mr. Rich, from its supporting a small tomb erected to the memory of some personage of that name, said to have been a son of the Khalif Ali, who fell at the battle of Hillah. The second pile is the Kasr, or palace, which is separated from the preceding by a distance of only 750 yards. The third is known by the appellation Majallibih, or Maquilba, the overturned. It stands about a mile and a half northward from the other, is about 200 yards square each way, and its S.E. corner is said to be 140 feet high. The religion of the Babylonians was of the lowest and most degrading kind. They had faith in magic, exorcism, charms, sorcery, onans, dreams. The three great Babylonian gods were, Anu, lord of the heavens; Bel, lord of the visible world; and Ick, lord of the sea and infernal regions. Sin, or the moon-god of Ur, was the eldest son of Bel; Shamas, the sun-god; Nergal, god of war; Ninip, Vul or Rimmon, god of the atmosphere; Sillil, king of the gods; with many others. The female deities were Anunit, goddess of life and death, the female form and complement of Anu; Anunit, goddess of Akkad; Aganu; Nana, goddess of Erech.
BACTRIA.

BACCHUS. A Bacchus. Bactria, the flesh of swine, salted and dried; largely prepared in Ireland and America, and in the northern counties of England and southern of Scotland, and exported to all parts of the world. It is a coarse food, and that prepared in India is very liable to induce disease of the bowels; its use should be avoided.—McCall, Com. Diet.

BACON, an author of First Impressions, and Studies from Nature in Hindustan.

BACTIA VINDA CHADA. SANSK. Euphorbia thyssifolia.

BACTRIA as known to the Greeks and Romans, was the region lying between the Oxus and its tributaries on the north, and the western part of the Paropamian range or Hindu Kush. It thus included the site of the modern Balkh, and of Margiana, the modern Merv. Bakhdi, or the fortunate, the name of one of the settlements of the eastern Aryans in their southerly migration, was the source of the term Bactria. Curtius accurately described Bactria as a region of the most varied physical character. The region has witnessed great political changes, which indeed continue to recur up to the present day. In B.C. 1200, Semiramis is supposed to have retreated into it after her defeat on the left bank of the Indus. In the 7th century B.C. it passed under the dominion of the Medes, and in the reign of Darina it formed the twelfth satrapy of the empire, and furnished powerful contingents for the army. Alexander the Great, in his advance towards the Indus, formed military stations in Bactria; and after his demise, when the generals of his armies set up for independence, Bactria was carved into dominions which, with varying limits, lasted from B.C. 256 to A.D. 207. But of that long line of Bactrian kings through a period of 463 years, their coins furnish almost the only available testimony of the survival, reinstatement, and extinction of the dominant Hellenic element on the site of Alexander's furthest conquest in the east, and of the potentates who swayed the destinies of those lands for the next four centuries. Professor Wilson gives a list of them from Theodotus I., B.C. 256, to Pantaleon, B.C. 170. Then of barbaric kings, Su Hormuz, Kadaphes, and Kadhphises, from B.C. 100 to B.C. 50; also of an Indo-Parthian dynasty; of the Indo-Scythian princes of Kabul, and a classification of their contemporaries. And Mr. Thomas, in Prinsep's Antiquities, gives Major Cunningham's later and more comprehensive table of the several dynasties.

Mr. James Prinsep, Mr. H. T. Prinsep, Professors Wilson and Lassen, have based their views on the coins of Greek, Aryan, Bactrian, and Indo-Scythian kings and dynasties, which the researches of Sir Alexander Bumnes, Mr. Masson, Generals Court and Ventura, had brought to light, as also from the engravings on rocks and on relics found in tope in the region around Kabul. The languages in which these languages are defined are Aryan-Pali or Bactrian, Greek, Indo-Pali or old pre-Sanskrit alphabets. On coins, these are sometimes single, but many dynasties adopted bilingual, the Greek becoming gradually more barbarous, until at length it became unintelligible. Mr. Prinsep thinks it established that the Aryan-Pali or Bactrian language was long the vernacular of the Paropamian range, of Kabul, and perhaps of Herat and Kandahar, up to the Indus, for its
writing has been found in the tops of Manikiyala in the Panjab, and, it is said, on the rock at Bamian. Unlike the Greek and Sanskrit, it is written, like the Semitic tongues, from right to left, and its characters seemingly of Phoenician origin. Besides being found on the Greco-Bactrian coins, it is seen on a copper plate known as the Taxila, on a vase found at Peshawar, on the Bumnan vase, on a cylinder at Manikiyala, and on the Wardak urn.

The inscription of Asoka at Kapardigiri is in the Bactrian-Pali characters, and written from right to left; all the others are in the Indo-Pali character, and written from left to right. The name of Asoka does not occur in them, but he calls himself Piyadasi, and the beloved of the gods.

One passage refers to the Greek king Antiochus and three others, under the version of Turamayo, Antakana, Mako, and Alkasunari, which are supposed to represent Ptolemy, Antigonus, Magnus, and Alexander.—J. R. A. S. xii.

Dr. Burnell concurs in the opinion that the characters used in the Kapardigiri inscription are of Phoenician origin.—Burnell, A Few Suggestions.

The Aryan character was adopted first on the coins of the Greek kings from Eucratides down to Hermaeus. It was then taken up by the Scythians, who crossed the Paropamisus, Imaus, or Hindu Kush, and also by Parthians, who asserted their independence in Afghanistan. Mr. James Prinsep, Mr. H. T. Prinsep, and Professor Wilson considered this Aryan language to have a close affinity with Sanskrit. Menander, the known Indian conqueror, never seems to have used the Indo-Pali characters of Asoka. At Manikiyala is a type solidly built of quarried stones and lime cement; a great cupula 80 feet high and 310 to 320 feet in circumference, was opened by General Ventura, and there are fifteen other and smaller cupolas there, which were opened by General Court. Monuments of the same kind are met with at Rawalpindi (in the Panjab), in the Hazara country, west of Kâbul, at Jalalabad, Lugman, Kâbul, Bamiian, and in the Khaibar pass. Many of those west of Kâbul were opened by Mr. Masson. In one, N.N.E. of the village, which was opened by General Court, a sculptured inhumation slab was found in Aryan characters, along with Roman coins and coins of Kâphîses and Kanerkes,—a fact alone sufficient to indicate that the territories around had been under the sway of rulers of varied races. The countries over which these chiefs ruled were Bactria, Sogdiana, Margiana, Paropamisadse, Nyssa, Aria, Drangar, Arachosia, Gandharitse, Peukelaotis, Taxila, Patalene, Syrastrene, and Larice, but their limits were incessantly varying.

Professor Lassen supposed the existence of four Greek kingdoms, viz. first, that of Bactria. A second, eastern, under Menander and Apollodotus, comprehending the Panjab and valley of the Indus, with Kâbul and Arachotia or Kandahar added in times of its prosperity. A third, western, at Herit and in Seistan. A fourth, central of the Paropamisus, which latter region Mr. Prinsep is inclined to give to Bactria, because of the bilingual as well as the pure Greek coins of Helioctes and Antimachus, kings of Bactria. The earliest of these rulers were the successors of Alexander the Great. Alexander's death occurred in the spring of the year 323 B.C. His empire, though only of ten years' growth, was not transient. His colonies and their institutions, manners and language, had a lasting action in Central Asia, the effects of which were felt for at least 500 years after his decease. Though he left his brother Aristhenes and the posthumous child of Roxana or Roxana, called Alexander, neither of these succeeded him; his military commandants assumed sovereign power.

Stasanor, whom Alexander had appointed to the satrapy of Drangia, retained it after Alexander's death, but on the subsequent division at Triparadeis, b.c. 321, he exchanged it for the government of Sogdiana and Bactriana; and Antiochus left him in possession, B.C. 316.

In India, Eudemus had been left in command of the troops, with Pithon the son of Agenor and Philip son of Machatas? as satraps. The last-named was murdered in 326 B.C., and Pithon was removed to Babylon in 316 B.C., and was put to death by Antigonus. Antigonus, in 315 B.C., assumed the title of king of Asia.

Seleucus Nicator, to whom Babylon was at first assigned, after various changes of fortune, rose to great power, and between 311 and 302 B.C. extended his sway towards the east, and even invaded India, where he formed a matrimonial alliance with Chandragupta, under his grandson Antiochus Soter, B.C. 261-246, when his kingdom was weakened by his long war with Tolemy Philadelphos.

Arsaces established a Parthian kingdom, B.C. 250, and shortly afterwards Diodotus, governor of Bactria, revolted, and made Bactria an independent state.

Seleucus Callinicus, B.C. 246-226, undertook an expedition against the Parthians, and seems to have entered into an alliance with Diodotus to secure his co-operation, but he was totally defeated by the Parthians.

The following are deemed conditionally established dates of Greek rule in Bactria and India:—Sophytes, an Indian chief near Lahore, and vassal of Alexander, coins Greek money about 306 B.C., imitating the head of Seleucus I. of Syria.

Antiochus II. of Syria, about 256 or 250 B.C., issues Bactrian coins, with the name of Antiochus, and subsequently adopted national Bactrian type.

Diodotus, called Soter by the later kings, about 256 or 250 B.C. becomes independent king of Bactria (revolta, or is acknowledged by Antiochus). His son, Diodotus II., mentioned by Justin, is not proved by the coins, and doubtful.

Euthydemos, from Magnesia, follows Diodotus or his dynasty in Bactria.

War with Antiochus III. of Syria. Treaty of peace. Antiochus gives his daughter (Laodike to Demetrius the son of Euthydemos. Euthydemos dies of old age. Demetrius the son of Euthydemos follows him and extends his dominion as far as India. Bilingual coins appear. Demetrius makes war with Eucratides.

Eucratides, king of Bactria, reigns in the time of one of the earliest Arsacid kings, therefore probably about 200 B.C. A treaty of peace was agreed to (according to some authors, the overthrow of Demetrius and occupation of India) with favourable conditions for the victor, Eucratides? Demetrius gives his daughter Laodike to the son of Eucratides (Helioctes?). Coins of
Euctrides, struck at the wedding of his son Heliocles and Laodike.

Heliocles coins as co-regent with his father.

Euthydemus II., son of Demetrius, a boy, coins (as co-regent with his father). These coins of Euthydemus II. are of the same date as those of Pantaleon, Agathokes, Antimachus (Θοκάτιος).

Pantaleon and Agathokes belong to the same kingdom. Agathokes and Antimachus strike the coins of their predecessors; among these, as predecessors on the Bactrian throne, are Antiochus Nicator, Diodotus-Soter, Euthydemus Deus.

The following reigns stand side by side:—

Plato, reigned 165, reigned towards the end of the lifetime of Euctrides, about 165 B.C. There is a unique tetradrachm of the Attic character, but he had not begun to use Attic inscriptions on his silver coins.

Strato, contemporary of the latter part of the reign of Heliocles.

Agathokleia, Strato's wife.

Strato II., the beloved of his father, Strato's son.

With the death of Heliocles, there begins suddenly a large series of other Greek coins of the Bactrio-Indian kings, so very like one another in style, that it is quite impossible, as before, where writers on history aim, to arrange them chronologically. After Heliocles, Plato and Antialcides, all certain indications of dates fail us.

In 256 or 255 B.C., Bactria declared for independence, under Theodotus or Diodotus; and his successors are known as the Graeco-Bactrian kings.

The names of several are known from the Greek and Roman historians, and about forty of them from their coins, but they have not, as yet, been arranged in any satisfactory manner. Many of them seem to have been ruling contemporaneously in different parts of Bactria.

The following is a line of rulers which has been framed from these kings by General Cunning-

Euctrides ruled in Bactria, Ariana, besides Patalene, Syraustrene, and Larice, as well as Nyssa, Gandharitis, Peukelaitos, and Taxila.

Antimachus Theos ruled in Nyssa, Gandharitis, Peukelaitos, and Taxila, contemporaneously with Euctrides' retention of the rest of his dominions.

150 Lysias succeeds these in Paropamisade, and obtains Nicias' dominion of Nyssa, Gandharitis, Peukelaitos; while Mithridates I. possesses himself of Ariana, having previously gained Margiana from Euctrides.

Plato.

Agathokleia.

150 Antialcides succeeds to Lysias' kingdom.

Amyntas.

Apollodorus.

Archebius follows Antialcides.

161-190 Menander reigns in Paropamisade, Nyssa, Gandharitis, Peukelaitos, Taxila, Por., Reg., Cos., Patalene, Syraustrene, Larice.

135 Strato succeeds, with the exception of the countries of Patalene, Syraustrene, Larice, which fall to Maus. 

Hippostratus, Telephus, Theophilius, follow Strato.

Of all the kings who followed Euctrides, Menander and Apollodotus alone are mentioned by classical authorities. Menander made conquests in the N.W. of India, and carried the Greek arms further in that direction than any other monarch. His coins are numerous about Kābul and Peshawur.

The first Theodotus, b.c. 256, reigned about the same time as Arsaces I.

Theodotus II., b.c. 243, is said to have reigned in the Kābul valley.

Euthydemus, b.c. 220, reigned in the time of the expedition of Antiochus the Great, and was defeated in battle near Merv by the united Syrian and Parthian armies. He then urged Antiochus to receive him in alliance, and so extend the Greek influence to the Indus. A peace was concluded, and Euthydemus led the Syrian army through Bactria, i.e. by the route north of the mountains to the Kābul valley, and across the Indus, in b.c. 206. There Antiochus made peace with Sophagasenus (Asoka), which was to carry the Greek tongues and pillars in various parts of India, in characters exactly resembling those on the coins of Agathokes. In b.c. 205, Antiochus returned by way of Arachotia. The translation of the edicts of Asoka is in the Asiatic Society's Journal for 1888. That on the Gīmr rock is said to name Antiochus as Antiochia Yona Raja.

Euctrides, b.c. 178 (Prinsep, b.c. 181; Bayer, Wilson, b.c. 165; Visconti, Lassen, b.c. 175). He seems to have made an expedition into India in 165 b.c., and on his return from which, to have been murdered by his son. Numbers of his coins have been found in Bactria and Afghanistan. Mr. H. T. Prinsep considers that he ruled originally in Bactria, subsequently made conquests in, and south of, Paropamisade, in Kābul; and first of all the Greeks coined in the bilingual Aryan inscription. The first use of two languages, however, is also ascribed to Agathokes, who used Greek and Sanskrit, while Euctrides used Greek and Aryan, and it is supposed, consequent on his conquest of the Paropamisade, after assumption of the title of Great King. On his death, his wide dominion is supposed to have been broken into several independent kingdoms.

Heliocles, b.c. 155, the parricide of Euctrides, used bilingual inscriptions on coins in pure Greek and Aryan. His rule, though short, extended over Bactria and the Paropamisade.

Antimachus, b.c. 150, coined with Greek and Aryan.

Agathokes, b.c. 190, coined with Greek and Sanskrit; is supposed by Lassen to have ruled Kābulistan to the Indus; and Mr. H. T. Prinsep
supposes him to have been the governor left by Antiochus in Kābul, after his treaty with Asoka.

Pantaleon, B.C. 195, coined in Greek and Sanskrit.

Parthia followed? Bactria for independence about the year 255 B.C., under the rule of Arsaces I., who is variously described as a native of Sogd, as a Bactrian, and by Moses of Choreno as of Balkh, this last author adding that the dynasty was known as Balkhavensis or Palavian. He used Greek only on his coins (and in his public letters and correspondence), ordinarily with the head of the sovereign on one side. Great King of Kings was a title first adopted by Mithridates II. Arsaces I., B.C. 254-250, is supposed to have been killed in action with Arianrites of Cappadocia, but the date and circumstances are not known.

Arsaces II. (Artabanus?), son of Arsaces I., about B.C. 220 or 216, at first extended the Parthian empire, but was afterwards driven into Hyrcania by Antiochus Magnus in B.C. 212; allying himself with the Scythians, he recovered Parthia.

Arsaces III., B.C. 196, called Priapatius, Phra- patius or Phraadatus, son of Arsaces II., reigned fifteen years, left three sons, Phrahates, Mithridates, and Artabanus.

Arsaces Mithridates I., B.C. 177 or 173, made Balkh his capital, subdued Media and Persia, and captured Babylon; brought under his dominion Western Bactria, Arin, Seistan, and Arenchias, and made a successful expedition into India.

Arsaces Phrahates II., B.C. 139 or 136. In his reign, Bactria seems to have been subjugated entirely by Scythians. He was defeated and slain in B.C. 130, when restraining the Parthians from ravaging the country.

Arsaces Artabanus, B.C. 126, uncle of Phrahates, and youngest son of Priapatius, died of a wound received in action from the Tochari Scythians.

After many kings, the Greco-Parthian or Arsacian dynasty in Central Asia ended in A.D. 209 with Arsaces Artabanus, who was involved in a war with Rome, but ultimately slain in battle at Balkh by one of his officers, Arishbar Barakhan, who established his own dynasty, that of the Sasanians, in A.D. 226. It lasted more than 500 years. The capital in the time of the Cæsars was at Seleucia on the Tigris. The system of government was Asiatic, by satraps or local rulers possessing full power over the persons and properties of the subjects.

The Parthians seem to have held sway in the brief interval that separated the death of Eucratides, about B.C. 155, till the total subversion of the Bactrian kingdom by the Tartar tribe of Su from the north of Transoxiana, B.C. 126; and their Indian kingdom was subverted about B.C. 26 by the Yue-Chi, who came from Persia, and spread themselves along a large portion of the course of the Indus.—Elphinstone, 246-248. De Guignes’ account of the first conquest is that the Su came from Farghana, on the Jaxartes (the modern Syr Darya), and conquered a civilised nation, whose coins bear a man on one side and horsemen on the other. These seem to have been the coins of the Eucratid, which had the king’s head on one side, Cester and Polux, mounted, on the other. According to Strabo, the nomades who overthrew the Greek rulers of Bactria were the Asii, Pasiianii, Tokhari, and Sakaranii.—Dr. Bhau Daji.

The Scythian kings followed the Greek kings in adopting their forms of money. They coined similar pieces, with superscriptions similar and in the same letters, but inscribed on them their own names and titles, and varied the emblems and devices.

Maars, B.C. 135, is supposed to have been a Scythian, the head of one of those tribes that broke into Bactria between 150 and 140 B.C., and he seems to have held communication with Azes. On the other side, this coin contains the king with a Tartar war trident, setting his foot on a prostrate enemy.

Azes, B.C. 130, the greatest of Scythian kings, on whose coins are bilingual inscriptions, in plain Greek characters:—ΒΑΣΙΛΕΩΣ ΒΑΣΙΛΕΩΝ ΜΕΓΑΛΟΤ ΑΖΟΤ; in Aryan-Pali, Maharajas Raja-Rajasa Mahatasa Ayasa. The figures on the coins are various. Professor Wilson thinks he was an Indian Buddhist king about 50 B.C. Professor Lassen regards him as a Saka (Scythian), who conquered the Kābul valley in the time of the second Mithridates, and finally destroyed the kingdom of Menander and Hermæus in about 120 B.C.

Azilises, B.C. 115, reigned with the same titles as Azes. On one coin, the name of Azes is on the Greek obverse, and that of Azilises on the Bactrian reverse.

Yones, B.C. 100, supposed to have been a Parthian satrap who asserted independence and created a kingdom for himself out of the dominions of Azilises.

Spalirius, B.C. 85, sometimes read Ipalirius, supposed a Parthian king.

Spalirius, B.C. 75, had many coins in two languages; he was a vice-regent, son of Yones, and perhaps brother of Spalirius.

About this time, as indicated by his coins, appears a ruler whose name and personal designation is not known, styled Soter Megas, B.C. 70. This nameless great Soter king had coins with an Aryan legend, which James Prinsep and Professor Lassen ascribed to Azes. On all is a peculiar monogram with three prongs. The same monogram was continued in coins of the Kadphises and of the Kanerkes, but it is not found in those of the Hercules type derived from Hermæus. Mr. H. T. Prinsep considers him to have been contemporary but not identified with Vikramaditya, and that he assumed the title of Soter Megas, which was continued down by the Kadphises kings. He considers that the nameless kings, with those on whose coins are the words Koles or Hyrkodes, although mere local chiefs, such as now rule at Kulm, Kunduz, and Balkh, preceded the conquest of the Panjab by Vikramaditya about B.C. 56. About this great king India affords nothing but fables; but a passage of the Periplus mentions that his capital was Ozene (Ujein), and it is known that he extended his empire to Kābul. His empire fell to pieces after his death.

Kadphises or Kadphises, a dynasty of three rulers who reigned in Kābul from the downfall of the kingdom of Vikramaditya. Kadphises’ name is on the Aryan reverse of the Hermæus coins of the Hercules type. There is no indication of a settled worship. The Hermæus worship was readily borrowed by the Greeks by the wild Scythians, as a mere reverence of physical strength. The Kohistan is
supposed to be the district of the first rise of Kadphises, while Kābūl and its valley were subject to Indian rule; and while there, the chief seems to have retained his Scythian title and rude worship of Hercules. Afterwards, overpowering the Indian governors who had followed Vikramaditya into the Kābūl valley and Panjab, he or his descendants seem to have adopted the Hindu religion, coining with Greek, and dropped their Scythian title. In a gold coinage by a Kadphises king, Sīva occurs in the mixed male and female character, and very generally accompanied by the bull Nandi. Professor Lassen discovered in Chinese history that Khi-out-chi-u-hi Kui-tsi-kio, a Yuchi, or Yeutchi, or white Hun, conquered the Szu or Azes Scythians in about 40 B.C., and, dying at the advanced age of 84 years, his son Yen-kao-Ching prosecuted his career of victory, and reduced the Indus valley and Panjab to subjection in about 20 B.C. The names are scarcely recognisable, but the facts and period correspond to the career and supposed era of the Kadphises kings.

Korosoko Kosoulo Kadphises, b.c. 50, in Aryan Dhama . . . rata Kujula kasa Sabashahaka Kadaphasahis.—coins are of the Hercules and Hermes types.

Zathos Kadaphes Koranos, b.c. 20. On the reverse of the coins is a sitting figure, with the arm extended, and wearing a loose flowing Indian dress. They have monograms the same as the Azes coins. The Sīva worship had not yet been established as the state religion.

Oohemo Kadphises (Hima, snow, white), b.c. 5. His copper coins have the king standing in a Tartar dress, with coat, boots, and cap, his right hand pointing downwards to an altar or Hima, and having a trident separate on one side, and a club on the other. The reverse has the Sīva and Nandi bull.

The readings of the Aryan inscriptions on coins of the Kadphises kings, by Lassen, J. Prinsep, and Wilson, are somewhat different, and it is suggested that the words Korso Kozoulo, Koranos, and Zathos, were titles short of royalty. Professors Lassen and Wilson carry the dynasty of Kadphises through the whole of the first century of the Christian era, and consider it to have been then overpowered by a fresh swarm of Scythians under the Kanerki kings. Mr. H. T. Prinsep supposes that during the ascendency of the Kadphises kings, the Gracco-Parthian party still held out in cities and communities, abiding their time to reassert their independence, and rose again about the middle of the first century of our era.

Amongst these, coins show—

Undopheres, a.d. 40, calling himself King of Kings in Greek, and in Aryan, Maharajah Raja Rajasa, Tratadasa, Mahatasa, Pharabhitasa.

Gondopheres or Gondophares, b.c. 55, who took the same Aryan name of Pharabhitasa.

Abagasus, King of Kings, a.d. 70, in Aryan Abakahafusa. Professor Lassen supposes this name to be identical with Vologeses. Mr. H. T. Prinsep supposes these coins to be of Parthians who established for themselves a separate and independent sovereignty in Kābūl and the Paropamisus.

Abalagasus, a.d. 80. Captain Cunningham described the Aryan legend on the coins to be, 'Of the saviour king Abagasus,' younger son of Undopheres.

BADAGA. BACTRIA. Kanerki. —At the close of the first century of our era, when the above Aryan-Parthian supposed dynasty ceased to reign in Kābūl and the Panjab, a new race of Scythian kings appeared, who issued gold and copper money of quite a different device and style from anything before current. These bear a title of Kanerkes, at first with the title of Basilissus Basilic, but afterwards with the Indian title of Rao Nano Rao. The number and variety of the Kanerki coins indicate a long dominion for kings of the race, but only characters on their coins are Greek, but these become at last so corrupt as to be quite illegible. On their obverse is the king standing, or in bust to the waist, in a Tartar or Indian dress, with the name and titles in a Greek legend round; while on the reverse are Mithraic representations of the sun or moon, with ΜΑΝΟΣ, ΝΑΝΑΙΑ, ΟΚΡΟ, ΜΙΟΡΟ, ΜΑΟ, ΛΗΡΟ, or some other mystical name of these luminaries, also in Greek letters. And on all the Kanerki coins is the same monogram as the Kadphises dynasty used, and which was borrowed apparently from the nameless Soter Megas. This would seem to indicate that the Kanerki dynasty, though interrupted, as Mr. Prinsep supposes, by the intervention of Aryan-Parthians, was yet a continuation of the same tribe and nation as its predecessors of the name of Kadphises. The state religion seems to have been Mithraic, whence derived not known; but on their coins the Sīva bull device is also found on the reverse, the bull's head being to the left,—in the coins of the Kadphises being to the right. A list of their kings cannot be framed, but their power seems to have lasted for more than two centuries. The style and device of the Greek, of the gold coins especially, of the coins both of Kadphises and the Kanerkes, was carried on till it grew more and more corrupt, and was at last entirely lost, through the deterioration of art, under the princes of Hindu race, who succeeded to the more energetic Greeks and Scythians.—Masson; E. Thomas' Bactrian Coins; Tod, Rajastahan, ii, 217; Bunsen, God in History, i. 270, 293; Bunsen's Egypt; Thomas' Prinsep; Mr. Newton in Journ. As. Soc. 1867; Blph. India; Wilson's Ariana Antiqua; Indian Antiquary; Dr. Bkhu Daji; Burnett, A Few Suggestions.

BACTRIAN CAMEL, or two-humped camel, Camelus Bactrianus.

BAD. PERS. The wind, according to Asiatics, a common cause of disease. It usually means rheumatism.

BADABANALA. SANSK. A term sometimes applied to the south pole.

BADADA. SINGH. From Buda, Wednesday.

BADADUM. TAM. Erythrina sublobata.

BADAGA. TAM. Tel. From Vada, north, the northern people, the Telugu people. The Badaga or Badagaleya-varu, a Brahman race in Mysore, Vaishnava sectarians. They mark their foreheads with three perpendicular lines.

BADAGA, the most numerous tribe of the Neelgherry hills. They state that about the 15th century their ancestors came from the Mulasal hills 60 miles south-east of the town of Mysore. Their name is supposed to be a modification of the Canarese word Vaddaca or north, and they undoubtedly speak an ancient but organized dialect of the Canarese. In 1867, the population was said to comprise 17,778 souls, distributed
over 4071 houses. They have the usual elongated head of the   peninsular Hindu races. The average height of 25 men, of 33½ years of age, was 667 inches, and their weight 11076 lbs. The average of 25 women, of 27-68 years, were of height 58-51 inches, and weight 92 lbs. They possessed the usual Asiatic features, with a feminine cast. They and their wives had   small feet when they arrived they acknowledged the proprietorship of the Toda as prior occupant races, to whom they promised a land-tax of one-sixth of the produce, which they still continue to pay, though with occasional demurring. The Toda race call them Mav, or father-in-law. Both men and women work in the fields, but of late years a large number of men find employment as labourers and artisans.

The other hill tribes on the hills live in isolated communities, but the Badaga dwell in villages on a rising ground, in streets running in parallel lines, in thatched houses built of stone and mud, and divided into separate compartments, with a double tier of lofts, and with a wide terrace in front as a drying, threshing, and winnowing floor. The doorway, 43 inches high and 26½ broad, is their only opening. The cattle are penned in an adjoining cow-house or shed. Marriage takes place when grown up. Women wrap a cloth round their bodies from below their arms to their hips, and fasten it with a cord below their arms and around their hips; the arms and shoulders and their legs below the knees are bare. A scarf goes round the head, and is let fall behind. The women are of domestic habits, and kind and affectionate mothers; they are simple, modest, and retiring. They seem now to be following three forms of the Hindu religions,—the Saiva, the Vira Saiva, and the Vaishnava. Formerly they claimed as their deity Hettee-du, an old man, and Hereardu, whom they, said, conducted them to the mountains. But they have numerous local deities. A chief deity is in Rungasawny peak, where men of the Irular tribe officiate as priests, and offerings of ghi and fruits are made.

Another deity is on a droog near the village of Hollikul, where a Badaga priest officiates, and there are other male and female gods. Many Badaga are comparatively wealthy. They can neither read nor write; they are timid and superstitious, haunted with a dread of evil spirits, and are deceitful, ungrateful, and false. They are in perpetual fear of the Kurumbar, to whose sorcery and witchcraft they attribute all accidents and misfortunes which befal themselves, their cattle and crops, and in their delusions they have killed Kurumbas, and are ready for war. Nevertheless they get the Kurumbar to officiate as priests at all social ceremonial occasions. They both burn and bury their dead.—Drs. Baikie, Latham, Shortt: Harkness, Neilgherry Hills.

BADAGE. A tribe of Coorg slaves.

BADAKSHAN is a mountainous region, including the upper part of the valley of the Oxus. The capital is Faizabad. It lies between lat. 36° and 38° N. and long. 69° and 73° E.; is on the western declivity of the Belur Tagh in the valleys of some of the head streams of the Oxus, of which the Badakhshan river is the principal. It is 180 miles long. Its inhabitants are of the Tajak race, Shah Mahomedans, and speak Persian. The Tajak race here are purer Iranians than other Tajaks. The Tajak possessed the country before the invasions of the Turks and Uzbaks. They are a wild race, living in the little mountain glens in villages surrounded by gardens. In the remote mountains of Badakhshan are the richest known mines of rubies and turquoise. Marco Polo mentions that the chief of Badakhshan laid claim to a Grecian origin. Baber corroborates the theory; and Elphinstone says that the chief of Darwaz in the valley of the Oxus, was of Macedonian descent. Bipper also believed in the descent of many of the chiefs of Badakhshan from the Greeks of Bactria. On the north of Badakhshan are the hill states of Wakkan, Shughshan, Darwaz, Kulaib, and Hissar, all of whose peoples claim a descent from Alexander. To the eastward of Badakhshan lies the plain of Panir, inhabited by the Kirghis; the Siah Posh Kafir are on the south, occupying a great part of the range of the Hindu Kush and a portion of Belur Tagh. Marco Polo resided in Badakhshan for the sake of his health, and he described Wakkan, Panir, Belur, and Kashimir. Badakhshan rubies were formerly of high repute. The turquoise of Badakhshan and Khokand is of a green colour, and is very inferior to the blue turquoise of Neshapur in Persia. In its ruby mines, the gem is said to be found in limestone, along with great masses of lapis-lazuli. It has also iron, salt, and sulphur. Its rivulets, romantic scenes and glens, its fruits, flowers, and nighttime songs, are spoken of in rapture by the people. The Tajak of Badakhshan are not so handsome as the men of Chatral; their dress is like that of the Uzbaks.—Markham's Embassy, p. 163; Mohun Lae Travels, p. 250; Yule's Cathay, i. p. 187; Col. Macgregor; Bellow, p. 207. See Afghanistan.

BADAL. Pers. Retaliation, vendetta.

BADAM, Pess., Hind., is a term which, with affixes and suffixes, is applied to several kernel fruits. Badam-i-talkh, bitter almond. Badam-i-shirin, sweet almond. Kaghazi Badam is like the thin-shelled Barcelona almond.

Badam Kohi is the apricot.

Badam talkh-i-pahari is Prunus Armeniacus. Jungli Badam, Stereulia foetida.

Badam, in Taml, Canarium commune.

Hijli Badam is the Terminalia catappa.

BADAMI, a hill fort, in lat. 15° 55' N. and long. 75° 42' E. in the South Mahratta country, is S.S.E. of Kaladghi. The foot of the fort is 1646 feet above the sea. At the close of the 18th century, it was the scene of a great disaster to a Hyderabad army, which was swept away by a pestilence; it was taken by the British in 1818, and again in 1841. Badami has Buddhists and also Brahmanical caves, one with a date, A.D. 579. The Aiwulli caves are 5 or 6 miles north of Badami, and those of Puranduk or Pittaduk are as far south. The Imperial Gazetteer mentions a Jaina cave of A.D. 650. In the Brahmanical caves the Narasinha avatar of Vishnu is represented seated on the five-headed serpent Ananta.—Ferguson and Burgess: Imp. Gaz.

BADAM VITTA BANKA. Tel. Tragaentha.

BADANIKHA. Tel. Loranthus longiflorus, L. Badanika Chega gaudia. Vangueria spinosa.

BADANJAM. Hind. Solanum melongena.

BADAR. Tel. Indus. Taxus baccata.

BADARINATH, in Garhwal, a peak situated
Badava-Hrita.  

Badjar-Kita.

in the Mana jass, within the Himalaya. It is in 30° 44' 15" N. lat., 79° 30' 40' E. long. The peak is 22,901 feet. The entrance to the Hindu temple is 10,124 feet above the sea, according to Robert Schlagewentz, but according to the Bengal As. Soc. Journal, 10,394 feet. Near it, the upper limit of the "Arsh and Kusii" fir trees is 9572 feet; the upper limit of the "Bilka and Deodar" fir trees, 9348 feet; and the upper limit of walnuts (Akrot), 8376 feet. Immediately below the village of Mana is the shrine, which is dedicated to an incarnation of Vishnu, and is one of the most sacred in Hindu mythology. The temple is built on the bank of the Bischen Ganga, immediately over the site of a hot spring, the existence of which no doubt led to the original selection of this remote spot. It is said to have been sanctified by Sankaracharya about A.D. 800, and pilgrims bathe in the sacred pool below the shrine. The east bank rises considerably higher than the west bank, and is on a level with the top of the temple. About the middle of the bank is a large cistern about 20 or 30 feet square, covered in with a sloping roof of deal planks supported on wooden posts. This is called Tapat-kund, and is supplied by a spring of hot water issuing from the mountain by a subterraneous passage, and conducted to the cistern through a small spout representing a dragon's or a griffin's head. A little to the left of it is Surya-kund, another hot spring, issuing in a very small stream through a fissure in the bank. There is no basin or reservoir to receive the water. The principal idol, Bhadri-nath, is placed opposite the door, at the farther extremity; above it head is a small looking-glass, which reflects the objects from the outside; in front of it are two or three lamps, which furnish all the light the apartment receives, excepting from the door, diffusing such feeble glimmering rays that nothing was clearly distinguished. It is dressed in a suit of gold and silver brocade. Below it was a table, or board, covered with the same kind of cloth. The Hawal or chief priest, is invariably a Namburi Brahman from Malabar, no other class of Brahman being allowed to touch the idol. Many temples erected in the same site have been overwhelmed and destroyed by the avalanches which occur there. Its revenues are derived from the offerings of its votaries and the rents of assigned lands.—Professor Wilson; Fraser's Himalaya Mountains, pp. 373-375. See Kusawar; Sri Sampradaya.

Badava-Hrita. Sank. A man who becomes a slave that he may marry a female slave in the family.

Badawurd. Hind. Fagonia cretica.

Badek, in Java, a fermented liquor, prepared by boiling and steeping rice, with a ferment called raz, consisting of onions, black pepper, and capsicum. After frequent stirring, the mixture is rolled into balls, which are piled up in a vessel, and the badek drips to the bottom.—Hogg, Veg. King. 816.

Badger, the Hebrew Tachash. Mammals of the tribe Semi-Plantigrada, family Melildidae. Arctonyx collaris of N. India is the hog-badger; Mellivora indica, the Indian badger; Meles ankuma is the Japanese sand-badger.

Badha. Sank. In Hindu law, corporal punishment, which may be of three kinds,—Tarana, beating; cauing: Chheddana, mutilating; and Marara, killing.—BADHAIL, a bold, brave, predatory race occupying Beit in Kattyawar; like the Waghair race of Dwaria, who with the Badhai race of Arantra were so long the terror of the western seas, they are a spurious branch of the Jhara family of Bhoj, one of whom, called Abra, with the cognomen of Much'wal or whiskered, came from Cutch in the time of Renna Sowa, into whose family he married. His son had offspring by a woman of impure caste, and assumed the name of Waghair, with the distinctive suffix Manik or gem. Mah Manik, the last chief of this race, with all his motley company of Waghairs, Badhais, and Arabs, was slain in the storm, or in the retreat after a desperate defence. The Aranra of the maps is in long. 83° 15' E., and lat. 22° 27' N. According to Colonel Tod, Uja, the third son of Sceji, a Rihari Rajah, died, issued from the sand-hills to Loomi, carrying his forays to the Sunushta peninsula, where he decapitated Beech-nami, the Chamar chieftain of Okanumuda, and established himself. From this act his branch became known as the Badhai. See Kattyawar.

Badhak. A robber tribe in Northern India, often associated with Thugs, and, like them, murdering those they rob. They resided chiefly on the borders of Oudh, but carried on their depredations at a distance.—Wilson's Glossary.

Badhawa, in Bengal, a guard over the village crops.

Badhia. Hind. A blight which attacks Holcus sorghum, Penicillaria, and Zm mais, which prevents the ear filling, also sugarcane.

Badhoo, a Hindu royal ceremonial. It consists in waving a brazen vessel, filled with pearls, round the sovereign's head, and distributing them to Brahmans.—Tod's Rajasthan, ii. p. 73.

Badi. Hind. The fortnight from full to new moon; the darkening half of the moon.

Badian. Pers. Feniculum pamnori; also F. vulgare and Nigella sativa; also comfits, sugared seeds of the 'sonf.' Badian-i-khatai, Pers., Illicium anisatum; star-anise.

Badidapi Chettu. Tel. Erythrina indica.

Badiki. Tel. Sapum cordifolia, Roxburgh.

Badi-simum, a desert wind in Kachi, which occurs by night or day, usually in June or July. Its appearance is sudden, though sometimes preceded by a cold wind; its course is straight and defined, leaving a narrow tract in which it has burned up or destroyed all vegetable and animal life. It is attended with a sulphurous odour, and resembles the blast of a furnace, and the current of air in which it is evidently greatly heated. It is not accompanied by dust, thunder or lightning. Dr. Cooke believes the Bad-i-simum to be a very concentrated form of ozone, generated in the atmosphere by some intensely minute electrical condition.—Dr. Cooke.

Badi-ud-Din, a Syrian saint, who lived a Makanpore in Oudh. His festival day is on the 17th Jamadi-us-Sani, and is known as the Chah-ghan-i-Zandah Shah Madar. See Dam-i-Madar.

BADLA. HIND. Brocade or variegated silk-stuff.

BAD-MAASH. PERS. An evil liver, a person living by defrauding others. It is from Bad, bad, and Maash, fool. Bad-man, disgrace. Bad-bakh, an unfortunate.

BADOCHI, a red earth of Gurgaon, used in dyeing.

BADOZAI, a tribe inhabiting the Paht-i-koh, to the west of Sib, in the Kohistan of Baluchistan. — MacGregor.

BAD PAI. PERS. A swift horse (wind-footed) of Turkoman breed, much prized by the Persians, and always found in the stedd of a person of rank.

BADR. ARAB. Full moon.

BADRACHELUM, in lat. 17° 41' N., and long. 81° E., a small town on the Godavery river, in the south of the Peninsula of India, to which pilgrims resort. Diamonds are found in the neighbourhood. The virtues of the great river Godavery are all collected in the neighbourhood of Badrachellum. It stands on a knoll about 100 feet high; the temple, an old structure, is very sacred.

BADRAGA. HIND. Escort, safe conduct.

BADRAJ-nil-ABIAZ. ARAB. Basella alba.

BADRAKAI. TAM. Elaeocarpus taberuclatius.

BADRANJ. BADRAKI. TAM. Elaeocarpus taberuclatius.

BADRASIR, BADRARA. BADROR, PADSHAH OF SIMLA.

BADULLA, son of Padshah, HIND. A king.

BADUSHA or Padshah. HIND. A king. Badshah, surnad, royal grant.

BADUSHAHI RAI, Sinapis brassica, also S. roga.

BADUL. BENG. Pteropus edwardsii.

BADUL, a young chief famed in the history of Chitore. It is in Chitore an oath to swear ‘by the sin of the sack of Chitore.’ Of these sacks were three and a half. In the ‘half,’ the city was not stormed, but the best and bravest were cut off (saka). The attack is described with great animation in the Khamon Rasa. Badul was then but a stripling of twelve, but the Rajput expects wonders from this early age. He escaped, though wounded, and a dialogue ensues between him and his uncle’s wife, who desires him to relate how her lord conducted himself, ere she joins him. The stripping replies: ‘He was the reaper of the harvest of battle; I followed his steps as the humble gleaner of his sword. On the gory bed of honour he spread a carpet of the slain; a barbarian prince his pillow, he laid him down, and sleeps surrounded by the foe.’ Again she said: ‘Tell me, Badul, how did my love (peear) behave?’ ‘Oh! mother, how further describe his deeds, when he left no foe to dread or admire him?’ She smiled farewell to the boy, and adding, ‘My lord will chide my delay,’ sprang into the flame.—Rajasthan, i. p. 264.

BADULLA, a town in Ceylon; near it are hot springs. A race of people, called Pareya, or strangers, are there met with, believed to have been descendants of Portuguese captives made slaves after the re-conquest. Badulla is in lat. 6° 29' N., and long. 81° 11' E., 38 miles W. from Nurella (Newera Elia), and is 2450 feet above the sea. The highest point of the road between Taldenia and Badulla is 2545 feet.
BAGHAD.

BAGHARA, a tribe of 1000 families of Arabs, tributaries of the Shamar, occupying the country to the north of Nisbin in Kurdistan.—MacGregor.

BAGARI, a tribe inhabiting the district of Bagar, between the south-west borders of Harihara and the Suluj. Said to have been Rajputs, but also supposed to be Jat. A robber race of this name is settled in Malwa.—Wls. Gloss.

BAGA ROH. Fushir. A white hill; a near range.

BAGATI JUMIZ. Hind. Aquila pennata, Gm.

BAGAWAT. Sansk. The most meritorious; a name of Buddha.

BAGHANWALLA. BAGHANDEN, BAGGAPATTI, BAGGAR, BAGARA, BAGA, BAGAWAT.

BAGHIR, a village in Malwa, 25 miles S.W. of Dhar, and 50 miles W. of Mandu, in lat. 22° 24' N., and long. 74° 52' 30" E. Three miles to its south is a group of ruined Viharas. The first from the east is 82 feet by 80 feet. The Viharas are known to the people as the Pancha Pandu. The rock-hewn pillars were once adorned with frescoes in different colours, and of great beauty.—Burges, p. 365.

BAGHENDEN, also Baghi, palanquin-bearers in Tinnevelly.

BAGH-ANKRA. Beng. Alangium decapetalum, also Fisiona villosa.

BAGHANWALLA, a town in the Salt Range, has the principal seam of tertiary coal.

BAGHAD, in lat. 33° 19' 50" N., long. 44° 22' 45" E., is the capital of the Turkish province of Baghad, and has a population of about 65,000, Turks, Persians, Jews, Christians, Kurds, and nomade Arabs. It is built on both sides of the Shat-ul-Arab, the connection being established by a bridge of boats. Its traditional name means 'City of Peace,' but its history has been one of continual strife and bloodshed. Founded in A.D. 763, it flourished under the khalifs, till the invasion of Hulaku with his Tartar hordes, who debuzed its streets with the blood of 160,000 inhabitants, A.D. 1257 (1258-59). In A.D. 1400 it was again taken by Timur, who raised a trophy of the heads of 90,000 of its principal men outside the city gate. In 1508 it was invaded by Shah Ismail Sufi, and fell into the hands of the Persians. In 1534 Suleiman wrested it from the Persians, and made it a Turkish province. Subsequently Shah Abbas recovered it for the Persians, but they finally lost it in 1698, since which time the Turks have held it against two Persian invaders successively. Its revenue under the khalif Mamun was said to have been £6,000,000 yearly. In 1854 it was reduced to £550,000. It is the classic scene of the Thousand and One Nights, but there is hardly a relic of the times of the khalifs in modern Baghdad. The city was then built on the western bank of the Tigris, now it is largely all on the east side. A small piece of the old river wall, an inscription on a gateway, and a venerable khan, are about the only vestiges of its ancient splendour. It is unequally divided by the river, two-thirds being on the left bank, and the remainder on the right or Mesopotamia side; the town is fortified by a high brick parapet wall, flanked at intervals with bastioned towers, and surrounded by a ditch; the citadel, which is a respectable work, is situated at the north-western extremity. The harem built by Dara Persus is one of the finest in the east, and is well stocked with home and foreign manufactures. Some of the mosques are also striking; but the rest of the buildings show, as in eastern countries is usual, on the exterior either dead walls or ruins; but when viewed from a distance, and especially from the river, the luxuriant date groves and rich gardens, contrasted with green domes and graceful minarets, present a rich and attractive appearance. Previously to the plague in 1580, there were 110,000 inhabitants.

Baghdad is frequently called Babylon by the early travellers, and even by the Arab geographers. The Church of Rome still gives the title of 'Bishop of Babylon' to the prelate who is placed over the Roman Catholic Christians in the pashalic of Baghdad.

The khaliis or vicegerents who succeeded Mahomed ruled sometimes in Baghdad and sometimes in other parts of their conquered dominions. The race of Ommiah, sixteen in all, ruled from Damascus from A.D. 661-2 to 744-5. The Abbasis reigned at Baghdad from A.D. 749-50 to 1258-9, when Baghdad was besieged and taken by Hulaku, grandson of Chengiz Khan.

The Mostanzeria mosque is of the age of the khalifs. The Takieh is a monastery of darvashes of the order of the Bektashi, which stands on the banks of the Tigris, on the west side of the town, and is a good specimen of early and pure Mahomedan architecture.

The Baghdad pushalik has many tombs of persons and places famed in history,—the ruins of Babylon, the tower of Babel, the Arch of Ctesiphon, the tombs of Ezekiel, of Ezra, and of the Lady Zobeidah, the reputed authoress of the Arabian Nights.

During the early trade in the Persian Gulf, direct intercourse was for many years maintained with the governors or pashas of Turkish Arabia, without much consideration of their relation to Constantinople. In the year 1689 there seems to have been an English factory at Bussora, subordinate to the factory at Gombroon, and protected by firmans. But the first firman on record is one
In 1855 the political agent in Turkish Arabia, who had hitherto been under the control of the Bombay Government, was put directly under the control of the Supreme Government of India. In 1841, consular powers were conferred on the agent by Her Majesty's Government. All ranks and classes stain their hands and hair with henna, and the Arabs largely stain their lips blue. The plague has repeatedly recurred, but in 1851 it was a very calamitous outbreak. Baghdad is called Dar-us-Salarn, or Mount of Peace, also Medinat-al-Khalifa, the City of Khalifs.

Four large synagogues are attended by contented and prosperous-looking Jews. Christian churches rear their heads on all sides, French, Latin, Armenian, and Chaldean; while the public baths are frequented by Musalmans and Christian alike, irrespective of caste, creed, or religion.

In the 8th century, Hindu physicians went to Baghdad and practised at the hospitals. Two of them, named Manka and Saleh, were the physicians of Harun-ur-Rashid. Nine miles from Baghdad is the small Akarkouf, the ground around the ruined pile, called by the Arabs Tal Namrud, and by the Turks Namrud Tapassi. Both these terms mean the hill, not the tower, of Nimrud, and the term Akarkouf or Argargouf, given by the Arabs, is intended to signify the ground only around it.

The Baghdad pashalik extends in a north-west direction from the mouth of the Shat-ul-Arab to the rocks of Merrdin, the Baghdad frontier towards Constantiopole. In an east and west line, it stretches from the confines of Persia to the banks of the Khabour, which separates it from the pashalik of Orfa (the Osrobe of the Romans, and that part of Mesopotamia which contained the Haran of Abraham, and the famous Edessa of the crusades). The general boundaries of the pashalik of Baghdad may be called the Euphrates and Arabian desert of Najd to the west and south, Khuzistan and the stretch of Zagros to the east, the pashalik of Diarbekir or Hollow Mesopotamia to the north-west, and Armenia, with the Kurdish territory of Julamerik, to the north; the whole forming a kind of irregular oval, comprehending ancient Babylonians and all Assyrians proper. That portion of the pashalik which lies north-east of the Tigris, and which comprised the chief part of Assyria, is now called Lower Kurdistan, a name not very dissimilar, as Major Renner observes, to the old Scripture appellation for Assyria, found in the second book of Kings, and in the Prophet Amos, both of which probably refer to the country east of Nineveh as the land of Kir. The rest of the pashalik lies between the widely divergent currents of the Tigris and the Euphrates, commands the no less renowned boundaries of Babylonia, including Chaldaza, its most eastern quarter. This insular country was also designated by the ancients by the name of Mesopotamia, so denoting its situation between two rivers; and modern times have changed its appellation again, the Arabian calling it Al Jazira, and the Persians including it within the line of Irak-i-Arabi. Its length is 500 miles, and its breadth 250 miles, area 50,000 square miles. Its three divisions are Al Jazira on the north-west, between the Euphrates and Tigris; Irak-i-Arabi, below Baghdad and south of the Tigris; and Sulaimania, or the country of the Kurds. Its migratory tribes are the Montefik, Beni Lam, Zobeil, Shammar, Toqeh, and Deffah. Its rivers are the Tigris, Euphrates, Zab, Asheyn, Diala, Thartar, Shal al Hat, and others.—Treaties, vii. p. 175; Porter’s Tr. ii. pp. 246, 281; Mignan’s Tr. pp. 90, 102; Rick’s Kurdistan; Chesney’s Expediton; Layard’s Nineveh, ii. p. 175; Thomas’s Prinsep; MacGregor’s Persia.

BAGHEL, according to Wilson, a branch of the Sisodhija Rajputs of Gujarat, who migrated eastwards. Subdivisions of the tribe, under different denominations, are widely spread though Bundelkhand, Almahab, Benares, Gopur, Gawnpur, and Farrakhabad. According to Sir Henry Elliot, Baghel, literally tigers' whelps, are a branch of the Solunki tribe of Rajputs, who give their name to Baghelcund, also called Rewa. To decribes the Baghela as a Chaldean race, descended from Komarpal (died A.D. 1166), sovereign of Gujarat. They were formerly rulers of Gujarat, and some Solunki chieftains are still there. Raja Ram, Baghel, protected the wife of Hamayun, Akbar's mother, and Akbar gave the tribe much influence. The chief of Rewa is a Baghel. He is the descendant of the famous Sid Rai Jyi Singh, the ruler of Anhalwar Pattan from A.D. 1094 to 1145, whose court was visited by the Nubian geographer Edrisi. Edrisi states that Jyi Singh was then a Buddhist.—Elliot. The Baghel are extrograme, not marrying within their own tribe, and, like the Gujar, permit remarriage of widows. The princes of Baghelcund are of this race; in Gujarat there are many petty chieftains of this tribe, as Lumaarwa, Mandivie, Mahera, Godra, Dubbaya, etc.

BAGHELUND, a tribe in Central India, whose princes are of the Baghel or Baghela race. It is described by the Indian Government as including the four states, Rewa, Nagode or Ocheyra, Mailar, and Sohawal or Koti. It is between lat. 22° 40' and 25° 10' N., and long. 80° 25' and 82° 45' E.; has an area of 14,250 square miles; a population of 2,260,000. It has on its west, Bundelkhand, with which it is historically connected.

BAGHI. ARAB, HIND, PERS. Rebellious.

BAGHLAH. ARAB. A ship of the eastern seas, of the Indian Ocean, and Bay of Bengal, from 50 to 300 tons' burden. The name is derived from the Arabic, and is the feminine of baghi, a mule, but is variously written by Europeans as baglu, baggalo. Wellusted, however, supposed it to be from bagola, Hind., the crane.—Burton's Pilgrimage, i. 262; Wellsted's Trs. i. p. 16.

BAGHNU. HIND. Populus ciliata.

BAGH-NUKROSHIM. BUNA. Lablab falcatum.

BAGH-XU. A. Beng. Cynotis axillaris.

BAGHOL, of Suites, Machilusa odoratissimus.

BAGHRAM, near Charikar, about 30 miles north of Kabul, was supposed by Mr. Prinsep to be Alexandria apud Caucasum, in which Alexander's army passed the winter of B.C. 330-329. Graco-Bactrian coins have been found here in great profusion.

BAGHUNA. HIND. Rhyns cotinus.

BAGHWAN, a territory in Baluchistin, held by the Eltaiz-Zyc, a branch of the Kamarani tribe, related to the khan of Kelat. In the valleys beyond Baghwan are to be seen stupendous bunds or dams erected by some prior race. They are supported and strengthened by buttresses or walls built at right angles. They always present a scarped face to the opposite side,
which, when well preserved, is levelled off with the surrounding and superior ground. Those built across the mouths of ravines are very solid and high, and usually the builders have taken advantage of some mass of rock jutting out as a sort of foundation. Those in slopes are never seen singly, but always in numbers, varying with the extent of the ground to be covered, and placed in succession, one behind the other. The intervening ground being levelled, is thus formed into a succession of terraces.

Those built across ravines were intended to form tanks for the preservation of the water that came down at irregular intervals in floods. Those on slopes, to economize the distribution of the water; the surplus water of one terrace running over and flooding the lower one, depositing as it went a layer of surface soil. The ground thus levelled of course became more valuable, freed from the irregularity and roughness which characterize these narrow stony valleys. They are almost confined to the provinces of Jalalawon, and are largest and most important in the southern and south-eastern portions of the province. That the ancient city at Gunjuck is of the same date, and constructed by the same people, seems extremely probable.

From the numbers and position of these structures, the Chorbasta people who built them must have felt that the country, as existing by nature, was utterly incapable of supporting them; and they must have possessed an energy and ingenuity which the present races are totally without. It appears almost certain that they must have swarmed eastward over the mountains from Mekran, making their appearance on the south-west portion of the table-land. Gradually pushing eastward and northward as their numbers increased, they ascended to the various valleys as high as Katel, when, discovering the great eastern outlet, the Moolas pass, they found an exit by it into the plains of India. How long they remained on the table-land, from whence they originally came, and over what countries they eventually distributed, are alike mysteries.

**BAGI.** Can. Sweet flag. Bagla or Bagola. SANSK. The genus Ardenia, the cranes. Baglan, on the crest of the Western Ghats, supposed to be the original residence of the Mahrattas, who there, as a mountain race, cultivate the fertile valleys or mawals. Baglan is the western taluka of Kandesh. Stretching north in Baglan are a series of valleys separated by small chains of hills. These hills, as in the Poona mawals, have ground naturally formed for forest reserves.—*Gibson's Forest Reports of 1857-60.*

BAG-NAK or Wág-nak, amongst the Mahrattas, a weapon worn on the hand in the form of a tiger's claws, made of curved steel blades set on a bar, with rings through which the fingers pass. It is struck as if tearing with claws. It was a weapon of this kind with which Sivaji strook Afzul Khan.

**BAGNI.** Pers. Malt liquor or beer, applied by some of the people of the Caucasus to their own beer (which Klaproth says is very like London porter). This liquor was called by the Mongols, darasun, the terracina of Rubruquis.

**BAGON.** PHILIP. Balachang.

**BAGOON.** BENJ. Egg-plant; Solanum melongena.

**BAGRENDI.** HIND. Jetropa curcas.

**BAGRI.** HIND. According to Wilson, Bagur is the tract lying between the S.W. borders of Hariana and the Sutlej, occupied by the Bagri tribe, who are regarded as Jats. Bagur is also a tract on the S.W. of Malwa; and a predatory race called Bagri have settled in the eastern parts of Malwa, Hisar, and Bhattiana. Sir H. Elliot says they were originally Rajputs, but now classed as Jats. The Bagri are one of the predatory tribes of Central India. Several of these tribes in the 18th century were for many years the worst enemies to the prosperity of this country; they were the Moghi, Bagri, Bhiil, Sondi, and Bhilalas. These two principal were the Bagri and Moghi; they came to Central India originally from the western parts of India, chiefly from the neighbourhood of Chitore. The Moghi hardly passed the Chambal, but the Bagri settled in the eastern parts of Malwa in considerable numbers; and about the beginning of the 19th century, the Solunki Rajputs introduced no less than 400 of them to garrison the small fort of Satnabare in Bersiah, in which district, and others in its vicinity, there had been for a long period many settlers of this tribe. The Bagri are a very brave race of men, and though they till the soil and pursue occupations of industry, from necessity, their favourite pursuits were theorizing and plundering. In these arts they were at once expert and bold. They were also mercenary soldiers, ready to serve any one, and to engage in any cause for prey. The Bagri were foot-soldiers, or their jamadars or leaders, whom they obeyed implicitly, were usually mounted. Wherever they settle, they remain in colonies; and even when three or four families fix in a small village, they live distinct from the other inhabitants. This tribe, though scattered, preserved a correspondence, which made them formidable enemies to the internal peace of any country in which they were numerous. There were not more than 1200 in the countries of Bagur and Kantul and their immediate vicinity. The Meena and Goopoo or Hindustan, who have settled in Central India (though the greater proportion of them are cultivators), have not forgotten the habits of their ancestors; and, till late in the 19th century many of these classes distinguished themselves as expert and successful thieves and robbers.—*Molyneux's Central India,* ii. p. 185; *Wilson's Glossary.*

**BAGSARIA.** A small clan of Rajputs in the Moradabad district; also a branch of Kanaun Brahmanas.—*Wilson's Glossary.*

**BAG-SIRA.** HIND. Gryllus monstrosus; locust. Bagu or Wagu. JAVAN. Gneumium gnetum. Bah or Daha. HIND. The burning of dead bodies.

**BAHA,** also Khal and Khala. HIND. A water course, in some places natural, in other places artificial. It is from bahna, to flow.

**BAHADHA,** also Bahadhr. TEL. Terminali bellerica. *Roxb.*

**BAHADUR.** Pers. The seventh title amongst Indian Mahomedans and Hindus, and generally given along with all other titles, as Motamid-ud-Dowla, Bahadur; Matar-ul-Umra, Bahadur; Siyaj-ul-Umra, Bahadur.

**BAHADURI VARAHA,** a gold coin struck in the time of Hyder Ali, value Rs. 44.

**BAHADUR KHEL,** in Afghanistan, a clan.
to the east of the Joorbuk pass, where, also, at Kharrar and Lutnur, are the three Trans-Indus salt-mines. Those of Bahadur Khel, in lat. 33° 10' 30" N., and long. 70° 59' 15" E., 4 miles long and 450 yards in breadth, are a mass of rock salt, and several salt hillocks crop out between two hills. The salt is largely worked by the Government, and is exported to Kabul, Baluchistan, the Derajat, and neighbouring Indian towns.

Revenue, £1279.

BAHAN. Pusht. Populus Euphratica. BAHANGI or Bhangi, in peninsular India, a postal term for the heavier book and parcel post.

BAHARA, also Ballara, an ancient Hindu dynasty that ruled in Gujerat and Surat (Saurashtra). The capital was Balabhipura, and the dynasty was named Bahara, Balabhi, and Bala Rai. Balabhipura was destroyed by the Parthians in A.D. 524. See Saurashtra; Kattyawar.

BAHARLOO, one of the seven Turkish tribes who supported Shah Ismail, one of the first of the Saffavane kings of Persia, about A.D. 1500. They wear the red cap, and are part of the Kazzilbash. See Kajar; Kazzilbash.

BAHA-ud-DIN, Nakshbandi, the national saint of Turkistan, was the founder of the sect of Nakshbandi fakirs or darwhes. He died A.D. 1388 (1963?), and his tomb is in a small garden in a village six miles from Bokhara, on the Samar-cand road. Pilgrims visit the shrine from remote countries of Asia. It is a small temple-like mausoleum, decorated with rams' horns and rags. At one side is the sang-i-murad, or wishing-stone, with an inscription, which devout visitors rub with their hands, faces, and beards.—Schuyler, ii. 113.

BAHA-ud-DIN, Zakarhiah, a fakir who lived in the beginning of the 14th century, and is still one of the most revered of the Mahomedan saints. He left enormous wealth to his heirs.—Briggs, Ferishta, i. p. 377.

BAHAI-ROPA. Hind. Literally, many faces, a section or clan of the Banjara, at the foot of the Himalaya; also mimics and beggars, and in the southern Mahrrata country they are the associates of thieves.

BAHAWULPUR, a Mahomedan state lying to the east of the river Indus, north of Saurashtra. The reigning family claim to trace their descent to the Abbassi khilifs of Baghdad, including Harun-al-Rashid. But the reigning chief, according to Mr. Masson, is of a Jat family, called Daimpootra, or the sons of David. They formerly lived about Shikarpur, but, becoming numerous, they were expelled; and, crossing the Indus, possessed themselves of the country, where they established separate and independent chiefships. Many of their leaders built towns, to which they gave their respective names, Bahawulpur, Ahmadpur, Fazilpur, Sabzal Kot. The state has an area of 22,000 square miles, with a population of 500,000, mostly Mahomedans. Its rivers are the Indus and the Sutlej, and the fertile parts extend along the banks; and, besides smaller inundation channels, a great channel, 113 miles long, has also been cut parallel to the Sutlej or Gharra. Bahawulpur is seated on the skirts of the desert. The town is built about two miles from the south bank of the Ghanna river, and the transition from a land of sterility and solitude to one of fertility and abundance, is very striking to the traveller approaching it from the east. The Bahawulpur territory is bounded on the north by the provinces of Multan, Mankira, and Lyia. To the south it has the great desert, separating it from Jassalmar. On the east, it touches to the north on the lands of the Sikh chief of Patiala, and, more directly east, on the frontiers of the Rajput principality of Bikanir. Westward it is defined by the river Indus, which divides it from Multan-Kot, and a slip of territory dependent on Dera Ghazi Khan; and lower down, from Harraund and Dauli, provinces of the Brahma Khan of Kelat. Bahawulpur is remarkable for the manufacture of lunesse, or silk'en girdles, and turban. The inhabitants of this and all the neighbouring countries on the west and north are principally Jat and Baluch, who profess the Mahomedan religion. Ueh is perhaps the most ancient town. The name is borne by two contiguous towns, one of which, Pir-ka-Uch, was bestowed on Pir Nasser-ud-Din, the spiritual adviser of the khan. Khanpur, 40 coss from Barra Ahmadpur, is surrounded by a country amusingly fertile, and is a depot for indigo, rice, and all kinds of grain. Moz Ghur fortress is a lofty structure, built of kiln-burnt bricks. The chief fortress of the state is Durawal, equidistant from Ahmadpur and Bahawulpur, or 18 coss from each. — Elphinston's Candbures p. 206; Masson's Journeys, i. pp. 17-28.

BAHBUDI, an Afghan knife.

BAHIDAN, a tribe in Kurdistan, along with the Seekir, Nur-ud-Din, Shindki, Gellati, Balbasi, Jass, and Mikri, under the prince of Amadiyah and Rowanduz, and number 400,000 souls.

BAHIEL, SHULLI. Maleal. Asteracantha longifolia, Nees.

BAHIERA, a clan of Rajput in Jopur and Chunbar.

BAHIKA, a tribe who were occupying the neighbourhood of the Indus near Attok, at the time of Alexander and Chandragupta. They were one of the republican races known as the Arashta, or the kingless, the republican defenders of Sangala or Sakala. The name of the Arashtah is Arrian, who place them on the Ravi. They were known by the several names of Babika, Jarikka, and Takka; from last which is the name of their old capital of Taxila, or Takkasila as known to the Greeks. The Takka people still exist in the Panjabs; and their alphabetical characters, under the name of Takri or Takni, are used by all the Hindus of Kashmir and the northern mountains, from Sinla and Sabathoo to Kabul and Bamiyan.—Elliot. See Chandragupta; Kubul; Pak-Pattan.

BAHIKHATIA, a mendicant sect in the Benares district, who, to enforce their demands for alms, cut and stab themselves, till the family, in horror, give them money to go away.—Sherring's Tribes, p. 270.

BAHIN, hind. A silver armlet.

BAHIRA, Sansk. Terminalia bellirica. Bel-leric myrobalan, the fruit, is very astringent; considered cooling, and given in hernia; much used in dyeing, and in messilhas; is common in all hazzors.—Gen. Med. Top. of Aimpur, p. 128.

BAHIR-VASI. Hind. A Hindu of unclear avocations, who resides outside (tahir) the town.
BAHILM, a Mahomedan tribe in Dassa and Meerut. Some of the Banjara tribes of Rohilkund take the name of Bahilim; also a gang of Thugs.—Elitio.

BAHILM, Burn. A useful timber of Tavoy.

BAHMAN, afterwards named Ardeshir, was the son of Isfandiyar, the brainy-bred, a prince of great renown in Persian annals. He is one of the most conspicuous heroes in the Shah Namah.

BAHMANI, a Mahomedan dynasty who ruled at Beder, in the Dekhan. They held the country towards Kulburga, in the S.W., and part of Telengana in the east. The first of the dynasty was Ala-ud-Din Hasan, Gangawi, Bahmani, a native of Dehli, of Afghan descent, and of humble origin. He farmed a small plot of land belonging to a Brahman astrologer named Gangu, and discovered a treasure, which he delivered up to Gangu, who returned obtained his advancement. He changed his own name to Ala-ud-Din, and added to it Hasan Gangu, the last being that of the Brahman. He was the first Mahomedan king in the Dekhan. He fixed his capital at Kulburga, and his successors afterwards made Beder the capital.

After the Bahmani kingdom of the Dekhan became dismembered, at the end of the 15th century, into five states of Bijapur, Ahmadnagar, Berar, Golconda, and Beder, these, for 150 years, continued incessantly at war, and so ruined the centre of the Dekhan that it is still with few inhabitants. Golconda State alone remains under another dynasty.—Eliph.

BAHMAN SATPAID, and Bahman Surkh, Hind. White and red Centaurea behnem.

BAHINI, —? A dance.

BAHIOLI or Bhawalii, Hind. Land about the village homestead in Kangra.

BAHHR, Arab. Pers. The ocean, a sea; a great river, as Bahr-ul-Yemen, Bahr-ul-Abid, the White Nile; Bahr-ul-Azrek, the Blue, and Bahr-ul-Aswad, the Black Nile. Bahr-ul-Kulzun, the Red Sea; Bahr-i-Oman, the Arabian Sea; Bahr-ul-Run, the Mediterranean.

BAHRAICH, a district of Oudh; area, 2645 square miles; population, 774,477; bounded on the west by the Gogra river. Bahraich town is in lat. 27° 34' 52" N., and long. 81° 38' 2" E. Besides the Aryan Hindu Brahmins, Kshatriya, and Vaisyas, the population consists of Ahir, Chamar, Garsiary, Kahas, Kurmi, Kori, Lodha, Murao, Nao, and Pasi, and about 34,000 Mahomedans. Sakya, the Buddha, was born at Kapilavatthu, near Kosin, about 623 B.C., and passed nineteen years of his life at Sravasti, its ancient capital, the modern Sahet Mahet. At Tanda, 9 miles west, is a statue of Maha Baha, Sakya's mother, which Hindus worship, but call it Sita Baha. Bahraich takes its name from the Bhar race, who once were dominant here and in all the districts of eastern Oudh.

BAHRAICH, the name of five of the Sassanian kings of Persia, whom the Romans styled Varanes and Varanu.

BAHRAKHAN. Smith. Mordman.

Varanes I. A.D. 274, 271 the 4th king.
Varanes II. A.D. 277, 277 the 5th king.
Varanes III. A.D. 294, 291 the 6th king.
Varanes V. A.D. 420-438 420 styled Bahram Ghor.

In the reign of Bahram Ghor, the famous impostor Mani, founder of the sect of Manicheans, made his appearance, and was put to death by the king. Bahram Ghor was famous for his liberty, galantry, and love of the chase of the Ghor or 'wild ass,' and he was surmised Gor from his partiality to hunting that animal. In its pursuit he was drowned in one of the deep pools near Persepolis. The monuments of Bahram are placed with those of Sapor I., below those of Darius and Xerxes, on the cliffs of Nakh-i-Rustam. Various authorities state that Bahram Ghor was in India in the 5th century, and left progeny by a princess of Kanor. A passage in an ancient Jain ms. indicates that in 'S. 528, raja Gardha-bhela, of Cacostha, or Sooryavansa, ruled in Balabhipoora.' It has been surmised that Gardha-bheela was the son of Bahram Ghor, a son of whom is stated to have obtained dominion at Putan.—Tod's Rajasthan, p. 292. See Sassanian Kings.

BAHRAM, a Sakkar or water-carrier, a poet of Bardwan of the time of Akbar. He has a tomb erected to his memory. Near it is buried Sher Afghan, first husband of Nur Jahan.

BAHRAKHAN, a Turkoman by birth, was a distinguished officer under the emperor Humayun, before his expulsion from India. In the defeat of Humayun by Sher Shah, Bahram was separated from his prince, but made his way, after a long series of dangers and adventures, through Gujarat to Sind, where he found Humayun, in the third year after his expulsion. He was received with joy by the whole of the exiled party, and became thenceforward the most confidential of Humayun's officers. When Akbar was sent as the nominal head of the army in the Panjab, the real command was vested in Bahram Khan. When Akbar ascended the throne (A.D. 1556, A.H. 963), at the age of thirteen years and four months, Bahram Khan was invested with the charge of all the powers of sovereignty, receiving the title of Khan Baha, or king's father, a translation of the Turki Atabek; and the real restoration of the house of Timur was brought about entirely through the exertions of Bahram. But his temper was harsh, his manners overbearing, and he could not suffer the smallest pretension to power derived from any source but his favour. Even Akbar was kept in thrall, and, when eighteen years old, concerted the plan of a hunting party, from which he returned suddenly to Delhi, where (A.D. March 1560, A.H. 28 Jamadi-ulp-Khahir 667) he proclaimed that he had assumed charge of the
government, and forbade obedience to other than his own orders. Bahram went off to Nagor as if proceeding on pilgrimage to Mecca, but receiving some further cause of irritation, he went openly into inscription and invasion of the Punjab. Akbar moved against him, and defeated him (A.D. September 1560, A.H. Muharram 968) by a detachment, and Bahram fled to the hills, but at length threw himself on the king's mercy. Akbar received him with honour, and Bahram proceeded to Gujerat on the way to Mecca, but while preparing to embark, he was assassinated by an Afghan, whose father he had killed in battle during the reign of Humayun.—Elph. pp. 455-6.

BAHREIN, also called Awal Island, on the Arabian shore, extends from lat. 26° 14' to 25° 46' N., and occupies a central position in the Gulf of Bahrein. Its pearl fishery employs about 4500 vessels and boats, and it was long a field of contention between the different powers who towards the end of the 18th century strove for supremacy in the Persian Gulf. In 1779, after having often changed masters, it was conquered by the Uttooee tribe, by whom it has ever since been held, under allegiance at one time to Muscat; and successively to the Wahabis, to Turkey, and to Persia. In 1820, after the capture of Ras-ul-Khyma by the expedition sent against the piratical tribes in the gulf, the two chiefs, Abdulla-bin-Ahmed and Suliman-bin-Ahmed, who then ruled Bahrein conjointly, signed a preliminary engagement not to permit in Bahrein the sale of property procured by plunder and piracy, and to restore all Indian prisoners then in their possession. They also subscribed a general treaty for the pacification of the Persian Gulf. The chiefs of Bahrein were parties to the engagement in 1847 for the suppression of the slave trade. Twelve miles from the north end is a small mass of volcanic hills, called Jabal Dukhan, 400 feet high. The Uttooee, who last conquered Bahrein (A.D. 1779, A.H. 1194), were of the Beni Sabah, Beni Yalahimah, and Beni Khalifah, who came originally from Koweit or Grane, but afterwards quarrelled, and the Yalahimah were nearly all destroyed. The pearls are large, and of a yellow colour; and Niebuhr stated the annual revenue from its pearl fishery at £157,000. Fresh-water springs occur on the shore reef off the island at 2½ fathoms; a similar spring is off Katiff, distant 8 or 9 miles.—Findlay: Kinnett's Memoir, p. 17; Horsburgh; Wellsted: Alitzen's Treatise.

BAIR-WATTHIAH (bahr, out, and wat, a road) is a term applied to Kattaywar Raiputs, who on some quarrel with their landlord quit their villages, which thus lie waste, and occupy the neighbouring fastnesses, from whence they make inroads, until hunted down, or a compromise or settlement occurs.

BAHU. Hind. In the south of India, persons formerly compelled to give their labour as porters or for public works. Compulsory labour.

BAIJA. Wilson says that Baja is a name of the Kharwar tribe, but this designation is not known in the Peninsula. The Kharwar are dyers with the red dye from the Morinda umbellata.

BAIKAH. Hind. A snake. The Kherwar tribe call it 'Dahya' and cultivate the poison from this reptile.

BAIL, also written Baie, Bye, and Bhaye, Mahb., a lady; a respectful address for a woman. In Bengal, a mistress, a dancing girl, a prostitute.

BAIHA. Hind. The Phoenix lapoia, Bligh, the weaver bird of India. It builds bottle-like nests, generally hanging over water, when it is readily domesticated, and acquires several little tricks.

BAIBARANG. Hind. Myrrine Africana, also Embelia ribs.

BAIBARANG KATAI. Hind. A species of Melissa or Nepeta.

BAIB-YAH. Bum. Conocarpus robusta.

BAID. Hind. Or Bed, herbalists who gather and sell medicines. They are often quoted as authorities for the properties of plants, but they are poor and illiterate, often beggars. They are a caste or a race. A considerable number occupy the Hyderabad country near the Deccan. See Ved; Gollar.

BAIDARA. The people or tribe from whom the term Pindara was obtained. In the many cultivated spots throughout the hills which extend northwards from Kasaladurga, Tipu settled tribes of the Baidara race, who received twelve pagodas a year, and served as irregular troops when requisitioned. They were mercenaries, and in following the armies spared neither life nor property. These men were the chief instruments of Hyder and his son in the depredations of the Karnatic. There are two Baileyar principalities in the Dukhan, one at Zorapore or Bairar Zorapore, and one at Ghurghunta. The men are tall and good-looking, and fond of sport. They hunt and eat the wild hog.—Buchanan's Mysore, p. 179.

BAIDWANA, descendants of the Chauhun or Pranara Rajput, who embraced Mahomedanism.

BAIGA of Mandla are supposed to be the prior occupants of that district, and take the title of Bhumia or landlord. The Baiga language is almost pure Hindi. They have three sections, Bijnwar or Bichwar, Mundhia, and Bhrintiah, each of which is subdivided into seven sections. Even where the Gond and Baiga occupy the same village, the Baiga live apart from the Gond. They are of a slight, wiry build; hardly, extremely active, fearless, trustworthv, and independent. They cultivate by the 'Dahya' system, and sow the Kodo or Fasalnum frumentaceum in patches called Bemar.

BAIGAR. Hind. In the south of India, persons formerly compelled to give their labour as porters or for public works. Compulsory labour.

BAIGAR. Wilson says that Baigar is a name of the Kharwar tribe, but this designation is not known in the Peninsula. The Kharwar are dyers with the red dye from the Morinda umbellata.

BAIKAL, in the Lake District, an expansion of the Angara river. Its length is nearly 400 miles (according to Bell, 300 miles), with 45 miles of average breadth from north to south. It has steamboats plying on it. Its seal and sturgeon fisheries are valuable, and the oil of the golomyka fish, Callionymus Baicalensis, is valuable. Mountains encompass the lake entirely, and several rivers discharge into it. The Commercial and Statistical Register for the year 1858, gives the area of the lake 0-lao-lan (Olchon) island, frequented by wandering tribes of the Mongol and the Pu-la-te (Buhaty of Bell), and they bring hither with them their horses. Baikal lake is 1715 feet above the
level of the sea, Selinghinek 1779 feet, and Kikakta 2400 feet, consequently higher than all the towns of the Harz and the Swiss Alps. The omulv fish come in vast shoals from the Baikal, in autumn, up the river Selinge to spawn. They advance up the river about 10 miles a day. This fish is very agreeable food, either fresh or salted. They are much fatter the nearer they are caught to the sea. Near Baikal lake are several hot mineral springs; that of Tourkins is the most accessible. Many families from Irkutzk spend part of their summer here. Between this place and the Ourt Bargouzine there are other springs, in which the gushing fluid scalds the hand if placed in it.—Narrative, pp. 45–53; Timbowski's Journey, i. 17.

BAIKER. HIND. Cervulus moschatus, De Bl.

BAIKIE, ROBERT, was a medical officer of the Madras army, who wrote observations on the Neighherry Hills in Mad. Lit. Trans., and Notes on the Climate of Coorg, ibid. 1896, iv. p. 398.—Dr. Buis's Catal.

BAIKUNTH or Vikunth, the heaven of Vishnu. Jafar Khan had pits of this name in which he confined revenue defaulters.

BAIL KUMHAR, the Canarese name of the Taremuk or wandering blacksmith. They wander about the Madhurtha country. Wilson writes the name Baitu kanammar.

BAINA. SANSE. Andropogon muricatum.

BAINGAN. HIND. Solanum melongena, egg plant. Baingani Rang, a dull purple colour, like that of the rind of the baingan. Baingan Tamaku, a variety of tobacco.

BAINSI, a section of the Gujar tribe.

BAIJO-JENTI. BENG. Sesbania Aegyptica.

BAIR or Ber. BENG. Zizyphus jujuba.

BAIRAGI. HIND. A Hindu ascetic mendicant. Byragi, Viragi, from Vi, private, and rag, passion; literally, a person freed from desire. The term is loosely applied to several sects of Hindu ascetics, but originally to followers of Ramanand and his disciple Ramanuji. They are chiefly recruited from the Sudras; they do not marry, and they bury their dead.—Sherrington, p. 260.

BAIRAM or Bairam, one of the Turk race of Constantinople, a religious festival on the 10th day of the month Zi-ul-Haj, and is also called the Eed-i-Adha and Eed-ul-Kurban, and by the Turks generally Kurban Bairam. See Bakrid.

BAIRATH, at the foot of the Bhim-gupha Hill, 41 miles north of Jeyapore and 25 miles west of Alwar. It is an old town of fame from the wanderings of the Pandus, and has two of Asoka's rock inscriptions. One of them is on a detached block of granite. Bairath has copper mines.

BAIR-DHSM, an officer of Madras and Bengal, who rose to the rank of lieutenant-colonel of Engineers. He was employed to report on the system of irrigation in Italy. He travelled in North America in 1883, and studied the irrigation systems of the Madras districts, under General Sir Proby Cantley. In 1854 he drew up regulations for the Ganges Canal, which was opened in that year. He was in command at Bhoorker during the rebellion of 1857; and in June of that year was employed as engineer before Delhi, where he was wounded. His services there were rewarded by promotion to lieutenant-colonel, he was raised to the rank of Commander of the Bath, nominated aide-de-camp to the Queen, and in 1858 he was appointed Mint Master at Calcutta. His reports on irrigation were printed. He died on board the P. & O. steamer Candia in 1868, and was buried at Madras.

BAIRHAM, a Hindu set of musical tunes, said to have been composed by Brahms.

BAIRIS, a river that issues from the Oodi-Sagur lake of Rajputana, and passes within a mile of Chitore. There are two grand reservoirs within six miles of each other,—the Peshola, or internal lake, having an elevation of eighty feet above the external one; the Oodi-Sagur, whose outlet forms the Bairs. The Peshola may be called the parent of the other, although it is partly fed by the minor lake at the villa of Shuhalea-Ki-Bari. Both are from twelve to fourteen miles in circumference, in some places thirty-five feet deep, and being fed by the perennial streams from the Aravalli, they contain a constant supply of water.—Todd's Rajasthan, ii. p. 627.

BAIRIYE. SINGH. A durable wood of Ceylon, weighing 57 lbs. 10 oz. per cubic foot, and lasting 10 to 30 years. The tree is found chiefly near the mouths of the rivers, in the northern and western provinces of the island, and its timber is used for anchors and in house-building.—Mendis.

BAIS, a numerous tribe of Rajputs in Oudh, and at Baiswarra in the N.W. Provinces, who gave their name to the district. They assert that they came from Manji Patthin in the Dekhan, and that their 360 clans are descendants of 360 wives of king Salivahana (A.D. 78). They are included amongst the 36 royal races, and can intermarry with the Chabhin and Kachwaha. Their tulk-chandra branch have the moon for their frontal mark.—Wilson's Glossary.

BAIS. HIND. A verbal alteration from Vais, or Vaisy, the third order of the Hindus. The bankers, merchants, and shopkeepers known as Marwari, call themselves Bais or Vais. See Vaisy.

BAISA-BOL. See Bol.

BAISAKH, amongst the Hindus, the first of their lunar-solar months, April and May. The first of Baisakh is a holiday, in which Hindus bathe, as a religious ceremonial, in rivers, canals, at Hardwar, at Ganges, or other holy rivers. The Baisakh Bihu is a festival as gay as a carnival. For many days before the actual festival, the young people in the villages may be seen moving about in groups daily dressed, or forming circles, in the midst of which the prettiest girls dance, with their long hair loose on their shoulders. The first day of the festival is devoted to interchanges of visits, the next to the bathing and worshipping of all the cattle, and on the third day the inhabitants of several groups of villages, old and young, meet at some appointed place and give themselves up to thorough enjoyment. The girls on these occasions do not like to dance before the men of their own village. Akhtij is the 18th day of Baisakh, on which cultivators of the N.W. Provinces adjust the obligations incurred to provide for the rabi crop. It is to this crop what the Diwali is to the kharif. On the Akhtij, the manufacture is commenced of new agricultural implements. Brasses are fed, and the new grain eaten, this being till then scrupulously abstained from. A plough is also slightly passed over the fields to secure good luck, but to sow seed on that day would be unlucky;—Pus Amawas mul bin, Srawan bhishni srawani, Bin ruhin Akhtij, Britha na boow biy.

BAISHEE. BENG. Willow; Salix Babylonica.
BAISHNAV.

BAISHNAV, a dialectal change from Vaishnava, a sectarian Hindu follower of Vishnu; but the term is commonly applied in northern India to religious mendicants, who mark their foreheads with the symbols of Vishnu, and repeat hymns in honour of his avatars, but chiefly of Rama and Krishna.—W. See Vaishnava.

BAISWARA, a district in the N.W. Provinces. 
BIAIT. A r a b . A house. Bait-Ullah, the house of God in Mecca; Bait-ul-Maqaddas, the holy house in Jerusalem; Bait-ul-Mal, a treasury.
BIAIT, a couplet in the Arabic, Persian, and Hindustani poetry; but the Mahommedan poets of Sind apply the word to their peculiar triplets. The war song, or that sung in battle, like the Arabic Rajaz, is called 'Shair' in Sind, and was sung by the Mirasis, or bard, who accompanies the chief, during the combat.—Burton's Seiude, p. 386.

BAITALI BHAT, bardic of the Gosains of the Benares district. They claim descent from Baital, a raj-bhat at Vikramaditya's court; but he abandoned the king and the king's religion, and attached himself to the Gosain sect. They subsist on charity, but accept it only from Gosains, whose bards they are.—Stirling.

BAITALI PACHISI, or Twenty-five Tales of a Demon, is the term generally in use in all the vernacular dialects of British India—Bengali, Gujarati, Hindi, Mahratti, Tamil, and Telugu—to designate an extremely popular collection of stories, written in Sanskrit, and translated into the current tongues. The collection is known as the Veta/ Panchavati, and purports to have been stories related by a sprite, or demon, or vampire, who haunts cemeteries, and animates dead bodies, to Vikramaditya, king of Oojein, according to the usual version: but, according to the Katha-Sagara, to Tri-Vikrama Sena, king of Prelishthana or Python, on the Godavery. Whether it was a separate work originally, or whether it always formed the ninth section of the twelfth book of the Katha, is uncertain. It is now, however, printed separately, and has been translated into English by Raja Kali Krishna, Mr. Eastwick, Captains Hollings and Richard Burton, Munshi Ghostam Mahomed, and Mr. John Platts. The scene is laid in Oojein, then ruled by Raja Gandharb Sen, whose son and successor Shank was slain by his younger brother Vikram, or Bhartari. It relates the occurrences resulting from the gift by a deity to an anchorite Brahim, of a fruit possessing the power of conferring immortality on whoever should eat it. Vikram ate it, and became a devotee. Kathasaritasagara, the Ocean of the Streams of Narrative, or Watery Ocean of Stories, is a well-known book in the languages of India, but is more commonly known as the Vrhat-katha and the Vrihat-kathasagara, the great collection of tales, or great tale from which the Kathasaritasagara has been compiled. The date and the author of the Vrhat-kathâ are both unknown, but it was written in prose in minute detail. The Kathasaritasagara, however, is in verse, and is more compressed in style, the author being Bhattach Samdeva, who lived about A.D. 1088. It is a large work, and consists of eighteen books, subdivided into 124 sections. Only a portion of it has been translated. The first book refers the origin of the stories to Siva, who told them to his wife Parvati. The Kathasaritasagar abounds with pictures of national manners and customs and feelings.

BAITA. styled Ul-Baitar, a learned man of Baghdad. He died A.D. 1248.

BAITAHA. SANSK. Dry ginger.

BAIT'HAK. HIND. A house with an open sitting-room on the first floor, from baitha, to sit; also an assembly at night of women. Baithak-khana, the reception-room of a native dwelling-house. Baithan, a homestead.

BAITUL, a district in the Nerbudda division of the Central Provinces, comprising the western section of the Satpura plateau, and situated between lat. 21° 20' and 22° 35' N., and long. 77° 20' and 78° 35' E., an area of 4118 square miles. Its population is about 190,000.

BAITUL-FAKIH, an inland town of the district of Tehama, a province of Yemen, from which the coffee tree was taken to Bourbon.

BAIZ. ARAB. Lit. white. A mark or signature by a feudalty Mahomedan prince, generally the first part of the Arabic letter swad; a cipher, a monogram.

BAIZA-BAI, born towards the close of the 18th century, was the daughter of Shirzi Rao, Ghatgay, a Mahatta leader and minister of great notoriety, and her brother was Hindoo Rao. She was married to Dowlut Rao Sindia with great pomp. She was a woman of imperious disposition and masculine temper, and when her husband died childless in 1827, she assumed sovereign power. Afterwards she adopted Jankojee, a relative of her husband, and acted as regent till Jankojee came of age, when, weary of restraint, she sought British protection, and he was placed on the gadd'i in A.D. 1838. On this, Baiz-Bai retired to Agra, then to Farmahkhal, and subsequently to her jaghir in the Dehkan.

BAIZAH, also Baidad. ARAB. An egg; also, owing to the shape, the testis.

BAIZAI is a division of Swat, south of the Mara range and north of Lunkhor. It is inhabited by Baizai Swati, Utman Khel, Khatak, Mohmand, Rawauri, etc. The Baizai section of the Mohmand tribe inhabits the country between the Halimzai section and Bajawar. They punish abduction by fine.—Mactir. N.W.F. i. pp. 138-145.

BAIZAWI, the cognomen of the author of the Nizam-ut-Tawarikh, given to him as a native of Baiza, a town a short distance from Shiraz. He was Kazi there, and subsequently at Shiraz, where he died A.D. 685, A.D. 1286. His name was Abu Saeed Abdullah bin Abu' Hasan Ali, Baizawi. He wrote a commentary upon the Koran, entitled Anwar ut Tasal wa Asrar ut Tawil, the Lights of Revelation and Mysteries of Allegorical Interpretation, which has been censured on by many succeeding authors. It is considered the best commentary. He also, about A.D. 674, wrote the Nizam-ut-Tawarikh, the arrangement of histories, a small work devoted to general history, the prophets and patriarchs from Adam to Noah, the pre-Mahomedan kings of Persia, Mahommed and his Unmayide and Abbasside successors, dynasties of Iran during the time of the Abbassides.—Elliot.

BAIZOARA, in lat. 16° 31' 6" N., and long. 80° 40' 1" E., on the left bank of the Krishna or Kistna river, and 180 feet above the sea. A dam or anicut has been thrown across the Krishna river at this place, and extensive canals lead from it to the north and south.

BAJA. HIND. Baja bauhuntri. Music; musical instruments.
BAJANTRI KORAWA.

BAJANTRI KORAWA, a branch of the Korawa tribe, who are usually the village musicians, from Baja, music. They are the Gaon Korawa or Sonai Kolawas. See Korawa; India.

BAJAR. HIND. Mamis pentadactyla.

BAJAWAR. According to Colonel Tod, the three great branches of the Indu (Lunar) Aswa bore the epithet of Mida (pronounced Mede), viz., Poora-med, Uja-med, and Dode-med, and he supposes these to be the Aswa invaders of Assyria and Media, the sons of Bajaswa, expressly stated to have multiplied in the countries west of the Indus, emigrating from their paternal seats in Panchalain.—Tod's Rajasthan, i. p. 58.

BAJAT. HIND. A head ornament.

BAJAWAR, an independent district south of the Mohmans and west of the Kunar range. It is an undulating plain, 25 miles long, and 2 to 7 miles broad. It is a pastoral country, with large herds of cattle and flocks of sheep and goats. The chief has a large force of 6000 men and 16 guns, has absolute power over his people, even extending to their wives and daughters. They have always been hostile to the British, and were against them at Jalalabad and at the Ambila expedition of 1869. It produces iron, sulphide of antimony, and copper. It is inhabited by Hindkis about 30,000 souls, a mixed race called Rudbari, and 10,000 to 12,000 families of Turkolani, who can turn out 15,000 fighting men. Elphinstone says the Turkolani are also called Turkani; that the upper hills are inhabited by converted Kafirs, the lower by Hindki, and the plain by the Rudbari, a mixture of all tribes and nations.—Elphinstone's Cawul, p. 251; MacGr. N.W.P.T. i. p. 145.

BAJ-BAJ or Budge-Budge, a fishing village on the banks of the Hugli, 15 miles below Calcutta.

BAJGAH. A village 64 miles N. of Damian, in the valley of Kamard, in Afghan-Turkistan.

BAJI BHIJ. Bexg. Herpestes Malaccensis.

BAJI RAO, son of Balaji Wiswanath, was the second Peshwa of the Maharrast. He was the ablest of all the Brahman dynasty, and of all the Maharrasta nation except Sivaji. His father died in October 1720, and Baji Rao had a powerful rival in the Pirti-Nidhi. The Pirti-Nidhi was sincerely apprehensive of the effects of a further diffusion of the Maharrast power; and he strenuously contended for the necessity of consolidating the raja's present possessions, suppressing civil discord, and acquiring a firm hold on the countries in the south of the Peninsula before attempting to make any conquests in Hindustan. Baji Rao took a bolder view. He saw that the hordes of predatory horse, who were so useful in an enemy's country, would be utterly un governable at home; and that it was only by forming an army, and establishing a military command, that an efficient internal government could be brought into existence. He therefore conceived an immediate invasion of the northern provinces, and pointed out the inward weakness of the Moghul empire, which was nowhere so rotten as at the core. Let us strike, said he, the withered trunk, and the branches will fall of themselves. The eloquence and earnestness with which he pressed his advice overcame all the doubts of the Raja Saho, and when urged by Baji Rao to allow him to carry his standard beyond the Nerbadda, he exclaimed with enthusiasm, 'You shall plant it on Himalaya.'

Raja Saho was not destitute of abilities, but his education in a Mahomedan seminary was alike unfavourable to hardness of body and activity of mind; while Baji Rao, born in a camp, and trained up a statesman and diplomatist, combined the habits of a Maharrasta horseman with an enlarged judgment and extensive knowledge. Unlike the subdued manners of others of the brahmanical class, his temper was ardent and his manner frank; he never flinched from fatigue or danger, and could make a meal of dry grain rubbed out of the husks between his hands as he rode along on a march. When Asof Jah was removed from the governments of Malwa and Gujarast, and Raja Girdhar was appointed governor of Malwa, he was unable to defend it against the incursions of Baji Rao; and Hamid Khan and Sirbalian Khan, successive governors of Gujarast, yielded the Chouth and Styr Deshmukhi to the Maharrasts (A.D. 1725, A.H. 1136). Asof Jah at this time raised questions as to the party to whom—whether to Samba, who had made Kolhapur his capital, or to Saho—his Chouth and Styr Deshmukhi pertain. Samba was too hardy to relieve Barhanpur. Baji Rao made a rapid incursion into Gujarast, which he ravaged with fire and sword. He returned with celerity to the Dekhan, laid waste the country around Asof Jah's army, and so straitened him for supplies, that he renounced his connection with Samba, and conceded other advantages to the Maharrasts (A.D. 1727, A.H. 1140). After this, in A.D. 1729, A.H. 1141-2, Baji Rao crossed the Nerbadda to ravage Malwa, and excited from Sirbalian Khan a confirmation of his predecessor's grant of the Chouth of Gujarast.

At this time, four officers of the Peshwa—the Puar, Gaekwar, Holkar, and Sindia—who were to be founders of dynasties, were rising into distinction. They were all from districts of the country in which the Maharrast language is spoken. Mulher Rao, Holkar was a shepherd on the Nira, south of Poona; the Puar family were in the Indore. Kanaji Sindia, though of a respectable family near Sattra, was in such abject poverty as to be a menial servant of Baji Rao. Piliji Gaekwar was an adherent of Dabari, hereditary senapati or commander-in-chief, and on Dabari falling in action, A.D. 1731, and his son an infant, Piliji was nominated regent by Baji Rao, and the family are still ruling at Baroda. Udaji Puar was a chief before his connection with the Peshwa; he soon acquired territory about Dhar, on the borders of Gujarast and Malwa, but never rose to such power as his colleagues or their descendants.

Baji Rao made peace with Asof Jah; but Abhi Singh of Jodhpur, who had murdered his father, Ajit Singh, procured the assassination of Piliji Gaekwar, whose son and brother ravaged Gujarast, raised all the surrounding hill tribes of Bhils and Kolis, and made a sudden irruption into Jodhpur. Baji Rao entered Malwa in possession, A.D. 1732; he aided the raja of Bundelkhand, and in return for his services the raja ceded the territory of Jansi on the Jumna, and bequeathed to him rights on the Jumna. In 1754 he came in contact with Jei Singh ii., raja of Ambar, distinguished for his love of science. Jei Singh was viceroy of Malwa, and, with the tacit concurrence of the emperor, he surrendered Malwa to the Maharrasts; and in 1756 he claimed as a jaghir the province of Malwa and all the country south of the Chambal, together
BAJI RAO.

with the holy cities of Muttra, Allahabad, and Benares. In the following year (A.D. 1737, A.H. 1149), Baji Rao advanced towards the capital. By the time he had arrived within 40 miles of Agra, his light troops, under the command of Mulhar Rao Holkar, were ravaging the country beyond the Jumna. These were attacked and driven back by Sadiat Khan, governor of Oudh, and Kamr-ud-Din Khan advanced to Muttra to oppose Baji Rao. Whilst he lay inactive near Muttra, Baji Rao suddenly quitted the Jumna, passed off about fourteen miles to the right of the Moghul army, and, advancing by prodigious marches, all at once presented himself before the gates of Delhi. He drove back a sally of the garrison, and retreated to the Dekhan, followed by Asof Jah, who had been appointed vizir of the emperor. Asof Jah advanced to Seronj with an army about 34,000 strong, supported by a reserve under Safdar Jung, nephew of the Saeid Khan of Oudh. Baji Rao crossed the Nerbadda with an army 80,000 strong, and Asof Jah awaited him (January 1737) in a strong position near Bhopal. The Maharattas laid waste the country around him, intercepted his supplies, attacked every detachment that showed itself, and interrupted all communication with his reserve, and at the end of a month or six weeks Asof Jah commenced to retreat. But the Maharattas hung upon his rear, and in February 1738 he ceded all the country from the Nerbadda to the Chambal (including all Malwa). Asof Jah also promised to procure from the emperor a confirmation of the cession and a payment of fifty lakhs of rupees (Feb. A.D. 1738, A.H. Ramzan 1150); but before this could be obtained, Nadir Shah, king of Persia, swept over the empire, and the progress of the Maharattas was arrested. After the rout of the imperial forces at Karnal (15th February 1739), the plunder of Delhi, and the massacre of its inhabitants, Nadir Shah left the Moghul army destroyed, the treasury exhausted, the finances all but annihilated, and internal dissensions between the Turmi families of Kamr-ud-Din Khan and Asof Jah, and all those who were desirous of supplanting them. During this state of things, Baji Rao suspended all operations. 'Our domestic quarrels,' he writes, 'are now insignificant. There is but one enemy in Hindustan. Hindus and Musalmans, the whole power of the Dekhan, must assemble.'

On Nadir Shah's departure, Baji Rao moved against Nasir Jang, son of Asof Jah, who was encamped with 10,000 soldiers at Barbanpur, but the young viceroy broke through Baji Rao's army, and advanced to Ahmadnagar on his way to Poona, and Baji Rao came to terms with him. Baji Rao then recommenced his march towards Hindostan, but he died on the 28th April 1740 (A.H. Safar 1153), on the banks of the Nerbadda. He left three sons, Balaji Rao, who succeeded him as Peshwa; Raginath Rao or Ragoba, who was at one time much connected with the British, and was the father of the last Peshwa; and Shamshir Bahadur, to whom (though an illegitimate son by a Mahomedan woman, and brought up in his mother's religion) he left all his possessions and pretensions in Bundelkhand.

During the last years of Baji Rao's administration, he had been engaged in wars in the Konkan. They were chiefly conducted by his brother, Chimraj; and from the position of his enemies in forts and islands, protected on one side by the sea, and on the other by hills and jungles, the wars required extraordinary exertions, and were attended with imperfect success. These enemies were Konajji Angria of Calala, a maritime predatory chief, the Habsbi of Junjira, and the Portuguese. Angria for about 20 years, 1713-1734, remained almost independent; and the Habsbi chiefs were almost as powerful at sea as Angria. The war with the Portuguese originated in the contest between the Angrias (A.D. 1737). It ended in the loss of the Portuguese possessions in Salsette, Bassein, and the neighbouring parts of the Konkan (A.D. 1739). The Maharattas lost 5000 killed and wounded at Bassein.—Grant Duft, Hist. of Marathas, i. p. 547.

BAJI RAO II. was Peshwa from 1795 to 1818, and was the last of the Peshwas. He was son of Ragbhoji, and succeeded his cousin, Madhoo Rao, who had thrown himself from a window and been killed. Baji Rao was a clever but unscrupulous ruler, and had amongst his more prominent officers Nama Farnavis and Tribhakaji Dandlia, both of them unprincipled men. After his defeat at Poona on the 15th November 1717, he retreated with his army to the southern districts of the Maharatt country, but on the 23rd retreat took his steps northwards. Baji Rao continued to elude the forces by which he was surrounded. He failed at Coregaum; General Sir Lionel Smith, with the 2d and 7th Madras Cavalry, and two squadrons of H.M. 22d Light Dragoons, defeated him on the 20th Feb. 1818 at Ashta; Brigadier Fritzer, Colonel Prother, Generals Munro and Malcolm, and Sir Thomas Hislop, had taken the strongholds of Vizierghur, Singur, and Purundhur, all those in the southern Konkan, Badami, Bhagulkot, Sholapur, Chanda, Taher, Belgaum, Tribukh, Mallegaum, Raiygar, and others in the Dekhan. Finally, on the 3d June 1818, he sallied at Bithur, where he passed his life in the manner common to Hindus of those days. He adopted Dundoo Punt as his son and heir, but the Indian Government refused to recognise Dundoo Punt as entitled to the eight lakhs, and to this refusal has been attributed his rapid conduct at Cummur.—Elph. India. See Mutiny.

BAJPAI. HIND. Vajpoy, Vajpe, Vahs. A branch of the Kanouj Brahmanas.

BAJRA. HIND. A large boat, round-bottomed, without a keel, in use for travelling on the lower Ganges, called budgerow by the British.

BAJRA. HIND. Penicillaria spicata. This is a very common millet in India; is not so heating as Jawari or Holena sorghum. It is made into cakes or porridge. Sown in fields at the commencement of the rains. It does not require much water, but it is of the last importance that this should be timely. That grown in the Indian desert is deemed of better quality than the produce of the richer lands of Malwa.—Tod.

BAJRA KAPTA. HIND. Manis pentadaetyla.

BAJRANGA, a name of Bhiravma. It means of thunderbolt frame, from Bajra, a thunderbolt, and anag, the head, Bhir, Bhiravma.

BAJRI. HIND. In the Punjab, a sort of grave of disintegrated rock, used when ground up in forming plasters and stucco. Qu. Is it kaolin?

BAJU. MALAY. A jacket of many different kinds, worn by both sexes.
BAJU or Baju Laut, a maritime people in the Archipelago Islands, who venture far to sea. Many of the Baju remain throughout the year near the Dutch settlement of Macassar, on the south end of the Celebes. They are chiefly employed by the Chinese in fishing for trepang or sea-slug, and are generally involved in debt. The demand against each boat or family usually averages about four hundred guilders (twenty-five pounds sterling), and no instance is on record of their ever having absconded to avoid the payment of their debts. The Baju are commonly called Sea Gipsies. They are found in considerable numbers in the sea which lies between the east coast of Borneo and the west coast of Celebes. They are said to have come originally from Johore, in the Malay Peninsula, the inhabitants of which they much resemble in features and habits. Many of them are settled in permanent villages on the east coast of Borneo, but the greater number live in their boats, which are from five to ten tons burden, during the whole year, and shift their position with the changing monsoon, so as always to keep on the lee side of the island, and consequently in fine weather. They all profess the Mahomedan religion, and differ but little, except in their maritime habits, from the Malays, though they are said to adhere less strictly to the tenets of their faith. They also deal in tortoiseshell, and it is said engage in piratical acts, though they do not pursue it as a profession. They also manufacture an alkali from the ashes of sea-weed, nipah leaves, and the marine plants of salt marshes, with which they traffic. Such of them as reside in permanent habitations have fowls about their houses, and in all respects resemble the other Mahomedans. Their villages are built on posts, and always over the water, and close to the sea, or near the mouths of large rivers, in which the eastern part of the island abounds. They are expert divers, and would be useful in this manner if capitalists should think proper to fish the rich banks of the pearl and mother-of-pearl oysters in Maludu Bay, and amongst the islands of the Sulu Archipelago, which would doubtless be found immensely productive.—*Lori*, p. 335. *Lor's Square*, p. 842. See Orang Laut.

BAKHTIARI. —B. As. S. Jo. v. p. 42.

BAKESWAR, of the Murshidabad district of Bengal. Springs impregnated with sulphuretted hydrogen occur in the bed of the river, and near Talifarsa village are a group of sacred hot sulphur springs, called Bhum Bakeswar.—*Imp. Gaz.*

BAKHAR. MAHR. Historic memoirs.

BAKHD, or fortunate, from which the term Balki is derived.

BAKHRA, a town in Tirhut, where there are many mound-like remains of an ancient Buddhist city, with images and inscriptions. See Kesarah.

BAKSH, HIND., from Bakshidan. PES. A gift, donation, a donor; usually Bux. Khuda-bakhsh, Deo-datus. Bakshi, a military chief, a paymaster; in Turkistan, a troubadour, a wandering singer. Bakshish, a present, a donation or gratuity; in Syria and Egypt, regarded as the drink-money of Europe. The Mahomedans of Syria and Egypt shout for bakshish on every occasion. It is seldom heard in southern India.

BAKHTAR ZAMIN, the Bakhtar country, the present name of the country between Balkh and Kâbul; ancient Bactria.

BAKHTAWAR, a religious mendicant of the Sunyabadi sect.

BAKHTRI, a Ghilzai general, who, under the orders of Kutub-ud-Din, about A.D. 1201 conquered Behar, and in 1203 Bengal; but in his expedition against Bhutan and Assam he was signally defeated, and driven back to Bengal, where he died from vexation, about A.D. 1206.

BAKHTARI, pastoral tribes of Kurds, who take up their warm winter quarters in Arabistan, at the head of the Persian Gulf, but in summer travel northwards amongst the mountains of Kirmân Shah. The inhabitants of Luri-Bazurg are now classified under the general title of Bakhthiari; but originally this name merely applied to a small tribe, one of the twenty-six distinct clans among whom the province was divided. The Bakhtiari comprise, exclusive of dependencies, the Haft Lang, the Chahar Lang, and the Dina ruin. The Bakhtiari tribe, who inhabit the mountains of Luriistan west of Irak, between Shuster and Isfahan, and from Shuster to near Kermanah, often wander to other parts. They have often attacked Isfahan, Nadir Shah alone having almost reduced them. They are named *Parthianobii* by Strabo, and Patiskhâris in the cueeniform inscriptions. Their manners and language have scarcely changed since the days of Cyrus. About 1840 they were conquered and decimated by the Persian Government, and their chiefs kept in perpetual

India, chiefly contributed to the Journal of the Bengal Asiatic Society.

BAKERGANJ, a town in Bengal, 120 miles east of Calcutta. It lies between the Megna and Jessore, is low-lying, and famed for its rice cultivation. The Bakerganj district in 1877 had 1,574,201 souls in an area of 4066 square miles; besides Hindus, there are many Chandal, Napit, and Kaira. A copper plate, in Sanskrit verse, was found here, dated Sanvat 3, of Kesava Sena's reign, which, from the Ayn Akbâri list, makes the year A.D. 1136. The character used in inscriptions is the Gaur, a little less simple than the earlier alphabets of the Pala dynasty. The Sena dynasty was of low origin, calling themselves Sankaya Gauriswara, or Lord of Gaur. There is not any mention of fire-arms, but of bows, arrows, swords, etc.—*B. As. S. Jo.* vol. p. 42.

BAKESWAR, of the Murshidabad district of Bengal. Springs impregnated with sulphuretted hydrogen occur in the bed of the river, and near Talifarsa village are a group of sacred hot sulphur springs, called Bhum Bakeswar.—*Imp. Gaz.*

BAKHAR. MAHR. Historic memoirs.

BAKHD, or fortunate, from which the term Balki is derived.

BAKHRA, a town in Tirhut, where there are many mound-like remains of an ancient Buddhist city, with images and inscriptions. See Kesarah.

BAKSH, HIND., from Bakshidan. PES. A gift, donation, a donor; usually Bux. Khuda-bakhsh, Deo-datus. Bakshi, a military chief, a paymaster; in Turkistan, a troubadour, a wandering singer. Bakshish, a present, a donation or gratuity; in Syria and Egypt, regarded as the drink-money of Europe. The Mahomedans of Syria and Egypt shout for bakshish on every occasion. It is seldom heard in southern India.

BAKHTAR ZAMIN, the Bakhtar country, the present name of the country between Balkh and Kâbul; ancient Bactria.

BAKHTAWAR, a religious mendicant of the Sunyabadi sect.

BAKHTRI, a Ghilzai general, who, under the orders of Kutub-ud-Din, about A.D. 1201 conquered Behar, and in 1203 Bengal; but in his expedition against Bhutan and Assam he was signally defeated, and driven back to Bengal, where he died from vexation, about A.D. 1206.

BAKHTARI, pastoral tribes of Kurds, who take up their warm winter quarters in Arabistan, at the head of the Persian Gulf, but in summer travel northwards amongst the mountains of Kirmân Shah. The inhabitants of Luri-Bazurg are now classified under the general title of Bakhthiari; but originally this name merely applied to a small tribe, one of the twenty-six distinct clans among whom the province was divided. The Bakhtiari comprise, exclusive of dependencies, the Haft Lang, the Chahar Lang, and the Dina ruin. The Bakhtiari tribe, who inhabit the mountains of Luriistan west of Irak, between Shuster and Isfahan, and from Shuster to near Kermanah, often wander to other parts. They have often attacked Isfahan, Nadir Shah alone having almost reduced them. They are named *Parthianobii* by Strabo, and Patiskhâris in the cueeniform inscriptions. Their manners and language have scarcely changed since the days of Cyrus. About 1840 they were conquered and decimated by the Persian Government, and their chiefs kept in perpetual
imprisonment at Teheran. The country is famed for the expedition of Alexander and his successors' rule. The country south of the great chain probably formed the site of the ancient Elam of Scripture, a powerful nation in the early days of Abraham, before the kingdoms of Assyria and Babylon rose into notice in the east. The tribe in Luristan have a tradition that they originally came from Syria (Sham) under one great chief, and took possession of the mountains which they now inhabit. They export to Khuzistan a small quantity of grain and tobacco, galls-nuts, mastic, cherry sticks for pipes. Their language is old Persian. They have a national dance called chapi. They have rejoicings around the body of one of their number, and if killed in battle their joy is more pronounced. Nadir Shah took a large number into his army, and they behaved well at the siege of Kandahar.

The Ulaki, a branch of the Haft Lang, about 1200 families, occupy the neighbourhood of Teheran in summer, in the mountains near Fellat and Semiran, and on the coast near Busahar in winter. The Janeki are the chief of the Chahar Lang, have many subdivisions, and number about 5000 families. The Mala Madli, a tribe of the Bakhtiari of about 1000 families. They accompanied Nadir Shah in his expeditions against Herat, and on their return settled in the Fellat district.

BAKKA MEENA. HIND. Scops Alcorvandi.

BAKAR or Bakher, opposite to Rohri and Sukkur, is fortified island in the Indus, and was once held by the Damani, latterly by Mir Sobhur of Sind. The effect of the landscape here is wonderfully increased by the beautiful stream, and the immense groves of date trees which fringe its banks. It was ceded to the British by the Talpur dynasty, 29th January 1839.—Mason's Journey, i. p. 362; Imp. Gaz.

BAKKUL. HIND. The fibrous bark of the roots of several trees, used in Malwa as a cheap substitute for string and cord. In Bengal, Agave Americana.—Royle.

BAKLA. DUK. Vicia faba; the garden bean, cultivated as the kidney bean. Bakla Kubti, the bean of Pythagoras. Baklazun, Phaseolus vulgaris; dwarf or kidney bean.

BAKLAT-ul-AHMAKA. ARAB. Purslane; Portulaca quadridiva. Baklat-ul-Faristan, balm; Melissa officinalis, var. Baklat-ul-malk; Pumaria parviflora, W. and A.

BAKLI. HIND. Lagerstræmia parviflora. R.

BAKOLI. HIND. A small green caterpillar that destroys rice crops.

BAKOOMBA. MAHI. Careya arborea; Roxb. 

BAKRAL. PUKHTU. A marriage portion.

BAKRI, a.d. 763, originator of the Moulud-i-Sharif recitations, by Mahomedans, of the birth, miracles, and death of their prophet.

BAKRID, from bakhar, a bull, and eed, a sacrifice; a Mahomedan festival held on the 10th day of the twelfth month of the Mahomedan year, called Zi-ul-haj. It is the festival in commemoration of Abraham offering up his son. The name of this son is not particularly mentioned in the Koran. Some Indian shiitks, however, suppose him to have been Isace; but the Persians all agree that he was Ishmael. This feast is also named Eel-i-kabber (the great feast), and Eeluz-zohna (feast of daylight), and Eel-i-Kurban. In India it is called Bukreef; and in Turkey Kurban-Bairum. Numbers of sheep and goats, sometimes a camel or an ox, are sacrificed on this day, and the flesh distributed to the people.

BAKHOR. To the eastward of Buddh Gaya, on the opposite bank of the Phalgu or Lillajan river, and immediately to the north of the village of Bakor, there are the ruins of a large brick tope, with a stump of a sandstone pillar at a short distance to the northward.—Gaz. N. S., 1864.

BAKSHA. Beng. Rottbdilla galba.

BAKSAR, a village in Outh, on the left bank of the Ganges, which is here a sacred spot for pilgrimage.—Imp. Gaz.

BAKSHI. HIND. Gardenia tetrasperma.

BAKTATURDHA, a title of Ganasha.

BAKU of the Bhot, a hill cloak.

BAKU or Bakon, in the north of Persia, on the shores of the Caspian, a place of pilgrimage, to which Hindu pilgrims even from India resort. It is now Russian territory. It has black naphtha springs, and when the weather is thick and hazy, the springs bubble up higher, and sometimes the naphtha takes fire, and runs like burning lava into the sea. The flaming soil or everlasting fire of Baku is the attraction to pilgrims, and is not less famous than its naphtha springs, which occasionally take fire. Moore tells us of—

'Baku and those fountains of blue flame That burn into the Caspian,'

and in recent years the naphtha has been used as fuel on board these vessels on the Caspian. In Hindu ancient geography, Baku is in Kushia Dwipa. The supply of this article in many places near that town, especially at the village of Balakhatany, has existed for centuries. The naphtha, cozing through a layer of sand, comes to the surface of the earth in the form of a thick black liquid. In 1859, M. Kokoreff, at the suggestion of the chemist Liebig, established a kerosene refinery at Soorakhanak, 12 versts distant from Baku. By 1869 there were 50 other similar establishments there, and 200,000 poods (40 lbs. to the pood) had been by then exported. At the end of a third period of ten years the quantity exported had reached 10,000,000. The principal cause which prevents Baku kerosene from competing with American, is the dearness of utensils to keep it in, and of carriage. At Baku it costs from 35 to 40 kopeks (about 10d.) a pood. It costs at the rate of 40 kopeks a pood for vessels to keep it in, and its cost per pood for conveyance to Astracan is 18 kopeks; to Tsararein (on the Volga), 30 kopeks; to Nijini-Novgorod, 49 kopeks; to Moscow, 63 kopeks; and to St. Petersburg, 86 kopeks.—Jameson's Ed. Journ. 1837-38.

BAKULA. HIND. Minusesops elengii. In Hindu legend, it was beneath a Bakula tree, on the banks of the Jumna, that Krishna fascinated the milkmaids of Brindhabhan with his flute.

BAKUMBER. BENG. Anisomeles ovata.

BAKUR-CHIRIA, or the 'bird's nest,' also called Jodagir, or Hill of Strife. Joda, on the recommendation of an ascetic, erected a castle on it. Doubtless its inaccessible position seconded the recommendation of the hermit, for its scarped summit renders it almost impregnable.—Tod.
BALA BHADRA.

BA-KUR-KHANI. PERS. Armeniaca vulgaris, L. Am.: the apricot.

BAKUS. BENG. Malabar nut, Adhatoda vasica. BAL. the sun-god of the Hindus, identical with the Baal-god of the Egyptians and western Semitic nations. The worship of Baal seems to have been originally astronomical, and subsequently physiological. In the former, the sun was worshipped direct, as yet in India, every morning, and at every solstice or sakrant. In the physiological worship, the female power of Bal was Baal-tis or Bel-tis. These formed an androgyne divinity. The Semitic emblem of Baal was the pillar on the high places, and his companion was the bull or calf,—all identical with the Hindu Ba-al or Bal represented by Siva, whose emblem is the pillar or lingam encircled by the yoni; with the vakha bull, Nandi or Basava, facing in front. See Numbers xxii. 41, xxiii. 14–28.

The worship of the god Bal seems to have been adopted in Egypt and throughout south-western Asia, and sometimes to have been considered that of the creative sun; sometimes in the form of the physiological emblems. The sun-worship of India seems to have had its chief place in Saurashtra, which was in constant intercourse with Egypt and western Asia. Under one or other of these philosophical explanations, Baal or Bal or Belus was the chief god of all the Semitic nations. The Aryan Brahman seems at present to have chiefly adopted the astronomical view; the Rajput and the southern Asians, the physiological. But in India, at present, these philosophies are all confused. At present the sakrant, or Sivarat (night of Siva) is the winter solstice. On it, in ancient times, in India, the horse was sacrificed to the sun, or Balath,—the lord Bal. The Scandinavians termed the longest night the 'mother night,' on which they held that the world was born. Hence the Beltane, the fires of Bal or Belenus; the Hi-ul of northern nations; the sacrificial fires on the Aswa Medha, or horse sacrifice worship of the sun, by the Soorya sect on the Ganges, and the Syrians and Sauroumte on the shores of the Mediterranean. When 'Judah did evil in the sight of the Lord, and built them high places, and images, and groves, on every high hill and under every tree,' the object was Bal, and the pillar, the lingam, was his symbol. It was on his altar they burned incense, and 'sacrificed unto the calf on the fifteenth day of the month' (the sacred Amavas of the Hindus). The calf of Israel is the bull (Nandi) of Bal- Oswar or Esawara, the Apsa of the Egyptian Osiris. According to Colonel Tod, the term of Solomon was to Bal; and all the idolaters of that day seem to have held to the grosser tenets of modern Hinduisum.

'Peer his other name, when he enticed Israel in Sittim, on their march from Nile.'—Paradise Lost, Book I.

Colonel Tod tells us that Balnath was the god Bal of the ancient times of India, and the buldan was the gift of the bull to the sun. He mentions that there are numerous temples in Rajasthan of Balim; and that Balpoor (Machado) in Saurashtra has several, all representing the sun. There is at Balpoor a temple to Balpoor Siva, or Siva of the town of Bal, with its lingam, yoni, and ball of brass; and Bal-eswar is the lord Bal, Maha-bal-Esvar the great lord Bal. In ancient western Asia, Bal and the brazen calf were specially worshipped on the fifteenth of the month, and in India, the sacred day of Bal-Esvar, with his vakha bull Nandi, is the amavasa, the moonless fifteenth day of the month. Amongst the Rajput races, according to Colonel Tod, Har is Bal, and is the patron of all who love war and strong drink, and is especially the object of the Rajput warrior's devotion; accordingly blood and wine form the chief oblations to the great god of the Indus. The Gosains, and the peculiar priests of Har, or Bal, the sun, all indulge in intoxicating drugs, herbs, and drinks. They are usually seated on a lion, leopard, or deer skins, their bodies covered with ashes, their hair matted and braided, with iron tongs to feed the pentential fires; and their savage appearance makes them fit organs for the command of the god of blood and slaughter. The bodies of these Gosain priests, ministers of Har, the god of war, are not burned like the Hindus, but are buried, and a circular tumulus is raised over the remains; and over some classes of Gosains, small tumuli, whose form is the frustum of a cone, with lateral steps, the apex crowned with a cylindrical stone.—Tod's Rajastahan, i. 76, 77; Tod's Travels, pp. 54, 49; Mitner's Seven Churches, p. 100; Layard's Nineveh; Sonnerat's Voyage, p. 160.

BAL. HIND. An ear of corn. Bal-kat, cutting off the ears of corn without reaping the stalks.

BAL. also Bala, also Bala-ka. SANSK. HIND. A child. Kumara, Kumari, a boy, a girl under 5 years of age. Poganda, a boy from 5 to 9. Kisora, from 10 to 16, is a child, a boy, a youth. Under the British, however, the minority is to the end of the 18th year. Women are termed Bal if under 16; Prude, middle-aged; Brid, when forty. Bal-Krishna, Bal-Gopala, the infant Krishna. Many Hindus and many Hindu towns have names beginning with Bal, sometimes referring to infancy, as bal-amra, or young mango grove, sometimes to a deity. —Wilson; Tod's Rajastahan, ii. p. 251.

BALA. BENG. Pavonia odorata, also Hibiscus tortuosus, Twisted hibiscus.

Bala. DUK. Cuscuta root; Andropogon muri- catus. In Bengal, Halietus fulviventer, Viell. In Hindustan, Sida rhombifolia. Also a grub which cates the young plants of wheat or barley when about six inches high.

BA-LA. BURM. Elettaria cardamomum, Wh. and Mast. Malay, Musa sapientum.

BALA, also Bala Bashik. HIND. Valeriana Wallachiana.

Bala-band, or head fillet, the diadem of the Greeks, is in Mewar the symbol of honour, and in the days of the grandeur of that state was held equal to any cordon of Christendom. It consists of one or more cords of floss silk and gold thread tied round the turban, the ends hanging behind the head. The bala-band or silk-en fillet was valued as a mark of the sovereign's favour, and was tantamount to one of the courtly orders of Europe.—Tod's Rajastahan, i. p. 652.

BALABANDI-TIGE. TEL. Ipomea pes-caprae.

Bala Bhadra, son of Nanda, and elder brother of Krishna. He is the patron of agriculture. He was of great strength and irate temper. Hindus believe that Bala Bhadra is Balarana, the ninth incarnation of Vishnu.—Taylor. See Baldeva.
BALABHII, an era mentioned by Tod as occurring in an inscription found at Somnath, commencing 318 A.D. It is named from the town of Balabhi, which was destroyed in 802 Samvat, from which time it may be presumed the era was discontinued. This is also written Valabhi; and in an inscription on copper plates found there, of date A.D. 524, containing grants of lands to Brahman priests, the era used in the inscription is the Valabhi era, corresponding to the 375th of Vikramaditya, or A.D. 319. The ancient kingdom of Balhara was ruled by Balabhi princes. Their chief town, Balabhipura, according to Tod, was destroyed under Silladitya III., by an irrigation of the Parthians, Getes, Huns, or Cathi, or of these tribes combined, and he gives the date as A.D. 524; but Thomas gives A.D. 745, and the Chinese traveller Hiwen Thang visited it in the 7th century. Its ruins exist, about 20 miles west of Bhaonagar in Kattyawar, near the modern town of Wulleh. The extent of the ancient kingdom seems to have been from the Aravalli mountains in the north, to the Tapri. On its destruction, Anhahwara became the seat of government, its princes bearing the title of Baliba-rai; this endured until the 14th century. Colonel Tod says that at all events the Prince of Deo laid the foundation of Anhahwara Puttin in S. 802 (A.D. 746), which henceforth became the capital city of this portion of India, in lieu of Balabhipura, which gave the title of Balika-rai to its princes, the Balhara of the earlier Arabian travellers, and, following them, the geographers of Europe, and supposed to be the Byzantium of Ptolemy. The Udaypur dynasty claim to be the descendants of Lob, the eldest son of Rama of the Solar dynasty. They say that they were first ruling at Balabhipur, but their capital was laid waste by the son of Nushirwan of Persia, A.D. 524. The Rajput queen escaped the general destruction, and gave birth to a son, who was named Goho, from whom the rajahs of Udaipur are descended. Goho established the kingdom of Edur, and eight princes succeeded him on the throne.

The capital of Balabhi was described by Hiwen Thang as 30 li or 5 miles in circuit, with 100 Buddhist monasteries and 600 Buddhist priests; it was called Balabhi or Balabhiyari, was a Buddhist. Ferguson (p. 727) gives the following inscriptions corresponding from A.D. 460 to 718. The ruins are extensive, and are still known by the name of Varnilapura.—Eiphin, p. 211; Cunningham, Ancient Geography of India, p. 323; Elliot's History of India, p. 356; Tod's Rajasthan, i, 49, 102; Ferguson, pp. 405, 727.

BALACHAN or Balachang. MALAY.

Gna-pi. BURM. | Bagon. PHIL. | Trasi. JAPAN.

A condiment prepared in various ways, but ordinarily from prawns, sardines (Engraulis melletta), and other small fish, pounded and pickled. It is one of the largest articles of native consumption throughout both the Malay and Philippine Archipelago, Asiatic Islands, by the Burmese, the Siamese, and Cochinchinese. It is indeed essentially the article known to the Greeks and Romans under the name of Garum, the produce of an Engraulis, a Mediterranean fish. A variation of Balachang is made in Bombay, and sold as an item in Indian oilmen's stores. 13,500 tons, valued at £90,000 sterling, were exported from Burma, from 1st November 1854 to 1st November 1855. It is a kind of caviare. In general, its aroma is too strong for European taste; but some of the best, from Tavoy and Mergi, is of a reddish colour, and is very similar to the anchovy paste of the London oilder. That most in use is made of a species of very small shrimp, which in the fine season, is found in enormous numbers on the borders of the sea; it is salted and pounded in a mortar, and, being made up into light parcels, is sent into the interior, where it is highly esteemed. The inferior kind is made of all kinds of little fish, shrimps, etc., in the same way, but does not bear so high a price. In another mode, the ingredients are placed in a pit to undergo fermentation, and afterwards dried, pounded, and preserved with spices. With the Malays, Siamese, Burmese, and Cochinchinese, Balachan has become a necessary of life, as it serves to season the daily food of these nations. In Sumatra the red Balachang is the best, and it is made of the spawn of shrimps, or of the shrimps themselves, which they take about the mouths of rivers. They are, after boiling, exposed to the sun to dry, then pounded in a mortar, with salt, moistened with a little water, and formed into cakes, which are all the process. The black sort, used by the lower class, is made of small fish, prepared in the same manner. On some parts of the east coast of the island they salt the roes of a large fish of the shad kind, and preserve them perfectly dry, and well flavoured. These are called trobo.—Ainslie; Faulkner's Com. Dict.; Yule's Embassy; Crawford's Dict. p. 27; Marsden's Hist. of Sumatra, pp. 63, 64.

BALADEYA, the Hercules of the Hindus.

BALADEYA PATANA, now called Maha Balpura.

BALA-DITYA-CALU, a Telugu astronomer, who wrote in the 455th year of the Kaliyug.

BALENIDE, R. antipodarum, Gray.

New Zealand whale. | Southern whale.

Antarctic, smooth-backed,, Taku. Peru of N. Zealand.

Is not known in the central parts of the Pacific. But in spring it resorts to the bays of Chili, South Africa, the Brazil, Australia, New Zealand, and Van Diemen's Land. It is smaller than the Arctic whale.

(b) Balena Australis, Des Moulins.

B. antarctica, Lesson.

Right whale of South Sea Sea | Le Grand Baleen du Cap | Gav.

Southern whalebone whale | Coquille black whale of | Sir James Ross.

Inhabits the South Sea; and multitudes were seen by Sir James Ross in very high latitudes.
It is of a uniform black colour. It nearly resembles the B. mysticetus, Linna. It is of value only inferior to that of the sperm whale. It is pursued by the people of the Cape of Good Hope.

(b) Balea Japonica.

The Japan whale is an inhabitant of the coasts of Japan, which it visits periodically. Its head is often covered with barnacles.

(d) Balea marginata, Gray.

The western Australasian whale has very long and slender baleen, with a rather broad black edge on the outer or straight side.

(e) Balea mysticetus, the Right Whale.

According to Lesson, inhabits all the seas of the globe.

Balaenoptera Indica, Blyth, the Indian fin-whale, inhabits the Australian seas, Persian Gulf, Indian Ocean, and Bay of Bengal. It attains a length of about 100 feet, and a circumference of 42 feet. They are often captured off Ceylon, and the Maldives and Seychelles are the headquarters of the whalers who seek these whales; but they are not so much sought after as the species of Balea which yield much blubber. Balaenoptera boops, Linna., and B. musculus, Linna., the great and lesser Orcaul, are both found in European seas. Dr. F. D. Bennet mentions (ii. p. 252) a species of Balaenoptera under the synonym of Balea gibba, Gmel., the humpback of southern whales, as frequently seen in the Atlantic and Pacific Oceans.—F. D. Bennet, ii. 292; Jerdon; Elliot.

BALAGAIIYI. KARN. The right-hand castes of the south of India.

BALAGHAN, a booth made by branches of trees thatched with birch bark.

BALAGHAT, a geographical term to designate a table-land in peninsular India; also the elevated region of the Peninsula of India between the Eastern and Western Ghats, the collectorate of Salem; it means above the ghat. The Balaghat district in the Central Provinces consists of the eastern portion of the central plateau which divides the Central Provinces from east to west, with a rich level tract on its south, in the valley of the Wainganga. Its subdivisions are Burha and Behir. Payin Ghat, or Til-Ghat, is the low country between the Eastern Ghats and the Bay of Bengal.

BALA GHUND. PUSHT. Aëgle marmelos.

BALA - GOPALA. SANSK. From Bala, a child, Go, a cow, and pala, a feeder; a name of the infant Krishna. See Bala; Krishna; Rudra.

BALAHAR. HIND. A low caste servant, a sweeper, a watchman, a village servant. The name is also written Balahar and Bilahar, and seems the same as Balahi, who is described as a man of low caste; a Chamar employed to measure land.

BALAHI, a deity of the Hindus of Gujarat; he is there also called Thakur.

BALAJI RAO was the eldest son of the first Baji Rao. ‘On his father’s death, 28th April 1740, he succeeded as Peshwa, amidst domestic troubles caused by the old enemies of the family, the Pirti-Nidhis, Ragoji Bhonsla, and the Gaekwar, and he got rid of enormous debts that had been incurred in the military operations, chiefly through Bara Matiker, a man of some consequence and of immense wealth. He moved into Hindustan, and occupied Malwa, which was conceded on condition of Balaji helping to drive Ragoji out of Bengal, which its viceroy, Ali Verdi Khan, was unable of himself to do. Balaji marched by Allahabad and Behar to Murshidabad, and intercepted Ragoji, who drew back, but (A.D. 1748, A.II. 1156) was followed and defeated with the loss of all his baggage. Balaji Rao was now opposed by a combination of Ragoji Bhonsla, Damaji Gaekwar, and the agent of the Pirti-Nidhis, but he successfully broke up their league by conceding to Ragoji the right of levying tribute in all Bengal and Behar, if not also in Allahabad and Oudh. About December 1749, raja Saho died. He was without issue, and Balaji Rao, under the authority of a deed which he produced from Saho, declared the son of Raja Ram his successor, under the title of Ram Raja. Balaji Rao undertook the conquest of Ghati-neh, against Salabat Jung, the third son. He marched into the Nizam’s territory, but was compelled to return by forced marches into his own dominions, because of the revolt of Tara Bai, who seized the person of Ram Raja, confined him in a dungeon, declared him an impostor, and carried on the government on her own authority, aided by Damaji Gaekwar. Balaji induced Damaji to visit him, and at the interview he treacherously made him prisoner, attacked and broke up his army, thus deprived of its leader. Salabat Jung advanced to the neighbourhood of Poonah, aided by a subsidiary force of 500 French soldiers and 5000 sepoys, under M. Bussy, who repulsed the assaults of Balaji, beat up his camps, and established a general impression of his superiority. But M. Bussy had to retreat, as his army had not been regularly paid and bounteously beyond the extreme wants of M. Bussy and Salabat Jung. Balaji became involved in the affairs to the south connected with the French and British. He released Damaji Gaekwar, and (A.D. 1755) sent him, along with Ragoba, the Peshwa’s brother, to bring Gujarat into order. Ragoba levied contributions in Malwa. In the end of 1756, Ragoba was again sent to Malwa, from which, on the invitation of Ghaziu-Din, grandson of Asof Jah, he advanced on Dehi, occupied the city, and laid siege to the fortified palace, which held out for more than a month. In May 1758 Ragoba marched and took possession of Lahore, and occupied all the Panjaban, the Daurani chief retiring across the Indus without offering battle. In 1759, when Ahmad Shah was approaching to avenge this, the Mahrattas had 30,000 men in the neighbourhood of the northern provinces, but apart, in two divisions, one of them under Damaji for the other under Malhar Rao Holkar. Ahmad Shah was made suddenly to break the force under Daji Sindia, who fell with two-thirds of his army, and Malhar Rao Holkar was overtaken when retreating towards the country south of the Chambal, and almost destroyed by a Daurani detachment, which had made a dajuigen march for that purpose. Sedasheo Rao Bhaio, cousin of Balaji, was employed at the capital as minister and commander-in-chief in the Dekhan. He had got possession of Ahmadnagar.
and was on the eve of a settlement, afterwards concluded at Udgir, by which large territorial and pecuniary cessions were obtained from Sahafat Jung, and such a burden imposed on the Moghul government in the Dehkan as it never was able to recover from. This success led to jealousy on the part of Ragoba, who, to Sedasheo Rao's remonstrances on the profusion of his hospitality, replied that the Bhao had better undertake the next expedition himself, when he would find the difference between that and serving in the Dehkan. Sedasheo Rao took him at his word, and an exchange of situations was forthwith agreed on. Whatever the nation possessed, either of power or magnificence, was brought forth to give weight to Sedasheo Rao's command, and news of the misfortunes of Sindia and Holkar only stimulated the nation to exertion. Sedasheo Rao was naturally haughty and overbearing, proud of the new greatness of his family, and puffed up by recent success into an overweening confidence in his own abilities, both as a statesman and a soldier. He was accompanied to his command by Wiswas Rao, the youthful son and heir apparent of the Peshwa, and by all the great Brahman and Mahratta chiefs without exception. Many Rajput detachments were sent to join him as he advanced, and Suraj Mull of Bhurtpur is said to have reinforced him with a body of 30,000 Jat. This experienced old chief advised the Bhao to leave his infantry and guns and all his heavy baggage in the Jat territory, where it could be protected by strong forts, and to advance with his cavalry alone, and harass his enemies in the Mahratta manner, and protract the war until the Daurani, who had already been many months in India, should be constrained by the climate to return to their native mountains. This prudent counsel was seconded by the Mahratta chiefs, but was at once rejected by their commander. He slighted Suraj Mull on several occasions, and offered the Mahratta chiefs by his Brahman pride, his imperious mode of exercising his command, and the absence of the freedom and familiarity to which they were accustomed in their leaders. In this manner he advanced to Delhi. Its walls were scaled, and the citadel shortly yielded to artillery. The Bhao defaced the palaces, tombs, and shrines, for the sake of the rich ornaments which had been spared by the Persians and Afghans; he tore down the silver ceiling of the audience hall, and seized on the throne (no longer so precious as of old), and on all other royal ornaments. Their value has been estimated by Mr. Casie Rapp and Grant Duff at £170,000. Suraj Mull, disgusted with what he saw, withdrew to his own territory. The Bhao sent a picked force to attack Cunjupa, on the Jamna, sixty miles above Delhi, where there was a Daurani garrison under an officer of distinction. To prevent this, Ahmad Shah advanced with all his army, but, finding the river near the capital full, he proceeded up to near Cunjupa, where he learned that it had been taken, and all the garrison put to the sword. Ahmad Shah crossed the river by fording and swimming (25th Oct. 1760), and the Mahrattas hastily retired to Paniput, where they threw up works round their camp, encompassed by a broad and deep ditch, and protected by their numerous artillery. Ahmad Shah and his allies advanced, and his force being very small, he too formed an entrenched camp in front of the Mahrattas. The numbers in the respective armies are not precisely known. The Bhao's force consisted of 5,000 cavalry in regular pay, with at least 15,000 predatory Mahratta horse, and 15,000 infantry, of whom 9000 were disciplined sepoys under Ibrahim Khan Gardi, a Mahomedan who had deserted from the French service. He had 200 guns, with numerous wall pieces, and a great supply of musketry. He himself was a favourite weapon with the Mahrattas. Grant Duff estimates the predatory horse and followers at 200,000, and Casi Rao states the whole number at 500,000. Ahmad Shah had about 40,000 Afghans and Persians, 13,000 Indian horse, and a force of Indian infantry estimated at 38,000, part of which were the Rohillas, but the great bulk was a rabble of foot-soldiers. The Bhao had ordered Govind Rao Bandela to collect what troops he could on the lower course of the Jumna, and that chief now appeared in the rear of the Daurani camp with 10,000 or 12,000 horse, who spread over the country and intercepted all supplies. But a body of the Daurani horse, under Attai Khan, nephew of the grand vizir, made a march of upwards of sixty miles, surprised Govind Rao's camp about daybreak, and completely destroyed his party, Govind Rao himself falling in the action. The Daurani force got the command of the open country, and the Mahrattas were at once dispersed and consumed the town of Panipat, and began to feel the severest pressure of want. Continued skirmishes were taking place between the two armies; the Mahrattas made three vigorous attacks on the Daurani lines. Ahmad Shah did not hurry on the war. He had a small red tent pitched in front of his entrenchment, to which he repaired every morning in time for the daybreak prayers, and where he generally returned to dine in the evening, and never rode less than fifty or sixty miles a day, in visiting his posts and reconnoitring the enemy. Among the last efforts of the Mahrattas to obtain relief, was their sending out a foraging party with innumerable camp followers; but the helpless crowd was discovered by the Daurani, and slaughtered in immense numbers. On this the chiefs and soldiers surrounded the Bhao's tent, and urged him to fight and die in the field rather than perish in misery. The Bhao agreed to their wishes; they all partook of betel-leaf, and swore to fight to the last, and orders were given to make the attack the next morning before daybreak. About three in the morning, the spies reported that the Mahrattas were gathering under arms. Shuja-ud-Dowla went to Ahmad Shah's tent and desired he should be awakened (A.D. 6th January 1761, A.H. Jamad- us-Sani 1174). The Mahomedan allies did not make much use of their guns, and as those of the Mahrattas approached, the shot went over the heads of their adversaries. The actual engagement was begun by Ibrahim Khan Gardi, who seized a flag with his own hands, and ordered his men to cease firing and advance with fixed bayonets. Their attack fell on the Rohillas, who were broken after a prodigious slaughter. Their defeat laid open the right of the grand vizir, who commanded the centre of the Daurani line, and who was now charged by the Bhao and Wiswas Rao with the flower of the Mahratta army. In this
charge, Attai Khan, the nephew of the vizir, was killed at his side; the vizir dismounted, and, with the rest who were near him, determined to die on the spot. Shuja-ud-Dowlah's division was next to that of Attai Khan, and, noticing a sudden diminution of the sounds of war in that quarter, he sent Cisi Rao to inquire the cause, and found the vizir on foot in full armour, endeavouring to get his men back into the ranks. Ride to Shuja-ud-Dowlah, said he, and tell him that if he does not support me immediately, I must perish. But Shuja-ud-Dowlah, though he kept his ground, did not venture to take part in the action. The advantage of the battle inclined to the Maharratas, until Ahmad Shah, after rallying the fugitives, and ordering all to be cut down who would not return, gave orders for an advance of his own line, and at the same time directed a division on his left to wheel up and take the enemy in flank. This manoeuvre was decisive; for though the closest combat was raging in the centre where the Bhao and Wiswas Rao were engaged on horseback, and where they fought on both sides with spears, swords, battle-axes, and even with daggers, yet all at once, as if by enchantment, the whole Maharrata army turned their backs, and fled at full speed, leaving the battlefield covered with heaps of dead. The victors pursued them with the utmost fury for fifteen or twenty miles, and as they gave no quarter, the slaughter was very great. The peasants destroyed a large portion of those who escaped from the Daurni, and great numbers who fell into the hands of the Daurni were put to death in cold blood. Ahmad Shah made a strict search for Janejool Sindia, who was concealed by a Daurni chief, and was made away with to avoid detection; he also compelled Shuja-ud-Dowlah to give up Humpham Khan, whom he personally abused, and ordered to be confined, but he died of his wounds within a week. The body of Wiswas Rao was found, and a headless trunk which was believed to be that of the Bhao. The whole number of the slain is stated at 200,000. Almost all the great Maharrata chiefs were killed or wounded, except those who had been left with a force at Dehi, and Malhar Rao Holkar, who was accused of having too early retreated. Madhaji Sindia, afterwards the founder of a great state, was lamed for life, and Nana Farnavis, who long kept off the downfall of the Peshwa's government, narrowly escaped by flight. Never was defeat more complete, and never was there a calamity that diffused greater consternation. Grief and despondency spread over the whole Maharrata people. Most had to mourn relations, and many the destruction of the army as a deathblow to their national glory. Balaji Rao never recovered the shock. He slowly retreated from his frontier towards Poona, and died in a temple which he had himself erected near that city. The wreck of the army withdrew south of the Nabhadda, evacuating almost all their acquisitions in Hindustan. Dissensions soon broke out after the death of Balaji, and the government of the Peshwa never recovered its vigour. Most of the Maharrata conquests were recovered at a subsequent period, but it was by independent chiefs, with the aid of European officers and disciplined sepoys.—Cust Rao's Narrative in As. Res. iii. 97, 123; Grant Duff's History of the Marathas; Sair-i-Muta-akhirin; Elliot's Life of Haji Rahmat, quoted in Elphinstone's History of India.

BALAJI WISWANATH, a Brahman of the Konkan, where he was the hereditary village accountant. He was the chief supporter of the raja Saho; he was a man of great ability both in civil and military affairs. His services in the wars that ensued after Saho arrived in the Dekhan, were rewarded by Saho with the title of Peshwa, and the office of prime minister; and the government was left almost entirely to him, while Saho pursued his favourite field sports of hunting, hawking, and fishing. This commenced the power afterwards acted on by the Peshwas, who became eventually the real rulers of the Maharrata empire. On his demise in 1721, his son, the first Baji Rao, succeeded him.

BALAK, two hills so called, 600 paces asunder, in the district of Balad-ul-Jalaf in Yemen. This district is the land of Sheba, being called to the present time Ard-us-Saba; and Balkees, the queen of Sheba, built a masonry dyke or dam between the two Balak hills. It afterwards burst, and is famed in Arabian story as the Sail-ul-Arun or Sail-ul-Mareb.—See Balkees; Saba.

BALAL, in Karnatica, an honorable appellation.

BALAM. Hind. Cymbopogon aromaticus.

BALAMBANGAN or Balambang Island, called Berobangan by the Malays, nearly 15 miles long, lies in the Balabac Strait, at the north-east side of Borneo. It was once a possession of Britain, and, from the extreme richness of that portion of the island, it might have proved a settlement of great value, but it was relinquished to Holland in 1827. It has two excellent harbours. The principal station on the peninsulae tongue off the southern harbour was determined to be in lat. 7° 12' 51'' N., long. 116° 49' 8'' E.—Horsburgh.

BALAM-CIRA. Hind. Cucumis sativus.

BALAM PULI. Maleal. Tamarindus Indica.

BALAND, a tribe formerly dominant in Ajoree Burhur and the southern parts of Mirzapur. They were expelled by the Chundel Rajputs, and now occupy Munwas, a principality in subordination to the raja of Rewa.—Elliot.

BALANISTUM. Hind. Pomegranate flowers.

BALANITES ÄGYPTIACA. Delie.

Balanites Ägyptiaca, var. 
Ximenia Ägyptiaca, R.
Indica, W. III.

Nanjunda maram, TAM.
Haleluj, : : : 
Arab. Gara or Gari chetta, Tel.
Hinguru Bet Hinga, Hind.

This small, thorny tree has alternate bifoliolate leaves, with greenish-white flowers. It is found throughout the country, and flourishes in black soil. It is cultivated in Egypt; and at Jerusalem it is made into walking-sticks, on which they inscribe the word Jordan in Hebrew characters. It grows in the Panjab from Delhi westward to Rohtuk. It has a girth of 18 inches. Wood soft, and shoemakers' boards are made of it. Its leaves are slightly acrid, and are said to possess anthe-

mantic properties. The fruit, when ripe, can be eaten without inconvenience; but Dr. Roxburgh describes the pulp as exceedingly bitter, and having an offensive, greasy smell. It is about the size of an egg, and covered with a smooth, dry cortex. It is used in native fireworkss; the kernel being scooped out, the shell is filled with
gunpowder, and explodes with a very loud report. A fat oil, called zechun, qu. zaitun? is extracted from the seeds.—Drs. Wight, Riddell, O'Sh., Voigt, Stewart; Mr. Jaaffrey.

BALANOPHOREAE. This order of plants contains several parasites, such as the Rafflesia and also the Cisti trees of Europe, which yield the hypocistus juice, and owe all their properties to the presence of an abundance of gallic acid. The Balanophorae species growing in the East Indies are,

' elongata, Blain. India, Wall. Pen. of India.
' typhina, Wall., Prome, Taong-dong.
' gigantes, Wall., Taong-dong.

A species, called Gochamuli in Hindi, is a curious leafless parasite growing abundantly on maple in the Zennu valley in Sikkim, and also in the N.W. Himalaya. Itoccasions great roots on the maple roots, and on the oaks and other mountain trees, from which the Tibetans form their drinking cups. Dr. Hooker found a small store of these knots, cleaned and cut ready for the turner, and hidden behind a stone by some poor Tibetan, who had never returned to the spot; they had evidently been there a very long time. The Lepeha drink out of these little wooden cups, which are very pretty, often polished and mounted with silver. Some cups are supposed to be antidotes against poison, and hence fetch an enormous price; these are of a peculiar wood, rarer and paler coloured, and Dr. Hooker paid a guinea for one such, hardly different from the common sort, which cost but 4d. or 6d. At Lhasa their price is higher, as they are all imported from the Himalaya. B. gigantea is a favourite astringent remedy in Burma. B. Indica, Wall. Cat. 7224, is found in the forests of the central province of Corely, at an elevation of 3000 to 5000 feet.—The En. Pl. Zeyl. p. 293; O'Sh. p. 569; Hooker, Him. Journ. i. 132.

BALANUS, the barnacle genus, one of the Cirripedia of the Articula. Some of those found on old timbers in India are very large.

BALA RAI. See Balbara; Balabhipur.

BALA RAMA, elder brother of Krishna. His history is greatly mixed up with mythical legends, but he seems to have married Revati. In youth he was the playfellow of Krishna, and in after life the sharer in his toils and his glory. He is the analogue of Heracles. He is said to have rebuilt the city of Rajagriha. A statue of him is at Muttra. He is also called Balabhadra and Baladeva. —Grose, p. 57.

BALA RAMA, the eighth avatar or incarnation of Vishnu.

BALASA PANDU. Tel. Webera tetrandra.

BALASHNORE, a tributary state in Gujerat, of 150 square miles. The title of the family is Babi, from their founder, Sher Khan, Babi.

BALASUR, a town and bay and river in Orissa, the entrance of the bay being in lat. 21° 28' N., long. 87° 4' E. The East India Company formed a factory here. It has a rock from which are made plates, dishes, cups, and household utensils. The district is 2068 square miles, with 770,232 people, Bhumiuj, Pan, Kandara, Khandait, Santal, and Hindus. One of its rivers, the Baitara, is the Styx of the Hindus. There are several seaports and harbours.—Horsburgh; Imp. Gaz.

BALASPUR, in the Central Provinces, contained, in 1867, a population of 780,503, amongst whom,

BALAS RUBY. Badakhshan has been known since the days of Marco Polo as the country producing the real balsas ruby, as well as the laviard or lapis-lazuli, from which is made the beautiful blue pigment called ultra-marine. —Pawlet, East India, i. 184.

BALAZAR, an intoxicating elecutary prepared from the Malaeea bean, the Anacardium; hence the cognomen Al-Baladuri of Ahmad, who was addicted to its use.

BALBAND, the Maharrta alphabetical character. BALBEK. See Baalbek.

BALBIQHO, an offering to Krishna in the early morning.

BALBI, GASPAR, a merchant dealer in precious stones, who travelled to India between 1579 to 1588. In 1583 he visited Pegu, and wrote a book, entitled Viaggio dell'Indie Orientale.

BALBOA. Vaso Nunez de Balboa was born in 1475 at Xeres de los Caballeros, of a noble but poor family.

BALBODII. MAHR. The Deva Nagri alphabet. BAL-CIFHARU, also Balchir and Balchir.

HIND. BEN. Nardostachys Jatamansi; Jatamansi valerian. It is found near standing water at Ajmir; the roots are small, and knotty, and fine, like hair, hence the name; they have a sweet scent, are tasteless; used to heat, strengthen, and excite the system. One tola is the dose. Are very much used also in hair mesalibs or pomades. Also the name of the Andropogon schoenanthus grass, the roots of which are like fine hair, sweet-scented, and much used in cleaning the hair.—Gen. Med. Top. p. 128. See Nardostachys.

BALDÆUS. Philip Baldaens about 1600 travelled in India, and in his book of travels gave a description of the coasts of Malabar and Coromandel. He gives information of the early struggles of the Dutch and Portuguese.

BALDEO or Baladeva, a city near Muttra. It has a statue of Bal Rama, elder brother of Krishna.

BALDEVA, son of a prince of Muttra, and nephew of Kosunt, the father of the five Pandu brothers. Baldeva was cousin of Krishna, and fled with Yudishtra from the battle-field famed in the Mahabharata at Saurashtra. After Krishna's death Baldeva and Yudishtra went southwards, and it is supposed penetrated into Greece. Baldeva has been deified as the god of strength, and is supposed to be the Heracles of the east and west. He is still worshipped as in the days of Alexander, his shrine at Baldeo in Vrij, his club a ploughshare, and a lion's skin his covering. At Ruplas, there is a statue 27 feet 5 inches in height, said to be that of Baldeva, but supposed to be a Jain image. —Tod's Rajasthan. See Bala Bhadra; Krishna; Pandu.

BALDUWA. MALAY. Velvet.

BALDWIN, king of Jerusalem; in A.D. 1111 took Beyrount from the Saracens, but in 1187 it was again lost.
BALFOUR, Edward.

BALFOUR, it had 180. on he. and, MOO on transacted, miles which of charge Ahmadnaggur to Commissioner BALELA. the Egypt, five was rank Vienna, and of Medical, the Survey-General, Surgeon-General, of the Surgeon-General, and of Mahomedan of the Madras Medical Department. During his service, he prepared and edited the Cyclopaedia of India and of Eastern and Southern Asia through two editions in India, in 1858 and 1873, and a third edition is now being printed in Great Britain. On the appearance of the first edition, a review of it in the Madras Journal of Literature and Science said: 'There is no question but that his long residence in India, his scientific researches, and his very variety of duties, eminently fit him for a work of this character, which, however imperfect and incomplete as a whole, will be of great utility, and prove a valuable aid to others.'

As an executive officer, he had been in medical charge of European and native artillery, of native cavalry, and of native infantry, both of the Madras and Bombay armies; had been Staff-Surgeon of Ahmadnaggar in the Dekhan, and Garrison-Surgeon of Bellary, in the Ceded Districts. In the administrative grade, from 1862 to 1870, he served as Deputy Surgeon-General of the Burmah Division and Straits Settlements, southwards to Singapore and the Andamans, twice in the Ceded Districts, twice in the Mysose Division, and for four years with the Hyderabad Subsidiary Force and Hyderabad Contingent. While so employed, he resided in or inspected at nearly a hundred of the cities, towns, and military cantonments, some several times over; and from 1871 to 1876 inclusive he was, as Surgeon-General, the Head of the Madras Medical Department.

For many years he was Political Agent at the Court of the Nawab of the Carnatic, also Paymaster of Carnatic Stipends; from 1858 to 1861, he was Commissioner for investigating the Debts of the Nawab of the Carnatic, against whose estate claims for above a million sterling (Rs. 1,00,80,000) were made. He acted for a short time as Assistant

BALFOUR, KARN. Glass bracelets worn by women.

BALE, of cotton weighs—

In America, . . . 440 lbs. In China, . . . 240 lbs.

" Brazil, . . . 189 " Bengal, . . . 300 "

" Egypt, . . . 350 " Madras, . . . 200 "

" Turkey, . . . 350 " Bombay, . . . 354 "

BALEAN, a timber of Singapore. See Kayu. BALEI, MALAY. A public hall in a village, where strangers are received, public business transacted, and marriages performed. See Morang. BALELA, ITHI-KANI. MALEAL. Zapania nodiflora. 

BALE, of Kashmir, Coriaria Nepalensis. BALELA. HIND. Terminalia bellerica. Balela Sujah, small black myrobalan, fruit of the Terminalia citrina.

BALESWAR, a distributary of the Ganges, which enters the Bay of Bengal, as an estuary 9 miles broad, under the name of Haringhata. The bore does not occur in it.—Imp. Gaz.

BAL-ESWARA, a title of Siva, whom his followers designate Mahadeo, or Mahadeva. He is the same with the Assur of the Scriptures, and has resemblance to Jupiter.

BALFOUR, EDWARD GREEN, L.R.C.S.E., Fellow of the Madras University, Corresponding Member of the Imperial-Royal Geological Institute, Vienna, a medical officer of the Madras Army. He was in India from 1834 to 1876; he rose to the rank of Surgeon-General, and for upwards of five years was the Head of the Madras Medical Department. During his service, he prepared and edited the Cyclopaedia of India and of Eastern and Southern Asia through two editions in India, in 1858 and 1873, and a third edition is now being printed in Great Britain. On the appearance of the first edition, a review of it in the Madras Journal of Literature and Science said: 'There is no question but that his long residence in India, his scientific researches, and his very variety of duties, eminently fit him for a work of this character, which, however imperfect and incomplete as a whole, will be of great utility, and prove a valuable aid to others.'

As an executive officer, he had been in medical charge of European and native artillery, of native cavalry, and of native infantry, both of the Madras and Bombay armies; had been Staff-Surgeon of Ahmadnaggar in the Dekhan, and Garrison-Surgeon of Bellary, in the Ceded Districts. In the administrative grade, from 1862 to 1870, he served as Deputy Surgeon-General of the Burmah Division and Straits Settlements, southwards to Singapore and the Andamans, twice in the Ceded Districts, twice in the Mysose Division, and for four years with the Hyderabad Subsidiary Force and Hyderabad Contingent. While so employed, he resided in or inspected at nearly a hundred of the cities, towns, and military cantonments, some several times over; and from 1871 to 1876 inclusive he was, as Surgeon-General, the Head of the Madras Medical Department.

For many years he was Political Agent at the Court of the Nawab of the Carnatic, also Paymaster of Carnatic Stipends; from 1858 to 1861, he was Commissioner for investigating the Debts of the Nawab of the Carnatic, against whose estate claims for above a million sterling (Rs. 1,00,80,000) were made. He acted for a short time as Assistant

Assay Master at the Madras Mint; and in the Military Finance Department of India he was, at Madras, Examiner of Medical Accounts.

Early in his service he had passed as Interpreter in the Hindustani language; he was for years employed at Punjab, and was Translator to Government (1854 to 1861); and, as a Member of the Board of Examiners, he examined the civil officers in those tongues. He obtained H.H. the Nawab of the Carnatic's consent to the establishment of the Madrassa-i- Azam (Azam being the tahlakus or literary title of that sovereign), and it still flourishes in Madras; and he induced the Mahomedan residents of that city to establish the Madras Mahomedan Library, of which, in 1876, they elected him a life member.

In 1850, his offer to the Government to form a museum in Madras was accepted, and he named it the Government Central Museum. He was its Superintendent till the year 1859, in which year the visitors rose to 552,407. In 1856 he commenced the collection of animals which have found their home in the Madras Zoological and Geological Gardens. In 1857, he established the People's Park. And in 1866 he instituted the Mysore Museum at Bangalore, the visitors to which in 1868 numbered 203,534. While Superintendent of the former museum, he prepared and printed nine catalogues and eight reports on its mineralogical, geological, zoological, and economic collections.

He was honorary Secretary to the Madras Central Committees for the Great Exhibition of 1851, for the Paris Exhibition of 1855, for the Madras Exhibitions of 1855 and 1857, and was a member of the Madras Committees for subsequent Exhibitions at Vienna and Paris. He published a volume of selections he had made from the Persian and Hindustani poets; it is quite a volume de luxe, lithographed with arabesques. He translated and published in Hindustani, Conquest's Outlines of Midwifery, and paid for and printed translations of some in Tamil, Telugu, and Canarese. He translated and published a work on Astronomy in Hindustani, and also a diglot Hindustani and English Statistical Map of the World, which also was rendered and printed in Tamil and Telugu. He contributed to current literature papers on the Migratory Tribes of India; on the Influence of Trees on the Climate of a Country, for which he received the thanks of Government; on the Health of Soldiers; on the Crimes and Disabilities for which the Native Soldiers of the Madras Army were discharged the Service; on the Amount of Education in Madras; on the Commercial Products of the Madras Presidency; on the Molasses, with the genera of Recent and Fossil Shells; on the Epidemic of Cholera at Thayet Myo; on the Vegetables available for Europeans in Burmah; on the Typhoid Fever at Bangalore; on the Ethnology of Hyderabad; on the Sanitary Condition of Secunderabad; and on the Sanitary Prospects of Trinbeghur. He also published two editions of his Statistics of Cholera; two editions of the Localities in India exempt from Cholera; three editions of the Timber Trees, Timber, and Fanci Woods of India and of Eastern and Southern Asia; three editions of the Vyidian and Hakim; two editions of Eminent Medical Men. The Honourable the Court of Directors, H.M. Secretaries of State for India, the Government of India, the Government of Madras, the Medical, the Finance, the Sanitary and other
authorities, noticed his work in favourable terms. When offering to take charge of the Madras Museum, he had intimated: 'I do not wish any remuneration of any kind; but what my offer to be considered as in any way hanging the Government in any arrangements they may in future wish to make;' and the Court of Directors, in acknowledging this, said: 'We have to express our sense of the liberal and considerate terms in which Mr. Balfour offered to undertake the charge.' When about to quit India, the Hindu, Mahomedan, and European community of Madras invited his attendance at a meeting, publicly to record the high sense they entertained of those labours of your life, which, having in view the public good, have pre-eminentiy characterized your career, but also to convey to you the expression of their regard and esteem for your private character. And in the address then presented to him, he was asked to sit for his portrait, to be placed in the Government Central Museum, and it quoted the words of the Mahomedan community, who said, 'The debt we owe him is one of the deepest gratitude, and his name will be cherished in our memories with the highest sense of esteem and respectful attention.' While still at the head of the medical department, M.M., the Queen bestowed on him a Good Service Pension.

The members of the Mahomedan Library, at a meeting at which the leading men of that race and the heads of the European society were present, presented him with an address in the Persian language, gratefully acknowledging that he had founded the institution in 1851; and long after he had retired from the service, the members of the Apothecaries' Fund, their Widows and their Orphans, sent after him to England an address "in grateful recollection of the valuable services rendered by him in 1872."

Balfour, General Sir George, K.C.B., M.P., an officer of the Madras, and afterwards of the Royal Artillery, 1826-1880. He served with the Malacca Field Force in 1832-33; as Brigade Major in the campaign against Kurnool in 1839, and was present at the battle of Zorapole on the 18th October 1859; served as Staff Officer of the Madras Forces in the war against China in 1840-1-2, and was present at the capture of Chusan on the 5th July 1840; Canton, 25th May 1841; Amoy, 26th August 1841; Chusan, 1st October 1841; Chine, 10th October 1841; Ningo, 13th October 1841; Ningpo, 10th March 1842; Tsekee, 15th March 1842; Segona, 15th March 1842; Chapeo, 18th May 1842; Wosung, 16th June 1842; Shanghai, 19th June 1842; Chin-keang-koo, 21st July 1842; Nankin, August 1842; Yang-tse-kiang river, September 1842; and received the Chinese medal. During the war he was Staff Officer of the Madras Forces; he was elected by the army Joint Agent for Captured Public Property; he was Receiver of the Ransom payable under the treaty of Nankin, and he settled and paid the Hong debts due by the Chinese merchants. He was Consul at Shanghai for many years; was employed as a Commissioner to inquire into the Madras Public Works Establishments. He was a member of the Military Board, which had control over every department of the army except as to pay and discipline, and which merged into the office of Inspector-General of Ordnance and Magazines, which he held for several years. In 1850 he was specially commissioned by the viceroy, Lord Canning, to inquire into the condition of the Native and European troops forming the garrison of Banyah; but his latest labours in India, from 1859 to 1862, were as Chief of the Military Finance Department of India. Towards the beginning of 1859 the last embers of the mutiny were just being trodden out; peace had been restored, but with peace had not come prosperity, for the British empire in India had been saved from the perils of revolt and rebellion, to be compelled to struggle a second time for life against the dangers of bankruptcy, as the sepoys' revolt had burdened India with a debt scarcely less to be dreaded than the dangers it had escaped. The large powers which, during the emergency, had of necessity been entrusted to departments, and to divisional and station officers, were still being exercised; extra establishments no longer necessary were being kept up; contracts were being renewed at war prices; and, from the nature of the circumstances, the army was the chief source of expense. At this juncture, Colonel Jameson of the Bombay army, Colonel Burn of the Bengal army, and Colonel Balfour, C.B., of the Madras Artillery, were formed into a commission on the military establishments of the country. They first examined into those of Bombay (18th July 1859), then visited Madras, and finally reached Calcutta in the beginning of 1860, from which, before many months were over, Colonels Jameson and Burn left in ill health, leaving to Colonel Balfour, early in 1860, the entire work. A Military Finance Department for final control and audit was then formed, of which he was appointed chief, and from that date the whole of his efforts were directed to bringing the army military establishments down to the peace scale. The numerical strength of the army, sanctioned on the restoration of peace after the revolt, was for Bengal, 113,095; for Madras, 55,125; for Bombay, 39,270; or a total of 207,490, of whom 71,121 were to be Europeans, and 136,369 natives. Prior to the revolt of 1857, the military charges of India were £11,500,000, and the European army had been lower than any year since 1816; but by the beginning of 1859 this charge had risen to £21,000,000, when the Military Finance Commission was established, and the result of its action became felt. The military estimates for 1860-61, including the carriage department, were reduced to a trible over £16,000,000, and in the following year, Mr. Laing, the financial member of the Supreme Council, intimated that the Military Finance Department had revised the estimates with great care, and they were stated at £12,850,000, or £2,479,000 lower than in 1860-61. Mr. Laing further added that £12,199,242 was the estimated cost of the military establishments as fixed permanently for India, only that in the year 1861-62, reduction of items costing £600,750 could not be completed. The 1861-62 estimate, therefore, was to that amount higher than the estimated permanent expenditure, so that the actual diminution from 1860-61 to 1861-62, in the cost of the army, was £3,229,000. It was further expected that the annual military charges would be brought down to twelve millions in India and two millions in Britain. Mr. Laing, when submitting his budget estimates, and ex-
plaining the changes in operation, stated that the future history of India would not be complete without mentioning the successful labours of Colonel Balfour. Mr. Thurlow, private secretary to Lord Elgin, remarks (The Company and the Crown, pp. 29, 30), that when the Military Finance Department was established after the revolt of 1857, in order to ensure economy in military expenditure, 'General, then Colonel, Balfour was selected for the sole control of this department, under the personal authority of Lord Canning.' 'He was,' adds Mr. Thurlow, 'a man of obstinate ability, and was armed to the teeth with power and promise of support. He conducted the work of pruning with a knowledge of detail only exceed by his zeal in execution.'

So early as 1861, Sir Charles Wood showed that the reductions ordered by the Government of India were expected to amount in the year 1860-61 to £2,500,000, which, with those of the previous year, would make an estimated saving in military expenditure alone of £6,000,000, and he added that if the reductions for 1861-62 were equal to those of 1860-61, and the produce of new taxes came up to the estimate, the expenditure and income of 1861-62 would be balanced. When the accounts were made, the deficit of 1861-62 was only £556,678. To admit of an examination of the results of Colonel Balfour's labours, the following tabular statements are given, showing the increase and decrease of the expenditure during his chiefship of the Military Finance Department:

</table>

It will be observed that the military expenditure in India rose to 21 and 20 millions in 1858-59 and 1859-60. But from that year Colonel Balfour's labours began to be felt. The military charges were reduced to £15,730,006 in 1860-61, to £13,681,900 in 1861-62, and to £12,697,069 in 1863-64. When the task was complete, the Government of India bore testimony to the important services which had resulted from his labours. The viceroy of India, Lord Elgin, on Colonel Balfour's return to England, wrote, that a man who, right or wrong, saved the country several millions sterling, well merited some reward. After his return to Britain, he was in 1866 employed on the Recruiting Commission in England. His voluminous and minute evidence before Lord Strathnairn's Committee led to his nomination in 1867 as Assistant to the Controller-in-Chief at the War Office, to assist Sir Henry Storks in the reorganization of the War Office Departments of Control. He was employed there from January 1868 to March 1871, and the result is shown by the estimates for store rates for the years prior and subsequent to his appointment:

1867-68, £1,555,500 | 1869-70, £1,150,000 |
1868-69, £1,491,000 | 1870-71, £1,000,000 |

The honour of K.C.B. was bestowed for his services in this department, and in 1872 he was elected M.P. for Kincardineshire.—Martin's Statesman's Year Book, 1864 to 1869; Thurlow's Company and the Crown, pp. 29, 30; West's Sir Charles Wood's Administration, London, 1867; Home News, 19th February 1869, p. 39; Madras Army List; Minutes of Lord Canning, Sir Bartle Frere, 11th March 1869, the Honourable Lord Cecil Beadon, 7th April 1862, to Sir R. Napier, 9th April 1862, and Earl of Elgin and Kincardine, 10th April 1862; Records of the India Office.

BALGHAH. Hind. Russian leather.

BALHARA, also styled Rashtrakuta, a dynasty who ruled at Malked in the Dekhan. According to Elliot, an ancient dynasty and kingdom mentioned by the merchant Suliman. The Balhara seem to represent the Balabhi sovereigns of Balabhipura, who were succeeded by the Balla princes of Auhalwara Puttun. Their territories included the country of Lata, or Larike, on the gulf of Cambay. According to Colonel Tod (Travels, pp. 147-48), Balhara was a title assumed by the successive sovereigns of Saurashtra. He says the earliest of the tribes which conquered a settlement in the peninsula of Saurashtra was the Balla, by some authors less stated to be a branch of the great Indus-vansa, and hence termed Balika-putra, and said to have been originally from Balika-des, or Balkh, the Bactria of the Greeks. The chief of Dhank is a Balla. The Balla pay adoration almost exclusively to the sun, and it is only in Saurashtra that temples to this orb abound. So that religion, tradition as regards their descent, and personal appearance, all indicate an Indo-Sasithic origin for this race; and in order to conceal their barbarian (M'hehra) extraction, the fable of their birth from Rama may have been devised. The city of Balabhi, written Wuleh in the maps, and now an inconsiderable village, was said to be 12 cos, or 15 miles in circumference. There is a sun-temple at Baroda, dedicated to Surya Narayana; and in Col. Tod's time it was the object of worship of the first minister of the Guicowar, who was of the Purvo caste, descended from the ancient Gueb. There is also a sun-temple at Banars. According to Mr. Edward Thomas, Balhara and Bala-Rai of the sea-going Arabs was a dialectical change from Bara Rai, the great king or lord paramount for the time being.—E. Thomas, Yule, Cathay, i. 183.

BALI, also called Mahabali, king of Mahabali-pana. He was the son of Virochana, son of
Prabla, son of Hiranya Kasipu. His wife was Vindhyavalli.—Dowson.

BALI, SANSK., in all peninsular India and in Ceylon, in the religious rites of the people, means a sacrifice performed to local deities, to earth and air deities, to evil spirits, to the manes of deceased ancestors, and to the Hindu deities Siva, Vishnu, their consorts and incarnations. Bali is the word used in Ceylon to express the worship of the heavenly bodies. The victim sacrificed is generally a cock; and the Baliya are clay images supposed to represent the controlling planet of the individual, and are destroyed at the conclusion of Bali ceremonies. Bali, Bali Akhi, Bali-Dan, and Rakta-Bali, are the names for the sacrifice offerings of flowers, animals, and other articles offered to an idol; also of the food offered to created beings, in small quantities thrown up into the air. In Canara, a woman by eating of Bali-akhi food assumes the profession of a prostitute. The gifts to Vishnu are milk, cocoa-nuts, or dough images, rice, flowers, curds, and fruits; but to Siva and Durga are goats, sheep, and buffaloes, the heads of which, after being cut off, are given to the pujari, and the carcases to the inferior castes. This rite is often practised in times of severe epidemics.—Wilson. See Sacrifices.

BALI, an island in the Eastern Archipelago, is feudatory to the Dutch. Bali and the adjoining island of Lombok in 1881 had a population of 80,498, viz. 78,187 natives, 207 Arabs, 403 Chinese, and 34 Europeans. The Balinese entertain great aversion to a maritime life, and are more rarely to be met with at the European ports than the natives of the other islands to the eastward. They are fairer in complexion, stouter in frame, and more energetic in their dispositions, than the Javanese, and in appearance and dress bear a great resemblance to the natives of Siam, from whom it is probable that they are descended. The entire population of Bali profess a degraded form of the Hindu religion, and the burning of widows amongst them was carried to an extent never known even in continental India. The slaves of a great man were also consumed upon his funeral pile; and when the immense annual loss of life produced by these frightful practices is considered, it is surprising that the island possesses so large a population. Other widows burn themselves or are despatched with a kriss. Keppel mentions that Bali is the only island, however, in the whole Archipelago where the two great forms in the Indian religions—the Brahmanical and the Buddhist—exist together undisturbed. The Balinese are a comparatively civilised race, and very jealous of the encroachments of their powerful neighbours. Bali island has inland freshwater lakes or reservoirs situated several thousand feet above the level of the sea. Bali, Borneo, Java, Timor, the Philippines, the Moluccas, and New Guinea possess almost similar climates, but there are other differences in their natural productions. In Bali, birds are the barbet, fruit-thrush, and woodpecker. In Lombok, the cockatoo, honey-sucker, and brush turkey. In Java and Borneo are many kinds of monkeys, wild cats, deer, civets, and many varieties of squirrels. In the Celebes and Moluccas, the prehensile-tailed cuscus is the only terrestrial animal seen, except pigs and deer. The natural productions of Borneo, Java, and Sumatra have a considerable resemblance. Sumatra has the Indian elephant, the tapir, and rhinoceros; Borneo has the same elephant and tapir; one of the Javan rhinoceros is different, but another occurs in Asia, and the smaller mammals are generally the same in the three islands. The fauna of Borneo and Celebes differ extremely, and this difference continues to the south, the line of separation passing between Bali and Lombok, though these two islands are only 15 miles apart. Bali women, like the Burmese, attend to the selling of goods and merchandise. The Balinese tongue, with its ceremonial dialect and sacred language, is one of the most improved languages of the Archipelago. Bali and Lombok form one of the residences of Netherland India; and treaties have been formed with several neighbouring native princes, of Badong, Belling, Den-Pasar, Karang-Assam, Klong-Koung, Lombok, and Taboeckan.—Bikmore; Earl, Kejpi's Ind. Arch. ii. pp. 143, 386, 389; Almanac.

BALIGH. ARAB. Mature, adult of age. Nabaligh, not grown up.

BALI-PATI, in the Panjab, earrings worn by both sexes of Hindus.

BALI-PRATIPADA, a Hindu festival in commemoration of king Bali being sent to Patala, held about the last days of October. It seems to relate to some war amongst the ancient races of S. India. In Coorg called Bali-payda.

BALIPURA, the Palibrotha of the Greeks, supposed to be the same with the city of Rajagriha.

BALISHT. HIND. A span.

BALISTES, the file fish of the South Seas.

BALIYUS, a term in the Turkish and Persian dominions for a consular functionary. It is supposed that it is originally Venetian, possibly from the Greek basilicus.

BALIJA. Tel. A large tribe of Sudra Hindus, scattered through Telingana. A few of them are foot-soldiers, but the majority are occupied in agricultural labour. A Balja man is Balja-rada; plural, Balja-wanlu.

BALIJAWAR, one day's journey north of the Oxus, has a rich lead mine, and in its immediate vicinity is a large hill, called the Koh-i-Meershah, from which is extracted coal of a good quality, and used as fuel by the inhabitants of the neighbourhood. Silk is produced in abundance, and could be cultivated to an almost indefinite extent. The vale of the Oxus seems peculiarly adapted to this produce, and the best specimens come from Koulbudian and Hazrat Imam, on its north and south bank. The silk of Bokhara is spoken of as being still better.—Papers, Afghanistan, p. 186.

BALIKAN, two low ranges of hills on the E. coast of the Caspian, about lat. 39° 30' N., and long. 54° 30' E., rising 3000 feet above the sea; guses are said to be found. —Bellett, Khiia.

BALIKSH, a lake of Central India.

BALKIES, who succeeded her father Hodhad in Yemen, was properly named Balkama or Yalkama. Her existence has given rise to numerous fables, and amongst others that she was the queen of Sheba, who married Solomon. This Balkes, however, lived about the commencement of the Christian era, and she repaired or consolidated the dam of Mareb.—Playfair. See Saba.

BALIKH, in lat. 36° 48' N., is a town of Afghan-Turkestan, 357 miles N.W. from Kabul, 120 miles W. of Kunduz, 370 miles N.E. of Herat. The province of Balkh is bounded on the N.E. by the
BALKO-BANS.

BallaPoora.

Oxus, E. by Kunduz, W. by Khorasan, and S.W. by the mountains of Hazara and the state of Maimuna. To the S.E. the country is cold and mountainous; but the N.W. parts of it are flat, sandy, and intersecting by broad summits. It is tolerably well peopled by Uzbek, Afghan, Mongol, Turk, and Tanjet or Tajak, who partly dwell in villages, and partly roam with their flocks in search of pasturage. The Uzbek are simple, honest, and humane; but the Tanjet are a corrupt and dissolute race of men, addicted to vices. They have a few Jews and Hindus; the new town has 10,000 Afghans, and 5000 Kapchak, and some Uzbek. The city of Balkh is regarded by the Persians as the ancient source of religion and polite education. The ruins of the old city are in a circuit of 20 miles around. Moorcroft and Guthrie are buried outside the city, but Moorcroft died at Andkhui. In 1860 it fell under Afghan rule. There are many aqueducts, and the country is fertile. The Asiatic balloons of Balkh is named Amul-Aba, the Mother of Cities. It is said to have been built by Kalamurz of Persia, also by the philosopher Zoroaster. It was conquered by Alexander, and included in Bactria. Balkh stands on a plain about six miles from the hills. Its climate is very insalubrious. It is well irrigated by means of aqueducts from the river. It is built on a gentle slope which sinks towards the Oxus, about 1800 feet above the sea. It has repeatedly sent out conquerors, and been conquered. Arases r. is described by some as a native of Sogd, by others as of Bactria, but by Moses of Chorene as of Balkh; and Moses adds that the dynasty was called Balkhavensis or Pahlavian. It was one of the finest cities of Asia, until Chenzhig Khan and Timur almost razed it to the ground on several occasions. In Polo's time it still preserved some signs of its former magnificence. Na'dir Shah, in 1786, conquered Balkh and Kunduz. After his death, these provinces passed, under the Daurani monarchy, into the possession of the Afghans, until, in 1820, Shah Murad of Kunduz asserted his independence. After that date they formed part of the state of Bokhara, but Afghanistan once more asserted her supremacy over them, Bokhara became confined to the northern bank of the Oxus, and Afghanistan extended its rule north of the Hind Kush, from Maimuna on the west to Kunduz and Badakshian on the east.—Vambery, Bokhara, p. 340; Kinneir's Geog. Memoir, p. 187; Chatfield's Hindustan, p. 31; MacGregor's, p. 192; Bellou, 265; Barnaby's Khiva; Kelenko's Central Asia.

BALKO-BANS. Beng. Denirocalamus balcoo.

Balla, a supposed Scythic race formerly ruling in Saurashtra; one of the Rajput race. The byrd or blacksmith of the indus is Tanjan-ka Rao; indicative of their original abodes on the Indus. They lay claim, however, to descent from the Suryavansi, and maintain that their great ancestor, Balera or Bappa, was the offspring of Sava, the eldest son of Ram; that their first settlement in Saurashtra was at the ancient Dhank, in more remote periods called Mongy Puttan; and that, in conquering the country adjacent, they termed it Balaekheter (their capital Balabhipura), and assumed the title of Bala Rai. Here they claim identity with the Gehlot race of Mewar, which long held power in Saurashtra. Before the Gehlot adopted the worship of Siva Mahadeo, which period is indicated in their annals, the chief object of their adoration was the sun. The Balla on the continent of Saurashtra, however, assert their origin to be Induvannas, and that they are the Bhika-putra who were the ancient lords of Aror on the Indus. The Katti people claim descent from the Balla, an additional proof of northern origin, and strengthening their right to the epitaph of the bards, ‘Lords of Multan and Tatta.’ The Balla were of sufficient consequence in the 13th century to make incursions on Mewar; and the first exploit of the celebrated rana Hamir, was his killing the Balla chiefman of Choteela. The chief of Dhank is a Balla, and the tribe yet preserves importance in the Peninsula.—Tod's Rajastan, i. 42, ii. 112.

BALLAM. A principality was founded at Ballali in Gujarath in the middle of the second century of the Christian era (A.D. 144), by Rakhan Sana, an emigrant of the Solar race, which reigned in Oudh. They were driven out of their capital, A.D. 524, under Sidhitya Ill, by an army under Colonel Tod thinks they may have been Persians of the Sasanian race. The princes of that family emigrated again from Gujarath, and at length, founded the kingdom of Mewar, which still subsists. Ballabi is supposed to be the Byzantium of Ptolemy. In one inscription, Druva Sana is described as a follower of Bhagavata, and Dhara-pattah of the sun; all the rest worship Siva.—Eliph. pp. 211, 212.

BALLAI or Ballati. Hind. Of the village community of India, the shepherd who drives the village flock to the common pasturage, and, besides his secréan, has some trifling reward from every individual. It is his especial duty to prevent cattle trespasses. In Central India, the village boundary servant.—Rajasth. ii. p. 506.

BALLAM or Vallam, the great cause of Ceylon, usually made from the angely, Artocarpus integrofella, or Aalur-sata. See Boat.

BALLAPoora. In Mysore, two towns of this name, Chikka and Doddla Ballapooor, about 14 miles apart, of great importance until reduced by Hyder Ali. Chikka Ballapoor is very healthy. Several families of the Morasen Wakaliga are in this part of the country; the women amputate two fingers of the right hand. The sect is said to be a subdivision of the Morasen Wakkal. Every woman of the sect, previous to piercing the ears of her eldest daughter, preparatory to her being betrothed in marriage, must necessarily undergo this mutilation, which is performed by the blacksmith of the village for a regulated fee, by a surgery process sufficiently rude. The fingers are first stripped of their skin, the blacksmith places a chisel over the articulation of the knuckles, and chops them off at a single blow. The story related by Wilks of the origin of this strange practice, is that a Rakshaas (giant) named Vrika, by a course of austere devotion to Mahadeva, obtained from him the promise of whatever boon he should ask. The Rakshaas accordingly demanded that every person on whose head he placed his right hand, should instantly be reduced to ashes; and Mahadeva conferred the boon, without suspicion of the purpose for which it was designed. The Rakshaas no sooner found himself possessed of this formidable power, than he attempted to use it for the
countries the village authorities are still ruling. They greatly vary in number and duties; but there are office-holders who claim to be descendants of the persons who first settled, a thousand years ago and more, in the villages they hold, and similar is to be found amongst the Reddi and Ganda of the south and east. It is this that preserves the Indian villages from the changes which would otherwise have occurred from the irruptions of the many conquering races. Amongst the Maharatta, office-bearers are known as Balute or Alute; amongst the Canarese, as Ayakuru, Ayagarru, or Ayangadlu.

Head officer, Potail, Reddi, Ganda; assistant do., Changala; accountant, or Kalkarni; district do., Despandi; Chaudari, conveyer of trades; the money-changer, assayer, gold and silver smith, is Potadar; the barber, Nhawi or Nat; washerman, Parit, Dhibri; temple servant or Gurno; carpenter or Sutar; potter or Kumhar; gatekeeper or watchman, usually a Pariah or Mhar, Mang, Ramusi or Bhil, called eskar, veskar, tallari; waterman, do., do., do.; astrologer or Josi; shoe-maker or Mhang; Bhat or bari; Maulana or Mulla, a Mahomedan priest.

The Maharatta village head, the potail, is also the civil magistrate, and settles petty civil matters to the extent of two maunds of grain, or four or six rupees, and sends higher claims to the tahsildar. In criminal matters he is only the police, and sends all to the Amin. In lieu of pay for the above services, the potail is allowed from 25 to 50 bighas of land rent-free, the land tax being about 3 or 4 rupees the bigha. For the cultivation of his rent-free lands two or four bullocks would be needed, because from 10 to 16 bighas, according as the rains are heavy or light, are all that a pair of bullocks can get over. There are sometimes two or four potails in a village, not always of the same caste; for instance, the village of Kanhapur, Zillah of Nandair, has four potails, two Maharatta, a Canarese-speaking lingaet, and a Kulkargah; and there are a few Brahman and Mahomedan and Pariah potails, but a Christian potail is unknown.

BALLOT, a fine-grained wood of a good colour, grown on the island of Banca.—Court, p. 134.

BALLOT, a timber of the Andamans, of great transverse strength.

BALLOT VINE, Cardiospermum halicacabum.

BALSAM, Pers. Galls, gall-nuts.

BALSAM, the name given by the people to the caves known as Ellora; also called Yerula.

BALSAM, village municipality; also the individuals composing it. In Hindustan and Bengal, the republic or village system has been greatly disturbed by the repeated inroads and conquests of foreign races, and the long period of Mahomedan rule, and there the village officers and servants are less complete. But even there the headman and the accountant are almost invariably retained, and some of the other officers and servants are also to be found, and in most instances the offices are hereditary, are capable of being mortgaged or sold, are paid by recognised fees and perquisites, by allotments of grain at the time of harvest, or sometimes by portions of land held rent-free or at a low quit-rent. In the Canarese and Maharatta

BALMUJ, a fine-grained wood of a good colour, grown on the island of Banca.—Court, p. 134.

BALLOT, a timber of the Andamans, of great transverse strength.

BALLOT VINE, Cardiospermum halicacabum.

BALSAM, Pers. Galls, gall-nuts.

BALSAM, the name given by the people to the caves known as Ellora; also called Yerula.

BALSAM, village municipality; also the individuals composing it. In Hindustan and Bengal, the republic or village system has been greatly disturbed by the repeated inroads and conquests of foreign races, and the long period of Mahomedan rule, and there the village officers and servants are less complete. But even there the headman and the accountant are almost invariably retained, and some of the other officers and servants are also to be found, and in most instances the offices are hereditary, are capable of being mortgaged or sold, are paid by recognised fees and perquisites, by allotments of grain at the time of harvest, or sometimes by portions of land held rent-free or at a low quit-rent. In the Canarese and Maharatta
BALNA. Mahr. A woman's name, meaning little one.

BAL-NATII, the deity worshipped by the Sauria races in Gujarat, identical with the Syrian Bal. The Bal-dan, or sacrifice of the bull to Bal-nath, is on record, though now discontinued amongst the Hindus. A ring was dug up at the Fort Hill, Montrose, which Colonel Tod considered to bear the symbol of the sun-god Bal-nath; around it is wreathed a serpent. Balnaith, a hill in the Panjab, the most commandary object within fifty miles of the Hydaspes.—Todd's Travels, p. 49.

BALO. JAV. Lacc.

BALLOO, a name of Skardo.

BALOO. SANSK. Sandy. Baloo-desa would be, in the Persian Regist'han, or desert, very applicable to Arabia Deserta.

BA-LOO-LET. BURM. Paratriphia digitata. BALOR, the name applied to Balti by the Dard race. Fossils are found in the Baior hills.

BALPUR-SIVA, or Siva of the city of Bal, a small temple visited by Colonel Tod. In front of the mythical emblem of the god was Nandi, the vahan or charner, the bull in brass, at one time apparently the sole object of worship of the Sauria peninsula.—Travels, p. 54.

BAL-RASKHA. HIND. Gnaphalium, sp.

BALSAM, flowering plants of the genus Impatiens, of which numerous species occur in India and China. Towards the close of the rains, the whole of the Western Ghats of India, the Syhadri range, are covered with the balsam, the valves of the ripe fruit opening at the slightest touch and expelling their seed, from which peculiarity the term Impatiens has been given to the genus. It is a pretty sight to see the hills for miles clothed with flowering balsams. Balsams, on the Khassaya hills, are next in relative abundance (about 2 to 5) to the orchids, both tropical and temperate kinds, of great beauty and variety in colour, form, and size of blossom. The common garden balsam, in its double state, has long been an object of cultivation. It not only has a tendency to vary with double flowers, but has also the power of continuing to produce them when renewed from seeds. To secure fine balsams, save the seed with great care from the finest and most double flowers only, throwing away all whole coloured and single blossoms. Balsams require to be sown thinly in a box or seed-pan. After the plants are 2 or 3 inches high, they should be transplanted out singly in well-manured soil; if to be grown in pots, they should be put in small-sized ones at first, and re-potted into larger when requisite, which will be when the small pots are filled with roots. The soil best adapted for culture is, two parts strong loam approaching in appearance to brick earth, and two parts well decayed manure, with a little lime, which will aid in preventing mildew, so destructive to the balsam; the pots should be well drained, and the plants must never be neglected in watering.—Hook. Rin. Jour.; Riddell's Gardening; Vogt. See Impatiens.

BALSAM, the balsam of the Dutch, balm of the French, balsamo of the Italian and Spanish, according to Calmet, is supposed to be derived from Bals-shemen, royal oil. The term designates the products of several plants, some of them of the S. and E. of Asia, but others foreign to these regions, as Brazilian elemi, called also Acouchi balsam, a resin obtained from the Itea heterophylla. Balsam apple is the fruit of the Monarda of Syria, and is applied to wounds. Carpathian balsam, from two species of pine. Copalmis balsam is from the Liquidambar styraciflua. Hungarian balsam is from the Pinus mugho. Balsam of copaiba is from several species of Copaifa of the West Indies and tropical America. Balsams of Peru is supposed to be obtained from the Myrsopyrum peruifolium of Central America, and one white balsam of commerce is made from it; but white balsam, or myrrh seed, or quinquino, is also obtained from the M. pubescens. Balsams of copaiba, Peru, and elemi are used medicinally. Canada turpentine or Canada balsam is obtained from the Abies balsamea in Canada. Between the bark and the wood of the trunks and branches of these trees are vesicles containing the oleo-resin, which exudes when they are broken. Canada balsam is much used by varnish makers in the manufacture of some of the most transparent varnishes. It is also extensively employed by opticians as a cement. To Balsamodendron opobalsamum, M. Kuntz more particularly refers the Balsam of Greece. The plants in the S. and E. of Asia which yield balsamic products are as under:

- Amyris commiphora.
- Balsamodendron giladense.
- Buchanania latifolia.
- Cuscuta deodea.
- Chloroxylon swietenia.
- Dalbergia sissoo.
- Dipterocarpus alatus.
- angustifoliolus.
- grandiflorus.
- inalmus.
- Roeb. larriam. 
- turbinatus, Gart.

Balsam of Peru, Balsamum Peruvianum. The tree, Myropermum peruifolium, is a native of Central America, from whence, formerly, the balsam was forwarded to Peru for re-exportation to Spain. The drug is obtained by beating and charring the bark, so as to promote the flow of the resin, which is collected by the application of rags to the injured portions of the trunk. It is a resins fluid, and is imported into India as a surgical application. Balsam of Tolou; Baume de tolou, Fr.; Toluitanscher Balsam, Ger.; Balsamo de Tolou, Sp. The source of the balsam of Tolou is imperfectly known.

BALSAMODENDRON, a genus of plants of the natural order Burseraceae, Kth., B. Berryanum, B. Roxburghii, and B. Agallochum, occur in India. Dr. Stocks, under B. Roxburghii, Arnott, unites Amyris commiphora, Roeb., A. agallocha, Hort. Beng., Balsamodendron agallocha, Voigt, Hort. Sub., B. Roxburghii, Arnott, Commiphora Madagascarensis, Lindl. Fl. Med., and a species of Protium, W. and A.; and he describes its species as growing in Arabia, Sind, Deesa, Marwar, the Dekhat, A. rangerabad, N. India, Sambalpur, and the Garh hills. B. Katof is mentioned by Forskal. B. pubescens, Stocks, is a small tree, called Bae by the Baluch, native of Sind, much resembling the Googul tree. Its young shoots are fragrant.—Dr. J. E. Stocks.
BALSIADENDRON AGALLOCHEA. W. & A.

Myrrh, commiphora, Roeb.

This small tree grows to the east and north-east of Bengal, in Silhet, Assam, and the Garo hills, also in the Central provinces and Panjab. Dr. Royle supposes this to produce the gum balsam of commerce, and perhaps of Dioscorides; but b'dellium is got also from B. Mukul and B. Africanum. The whole plant, while growing, is considerably odoriferous, particularly when any part is broken or bruised, and diffuses a grateful fragrance, like that of the finest myrrh, to a considerable distance around. Timber worthless, from the rapidity with which white ants devour it. It burns brightly, and makes excellent torches.

Voigt; Roxb.; Fl. Audh.; Pearson; Jacob.

BALSIADENDRON BERRYI. Arn.

Protium Giladense, W. & A. Amyris Giladensis, Wilde, Roeb.

A large shrub or small tree, a native of Arabia, Ethiopia, and all over the Madras presidency. It forms an excellent hedge, and the whole tree has a grateful fragrance. M. Fee ascribes to this tree three distinct products, balsam of Meecha, a wood called xylobalsamum, and fruits termed carpoolasamum. Tradition is rich in anecdotes relative to the origin of its balsam. The Mahomedans affirm that it sprang from the blood of the slain of Mahomed's conflict with the tribe of Harb, and that the prophet used the balsam for the resurrection of the dead. It is much used in medicine by the hakims as a stimulant, tonic, and somewhat astrigent remedy, and as an external application to indolent sores. It is also employed as a perfume and cosmetic. A mixture of this balsam is made by rubbing together 8 ounces of acacia gum on white muslin, and 2 drachms of Meecha balsam. It is much prized by the Mahomedan physicians as a tonic stimulant, in doses of half to one ounce, three times daily.

BALSIADENDRON EHRBENGERI, Bory., yields myrrh resin. B. mukul, Hooker, yields the b'dellium resin.

BALSIADENDRON GILEADENSE. Kunth.

This plant of Arabia is supposed to be one of those that produce the balm of Gilead, the balm of Scripture and balm of Theophrastus and Dioscorides.—Birdwood, pp. 20, 21.

BALSIADENDRON MYRHRHA. Nees.

Murr, Mor., ARAB. Hoerabul, SANSK. Bola, Bol., SANSK. Valati-polam, TAM.

A native of Yemen; is a small tree with a whitish grey bark, with rough abortive branches, terminating in spines. It yields the myrrh of commerce; the juice exudes spontaneously, and hardens on the bark. It contains gum and resin, as acts as a stimulant expectorant, and is used in bronchitis, asthma, and diseases of women; also as an external application to ulcers and sore throats, aphthous and spongy gums; by hakims it is employed in chronic coughs, induration of the liver, intestinal worms, and amenorrhoea. It is said to cause abortion.—Birdwood, p. 20; Powell's Handb. i. p. 378.

BALSIADENDRON ROXBURGHII. Arn.

A small tree 4 to 6 feet high. It grows in Arabia, Sind, Deesa, Marwar, Aurangabad, the Dekhan, N. India, Silhet, Assam, Garo hills. It produces a valuable gum-resin, met with in all the bazaars of India, and said to constitute the bulk of the article exported from Bengal as East Indian myrrh. Royle considers the Googul identical with the B'dellium of commerce, and he ingeniously traces in Budlyoon and Madelkon (the Greek synonyms of Googul) the θ’διλλιομ and χαιρείν of Dioscorides. The medicinal properties of B'dellium are exactly like those of myrrh, and it is much cheaper. Dr. Ainslie describes the gum-resin as semi-pellucid, yellowish or brown, inodorous, and brittle, softening between the fingers; in appearance not unlike myrrh, of bitterish taste, and rather strong smell. He states that it was then all brought from Arabia and Persia, where the tree is called Darach-i-mulq.—O.S. 287; Birds., p. 20; Royle, p. 177; Birdwood, p. 21; Dr. J. N. Cowle.,

so that there is no appearance of a town. They have the Khor country on the east, inhabited by a people supposed to be the Chauranei-Scythe of Ptolomy. Iskardo, Skardo, or Little Tibet, was conquered in 1840 for the rajah Gulab Singh, by his general Zorawar Singh, with his Dogra troops. rgyilo, the title of the ruler of Iskardo or Little Tibet, is derived from two Balti words,—rgyil, powerful, and Po, a man. The queen is styled rgyil-mo. Mr. Vigne points to this as the original of the title of Guelph belonging to the royal family of Britain, and of the term Gylden, still used to designate the old kings of Denmark.—Thomson's 'Trs. in W. Himalaya,' 247; Latham's 'Ethn. ; A. Cunningham; Vigne, Narrative; Hooker et Thomson,' p. 225; Yule, 'Cathay,' i. 234.

BALU. HIND. A bear. Balu-Soor, the Indian hog-badger, Arctonyx Collaris.

BALU. HIND. Sand; hence Balu, sandy, and Bal-sundar, sandy soil.

BALUCHISTAN, between lat. 24° 50' and 30° 20' N., and long. 61° 10' to 68° 38' E., comprises the extensive regions between the confines of modern Persia and British territory in the valley of the Indus; to the north Seistan and Afghanistan, to the south the ocean, mark its boundaries. Area, 106,500 square miles; population, 400,000. The western section comprises the subDivisions of Mushki, Kharan, Mushki, Panjghur, Kej, Kolwah, and Jhow; the maritime section includes the provinces of Las, Hormara, and Pessani; the central section is formed of the great provinces of SaraHarwan and Jhalawan, to which are to be added the districts dependent on the capital, Kalat, and which are intermediately situated between the two; and the eastern section includes the provinces of Cutch Gandava, Harand, and Dajil, the last two bordering on the river Indus. The most remarkable features of Baluchistan are its rugged and elevated surface, its barrenness, and deficiency of water. It may be described as a maze of mountain, except on the N.W., in which direction the surface descends to the great desert, and on the south, where a low tract stretches along the sea-shore. The more important valleys are Shal, Mustung, Kalat, Baghwan, and Mungochar.

The valley of Quetta, or Shal, is situated in 67° E. long., and 30° to 30° 20' N. lat. It is about 15 or 20 miles in length, and from 4 to 6 in breadth. It is bounded to the westward by the Chahl Tan range, having a strike of S.S.W. by N.N.E.

The valley of Kanhee is situated to the west of, and runs parallel to, that of Quetta, but extends further south. Its length is about 30 miles, and breadth 5 or 6. It is bounded on the east by the great Chahl Tan range, which separates it from the valley of Quetta, and on the west by a parallel range of much less height, which, towards the north, separates it from the valley of Fishin.

The valley of Mustung is to the south of the valleys of Quetta and Kanhee. It extends from about 29° 30' to near 30° N. lat., and its eastern boundary is nearly defined by the 67° of E. long. It is therefore about 40 miles in length, and varies in breadth from 5 to 8 miles, spreading out towards its upper end, and being gradually contracted towards its lower or southern extremity. It is bounded by parallel ranges, running N.N.E. by S.S.W. of height, probably, from 500 to 800 feet. The range to the eastward is pierced by a pass leading to the Dashti-i-be-Daulat.

The Dashti-i-be-Daulat is an elevated valley or plain, situated to the N.E. of Mustang, at the head of the Bolan pass. Its breadth is from 15 to 20 miles. It has no towns or villages, but is occasionally dotted with the tomans of the Kurd tribe. Some portions of it are cultivated in the spring and summer months, but during the winter it is a bleak, howling wilderness, destitute of trees or any shelter; the snow lies deep on it, and cold winds whistle over its frozen surface. It is subject to the depredations of the Kaka (Khaka, Kakar, Kakarr) tribe of Afghans, and caravans are frequently plundered by them. In the summer it is clothed with the fragrant Terk plant, and its surface diversified by fields of waving grain. It has no streams, but one or two wells have been dug, and water obtained with some difficulty; the cultivators are dependent on rain and heavy dews.

The valley of Mungochar is situated to the southward of that of Mustang, more circular in form, and of much less extent; destitute of trees, save a few stunted mulberries.

The valley of Girvanee is situated south of Mungochar, and is distant about 8 miles from Kalat.

The valley of Ziarat is situated to the westward of, and runs parallel with, the preceding; is of considerable extent, well watered and cultivated.

Baluchistan was early traversed or noticed by Pottinger, Postans, Ferriere, Burton, Masson, and Mohun Lal; and, more recently, other writers have noticed its features and peoples. Dr. Cook (in Trans. Bomb. Med. and Phys. Society) described the territories as consisting of lofty rugged table-lands and level ground, and their climates as exhibiting the severest heat and the most intense cold. He arranged it into five portions—

The great central mountain range or table-land, running north and south, which comprises the provinces of SaraHarwan, Jhalawan, and Las;

The mountain district extending eastward, inhabited by the Murri and Bugti, situated to the south of Sind and Cutch;

The province of the plains, Cutch Gandava;

The province of Makran, diversified by mountain and desert, which stretches westward along the sea-coast;

The great desert of Seistan to the north of the last-mentioned districts.

Saharawan is the more northern of the central provinces, and blends its confines with the Afghan districts of Fishin and Toha, dependent on Kandahar. It has a length and breadth of about 100 miles each way. On its east are parallel ranges of hills, which separate it from Darad and Cutchi, with which it communicates by a pass through which runs the river Bolan, leading from Darad to the Dashti-i-be-Daulat. Mustang district is occupied by the Raisani, Sherwani, Mumud-Shahi, Bangalzai, and Lari; Gurghina is the land of the Sirphera; the Dashti-i-be-Daulat and Merv are held by the Kurd; the Lagano are in Mungochar; the Rosani in Ashi Khan and Pudan, but also subject to Kurdogat, at Iri in Kachi and at Sahrab in Jhalawan; the Ghazghi in Ghazur; the hills west of Khanak are occupied by the Shaikh Husain and Samulari, and the Sunari are in the Dashti-i-Goram.
Jhalawan lies between lat. 26° and 29° N., and long. 65° and 67° 30' E. It includes the countries stretching in a southerly direction between Kalat and the maritime province of Las. To the west, barren tracts intervening, it has the provinces of Mushki, Kharan, and Kolwah. It comprises the districts of Sohrab, Zabbi, Baghwan, Khoozlur, Zidi, Kappar, Wad, Nall, and the hills of the Mingal, Bizanju, and Sumbati. The pastoral tribes in this province are superior in numbers, the great tribes of Mingal and Bizanju giving them preponderance. The Mehmansiri, Musherswan, and Mirwari occupy the Mushki district. Jhalawan is somewhat less mountainous than Saharanaw, and, except its valleys, is very barren. Its people, about 30,000 in number, are chiefly pastoral, very poor and very ignorant. These tribes are largely pastoral and nomadic, and have their allotted portions of the country, which they jealously guard. Many of them are traders and horse-dealers, visiting the chief towns of India.

Kharan has two small towns, one of which, Washak, is occupied by the Nusherwani tribe, who claim a Persian descent, and, in common with the Rajput of Udaipur in western India, trace it to the celebrated Nusherwan.

The deserts of Nushki, Chagai, and Seistan are sometimes collectively called the desert of Baluchistan.

The Kohistan district is a mountain region lying between Kalat and Cutch Gandava, and is composed of several parallel ranges of limestone rock. Its highest mountain, the Chalch Tan, 12,000 feet, is 85 miles east of Kalat. Its two water-courses are the Bolan and the Mula, which discharge into the plains of Cutchi, also the Gaj and the Nara.

The following heights were obtained by the boiling point of water in the route towards Makran and the return route:

Kalat, 3850 feet Nokheja, 3580 feet.
Panderan, 5600 feet Gajer, 2950 feet.
Nogranuma, 470 Juri, 3900 feet.
Baghwan, 470 Tyuk, 4700 feet.
Khoozlur, 330 Wulja Kulgullu pass, 5700 feet.
Nali, 3300 Matta, 5330 feet.
Taigab, 360 Sohrat, 5770 feet.
Greisher, 4173 Rodings, 6580 feet.

Throughout Baluchistan, but chiefly in Jhalawan, are great structures, called Ghurbasta or Ghorbant, constructed by some prior race, and bearing a resemblance to the Cyclopean remains of Europe. They are built across ravines, and evidently intended for tank bands; their vicinity is all terraced.

The southern part of the modern Baluchistan was made known to Europe by the march of Alexander the Great. On quitting Pattala (supposed to be Tatta) on the Indus, he proceeded with his army through the dominions of the Arabita, a part of the province of Las, and in it forded the Arabis (Purnal) river. Westward of that insignificant stream, he traversed the territory of the Kirtha and thence crossing over one range of mountains, he entered the province of Gedrosia (Makran), in which his troops were thinned by the accumulated hardships of thirst, famine, and fatigue. Craterus, with the heavy baggage and invalid soldiers, marched far to the north by Arachosia and Drangiana, which provinces are included in the modern ones of Kandahar and Seistan. Since the middle of the 19th century, many of the valleys and mountain districts of the northern parts have been repeatedly and successfully marched over in the expeditions of the army of British India, though they also have suffered from want of water, from the heat of the hot weather, and the cold of winter.

Baluchistan and British India are in political alliance, the treaties bearing date 14th May 1854, 8th December 1876. Nasir Khan, in the 18th century, after a contest with Ahmad Shah, acknowledged the latter as his suzerain, agreed to furnish a contingent for war services, and accompanied him to Hindustan. He died A.D. 1795. He was a liberal, just, and brave ruler. His son and successor was Mahmut Khan, who died A.D. 1819, and was succeeded by his son Mehrab Khan, who was killed, 13th November 1839, in the storm of Kalat by the British forces. His son Hasan Khan, after a brief reign of Shah Nawaz Khan, regained power, assumed the title of Nasir Khan, and ruled till his death, A.D. 1857; his half-brother, Khudabad Khan. 16 years of age, succeeded him, but was temporarily put aside by Sherdil Khan, after whose murder in 1864 he resumed authority.

Kalat, the chief town, has about 400 houses within its walls, with suburbs comprising other 400 houses. Kalat is situated in a narrow valley, bounded to the east by the hill ranges extending to Cutch Gandava. In the town are many Brahui, a great number of Hindus, and a large proportion of slaves. The entire suburbs are inhabited by Babi and other Afghans. The agricultural classes are nearly exclusively Dehvars, whom Masson regards as the original occupants, and equivalent to the Tajaks of Afghanistan and Turkestan, and, as with them, their vernacular language is Persian.

The Brahui pastoral tribes, belonging to whom is the reigning family, speak a language called Brahui, or Kur Gall.

Cutch Gandava presents a large extent of level surface, has an excessively sultry climate, and great scarcity of water for agricultural purposes. It is inhabited by three very distinctly marked races, the Jat, the Rind (including the Mahbaghi), and the Brahui. The Jats are undoubtedly its early occupants; the Rind are more recent settlers; and the Brahui have acquired a permanent interest in the province only since the time of Nadir Shah. The climate is so oppressive from April to August that communications are nearly suspended, and travelling is attended with great risk, from the hot winds which sweep with fatal violence over the parched, arid plains. No less terrible are the emaciations emitted from the heated surface of the soil. This noxious hot wind is known as the Harm-i-simoom. But in winter its climate is temperate, and the Khan of Kalat, and the Rind, Brahui, and well-to-do Baluch resort to it. It is their wintering land. It has the Bolan, Moolla, and Nari rivers. Its chief towns are Gandava, Bagh, Dadar, Kajak, Leri, Hajji ka Shahar, Kotru, and Mirpur.

Nushki lies between the desert of Seistan on the west and the Gurgchina district of Saharanaw on the east. The Kaisar river runs through it: asafotida and rhubarb grow wild. It is occupied by the Zigger Minghal and the Rakshani Baluch. They have large flocks of sheep and herds of cattle, and remain there all the year round.

Makran, the ancient Gedrosia, is partly Persia
and in part belongs to Baluchistán, lying between Persia and the Baluch province of Las. Its sea-board extends from Ras Malan to Ras Jashk. On its coast line are the districts of Hormara, Pasni, Kolanch, Guadar, Juni, Baho Dastyari, Choaabar, and Kibla; and inland are Kolwa, Panjur, Kej, Tump, Mand, Pishin, Sarbaz, Disaz, Kasarkar, and Geh. It is traversed from east to west by parallel ranges of mountains, and has several rivers, the beds of which are dry for many months. The tribes are chiefly Baluch, Gichki, Boledi, Malika, also Nusherwani, Bizajnur, Narui, Hot, and Rind, and the Brahu Mirwani. Other less important tribes are Ashkani, Band, Birdi, Gaja, Gorji, Jatgal, Kaodai, Kalmati, Ketwari, Lagnori, Kosagi, Kotigi, Mulgi, Maidizai, Puzl, Raisi, Singalu, Shazadah, Shehi, Sanjadah, Sangorif, Wardili, and Zishkhani. The inferior tribes are Bahari, Durzadah, Korwa, Langao, Lori, Lundi, Med, and Zat; and the unorthodox Baluch tribes are the Dal or Zikri, the coast tribes of Med, Korwa, and Raisi; also the Biadish, and the Khoja, or Lutia. The language of Makran is a patois of Persian, with many Arabic words and phrases. The races are true to their undertakings; they number about 200,000 souls. The more important harbours are Summiani, Hormara, Kolmat, Guadar, Juni, and Choaabar.

Panjur district of Baluch Makran consists of a cluster of forts and villages amongst groves of date trees. Kej, the most western district of Baluch Makran, has a cluster of villages and forts, situated in the great valley, about 12 miles wide, that traverses the country of Makran from east to west. The chief families are the Gichki, of Hindu descent, with two clans, the Malikzai and Esazi; also the Raisi and Mulki. Above half the population of Kej are of a religious sect called Zigger, who dispense with many prayers, rites, and ceremonies of orthodox Mahomedanism.

Kolahch province is four or five days from the coast, north of Hormara. It is sterile, but inhabited by the Mirwari, Homersari, Rodahi, and Nusherwani tribes.

Jowo, a small province west of Las, from which it is separated by a range of mountains. Its inhabitants are the Mirwari and Halada tribes, the latter are Brahu, and pastoral.

Las has an area of about 5000 square miles. It is a flat plain, barren, and lies between mountains and the sea, and has the Purali river, the Arabs of the Greeks, and other streams, the banks of which are fertile. Its towns are Bela, Uraj, Summiany, and Lari. The chief inhabitants are the Lassi division of the great Lumi tribe, with Hindu and Khoja traditions.

Bela in Las, built on the Purali river, seems to have been preceded by another town, the sepulchres of which are about five miles westward, where coins and trinkets are occasionally found. Funeral jars are also brought to light, filled with ashes, charcoal, and other incinerated substances. In the nearest point of the contiguous hills separating Las from Jowo are numerous caves and rock temples. Captain Postans says (p. 359) : 'The tribe of Beaveiros, who dwell near Bela, made a practice of selling their children when in want, which appeared to be generally the case, as no difficulty was experienced in obtaining them whenever required.'

Hormara, a sea-coast district of Baluch Makran, has about 1000 Med fishermen, with a few Hindu and Khojak traders.

Passi or Passani, also a sea-coast district, is occupied chiefly by the Kalmati.

Saharawan and Jhalawun are ruled by hereditary chiefs, who have their hereditary standard-bearers. The place of the Saharawan chief, in council and in war, is on the right of the Khan; that of the Jhalawan chief is on his left. Las also has usually been governed by a hereditary chief, called the Jam; but this ruler rebelled, and became an exile in British territory.

The Baluch have three great sections, Nari, Rind, and Maghazzi; and Pottinger, writing in the early part of the 19th century, gave the following list of their subdivisions and the numbers of their fighting men:—

<table>

The Rind, one of the principal divisions of the Baluch tribes, have a tradition that they came originally from Aleppo.

The affinity of the Baluchi to the Persian language affords of itself strong evidence in favour of the supposition that they came from the westward; and the majority of the Baluch nation dwell on the western frontier; neither hair, features, manners, nor language bear the slightest similitude to those of the Arabs.

</table>
The Brahui appear to have been a nation of Tartar mountaineers, who settled at a very early period in the southern parts of Asia, where they lived a nomadic life in small khels or societies, headed and governed by their own chiefs and laws, for many centuries; and at length they became incorporated, and obtained their present footing at Kalat and throughout Baluchistan. Some amongst them affirm that the name is a compound of an affix boon, and rob, a word said to mean a hill, the Brahui being called in one quarter of the country, Nuri, which means 'lowlanders,' i.e. literally not hillmen, a name they received from the Brahui when they came amongst them, and evinced a preference for the champagne districts, low villages, and plains. The Brahui imagine themselves the aborigines of the country.

The Baluch and Brahui take their tribal names either from the chief under whom they serve, the district or country to which they belong, or the traditions as to whence they derive their descent. The Gurgani, Sherwari, and Sherzai take from gurg and sher, respectively a wolf and a lion; the Lumri, from lumri, the fox; the Jamalzai, Changozai, Shadanzai, and Gulzai, from the terms jama, change, shad, and gull, severally meaning beautiful, good, happy, and rose; the Dodzai, from 'do,' two, being two united tribes, etc.

The Kurd, who inhabit the Dasht-i-be-Daulat, doubtless came from Kurdistan, and made choice of the Dasht-i-be-Daulat. Many of the Jhalawan tribes are undoubtedly of Rajput origin; and until lately the practice of infanticide prevailed amongst them. Near Bagwan was a cave in the rock filled with the dried mummies-like bodies of infants, some of which when seen had a comparatively recent appearance. Burton states (Seine, p. 244) that the Baluchis were in the habit of putting to death their female children by concubines and unmarried girls, either by means of opium or drowning in milk.

Grammars of the languages show that the Baluch is of the Aryan or Sanskrit stock, and the Brahui of the Scythic or Turanian family. Lieut. Pottinger mentions that the Baluchi tongue partakes considerably of the idiom of the Persian, and at least one-half of its words are borrowed from that language, but greatly disguised under a corrupt and unaccountable pronunciation. The Brahui, on the contrary, is, he says, so dissimilar in its sound and formation, that he did not recollect to have marked in it a single expression in any way approaching to the idiom of the Persian.

Dr. Caldwell regards the Brahui as derived from the same source as the Panjtab and Sindi, but it unquestionably contains a Dravidian element. The discovery of this element beyond the Indus river, supports the view that some of the Dravidians, like the Aryans, the Graeco-Scythians, and the Turco-Mongolians, entered India by the N.W. route. According to Mr. Campbell (pp. 54-56), Brahui is nearly Aryan (Indo-Persic), with a Turanian element. The consequence of the people of these two classes, Brahui and Baluch, is, as unlike, in most instances, as their languages, provided they be descendants of a regular succession of ancestors of either; but the frequent intermarriages which take place amongst them have tended in some degree to blend together the peculiar characteristics of both, so that in many families, and even in whole tribes, they have ceased to exist.

The typical Brahui are certain tribes in Saharanw and Jhalawan.

The Brahui are a nomade race, always residing in one part of the country during summer, and migrating to another for the winter season. They likewise change their immediate place of resort many times, in search of pasturage for their flocks,—a practice rare among the Baluch tribes. The Brahui, instead of the tall figure, long visage, and raised features of their fellow-countrymen, have stout, squat features, short, thick bones, with round heads, short, and flat linements. Numbers of them have brown beards, and are bearded. The Kamburani, the chief tribe, are subdivided into three distinct gradations of rank, called Ahmedzai, Khani, and Kamburani. The first supplies the khan; the Khani are of the secondary rank of chiefs. The term Kamburani includes all the remainder of the tribe, but in common is applicable to the whole body. They receive wives from, but do not marry their daughters into, other tribes.

The Baluch tribes, Rind and Magzhi, are settled in Cutch Gandava, to which fertile plain they have emigrated at different periods from the province of Makran, and have become incorporated with the Jat, or cultivators of the soil, as the subjects of the Khan of Kalat; a few of these likewise reside in the hills to the N.E. of Cutch Gandava, and skirts of the deserts north of Kalat. The Saece, who formed part of Alexander’s army, and whose country is stated by Wilson to have been that lying between the Pandianisan mountains and Sea of Aral, still, it has been said, exist as a tribe of the Brahui of Jhalawan.

The Baluchis have by no means a pure and unbroken descent from any one source. They claim to be Arabs from Aleppo. In many cases the outline of their physiognomy is very similar to that of the Arabs of Egypt and Syria; and if such a Baluch were dressed in the Arab dress, it would be exceedingly difficult to detect his nationality. Others are Sindians who fled to the hills on the invasion of their country by the Mahomedans.

The whole of the tribes, Brahui and Baluch, are nominally subject to the Khan of Kalat as chief of all, but his power varies with his popularity. The nomadic tribes reside in tomans, or collections of tents. The tents are made of goat’s hair, black or striped; the furniture is very simple, a few metal cooking-pots, a stone hand-mill, some rough carpets with a rug, a distaff for spinning wool, and a hookah, are all that are usually found in a Brahui tent. That of the chief may perhaps be better furnished, and he is richer than his neigh-
bours in flocks and herds. The dress of the poorer classes is made up of a long tunic, trousers loose at the feet, and a black or brown overcoat or cloak, usually of felt, kummerbund and sandals. They wear a small cap, either fitting tight to the outline of the head, or dome-shaped, with a tassel on the top. Those of the higher classes are elaborately ornamented with gold thread. Few wear turbans; but the Baluchi have them preposterously large, of white muslin. The higher classes are somewhat better dressed, and carry longees or scarfs, which they throw around their shoulders in exactly the same manner as a Scotch plaid. Instead of the cholo, Baluchi women generally wear the gaggheho, a long shift opening behind between the shoulders, and with half arms. It is generally made of red or white stuff, reaches almost down to the ankles, and is elaborately worked at the breast. Red is the fashionable colour. Among the poorest no trousers or drawers are worn under it.

The women tie their hair in a knot behind, brushing it smooth in front, and keeping it in place by a kind of fixature. The colour of the hair is frequently brown or red. The men wear their hair long and flowing over the shoulders, whilst a luxuriant beard falls over the breast.

Baluchistan is rich in mineral productions; copper, lead, iron, antimony, sulphur, and alum abound in various parts; while common salt is too plentiful to be advantageous to vegetation. On the high road from Kalat to Cutch Gandava is a range of hills from which red salt is extracted. Sulphur and alum are to be had at the same place.

Ferrier saw quantities of white and grey marble in the mountains to the westward of Nushki, but it does not seem to be at all prized by the Baluch. The best timber the Baluchi have is the Upoors, the Zizyphus jujuba and tamarind trees, both of which are remarkably hard and durable; also the Babul, Farnesian mimosa. Lye, or tamarisk; Neem, or Melia azadirachta; Pipul, or Ficus religiosa; Sisoo, or Dalbergia sissoo, Rosburgh; Chinar, Platanae orientalis. The Brahui, unlike all other Mahomedan people, have no syuds, pias, mullas, or fakirs, or any persons pretending to inspiration or sanctity amongst them, and are compelled, while holding the craft in due reverence, to seek them amongst strangers.—Richard F. Burton's Scinde, p. 244; British World in the East; Ritchie; Ferrier's Journeys; Pottinger's Travels, Beluchistan and Sind; Masson's Narrative; Masson's Journeys; Masson's Kalat; Postans' Personal Observations; Dr. Cook; Imp. Gaz.; Caldwell's Comparative Grammar; Mr. (Sir Geo.) Campbell, pp. 64–56.

BAMBOO.

BAMBOO. The most gigantea of the grasses, these and many genera and species, which are applied to so many useful purposes, that it would be difficult to point out an object in which strength and elasticity are requisite, and for which lightness is no objection, to which the stems are not adapted in the countries where they grow. They vary in size from that of a reed to that of a tall and slender palm tree; and the South Asia genera comprise species of arundinaria, bambusa,
BAMBOO.

beesha, three of dendrocalamus, with species of
gigantoehia, nautus, and phyllostachyus.

For building purposes, they are used for frame-
works of houses, the uprights, flooring, planking,
roofing, and thatching, with all the needed scaf-
dolding;

Also for all household furniture, chairs, seats,
bed-posts, couches, beds, tables, blinds, screens,
and mats; also as pans, baskets, buckets, boxes,
hollow cases, cooking pots, and cups; likewise
as tongs, forks, and knives; also for pipe-sticks,
usual instruments, weaving implements, and
handles for umbrellas and parasols.

Conveyances of kinds, palanquins, dholoees,
palanquin and dholoee poles, litters of kinds,
biers, carts, tent poles and shoulder poles, are all
made of bamboo.

For war and the chase, they make bows, arrows,
and quivers; lance, javelin, and spear shafts; spears,
daggers, and arrow heads; stockades, rockets; fire-
works, and the sumpitam blow-pipe.

Fishers make stakes for nets, fishing-rods, fish
poles, and crab nets.

For agricultural purposes, the harrow, the hoe,
the clod-crusher, durable water-pipes, conduits,
levers for wells, fences, raised floors for rice stores,
portable stages, hencoops, bird-cages, the floors
and supports of bridges, ladders, platforms.

For seafarers, the bamboo provides spars, oars,
yards, masts, deck planking, flag poles, outriggers,
and rafts for floating heavy timber; while for the
learned, books, paper, rulers, and pencil are all
made of bamboo.

Bamboo bows and arrows are in common use
wherever the bamboo is obtainable. The harder
and thicker sorts, split and formed with tapering
ends, make a very strong and elastic bow; a narrow
strip of the outer skin of the same is used for the
string; and the slender, reed-like kinds make
excellent arrows. One of the few agricultural
implements used by the Papuans, a spud or hoe
for planting or weeding, is made of a stout bamboo,
cut somewhat like a spear head.

Ladders are made of two bamboos of the required
length, by cutting small holes just above each
ring, to receive the rungs or steps, formed of a
more slender bamboo. Malays make wonderfully
light scaling-ladders, which can be conveyed with
facility where heavier machines could not be
transported. In their search for honey and bees-
wax, the tribes of the Archipelago make a ladder
by driving bamboo pegs into the tree three feet
apart, and a straight bamboo is fastened to their
outer ends, thus forming with the tree a ladder,
which they build higher as they ascend.

The bamboo can be split with great facility and
accuracy, and, owing to its being hollow, it can be
easily cut across or notched with a sharp knife or
hatchet. By cutting off the end very obliquely
just beyond a joint, a very sharp cutting point is
obtained, suitable for a spear, dagger, or arrow
head, as effective as a weapon as iron. Such
spears are used by all the Malay races. The masts
and yards of native vessels in the Archipelago are
almost always formed of bamboo, as it combines
lightness, strength, and elasticity in an unequaled
degree. Two or three large bamboos form the best
outriggers to canoes, on account of their great
buoyancy. They also serve to form rafts; and in

of huge bundles of bamboos. The Dyaks make
bamboo bridges to cross streams, and also carry
footpaths along the face of precipices, formed
wholly of bamboo ingeniously hung from over-
hanging trees by diagonal rods of bamboo so as
to form true suspension bridges. The flooring of
Burma and Malay houses is almost always of
bamboo. They are split lengthways twice, and
the pieces tied down with a rattan; or the bamboo
are split down one side, opened out and spread
flat. In Lombok and Macassar, houses are made
entirely of bamboo,—for floors, doors, and
roof all being of this one material. In every
article of their furniture,—chairs, sofas, and bed-
steads, blinds, screens, mats, baskets. For water
vessels, some of the lighter kinds are cut into
lengths up to five feet, a small hole being knocked
through the seata of the joints and three or four
of these vessels are tied together and carried on
the back. Water pipes and aqueducts are also
made from bamboo tubes; measures, drinking
vessels, water dippers, tobacco boxes, and tinder
boxes. Single joints of bamboo make excellent
cooking vessels for rice, fish, and vegetables.

They serve, too, for jars; and pipes and hookahs
can also be formed from them. In Sumatra, the
framework of the houses of the natives is chiefly
composed of this material. In the floorings, whole
stems, four or five inches in diameter, are laid
close to each other, and across these stems laths
of split bamboo about an inch wide are fastened
down with filaments of the rattan cane.

The sides of the houses are closed in with the bamboo,
opened, and rendered flat by splitting or notching
the circular joints on the outside, chipping away
the corresponding divisions within, and laying it
in the sun to dry, pressed down with weights.

Whole bamboos often form the uprights; and the
house is generally roofed in with a thatch of
narrow split bamboo, six feet long, placed in
regular layers, each reaching within two feet of
the extremity of that beneath it, by which a treble
covering is formed. Another and most ingenious
roof is also formed by cutting large straight
bamboos of sufficient length to reach from the
ridge to the eaves, then splitting them exactly in
two, knocking out the partitions, and arranging
them in close order with the hollow or inner sides
uppermost; over which a second layer, with the
outer or convex sides up, is placed upon the other
in such a manner that each of the convex pieces
falls into the two contiguous concave pieces,
covering their edges, the latter serving as gutters
to carry off the rain that falls upon the upper
convex layer.

In China, the shoots are boiled, pickled, and
comitted; the roots are carved into fantastic
images of men, birds, monkeys, or monstrous
perversions of animated nature, or are turned into
oval sticks for worshippers to divine whether the
gods will hear or refuse their petitions. The
tapering culms are used for all purposes that
poles can be applied to,—carrying, supporting,
propelling, and measuring; by the porter, the
carpenter, and the boatman; for the joists of
houses, the ribs of sails, the shafts of spears, and
the wattles of hurdles; the tubes of aqueducts,
and the handles and the ribs of umbrellas and
fans. The leaves are sewed upon cords to make
rain-clouts, swept into heaps to form manure, and
matted into thatch to cover houses. Cut into
sprinths and slivers of various sizes, the wood is worked into baskets and trays of every form and fancy; twisted into cables, plaited into awnings, and woven into mats for scenery of the theatre, the roofs of boats, and the easing of goods. The shavings even are picked into oskam, and mixed with those of rattan to be stuffed into mattresses. The bamboo furnishes their bed for sleeping and the couch for reclining, the chopsticks for eating, the pipe for smoking, and the flute for entertaining; a curtain to hang before the door, and a broom to sweep around it; together with screens, stools, stands, and sofas for various uses of conveniences and luxury in the house. The mattresst to lie upon, the chair to sit upon, the table to dine from, food to eat, and fuel to cook it with, are alike derived from it; the ferule to govern the scholar, and the book he studies, both originate here. The tapering barrels of the 'song' or organ, and the dreaded instrument of the lictor, one to make harmony and the other to strike dread, the skewer to pin the hair and the hat to screen the head, the paper to write on, the pencil handle to write with, and the cup to hold the pencil, the rule to measure lengths, the cup to gauge quantities, and the bucket to draw water, the bellows to blow the fire, and the bottle to retain the match, the bird-cage and crab-net, the fish-rod and sumpitan, the water-wheel and aqueduct, wheelbarrow and cart, etc., are one and all furnished or completed by this magnificent grass, whose graceful beauty when growing is comparable to its varied usefulness when cut down.

In the Malay Peninsula and Sumatra, the bamboo is formed into a wind instrument. On nearing one of these, says a writer, our ears were saluted by the most melodious sounds, some soft and liquid like flute notes, and others deep and full like the tones of an organ. These sounds were sometimes low, interrupted, or even single, and presently they would swell into a grand burst of mingled melody. I can hardly express the feelings of astonishment with which I paused to listen and look for the source of music so wild in such a spot. It seemed to proceed from a clump of trees at a little distance, but I could see neither musician nor instrument, and the sounds varied so much in their strength, that their origin seemed now at one place and now at another, as if they sometimes came from mid air and sometimes swelled up from the mass of dark foliage, or hovered, faint and fitful, around it. On drawing nearer to the clump, my companions pointed out a slender bamboo which rose above the branches, and whence they said the musical tones issued. I was more bewildered than before, but they proceeded to explain that the bamboo was perforated, and that the breeze called forth all the sounds. Here was the most wonderful of all the applications of the bamboo, converting an entire bamboo, rough from the jungle, and thirty or forty feet in length, into a musical instrument by simply cutting a few holes in it. These are called riba ratib, or ba perinda (storm or plucking bamboo). As we proceeded, and when the notes had died away in the distance, our ears were suddenly penetrated by a crash of grand thrilling tones, which seemed to grow out of the air around instead of pursuing us. A brisk breeze which soon followed, and imparted animation to the dark and heavy leaves of the gumut palms, explained the mystery, while it prolonged the powerful swell. As we went on, the sounds decreased in strength, and gradually became faint, but it was not till we had left the bamboo of the wind far behind us, and long hidden by intervening trees and cottages, that we ceased to hear it. Marsden, in his Dictionary, gives the quotation, 'Terlalu amat mardi buniyina seperti buluh perinda rasania,' which he translates, 'Most melodious was the sound, affecting the sense like supernatural music.' Those seen in Ramban and Nanning had a slit in each joint above a certain height, so that one bamboo possessed 14 to 20 notes, each of which varied in itself according to the strength of the breeze. The joints decrease in their bore from the bottom to the top, and the slits also differ in their size and shape.

In Timur, a musical instrument is formed from a single joint of a bamboo by carefully raising seven strips of the hard skin to form strings, which remain attached at each end, and are raised up by small pegs wedged underneath, the strings being prevented from splitting off by a strongly plaited ring of the same material bound around each end. An opening cut on one side allows the bamboo to vibrate in musical notes when the string is pulled. The gamelans of Java is made by sets of gongs and metallic plates.

About Hong-Kong and Canton, several kinds of the bamboo are very common. There is a yellow variety with beautiful green stripes painted on its stems, as if done by the hand of a most delicate artist. But, like the Indian varieties, they grow in dense bushes, their stems are not remarkable for their straightness, and the large joints and branches which are produced on all parts of the stem give it a rough surface, and consequently render it unsuitable for fine work. These tropical jungly-looking bamboo disappear in the more northern latitudes, and in their places we have the mowchok, the long-sin-chok, the hoo-chok, and one or two others, all with clean stems and feather-branches, suited for the most delicate kinds of work, and all 'good for food.' These bamboos invariably grow in a rich yellow loam on the alluvial banks of the rivers.

Almost all the common paper of China is made from bamboo foliage. In the Himalayas, also, large water-tanks are constructed in the fields for steeping the bamboo stems in a solution of lime. They are then taken out and beaten upon stones until they become quite soft, or till all the flinty matter which abounds in their stems is removed. A fibre for textile purposes can be got from bamboo. To prepare the fibre, the knots or joints are cut with a circular saw. A quantity is then placed in a tub or boiler having a perforated steam-pipe at the bottom. Cold water and then caustic soda is put in, the quantity of the latter being governed by the quantity of the bamboo, and determined by experiments, since some kinds of bamboo require more soda than others. Steam is then turned on, and the boiling kept up for four or five days with the caustic soda. The caustic liquor is then drawn off and fresh water poured on, and then another boiling for four days. This is repeated. The bamboo is then put into a sort of mangle machine, with a roller of 3800 lbs. to crush it. Several other processes then take place, and the fibre is then put up in bales ready for scouring and dyeing, and for mixing with wool, silk, cotton, or any other fibrous substances. It is said to mix
readily with almost anything, and takes colours without difficulty. A fungus like a mushroom grows at the root of the bamboo, and it is regarded by the Burmese as quite a specific for worms. Some European physicians also deem it a superior anthelmintic.

The best places for bamboos are near water, wells, tanks of rivers. The bamboos can up almost their entire length before they throw out any of their branches,—an interesting provision of nature; for if the lateral shoots were developed before, they could not possibly rise through the thick network of branches above, and attain that form of grace and beauty which nothing in nature can surpass. The ordinary great bamboo of India is known to grow 40 feet in 40 days in the moist jungles, and Indian bamboos at Cairo grew 10 inches in one night. In Ceylon, the rapid growth of the bamboo was made use of under native rule as a means of carrying out a sentence of a cruel death. The criminal or victim was laid on the ground over a bamboo shoot, which speedily made a way through his body.

The Garo, Bodo, and Kachari races perform sacrifice before a bamboo fixed into the ground. Bamboos are taken to Britain chiefly as dumpage in the holodes of vessels, and used principally for making umbrella sticks, light garden seats, and handloom weavers' reeds, etc.

Bamboo Rice.—The bamboo flowers once in 30 to 60 years, and die. In most districts in which they grow, the bloom makes its appearance in January, and by the end of March the seeds are ripened, when the natives watch for the first shower of rain to throw them down. On the Shervey hills it rained heavily on the 1st and 2nd of April in 1872, and on the 3d groups of native men, women, and children were seen entering the bamboo jungles at the base of the hills, with baskets, sieves, and brooms, for the purpose of collecting the seed for food. A Madras measure of the seed when cleared yields half a measure of grain; the grain is small, about one line in thickness, a quarter inch in length, of a light brownish colour, oblong in shape, pointed at both extremities, and rounded off on one side, and on the other it is flat, the germinal spot being placed at an extremity facing the rounded side, and indicated by a slight depression at the part. The grain is readily boiled, when it has all the appearance, taste, and flavour of the ordinary rice, the Oryza sativa. One Madras ollcock of the clean grain, weighing 164 tolas, when boiled yielded 24 ollocks of boiled rice, weighing 292 tolas by weight. The grain makes good healthy food, and is largely partaken of by the poor in districts where it can be collected; in some parts of India the grain is eaten raw; also used to distil country arrack from, and like ordinary rice on all occasions when procurable. Large flowering in the Soopah forests took place in the spring of 1864, during which about 60,000 people assembled from neighbouring districts to collect the seeds, which they used as rice. Fever is said to prevail where tracts of bamboos are seeding. Capt. Sleeman mentions that all the large bamboos, whose clusters and avenues formed the principal feature in the beauty of Dehrâ Doon ever since the valley became known to us, or for the last quarter of a century, ran to seed and died on one season, as well those transplanted from the original stock the previous season as those transplanted twenty years ago. The people of the hill and jungly tracts of central India calculate ages and events by the seedings of the hill bamboos; a man who has seen two Kutungs, or two seedings of the bamboo, is considered an old man,—perhaps sixty years of age.

Immense quantities of fine bamboos are floated down the various rivers of the western coast of India. They are one of the riches of those provinces. They are ordinarily 60 feet long and five inches in diameter near the root; these are usually purchased standing at 5 rupees per 1000, and small ones at 3 rupees per 1000. Millions are annually cut in the forests, and taken away by water in rafts or by land in carts. From their great buoyancy, they are much used for floating the heavier woods, as Terminalia tomentosa and Dalbergia arborea, and piles of them are lashed to the sides of the pattinars going to Bombay. The larger ones are selected as outriggers for ferry boats, or studding-sail booms for small craft. In addition to the vast export by sea, it is estimated that two lakhs are taken from the Soopah taluk eastward. The Malabar bamboo is much smaller than that of Pegu (Bambusa gigantea), which is 8 inches in diameter. Immersing in water, or, better still, in a solution of sulphate of iron or lime water, extracts the sweet sap, which would otherwise induce decay. But when it is intended to split the bamboos for reapers, this should be done before steeping them in the metallic bath. The merchants on the western coast of India prefer the water-seasoned bamboos which have been months in the water attached to the rafts that are floated down the Nelambur and Sedasheghur rivers to the sea. The bamboos are brought down in immense floats, tied together in bundles of fifty by the root ends, which are turned towards the fore part of the float. Enormous quantities are annually rafted down the Ganges and Ramganga rivers, and down the Ganges canal.

Bamboo Caps.—The official summer caps of the Chinese mandarins are made from the rind of a crocked bamboo.

Bamboo Galls, Chuh-juh, Chln., morbid excrescences which grow to the size of a hen's egg on the stalks of the bitter bamboo (Ku-chuh, Chln.). They are said to have injurious properties.

Bamboo Juice, Chuh-lil, Chln., is prepared by heating short pieces of green bamboo so as to drive out the sap at the cut ends, and is given in catarrh, fever, etc.

Bamboo Sugar, or Tabashir, is found in the hollows of the bamboos. It is a silicate, and quite inert, but the natives have great faith in it as a stimulant. Its properties are said to be by them of a very heating nature. Tamil practitioners say the root is diuretic, that the bark curbs eruptions, the leaves emenagogue, and that the tabashir, which is found in the old cavities of the joints, is useful in paralysis and flatulence.—Oriental Herald, ix. p. 296; Calcutta Catalogue; Fortune's Residence in China; Fortune's Wanderings in China; Smith's China-English Cyclopedia; Von Mueller.

BAMBOUA. BURM. Careya arborea.

BAMBUSIA, the bamboo genus of tropical plants of the order Paniaceae. There are numerous species in the south and east of Asia, mostly
in regions where the climate is warm and moist. The stems grow in clusters, from 10 to 100, from the same root-stock, and are straight for 18 or 20 feet. When in flower it is usually destitute of leaves, and as the extremity of every ramifications is crowned with blossom, the whole plant seems one entire, immense panicle.

A. Argetis, Poir. Mountainous and dry desert places in all China, Cochín-China, and the Malay islands. Stems crooked, often a foot thick, a foot and a half long, and nearly solid.

B. Amahussana, Amboyna and Manipa, has short joints and a thick wood; upper leaves with stinging hairs.

B. Apus, Schultes. A gigantic species on Mount Salak in Java; stems 60 or 70 feet high, and as thick as a man's thigh; leaves very large, taper-pointed.

B. Aristata, Loddiges. Slender stems, smooth, not spiny; native of E. India; an elegant species.

B. Arundo, Klein, of Chawuree, furnishes the Mahabaleshwar walking-sticks.

B. A. Rheedii, Sch. Amboyna; rises to 60 or 70 feet high.

B. Atra. Leaf-stalks covered with stinging hairs. Stems black and shining, and found in Amboyna. It is the Leleba nigra of Rumphius.

B. Balcooa, Roxb. Dendrocalamus balcooa, Voigt. Balcooa bans; Dhoil balcooa, Beng. Of gigantic size, and reckoned the best for building purposes. Before using it, it is steeped in water for a considerable time.

B. Bitung, Schl. Found in Java; remarkable for its extremely broad and scabrous leaves.

B. Blumeana, Sch. Java; stems as thick as a child's arm.

B. Glans, Loddiges. India. Not spiny. Leaves covered on the under surface with very close bright glaucous bloom, scarcely above an inch long, and not more than two lines broad, not growing above two feet high, with entangled branches.

B. Maxima, Poir. Cambodia, Bali, Java, and various islands of the Archipelago. Grows 60 to 70 feet high, and as thick as a man's body. Its wood is, however, very thin.

B. Mitis, Poir. Cultivated in Cochín-China; wild in Amboyna. Stems thin, but sometimes as thick as a man's leg, 30 feet long, and said to be very strong.

B. Multiplex, Lour. Stems 12 feet long, and an inch thick, cultivated for hedges in the north of Cochín-China.

B. Nana, Roxb. Pelan, Pe-Nangwa, BURM. | KEU-fa., ... CHIN. Burma; China. Makes most beautiful close hedges and fences.

B. Nigra, Loddiges. Canton, where its stems, not more than a man's height, are cut for walking-sticks and handles of ladies' parasols. Grows in England.

B. Picta. Common in Ceram, Kelanga, Celebes, and other islands. Joints 4 feet long, and about 2 inches thick; wood is thin, and consequently used principally for light walking-sticks. It is, however, extremely strong.

B. Prava forms large woods in Amboyna, which come down to the coast. Its leaves, 18 inches long and 3 or 4 inches broad, have stinging hairs.

B. Pubescens, Loddiges. Not spiny; native country unknown. Stems 30 feet long, and an inch and a half in diameter.

B. Spina. Canta Banso, Uria. Extreme height, 80 feet; circumference, 14 feet. Abounds in Ganjam and Gumsur.

B. Spinosas. Arundo arbor, Linn. | A. bambos, Linn. Behur Bans, ... BENG. | Wagna Khlys, BURM.

This middling-sized and very elegant species grows from 30 to 50 feet high, in the vicinity of Calcutta, and in Burma. Its stems, almost solid, have strong sharp spines, and grow so close together as to form an almost impenetrable thicket. It has a smaller cavity in its centre than others of the genus, and a staff of it is put into the hand of a young Brahman when being invested with the sacerdotal thread.

B. Strica, Roxb. Dendrocalamus strictus, Nees. Nastus strictus, Sm. Bar, ... HIND. | Sandanapa Vedara, TEL.

Somewhat spiny. Its great strength, solidity, and straightness render it fit for many purposes.

Spear or lance shafts are made of it.

B. Tabacaria, Poir. Grows wild in Amboyna, Manipa, and Java. Its stems, with nearly solid joints 3 or 4 feet long, but not thicker than the little finger; when polished, make the finest pipe sticks. The outside is so hard that it emits sparks of fire when struck with the hatchet.

B. Tulda, Roxb. Dendrocalamus tulda, Voigt. | Tulda, or Pika, bans.

Is common all over Bengal, and grows rapidly to 70 feet long and 12 inches in circumference, rising to its full height in thirty days. Important in strength by steeping in water. The Jowa bans with long joints is one variety, and the Basini bans used to make baskets is another.

B. Verticillata, Willd. 15 or 16 feet high. The leaves occasion so much itching, that this kind is troublesome to collect. It is the Leleba alba of Rumphius, who says the edges of its leaves are so sharp as to wound the gatherers. It is found in Amboyna.

B. Vulgaris, Wendl. Its stems are from 20 to 30 feet long, and as thick as a child's arm. In favourable seasons it has been observed to grow 18 inches per diem. Besides these may be named B. Brandisi; Beechyana, flexuosa, marginata, nutans, palida polymorpha; regia and tul- doides.—Transactions of the Agr. and Hortic. Soc. of India, iii.; Roxb.; Eng. Cyc.; Manson's Tenas- ceris; Cieghorn's Reports; Poole's Statistics of Commerce, p. 10; Dr. Hill's Hist. Journ. ii, 311, 281.—Merrill's Chinese Products; Marraden's Swin- nerton; Von Mueller; Kurz.

BAMBUS-BOOK, the Chinese, contains the record of the Imperial dynasties from B.C. 1991 to A.D. 1264. The chronological connection of its dynasties is as under:

I. Dynasty Hia, the first emperor, Yu, beginning B.C. 1991, reigned 432 years.

II. Dynasty Shang, began B.C. 1539, lasted 509 years.
III. Dynasty Tahan, began B.C. 1050, lasted 269 years; the emperor Yen Yang began to reign B.C. 781.

Confucius lived under his dynasty, and he recorded the observations of the solar eclipses from B.C. 431 upwards to 720.

IV. Dynasty Yao, began 269 B.C., and lasted 99 years.

V. Dynasty Han, began B.C. 206, and lasted to A.D. 264, a total of 469 years.

BAMIA. Egypt. Abelmoschus esculentus.

BAMIA. Ar. ? the little edible fish known as the Bombay duck.

BAMIAN. The pass at Bamian town is 8946 feet above the level of the sea. It is the great commercial route from Kabul to Turkestan; the several passes to the eastward are less frequented on account of their difficulty and their elevation. The valley is in lat. 34° 50' N., long. 67° 54' E., is about one mile wide, and is bounded by nearly perpendicular steeps, in some parts so close as to exclude the mid-day sun. The pass leads over a succession of ridges from 8000 to 15,000 feet. The Harakotal pass, at the entrance to the Bamian, or, more correctly, the Lighan valley, is nearly 10,000 feet, while two others near the town of Bamian are about 8500 each. The Hadshehjak, leading from Bamian to Kabul, is the most formidable, and is almost 12,000 feet above the sea. It is the only known route over the Hindu Kush for artillery or wheeled carriages. Bamian town has been conjectured to be the site of Alexander ad Caucassum; but it lies north of the Hindu Kush, and Alexander is supposed by some to have moved to the south of that mountain. The town and its vicinity are remarkable for relics of antiquity, colossal idols, the castle of Zohak, the fortress of Syadabad, and the ruins of Ghulghuleh, with numerous cells excavated for about 8 miles in the mountain-sides. The impression is that the idols and cells are Buddhist remains. Of three idols sculptured in bold relief on the cliff, according to Eyre, one is about 160 feet high, a smaller one 120 feet; but Burns, Moorcroft, Gerard, and Vigne all have stated other dimensions. The greater figure is called Sang Sal, and supposed to be that of a man. The smaller, called Shiah-Muma, supposed to be a woman; a third figure being called that of a child. The figures have been injured by cannon-shot, some say by Aurangzeb, some by Nadir Shah. The caves or cells are of great extent; some exhibit considerable artistic decorations. One of them under the larger idol would lodge half a regiment. They are supposed to be residences of the Buddhist priests. On the summits of neighbouring hills are towers, supposed to be pyramids. The whole valley is filled with the ruins of tombs and other edifices. The ruins of the city of Ghulghuleh are extensive; it was taken by Chenguiz Khan, its people all destroyed, and the city overturned. The ruins of what is called Fort Zohak are 8 miles from Bamian town. It is attributed to king Zohak of Persia. Its ramparts are 70 or 80 feet high. The early political vicissitudes of Bamian must have been the same as those of Bactria and Kabul. We find there successive vestiges of Greek, Scythian, and Sasanian rule, and of the Buddhist and Mithraic forms of worship. In the early ages of the Christian era, or perhaps for a century or two before, Buddhism prevailed at this place. Such of the caves as are appropriated to Buddhist mendicants were embellished, and the statues of

Sakya Muni (Buddha) were hewn out of the rock. At a subsequent period, the emblems of the fire-worship and its altars succeeded, until these were in turn displaced by the Arab and the Kohn. Bamian is rich in minerals. Gold is found at Fuladat, also in Kohn-bani, and in the hills of Ilatif north of Kohn. There are ten or twelve lead mines in a defile in the neighbourhood, also ores of copper, tin, and antimony. It is said also to have sulphurous springs.—Burney, Ride to Khiva; Costwack on Central Asia; Vambery’s Bokhara; Bellowe, p. 205; MacGregor, p. 195; Moorcroft’s Travels, ii. pp. 387-393; Burnes’ Travels; Vigne’s Narrative, pp. 185, 193-197; Masson’s Journeys, p. 288-295; Tod’s Rajastan, i. p. 22.

BAM-MARGI, a depraved Hindu sect at Benares, who follow the teachings of a Bamo, or woman.—Sherring.

BAMO, in long. 97° 30' E., and lat. 24° 4' N. Bamo, properly Mang-mo, is a frontier town lying between Yunnan and Burma, in the Shan territory. It has the Pu-long tribes and the Khiyen around it. From Bamo to the Burmese frontier is 46 miles; Bamo to Minm, 90 miles, in Shan and Chinese territory. A route by Bamo from Burmah into China is in the province of Yunnan, near which, in the Burmese traditions, their ancestors formerly dwelt. The present city is situated about 40 miles W. of the Chinese frontier, and Chinese form about one-half of the population; the remainder are Shan and Burmese. It carries on a trade by means of caravans with some of the large cities in western China, in woollen, cotton, and silk goods. British trade between Rangoon and Bamo, from a few hundred pounds in 1857-58, attained in 1873 to a million sterling.

BAMTELE, an important Rajput tribe in the eastern parts of the central Doab.

BAMUN-HATI. Beng. Clerodendron siphonanthus.

BAMUNIPAT, a holy mountain.

BAN. Hind. A forest; wild, uncultivated, as Sandar-ban, Tar-ban, sandar forest, Palmyra forest; also written bun.

Ban Ada, Zingerbe longiflorum, wild ginger, Rohb.

Acer, Favia Indica.

Asarhoo, Gossypium herbaceaum.

Bati, wet land.

Bhanta, wild Solanum melengana.

Bill, Bhulbas.

Biral, Felis leopoldina Bengalensis.

Burbuti, Phacelosus rostratus.

Chalala, Lea crispa.

Chandarto, Flaggellaria Indica.

Char, Desmodium gyrans.

Chok, Quercus semicarpifolius.

Chori, also Boro, a high jungle grass with leaves like those of the sorghum. Wild elephants are very fond of it.

Chirping, Tricosanthus lobata.

Choose, the wild yak.

Gz cotton wool, raw cotton.

Gab, Diospyros cordifolia.

Ghi, Clerodendrum officinale.

Gao, Bos gaurus.

Goou, Areca tricolor.

Gus, Solanum melengana.

Gumak, Cucumis pubescens.

Gutthina, Allium tuberosum.

Huldee, Cucumis aromaticus.

Joeme, Clerodendron inerne.

Jum, Artisia humilis.

Jim, a weed about 3 feet high, which springs up with the autumn crops. Much sought after by fakirs who practise alchemy.
BANA-PRASTH.

BANAGANAPILLY, the town of a chieftain in the Ceded Districts of the Madras Presidency, between Kurnool and Cuddapah, in lat. 15°N. and long. 78°E., with an area of about 275 square miles; population, 45,208. It was held first by a Moghul chief, but is now in the possession of a Syud family. There are diamond mines in a low range of hills about half a mile from the town. The matrix of the gem is a breccia lying under compact limestone, of which the hills in the neighbourhood are composed. The breccia is composed of a mixture of coloured Jasper, quartz, and hornstone, cemented by a silicious paste. It passes into pudding-stones of rounded pebbles of the above, cemented by an argillo-calcareous earth of a loose friable texture, in which the diamonds are found.

BANAJIGA, a linga sect.

BANANA.

Kan-taia, Pa-taia, CHIN. Arati Pallam, TAM, Mou, ... HIND. Pandoo, ... TEL.

Banana is a W. Indian and tropical American term for the plantain tribe Musacee, to which, in India, the term plantain is usually given; there are few species, but many varieties. Their fruits are largely eaten. The stem of Musa taxillaris, of the Philippine Islands, furnishes the Manilla hemp. In the valleys of the south of the Peninsula of India, and of the Dindigul mountains, M. superba is found wild. Major Munro has seen the wild plantain at 7000 feet above the sea, in the Khondah slopes of the Neelgherries. A similar variety, having seeds surrounded with a gummy substance instead of a pulp-like fruit, was found by Dr. Forsyth in Palo Ubi, near the southern extremity of Cambodia. In Batavia, also, there is stated to be a variety full of seeds, which is called Pisang batu or Pisang bidu, that is, seed plantain. In Khassa the name of the wild plantain is Kairem, and the cultivated Kakesh. That cultivated in Nepal has been called M. Nepalesia; and a similar species may be seen growing below the Mussoorii range, as well as near Nabu. The wild fruit in all the situations consists of little else than the hard, dry seeds. The common edible varieties of M. paradisiaca, or Musa sapientum, flourish even in the poorest soils, and also near brackish water. The nates of Bengal generally prefer the larger and coarser fruited kinds, called banana, to the smaller and more delicately tasted fruit known as the plantain, which is alone esteemed by Europeans. The edible varieties extend through the Indian Archipelago northwards as far as Japan, while in China are found M. coccinea and M. Cavendishii, M. carata, grown in Chittagong. Again, M. glauca is indigenous along the Malayan peninsula. Dr. Helder mentions that twenty varieties are found in the Tenasserim Provinces; and the Malays reckon forty varieties of the cultivated banana, and the Philippine islands carry them to fifty-seven, both people having a distinctive epithet for each variety. The qualities are as various as those of apples and pears in Europe, the ordinary sorts being a very indifferent fruit.—Hooker's Hist. Jour. ii. p. 268; Boyle's Fibrous Plants; Crawford's Dict. p. 31.

BANANG. MALAY. Yarn, thread.

BANAN-PHAL, of Sutloj. Strawberry; Fragaria vesca, L.

BANA-PRASTH, properly Vana-prasth, a Hindu who has become a hermit in the third stage of
his life's career; who has retired to the forest and become an ascetic.

BANAS, and Koterrie or Kotesiree, are rivers near Sauganee in Udaipur (Oodeypore). The Banas river runs through Jeypore.

BANAT. HIND. Broadcloth.

BANULA. HIND. Cotton seed.

BA-NAWA, a sect of fakirs in India.

BANCA DEV, also called Banga, a deity of the Gonds. See Banga.

BANCA ISLAND, northern point, is in lat. 1° 52', long. 125° 24' E. It is hilly, and of middling height. St. Paul's mountains, contiguous to its south end, are 930 feet high; but Parmasang and Manuopen hills, on the west side of the island, are respectively 1350 and 1617 feet in height. The Straits of Banca are bounded on the east by this island, and on the west side by the coast of Sumatra. The Straits extend from Lucepara island about 129 miles, with an undulating course to the N.W. The Straits are one of the most frequented in the Indian seas. Banca has a population of 69,312, of whom 18,140 are Europeans, 40,592 are slaves, 20,063 are Chinese, and 136,020 Arabs. Its area is 237 square miles. The Chinese have been attracted to it by its very valuable tin mines. Banca is inhabited by four distinct races of people. The Orang-Gunung, or hill-people, the aborigines in the interior, lead a wild kind of life, but are submissive to the regulations established by the Government. The sea-coasts are occupied by Malays from Sumatra; they are extremely indolent, all the labour, either in cultivating pepper or working the mines, being performed by the Chinese, consisting of between fifteen and twenty thousand souls. The Orang-Laut, or sea-people, who are similar in their habits to the Bajau Laut on the coasts of Borneo and Celebes, live entirely in their little prahuas, and move about the coasts. They subsist principally by fishing, and were always ready to give information to the piratical rovers. The discovery of tin attracted numerous foreigners, chiefly Chinese, who, with the working of the mines, introduced the first attempts at agriculture and commerce. During many years this small island had been a haven for pirates, which for a district of the same extent equals the metallic wealth obtained annually from the mines of Mexico. The Anten district contains the richest of the tin mines. — Court; Earl's Archipelago; Horsburgh; White's Voyage, p. 228.

BAN - CHAR, also Baro. HIND. A high jungle grass, with leaves like those of the sorghum. Wild elephants are very fond of it.

BANCOONG OR Bacoong Bay, in Sumatra, opposite the river and village of same name, in lat. 2° 52' N., and long. 97° 38' E., where ships find shelter.—Horsburgh.

BANCOORAH, a town and its district in the Burdwan division of Bengal, lying between lat. 22° 54' and 23° 37' N., and long. 86° 49' 15" and 87° 55' E., with an area of 1346 square miles, and 526,772 inhabitants. The town is on the left bank of the Dalkissur, in lat. 29° 14' N., long. 87° 6' E., and 29 miles from Raniganj, 101 miles from Calcutta. It is a fertile district, with much coal and iron ore. Coal is worked at Raniganj.

BANCOOT, in lat. 17° 57' N., and 114 miles east of Bombay Castle, has 10 feet on the bar at low water. The town of Bancoot, on the northern part of the Angria country, surrendered to Commodore James on the 8th April 1756, and was called Fort Victoria.—Horsburgh.

BAND. PERU. HIND. A band, tie, dam, dyke, causeway, bank, or bundle of ropes. Bandah, a slave, a servant; Bandi, a slave girl; Bandiran, a prisoner; Band-o-lust, settlement. Band is also an embankment across a valley, or across a dip of the ground to form a tank. The whole of the Karnatic is covered with such tanks, some of them very small, sufficient only for a small field, others of lake-like dimensions; one near Cumbum is eight miles in circumference, and one near Hyderabad is about seven miles in circumference. The word is from the Hindi word bandhuna, to tie or bind; hence also the Bandana handkerchiefs. Several bands or embankments in Persia are celebrated, — Band-i-Ahwaz and Band-i-Shahzada, across the Karun river; Band-i-Amir, over the Kur river, the Bandamir of Moore's poetry.

BANDA. BALL. Area catechu.

BANDA, a gur of the Sikh religionists, who succeeded Guru Govind. He was tortured to death by Farokhshir, emperor of Delhi, A.D. 1716.

BANDA. HIND. Viscum album.

BANDA. HIND. A perfumed cosmetic powder, the Abr of the Arabs. See Abr.

BANDA, a town and district in Bundelkhand, between lat. 24° 53' 15" and 25° 55' 30" N., and long. 80° 2' 45" and 81° 36' 15" E., with an area of 2908 square miles, and 657,684 inhabitants. The town is on the right bank of the Keyn river (Ken, Caine), had a population of 72,800, and is 620 miles from Calcutta. Banda district is an irregular triangle, separated on the N. and N.E. by the river Junna from the Futtehpur and Allahabad districts. The S.W. and S. are bounded by the Ken, and partly by the second range of low hills forming the flank of the table-land of Bundelkhand.

BANDA, a group in the Archipelago consisting of ten islands; the largest is Lontar or Great Banda. It is crescent-shaped, and Pulo Pasing. Banana island, Pulo Kapal, and the island immediately to the south, form the arc of the crescent, and the others are on the outer circle. Within this area are three other islands, the highest of which is Gunong Api, next Band A Neira, N.E. of which is Pulo Krakka or old woman's island. D'Abreu, a Portuguese commander, was the first European who visited the nutmeg group, and for nearly a hundred years the Portuguese monopolized the trade. In 1609 the Dutch attempted to take these islands, but as the war lasted eighteen years, and the natives had all fled to the neighbouring islands, the Dutch had to cultivate these islands with slaves, and, when slavery was abolished, with convicts, of whom, in 1865, there were about 3000. Almost all the island is covered with nutmeg trees, grown under the shade of the Canarium commune. Banda and its three islands enclose a secure harbour, and the water is so transparent that living corals and minute objects are seen below. Of the birds is a very handsome fruit pigeon, Caropphaga convina, which feeds on the mace, and is found also in Ke and Matabello; and a small fruit dove, Ptilonopus diadematus. The area of the whole group is only 176 geographical square miles, but in five of them all the nutmegs consumed in the world are grown, and for twenty years they annually yielded 580,000 lbs. of nutmegs, and
137,000 lbs. of mace, Dutch weight. In 1865, about 450,000 nutmeg trees were in the Banda group. In some trees the mace is white. Unlike Ambaya, it is unhealthy, and exposed to constant danger from the Gunong Api volcano, which has many times burst in eruption, devastating and blasting the neighbouring region with showers of scorching ashes. This Fire Mountain is the curse of the group, not only when in eruption, but on account of the insalubrity it spreads around. The base of the volcano, called by the French the Grenade of Banda, occupies the whole surface of the islet, to which it gives a name. Its height is about 2000 feet, covered with magnificent vegetation, commencing at the line where the waves cease to beat, and continuing upwards to the point where the lava ceases to flow, being cooled by the air. The nutmeg is not cultivated on Gunong Api, and the isle is inhabited only by a few immigrants from Timor. Up to 1820, people occupied the base of Gunong Api, and cultivated the nutmeg trees. On the 11th June 1820, a little before noon, in an instant, without any warning, an eruption occurred of such violence that all the people at once fled to the shore and crossed over to Banda Neira. From its summit rose great masses of ashes. Lontar is merely part of the walls of an immense crater about (if the circle were complete) six miles in diameter, and Pulo Pisang and Pulo Kapal are two fragments of the circle. On the average, an earthquake occurred once a month in Lontar. The volcano has burst forth in 1586, 1598, 1609, 1615, 1632, 1690, 1696, 1712, 1765, 1775, 1778, 1820, and 1824. It is 2321 English feet high, but has several times been ascended. On one occasion, sand and stones, heated till they gave out light like living stones, fell on every side like hail, set fire to the woods, and soon changed the mountain-side into one immense cone of flame. The south-west monsoon then blowing, carried the sand and steam over to Banda Neira, and destroyed all its mines, parks and its drinking water. The eruption continued incessantly for thirteen days, and did not wholly cease for six weeks. During this eruption the mountain was apparently split through in a N.N.W. and S.S.E. direction. An eruption of ashes occurred on the 22d April 1824. Banda is only separated from Gunong Api by the narrow Sun Strait, and has suffered from a great sea wave. The water first streamed out from the land, and left dry a vessel that was riding at eight or nine fathoms. It then returned in a great wave from the ocean, which rose 25 or 30 feet over the low western part of the village, and engulfed Fort Nassau. Professor Bikmore supposes that the whole of the old volcano, Banda Neira, Gunong Api, and Lontar, and the area they enclose, was raised for a moment, the water streamed out from the straits between them, and returned with violence as the area subsided. When first discovered by Europeans, the inhabitants of Banda had made considerable advance in civilization, although still much inferior to that of the Malays and Javanese. About three-fourths of the inhabitants are mixed races, Malay, Papuan, Arab, Portuguese, and Dutch; but the aborigines doubtless were Papuans, and a portion of them still exists in the Ke islands, to which they emigrated when they first took possession of Banda. —Temminck, Possessions Neerlandaises, iii. 290; St. John's Indian Archipelago, i. pp. 134, 155; Bikmore's Travels; Horsburgh; Valmont de Bomare, Histoire Naturelle, iv. 177, 181; Hoyendrop, Coup d'Œil sur Java.

BANDA. Hind. Literally service; an expression used by Mahomedans in saluting superiors, and in addressing letters to their parents and persons in authority.

BANDAHL. Beng. A spur projecting into a river.

BANDAH-NAWAZ, a Mahomedan saint or holy man who is buried at Kulburga. His name and title was Syud Muhammad, styled Gesu Daraz of the long locks. A Mahomedan festival is held on the 16th of Zu-l-Kaichah in his honour.

BAND-AHWAZ, a dam across the river Karun in Khuzistan. The whole river passes through the weir, about forty yards broad, at its west end. —Layard; Chesney; Selby; MacGregor, p. 56.

BANDAIR HILLS are separated from the Panna range by the valley of Lohargaon, rising from a platform from ten to twenty miles wide. Average elevation 1700, but amounting on some of the higher elevations to 3000 feet. The hills are generally of sandstone, intermixed with ferruginous gravel. The basin of Lohargaon is of lias limestone. The outer limit of this hilly tract is marked by abrupt isolated hills.

BAN-DAKHUR. Hind. Syringa emodi. BANDALA, in the Philippine Islands, a fibre extracted from the harder and stronger outer layers of the Musa textilis, employed for cordage. —Royle.

BAND-AMIR. A dam erected about the 12th century across the river Kur by Azad-ud-Dowla, a former prince and governor of Fars. Its object was to raise and throw the water into irrigation channels. The dam consists of a straight bridge of thirteen arches. —Morier; Malcolm; Kinneir; Ouseley; MacGregor. See Benamir.

BANDANA. Hind. A term applied to a cotton print; also to a kind of silk or cotton handkerchief with bright figures, etc., upon it made generally of sandstone, intermixed with ferruginous gravel; from bandhna, to tie; because, in India, the parts intended to remain undyed were tightly tied. The Indian manufacture has almost ceased, British dyers having imitated them by white figures formed on a ground of Turkey-red by means of an aqueous solution of chlorine. This is made to flow down through the red cloth in certain points which are defined and circumscribed by the pressure of hollow lead types inserted into plates of lead contained in a hydraulic press. The press is furnished with a pair of pattern plates, one attached to the upper block of the press, and the other to the moveable part of it. From twelve to fourteen pieces of cloth, previously dyed in Turkey-red, are stretched over each other as evenly as possible, and then rolled round a drum. A portion of the fourteen layers equal to the area of the plates being drawn through between them, the press is worked, and the plates are brought together with a force of upwards of three hundred tons. The solution of chlorine is then allowed to flow into the hollows of the upper lead plate, whence it descends on the cloth and percolates through it, extracting the Turkey-red dye, the intense pressure preventing the bleaching liquor from spreading beyond the limits of the figures perforated in the plates. When a certain quantity of bleaching liquor has passed through,
water is admitted in a similar manner to wash away the chlorine. The pressure is then removed, and another square of the fourteen layers is moved forward under the plates, and the process is repeated. When all the pieces have been discharged, they are winced in water, and further treated so as to improve the lustre both of the white and of the red.—Faulkner.

BANDAR. HIND. A monkey.

BANDAR. SUTLEJ. Capparis spinosa, L.

BANDAR SINGH. Pandar, TAM. A Singhalese affix of nobility.

BANDAR, PERS. A harbour, a seaport. A prefix, as Bandar-Abbas; in India, a suffix, as Machili-bandar, Lakpat-bandar. From this comes the harbour Bandar boat of British sailors. The harbourmaster or governor of a place is the Shah-bandar, or king of the harbour. Like Kalka or Patna, a bandar is a mart on a river bank.

BANDARA. Mahr. Hymenodictyon excelsum. BANDAR ABBAS, in lat. 27° 10' 35" N., and long. 56° 18' 48" E., a port on the east of Kirkman in Persia, 108 miles S.E. of Shiraz, distant from Isfahan 740 miles, and from Teheran 1000 miles. It is in a bay of the Gulf ofOrmuz. It contains about 89,000 inhabitants, Persians, Arabs, Kurds, a few Armenians and Bedouins. It has only two or three fathoms of water at high tides from the shore, and a heavy surf rises from the S. and S.E. winds, which are frequent, and ships seek shelter at Ormuz and Kishm. It is the ancient Harmozia. Its former name, Garmun, was changed A.D. 1662, when Shah Abbas, aided by the English, drove off the Portuguese, but towards the close of the 17th century it again fell into a subordinate position. Nevertheless the route of Bandar Abbas leads by one of the natural passes into the heart of Persia. The summer heat is so great that it is then almost abandoned, the people going to Minab, fourteen miles distant; but in winter the landing of goods recommences for Yezd, Isfahan, Shiraz, and Kirkman. Exports are Persian carpets, tobacco, dried fruit, sulphur; and imports piece goods, earthenware. It is suited for an emporium of trade. Sulphur is brought to Bandar Abbas and to Muscat from mountains a little way in the interior from Muscat.—Pelly; MacGregor, p. 57; Goldsmith's E. Persia, i. 227; Findlay; Osley's Travels, i. p. 165; A Journal from Calcutta to Aleppo, etc. p. 11, London, 1798; Kaince's Geographical Memoir, p. 201.

BANDAR MANCHE, a large canoe. See Boat.

BANDAR REG, a small town in Fars, Persia, thirty-two miles N.W. of Bushahr. It was the stronghold of the celebrated pirate, Mir Mohanna, once the terror of the Persian Gulf. It was taken by the English, and the fortifications razed.

BANDARRI, a race in Bombay who climb the palm trees and cocoa-nut trees for palm wine. From habit, these men attain extraordinary dexterity in ascending the loftiest trees, with little other assistance than may be afforded by the natural rings or sheaths of their slender stems. The costume of the Bandarri is a close crimson cap, round bound round the head with a small handkerchief, the depending corner protecting his neck from the influence of the sun. A stiff leather kick descends to the knee, fastened round the waist with a thong, which secures the necessary implements of his calling, and supports a strong hook, on which the Bandarri swings a chatty, previous to commencing his ascent.—Postans' Western India, i. p. 89.

BANDARU. Tel. Dolouea Buchannania, D. C.; D. angustifolia and dioica, R. II. 256.

BANDARU. HIND. Gardenia tetrasperma.

BANDWAR, a numerous tribe of the Baniya of Hindustan, with 36 clans, who intermarry.—Sh.

BANDELKHAND. See Bundelkund.

BANDENG. MALAY. A palatable fish, much resembling the salmon in taste. They are reared in fish-ponds, and the young are sold at 18 Rs. per redan of 5500 small fish. At the change of the east and west monsoon, the coast is yearly visited by Madurese fishermen, who come to catch the young bandeng for the fish-ponds.

BANDHAGURU. See Senapathi.

BANDHAL GOTTI, a Chauhan Rajput tribe in Bundelkhand and Benoudia.—Wilson.

BANDHAIRA. MALAY. A hereditary elective officer of Johore.

BANDHRIK. HIND. Also written Bandhu-kamu, Pantapetes Phosmea, L.; also Ixora bandhurea, R. i. 376.

BANDI. HIND. A female slave; also a court minstrel.

BAND-i-BERBER. It is said that a day's journey from Baniyan to the S.W. are the remains of an extensive fortress, called Band-i-Berber, erected near a large lake.—Moorecraft's Trees, ii. pp. 387-393.

BANDICOOT. In India, the Mus giganteus. It is the English corruption of the Telugu words, pandi-koka, pig-rat; it weighs 3 lbs. Its bones are fragile, and it is very easily killed. Its nests, when rifled, are frequently found to contain considerable quantities of rice, stored up against the dry season. The Australia bandicoot is the Peta meles nasuta of St. Hilaire, a marsupial animal.—Tennent's Ceylon, p. 45.

BAND-i-FARIDUN, a dam in Khorasan, 6 miles N.W. of Kalandarabad, near Mashad, with channels to fertilize the lands of Faridun.

BANDIGURVINDZA. Tel. Adenanthera pavonina. Bandi Murugudu, Getonia floribunda.

BANDITA CHERTO. Tel. Erythrina indica.

BANDO-BAST. HIND. Final settlement.

BAND PAT. HIND. Clitorea ternatea.

BANDRI. HIND. A grass about 3 feet high, found in rice and kodo fields, used as fodder for cattle.

BANDUK. HIND. A musket, a fowling-piece. Toradar banduk, a matchlock. Si-paia banduk, a heavy gun, requiring a strong support; a kind of jazal, but carried in the field.

Banduk-Masaladar, a gun fired with a percussion cap,—'masala,' the percussion composition.

Banduk Pathar-kalah, a matchlock with flint pan.

Banduk Rakh-dar, a gun, rifle-bored.

BANE. Flee-bane, insect-bane, mosquite-bane, bug-bane, rat-bane, etc., are insecticidal substances. The dogbane family 'Apocynaceae' are truly poisons. Nerium piseclium bark, which contains much useful fibre, proves deadly to fishes. Dogs refuse to sleep on rugs beneath which mint has been placed, and this simple plant thus affords a good means of ensuring cleanliness. Deer refuse to approach crops in which the safflower, Carthamus tinctorius, has been intermixed. White mustard sown round vegetables, as the cabbage, prevents the intrusions of caterpillars. Snakes are said to avoid
the fennel plant, as well as all places strewn with fennel seed (Nigella sativa). Dill grown in cabbage beds protects the cabbages from caterpillars. Broad beans growing close to the gooseberry bushes protect the bushes from the caterpillars. The pyrethrum is said to protect vines from the phylloxera. The tansy wood of the oleander is employed as rat-bane. To destroy flies, a decoction of quassia placed in a plate is frequently had recourse to. In southern Asia, plants of the 'Ghi-gowar' or 'Kalbunda,' the Aloe perfoliata, are suspended with their roots upwards, with a longitudinal incision in each leaf, to permit the aroma of the juice to become apparent, and disperse mosquitoes from the room. Flies, fleas, and mosquitoes avoid rooms in which branches of pennyroyal have been suspended. In India, mosquitoes are smoked out by burning chips of resinous wood. A species of ant, Fornica smaragdina, well known in Malabar and the wooded parts of India, is employed in the N.W. Provinces to destroy the nests of wasps that have established themselves in a house. They are said to destroy all the wasps, but become so infuriated that their own indiscriminate attacks are nearly as bad as those of their foes. Honegger states that the twig of the walnut tree. Juglans regia, is kept in a room as a means of dispelling flies; that when flea-bane is roasted, flies take to flight; and when sprinkled on the floor, fleas disappear. Dr. Hooker mentions that Clerodendron leaves bruised are used to kill vermin, fly-blowes, etc., in cattle. The Inula pulicaria, or flea-bane, a common roadside plant in Britain, strewn or burned in any place destroys gnats and fleas; and the same properties are attributed to the common ox-eye daisy of Britain, Chrysanthemum leucanthemum. 'Camomille rouge,' the beautiful red Pyrethrum (P. cemeum, formerly Chrysanthemum cocineum), in England a pretty ornamental garden flower, is prepared from the flower heads of the plant, which, when dried and crushed, form the famous Persian flea powder. Sprinkled in beds, etc., it kills all disagreeable and hurtful insects; and the small quantity of the spirit distilled from it destroys insects in greenhouses, or can be applied to vegetable life in the open air against green-fly, house-fly, etc., without injuring the plants. More than twenty villages in the district of Alexandropol are occupied in the cultivation of the red chamomile. It is said also to destroy maggots which breed in wounds, a property which the valuable decamulli gum of the Gardenia lucida and chlorof orm also possess. The pyrethrum powder seems the same as the well-known picroict of Kurdistan, is largely imported into Turkey, and during the war was greatly used in the barracks and hospitals of Turkey and the Crimea. Its introduction into India merits favourable consideration. Pyrethrum Indicum and P. Sinense grow in the Tenasserim Provinces. The odor of the common flowers of Britain, P. parthenium, is disliked by bees; and these insects may be easily kept at a distance by a person carrying a handful of the flower heads. The 'akarakarum' of India, the Pyrethrum officinale, or common pellitory, may perhaps have equal power. Chrysanthemum Indicum, the common Gool Dawudence, of which there are several varieties, grows all over India, and is worth a trial. Natives of India suspend in their houses a few branches of the milk-hedge (Euphor-
probably dipped in some preparation to make them burn. Hot alum water will destroy red and black ants, cockroaches, spiders, chintz bugs, and all the crawling pests which infest houses. Take two pounds of alum and dissolve it in three or four quarts of boiling water; let it stand on the fire until the alum disappears, then apply it with a brush, while nearly boiling hot, to every joint and crevice in closets, bedsteads, pantry shelves, and the like. Brush the crevices in the floor of the skirting or mop boards, if you suspect that they harbour vermin. If, in whitewashing a ceiling, plenty of alum is added to the lime, it will also serve to keep insects at a distance. Cockroaches will flee the paint that has been washed in cool alum water. Sugar barrels and boxes can be freed from ants by drawing a wide chalk mark just round the edge of the top of them. The mark must be unbroken, or they will creep over it, but a continuous chalk line half an inch in width will set their depredations at naught. Powdered alum or borax will keep the chintz bug at a respectful distance.—Tennant's Ceylon; O'Sh.; Hooker, Him. Jour.; Honighberger.

**BANEBERRY.** Actea spicata.

**BANG.** Hind. Or bhang. Cannabis sativa.

**BANGALORE.** Ben. Amomum subulatum.

**BANGALORE,** in lat. 12° 57' 37" N. long. 77° 36' 56" E., a large military station and town in Mysore. At the flagstaff, the mean height of the cantonment above the sea is 2949 feet, according to Ad. Sch., and 2874 according to Babington. The climate is almost European as to coolness, but at the more exposed parts is unfavourable to young children. The fruits and vegetables of Europe all grow well, and many Europeans are settled there. Average rainfall, 36 inches. Bangalore Pettah or civil town, was taken by storm by the British on the 21st March 1791; and a battle was fought on the 6th December 1791.

According to a legend, it was anciently named Yalabunka Naad, but its ruler, Vira Babala Roya, about the 12th century, having lost his way, found shelter from an aged woman and a meal of Auvara Bangaloo (the Hala Kanada name for boiled gram), and he named the village Bangaloor, and gave it to his hostess.

In 1881, on the coming of age of the present ruler of Mysore, Bangalore was transferred to the British. Bangalore city in 1871 had 142,513 inhabitants, of whom 105,632 were Hindus, 21,587 Mahomedans, and 15,294 Christians. Public buildings for the administration of Mysore were erected during the minority of the present ruler. There are many Christian churches; and the French Catholics and several Protestant sects are spread over Mysore district. There is a college, and the Mysore Museum, which the editor founded in 1865. The manufactures consist of woolen and silk fabrics, iron and steel.

**BANGALORE,** a district of the Nundidrug division of Mysore, has an area of 2914 square miles, with 828,354 inhabitants in 1871, chiefly Hindus. The Konati number 5641; the Nagarta, 4888; the Wakkaliga, 222,653; the Lingaet, 56,430; Kumb, 46,167; Banajiga, 29,936; Tiglar market gardeners, 28,780; wandering tribes, 12,036; and wild tribes, 1738.

**BANGALOW,** from banglah. Hind. A single-storied house.

**BANGALZAI,** a Baluch tribe, occupying exclusively Ispirinji, but reside also at Shal and Mouthing, and in winter repair to Talli near Lehri.

**BANIAN,** a group of islands in the Eastern Archipelago, occupied by the Manguianes, a mild and industrious people.

**BANGANGA,** a tank at Walkeshwar, near Bombay, failed to have been produced by Krishna firing an arrow at a spot to obtain water.

**BANGAR,** Hind.; of Cis-Sutlej, high land requiring irrigation by wells. See Bhangar.

**BANGARI,** Hind. Vangueria spinosa.

**BANGARMAU,** a pargana in Umo; its inhabitants are so fond of display, as to have given occasion for the saying that one with nine gold stripes in his turban will earn his livelihood by gathering cow-dung.

**BANGARO MAE,** a wood of the Kel islands, well adapted for masts.

**BANGASH,** a people claiming Afghan descent. The Samalzai clan are of the Shiah sect. They are noted for their bravery, and could turn out 700 fighting men.—Lit.-Col. MacGreg. iii. p. 65.

**BANGAS JAMPACCA,** Malay. Michella champaca.

**BANGHI,** Tam. A heavy mail post.

**BANGI,** Tam. In Timnevally, a form of village tenury by which the lands are redistributed once in every six years among the villagers by lot. It is the same as the wesh (waish) of the Aghans.—W.

**BANGKA,** also called Katna. Hind. An aquatic beetle which eats rice plants. It is said to take a leaf for a boat and to paddle itself from stall to stalk. It is harmless when the water is let off from the field.

**BANG-KONG,** a sash or waist-cloth of cotton or silk.

**BANGLA.** Hind. A kind of betel leaf.

**BANGLES.**

Bangrian, . . . HIND.; Wallaee, . . . TAM.; Kadiam, . . . SANSK.; Galzoo, . . . TEL.

Glass, gold, and silver bracelets worn by women throughout the East. The Chinese make them of a clouded or plain vitreous substance, to imitate jade stone or chalcedony. For export they are packed in boxes containing 1000 pairs, each box estimated to weigh a pikul. Bangles are imported into, and also exported from, Madras and Bombay. In four years, the imports were to the value of Rs. 1147, chiefly from Bombay. The exports were in number 1,935,000, of the value of Rs. 5078, and to Bombay and Sind.

Glass bangles are largely made in many parts of India, a workman turning out 600 or 700 daily. Some are of beautifully tinted glass. Jade bangles in Yunnan sell at Rs. 125 the pair. In Bengal, a bangle of iron is put on the left hand of the Hindu bride by her mother-in-law, with a benediction that she may be ever blessed with her husband, and she marks the middle of the bride's forehead with vermilion. The iron or other metal bangle denotes the ayestree or married state.

**BANGNI,** a Dulla tribe.

**BANGRA.** Beno. Wedelia calendulacea.

**BANGRA,** a cloth made from the gigantic sing-
BANJAR.

The Bahrup Banjara are mostly Hindu, and lead a more wandering life. They are divided into the five tribes, Rahtar, Chauhan or Koori, Powar,Tuwar, and Barka, who are again subdivided into tribes or got. They claim to have come from Chittur. They intermarry, but not with members of the same got. They have a close relation with those of the Dekhan; each community has a chief at its head, styled Naik, to whom they yield implicit obedience. The Banjara are scattered in communities all over India. In the south of India they style themselves Gohur. They are met with from Kashmir to the south of India, and keep in Tandas or encampments. Their Tanda, Hind, Kepa, Manir, in the extreme south of India have become greatly broken up, for they are predatory, engage in gang robbery; many of them are to be seen in jails; in the Mysore territory their women and aged men are breaking metal for the roads; and the rapid extensions of roads and railroads have done much to exclude them there from their trade as carriers and collecting merchants. But in Berar and throughout the Hyderabad country they are still in large numbers, collecting from the lone hamlets the small quantities of grain, cotton, and wool obtainable, and bringing them to the larger markets. Their means of carriage is solely the bullock and the cow. Some of these are magnificent; and it is a grand sight to see a Banjara Tanda, laden with cotton or grain, traversing the country through pathways and tangled trees and brushwood, so entwining that portions of cotton are taken up at every step. Their value as travelling merchants, in times of scarcity or great demand, is in calculable, for no other means could bring in the small stores of outlying hamlets. They will shortly disappear from traffic as rail and metalled roads increase. The Banjaras are men of great energy. They have in some places fixed homes. Throughout Berar, and in the northern parts of the Hyderabad territory, some of them are to be found settled in villages as servants of the potters, and are recognised as village Banjara. On the borders of Rohilkhand, towards the Feral, they have considerable settlements, are prominent landowners, proprietors, and important people. A numerous tribe are spread along the foot of the Himalayas from Hurdwar to Gorakhpur, engaged in agriculture.

Wilson says they are partly of Hindu and in part of Mahomedan belief; and some of the Bahrupura Banjara are, it is said, accepted as guarantees for agreements, similarly to the Charan and Bhat; but their name, Bahr-rupa, meaning many disguises, does not bear this out.

The Banjar is also called by the Dekhan people Lambana. The Banjara man is a Gohur, a man; and this is their own tribal name; a woman, however, is a Banjarini.

The goddess Marri-Ai is a great deity with the Dekhan Banjar, and they invoke her in their private solemo oaths. They use a broken branch of the Azaderacha Indica, the nim tree, or, as they call it, Lim Ka Dagla, in their solemn oaths. They lay one on the ground, and will say to a woman whose virtue is in question, ‘If you be not a whore, lift it;’ and her lifting it or otherwise establishes her innocence or her guilt.
Their dress and appearance are singular, more particularly the women, and their social habits and customs distinctive. The men wear the usual Pagri and Dhoti, whilst the dress of the women consists of a bodice, Chuli, with long sleeves, and a petticoat or skirt hung from the waist in ample folds, consisting of coarse cotton prints of bright colours, and a sari or scarf of a similar texture, which is carelessly thrown over the shoulders, giving them a picturesque appearance, when combined with the brass and deer-horn ornaments and gaudy-coloured tassels of cotton, with which their arms, ears, nose, neck, ankles, and toes are profusely decked. They have small, well-turned hands and feet; their movements are easy, graceful, and stately, rendered slow from the quantity of ornaments they wear. The hair is parted in the centre, combed back, plaited, and ornamented with a profusion of silk or cotton tassels. They seldom change their clothes, till they are tattered and torn, and are only renewed by a new suit. The women possess considerable natural charms, are as active as the men in their business avocations, and they carry burdens when travelling, chiefly their children, provisions, or utensils. They are capital needle-women, making their own jackets and petticoats, and frequently embroider these tastefully. The material used by the women of some branches of this tribe is manufactured from the fibre of a species of nettle, which is woven into cloth for themselves, and these are tastefully dyed in various colours, to suit their peculiar taste in this respect, frequently over-gaudy. They visit the most remote and hilly regions and hilly hamlets, to collect and transport grain and other commodities to more civilised parts; no jungles or wild beasts deter them from travelling. In some districts they are addicted to thieving and thuggi. They settle their own disputes, either by arbitration, or by the decision of their naiks, and seldom or ever complain of their fellows. Their code of laws prescribes punishments for all crimes, the verdict of which, when carried out, is never disputed. Their priests exercise the power of life and death over the community, but this is masked under the cloak of religion and supernatural agency; and, as a tribe, they are bound to secrecy whenever the extreme penalties of their laws are carried into effect. Un chastity is strictly punished with death; frequently both the woman and man suffer when detected, and their corpses are buried or burned together, and neither the justice nor execution are ever complained of. They recognise no Civil Authority, keep aloof from settled races, interfere with no one, and allow of no interference among them in the matter of their laws or customs, etc. As carriers, distance and climate have no difficulties for them. They undertake extensive engagements in exporting merchandise, chiefly grain, cotton, cloths, oil-seeds, etc., and carry them out with the utmost good faith. They never play false when once the work is undertaken by them; no instance has been known of goods entrusted to their care having been robbed. They are looked upon by other classes of natives with a superstitious dread, so that they can traverse the wildest and most jungly tracts with impunity and perfect security. It is reported that the Banjara of the hill districts of Bisram, Cuttack, and Jeypore, practise the Meriah sacrifice, as also do those who trade between Nagpur and the coast. Dr. Shortt, from personal inquiries in Orissa, Nagpur, Hyderabad, South Arcot, Vizagapatam, Jeypore, etc., was satisfied that sorcery, witchcraft, human sacrifice, and infanticide prevail among different clans of the tribe. Each community is localized by the term of 'Tanda,' having its own leader, who is said to lead a peculiar ecstatic life. On occasions of sickness among themselves, or murrain amongst their cattle, the priest is consulted, and should he attribute such visitation to sorcery, he fixes the guilt on some individual belonging to the community, when the supposed sorcerer is immediately ruthlessly seized, and murdered in a manner dictated by the priest, to abate the evil. An execution is coolly and deliberately carried out in the most summary manner, and the deed is buried in oblivion. The practice of infanticide is in vogue among them, in consequence, it is said, of the large sums of money required to ornament their girls, in addition to the large dowries which they have to bestow on marriage. It is reputed that the practice is carried out by placing the newborn infant in an earthen vessel or chatty, the mouth of which is tied over with cloths steeped in a decoction of turmeric, and ornamented with flowers, some trilling ceremonies being carried out. The chatty is taken to some remote place in the jungles, and there buried. Some of the Khond tribe carry out a similar practice as regards their female children.

The Banjara generally possess large herds of cattle, which they convert into pack animals; and they are divided into a number of classes, each of which, as a rule, no other class of natives do; and none of these is more peculiar than the Custom of the Khond Banjara in their Cattle. In carrying to market the jagi (sacred cows), the Banjara have a custom peculiar among all races of the country. The cattle are let loose as soon as the march is over, to enable them to pick up what they can by browsing in the vicinity. The Banjara are independent of villages generally, and they travel as far as they can. As soon as the encampment is fixed on, he unloads his bullocks, and packs the loads in tiers, and over them he stretches an awning of cloth or a cumby, as protection from the weather. At night, the cattle are tied round the packages in a circle; in the midst, the Banjara lights a fire and lies down to sleep. He is up at sunrise, loads his bullocks, and proceeds to the next station; the distance travelled is generally from 10 to 15 miles a day. On these journeys, one or more of their women accompany them. These men were the great grain carriers of the Moghul armies, and came down with them into the Dekhan early in the 17th century. Two brothers of the Chars, one of the three great tribes into which the Banjaras are divided, are said in the year 1730.
to have possessed 180,000 bullocks, which carried Asof Jah's provisions for him during his raids. So much were these carriers prized by that Wazir, that he gave to these two brothers, Jhangi and Bhangi, the following prescriptive rights, engraved on copper in gold letters:

'Rangan ka pani,
Chapar ka ghas,
Din ka teen khun masaf,
Aur jahan Asof Jah ka ghore,
Wahan Bhangi Jhangi ke baal.'

Or—

'Water from the pots of my followers,
Grass from the roots of their huts,
Three murders a day pardoned;
Only where Asof Jah's cavalry are,
There must Jhangi Bhangi's bullocks be.'

This was to induce them to keep up with the army, and stop their complaints of want of grass and water for their cattle. The descendants of the house of Bhangi still possess the above engraving.

Witchcraft still obtains among them. There is a hut set apart in nearly every Tanda, and devoted to Mittu Bhukia, an old freebooter. No one may eat, drink, or sleep in this hut, and it is simply used for devotional purposes. In front of this hut is a flagstaff, to which a piece of white cloth is attached. Worship and preparation is always gone through before the commission of crime by those who worship Mittu Bhukia. By all criminals Mittu Bhukia is worshipped as a clever freebooter; but he is more thought of south of the Wardha. The white flag in front of a hut is a sign that the Tanda worships Mittu Bhukia, and it should therefore be watched carefully for days, when they are suspected of having committed crime.

The men who have agreed to and arranged the particulars regarding the carrying out of their scheme, meet at night at this hut, where the image of Satti is produced. Ghi is put into a saucer, and into this a wick is placed, very broad at the bottom and tapering upwards. This wick standing erect is lit; an appeal is made to Satti for an omen, those worshipping mentioning in a low tone to the god where they are going and what they purpose. The wick is then carefully watched, and should it drop at all the omen is propitious; all immediately get up and make an obeisance to the flag, and start then and there for the business they have agreed on. They cannot return to their homes before they start, because they must not speak to any one till their business has been carried through. When engaged in a robbery, if challenged, the men who have gone through the ceremony may not reply. If any one of them reply the charm is broken, and all return home. They must again take the omens and worship again, or give up the attempt altogether. But they generally prefer to make certain of the man who is venturesome enough to challenge them, by killing or injuring him so severely that he cannot meddle with their other arrangements. If one of the gang sneeze on the road, it is also fatal to the enterprise; they must return to their Tanda at once.

Predatory races in the Mahrrata country and North Canara district are said to assume the dress and ostensible occupations of the Banjara. The Bahnh-Rupa Banjara (many guises) may be of these pretended tribes. The Turki subdivision has the Aliya and other branches. The Bhuyarya subdivision claim to have been Rajputs from Central India. Their name is said to be derived from Vana, a forest, and jara, forest wanderer. Banjara women wear the same personal ornaments as are on the figures in the caves of Karli.—Wilson's Glossary; Baron Hugel's Travels in Kashmir and the Panjab, p. 81; Mr. (Sir George) Campbell, p. 107; Dr Shortt's Report; Pioneer.

BANJARASSIN, a province of Borneo.

BANJER. JAV. An inundation.

BANJHOKA, a tract of country near the Yuzufzai possession, along with Buner, Bajawar, Astor, and Swat.

BANJI. HIND. Quercus incana, heavy oak.

BANK. Bankq; Armen; Banke; Dan; Banque, Fr.; Banken, Ger.; Banco, Italian; Bank, Port.; Banc, Saxon; Banca, Sp.; Banek, Sw.

Thee have been banking transactions from the most ancient times. Mr. George Smith purchased for the British Museum 2500 dated tokens, which enable us to follow for several centuries the monetary transactions of the great Babylonian banking firm of EgiBi and Son. The series goes back as far as the reigns of Sennacherib and his son Esar-Haddon. The Greek and Roman mints furnished the early coinages of the Argive king Peidon and of Servius Tullius. To the earliest of the Greek trapezites, Philoctates of Corinth, Themeistocles entrusted 70 talents (£16,000). Of other Hellenic bankers were Archestratos, and his clerk and successor Pasion, the most famous among the powerful Athenian money-dealers. At Sparta there was Glaucus, the story of whose late but genuine honesty is given in Herodotus. The discovery at Pompeii of 192 tabellas found in the house of the banker Lecius Gallicius Jucundus, gives the latest records of his payments to the exchequer of the doomed city, being dated A.D. 62. The Latin words Argentarii, Mensarri, and Nummularii are derived respectively from argentum, which means silver, from mensa, a table, and nummus, a piece of Roman money. Banking, as understood by the moderns, took its origin during the existence of the Florentine republic in the middle ages. The Bank of Venice commenced business in 1157. The Bank of England was first chartered in the reign of William and Mary in 1693. In India, most of the banking business has been in the hands of Hindus; they do little as depositaries, but are chiefly lenders. They number 118,000 adult males, as bankers proper. The first banks in India were started respectively at Calcutta, 1770; at Madras, the Carnatic Bank, in 1791; and at Madura, only as late as 1840. The present Bank of Bengal was opened for business on the 1st May 1806. It is therefore the oldest and most successful of all the banks that have ever existed in India. The Government of India being the owners of a large number of its shares, it has always received the vigilant supervision of various officers of Government. Since it commenced operations, its average rate of dividends has been about twelve per cent. per annum. One year it paid as high as twenty; another year, when heavy frauds had taken place, they fell to two and a half. There are now, 1882, about twenty-four banks in various parts of the E. Indies, in Madras, Bombay, Calcutta, Rangoon, Singapore, Hong-Kong, and other towns; and great British houses and houses of Hindus of the Vais and
BANKA.

Bhatya castes are also doing a large banking business, as banks of deposit, banks of discount, and banks of circulation. The latest charter is entitled The Presidency Banks Act, No. XI. of 1876. The liability of shareholders is limited to the amount of their shares; the transactions of the banks, except as agents, are confined to India and Ceylon. Those in which the Indian Government are interested are called public, while those not so conducted are said to be private, and depend on the honour, reputation, and good name of men in high position in private or public life. Their capitals are as follows, viz.:—Bank of Bengal, Rs. 2,00,00,000; Bank of Madras, Rs. 50,00,000; Bank of Bombay, Rs. 1,00,00,000.

BANKA. Tel. Gum gum arabic; also any viscous plant, and applied to species of different genera. Banka-baddu, Vitis Linn, Wall. B. Quetan, Zizyphus, sp. Banka Nakkeria, Cordia myxa, L.; and B. pavili, Portulaca, sp.

BAN-KAHU. Hind. A large sword used in athletic games; also a large vice for table use. Banka is a musical instrument, also the upper piece turned from the performer, forming it into the shape of the letter S.

BANKA. Tel. Gum gum arabic; also any viscous plant, and applied to species of different genera. Banka-baddu, Vitis Linn, Wall. B. Quetan, Zizyphus, sp. Banka Nakkeria, Cordia myxa, L.; and B. pavili, Portulaca, sp.

BAN-KAHU. Hind. Vitex negundo.

BANKAI, a weight in the Straits of Malacca at Singapore, 835 or 836 grains, at Penang somewhat less.—Simmonds.

BAN-KATTI. Hind. In the land rules of India, the rights acquired by clearing jungle land and bringing it under cultivation.

BAN-KHA. Burm. In Amherst, a timber, colour grey, used for house posts and other common purposes. Terminalia belerica, Roxb.

BAN-KHAI, also Barauulda and Mudi. Hind. Lands on which cotton was grown during the past season.

BANKOK is about 27 miles up the Menam river of Siam. It is built upon an island, in lat. 13° 58' N., and long. 100° 34' E., on both branches of the river, generally with 7 fathoms water close to each side, and navigable for vessels up to 250 tons at all seasons of the year. The river is the highway for communication with all parts of the country, though several ancient canals have connected rivers in the interior and made passages to the coast. It is the capital and seat of trade in Siam; is 14 miles in direct distance from the sea, or 25 miles following the windings of the river. The walled city is on the east bank. All the well-to-do people live in wooden houses, while the poorer class consist but composed of bamboos and palm leaves. Many of the people have their permanent homes on rafts moored along the banks of the river. Numbers of shrines and temples and pagodas are to be seen in every direction, built with the most durable materials, and in the most costly manner. Bankok is supposed to have a population of about 200,000, of whom three-fifths are Chinese, and the remainder are Siamese, Peguans, Laos, Cambojans, Tavoyans, Cochin-Chinese, Malays, Mohomedans, Hindus, and Christians, the descendants of Portuguese born in the country.

BANKS. In the oceans on the south of Asia are several extensive banks, some of them full of peril to sailors, but from which fishermen draw large quantities of fish, Agar-agar, a marine lichen extensively used in China, trepang or sea-ling, and mother-of-pearl shell, etc. A continuous submarine bank extends all along the E. side of Asia from lat. 8° S. to 6° N. It is 1200 miles from N. to S., and 1500 from E. to W., and embraces Borneo, Java, Sumatra, and the Malay Peninsula. This vast area is all under 100 fathoms deep, but the greater part from the Gulf of Siam to Sumatra and Java is under 50 fathoms.

Borneo and the Philippines are connected by two narrow submarine banks, over the northern of which rises Palawan, and the Sulu islands over the southern.

Formosa is connected with the mainland by a submerged bank under 100 fathoms, including Hainan to the S.W., and Japan on the N.E., and under 200 fathom, including Madjico and Lo-choo islands.

To the east of the great bank which stretches out from the Malay and Siamese peninsulas, as far as Java, Borneo, Sumatra, and the Philippines, is another bank, which unites N. Guinea and the Papuan islands, as far as Aru, Mysol and Waigiu, with Australia. The Australian bank commences near the N.W. Cape, and extends in a N.E. direction to New Guinea, where it terminates at the base of the high but narrow mountain range that unites the eastern and western parts of that island, and separates the Banda Sea from the Pacific. It is at this point that the edge of the bank is most remote from Australia, the distance to the nearest part of the N. coast being 400 miles. It appears again on the S. coast of New Guinea, near Torres Straits, and extends along the N.E. coast of Australia, the Great Barrier Reef being on its outer edge. The Aru Islands and New Guinea are thus united to the continent of Australia; and the kangaroo, long supposed to be peculiar to Australia, is found both in the Aru Islands and on the southern part of New Guinea.—A. R. Wallace, pp. 349, 373.

BANKSIA ERICIFOLIA. Its dried cones are used by the natives of Australia for retaining fire.—Bennett, i. p. 61.

BANNA. Hind. Viburnum foteus.

BANNERS.

Bannière, . . . . Fr. Bandiera, Insegnia, Fr.
Banners are in use with all military, and for designating the religious ceremonies of all the races and nations and religions of Asia. They are of various shapes and sizes, and of different colours; and the phrases so familiar to Europe as to lowering and displaying the colours are in use in Asia. In India, the invocation Angriz ka bhaota kaim, May the British flag stand fast, is common. The Yuzufzai Afghan, in a war, advanced against the British with 'scarlet' banners, though scarlet is a forbidden colour to Mahomedans. It is unlawful for them to use it on banners or standards; and it is not known how these strict Mahomedans so far transgressed the 'traditions of the elders' in this matter. The Tartar armies of China are arranged under the separate banners of their leaders.

BANNI. Hind. Payment in kind.

BANNU. A British district in the Panjab, lying between lat. 33° 10' and 33° 15' N., and long. 70° 26' and 72° E. Area, 3786 square miles; and population in 1868, 287,547. The Indus passes

273
through the district, and the Bannu valley is drained by the Kurram and Tochi, which unite and join the Indus. The annual rainfall is 11½ inches. The population is now almost wholly Pathan, but remains of a Grecian occupation are found, also of a later Hindu race. At Akra, and other places in the valley, coins are found with Greek or corrupted Greek inscriptions. In 1865, at Rohri, the river laid bare coins, and heads of statues with the unmistakeable well-shaped features of Grecian art. Broken Hindu images are also found. The Marwat, a noble race, but haughty and sly, hold the southern part of the valley. There are 26,222 Hindus, of whom 20,809 are Arora, and 493 Sikhs. The Marwat are good agriculturists.—Istn. Gaz.

BANUR-KULAY. BANOG. BEI. L. Vexet negundo, L. BANOG, a bill to the west of Mussoori, 7545 feet above the level of the sea, in lat. 30° 28' 29" N., and long. 75° 3' 25" E. The river Jumna flows towards the northern face of Banog and Badray, and bounds the settlement of Mussoori on the west. Mussoori was first resorted to as a sanatorium in 1823.

BANOTSARGR. BANOT-SARGAR. BANSA. BANTAM. BNTAM, Kwar-Sud. A rope (barra), thicker than a man’s arm, is made of makra grass, and that village party in whose quarter the rope is broken, or by whom the rope is pulled out of the hands of the opponents, remain the champions during the ensuing year, and retain possession of the rope. The first voyage made by the Dutch was in 1595 in which year their first fleet with Houtman (who had been previously employed by the Portuguese in the East India service) sailed direct to Bantam. At this period the Portuguese were at war with the king of Bantam, to whom Houtman offered assistance, in return for which he obtained permission to build a factory at Bantam.—Raffles’ Hist. of Java, i. p. 22.

BANSLOCHUN. Hind. Tabashir; a silicate deposited in the joints of a bamboo. It is said to be found in old bamboos only, and about one bamboo in three yields it. Used by natives as a stimulant and tonic, in doses of about five grains. It is a very pure kind of silex. Some of it approaches opal in appearance and composition.

BANSMATI. RICE is the best in the Panjab; that of Bora, in the Peshawar district, is also highly esteemed; properly Bas-marti.

BANSUR. Hind. A weed growing in the Doab, near the Jumna, difficult to eradicate from arable land, and very injurious to growing crops.

BANSWARA. A state in Rajputana of 1500 square miles. It is ruled over by a chief with the title of Maharawal. He is a Sosodia Rajput; but the population (in 1875, 150,000) are nearly all Bilis, and of a wild and turbulent character. The town is in lat. 23° 32' 34" N., and long. 74° 27' E. It has 33 feet stories. Banswara was originally part of Mewar, but became independent of it prior to the establishment of the supremacy of the British Government, who recognised it as a separate state. In 1812, the chief of Banswara offered to become tributary to the British Government on condition of the expulsion of the Maharratas; but no definite relations were formed with him till September 1818, when a treaty (No. IV.) was concluded, by which, in consideration of the protection of the British Government, the Rawal agreed to act in accordance with the advice of the British Government, to abstain from disputes and political correspondence with other chiefs, to pay a tribute equal to three-eighths of his revenues, and to furnish troops when required.—Treaties, etc., iv. p. 177.

BANT, a race of Canara, who believe that persons who die a violent death become demons, called paisachi.

BANTA-CHAUDAS. Hind. A village game played in the N.W. Provinces on the 14th of Kwar-Sud. A rope (barra), thicker than a man’s arm, is made of makra grass, and that village party in whose quarter the rope is broken, or by whom the rope is pulled out of the hands of the opponents, remain the champions during the ensuing year, and retain possession of the rope. The first voyage made by the Dutch was in 1595 in which year their first fleet with Houtman (who had been previously employed by the Portuguese in the East India service) sailed direct to Bantam. At this period the Portuguese were at war with the king of Bantam, to whom Houtman offered assistance, in return for which he obtained permission to build a factory at Bantam.—Raffles’ Hist. of Java, i. p. 22.

BANTAREA, wood rangers, formerly holding rent-free lands in quittance of police duties in the northern parganas of Gorakhpur.—W.

BANTI CHETTU, Tagetes patula, L.

BANTU, a great race on the eastern side of Africa. To the Bantu family, in its eastern, middle, and western branches, are respectively ascribed, first, the so-called Kafrs and Zulus, with the Bechuanas and Matabele of Livingstone, and the Shalihi and Nyamwesi of the Tanganyika route; secondly, the tribes of the Lulaba and Ulunda central region, to which Commander Cameron and Mr. Stanley found their way; thirdly, the nations of Lower Guinea and Angola, of whom Captain Burton and Mr. Winwood Reade reported. The unity of race among the various inhabitants, from the Victoria Nyanza in the east, and from the Gaboon of the west coast, to the exceptional Bosjesmen and Hottentots at the Cape, is a fact of high importance. These populations, generally speaking, have more capability than the Gold Coast and Slave Coast Negroes of receiving permanent impressions of a civilising character; the missionary experiences among them have not been so unfavourable. Their pastoral and agricultural industry, where they are not exposed to the cruel persecution of kidnappers for the slave trade, provides amply for their secure subsistence.

BANU, a terminal honorific name of the Afghan women, as Arjamand Banu Begum.

BANUR-KULAY. Beng. Cantharospernum.
BANYA.  

BANYA. HIND. Also pronounced Vania and Wania, the V and W being frequently substituted for each other in many dialects of India. This race or caste are known to the British as Baniars or Banyans. They are a Hindu people of the Vaisya caste, following wholesale and retail trade, but the Marwari, Kshatriya Rajputs, also adopt the title. Of all Hindu sects, the Banya and the lingaust abstain the most rigidly from eating flesh; hence probably is derived the term Banyan day on board ship, the ration of that day, which, when on full allowance, occurred once a week, including no meat. The Banya are a very important race. Every hamlet in India contains the shop of the Banya, who is the dry grocer, and sells meal and the fine flour of wheat, with suji or semolina, millets, meal of millets, rice, split peas, and pulses of many kinds, for all these are used in the diet of the people, which is almost exclusively farinaceous. He sells also parched rice and parched peas, also gram or horse pulse, and generally every article of food except vegetables and meat, with which he has no concern, except preserves dried fish and prawns. Besides these, he has condiments, salt, chillies, black pepper, green and dry ginger, garlic (but not onions) and asafetida, a small taste of which never fails to startle a peculiar lichen, by Brahmanas and other high caste Hindus, to flavour made dishes. He has also spices, cassia, cardamoms, cloves, and mace, sugar and gur, or unclarified sugar. He has often to sell on credit, from which the usual disputes arise; and as he lends money also, usually at 3 per cent. per mensem, with compound interest, the Banya is a most indispensable, and yet the most disliked person in the Hindu community. In the 10th century of the Christian era, an attempt is said to have been made by the famous raja of Bulala, in the ancient Bengal metropolis at Gaur, to degrade the Banya caste, probably from differences of religious opinions and sectarian feelings, of which, however, nothing whatever is known beyond the bare tradition of the fact. Their opulence and enterprise have always kept up the respectability and dignity of the class. The Banya from Gaur who settled in Satgong in the Hooghly district during the last three centuries, have been trading with the Portuguese of Hooghly, with the Dutch of Chinsurah, the French of Chandernagur, and the British at Calcutta. The Mullicks of Calcutta belong to them. But the Banya of Bengal have ceased to wear the sacrificial thread. Throughout the wildest parts of the mountain ranges on the N.W. Frontier, throughout Afghanistan and Baluchistan, to the frontiers of Russia, Banya shopkeepers are to be found. The Marwari who take Vanis as their designation, though found everywhere in British India, form no part of the permanent population. The N.W. Provinces are entirely in the hands of Banya, who point to the west as the districts whence they come. Gujerat, Malwa, and the Bombay Presidency are full of them. They are numerous all through Hyderabad in the Dekhan. They are not warlike, but engage in shopkeeping and manuscript transactions and banking business. They are acute men, and excellent accountants.—Sir G. Campbell; Travels in Hindostan.

BANYAN. ANGLO-HIND. A merchant, a shopkeeper. The word is supposed to have been obtained from the Gujarati word Vanum, trading classes.—W.

BANYAN TREE. The Ficus Indica, the Barka-jhar of Southern India, the Arbor de Bais of the Portuguese. It throws down aerial roots, which support the larger branches, and these again throw down other roots, till, as Milton wrote (Paradise Lost, ix.), the tree becomes "Such as at this day, to Indias known, In Malabar or Dekhan, spreads her arms, Branching so broad and long, that in the ground The bended twigs take root, and daughters grow About the mother tree, a pillared shade, High overarched and echoing walks between. Through every road, the Indian herdman, shunning heat, Shelters in cool, and tends his pasturing herds, At loopholes cut through strictest shade." Several of these trees have attracted attention from their dimensions. Four miles distant from Fort Saint David, was one under the shade of which Mr. Ives quotes Mr. Didge as computing that ten thousand men might stand without incommoding themselves. Dr. Frazier saw one of those admirable trees, near Surat, in the year 1783. In the Botanical Gardens at Calcutta, a great banyan tree has been long the pride and ornament of the garden. In 1807, Dr. Falconer thought it to be about only seventy-five years old. People were alive next year, who remembered well its site being occupied in 1783 by a date-palm, out of whose crown the banyan sprouted, and beneath which a fakir sat. This tree, for the thirty-four years from 1834 till 1868, had not increased in size, having been lopped under some misapprehension, and when paced by the editor in 1863, its dimensions were identical with what he had found in 1834, viz. 100 yards in diameter and 360 in circumference. The banyan seed hardly ever vegetates on the ground, but its figs are eaten by birds, and the seeds deposited in the crowns of palms, where they grow, sending down roots that embrace and eventually kill the palm, which decays away. Had the Calcutta tree been growing in 1849 over the great palm-stove at Kew, only 30 feet of each end of that vast structure would have been uncovered. When the banyan tree embraces a date or palmyra or cocoaen tree, the latter are seen growing out of it, this is called by Hindus a marriage of the trees. These are encouraged, and many are to be seen near the Kistna river, on the left bank to the N. of Kurna. As the banyan tree gets old, it breaks up into separate masses, the original trunk decaying, and the props becoming separate trunks of the different portions. Lady Faulkland, writing from the western coast, tells us that about 8 miles from Wace was a banyan tree, covering a space of ground of 3 acres. The shade was complete; and separate picnic parties might take place under it, and not interfere with each other. There were countless avenues, or rather aisles like those of a church, the pale-grey stems being the columns, which, as the sun fell on them, glittered in parts like silver; and here and there were little recesses like chapels, where the roots from the boughs formed themselves into delicate clustering pillars, up and down which little squirrels were chasing each other, while large monkeys were jumping from bough to bough, the bougha crackling and creaking as they leaped. At Mhuwa, in the Sattara collectorate, were two trees, one 450
yards in circumference, the other 350 yards. They were known to be 200 years old, and may be double that age.—Hooker, *Hist. Jour.* ii. p. 246; *Oxley's Travels*, i. p. 80; *Pennisant's Hindoostan*, ii. p. 51; *Postans’ Western India*, i. p. 182; *Lady Pakkland's Chow-Chow*. See *Ficus Indica.*

BAN ZARDAK, a fortress in Kirmanshah, immediately overhauling the town of Zobah. This is the stronghold of Kolwan, to which Yeze-jird, the last of the Sassanian kings, fled after the capture of Ctesiphon by the Arabs. It is a noble specimen of the labour bestowed.—*Rawlinson.*

BAOBAB. ENG. Adansonia digitata. One was seen near Gunner in Fasshol, 95 feet in circumference. Its inner bark, stripped off, beaten and dried in the sun, can be made into paper. They are to be seen in the Peninsula of India, growing as curiosities. In Western Africa, the trees grow to an enormous size. The fruit resembles a gourd in form, and contains a pleasantly acid pulp. Trees are found, especially between the Senegal and Gambia, with a circumference of 70 to 90 feet. One seen by Humboldt was estimated by him as being 5150 years old.

BAO CHAN. DUKH. Psoralea corylifolia.

BAOLI. HIND. A well, corruption of Baori; also an ear ornament.

BAONEE, the only Mahomedan state in Bundelkhand. Nawab Ghazi-ud-Din Khan, grandson of Asaf Jah Nizam-ul-Mulk of Hyderabad in the Dehkan, received from the Peshwa a grant of 52 villages near Kalpi, of 49 of which, at the time of the British occupation of Bundelkhand, his son Nasir-ud-Dowlah was in possession. In 1863, as a reward for various liberal measures adopted by the ruling Nawab, and particularly the abolition of transit duties within the limits of his state, Government sanctioned an addition to his complimentary titles. The state is said to cover an area of 127 square miles, with a population of 20,000 souls, and to yield a revenue of one lakh of rupees.—*Treaties*, p. 251.

BAORA, a predatory vagrant tribe on the Bhatti territory and western parts of Dehi. They resemble the Kanjar and Gudheca, and subsist chiefly by stealing. Baora of Gujranwala are also called Hijra.

BAORASI. HIND. The Jangle Mahal are a low caste of cultivators and palanquin-bearers. The Baori has the heron as the emblem of their tribe; its flesh must not be eaten by them. Colonel Dalton considers that the fact of Baori being still in possession of Ghatwali tenures as ancestral, shows that they had once a proprietary interest in the soil.—*Wils. Gloss. ; Dalton, Ethnol.* p. 327.

BAP, HIND, father. Bap-re, the British say Bobbery, an exclamation of pained surprise.

BAPAI-PANDU. TEL. Carica papaya.

BAPANABURI. TEL. Ehetría buxifolia, R.

BAPANS, also Bapaoti. HIND. Paternal inheritance.

BAPARITI. MALEL. Thespesia populnea.

BAPCHI, seed of a small bush found near Ajmir; very mucilaginous, coating, and demulcent; taken in sherbet.—*Gen. Med. Top. of Ajmir.*

BAPHALLI. HIND. Convolvulus pluricaulis.

BAPHIA NITIDA, the African camwood dye.

BA-PHOLA. Dr. Stewart gives 'Ba-phola' and Baphor as the vernacular names of a species of colocinum in the Salt Range; the seeds, he says, are called 'isasgol,' which seems the ordinary

Plantago.—*Masson's Journeys*, i. 338; *Stewart; Honigberger.*

BAPOTA is from Bap, father, and the termination 'ot,' of or belonging to, and by which clans are distinguished, as Kurran-sot, descended of Kurran; Mansin-got, descended of Man Sing. The ryot (cultivator) is the proprietor of the soil in Mewar. He compares his Right therein to the a'khya d'huba, which no viceroyalties can destroy. He calls the land his bapota, or patrimonial inheritance. He has Menu in support of his claim in the text. 'Cultivated land is the property of him who cut away the wood, or who cleared and tilled it;' an ordinance binding on the whole Hindu race, and which no international wars or conquest could overturn. A Brahman may spill his blood on the threshold of his dwelling, or in the field in dispute, which will be relinquished by the owner but with his life. The Pat Rani, or chief queen, on the death of prince Uma, the heir-apparent of Mewar, in 1818, bestowed a grant of 15 bighas of land, in one of the central districts, on a Brahman who had assisted in the funeral rites of her son. With grant in hand, he hastened to the Jat proprietor, and desired him to make over to him the patch of land. The latter coolly replied that he would give him all the prince had a right to, namely, the tax. The Brahman threatened to spill his own blood and obey the command, and gave himself a gash in a limb; but the Jat was inflexible, and declared that he would not surrender his patrimony (bapota) even if he slew himself. In short, the ryot of Mewar would reply even to his sovereign, if he demanded his field, in the very words of Naboloth to Ahab king of Israel, when he demanded the vineyard contiguous to the palace: 'The Lord forbid it me, that I should give the inheritance of my fathers unto thee.—*Rajasthan*, i. 494, 510.

BAPPA, son of Nagadit, when only three years old, was conveyed to the fortress of Bhandar, where he was protected by a Bhil of Yadu descent. Thence he was removed for greater security to the wilds of Parassar. Within its impervious recesses rise the three-peaked (tri-cuta) mountain, at whose base was the town of Nagindra, the abode of Brahmons, who performed the rites of the greatest temple in Mewar. In this retreat passed the early years of Bappa, wandering through these Alpine valleys, amidst the groves of Bal, and the shrines of the brown calf. Several of the twenty-four Gehlot tribes issued from the founder, Bappa. Shortly after the conquest of Chitore, Bappa proceeded to Saurashtra and married the daughter of Emagol, prince of the island of Banderiva. With his bride he conveyed to Chitore the statue of Vyan-mata, the tutelary goddess of her race, who still divides with Eklinga the devotion of the Gehlot princes. The temple in which he enshrined this islandic goddess yet stands on the summit of Chitore, with many other monuments assigned by tradition to Bappa. Bappa signifies merely a child.' He is frequently styled Syeel, and in inscriptions, Syeel Adhes, 'the mountain lord.' The Mori prince, from whom Bappa took Chitore, was of the Tak or Takshae race, of whom Nagnéché or Nagén Mata was the mythical mother, represented as half woman and half serpent, the sister of the mother of the Scythic race, according to their legends. According to Sir H. Elliot, when Mahomed bin Kasim, the general of Walid,
overran Gujerat about A.D. 718, and advanced to Chitore, Bappa met and entirely defeated him, and after this he was raised to the throne of Chitore, where his descendants still reign. After a long and prosperous reign, Bappa abdicated and departed to Khorsan. In the reign of Khoman, his great-grandson, Mahmun, governor of Khorsan, invaded Chitore, but was defeated and expelled by Khoman after 24 engagements.—*Eliot, Hist. of India; Tod's Rajasthan*, p. 594.

**BAPUNGA.**

Tel. Psoralea corylifolia.

**BAQUA,** from *Baqa.*

**BAQAI,** from *Baqa.*

**BAQAI,** Fr. of *Mauritius.*

Pandanus odoratissimus. See Pandanus.

**BAR.**

Bar, an intoxicating liquor prepared in western India from the Calotropis gigantea.

**BAR.**

**FERS. HIND.** A load; an occasion. Bargir, a trooper not providing his horse, but serving on one supplied by the State or by a contractor; also infantry soldiers.

**B&E;R.**

**HIND.** Ficus Indica, the banyan. Of Murree hills, Quercus dilatata. A solid bamboo, the Bambusa stricta. Bar of Hazara hills, the cotton plant.

**Bar.**

**PANJ.** Large sandy wastes between the several rivers of the Panjtab, cultivation being confined to belts on each bank. The plants growing on them resemble those found on the wastes bordering on the Caspian Sea; and most of the genera which abound in the southern steppes of Russia have representatives on the Bar. Species of saliosa, salicornia, and sueda cover every patch of saline land in the Panjtab, and are largely used for the manufacture of sajji, or impure carbonate of soda; kurreel (Capparis aphylla), jhau (Tamarix Indica), the furush (Tamarix orientalis), Zizyphus vulgaris, which compose almost the whole tree vegetation of the Bar, have also cutaneous rafts on the shores of the Black Sea and the banks of the Volga.

**B&RA.**

**HIND.** Wind; metaphorically, Cholera morbus.

**BA&RA-B&ANKI,** a town and district in Oudh. The district is of 1769 square miles, with a population of 1,112,165. The district has been fought over from prehistoric times, between professors of Buddhism, Brahmanism, Mahomedanism, and the British, the latest efforts being in 1857-8, when the queen of Oudh took refuge amongst its people. ‘I have seen,’ then wrote the British general, ‘many battles in India, and many brave fellows fighting with a determination to conquer or die, but I never witnessed anything more magnificent than the conduct of these zemindars.’ A remnant is there of the ancient dominant Bbar, with Ahir 96,857, Fasi 74,303, Kurmi 134,087. The poppy is largely grown; in 1873, 7111 acres were under cultivation. The average yield of opium, 1400 manzars or 1025 cwt., for which the Government paid, at 10s. the £1, or £2800. Other races are the Chambar, Khsathen, Brahman, Mahomedans.

**BAR&BAR.**

In Bengal, at 19 miles to the north of Gaya by the road, there are several groups of granite hills, called Kauwa-Dol, Bharabar, Nagajruni, and Dharalet. All of these possess some Buddhistic remains; but the most interesting are the caves of Barabar and Nagarjun, which have been left out of the solid rock. The Barabar caves are now known by names connected with Brahmanism. The Lomas Rishi and Satgurra are the largest; next in size, Gori Koobha or Nag Arjun, Visawmitra, Karuna Chopra or Kurn Chopar, the Sudana or Ngop; they are seven in number. The largest, the Nagarjun, is 46 feet by 19 feet 5 inches. Next to it are the Lomas Rishi and Sudana. Six of them have inscriptions, in the oldest form of the Pali character, identical with that used in Asoka’s lats. They all seem to have been completed between B.C. 252 and 214, during a great part of Asoka’s reign. The Lomas Rishi has no inscription, but it seems to have been formed in the 3d or 4th century A.D. On Barabar highest peak is a temple with a lingam sacred to Sdihesswar. At the base of the ragged peak of Kauwa-Dol is an enormous figure of Buddha.—*Dr. Ferguson.*

See Baragom.

**BAR.**

**BATSALI.**

**Tel.** Ficus setosa, Wall.

**BARA-BHAO.**

Hind. lit. largest price rate, a form of loan, by which a cultivator, borrowing, undertakes to repay with interest at the highest rate of the season. Suppose a farmer, at the beginning of the season, when wheat is at 20 seers the rupee, borrows 10 rupees on bara-bhao at 5 seers interest; and supposing grain subsequently at any season range up to 25 seers, he will have to pay 15 man as interest added to 64 man as principal, in all, 79 man, having borrowed only a few months previously what was equal to 5 man. This rate of interest is about 33 per cent. for the short loan.

**BARA-BRAHMAN,** also styled Maha-Brahman, a class of Brahmins in northern India, in humble avocations, performing the funeral rites of strangers.

**BARADARI.**

**HIND., from barah, ‘twelve,’ dari, ‘a door.’ A house having twelve doors, an open building, a summer house, pavilion.”

**BARA GALI,** a small sanctuary of the Hazara hills, on the road from Broach to Marri.

**BARAGOZA,** the modern Broach. A native of this city was in the embassy from King Pandyon to Augustus at Antioc. His name is given as Zaramano Chidus or Zarnamochecus. He accompanied Augustus as far as Athens, and there immortalised himself before the emperor.—*Col. Rev.*

**BARAHA or Varaha.**

**BENG.**

Hind. The bear avatar of Vishnu. See Varaha, a hog.

**BARIHAAT or Gopevare,** two towns in Garhwal, from which were obtained two bronze tridents, with inscriptions of about the 7th century.

**BARAH BHUIYA,** a dynasty which Colonel Dalton believes once ruled in Assam. The country to the north of the Brahmaputra, from one end of the valley to the other, is full of great works ascribed to this people. Buchanan, in his account of Dinajpur, narrated a number of extant or distinguished persons of the Bhuiyia race came to the Kaludarye river, the boundary between Kamrup and the ancient Matsyades, took up their abode there, extended their sway, and executed great works.—Dalton.

**BARAH-SADAT,** a powerful tribe of Syuds on the eastern parts of the Muzzafarnagar district. Some of their ancestors served Humayun, Farokhsir, and Aurangzeb.

**BARAH-SINHA or Buriydi of Bengal, eastern**
and northern skirts of India, the twelve-tined stag, Rucerus Duvaucelli of Cuvier.

BARAH-THAKURA. Twelve small hill states between the Jumna and Sutlej. See Baraich.

BARAK. HIND. A flag planted on land newly taken up.

BARAK, amongst the Hazara, a cloth of camel’s hair.

BARAK, the horse on which Mahomed ascended to heaven in his dream.

BARAK or Surma, a tributary to the Brahmaputra. It is an offshoot from the Jiri, which leaves in lat. 24° 48’ N., long. 93° 13’ E., through Cachar and Silhet, S.W. into the Megna. Length 200 miles. Banks low and marshy along the valley of the Cachar. The Barak is navigable for steamers, and is the chief means of communication between Cachar and Silhet. Its affluents, the Jiri, Chiri, Jatinga, Chengar, Khol, and Kato-Khal, are navigable for country boats.

BARAK, one of the three sons of Zirak, the ancestor of the Barakzai, of which tribe Dost Mahomed Khan, of Kûbul, was the head.

BARA KUTA, a fish of the Arabian Sea, with numerous teeth.

BARAL. HIND. Artoecarpus lakoochea.

BARA-LACHA, a pass in the Kangra district, lat. 32° 49’ N., long. 77° 28’ E., and 15,000 feet above the sea, but can be crossed by ponies and laden yaks. The Bara-lacha range of mountains, which forms the watershed between the Indus and its first affluents, is regarded by Alexander Cunningham as the western continuation of the Himalaya. The Eastern Himalaya divides the watershed of the Iaspis-po from those of the Ganges and its tributaries. The Western as well as the Eastern chain separate the great Hindu family of India from the Bot of Tibet. Some mixed races are found to the south of each chain; the Lahuli and Kanawari to the west, and the Gurkha and Bhutanis to the east. The inferior mountains of the eastern chain generally run at right angles to its axis, whereas those of the western chain are mostly disposed in subordinate parallel ranges. There are thus two distinct and independent ranges to the south of the Western Himalaya, both stretching in the same general direction from north-west to south-east, which may be termed the Mid-Himalaya, and the Outer and Sub-Himalaya,—the term Siwalik being that applied to the lowestmost sandstone ranges.—A. Cunningham.

BARA-MADAH. Pers. A vestibule, an entrance hall, a verandah.

BARA-MAHAL, a fertile district in southern India now known as the collectorate of Salem. It contains soils impregnated with soda. It is a plain elevated about 800 feet above the sea.

BARA MARECA. MALE. Dolichos cultratus; Canavalia gladiata.

BARAMOOLA, a pass into Kashmir leading through the valley, and by which the Jhelum leaves the valley. It is open all the year round for horses and foot-passengers. It is in lat. 34° 10’ N., long. 74° 30’ E., and is the only pass into Kashmir practicable for an army. The town is on the right bank.

BARANDA, a hill deity.

BARANGAN. MALAY. Sulphuret of arsenic.

BARANGI. HIND. Clerodendron infortunatum.

BARANGHA, a genus of mammals of the family Mustelidae, tribe Semi-plantigranda, and order of the Carnivora. B. Nipponesis, Gray, is of Nepal. Lutra barang, of the Malayian islands, has been placed by Dr. Gray into the genus Barangia, otters with hairy muzzle, rather long toes, and rudimentary claws.

BARANI, land dependent on the rains. Barani, a rain-coat, so called from baran, rain; an overcoat; generally pronounced in southern Persia as baroon and barooni. Both Barani and Oima are overcoats; the former, confined to men of some rank, is an ample cloak, with large sleeves, that shrouds the whole person, and is made, according to the fancy and means of the wearer, of coarse or fine broad-cloth, of shawl, or even of velvet, lined with every kind of material, from the richest fur down to the coarsest chintz, and embroidered, often very richly, with silk, gold, or silver. The Oima is more commonly used, and is more exclusively calculated for riding. It somewhat resembles a lady’s riding habit, fitting tight to the shape from the neck to the waist, where it is gathered into plaits, and swells out above the girdle, falling in ample folds to the feet. It is generally made of broad-cloth, varying in quality.—Ouseley’s Tr. ii. p. 94; Fraser’s Journey into Khurasan, p. 69.

BARANKI CHETTU. Tel. Butes superba.

BARANO, of Kaghan. Quercus annulata.

BARANUS. HIND. Rhododendron arboreum.

BARAPATALU. Tel. Indigofera glandulosa, Wild. It abounds in the north-west parts of Rajahmundry; also I. trifoliate, W. and A.

BARAR. HIND. A blight which affects rice crops.

BARARI, of Chenab. Capparis spinosa, L.

BARAS. ARAB. A kind of leprous so called.

BARAS. HIND. A year. Bars-Glanth, annual knot: birthday, on which day a knot is tied on a cord kept for that purpose.

BARAT. ARAB. Marriage procession. The Shab-i-Barat, or night of record, is a Mahomedan festival held on the night of the 14th of the month Shaban. In the north of India, lamps are lighted and prayers said in behalf of deceased ancestors.—Wilson.

BARATGAON, near Gaya, is the ancient Nalanda. It was celebrated for its monastery, now a mass of brick ruins, 1600 feet long by 400 feet deep. Ten thousand monks and novices of the eighteen Buddhist schools here studied philosophy, law, science, medicine, and practised devotion. It was three times destroyed by opposing sects.—Imp. Gaz. See Barabar.

BARAT-KHAND. The channel which separates the island of Dwaraica from the mainland. It is filled up, except in spring tides.

BARA-WAFAT. ARAB. HIND. The great death; a solemn festival on the 12-13th of the Mahomedan month Rabi-ul-Awal, on which date, A.H. 11, Mahomed died; also called Weadat-i-Sharif, otherwise called the ’day of death,’ or ’death day.’ In some large towns, especially those in the north, where there are educated men, daily meetings are held from the first to the twelfth day of Rabi-ul-Awal, when the more learned deliver lectures on the different events that occurred during the lifetime of their great and esteemed master and friend, which events are contained in the Koran. On the eleventh day, the ceremonies, etc., are performed with great magnificence, and the whole hall in which the party is assembled
Baryat.

is beautifully lit up for the occasion. Every facet of the prophet's life is then rehearsed by the lecturer, in order to excite their feelings at the loss of their great master. In the evening, a very grand procession, resembling that of the Moharram, passes through many of the streets in the town. During the procession may be seen a good display of fireworks of every description. The following day the richer Mahomedeans light their houses up very beautifully, and sit up the greater part of the night reading the Koran, etc. Much food is also distributed to the poor.

Baryat, of Benares, betel-leaf and betel-nut sellers.

Barbara, a Kaolin used in Delft for making porcelain.—Powell.

Barbaramu. Tel. Acacia Arabica.

Barbary.}

The Greeks applied the term Barnaros to everything foreign, and to every race not speaking Greek, and it was afterwards taken up and used by the Romans. It was a term similar to the Gentile of the Jews, to whom every person not circumcised was a Gentile; to the Hindu, every man not twice born is a M'Helecha; to the Mahomedan, every man not believing in Mahomed is a Kafir; to the Chinese, every one not a Chinese is a Fan or E. Arabs observe that Indians, unless brought young into the country, never learn its language well; and they have a term to express the vicious pronouncement of a slave or Indian.—Barbaret al-Hund, the barbarism of the Indian. The Greek 'Barbaros' appears to be derived from the Sanskrit Vararavana, an outcast, a barbarian, a man with curly hair. Ajum in Arabic literally means foreign; but in the southern part of Arabia, Al Ajum is applied to the opposite part of the coast of Africa. By the Turks, Persia is bald-ul-Ajam, or Ajamistan; and the north-eastern coast of Africa is Bar-el-Ajam. The Arabs divide the world into two great bodies,—first themselves, and secondly 'Ajami,' i.e. all that are not Arabs.

E means barbarian or foreigner, and it is almost certain that the term was formerly applied by the Chinese strictly in this sense. Dr. Morrison, an eminent Chinese scholar, rendered the letter E as foreigner; but in subsequent translations he changed, and rendered it Barbarian. Mandarin of Fu-chu-fu, however, distinctly stated that the word was equivalent to, and synonymous with, foreigner, and that there was nothing whatever offensive in the term.' At Ningo, on Mr. Lindsay objecting to being called E, he was called 'Yuen,' another term for a foreigner. The Chinese also called the British 'Hung Mou Yin,' literally Red-bristled Man. The gentlemen of Lord Macartney's embassy were frequently asked by the Mandarins if they were Hung Mou Yin. The British were also called by the Chinese 'Quot,' which means devil or spirit. The Si-fan races of western China get their China name from the words meaning western aliens, and is applied by them to the people of Sakyul, Ando, Tho-chu, Gya-rung, and Manyak.

Gya, in the Tibetan, means a stranger, a foreigner, hence Gya-filing, a Frank foreigner.

The Arab, the Persian, and the Moghul races, who speak the Turko tongue, designate the natives of India as the Kala-Adni, or black men.—Playfair's Aden; Burton's Mecca, ii. 26, 264; Muller's Lectures, p. 84.

Barbarike Emporium is supposed to be the ruined town of Bambhara or Bambhara, on the head of the Ghara creek, the site of the most ancient seaport of Sind.—Cunn. Anc. Geog. p. 294.

Barbary, a region of Africa, between the Atlantic Ocean, the Mediterranean Sea, and Egypt. It is 2200 miles in length and 500 in breadth, containing the countries of Barca, Tripoli, Tunis, Algiers, Fez, Morocco, Tafiset, and Balad-ul-gerid. It was known to the ancients by the names of Mauritania, Numidia, Africa Proper, and Lribly.

Barbecue, drying grounds for coffee.

Barber.

Amongst Hindoos barbers there are many different classes. They are considered a low caste of Sudras. A Hindu poet says, 'Among the sages and warriors, amongst the beasts the jackal, amongst the birds the crow, and amongst men the barber, is the most crafty.' (Ward, iii. p. 122.) The barbers' wives cut the nails and dye the feet and the hands of the Hindu women, and are midwives. The castes of Teling barbers in Madras are the Reddi Bummala, Nalum Mangala, Sree Mangala, Chata Coooro, Pongkanatu, Saljara Mangala, Arava Mangula, Palay Mangula, Bree Mangula.

Barberry, plants of the Himalaya and Neithgherries, species of the genus Berberis. Russout, which is used among natives for sore eyes, is extracted from the roots. Its virtues have of late been much extolled as a remedial agent in fevers, but beyond being a good tonic in weak digestion consequent on fever, it possesses no antiperiodic powers, and will never be equal to quinine or the bark of the Bibiree green-heart tree of British Guiana, a large forest tree attaining an altitude of 80 feet and found on the rocky hill-sides on the borders of the South American rivers, and belongs to the Laurel tribe. The active principle in Warburg is extracted from the Bibiree, and forms the essence of the drops given in those severe forms of jungle fever seen at Mysore and in the Wynad.

Barbet, birds of the family Megalaimidae, comprising the genera Megalaima, Cyanops, and Xantholoma. The species in S.E. Asia are Megalaima vires, the great barbet; M. lineata, Viell.; M. caniceps, Franklin; M. viridis, Gm.; and M. hayi; Cyanops Asiatica, Lath.; and C. Franklinii, Blith; Xantholoma Indica, Lath.; X. Malabarica, Blith; and X. rubri capilla, Gm. In the Tenasserim mountains it swarms from 3000 to 5000 feet elevation, not higher nor lower; and from the first level it suddenly and entirely supplants M. lineata, the Pokong of the Burmese. As long as day lasts, the woods amongst the Danha hills resound with its cry—Piow, piow, piow, etc. etc. Another barbet, resembling apparently M. Indica, is also pretty common from 1000 to 3500 feet, but it settles solely on the summits of the highest trees, calling

270
BAREILLY.

out Tapral, tapral, tapral, by the hour together. The greater red-headed barbet (Megalaica Indica, Lath.; M. Philippensis, var. A. Lath.) gives out from its throat an incessant din, in sounds which resemble the blows of a smith hammering a cadron, and is known by the British in India as the coppersmith.—Tennent’s Ceylon, p. 242; Tickell.

BARBOSA. Odoardo Barbosa was a cousin of Magellan, was with him at the capture of Malaca, and accompanied him in his circumnavigation of the globe. In 1515 he wrote a book, entitled The Coasts of East Africa and Malabar, in which he describes these coasts, also Bijanagar, Bengal, Orissa, Further India, the Indian Archipelago, and China, and the trade of the eastern seas as it was found by the Portuguese on their first entering them. He gives a detailed account of the trade in rubies, diamonds, emeralds, and other precious stones; also of the drugs and spices, the perfumes and dyes. He describes Cambay as a remarkably well built city, in a beautiful and fertile country, filled with merchants of all nations, and with artisans and manufacturers like those of Flanders. He speaks with much precision of Sumatra. On the death of Magellan, he was elected joint commander of the Spanish Expedition.—Elph. p. 427; Morselen’s Hist. of Sumatra, p. 6.

BARBUS. A genus of fishes. B. mossel. B. Ham., and B. Neilli, Day, of the south of India, are known as the Mahasorer.

BARCHHA. HIND. Quercus floribunda.

BARC-HA. HIND. A spear or lance with a wooden stock, carried by fakirs; also the lance of cavalry soldiers.

BARD.

Bardo, Pocée, . . . Fr. | Bhat-Raj, . . . HIND.
Bart, Wideshaken, GEH. | Vate, poet, . . . IT.
Bardai, Bardet, . . . HIND. | Poets, Vardo, . . . SP.

The Bardai of the Rajput is the prototype of the bard of the Saxon races, reciters of warlike poetry, of whom Tacitus says, 'With their barbarous strains they influence their minds in the day of battle with a chorus of military virtue.' The Bards of India are the Bhat and the Charun. The Bhat are found all through Peninsular India, where they are respected, though not revered. The Bhat or Bards of Central India are of three sorts,—the Magadha or historian, the Sota or genealogist, and the Bard or court minstrel, whose duty in older times it was to salute the king or chief in the early morning, wishing him long life and prosperity. Bards from their sacred character are often employed as convoy of travelers, and of their property in tandas or caravans. Throughout Rajputana they are regarded as a sacred order, and as the hereditary guardians of history and pedigree. They chant their own verses, or legends from the mythology of India. Bhat-Raj claim to be Khatatriya, whose occupation is to proclaim the titles of kings and be their eulogists. In Malwa and Gujerat, it was usual for travellers to hire a Charan to protect them, and if robbers appeared, he stepped forward waving his long white garments, and denouncing in verse infamy and disgrace on all who should injure travelers under the protection of the holy members of Siva. If this failed, he stabbed himself with a dagger in the arm, declaring that his blood was on their heads; and if all failed, he was bound in honour to stab himself to the heart. Elphinston mentions that the Bhat and Charan of the west of India were revered as bards, and in some measure as heralds, among the Rajput tribes. In Rajputana they conducted caravans, which were not only protected from plunder, but from legal duties. In Gujerat, they carried large sums in bullion through tracts where a strong escort would be insufficient to protect it. They were also guarantee of all agreements of chiefs among themselves, and even with the government.

Their power is derived from the sanctity of their character and their desperate resolution. If a man carrying treasure is approached, he announces that he will commit trage, as it is called; or if an engagement is not complied with, he issues the same threat unless it is fulfilled. Malcolm mentions that Charans, particularly of the Maru class, who are mendicants, attended at feasts and marriages in great numbers, and were in the habit of extorting large sums, at the latter, by threats (if not satisfied) of sprinkling their blood on the parties met on this joyous occasion; and these threats had been too often carried into execution to make them be deemed idle by the superstitious Rajputs. The Charan women are distinct from all the other population, both in dress and manners. They often resided in separate villages; and the traveller was surprised to see them come out in their long robes, and attend him for some space, chanting his welcome to their abode. The Charans are everywhere treated by the Rajputs with great respect, the highest rulers of that race rising when one of this class enters or leaves an assembly. Brahmas are less esteemed than the bard.—Todd’s Rajojastan, i. 39, 67, 540; Burton’s Scinde, p. 302; Malcolm’s Central India, ii. p. 135; Elphinston’s Hist. of India, p. 364; Hindu Theatre, ii. p. 276; Infanticide, p. 78; The Hindoos, p. 75.

BARDWAN, a town in Bengal, in lat. 23° 14' 10" N., and long. 87° 53' 55" E., built on the left bank of the Damodar. It gives its name to a revenue division of 12,719 square miles, with a population of 7,286,957, and through which the rivers Damodar, Dhalkeor, Khari, and Ajai flow. In the 16th, 17th, and 18th centuries, it was successively held by Mahomedans, Hindus, and Mahrattas, but it was ceded to the East India Company in 1760, and since the close of the 19th century it has been under a permanent settlement. Its coal mines at Raniganj, about 44 in number, its sari and dhoti silk fabrics, its iron, gold, silver, and brass wares, and its agricultural produce, form its sources of wealth. Its coal area is about 500 square miles. About 564,933 tons of coal are yearly raised. The Maharaja of Bardwan is the oldest and wealthiest of the Bengal zamindari chiefs, and the family keep up a regal state. They have been uniformly friendly with the British.

BAREILLY, a city in the Rohilkhand division of the N.W. Provinces, in lat. 28° 22' 9" N., and long. 79° 26' 38" E., which gives its name to a British revenue district. The district has an area of 2,092 square miles, and, in 1872, a population of 1,507,139 souls. It is a level plain just below the last slopes of the Himalaya. During the 17th and 18th centuries, it changed hands amongst Mahomedan and Mahratta chiefs. In 1811 it was ceded to the British. In 1805, 1816, 1837, and 1842, there were disturbances, and in the Mutiny it was in rebellion from the 31st May 1857 to the
7th March 1858, when the city was retaken. Its best cultivators are the Kurmi, Lodh, Murai, Jat, and Chamar. Mahomedans number about 306,682 souls. Hindus, 1,197,588,—Brahmans, 76,442; Rajputs, 44,669; Baniya, 30,726; Ahor, 47,238; Chamars, 132,798; Kurmi, 166,280.—Imp. Gaz.

BARG.

Baniya, 1562; i-tambui, Fa. 1549; 1572 i-anab, i-haiina, "i-wiisma, Arab. i-murad, Port.

BARILLA.

Bari-Doab consists of an elevated central doral plateau, called Ganj-i-Doab, or bald tract, in the Manja or middle part. This, on both sides, makes a sudden drop, there called dihaya, down to a flat alluvial tract of several miles in width, running along either river, and producing tamarisk and jhund.

The soil of the Ganj-i-Bar is intensely arid, and often saline, and produces only jali and some salsolaceous plants, with a few bushes of jhund. On the occasion of heavy rain in its upper part, the Ravi and Beas become flooded, and injury results to the low-lying land on the borders of the latter river. The Ravi, in July 1873, rose 12 feet in two days, and came down at 74 miles an hour. The Bari Doab canal is 212 miles in aggregate length. It cost £1,251,443.—Cal. Rec.

BARID SHAII, a dynasty which ruled at Beder from A.D. 1498 to 1572. The kings were—

Kasim L, A.D. 1496 A.H. 904 Kasim II, A.D. 1569 A.H. 965
Amir L, ... 1504 910 Mirza Ali, ... 1572 1000
Ali, ... 1549 945 Mirza II, ... 1591
Ibrahim, ... 1562 990.

BARIIJ. SANSK. Lotus.

BARIK TIIL. DUK. Sesamum orientale.

BARI-KUDU-VADU, also Bariki. Tel. A village menial, servant, messenger, watchman, scavenger.—W.

BARILUS RUGOSUS. Day. A fish in the rivers below Kotagbbery, called the Indian or spotted trout. B. barii, Barch: Ham., of the rivers of Bengal and Hind, is the bhola or trout. B. barna, B. Ham., is also called Bali bhola, Bahri, Barel, and Barna.

BARILLA, soda, kelp.

Kali, ... ARAB. Jarrilla, Solda, ... PORT. Soude, Barille, ... FR. Socien, ... RUS. Sajikhar, Khar, GUL. HIND. Appelacramm, TAM., Tel.

Barilla, kelp, salosa soda, and natron are all carbonates of soda. Barilla is prepared by burning sea-weed and the plants that grow in the marine lagoons or salt-water lakes of most of the seaboads of South-Eastern Asia. In the Archipelago, quantities are produced by the settled populations or by migratory fishing races, and it is largely brought to India from the Persian Gulf. In India, barilla is obtained from Salicornia Arabica, W., of Sunderbun and the Coromandel coast, and from S. Indica, W., of Malabar. The genus Mesembryanthemum is rich in alkaline carbonates, and the plants from which the sea-shore. Dr. Roxburgh was of opinion that the two species of Salicornia and one of Salsola, which are extremely abundant on the Coromandel coast, might be made to yield barilla sufficient to make soap and glass for the whole world. There are now more economical processes for procuring this substance from dhobi's earth (native carbonate of soda), and from sea salt. But Dr. Helenus Scott received the gold medal of the Society of Arts, for sending from Bombay the mineral alkali, the Saji Matti of Bengal, the Appelacram of the Tamil people, which occurs in immense quantities in many parts of Bengal, especially in the districts of Moughir, Purnea, and Cawnpur. It contains from 40 to 50 per cent. of carbonate of soda, with organic

281
matters, clay, sand, and oxide of iron. The salts can be extracted by washing the mineral without incineration, but the organic matter is dissolved at the same time, and gives a deep brown solution from which pure crystals cannot be obtained. The firing destroys this substance, and then the solution is colourless; but care must be taken not to push the heat beyond low redness, for the alkali at a higher temperature combines with the sand and clay, and the whole runs into a green glass, insoluble in water. The earth of a large tract of unproductive land in the Puttocoottah and Trevandy taluqs of Tanjore is greatly impregnated with impure carbonate of soda, and a small export trade goes on of dhobi's earth. In the years 1826 to 1830, the late Mr. Hart and Dr. Macleod worked it on the large scale, and about 1000 tons of barilla, containing 25 per cent. of pure alkali, and equal to the best Spanish, was the estimated produce. In Europe, this salt is prepared either by burning sea-weeds and lixiviating the ashes, the product being termed kelp and barilla, or by decomposing common salt by sulphuric acid, and then roasting the resulting sulphate with chalk, sawdust, and fragments of iron. The mass when washed gives the carbonate of soda. The celebrated lake of Loomar produces six principal varieties of natron salts, to which the natives give the following names:—1. Dulla; 2. Numuck Dulla; 3. Khuppul; 4. Pappree; 5. Bhookeee; and 6. Mahd Kiar. Dulla and Numuck Dulla are used for dyeing silks, fixing colours,—also as medicines, and in the manufacture of bangles. Of Khuppul, there are two kinds, one of greater value than the other, and this salt is used in fixing the red dyes of cloth. Pappree is used in the manufacture of bangles, of which there are two manufactories near the lake. When these are in full operation, bangles are manufactured in large quantities, each man being able to manufacture from 600 to 700 daily. The eyesight of these men fails soon, owing to the entire want of protection from the glare of the furnaces.—Scientific Records of the Madras Government; O'Shaughnessy.

BARI-MAI. HIND. Galls of Tamarix Indica.

BARING. HIND. Myrsine Africana.

BARINA, also Bari-venka. Tel. Trophis aspera, Retz.

BARINA. Tel. Epicarpus orientalis.

BARISAL, a town in the district of Bakarganj, in Bengal, 136 miles from Calcutta, to the north of the Twenty-four Parganas. Barisal guns, a term applied to thundering noises which are heard occasionally in the delta of the Ganges and Benga.

BARJ, of Kangra; Zizyphus flexuosa, Wall.

BARJALA. Beng. Sida cordifolia, Linn.

BARJAPU CHETTU. Tel. Erythrina Indica.

BARJURI, root-bark of a climber found in Rajwara; tasteless. One-fourth of a tola is a dose; is given to women after child-birth, in 'luddoo'; said to augment the secretion of milk, to relieve the after-pains, and to strengthen.—Gen. Med. Top. BARK.

The barks of trees are largely in use in medicine and the arts in all parts of the world. In the arts, the bark of the oaks, of species of Rhus, of the Acacia Arabica, of species of Eucalyptus, are largely used in tanning; and that of one of the oaks furnishes the cork of commerce. The wattle bark of Australis is largely used; in India, that of the Acacia leucophloea is employed as an ingredient in the distillation of arrack, and that of A. Arabica in tanning. Many barks of the plains of India furnish useful basts for cordage; and cloth is obtained by extracting the layers of cellular tissue which form a tubular sheath enclosing the woody parts of other plants. Species of Grewia, Hibiscus, and mulberry of the East Indies furnish these most abundantly, as also do the Eriodendron anfractuosum and the Acacia robusta, some of them being woven into cloth. The barks of species of cinchona, now introduced into India, have long been employed in medicine, as also that of Michelia champaca. See BARK.

BARK OF Kâbul, a soft fabric of camel's hair. Bark shurti, camel-hair cloth.

BARKA, a non-Aryan race of India.

BARKAL, an inferior tribe of Rajputs in Balandsahar.

BARKHAN, a district of Baluchistan, occupied by the Khidrani.

BARKHAUST. PERS. The breaking up of an assembly; the departing of a visitor.

BARKHAUSiÄ REPENS. Smith.

Hu-hwang-lien, . . . CHIN. . . . Ko-ku-ku-tseh, . . . CHIN.

A plant of Kan-suh and Shen-si, in China; root used as an astringent.—Smith, p. 33.

BARKING DÉER of Nepal, Cervulus moschatus.

BARKUK. PERS. Armeniaca vulgaris.

BARLAAM and Josaphat, a story supposed to have been written by Joannes Damascenus to give a simple exposition of the principal doctrines of the Christian religion, and a disquisition on the merits of the principal religions of the world.—Chaldean, Egyptian, Greek, Jewish, and the Christian. It is a novel, and the story was taken from the Lalita Vistara, the legendary life of Buddha. Barisal drives in is the four drives of Buddha, so famous in Buddhist history. The pillars or towers raised to commemorate these drives were still standing at Fataliputra at the times of Fa Hian's and Hiwen Thsang's visits to India. The story became a most popular book during the middle ages. In the east it was translated into Syriac, Arabic, Ethiopic, Armenian, and Hebrew; in the west it exists in Latin, French, Italian, German, English, Spanish, Bohemian, and Polish. As early as 1204, a king of Norway translated it into Icelandic; and at a later time it was translated by a Jesuit missionary into Tagala, the classical language of the Philippine Islands. In the Eastern and Western Churches, Baralam and Josaphat have both risen to be saints; in the
BARLERA.

Eastern Church the 26th of August is the saints' day of Barlaam and Josaphat, and in the Roman Martyrology the 27th November is assigned to them.—Max Müller, Chips, iv. p. 186.

BARLERA, a genus of plants of the natural order Acanthaceae. The following species occur in the East Indies—bispinosa, ciliata, cerulina, cristata, cuspidata, Courtallia, dichotoma, Hochstetteri, polytrichaa, longifolia, prionites, nitida, obovata, hirsuta. Some of these are cultivated as flowering plants. B. Roxburghii grows in the northern parts of Bengal. B. dichotoma is the sada jati of Bengal.

Barleri cerulina, Roxb. iii. 30.

Barleri cristata, Linn.

Barleri longifolia, Linn.

Barleri prionites, Linn.

BARMECIDES.

Barleri prionites, Linn.

Kantcha-jati, Beng. Mulu-gomanta, Tel.

Koletta vitia, Hind. Neermooli vayr, Tam.

Kuruntaka, Sansk. Paicheha mulu-gor.

Shem muli, Tam. auto.

One of the most common and at the same time most elegant of the small shrubby plants of India. It is in flower all the year round, and every soil and situation seem to suit it. The juice of the leaf is slightly bitter, and rather pleasant to the taste, and is a favourite medicine of the Tamil practitioners. It is found in those catarchial complaints of children which are accompanied with fever and much viscid phlegm; it is generally administered in a little honey, or sugar and water.—Ainslie.

BARLEY.

Barley is largely cultivated in Europe, Asia, Africa, and America; but there are several species, viz. H. coelestis, distichum, hexastichum, jubatum, maritinum, muginum, and vulgarum, some one or other of which is preferred in different localities. It is extensively grown in the north of India, occasionally on the Neelgherry mountains, and in the hill regions in the south. Two kinds are grown in Oudh on light soils, and not irrigated. The kind called Jan is grown everywhere; the other, called Dasawri, is grown on the banks of rivers. It is there sown in October, soils for 2 or 2½ maunds for 1 reepee, and in Gujerat was for many years one of the cheapest grains. In the Punjab, in the Sutlej valley, Hordeum coeleste and H. hexastichum are grown at an elevation of 15,000 feet, the headdress variety of H. coeleste being most esteemed. Barley constitutes one of the Burmese seven kinds of saka or cereal grasses. Hordeum distichum, or two-cared barley, is that commonly cultivated in Britain. As met with in commerce, the seeds or grains are usually enclosed in the pale or husks; denuded of these they form 'Scotch or pot barley.' When produced they constitute 'pearl barley'; and this again reduced to powder is called 'patent barley.' In 100 parts the following were found in Bombay bazar barley, unhusked.—Moisture, 8.00 per cent.; Nitrogenous matter, 10.94 per cent.; starchy matter, 77.14 per cent.; fatty or oily matter, 1.65 per cent.; mineral constituents (ash), 2.27 per cent.

The best test of barley is its fitness for malt; and breweries now exist in full working order at Murree, Kussowli, Simla, Naini Tal, and also in the Neelgheries. The native indigenous barley of the Neelgheries is unfit for making malt, and it yields only ten bushels per acre; whereas the English seed barley yielded on the Neelgheries thirty-five bushels per acre. The barley of Afghanistan has always been remarkable for its fine quality, being rich in flour, a good protein, and bone-forming elements, as proved by the strength, bone, and muscle of the Afghan horse, galloway, and powerful ponies or yabies. Tibet barley sold from India to Scotland was not considered worth the trouble and expense of culture. One hundred pounds of good barley judiciously malted will yield 8 lbs. of malt. The bushel of malt weighs 35 lbs.; and the distiller of pure malt whisky calculates on obtaining 2 gallons of proof spirits from 1 bushel of malt in average years. Hence a block of Indian compressed malt, weighing 105 lbs., represents 6 gallons of proof whisky.—Hassall; Mason's Tenasserim; M'Cutcheon; Cleg-ior's Punjab Report.

BARLEY SPROUTS.

Meh-ya, Chin. Meh-meh, Chin.

BARLOW, Sir GEORGE, Baronnet, a Bengal civilian, succeeded Lord Cornwallis as Governor-General, from the 10th October 1805 to the 31st July 1807. He was afterwards Governor of Madras, and during his administration the officers of the Madras army mutinied. He wrote Ten Tracts on his Government in India.

BARMAB, Chinas. Taxis baccata.

BARMECIDES. The Beni Barmek, an old noble Persian family, who, before they embraced Mahomedanism, had been the custodians of the sacred fire. Khalid-ibn-Barmek became vizier to Ibn-us-Safah, the first of the Abbasie khalifs, and his son Yahya succeeded him in that office. His grandson Jafar was the constant companion of Harun-ur-Rashid. The vices of this family were very great, even in oriental life. They were Dehguna or heiros of the land. Jafar was the constant companion of Harun-ur-Rashid, abroad in all Harun's nightly walks, and at home along with Abu Nawaz the jester-poet, and Masrur the black headman. Jafar was distinguished for his eloquence, his gentleness, his generosity, and high intellectual attainments. Harun gave his sister Maintanah to Jafar as a wife, under a promise of continuance, which was not kept, and Arzu, a slave of Rashid's wife Zobaidah, told Rashid that children were born. How Jafar fell is variously related, but all the stories show that Harun's jealousy of Jafar's power induced him to assassinate his friend. Harun slew Arzu; ordered Masrur to bring masons in the evening, then slew his sister, buried her in her own rooms, and ordered Masrur to kill
and put the masons in sacks, and throw them into the Tigris. On Thursday, when Jafar waited on Rashid he was graciously received, and allowed to return home; but Masur was sent to recall him, to take him into a tent and behead him. Jafar seeing the object of it, pleaded with Masur, and induced him to go for fresh instructions, but finding Rashid determined, Masur returned and beheaded Jafar while praying, and flung the bleeding head at Rashid's feet. Rashid wept sorely, but he sent to Medina for the two sons of Jafar and Ma'mnunah, wept over but killed them too, and buried them in a pit with the box with their mother's remains. Yahya, Jafar's father, and Al-Fadhl, Jafar's brother, were imprisoned, all their property was confiscated, and more than a thousand of the Barracides were slain.

BARHOTAR. Hind. A free grant given to Brahmans for religious purposes. Barhpajia, land given to Hindu priests, resumable at will.

Barnacles belong to the generic lepas, otion, balanus, and scalpellum.

Barak, an opprobrious name given by the Turks to their Christian converts. The word is derived from Burmak, to twist, to turn. —Burton's Mecca, i. p. 33.

Baroda, a city in lat. 22° 17' 30" N. and long. 73° 16' E., is the capital of the territory of the Gaekwar, to which it gives its name, and includes all the parts in Gujarat belonging to the family. The area is 4939 square miles, and its population is 2,000,223: 91-27 per cent. being Hindus, with 46,544 Srawak or Jains, 8/3 per cent. Mahomedans, and the Parsees are 7283. Other races are Bhutela Brahmans, Kumhi, Rajput, Koli, Bhi, Bhat, and Charan. Its lands are much intermixed with British territory. The principal rivers are the Saraswati, Sabarmati Mahi, Nerbadda. The ancient name of Baroda is Chandanavati, having been, it is said, founded by Chandu, rajah of the Dor tribe of Rajputs, not unknown to legendary lore. But, like all ancient cities of India, it has borne various names. Chandanavati, 'the City of Sandal-wood,' was changed to Viravati, or 'Abode of Warriors;' and again to Barpotra, or 'Leaf of the Bar,' perhaps from some fancied resemblance in its circumvallation to the shape of the leaf of the sacred banyan tree. From this the transition to Baroda was simple, and the Gaekwars seem inclined to let it rest under its present designation. This family sprung, in 1720, from Damaji Gaekwar, Sirdar Bahadur. He was an officer under Khandi Rao Holkar. The family title is Sena Khas Khel Shamsher Bahadur. The population of the Baroda city is 112,057. —Todd's Travels, p. 245.

Baroli, in Central India, not far from the falls of the Chambal, has three Hindu temples, one with a pillared porch. It has also a chori, or nuptial hall, in which a Huna (Hun) was married to a Rajputni. —Ferguson, iv. p. 50.

Baros, Tapas, and Singkel are three Dutch settlements on the north-west coast of Sumatra, south of Aceh. Baros is a place of some trade, in lat. 1° 56' N. Its principal exports are camphor and benzoin. Baros camphor is much prized by the Chinese.

Barothi, a tribe of Ahirs in Mysnuri.

BAROZA or ganda barosa, the oleo-resin exuding from the 'chili,' or Pinus longifolia.

Barozhi, residents in the town of Koork in Sibi, a semi-circular bay, 25 miles across, in the hills N.E. of Dadur, and irrigated by canals from the Narra river.

Bar Pushutun, the upper, higher, or western Afghans dwelling west of the Khabar pass.

Barpyal. Hind. of Sealkote. Land left for a year after an exhausting crop.

Barqandaz or Burkandaz, Hind. Pers., from Barq and andalz, literally lightening-thrower. An armed policeman, a matchlockman, a peon armed or unarmed.

Barra. Hind. A rope used on the Banta Chaudas day, the 14th of the Kooro Sadi. —Elk.

Barrackpur, a civil and military station in the Twenty-four Parganas of Bengal, in lat. 22° 45' 40', long. 88° 28' 52', on the left bank of the river Hugli, 14 miles by rail from Calcutta. It has a residence for the Viceroy. Lord Auckland, when Governor-General, endowed a native school at this place. Its population, 5951. The natives call it Chanka, after Job Charnock, who founded Calcutta. In 1824, the 47th B.N.I., when ordered for Burma, mutinied here; and in 1857, 29th March, the sepoys of the 34th Bengal N.I. openly mutinied.

Barracks for soldiers in India are built of stone or brick, and those of Burma and Singapore are of wood, raised on piles above the ground. Barracks generally had, from the first, been ground-storeyed, but latterly the principle has been adopted of building them of two storeys, with verandahs, and using the lower storeys for day purposes.

Barrada or Baradi, the Chrysorrhoea or 'Golden Stream' of the ancient geographer, is the river of Damascas. As soon as it issues from the cleft in the mountains, it is immediately divided into three smaller courses. The largest, which is the middle one, runs directly to the city, and is there distributed to the different public fountains, baths, and cisterns; whilst the other two, branching off right and left, contribute mainly to the luxuriant vegetation which adorns the environs. South-east of the city their scattered waters unite again into one channel, and, after flowing towards the eastern hills for two or three hours, are finally lost in a marsh, which, from one side view, appears like a lake. —Robinson's Travels, p. 115.

Barrage, a great dam constructed at the point of the delta of the Nile, near Cairo, with the object of distributing the waters of that river throughout Lower Egypt. It was a conception of Mahomed Ali, and was executed by a French engineer, and has proved one of the most successful forms of artificial irrigation. It has raised the waters of the Nile by 154 to 21 feet, and has irrigated 100,000 acres of Lower Egypt. There was in 1863 a heavy rise in the Nile, under which several parts of the Barrage gave way; but these were repaired, and the Barrage strengthened, and it resisted a heavier rise which occurred in 1866. —C. Millet, p. 23.

Barral. Hind. Himalayan sheep, the Ovis
ammon; the wild snow sheep of Kamaon and Garhwal. See Capra; Ovis.

BARRANKI. Tel. Trophi aspera, Retz.

BARRE. Hind. Safflower seed.

BARRIEN ISLAND, in lat. 12° 16' N., long. 93° 54' E., in the Bay of Bengal. It is a volcano of small extent, and covered with trees, except near the crater. It is a conspicuous object, and white scoriae are always visible, and sometimes smoke is to be seen. The cone is 975 feet above the sea level. The diameter of the island is 2970 yards, or 1¼ mile.

BARRIER REEF is a term usually applied to the vast reef which fronds the N.E. shore of Australia, also to that on the W. coast of New Caledonia; but the same kind of reef occurs off Tahiti, in the Society Archipelago and Caroline Archipelago. The great barrier reef, which runs north and south, at a distance of 7 to 18 miles, from the Queensland coast, is submered in parts generally to a shallow depth, with here and there a sandbank or island with vegetation, or a channel open to the sea. The water within the barrier reef is everywhere studded with islands, islets, coral banks, and hidden reefs. The Australian reef extends, with a few interruptions, for about 1100 miles, at from 20 to 90 miles distant from the land. The enclosed sea is from 10 to 60 fathoms deep, with a sandy bottom.

The barrier reef on the W. coast of New Caledonia is 400 miles long, and for many leagues seldom approaches within 8 miles of the shore. A barrier reef 33 miles long lies about two miles off the northern shore of Rossell Island.—Darwin; Moreby, p. 3.

BARRINGTONIA ACUTANGULA. Gartn.

Stravadium rubrum, D.C. | Eugenia racemosa, Linn.

Samandar Phal, HIND. Kanapa, Kanagi, BENG.

This large, handsome tree, with dark, scarlet-coloured flowers, belongs to the natural order Myrtaceae. In appearance it is like a well-shaped, regular, middle-sized oak; it flowers about the beginning of the wet season. It is met with in the hotter parts of Ceylon, up to no great elevation. It grows in Saharanpur, the Morung hills, Bengal, Chittagong, in both the peninsula of India, and is plentiful in the Tharawaddy district. The wood is of a red colour, hard, of a fine grain, used in constructing carts, and equivalent to mahogany, but tough to work, and short-grained. Dr. Massey says the tree is very abundant in the Tenasserim forests, of which it is a great ornament.

The seeds are used in native medicine.—Drs. Royle, Voigt; Roxb.; Th. Zeyl. ii. p. 119.

BARRINGTONIA RACEMOSA. Roxb.

Butonica sylvestris alba, R.; | Eugenia racemosa, L.
Samandra pana maram, MAL. | Deyamidella, SINGH.
Samstravadi, | Samandra pallam, TAM.

This stout timber tree is a native of Ceylon, where it grows in the warm, moist parts of the island up to an elevation of 1500 feet, also in the Moluccas, Penang, the delta of the Ganges, and Malabar. Its root is slightly bitter, and is considered by the Hindus to be aperient, cooling, and febrifuge.—Flora Andrica; Voigt; Thwaites; Roxburgh.

BARRINGTONIA SPECIOSA. Linn.

Butonica speciosa, Lam. | Maurnea Aristacea, L.

Kayai gye, BUM.

This large beautiful tree is a native of Ceylon, on the sea-shore between Galle and Matura; of the Tharawaddy districts of the Pegu forests, the Tenasserim Provinces, the Malay Archipelago, Singapore, the Moluccas, and the South Sea Islands. It is very plentiful in Pegu. Its wood is red, hard, of a fine grain, and equivalent to mahogany, and used in making carts. Aiming says its seeds are employed in Java for intoxicating fish.—Drs. O'Sh., M'Cull., Roxb., Voigt.

BARI TUKAR. HIND. Cajanus Indicus.

BARROW, a monumental heap erected as a grave mound over the dead of the Celtic and Scytheic races. The Romans styled this a tumulus. But it is not known that any such have been found south of the mountain range that runs from the Caspian sea to China. Raised to a considerable height, the barrow was a noble, and has been the most enduring, sepulchral monument. In such the remains of the departed were placed on the surface of the ground, and the earth heaped up. The Scriptures tell us that the body of the king of Ai, slain by Joshua, was placed at the entrance of the city, and over it was raised a great heap of stones. Herodotus mentions the barrow of Alyattes, king of Lydia, which has been identified by modern travellers. It was 1300 feet broad, and nearly a mile in circumference. Burial-places, surrounded by circles of stones, are found in the Nappur province, in the Nizam's territories, in the Coimbatore, Madura, and Neillgherry districts, in the hilly country of Chuttia Nappur, and in many places in great numbers. Those opened near Kanuppe contained iron implements, with broken pieces of pottery. The stones of those of Europe and India, have similar cup marks.—North American Review.

BARROW, JOHN, author of Travels in China. BARSANGA. BENG. Bergera Konigii, Linn.

BARSAT, HIND., PECS. Rain, rainy season. Barsati, scrofulous sores which break out on horses in the rainy season.

BART. HIND. of Kaghan. Prunus padus.

BARTAKOO. BENG. Solanum melongena.

BARTAM. MALAY. Eugenia sonniana, Griffith. A palm growing on the hills about Ching, Malacca, and Penang, used in Penang in making mats for the sides of houses, also for thatch, and for all the purposes to which those of the Nipa frutescens are applied.

BARTANG. HIND. Plantago major.

BARTH. HIND. A kind of alloyed metal.

BARTHI or BART, a Hindu fast-day, during which certain grains and pulses, called phalasa, are lawful food.

BARTHHEMA. Ludovic Bartheuma (Vartona), a native of Bologna who travelled in the east. He began his travels and visited Mecca in A.D. 1503, and in 1506 he visited Malacca.

BARTHOLOMEW DIAS had a squadron fitted out for him by John II. of Portugal, and, setting sail in August 1486, was the first who rounded that famous cape to which, from the storms he encountered, he gave the name of Cabo dos Tornementos, or Cabo Tornementosa.—India in the 15th Century. See Dias.

BARIHUA. HIND. Hymenodictyon excelsa.

BARTOLOMEO. Fra Paolo da San Bartolomeo, born at Hof, in Austria, A.D. 1748, a bare
footed Carmelite, a member of the Academy of Velitti, and Professor of Oriental Languages in the Propaganda at Rome. He resided in different parts of the East Indies between 1776 and 1789, and wrote his Voyage to the East Indies, with an Account of the Manners, Customs, etc. of the Natives, and a Geographical Description of the Country, which was printed at Rome in 1796, a German edition at Berlin in 1798, and in London, by W. Johnston, in English in 1800. His name prior to embracing a monastic life was John Philip Wesdin. He published a Sanskrit Grammar at Rome in 1794. His travels were chiefly along the Coromandel coast.

BARNDI, Mahi, Morinda citrifolia.

BARTONDI, also called Daron. HIND. Gunpowder.

BARZHA, HIND. A rare plant, belonging to the family of Solanaceae, having white flowers, and a sweet odour.

BARTHARI, the author of a metrical Sanskrit grammar. His aphorisms are entitled Karika.

BARTUNG, seed of a bush, brought to Amur from Delhi, considered cooling and astrin- gent, used in sherbets in diarrhoea.—*Med. Top.*

BARU. MALAY. Kawal, JAVAN. A gossamer-like substance, found at the base of the petals of the gomuti palm, the Arenga saccharifera. It is imported into China, where it is applied like oakum for caulking, also for tinder.

BASANTI, king of Persia, contemporary of the emperor Justinian. He translated into Pehlevi the Pan- chatantra or Hitopadesa, the source of the Kalila o Dunma. He travelled to India, got the book, and also brought back translations of medical books. He declined all rewards except a dress of honour, and only stipulated that an account of his life and opinions should be added to the book. The account is a kind of 'religio medici' of the 6th century, and shows us a soul dissatisfied with traditions and formularies, striving after truth. Fardusi, in his Shah Namah, gives a somewhat different account of Barzuyeh. In a preface of later date by Ali, son of Alshah Faresi, the names of Bidziz and Namahelshin are mentioned.—*Chips, iii. and iv.* p. 168.

BAS. HIND. A perfume, or a disagreeable odour. Basi, smelling, putrid, stale. Badbas, bad smell.

BASAAL. MALEAL. Embelia baseal, D. C.

BASALT, a rock of the older volcanic series, of a black colour, and homogeneous in appearance, containing 91-2 per cent. of silica, alumina, and oxide of iron. It occurs, columnar, in several parts of British India, in the great volcanic tract of the Dekhan, at the hill fort of Gawilghur, and on the banks of the Nerbudda. That vast volcanic formation extends over more than 200,000 square miles, and contains, breaks up, or alters all the other rocks from beneath which it has forced its way. South of the Godavery, basaltic dykes burnt through granite, argente, porphyry, gneiss, hornblende-slate, generally with an east and west direction.—*Colonel Sykes; Carter's Geol.; Western India.*

BASANT or Basanta. HIND. The spring-time. The Suevi, or Suiones, erected a celebrated temple at Upsala, in which they placed the statues of Thor, Woden, and Friya, the triple divinity of the Scandinavian Asi, the Tri-urnti of the Solar and Lunar races. Thor, the thunderer, or god of war, is the analogue of Har, or Mahadeva, the de- stroyer; Woden is Buddha, the preserver; and Friya is Oonnia, the creative power. The grand festival to Friya was in spring, when all nature revived; then boars were offered to her by the Scandi- navians, and boars of paste were made and eaten by the penansary. Similarly, Vasanti, or spring personified, the consort of Har, is still worshipped by the Rajput, who opens the season with a grand hunt, led by the prince and his vassal chiefs, when they chase, slay, and eat the boar. Personal danger is disregarded on this day, as want of success is ominous that the Great Mother will refuse all petitions throughout the year. In Tamil countries, on the day that the sun enters Aries, bands of twelve young women, of the non-Hindu races, persecute the streets. They have a basket of shavings which they surround, and bending low they circumambulate, clapping their hands and singing; in this they represent the twelve signs of the zodiac, with the sun in the centre.—*Tod.*

BASANTI. HIND. A bright, pale lemon-yellow colour, the favourite colour of Krishna; also the yellow garment worn by Hindu religious mendicants, also by Rajputs when about to sacrifice themselves in a hopeless conflict. This forlorn hope is termed the jathar.

Basant-mail Surkh, yellow colour with crimson tint. Basanti-Panchmi, a Hindu seasonal festival.
about the 9th February, in honour of Basanth, the spring, in Hindu mythology personified, and
an attendant of Kama, the god of love. The
basanth or spring songs, and the megh or cloud
songs of the monsoon, are full of melody. A spring
festival is observed at Lucknow. See Vassanth.

BASED. HIND. Goods, property. Basati,
pedlar’s wares, pins, looking-glasses, antimony,
pumice boxes, etc.

BA-SAUH. Tin. A cross between a bull and
a yak cow.

BASEVA. In the south-west of the Peninsula,
about the 12th century, there sprang up a new
saiva sect, between whom and the followers of
Ramanuja a religious war was carried on, during
which the raja of Kalyan was killed, and his
capital destroyed. The founder of the new sect
was Basava, son of a saiva Brahman. While yet
a boy, he refused to assume the sacred thread,
because the initiatory rites required adoration of
the sun; and in A.D. 1135 he fled from his home,
accompanied by his sister, to Kalyan, the capital
of Karnatika, whose ruler was of the Jaina reli-

gion. Here he joined his maternal uncle, a
Brahman, and the raja’s minister, who gave him
employment, also gave him his daughter in mar-
riage, and Basava became prime minister on his
uncle’s death. He had great influence over his
king, to whom he is said to have lent his sister.
He spared no efforts to extend the views of his
sect, and the bulk of the people from north of
Kalyan to Mysore adhered to him. But King
Bajal opposed the movement, and was assassinated
by two fanatics, on which the Kalyan kingdom
closed. The views put forward by Basava were
to change the worship of Siva. The linga, as
an emblem of Siva, was always to be worn on
the person, and called Jangama Linga, or loco-
motive linga, or living linga, in contradistinc-
tion to the linga erected in the Saiva temples,
called Shavara Linga, or the stationary linga.
Basava inculcated the doctrine of the equality of all
men; that the distinctions of castes were brahmanal
institutions; that man is the living temple of the
deity; that women should be protected, and per-
mitted to teach their doctrines, unchasteness alone
causing her to forfeit her claims to respect. Basava
is said to have disappeared at a Saiva lingam
temple, at the Kapila confluence of the Kistna
and Malparba, but his sister’s son, Chinn Basava,
extended the sect. His followers are known as the
Jangam sect, also Lingaet, Lingadhara, Linga-
want, and Linghamat. They are Vira-Saiva
Hindus, holding the doctrine of the Aradhyas
Brahmans, and carry the lingam enclosed in a
gold or silver casket suspended from the neck,
or bound round their arms, folded in a cloth or
handkerchief. Nearly all the Hindus speaking
Canarese are of this sect, and their numbers may
be estimated at about 6,000,000. They are almost
exclusively engaged in civil vocations, and are
rigid vegetarians. They are perhaps the most
bigoted of all the Hindu sects. In their early
career they persecuted the Jaina sect. — Dowson;
Garrett.

BASAVA, the name of Nandi, the sacred
Vahan bull of Siva, in Canarese.

BASAVI. TEL. The Murli of the Mahrratras;
Deva-Dass women devoted to the gods in the
Hindu temples. The Basavi women are usually
devoted to the god Siva, and become prostitutes.

But they are also called Linga Basavi, or Garudu
Basavi, according as they are devoted to one or
other deity. They are called also Jogni, also Murli,
and are married sometimes to a knife, sometimes
to an idol. In many parts of the south of India, the
low non-Aryan castes thus devote their young
women, in order that they may follow prostitution
openly, under the cloak of a religious rite, and
they are very numerous in the Canarese, Maharati,
and Telugu countries. It is not easy to trace the
origin of this custom; but in the Myletta festivals,
which were connected with the worship of Basal
or Moloch, the women, as slaves to the goddess,
were obliged to purchase exemption from being
sacrificed, by prostitution. Almost all the Jewish
prophets down to Jeremiah complain that this
service was carried on in the high places by the
Murli.

BASDEO, a kinsman of Krishna.

it, as far east as the confines of Kunwar. The valley of the Sutlej, in the western part of Basha-
hir, from Rampur downwards, has an elevation of little more than 3000 feet, Rampur, 140 feet
above the bed of the river, being 3400 feet above the level of the sea. The river at the height of
the rains is an impetuous torrent of great size.—

BASMA.

BASOTI. Turk. A commander, Minbashi of 1000, Oobashi of 10, and Yuzbashi of 100 horse-
men. Bashli-bazook, irregular cavalry, called Hyta along the valley of the Tigris and at Mosul,
and Bashi-bazook in Roumelia and Anatolia. They are collected from all classes and provinces.
The Hyta-bashi, or chief of the Hyta, is furnished with tazkara orders for pay and provisions for
from four or five hundred to a thousand or more horsemen. They find their own arms and horses,
although sometimes they are furnished by the Hyta-Bashi, who deducts a part of their pay until
he reimburses himself. The best Hyta are Arba-

BASHAN.

mian, Malay. The Malay is the ancient province, and has probably been the seat of many
small, numerous tribes. It has no precise geographical limits, and the inhabitants are

BASHAN of Scripture, the modern Hauran.

BA-SHARRA. ARAB. HIND. According to law, a sect of fakirs.

BASHI. Turk. A commander, Minbashi of 1000, Oobashi of 10, and Yuzbashi of 100 horse-
men. Bashli-bazook, irregular cavalry, called Hyta along the valley of the Tigris and at Mosul,
and Bashi-bazook in Roumelia and Anatolia. They are collected from all classes and provinces.

BASPA RIVER, an impetuous stream, a feeder of the Ganges. It runs in a beautiful valley. The
climate is intermediate between the dry one of Spiti and the moist one of Garhwal.—Cleg. Panj.
BASSAII.

BASSRAH, or Bassora, in lat. 30° 30' N., long. 47° 33' E., a town in the province of Baghdad, on the right bank of the Shatt-ul-Arab. It has about 12,000 inhabitants. It is built on a canal, about 14 miles from the river. The banks are fringed with walnut, apple, mulberry, apricot trees. It is called by the Arabs Al-Sura, from Be-al-Sura, signifying the stone on which it is built. Khaliif Omar, in a.H. 15, wishing to combine the commerce of India, Persia, and Arabia, and secure that of Sind and Gujerat, laid the foundation of this place near to the confluence of the Euphrates and Tigris. The united stream, called the Shatt-ul-Arab, empties itself at the distance of 80 miles into the Persian Gulf, and commands the navigation of the surrounding countries with the coast of India. The site of Bassrah is low, and from this circumstance is much subject to inundation when the river overflows its banks. Caravans of Persia and Arabia, and merchants from all nations, resorted here for the sake of traffic.—Greeks, Jews, Armenians, Banyans, and Moors.

BASSAD. Arab. Coral.

BASSADORE POINT is the N.W. extremity of Kishm, in lat. 26° 39' N., long. 55° 22' E. It was once a flourishing settlement of the Portuguese. It was made the headquarters of the Indian Naval Squadron in the Persian Gulf in 1824, and continued so until 1864, when that service was abolished.—McGregor, iv. p. 67.

BASSANA. Hind. Agati grandiflora.

BASSANT DENDIU of Beus. Hypericum perforatum, L.

BASSAR. Hind. of Kanawar and along the Satlej. Capparis spinosa; European eaper.

BASSARI MARA. Can. Ficus infectoria.

BASSEIN, a town on the banks of the western branch in the Irawadi delta, in lat. 16° 46' N., and long. 94° 48' 10" E. It names one of the revenue districts of British Burma, with an area of 6517 square miles, pop. 322,689 souls. The Bassein creek is subject to the bore; the creek joins the Rangoon and China Buckne rivers.

BASSEIN (properly Wasi), a town and port in India, in long. 72° 51' 20" E., lat. 19° 20' 20" N. The mouth of the river is in lat. 19° 18' N., long. 72° 49' E. Bassein is an ancient and now desolate city, 30 miles from Bombay, on the Gora Bunder river. The old fort of Bassein was built by the Portuguese in the early part of the 16th century; it was taken after a protracted siege by the Maharrats in 1739, and by them utterly devastated. In 1780 it was captured by General Goddard, but in 1782 restored; and in 1818, on the defeat of Baji Rao, it was again resumed. Pop. 3356.

BASSES. The Great Basses, called Kaman-Paz by the natives of India, is the name of a ledge of silicious limestone rocks, nearly a mile in extent, elevated a few feet above water, on which the sea breaks very high in bad weather. According to native tradition, a mangoda of brass was formerly erected thereon; but at present only a long flat rock appears, which is completely covered when the surge runs high. This dangerous ledge is about 9 miles from the shore, in lat. 6° 10' 5" N., long. 81° 28' E. There is a safe channel between it and the main, with about 7 to 14 fathoms. The Little Basses are in lat. 6° 24' 4" N., long. 81° 54' E., and 21 miles N.E. 1/2 E. from the Great Basses. They consist of a ledge of rocks a little above water, with others contiguous, and struggling rocks projecting under water a great way from the dry ledge. It is distant from the shore 6 or 7 miles; the channel inside the Little Basses is not safe for large ships. The Basses are believed to be the remains of the great island of Giri, swallowed up by the sea (Mahanawso, ch. i. p. 4). They may possibly be the Basse of Tolyenia's map of Taprobane.—Hors.; Tenanit. Ceylon, p. 309.

BASSIA, a genus of plants of the natural order Sapotaeeae. B. Parkii, Dow, is an African tree; Bl. of the Mauritiuss; and B. cuneata, Bl. of a tree of Java. —Dr. Marn.

BASSIA BUTYRAGEA. Rooh, Butter tree. Falwa; Phalawara, Hind. Yel-pote, Euphor.

This tree has smallish white flowers, grows on the Almora hills, in Nepal, and also in the lower hills and warm valleys of eastern Kamaon. Extreme height 30 feet, with large unbranched foliage. Timber light and unessential. Its fruit is eaten by some. The product that has commercial value is the solid oil which is expressed from the kernels,—a beautiful white, solid fat. The kernels are bruised into the consistence of cream, put into a cloth bag, and a stone put on the top to express the oil, which immediately hardens, and is of a delicate white colour, but melts at a temperature above 120° Fahr. It is used as a lubricant in rheumatism. It keeps for months. In Kohilkhand sugar is obtained from this tree.—Rooh.; O'Sha: Royale, H. H. Bot.; Exh., 1862; Voigt; Hooker, Hinn. Journ. See Shea Butter; Vegetable Butter.

Pachonta, ... Can. Pausenthula Pala, ... Tam.

A majestic tree, 100 feet high, and up to 12 feet in girth, common in the mountain shola of the Western Ghats of Madras, up to 3000 or 4000 feet. The timber is hard, not unlike sal in its grain, and takes a good polish. It is much employed by planters for building purposes, and might be used for furniture. A sort of gutta exudes from the trunk, which is known as pala gum, or Indian gutta-percha. It might be used as a bird-line, or for encasing telegraph wires.—Cleghorn's Foresta; Beddome, Fl. Syl., p. 43.

BASSIA GRANDIS. Thw.

Ionandra grandis, Thw. Meeris, ... Singh.

A very large tree in Ceylon, Central Provinces, and Saffragram district, at an elevation of 36,000 feet. The seeds yield an oil similar to that of Bassia longifolia.—Beddome, Fl. Syl., p. 254.

BASSIA LATIFOLIA. Wild. Mahwa tree. Mahula, ... Beng. Madhuka, ... Sansk.

Mahwa, ... Beng., Hind. Kasthlipe, ... Tam.

Moho, ... Marh., English, ... Tel.

Pomana, ... Marh. Lippa chatta, ... Engl.

This tree grows in the mountainous parts of the Cireacs, in Bengal, the Terai, Oudh, Gwalior, Panjab, Malwa, Nagpur, and Gujerat. It is planted near the Oudh villages in groves. The tree is common all over the Bombay jungles, both on the coast and above the ghats. It is abundant in parts of the Nurpur pargana of the Kangra district, where the two small taluks of Man derive their name from the prevalence of the tree. This tree attains a height of 50 feet and a girth of 12 feet. A cubic foot unseasoned weighs 77 to 80 lbs., and 60 lbs. when seasoned; its sp. gr. 1'056. In the Cireacs it is never felled.
by the natives, and it is also preserved in Nagpur, on account of its large flaky flowers, which are dried and eaten raw by the hill tribes, and are fermented and used in distilling mahwa arrack. The flowers in the Panjab sell at 50 seers the rupee for this purpose. The flowers are sweet-tasted. It flowers in the hot season. Jackals are particularly fond of them. They fall spontaneously as they ripen, and are gathered and dried by a few days’ exposure in the sun; when thus prepared, they much resemble a dried grape, both in taste and flavour. Either eaten raw or dressed, they afford a wholesome, strengthening food.

Mahwa oil, obtained from the kernels of the fruit, is sold at 95%, is an article of common consumption in India, and may often be met with under the names of Mowha or Yallah oil in the London market. The cost of the oil extracted is 5 rupees per maund. The proportion of oil yielded by native processes is about half the weight of the seed; it so much resembles ghee, or clarified butter, that, being cheaper, it is often mixed with that commodity, and used in victuals. It is burned in lamps, and applied externally as a remedy for wounds and all cutaneous eruptions. The timber in Nagpur is from 10 to 20 feet long, and in girth 4 or 6 feet; and attains its full size in 80 years. The character of its wood seems to vary in different localities. In the Panjab, its wood is described as of a cinnamon colour, hard, close-grained, heavy, and durable, and good for building purposes. Captain Sankey says that in Nagpur it is of a pinkish colour, and weak; while, from being invariably rotten at the heart, 4 to 6 inches square of really good sound timber is all that can be reckoned on, and it is eagerly devoured by white ants. Dr. Gibson, however, says that the wood, particularly the large logs brought from the Buria forest and Kum hill-forests, is extensively used for house and cart purposes in Gujerat, but seldom appears in the market in Bombay. Mr. Powell says that the tree gives a good and durable wood, but small; and though not abundant in the Panjab, the wood is hard and strong, and in request for navies of vessels, carriages, etc.—Rozh.; Vogt; Birdwood; Exch., 1862; Powell’s Panjab; Cleghorn’s Report.

**BASSIA LONGIFOLIA.** *Willd.* Wild sapota.

Kan-Zau, ... **BURM.** Enna Karriar maram? **TAM.** Ellupi, ... **MALEAL.** Yappa? **JPA;** Pinda, **TEL.** Mi-gass; **TEL-M.** Singh. Oodooga of. **WYNAD.** Ilupa. **ELPA,** **TAM.**

This good-sized tree attains to a height of 50 feet and 6 feet in girth. It grows in the hotter parts of Ceylon, especially in native gardens, in Coimbatore, on the Malabar coast, in the Wynad, in the Bombay forests north of the Goa border, and in plantations along the southern coast of Coromandel. The wood is ideal for Bassia furniture, but its leaves are narrow, and its flowers much more flaky. It flowers in the month of May, and the seed ripens in August and September. The oil stains linen or woollen cloth as animal oil does; the fatty substance of B. butyraea, when rubbed on cloth, leaves no trace behind. The wood is as hard and durable as teak-wood, but not so easily worked; nor is it procurable of such a length for beams and planks, except on clay ground, where it grows to a considerable height, but in such a soil does not produce so many branches, and is less fruitful than when in a sandy or mixed soil. They require little attention and watering, and being of so great use, there should be plantations of them on high and sandy grounds, where no other fruit trees will grow. A cubic foot when unseasoned weighs 70 to 75 lbs., and when seasoned 60 lbs.; sp. gr. 0.960. Mr. Rohde says that Jppli wood of the Telugu country is valued for keels of ships, and for planking below the water line. Exposed to the wind and sun in the log, it rends into strips, but it is considered a good wood for treenails, for platform carts, and for the more substantial parts of furniture, and it is comparatively free from the attacks of the Teredo navalis. In the Wynad it is an ordinary-sized tree, and its wood is much used in the construction of carts, where great strength is called for. In Ceylon its wood is said to last from 90 to 120 years, weighs 61 lbs. to the cubic foot; and is there used as keels for chonies, for bridges, and in house-building. The seeds contain about 60 per cent. of oil of a bright yellow colour; 12 lbs. of seed, in the ordinary native rude way of expressing, produce 2 gallons (English) of oil. The oil or its seed might form an important article of export. It makes excellent candles and soap. Its chief use is, however, for burning in lamps, and when fresh, as a substitute for butter in native cookery. In medicine, the oil is used externally to cure cutaneous disorders; and the leaves, milk of the green fruit, and bark, are boiled in water and used as a remedy in rheumatism.—Dr. Wight, Cleghorn, Roxb.; Thei. iii. p. 175; Beddome.

**BASSIA PARKII,** the Shea tree or Stea tree of Africa, called also the African butter plant, might be introduced into India. A solid oil is obtained from its fruits by drying them in the sun, and then boiling them in vessels in water.—V. 1784, iii. 190, 727.

**BAST.** Pers. From bāstān, to fasten, a sanctuary, a refuge. Like Kedesh of Galilee, Shechem of Samaria, and Hebron in Judea, the sanctuaries of Kumm, and the Great Mosque in particular, are famous places of refuge (or bāst, as it is termed) for all persons who have committed crimes, or fallen under the royal-displeasure. Such is the sanctity of the holy Fatima’s mosque, that the king himself dare not arrest a criminal who has there sought protection. The Persian custom of bast somewhat resembles that of the Jewish cities of refuge, the Alsatia of London, the precincts of Holyrood at Edinburgh and Westminster, etc. The custom prevailing in the East, of having places of asylum, owes its origin probably to the Mosaic law concerning the six cities of refuge. Formally the whole mahalāh, or quarter of Bībad, was reckoned bast, or sacred. The principal mosque, the stables of the king and nobles, and place of residence of the king, from 3°17’ N., long. 50°29’ E., is a ruined town in Irak-I-Ajam, in Persia, 80 miles on the road from Teheran to Isfahan. It was taken by the Afghans in 1772. The tomb of the sister of Imam Raza is there, its bars of solid silver and gates gold plated. Kum is the most celebrated of the sanctuaries of Persia, and Shias frequently fly to it for shelter.—Morier; Kininer; K. Abbott; Malcolm; Ouseley; Taylor; MacGr. iv. p. 276; De Bode’s Trav.

**BAST.** is the Sha of the Burmese, and Nar, Hind., Tam., Tel. The bast of plants is the liber or cellular tissue, consisting of tough elongated vessels.
which can often be separated and converted into fibrous material, and made useful for cordage and matting. That best known to Europe is a product of Russia, and obtained from the lime or linden tree, the Tilia Europea, and converted into mats and shoes. In the East Indies, species of gewia, of hibiscus, and of mulberry, are remarkable for this product; and the Theng-ban-sha, the Pa-tha-you-sha, the Sha-phyu, the Ngau-tsoung-sha, Sha-nee, and Eewg-ot-sha are basts of Arakan. The basts of Akyab and Burma are Heng-kyo-sha, Dam-sha, Thanot-sha, Wapeelo-sha, and Sha-yong, and others, all used in preparing cordage for boats, nets, etc.; wholesale market price, 2 rupees 8 annas per maund, and all are of the inner bark of large trees. The Sha-nee, Sha-phyu, and Theng-ban-sha of Akyab are more plentiful, and used in preparing cordage for boats, nets, etc., and wholesale market price, 1 rupee 12 annas per maund. The Guand-young-sha of Akyab is used for cables and strong nets, the whole and net price being 3 rupees 2 annas per maund; and all these fibre are much used by the inhabitants of that province.

The Glam tree bark is from the Melaleuca viridiflora, Malaysia. The Talee trap (Artocarpus, sp.) is used for fishing-nets at Hassang.

The Talee Taras is of Singapore; and there is a bast used as twine in Siam.

The bark cloth of the Malay Peninsula and Keda is manufactured by the Semang, an oriental Negro tribe; and that of the Celebes (Kaili) is made from the bark of the paper mulberry. Mr. Jaffrey, at the Madras Exhibition of 1857, exhibited a very powerful bast from the Eriodendron anfractuosum. A bast or nar from Acacia robusta, has been used for all purposes to which Russian bast is applied in gardens in Europe. The material is strong, tough, and durable, also pliable when wetted; this bast could be procured cheaply and in large quantities, as the roots, when the trees are cut down, throw up numerous young shoots to the height of from 6 to 12 feet in one year. The bark of this tree is also a powerful tan.

BASTAK, a febrile state, situated between lat. 20° 37' and 17° 40' N., and long. 80° 18' and 82° 21' E., and 170 miles east and 120 miles broad, with an area of 13,062 square miles, and 78,856 souls. The people chiefly Gond. The raja is of a very ancient family, and claims to be of the purest Rajput blood. In Bastar, the leaf-ordeal is followed by sewing up the accused in a sack, and letting him down into water waist deep; if he manage in his struggles for life to raise his head above water, he is finally adjudged to be guilty. Then comes the punishment. The extraction of the teeth is said in Bastar to be effected with the idea of preventing the witch from muttering charms; but in Kamaon the object of the operation is rather to prevent her from doing mischief under the form of a tiger, which is the Indian equivalent of the loup-garou. The people are little advanced in civilization. The Gond are the most numerous; the deities are Dantawari or Mauli, also Mata. Human sacrifices were made to the former, but since 1842 arrangements to prevent such have been adopted. The dress of the Gadwa women is very peculiar.

BASTAR. Hind. Callicarpa lausa.

BASTAR, an Anglo-Indian term employed to designate some plants and animals which have resemblance to others;

Bastard Aloe, Agave viripara.
Bastard Cedar, Cedrela tonsa; Guazuma tonentosa; Chicklassia tabularis; Symmondsia ferruginea.
Bastard Ebony, in Ceylon, is their Kadamp-Beriy, probably a species of Dalbergia.
Bastard Floriken, one of the smaller species of bastard, the genus Otis.
Bastard Mahogany, Cedrela toona.
Bastard Poon, Sterculia fistida.
Bastard Sago Palm, Caryota urens.
Bastard Teak, Chiri Toku, Tel., is a term applied to the Erythrina Indica, Lam., or 'Moochy wood,' on the Nargi hills. The Ŷándail give it to Dillery (now Wormia) bracteata, W. i. 358, and it is given also to Butea frondosa; in Bombay the Ban-Teak or Ben-Teak (literally wild teak), being the Lagerstramia microcarpa.

BASTI. Hind. A hamlet, a village, a town, from Basna, to inhabit; a Jain temple.—Elliott.
BASTINADO, the Felēk of Egypt, or ChobKhurdu, literally stiching-stick, of the Persians.
BASTIA, Hind. Callicarpa lausa.
BASU, Beng. An honorific suffix in Bengal to Kayasth families, which Anglo-Indians pronounce Bhose. See Kayasth.
BASUK, Beng. Adhatoda vasicum.
BASUNTEE, Beng. Hiptage madabolta.
BASWAPUR. See Diamond.

The bat is mentioned in Lev. xi. 19, Dent. xiv. 18, Isa. ii. 20, and Baruch vii. 22, and is generally referred to as an unclean animal, or as illustrative of ungodly things. With the Chinese the bats are regarded as creatures of good omen; and they believe that by eating preparations made of the bat, the eater will acquire the long life and excellent eyesight of the animal. The fruit bats (Pteropus), or flying foxes, as they are often called, constitute a well-marked section of the bats belonging to the warmer parts of the old World. They are frugivorous, and do great damage in gardens and plantations. The families and genera of the Cheiroptera of South-Eastern Asia are arranged by naturalists as under:—

FAM. Pteropoliadae; Genus, cynopterus, pteropus.
FAM. Vampyridae; Genus, euclops, hippociderus, megadaras, rhinolophus, rhinopoma.
FAM. Nocteolobiidae; Genus, nyctinomus, taphous.
FAM. Pteropoliidae; Genus, pteropus, barbastellus, kerr- voula, lasius, murini, myotis, noctulinia nyctophilus, nictitecias, plecotus, scotophilus, vespertilio.

Some bats of Ceylon, as Rhinolophus affinis, var. rubidus, Kelvar, Hipposideros murinus, var. fulgens, Kelvar, also H. speoris, var. aureus, Kelvar, have brilliant colours,—bright yellow, deep orange, and a rich ferruginous brown inclining to red. The Pteropus Edwardsi, Geoff., is eaten by natives of India and Ceylon, and its flesh is said to resemble that of the hare.

Of nine species of bats sent by Captain Hutton from Missouri, four were European, and included in the Fauna Britannica. These were Barbarostelus communis, Gray, Myotis murinus, Geoff., M. pipigremis, Schilder, and Scotophilus serotinus, Schild. See Cheiroptera; Mammals.
BATAVIA.

Batavia, the ancient Jakatra, situated on the banks of the large river Tjil-ji-wung in Java, has always been the capital of the Dutch possessions. The islands of Java and Madura in 1880 had a population of 19,797,077 souls, 19,542,835 being indians, 10,528 Arabs, and 906,914 Chinese; and Batavia district, 941,347. Batavia town is in lat. 6° 9' S., long. 106° 51' E., 60 miles E.S.E. of the Straits of Sunda. Batavia was founded by the Dutch in 1619. It was taken by a British force from India in 1811, but restored in August 1816. It is the residence of the Governor-General of Netherland India, is defended by a citadel and a large garrison, and has an extensive marine arsenal. The bay and harbour are well adapted for commerce, and a considerable trade is carried on in pepper, rice, sugar, coffee, indigo, spices, hides, and teak-wood. The chief imports are opium and piece-goods. The anchorage is sheltered by the islands at the mouth of the bay. — J. Ind. Arch.; Bikmore, p. 56.

Batanya, the natives are well-proportioned, of a copper colour, and medium stature. They are very ugly; their hair is black, and cut short. Their usual dress consists of a piece of cotton passed round the loins, and a peculiar-looking conical hat, surmounted with a tuft of goat's hair. In rainy weather they wear a cloak of rushes, through which the water cannot penetrate. The sole covering of the women is a piece of cotton cloth, fastened below the bosom, and reaching down to the knee. — Maryat, Ind. Archip. p. 26.

BATHING.

BATCHIAN, a large island fronting the S.W. part of Gilolo. It is about 52 miles long by 20, and is separated from Gilolo only by a narrow strait. Oki, Batchian, and the three southern peninsulas of Gilolo, possess no true indigenous population. The Batchian Malays differ very little from those of Ternate. Their language, however, has more of the Papuan element in it, with a mixture of pure Malay, showing that they are formed from stragglers of various races. The Orang Sirani (qu. Nasrani or Suryani) are Christians of Portuguese descent, like those of Ternate. Many of these have a Portuguese physiognomy, but their skin is generally darker than that of the Portuguese. They speak Malay, with a large number of Portuguese words and idioms. A third race is the Galeas men from Gilolo; and a fourth race is a colony from Timor, in the eastern peninsula of Celebes. They have a very light complexion, open Tartar physiognomy, low stature, and a language of the Bugis type. They are an industrious agricultural people, and supply the town with vegetables. They make a good deal of bark cloth, similar to the tapi of the Polynesian. A cylinder of bark is taken off and soaked and beaten till it be as thin and as tough as parchment. It is used for wrapping up clothes; also dyed with a bark dye, and sewed into jackets. The Orang Sirani are very fond of dancing. In three hundred years they have changed their language and lost all knowledge of their nationality, but in manners and appearance they are almost pure Portuguese. Everywhere in the east, where the Portuguese have mixed with the native races, the offspring are darker in colour than either of the parent stocks. This is the case with the Orang Sirani, and with the Portuguese of Malacca. This is not the case in South America, where the Macabees, the offspring of the Portuguese and Indian, is often fairer than either race, but always fairer than the Indian. Batchian is the most eastern point in the globe inhabited by any of the quadrumana. Cycnothece nigreens, found all over the Celebes, is abundant in some parts of the forest of Batchian. Casseau ornatus, gray, the Belidens ariel, or little flying opossum, and the civet cat, Viverra zebetha, Wall., are found in Batchian. Carpodapha persicicollata is the great green pigeon. Semiportera Wallacea, gray, is a paradise bird; the general olive plumage of the male is very sober, but it has a pair of white feathers about six inches long sticking out straight from each shoulder, and the crown of the head is glossy, and pale metallic violet. Lusus garrulus, a red lory; Charmosyna placenta, little forkeet; Goeffryrea cyanically, a green bird of the parrot tribe; Excrustus azureus, a deep blue roller; Nectarina auriceps, a golden-capped sun-bird; Tanyptera Isis, racquet-tailed kingfisher. Nicobar pigeon occurs in Batchian, New Guinea, the Kaia islands, and in small islands near Macassar and Java. Batarctostomus cinerinos, a great-scooter of Batchian and Moluccas. Among insects, the Pieris aruna, a fine butterfly of a rich chromo colour. Megachile pluto, Smith, a wasp-like insect with immense jaws, like a stag beetle.

Batchian has gold, copper, and coal; hot springs and geysers occur in it. It consists of sedimentary and volcanic rocks and coralline limestone, with alluvial plains. The hills are abrupt, and mountains lofty; the climate moist, and a grand and luxuriant vegetation.—Bikmore, 299; Wallace, ii. 19, 23.

BATE, also written Beye, or Pirate's Isle, a low island of considerable size, forming the extreme northerly point of the Saumatra peninsula, in lat. 22° 24' N., and long. 99° 20' E. Even at the Greek invasion, the Sungara of Bate were daring, reckless pirates, notorious men steeped in crime, and hardened in defiance of all human law. According to the mythological hero-worship of the Hindus, it was in Bate that Krishna or Kanya acted the part of the Pythian Apollo, and redeemed the sacred books, slaying his hydra foe the Takshas, who had purloined and concealed them in one of those gigantic shells whence the island has its name.—Posters' Western India, ii. 4, 5.

BATELA or Botilla, on the Malabar coast, a coating (one-masted) sloop of 30 to 85 tons burden; the Batela of Sind is described as a flat-bottomed boat.

BATHING.

Sar Nahana, Ghussal, Hix. | St'n'anam, | Tal., Tel. | Hamaan lens, | Abi-angana, |... |... |... |... |... |... |... |...

Bathing amongst the Jews, Mahomedans, and Hindus, is a religious rite; and in Turkey, Egypt, and Persia, public baths are established in the principal cities. Mahomedans have two kinds of ablution, or lustration; the 'Ghussal,' or legal washing, is for all classes, after any kind of bodily uncleanness, such as the polluting nocturna, menses, coitus or child-birth, for until purified it is unlawful to eat, pray, touch the Koran, or go to the mosque. If the legal Ghussal be not conceded, nevertheless, before prayer, the Wazzu or washing, in a prescribed manner, of the face, hands, and feet is indispensable. It occupies two or three minutes. The Wazzu is only adopted when any minor cause of impurity, as in performing the natural functions, has occurred. Where water is not to be had, the Tycamum, or rubbing the face, legs, and hands with fine dust or dry sand, suffices. In Persia, periods are allotted for women to go to the bath. Ouseley notices that the bath-horn, Buq-i-Hamam, is sounded to announce that the city baths are heated and open for the reception of women,—this bath trumpet being sometimes a horn, sometimes a conch shell. In British India there are no warm baths, either for Hindus or Mahomedans; in the larger towns, and in club-houses, there are a few private swimming baths for Europeans. Hindus generally resort to a river-side or tank; and Mahomedans and the Christians bathe in their own enclosures.

The priests of ancient Egypt purified themselves by bathing in the morning in the waters of the Nile. The story of the Jews is described in Mark vii. 2-5, where he mentions that when the Pharisees saw some of the 'disciples eat with unwashed hands they found fault; for the Pharisees and all the Jews, except they wash their hands oft, eat not, holding the tradition of the elders. And when they come from the market, except they wash, they eat not; and many other things there be, which they have received to hold, as the washing of pots and pans, brazen vessels, and of tables.' And up to the present hour the Hindu ritual is almost identical.

The Hindu purification after child-birth is performed on the 16th day; Mahomedans adhere to the Hebrew forty days. The Hindu
BATHO.

Sth'nanam is ordinarily performed once daily, in the early morning, their evening ablution not involving the head, but from the neck. The Abhiangana Sth'nanam of the Hindus is that, generally twice a week, in which the head is anointed with oil, and corresponds to the anointing of the Jewish ceremonial, and to the Indian Mahomedan's Sar-Nahana, or head-washing, of which perhaps the initiatory head-washing rite of certain craftsmen in Great Britain is a remnant, as possibly may, similarly, be the feet-washing as a marriage ceremony. In Britain, the bride’s feet are washed; and in the south of India the engaged couple wash each other after the ceremony (pali-kal-kazhu-viradu, Tamil) of washing his intended father-in-law’s feet. Along the banks of the Ganges at every large place, crowds of nude men and women are to be seen at certain hours of the day, bathing close together. Mr. Layard tells us that amongst the Tiyari of the Nestorians, the girls and women bathe, unrestrained by the presence of men, in the streams or at the doors of their houses. In Japan there are bathing-houses, in which, at Hakodadi, both men and women of the lower ranks assemble. Mr. Hodgson tells us that on one occasion, at Yodo, the bathers of both sexes indiscriminately sallied out to see them pass. When Mr. Aitoeck went, preceded by a band of music, to the Governor’s Yamun, all the bathers of both sexes came out, to gratify their curiosity by a good long gaze on the novel spectacle. Amongst the Maori of New Zealand, both sexes bathe together in the hot waters of the volcanic regions.

The functions of the skin cannot be preserved in healthy activity, nor the changes of climate effectually guarded against, without the frequent use of the bath. The warm, tepid, cold, or shower bath, as a means of preserving health, ought to be in as common use as a change of apparel. On a large scale, baths are economically heated by steam. The sickly, the aged, the weak, and the intemperate should avoid the use of the cold bath, which should seldom be used in the higher table-lands of India, even by the strong.—Somner’s Voyage, p. 161; Hodgson’s Nagasuki, 252; Layard’s Nineveh; Robinson’s Travels, ii. 149; Ouseley’s Travels, i. 501.

BATHO, a deity of the Cachari race.

BATHU, also Bathua. HIND. Chenopodium album, much grown in the hills of the W. Himalaya. In the Panjab, Amaranthus frumentaceus. BATIN, a tribe of weavers in the Madura and Tinnevelly districts, which speak a slang dialect.—Wtl.

BATOOLA. HIND. Cicer arietinum.

BATOR NIBU. BENG. Citrus decumana.

BATTIA.

BHATSALI-KURA. Tel. Linn. var. quadrifida.

BATRACHIA. sub-class of animals of the class Reptilia, including all the frogs. It is arranged by some naturalists into three orders, (1) Batrachia salientia, (2) B. gradienta, and (3) B. apoda. The order B. salientia has the families Ranidse, Discoglossidae, Rhinodermatidae, Bufonidae, and Polypedatidae; the order B. apoda has but one family, Cecididae. Mr. A. R. Wallace arranges the Amphibia into the orders (1) Pseudo-philia, (2) Batracina Urodela, and (3) B. Anoure. Mr. A. R. Wallace’s list of the order Batrachia, such as the Siren of Carolina, the Protopus of Illyria, the Axolotl of Mexico, and the Menobranchus of the North American lakes, retain their gills during life; but although provided with lungs in mature age, they are not capable of living out of the water. Such Batrachians form an intermediate link between reptiles and fishes.—Tennent’s Ceylon, p. 320; A. R. Wallace, Distribution, i. 101. See Frogs; Reptiles.

BATRACHIA GRUONIENS. Linn. The natives attribute poisonous qualities to these fishes, and reject them even as manure. The eaking sound they emit has been noted by Buchanan. They are capable of living a considerable time out of their element.

BATSON BISH. Beng. Aconitum ferox. BATTA. HIND. Difference or rate of exchange; extra allowance. A mutiny occurred in the Bengal army in consequence of an order, dated 1st January 1766, abolishing double batta for the officers of the army. They were ordered to send in their resignations by the 1st May 1766. The mutiny was suppressed by Lord Clive.

BATWA or Battak, a collection of tribes inhabiting the interior of that part of Sumatra which lies between Acheen and the now decayed empire of Menang Kabon. They are under separate chiefs. The Batta in the north of Sumatra occupy from the country of the Rawa on the river Rakun on the east side, Natal on the west side, as far north probably as the latitude of Diamond Point on the east, and Gumong Abong-Ang on the west, and border on the Achinese. Their total number is 357,860, but others have estimated it at 1½ million. The Batta of Mandailing and Rertibi are muscular, square-built, and strong, but averse to all severe labour. The men are generally better built than the women. Real beauty amongst the women is rare. The Batta have a true and keen memory, and in their assemblies have now a grave and now a lively eloquence, which generally remains free of bombast. Insanity is hereditary in many families. They have polygamy; young and married women are chaste. The Batta loves palm-wine, is honourable, humble to superiors without being slavish; he will not suffer defamation or insult. He is frugal, but hospitable. But he is fond of gambling; is covetous, and exceedingly lazy. He is intrepid and courageous in the chase.

The more barbarous and indolent tribes are in the interior of Bata-bara, Assaham, Beclah, and Puan. The Batta alphabet has nineteen letters, and they write from the bottom to the top, in the reverse of the Chinese way. Their language bears a great resemblance to Malay. To a considerable knowledge of letters, of useful arts, and tolerable...
industry, some tribes add cannibalism. Moor, Leyden, Marsden, and Crawford first brought to notice that they are cannibals. Sir Stamford Raffles mentions by his Memoirs, p. 327, that he had been informed that the old people quietly suspended themselves by their hands from the branch of a tree, and then children and neighbours danced around them, exclaiming, 'When the fruit is ripe then it will fall.' And when the old, unable to hold on longer, fell to the ground, they all cut them up and eat them. Most writers, but lately Captain Low, in No. 3 of Journal of Royal Asiatic Society, describe them as cannibals. The Karau Karu tribe in the districts bordering on Acheen are not cannibals. The Padimbola tribe (Mr. Anderson terms the tribe Perdimbanan) were the most barbarous and most addicted to eating human beings. Other Battak eat prisoners of war and criminals as a punishment, also eat their aged and infirm relatives; but the Padimbola waylay travellers, kill and eat them. A chief stated as the manner of eating the criminals and prisoners, that three posts were fixed in the ground; to the middle one the body of the prisoner or criminal is fastened, and his arms and legs are extended to the two others, in the figure of a St. Andrew's cross. On a signal being given, every one entitled to share in the feast, rushes on him with hatchets and knives, and many only with their teeth and nails; he is thus in a few minutes entirely cut or torn to pieces; and so keen are the guests, that they often wound each other's hands and fingers (Moor, p. 128). The lives of criminals are redeemable. Polygamy is practised to a great extent, but each wife has a separate hearth in the one-roomed house. Women and children can be sold by the husband and father. Their dead are buried with much ceremony; the bodies of persons of rank being retained for a long time, and finally buried with a sacrifice of animals.—Memoirs, p. 427; Newbold, Brit. Settlements, ii. 370; Moor.

BATTAL. HIND. Buonumus fimbrirat, or E. Hamiltonii; in Kaghán, it is Pyrus aucuparia.

BATTAR. HIND. A person who performs the ritual worship of a Hindu idol.

BATTEDOMBE. SINGH. Calyptranthes Caryophyllina.

BATTEE SAL. HIND. Dipotocarpus alatus.

BATTI. HIND. A candle, a pastile; a roll or stick of scaling-wax, lacquer, or any other substance used up in this form.

BATTIA, a Hindu sect who worship Vishnu and his incarnations, as Ballaji at Panderpur and Tripati. They have a great reverence for their guru, whom they style maharaja, and place at his disposal tan, man, and dhan,—body, mind, and means,—and recently in Bombay scandalous immoralities regarding, and careless treatment of their women were disclosed. They are generally merchants, and some give annually 5 or 10 per cent. of their profits. In Bombay, in 1811, there were 9417. See Ballaji; Bhattia; Vallabha-Charya.

BATTICALOA, a small town on an island, long. 81° 49' E., and lat. 6° 42' N., on the east coast of Ceylon. Its estuary abounds in crocodiles.—Yule, Cathay, ii. p. 451.

BATTLE-AXE of Thor is the cross. Patee is the swathika cross of the Buddhists, and the monogram of Vishnu and Siva. Thor's symbol of governance was the letter of the Samaritan alphabet, the tan or tao in its decussated form. It is the mark which the prophet Ezekiel (ix. 4) was ordered to place on the foreheads of the faithful in Judah; and Indian women still place it on the foreheads of grain. It is placed on the jars of the water for the Ganges and Indus, and in the south of India is the emblem of disembodied Jain saints. It is the mystical Topkapi of the Chinese Buddhists, is the chief ornament on the sceptre of the Bon-va deities of Tibet, and is expounded on the Arctus or musical bell borne by Hal-govind.

BATTLES OF INDIA. Anciently, the Sodha and Raktor Rajput and the Jharja of Gujerat dismounted in the presence of the enemy, and fought on foot. After the fatal battle of Kadasia, the Persian general Takharjan dismounted to fight with Zahir, the Arab champion. This was a common practice of Europe in the middle ages. The emperor Conrad's cavalry followed it in the second crusade, and the English when fighting at Northallerton the battle of the standard. Sir John Hawkwood, a knight of Edward iii., introduced the practice into Italy; and the English followed it in the battle of Crevant and Verneuil. Of the chief battles and sieges in India from which British supremacy has resulted, are that at Plassey, by Lord Clive, in 1757, against the Mahomedan power in Bengal, no Perreira being given to the battle-field, from that circumstance that it was covered with the pulp tree Butea frondosa. The siege of Seringapatam in 1799 was of importance; also the battles of Assaye and Argaum, fought by Sir Arthur Wellesley in 1803 against the Maharattas. In 1803, Alighur and Laswari, both won by Lord Lake and General Fraser against Sindia's battalions of Maharattas, trained by Perron. The battle of Deeg in 1804; Mahidpore, in 1817, against the Maharattas; Ashti, in 1818, against the Maharattas. In 1819, Aigirgh; in 1824-25-26, against the Burmese; and in 1826 Buhtrup fell. In 1840 and 1842, against the Chinese; 1845, against the Amirs of Sind by Sir Charles Napier. In 1846, against the Sikhs at Sobraon; 1848, Mutien; and again, in 1849, against the Sikhs at Gujerat, and in 1856, in south Persia. In 1857 and 1858-59, in northern India, at Dehi, and Lucknow, against the native soldiers in revolt, and nearly the whole of Hindustan and Oudh in rebellion. The progress of the British in India has been by dissimilar military tactics. When in the field, as with Lord Clive at Plassey, with Sir Arthur Wellesley at Assaye, with Lord Lake at Laswari, Fattcheughir, and Afzalgarh; in 1818 at Nagpur; in 1824-25-26, in Burma with Sir Archibald Campbell; in China, 1841-42, under Lord Gough; against the Sikhs, at Gujerat, under that command; and against the Persians, in 1856, under Sir James Outram; in 1880, by Sir Frederick Roberts at Kandahar,—the battles were won by boldly throwing the stable British troops, however few in numbers and after long marches, against the less coherent native levies, however numerous; and in the siege operations against Seringapatam, against Gawilghur, and against Bhurtpur both in 1805 and 1826, by persevering determination. Lord Clyde's operations of 1858-59, however, were marked by the very methodical reduction of vast bodies against the revolted soldiers and rebellious races; by the measured, ponderous, but slow tramp of splendid infantry, with the cavalry.
and artillery in aid. The only cavalry movement of note that occurred, was after the battle of Cawnpur, when, on the 9th December 1858, Sir Hope Grant, with the 9th Lancers, some native cavalry and horse artillery, moved 25 miles to the Sheo-majore ghat on the Ganges, and attacked the flying rebels, defeating them, and capturing all the guns, without, on his side, a single casualty. Sir H. Rose had defeated the army of Gwalior before that city on the 20th; and on the 21st June 1858, Sir Robert Napier, with the 14th Light Dragoons, some native cavalry, and a battery of artillery, not 600 in all, went in their pursuit, and came up with the 6000 sepoys, with their 30 guns, at Jowra Alipur, where he charged into the thickest of the enemy, and completed their dispersion. But of the 100,000 native soldiers who revolted in May and June 1857, though many died from disease, probably not more than 40,000 from first to last were killed or wounded. In that revolt, from May till the 30th September of 1857, the British soldier, aided by the few native troops who remained staunch, in all 45,000 British and 60,000 native, had to struggle for their lives against 120,000 sepoys troops and an equal number of civil rebels, every one of whom in Oudh and Rohilkhand had been born a soldier. The first aid that the British got was from the Sikh levies sent by Sir J. Lawrence from Lahore. In all, the British and native troops rose to about 150,000 before the end of 1857; and before July 1858 there were 80,000 British soldiers in India. But up to September 1857, the smaller number of 43,000 British and 60,000 natives had to comb for their lives against not less than 300,000 combatants, 120,000 of whom had been regularly trained soldiers or partially trained police. Before the end of September 1857, Delhi had fallen, and the part relief of Lucknow before the receipt from Great Britain of other aid than a wing of the 5th Fusiliers and the 90th Light Infantry.

The real relief of Lucknow took place on the 6th December 1857. After Lord Clyde’s arrival, Lucknow remained to be besieged, and captured, Cawnpur to be released from the Gwalior Contingent, and Oudh and Rohilkhand cleared from the armed rebellion; and under Sir Hugh Rose, Central India was restored to British supremacy. Towards September 1857, and from that time onwards, British troops came in (and amongst the first of these came Lord Clyde), at first in small bodies, and then in large, until the entire reinforcement of 50,000 men had arrived from Britain to re-establish the British key-mancy. As matters of history, it may be well to record here the strength of British soldiers in India in the years preceding and succeeding the revolt.

1 Of these, 5000 in Persia. 2 Of these, 4000 in Abyssinia.

Throughout British India generally, the object of those with whom the British from their first entry on the arena had come in contact,—the Mahomedans, Mahrrattas, Sikhs, Sindians, and Afghans,—had been personal, either to gain new lands, or to hold such as were in their possession; and impressed by the habits and customs of age, they have mostly been ready to yield or retreat when pressed, with the belief that they could regain or return when opportunity recurred; for, except the Sind Amirs, not one of all the ruling powers in India and its borders, with whom the British came in contact, had possessed authority in the country longer than the British themselves.

The battles fought by the British in the 18th century were chiefly for existence and for a standing ground; and the names of the great Lord Cholm, Colonel Lawrence, Sir Barry Close, Lord Cornwallis, General Harris, General Wellesley, Sir David Ouchterlony, General Gillespie, Lord Lake, Lord Gough, Sir Donald Stewart, Sir Frederick Roberts, have been conspicuous amongst others of their countrymen.

The Karnatic came into the British possession, partly by gift, partly by treaties, and in part as the result of battles fought in the 18th century against Mahomedan and Hindu princes and chiefs, whom the French aided. Amongst these may be enumerated Sholinghur, taken 27th September 1781; Negepatam, surrendered 16th November 1781; battle of Cuddalore of 18th June 1783.

The taking of Bangalore from Tipu Sultan on the 21st March 1791, gave a permanent position in Mysore, but it was eight years later, when Seringapatam was stormed, on the 4th May 1799, that the country came under British control, by the reduction of the French on the throne of the relative of former Hindu rulers.

The campaign of 1803 commenced on the 7th August. It was directed against Sindia and Perron and the Bhunala raja of Berar. These two Mahrratta powers had 72 regular battalions officered by Frenchmen, and 200,000 troops untrained, but from the sources whence they were drawn, such took even a higher social standing than their soldiers of the line. Before the end of December there were gained by the British four battles, amongst which were Assaye, and Argaum, and Laswari; the British completed eight sieges and storms, and effected the almost total destruction of the 72 trained battalions, the dispersion of the rest of their armies, the capture of 735 pieces of cannon,—the British force being about 55,000 regular troops, amongst which were 10,000 British soldiers. To effect these results, Sir Arthur Wellesley had been moving northwards, taking the insignificant fort of Gaugrwa, and Gaugrwa, in the Vindhyas, also Aiciviar; while Lord Lake moved southwards, fighting the battle of Laswari, against the battalions of Sindia and Perron. At that time, also, Jeswant Rao Holkar, when he opposed the British in 1806, had 100,000 regular troops, amongst whom were 60,000 light horse, and 130 guns, with the fortress of Chandore and Galinghur. From the tactics adopted, this moveable force baffled the British commanders and all the military power of India from April 1804 till the 15th February 1805. On the 2d April 1805, Jeswant Rao Holkar was again defeated by Lord Lake, who marched all night, and at daybreak entered Holkar’s camp, which he completely broke up. In this, in going and coming, Lake marched 50 miles. Lord Lake
BATTLES OF INDIA.

subsequently, in December 1805, marched in his pursuit 405 miles in 43 days, from Secundra to the Beas river at the Razghat. In Jeswant Rao Holkar's final overthrow, Lord Lake marched 350 miles in a fortnight to reach Delhi, which Sir D. Ochterlony was defending against Jeswant Rao Holkar. But on Holkar's abandonment of Delhi on the 14th and 15th October 1804, Lord Lake followed him, and at length, with a small body of 3000 British horse and artillery, amongst which were the 8th and 27th dragoons, made a forced march of about 48 miles, defeated the forces of Holkar, about 60,000, near Farrakhabad, followed 10 miles in pursuit, and returned to camp, making a journey of about 70 miles in 24 hours, with a loss of 22 dragoons killed, and 20 Europeans and natives wounded.

Amir Khan, the Rohilla chieftenant of Rohilkhand, forsook the raja of Bhurtpur, but was followed by General Smith, whom Lord Lake sent in pursuit. After a march of 700 miles in 43 days, Amir Khan's army was overthrown and defeated at Afzalghar, at the foot of the Himalayas, on the 2d March 1804, and Amir Khan was conveyed across the Ganges and Jumna in March, but he rejoined Holkar's camp under Bhurtpur.

Delhi, battle of, 11th Sept. 1803
Aligur, assault of the fortress of, 4th Sept. 1803

The Jat rulers of Bhurtpur were inclined to side with Jeswant Rao Holkar. Bhurtpur is on the borders of the desert of Rajputana. When besieged by Lord Lake in 1805, with 10,000 regular soldiers, four determined assaults were made on January 9th and 22d, and February 20th and 21st, but in each instance repulsed, though at the close, the besieged, on the 10th April 1805, yielded to terms. In those four fruitless attacks, the British loss was 3203 killed and wounded, of whom 103 were officers. In 1825, however, during the Burmese war, puffed up by the belief that their mud fort was impregnable, they again drew down the anger of the Indian Government, and it was again besieged, and, on the 18th January 1826, successfully invested by Colonel Combermere. Agra city was taken on the 17th, and the fortress on the 19th October 1803. Sir David Ochterlony, a general officer of the Bengal army, for 8 days defended Delhi against the Mahratta Jeswant Rao Holkar, repulsing repeated assaults, though with open breaches, till on the night of the 15th October 1804, on the approach of Lord Lake, Holkar withdrew. From that time the Moghul emperor of Delhi became a stipendiary of the British. The Nepal war ended on the 12th March 1816. It was successfully conducted by Sir David Ochterlony; but there fell General Gillespie, who had relieved Vellore when it was seized by rebels in 1808, and who had distinguished himself in Java in August and September 1811. Several tracts in the mountain valleys of the Himalaya were then ceded to the British Indian Government.

The territories on the north-west part of peninsular India have been chiefly acquired from the Mahratta rulers, as the results of war and victories gained, and fortresses taken. Bombay island came by gift from Portugal, as part of the dowry of King Charles the Second's bride. The principal battles were in the beginning of the 19th century, and, in 1817, 1818, and 1819, fought by General Wellesley, Sir Thomas Hislop, and Sir Thomas Munro. Of these—

Ahmadnagar, surrender of city, 11th Aug. 1803
Assaye, battle of, 23rd Sept. 1803
Gawilgarh fort.
Berliampore surrendered, 16th Oct. 1803

Ahmadnagar city was taken by Sir Arthur Wellesley on the 11th August 1803, and immediately afterwards he received the surrender of the fortress, long regarded as the key of the Dekkan.

Poona, city of, taken, 19th Nov. 1817
Seestulbilles, battle of, 26th and 27th Nov. 1817
Napur taken, 20th Nov. 1817
Do. re-taken, 30th Dec. 1817
Jubbulpur, battle of, 19th Dec. 1817
Mahulpur, battle of, 21st Dec. 1817
Corgooys battle of, 22nd Dec. 1817
Copauldrug, storm of, 14th May 1819
Ghanda, siege and storm of, 20th May 1818
Amulnair, surrender of, 30th Nov. 1818
Asirgarh, siege of, 9th Mar. 1819
Do. surrendered unconditionally, 30th Apr. 1819

Sind fell to the Indian Government, from the Mahomedan Talpur dynasty, after the battles of Meaneecz, on the 17th February 1813, and of Hyderabad, on the 24th March 1813, both fought by Sir Charles Napier, and this gave the course of the Indus up to Multan. The Punjab was twice engaged in war with the British Indian Government, in 1814, and again in 1819, after which the entire Sikh dominions were incorporated with those of British India, and a rapid increase of its resources followed.

Moodkee, battle of, 18th Dec. 1845
Ferozahah, battle of, 21st and 22nd Dec. 1845
Aliaw, battle of, 25th Jan. 1846
Lahore, annexation to the British, Dec. 1845
Do. occupied by the British, 22nd Feb. 1846
Do. treaty of, 9th Mar. 1846
Sobraon, battle of, 16th Feb. 1846
Multan, city of, taken by storm, 24th Jan. 1849
Do. unconditional surrender of, 22nd Jan. 1849
Modraj and garrison of, 22nd Jan. 1849
Chillianwalla, battle of, 13th Jan. 1849
Gujerat, battle of, 21st Feb. 1849

Political difficulties with the Barakzai chief, Dost Muhammad Khan, induced the Indian Government, at the close of 1838, to resolve on displacing him, and replacing the deposed king, Shah Shuja ul Mulk. This was done after a series of successes and severe reverses, in one of which an entire British Indian brigade was destroyed by climate and the sword. It was the greatest disaster that ever befell the army of India. The chief battles fought were—

Ghazni, capture of, 23rd July 1839
Do. re-capture of, 6th Sept. 1842
Kabul taken, 7th Apr. 1839
Do. re-occupation of, 16th Sept. 1842
Khielat, storm and capture of, 13th Nov. 1839
Jalalabad, battle of, 7th Apr. 1842

In 1878-79, political difficulties again led to war, and Kabul, Ghazni, and Kandahar were again occupied, and battles fought, in which Sir Donald Stewart and Sir Frederick Roberts were victorious.

The territories held by the British, west of the Indus, consist of a strip on the bank of that river, and, in Arabia, on the peninsula of Aden, taken on the 18th January 1839.

The possessions east of the Ganges have fallen to the British arms from two powers. The first to engage in hostile operations were the Burmese, from whom, after a series of operations in 1824, 1825, and 1826, territories in Assam, in Arakan, and in Tenasserim were gained. But war again recurred in 1852, and further territories were annexed at the mouth of the Irawadi; so that
from the mouth of the Indus to Singapore, almost the entire seaboard became British territory. The principal occurrences were:

1st War.

With China there have been two wars, in 1841 and again in 1859 to 1860—1, from which several small districts were ceded to the British. In the earlier war the chief battles were as under:

Chusan, capture of, 5th July 1840

Do., re-capture of, 1st Oct 1841

Chuenkee, taking of, 17th Jan 1841

Bougue Ports, taking of, 26th Feb 1841

Canton captured and ransomed, 25th May 1841

Ameoy, capture of, 26th Aug 1841

Chinhas, capture of, 10th Oct 1841

Ninpo taken, 18th May 1841

Chuing-fang-fu, battle of, 21st July 1842

Chapoe, capture of, 18th May 1842

Ceylon, long a Portuguese and Dutch territory, was taken by the British at different times, viz:—

Colombo taken, 16th Feb 1796

Kandy taken, 18th Feb 1815

Kandian country, British entered the, 11th Jan 1815

The central parts of peninsular India have several times needed coercion. At Kittoor, a battle was fought on the 23d October 1824, and the fort was besieged and taken on the 5th December of that year. Badami fort was taken by storm on the 18th February 1818, and was again captured on the 10th June 1841; and as a continuation of the same events, Punalla and Powan-gur were captured on the 1st December 1844.

Kurnool, held by a feudatory Pathan chief, lying between the Ceded Districts and the Hyderabad territory, was surrendered to the East India Company on 15th December 1815, but on the 18th October 1839 was again taken possession of, and on the same day a battle was fought at Zorenpur, a few miles off, the nawab of Kurnool taken prisoner, and the territory annexed.

In 1854, cruelties carried on for a long series of years by the raja, brought on him the hand of the Indian Government, and, after a series of operations, Coorg was captured, after a battle, on the 8th April 1854.

In the interval of one hundred years here reviewed, the British India troops, under the East Indian Company's administration, were composed both of European and native soldiery, armed according to the European mode, as artillery, cavalry, and infantry, and similarly disciplined, but aided by levies of horse and foot with a less perfect or less extensive organization, and termed irregular. In the early wars there were few or no European soldiery, and but small bodies of native troops; but these gradually increased with expansion of territory and more concentrated opposition, and the European and native forces in India were in the years

Europeans. Natives.

1830-40 33,604 196,889
1842-43 46,726 220,947
1850-57 45,522 232,224

In 1857, the revolt of the Bengal native army occurred, and the policy since then has been to augment the European arm, remove all sepoys from the scientific corps, and reduce their numbers. The composition of the Indian army in 1857 and 1865 was as under:

<table>
<thead>
<tr>
<th>Artillery</th>
<th>Cavalry</th>
<th>Infantry</th>
<th>Sappers</th>
</tr>
</thead>
<tbody>
<tr>
<td>1857</td>
<td>6,944</td>
<td>13,076</td>
<td>22,694</td>
</tr>
<tr>
<td>1860</td>
<td>19,072</td>
<td>46,945</td>
<td>438</td>
</tr>
</tbody>
</table>

In their opponents, the British forces have had to encounter clouds of horse, as in the Maharrata camps; brave foot-soldiers, as in the Afghan, Gurkha, Sindian, Sikh, Tartar, and Mongol; and native armies trained by European officers, Italians, French, and Germans. But those with the native rulers have appeared in the field with every weapon and armour of defence mentioned in history, swords and spears, shields, bows and arrows; and up to 1867, in Hyderabad, soldiery with bows and arrows were still to be seen passing in review in the war pageant of the Nizam's Langar, and are the national weapons of several races in the Vindhyas and Satpura hills.

The chief sieges, battles, etc., of the British, in S.E. Asia, have been as under:

<table>

298
BATTLES OF INDIA.

BAUHINIA.

There were 8050 men, augmented afterwards by the force from Bombay, according to Major Hough, appeared before Bhurtpur in January 1805. During four successive attacks, each increasing in desperation, Lord Lake was repulsed, with loss of 2910 killed and wounded.

First assault. ... 456 Third assault, ... 894
Second do. ... 573 Fourth do. ... 987

BAUHINIA, a genus of plants of the natural order Fabaceae; the generic name was given to it from the twin form of the leaf, in honour of the twin brothers Bauhin. The number of species is considerable; and some are shrubs, and some are trees which yield useful woods, astrignent gums, fibrous barks. Dr. Hooker mentions that a thousand feet above Punakabaree in the Outer Himalaya the prevalent timber is gigantic, but scaled by climbing Bauhinia, is used in the office of the British adventurer, with sometimes sheets of the woods. The flowers-buds of almost all the Bauhinas are eaten by the natives of India. The seeds taken from the huge pods of B. racemosa are eaten in the hills of the N.W. Himalaya. The pods look like pieces of thick undressed leather, about a foot long and an inch or two broad; they are placed over the ashes of a fire till they roast and split open; the flat soft seeds are taken out and eaten; the flavour is pleasant, but the seed is not wholesome. The woods are often of a dark colour. The following are the principal species:—

Of the officers, 25 were killed and wounded in the assault. Lord Lake, with an original force of
Bauhinia acuminata, L., mountain ebony.

B. Candida, Ait. not Rozb.

Bauhinia brachycarpa, Wall., the Blai-jin of the Burmese, attains to nearly three or four feet at Taong-dong and in the Tenasserim Provinces; its wood is white-coloured, and adapted for fancy work and cabinetmaking.

Bauhinia diphylla, Buch.

This small tree grows in Burma, on the banks of the Irrawady at Yanan-guem and Taong-dong, also at Masulipatam, Cuddapah, Guntur, and Nellore. Its flowers are pure white, of middling size. The natives make temporary ropes of its bark for securing thatch, matting, or fences. The barks of several other Bauhinias are used similarly. Ara nar is the bark of B. parvifolia, of which matches for matchlocks are made.

Bauhinia Malabarica, Rozb., the Bo-ay-gy-in of the Burmese, a native of Malabar, where it blossoms in October and November. It also grows in Assam, and is common in the plains of British Burma, where its wood is used for the crossing pieces of harrows, house posts, etc. A cubic foot weighs 42 lbs. The average length of the trunk to first branch is 15 feet, and average girth at 6 feet from the ground is 4 feet.

Bauhinia parviflora, Vahl., the Kosunda of the Punjab. A great climber in the Siwalik tract. Timber of a small size, from 5 to 6 feet in length, and 2 to 3 feet in diameter. Its gum is used medicinally.

Bauhinia purpurea, L. B. Coromandeliana, D.C.

Dev Kanchan, BENG. Shegup Mutthari, TAM. Saral-mara, CAN. Bodanta Chettu, TEL. Chovana Mandara, MAL. Pedda-are, TEL.

A tree with very large, deep rose-coloured, fragrant flowers, which appear at the commencement of the rains. It grows in the Mauritius, Coromandel, Burma, Assam, and Oudh, the Kheri pass, Garhwal, and Kanaon, also in Canara and Sunda, both above and below; most common near the Ganges valley. It attains a large size in the mountains of India. Its timber is hard, close-grained, and very durable, and of a fine, reddish-brown colour, and can be had in lengths of 12 to 15 feet, and 30 to 35 inches in girth. It is strong, and good for agricultural implements, but seldom large enough for building.

Bauhinia racemosa, Lam. not Vahl.

This immense climber is found all over British India, all through Burma, and along the forests of the Siwalik hills and the hot valleys of the Himalaya, from the Doughs of the north-west to the valley of Assam. Its flowers may be seen hanging in elegant festoons from the tops of lofty trees. The bark when stripped off is of a reddish-brown colour, and the natives of the mountains make ropes of it; the stems are usually cut in July and August; the outer bark, being stripped off, is thrown away, and the inner is used for ropes as wanted, by being previously soaked in water, and twisted when wet. It is also said to be boiled and beaten with mallets, which renders it soft and pliable. The fibre makes very strong ropes, but rots if kept constantly in water. Major Swetenham describes its strong coarse ropes as answering well for suspension bridges. Its bark is also made into matchlock matches. The wood is small, but the heart-wood is exceedingly hard and fine. The leaves are eaten by buffaloes, etc., and are used for packing, and for making umbrellas, being put between strips of bamboo, so as to overlap each other. They are also favourite leaves for the platters, used at the marriages of Brahmins, etc.

Bauhinia racemosa, Linn., Rod Bauhinia.

Myoxh-bge-ga, BURM. Naja balli, MALEAL. Esculapian Bauhinia, Eng. Gunda gilles of. STEHET.

This trailing, climbing Bauhinia has small whitish flowers, which turn to a yellowish colour. It grows in the Konkans, Moluccas, Assam, is not uncommon about Gowhatti, and is a common species at Sylhet, where it runs up over trees of the largest size. It is remarkable for its contorted branches, and is said to have formed the type of the snake rod of Esculapian which he brought with him from India. Its fibrous bark is made into cloth and rope, but the fibres are harsh and stubborn.

Bauhinia tomentosa, Linn.

Ma-ha-bge-ga-wa, BURM. Petan, SINGH. Yellow Bauhinia, ENG. Cat-attii, TAM. Kanehana, MALEAL. Trivialiapatram, TAM. Usamaduga, SANSK. Tira vala conany, TAM.

A native of Ceylon, Malabar, and Coromandel; bears a large sulphur-coloured flower; and the upper petal has usually a deep purple spot on the inside. It is a large shrub, never exceeding 12 feet in height. Its wood is very hard, but too small to be of much great value in commerce. This, like the B. racemosa, has a strong, very dark-coloured wood, hence the names Kat-attii, wild ebony. Even the younger branches show the heart-wood very dark brown; the bark of this is also employed as extemporary cordage. Native practitioners prescribe the small dried buds and young flowers in certain dysenteric cases; they have little sensible taste or smell, though the leaves, when fresh and bruised, have a strong but not unpleasant odour. Their astrigency is probably due to the presence of tannin.

800
This is an immense scented shrub, with a circumference of stem of 1 foot, and largeth white flowers, that turn yellow. It grows in the Thull Ghats, ravines at Khandalla, Morning mountains, in the Dehra Doon and Kausan; it abounds in the jungles in the North-West Provinces of India, and near the mountains of Ganjam and Gumsur, and yields a fibre which is extensively used in rope-making. The leaves are a foot in length and breadth, and have rounded lobes; they are used as platters for eating from, and for making the 'tallari,' or small umbrellas worn on the head; also for packing and lining baskets, and for house thatch, and bark for ropes. Legumes pendulous, from twelve to twenty inches long, covered with a brown velvet down. The kernels of the large and broad pods have a sweet aromatic flavour, and are eaten like almonds by the natives. When the husks are fresh, the natives roast them to get at the kernels; when old, they open of themselves. The kernels possess tonic and aphrodisiac properties.

Bauhinia variegata, Linn., Mountain ebony.

An ornamental tree with variegated flowers. It is sparingly found in the Bombay forests, and there it never reaches a size for a 10-inch plank. The wood, however, is hard and good. In Ganjam and Gumsur it is tolerably common, and used for firewood. Common in Burma and at Ajmir. When in blossom the tree is very splendid, and the fragrance delightful. The flower-buds are eaten as a vegetable. Its buds are sold fresh in the bazaar at Lahore as a vegetable, which are eaten prepared with animal food.

Var. a. Purpurascens.

Bidal, . . BEND. Ma-ha-hla-ga-ni, BURM. Rakta-kanchan, . . " Segapoo Munthari, TAM. Kuvalara, . . SANSK.

A tree with beautiful large purple flowers, four petales light purple, the fifth deep purple tinged with cream and red. It is one of the most stately of the Bauhinias, and grows in the Peninsula of India, in Serampore, Pateram, Monihari, and Puraneya.

Var. b. Candida.

Kana-raj, . . . HIND.

A shrub with large flowers, with four white petals in its flowers and one with a sulphur colour within. It grows in Nepal, Oudh, Bengal, Assam, Islamnagar, and Prome. — Drs. Ainslie, Brandis, Cleyhorn, Gibson, Hooker, Honinberger; Madras Museum; M'Clelland, Mason, O'Sh., J. L. Stellart, Riddell, Roxb., Royle, Voint, and Wright; Elliot, Fl. Andh.; Jaffrey; Drury, U. Pl.; Madr. Ex. J. Rept.; Capt. Macdonald; Mendis; Beddome.

BAUJHONO. Uins. In Ganjam and Gumsur, a scarce tree, of extreme height 45 feet, circumference 5 feet, and height above ground to the intersection of the first branch, 22 feet. The wood is strong, and used for heavy wheels.— Capt. Macdonald.

BAULEA, a boat of the Ganges river.

BAULU of Chenab. Corinaria Nepalensis.

BAYA-KHANI, a golden coin of Persia, value Rs.5.

BAWA. HIND. A son; a mode of address among the fakir or darvesh sects. Bawa Boodun alias Hyat Qulundur. See Baba Boodun. Bawa ud Deen, a venerated saint. Bawa piare ke fuqeran, a class of devotees.

BAWADA. HIND. A herb of N. India, used in rheumatism.

BA-WA-NET. BURM. Gendarussa vulgaris.

BAWAR, a section of the Koli tribe of Rajputana. The Bawar, Bawari, and Bhaora or Bhaora are possibly parts of some great race, which were dispersed in prehistoric times. The Bawari are predatory, and scattered throughout India. Wilson describes them as robbers by profession, and known in different places by different appellations, but call themselves Bawari, and using a dialect which is said to be spoken in parts of Gujerat. They seem to be the Bhora of Southern India, who are styled Harn-pardi and Harn Shikari, and are the wild fowlers of the jungles and forests. The Bawari of Central India are excluded from the tribe if they kill a heron or a dog. In regard to the heron, it is the emblem of the tribe, and its flesh they must not eat. A race called Bawari are swineherds.

BAWEAN, or Lubeck island, forms a portion of the residency of Sourabaya. It is in lat. 5° 90'S., and long. 112° 38' W. (Greenwich), and contains about 44 English square miles. The country in general is very mountainous, and it is only near the sea that some plains are found, on the largest of which, about 3½ miles in circumference, the principal village, Sangkapura, is situated. The Baweans are probably descendants of the Madurese, whose language with a few modifications prevails, though they differ from them in dress; but in this respect agree closely with the Bugis. The inhabitants of the Dessa Dipanga excel in the Javanese language. The people come every year to Singapore to serve as groovers, labourers, and drivers. Coal is found in Dessa Kalompe; hot springs occur all over the island, one with a temperature of 125 Fahr.—Journ. Ind. Arch., No. 7.

BAWR. PUSHT. A leopard.

BAYA. HIND. Ploceseus Philippiensis. JAV. Crocodile. MAHR. Cassia fistula. HIND. In the Lower Doab and Rohilkhand, a person appointed in the bazaar to measure grain.

BAYAZID, lat. 39° 24' N., long. 44° 20' E., a town in Asiatic Turkey, 140 miles S.E. of Erzerum on the S.W. of Ararat. It gives its name to a province. The reigning family are Kurds of the Zilanli tribe; Russia destroyed what could not be carried off.—MacGregor.

BAYAZID ANSARI, a religious reformer, who founded the Rashidi sect. He appeared among the Yuzufi Afghans about the latter part of the 16th century. He set aside the Koran, and taught that nothing existed except God, who filled all space, and was the substance of all forms. He soon formed a numerous sect, and established his authority in the Sulimani and Khaibar hills, and over the neighbouring tribes. His followers were defeated with great slaughter, and he died soon after of grief and vexation. His sons dug up his bones, and bore them in an ark at the head of
BAYBERRY TREE.

their column; but they ceased to be formidable beyond their hills till about A.D. 1585, when Jallala, one of the youngest, assumed the command, and exercised it with such vigour, that the ordinary government of Kâbul was found incompetent to resist him. Akbar's action against him was suspended, in consequence of the total rout of the army he sent under Zain Khan and Raja Birbal against the Yuzufzai. Jallala took Ghazni A.D. 1600, but was soon driven out, pursued, and killed. The sect, however, survived, and Jahangir and Shah Jahan continued their wars against them. Bayazid was nicknamed Pir-Yarik, or the sult of darkness.—Ladyden's Account of the Raunshent Sect, As. Res. vii. p. 363.

BAYBERRY TREE. Eugenia pimenta.

BAYENGI. Hind. Wool of the Tibet sheep.

BAYGOONA, Uria(?). A Ganjan and Gumaur tree, leaves red in spring.

BAYLA NAVA MARAM. Tam. Dinduga tree, Andersoniæ, sp.

BAY OF BENGAL. See Bengal.

BAZ. HIND. A falcon.

BAZAR. Hind. A market-place. In Egypt and in most cities of Asia, most of the great thoroughfare streets and many others have a row of shops along each side, not communicating with the superstructures, which latter are divided into separate lodgings, inhabited by different families, and seldom by the persons who rent the shops beneath. These streets are called in Arabic 'S'ook.' A whole street of this description, or a portion of such street, mostly contains shops appropriated to a particular trade, and is called the S'ook of that trade. In general the shop is a small recess or cell, about 6 or 7 feet high, and between 3 and 4 feet wide, the floor of which is even with the top of a raised seat of stone or brick, called 'yaqub,' between 2 or 3 feet high and about the same in breadth, upon which the shopkeeper usually sits. The front of the shop is furnished with shutters, which, when closed at night, are secured by a wooden lock. Those in India are usually held in an open street or open quadrangle, and are attended to by men. Those of Burma are large wooden or iron buildings, and the sellers are almost exclusively women, the women of Burma generally being active commercial agents. In all oriental countries it is the custom for the purchaser to seek out the seller, and to make an offer for what he wants. These two customs are opposed to the practice in Europe; and where the purchaser is a stranger, and ignorant of the ordinary value of the article he is purchasing, that of the East leads him into overpaying, and to his regarding orientals as lying impostors.

BAZ BAHADUR, an officer of the Afghan kings, who held Malwa at the time of Akbar's accession (A.D. 1556). He was defeated and expelled by Adam Khan, an officer of Akbar. Baz Bahadur had a Hindu mistress, who is said to have been one of the most beautiful women ever seen in India. She was as accomplished as she was fair, and was celebrated for her verses in the Hindi language. She fell into the hands of Adam Khan on the flight of Baz Bahadur; and finding herself unable to resist his importunities and threatened violence, she appointed an hour to receive him, put on her most splendid dress, on which she sprinkled the richest perfumes, and lay down on a couch with her mantle drawn over her face. Her attendants thought she had fallen asleep, but on endeavouring to awake her on the approach of Adam Khan, they found she had taken poison, and was already dead.—Khaji Khan, Tr. of a Hind. p. 198.

BAZIGAR and Nut, jugglers, acrobats, and tumblers. The Nut may be considered as the gipsies of Hindustan. Both are wandering tribes, and have each a slang language; they live principally by juggling, fortune-telling, palmistry, and other means, and are alike addicted to thieving. The gipsies are governed by their king, the Nut by their nardar bouthah. They appear to be equally indifferent on the subject of religion, and in no respect particular in their food, or the manner by which it is obtained. According to a list furnished by Captain Nair, the languages adopted by these tribes would appear to possess a very strong affinity to each other. The Bazigur are subdivided into seven castes, viz. the Charree, Af'byeeen, Bynsa, Purbuttee, Kalkoor, Dorikine, and Gungwar, who intermarry. They say they are descended from four brothers. They practise the Mahomedian rite of circumcision; they regard Tan-Sin as their tutelar deity; consequently they look up to him for success and safety in all their professional exploits. These consist of playing on various instruments, singing, dancing, tumbling, etc. The two latter accomplishments are peculiar to the women of this sect. The notions of religion and a future state among this vagrant race are principally derived from their songs, which are beautifully simple.—Cole. Myth. Hind. p. 319.

BAZIN. Pere Bazin, a Jesuit, who accompanied Nadir Shah as his physician in the last years of his life. When Nadir was assassinated in June 1747, on the following morning, the Afghans and Uzbaks, 4000 in number, led by Ahmad Shah, Abdali, unaware of his master's death, and in the hope of rescuing him, fell on the Persians, but had to retreat to their native country, which they did in good order. Bazin was a spectator of the action, 'au milieu des balles et des sabres.'—Lettres Edifiantes, vi.

BAZIRA, Aornis, was the place fixed on by the Greek dynasties for a military garrison. There were military colonies of Macedonians established, at Alexandria ad Caena, Aigrium, and Bazira, and garrisons at Nysa, Ora, Massaga, Peneleotic, and at Aornis, a mountain range, supposed by some to be the mountain of Mahab in the Pir-Panjal or Mid- Himalayan range. See Awar; Bactria.

Aflatoon; Moqul. ARAB. Gugal. GEJ. HIND. Kar-a-wa. BURM. Bealoah; HAM. Moom-yah; CHIN. Gugal; SINGAL. Badleyum, B'dellion, Gr. Kungiliam; TAM. Madekhanon; Guggilam; TEL.

This fragrant gum-resin, as met with in commerce, is the product of various trees. Dr. Ainslie, p. 29, was not inclined to regard it as a product of any of the trees of India, and pointed to the Darakh-i-mukul of Persia as the plant producing it. That of Africa is from Balsamodendron Africanaum; the Sicilian B'dellion is obtained from the Daneus Hispanicus, D. C.; but in all essential properties these are identical with the
Gugul of the Indian bazaars, a product of the Commiphora Madagasacarensis, Lindley, the Amrysis commiphora, Roch., the Bakousedron commun, Wight and Arnott, and a native of Sylhet, Assam, and Madagascar. At the Madras Exhibition of 1855, two varieties of the B'dellium from the Amrysis commiphora, were exhibited, the solid gum, and the balsamic fluid, as obtained from the tree. The Indian Gugul much resembles myrrh, and is said to be largely exported as that drug. Dr. Royle considered the Gugul as identical with the B'dellium of commerce, and indicates the Greek names of B'dellium, Badleyun, and Madekhu, as the B'hdllau and B'dllau of Dioscorides. The B'dellium of Genesis ii. 12 and Numbers xi. 17 is supposed to have been the gum-resin of Balsamusdron Roxburghii, Arn. (B. pubescens, Stocks'a and B. Mukul, Hooker). B'dellium, in Bombay, is imported from Cutch and the Persian Gulf. It is re-exported to China and to England under the name of myrrh. B'delach of Scripture (Gen. ii. 12, Numbers xi. 7) is supposed to be B'dellium gum-resin of Asia Minor. Roxburghii is a musky, Charlie Birdwood; O'Sh.; M. J. J. Royle's Ill. Him. Bot.; Faulkner.

BEADS. Without Be-charagh, without a lamp, deserted. Be-samajh, without discretion. Be-baq, an acquittance in full. Be-dana, a seedless grape; also a sort of mulberry. BEAD PLANTS. Several plants in India produce bright-coloured seeds, used as beads. Amongst these is the red seed with a black eye of the Abrus precatorius, Sweta Kooneh, Beng., Gondamani, Tam., which is also used by the Burmese as a weight. The Karen in the southern provinces cultivate one or two species of Job's tears for the seed. The Pwo clan plant a species yielding round seeds, which are used to ornament the borders of the men's tunics, but they are never seen on a woman's gown. The Sgau, on the contrary, cultivate a species bearing an oval seed, and use them merely for embroidering female dresses. In Province Amherst, the Pwo seldom appear in their native costume, and many deny that their tribe ever had any other than that which they now wear, which is Burmese. Abrus precatorius seeds are strung together as beads, necklaces, bracelets, and other ornaments, and also as rosaries, hence the name precatorius. The common variety are red with a black spot, whilst other varieties produce various-coloured seeds. The white sort resemble pearls. Reused into a fine powder, goldsmiths use it to join together the more delicate parts of golden ornaments. The shining scarlet seeds of the Adenanthera pavonina are used as weights by jewellers, and are made into ornaments, in the form of beads, bracelets, etc. The round, hard black seeds contained in the hairy pericarp of the Canna Indica are made into necklaces and other ornaments. The Utrassum beads are the very rough seeds of the Elaeocarpus lanceolatus, (Utrassum, Tam.; Oodraj, Duk.) They are brought to India from Java, of which country the tree is a native, are about the size of small nut-megs, and are made into bracelets for European ladies. The saiva Brahmas and the pandarans, religious devotees of the saiva sect of Hindus, who live by alms, wear them round their heads and necks, and form them into various. The dark-coloured oval seeds of the Caryota urens are made into buttons, and are used as beads by Mahamalas (Koondel-panel munnie; Tam.; Erinnampa, Can.). The dark-coloured roundish seeds (Kodad-panel munnie, Tam.) of the Carypha inbuctridera are used as beads by the Dassari wankoo, Hindu devotees who live on alms. The Tulasee beads (Tulacee vary munnie, Tam.; Toolai kemunke, Duk.) are made from the root of the holy basil, Oecium sanctum, a plant sacred to Vishnu, and held in esteem by all his worshippers, many of whom wear it round their necks and arms. A very handsome bead is made by polishing the betel-nut, called by the Tamil people Pask munnie.

Beans are in general use in all countries for personal ornament, as necklaces, ear and nose drops, and for ornamental work, and are made of glass, ivory, wood, the inferior and the precious gems; cornelians, onyxes, rubies, emeralds, pearls, seeds, abalaster, magnesite, nacre, coral, gold, silver, and date stones are all used as beads; rosaries likewise consist of beads. Glass beads are manufactured in China for export to India and the Archipelago, and are largely exported from England to Africa, sometimes to the value of £10,000 to £20,000.

BEAMI. MALEAL. Herpetesia munniens.

The various kinds of beans cultivated in the gardens of Europe are largely grown in India, —Viola falla or Windsor beans, and the various species and varieties of phaseolus or French beans. China is rich in many kinds of bean, some of them indigenous. A bean grown at Shan-tung has its oil and oil-cake largely imported into Shanghai and Ningpo, its oil-cake being used as manure. French beans are of white, black, and yellow colour. The dwarf white bean sooner than the other sorts, which require sticks at least six feet high, and strong. The Portuguese bean or chevaux-de-frise pod has four fringed edges, the angles jagged. Broad and Windsor beans should be sown in the cold weather, in drills the same as peas, each bean at six inches apart, the rows sufficiently separated to admit a person to pass between them for picking, weeding, etc.

Bitter bean, the Hu-lu-pa and Ku-tan of the Chinese, are small, pale, reddish-brown seeds of a leguminous plant, introduced into the south of China. Bean-curd, Tau-fu of the Chinese, is largely used as a condiment in China. It is an emulsification of a species of Dolichos, D. soja. The bean is boiled and skinned, and ground with water to a pulp, which is strained, and water added. In this state it resembles bony calabashes or curled milk, and is called tau-fu-lua, or bean-curd jam; the water is sometimes all strained off, and it is then sold in slices, or small seeds called huang-tze are added. The Rev. Mr. Gray says the bean flour is sifted through coarse calico, and then through a finer sort, and is then boiled for an hour over a slow fire, until it

303
thickens to a consistence suitable as food; it very much resembles blanc-mange.

Bean-sprout, the Tau-yu of the Chinese, are the germinating sprouts of the Dolichos soja bean, artificially raised by the Chinese in large quantities for wood in winter. — Smith, Chin. Mat. Med.; Gray, ii. 136.

BEAR.

Arktos. GR. 
Rich; Balu. HIND. 
Orso. IT.

The bear is of the genus Ursus, of the mammal a plantigrade animal. Four Indian species are known, viz. U. isabellinus of Horsfield, U. labiatus of Blainville, U. Malayensis of Raffles, and U. Tibeatanus of Cuvier. U. isabellinus is, according to Gray, the U. Syriacus of Hemphil and Englem. and that known to Himalayan sportsmen as the brown, red, yellow, white, grey, orl snow bear, or Tibetan snow bear, and is the Harpat of Kashmir, for it inhabits Tibet and the snowy regions of the Himalaya and high Central Asia generally.

U. labiatus, Blainville, is found all over India, Ceylon, and Assam, and is the Balu or Reech. It has received several scientific synonyms, attaching it to the genera Brandyopsis and Melurs; and its names in English, five-fingered sloth, sloth bear, and ur sine sloth, have corresponded. It is readily domesticated. When wild, it lives on roots and honey.

Ursus Malayensis occurs in Arakan, Malaya Peninsula, Sumatra, Java, Borneo, and in Indo-Chinese countries generally.

U. Tibeatanus, the black bear of Himalayan sportsmen, inhabits the forest region of the Himalaya, and is very rare in Tibet, though met with in its lower forest. It is identical with U. isabellinus. The brown and black bears never associate, and when they meet, one invariably attacks the other; the black seems always the assailant.

Bear-gall, Hsiang-tan, CHN. In China, a soft, black, sticky bolus-like substance, having a bitter aromatic flavour. It is very costly, but seldom genuine. It is given in homoeopathic doses in abdominal and hepatic ailments.

Bear’s-grease. To prepare it, cut off the fat in long strips, and put these into empty bottles; when filled, cork down the bottles, and place them all day in the sun. The fat soon melts, and now looks like oil, but when cool, becomes quite firm and white. Capital for cleaning guns, for it prevents rust; scented with bergamot, etc., it is much prized for the hair.

Bear’s-paw, Hsian-fan, CHN., is regarded in China as a great delicacy. — Williams’ Middle Kingdom, p. 319; Smith; Gray; Adam; Blyth. 

BEAR. The Great Bear in astronomy is the Dab-i-Akbar of Persian astronomers.

BEARDS.

Bart. BARBA, L. 
Beard. DAX, GER. 
Bare. DUT. Beas, Pers.
Darbi. HIND. Thadi, Tam.
Barbe. FR. Gadamu, Tel.

The beard is worn by most Mahomedans, and by several of the Christian sects of the East. In Europe, from the 12th to the 15th century, the Christian clergy wore the beard long, till the laity began to follow the example, when Leo x. ordered the priests and abbeys to shave. Most Mahomedans of the Shafein school, however, clip their moustaches exceedingly short; some clean shave the upper lip, the imperial, and the parts of the beard about the corners of the mouth and the forepart of the cheeks. In anointing the body, the beard is also attended to; and in the utterance of any holy name or prayer, Mahomedans rub their hand down over their face and mouth and beard, catching as it were the sacred sound, and filling the beard with it.

The Persians and Afghans have a magnificent growth of hair on their faces. The Sindiand Baluch have also a good quantity. The emperor Akbar so disliked the use of beards, that he would scarcely admit a person into his presence who wore one. Beards are dyed red or black with henna (Lawsonia), or blue with indigo. Many of the Sikhs and Rajputs wear the beard, but, generally speaking, Hindus and Burmese shave off the hair of the face. In western Asia, in ancient times, they had figures of bearded men, the symbolic representation of the union of the male and female principles in nature-worship. This is plainly the intention in the statues of the Aphrodite Barbata, which are to be seen occasionally in the museums. The Goddess of Love of Cyprus was Asiatic and oriental. Dr. Bartel calls her a Semitic deity of Assyrio-Phoenician origin, identical at first with the Asharoth of these peoples. — Gatton’s Vacation Tourists, p. 351; Burton’s Mecc.a, ii. p. 333; Elphinstone, 472.

BEARER. ANGLO-HIND. A palanquin-carrier; also a house servant.

BEARROOT, hunting eagle of the Kirghia.

BEAR-PIG, or hog-badger, Arctonyx collaris.

BEAR-WOOD or Biair wood, of Meena forest, Abbottabad, Hazara; also, of the Malayanus of the Himalaya region.

BEAS, a river of the Panjab; this and the Jeholun, Chenab, Ravi, and Sutlej, form the Panjnad, that joins the Indus near the southern extremity of the province. It is the Bibasis of Ptolemy, the Hypaphsis of Arrian, and Hypasias of Pliny; it was also known as the Beah and Veya, and now locally by its Sanskrit name Vipasa, corruptly Bipasha. It is, however, also said to take its name from a sacred pool at its source, called Vyas Rihs, situated in the Rottang pass, at the head of the Kulu valley. It rises in the snowy mountains of Kulu, on the south verge of Rottang (Ritanka) pass, lat. 32° 24’, long. 77° 11’, 13,326 feet above the sea, runs south to Sutlej, at Endrass length 290 miles. Its chief tributaries and affluent are the Parbatii; Sainj, 35; Comati, 55 miles; Ul; Gaj. About 10,000 square miles are drained by it. The scenery of the Beas is particularly beautiful, and differs from that of the Ghaghra and Chambal. Above Sultanpur there is abundance of kail trees; the dhar-chil of Chamba, elm, maple, oak (two species), and walnut. On the Parbatii, not far from the sacred hot spring of Mani Karan, there is a considerable supply of box (Buxus sempervirens), also of ‘Shamshad’ of the Cupressus torulosa (twisted cypress), and of the olive (Kahu). A large forest of chin (Pinus longifolia) is found below Karsole on the Parbatii. The higher slopes there are dense forests of the less valuable pines, and of the alpine oak, Quercus semicarp-
BEAUMONTIA GRANDIFLORA.

There are gold washings in its sands. From Manoli forest to Larji the fall appears to be nearly 60 feet per mile. From Larji to Mandi, a distance of 25 miles, the fall is 1000 feet, or 40 feet per mile. From Mural, a distance of 150 miles, the fall is only 1600 feet, or 10-06 feet per mile. Polygony prevails in the Beas valley, but the general immorality is ascribed to the large numbers of Yarkandi traders.—Arrian: History of the Panjab, p. 15; Hook, et Thom.; Mrs. Hervey's Turfary, i.p.85; Cumingham; Clegborough's Panjab Report, p. 84.

BEAUMONTIA GRANDIFLORA. Wall., the Echites grandiflora of Roxburgh, one of the Apocynaceae, is a gigantic climbing shrub, growing in Chittagong, the Khassya hills, and Nepal; flowers in February, and is very showy; found by Dr. Hooker in the Terai east of Siligori, ascending the loftiest trees, and clothing their trunks with its splended foliage and festoons of enormous funnel-shaped white flowers. B. Jerdoniana, R. Wright, of the Coorg jungles, attains similar heights.

—Roxb.; R. Brown; Hooker, Jour. i. p. 401.

BEAVER.

Neither the large nor the little beaver occur in India; but the tails of the latter, the Ondatra Americana of Tiedmann, the Castor Zibethicus of Linnaeus, Fiber Zibethicus of Cuvier, Ondatra of Lacepede, the musk-rat of Canada, and musquash of the Cree Indians, form a considerable article of import into India, being regarded by some races as aphrodisiac.

BEBBEH, the chief family of the Kurd clan of Kermani; the members are the hereditary chiefs of the clan, hence their whole territory and the people are now called the government of the Bebbeh or Baban. The clan was originally established at Fizhdher in the northern mountains, near Sikenah, on the frontier of Persia.—Rich's Kurdistan, i. p. 80.

BEBEHAN, one of the three districts of Fars, the other being Laristan and Faras proper.

BEBINA. Hind. Mussaenda frondosa.

Treapang, the esculent Holothuria, or sea cucumber of the sea of the Archipelo, sells at Singapore at 18 to 70 dollars per pikul. One species, the H. truncula, is abundant on the reefs at Batavia, Tahiti, and is 6 to 8 inches long, and 2 to 4 inches broad. Another species is 3 feet long, with a cylindrical body. A settlement of Sandwich islanders was formed on Fenning's Island in the N. Pacific to collect treapang for the China trade. That of the Torres Straits is assocted into the red fish, which bring $140 per ton at Sydney; the black fish, $120; and the tent fish, $80.—Moresby, p. 136. See Holothuria; Treapang.

BECHEI. Hind. An Indian variety of the Cucumis dromedarius.

BECHIAUCORI, a wood of Nepal, called also Sulla and Suraahooli, or Dhoobkee, on account of its resinous quality. Its branches are used as torches; the fragrant turpentine which it yields is employed in sacrifices and in medicated salves; and its wood is converted into rafters for houses.

—Smith's Nepal, p. 67.

BECHNE-WALA JOGI, a sect of Jogis peddlars and mendicants.

BECHUI or Beh-chandee. Hind. In Raopore, this substance, if pulverized, resembles arrowroot, and is made use of by natives on their part or fast days, prepared in various ways. It is obtained from the lignon tree which issues from the stems of a jungle plant, after being soaked in running water for some days. The Gould race prepare the Beh-chandee. It can be had in any quantity in the Jubulpurazar, but most of it comes from Mundla and Sheone. It appears to consist of the dried sections of a farinaceous root containing bassorin, and allied in composition to salpe.

BED.

John v. 8, 9, says, 'And the man took up the bed and walked.' The bed of an oriental is seldom anything besides a carpet or mat, or a felt as thick as a bed quilt. Men carrying such bedding may be seen daily on the highways. The Hindus of the south of India usually sleep on the floors of their houses, but all of them have right dressed-in which to sleep, that of the women being generally a loin-cloth like a kilt, called Padawi, Tam., Koka, Tel., made of cotton or of the fibres of one of the hemp plants, though many lie down in their day dress, as in Exodus xxii. 27. Mostly all Mahomedans in India use cot's to sleep on, when able to afford them, and every Mahomedan bride takes a cot or charpai to her husband's house, as part of her 'jahez' or furnishings. In Burmah the poorest person sleeps on a cot with mosquito curtains.—Ward, Hindoos.

BED. Hind., Pers. Salix, sp., the willow, also Calamus rogatong, the cane rattan.

Bed-i-Anjir, the castor-oil plant.

Bed-i-Mushik, Salix Egyptiacen, S. Capreca. Willow-flower water is the arak-i-bed-i-mushik.

Bed-Kist is a species of Salix.

Bed-Lala, S. tetrasperma.

Bed-Majnun is the S. Babyloncns.

Makhan bed or pakhian bed, Saxifraga ligulata, Bed-ul-Ashar, Calotropis gigantea.

BEDALI or Bedalika. Hind. Griffithia fragrans.

BEDA-TIGE. Tel. Ipomea pes-caprae, Sweet.

BEDDOME, COLONEL, a Madras military officer, wrote on the snakes, the ferns, and timber trees of the Madras Presidency. His Flora Sylivatica of the Peninsular tree, a work of great research, gives also notices of Ceylon trees.

BEDEE. Of the Sikh sects, the highest class are the Bedee, as being descended from Guru Nanak, the founder of the sect. They form, by virtue of their descent, the hereditary priesthood. They are to be found in all parts of the Panjáb: in the districts lying at the base of the Kangra hills, at Gujranwala in the middle of the Rehna Deob, at Gogira on the Ravi, and at Shahpur on the Jehulum, and a few at Rawal Pindi; they are also occasionally to be met with to the south of the Sutlej. But their home and stronghold is at a town named after their founder, Derah Dalew Nanak, on the Ravi, near Butalla. So notorius
had been the crime of infanticide among them, that a Bedee was generally known by the opprobrious title of Kowee Mar, or ‘daughter-slayer’. The Bedee adopted as their patronymic the name of the tribe to which their ancestor Nanak belonged. But there are Bedee still of that original tribe, who are not descendants of the Guru, nor, indeed, Sikhs at all. With these men pride alone prompted to the crime. The fear of poverty arising from marriage expenditure would have little weight with them, as, unlike the impoverished Rajputs, they were generally men of wealth and affluence; they held fertile jaghirs, and their priestly coffers were well filled with the offerings and dues of their race. But in defence of the unnatural custom, which they did not attempt to deny, they, like the Rajput races, were ready with a traditional obligation laid upon them by an indignant ancestor. The story is thus given by Major Herbert Edwardees:

—When a bridegroom and his party were departing, the two sons of Dharm Chund accepted presents from them except the oldest. The weather was hot, the party out of temper, and they took a malicious pleasure in taking the young Bedee farther than etiquette required. When the lads returned home footsore, Dharm Chund asked if the Khutra had not bid them to turn back sooner. The boys said “No,” and it was then that the old man, indignant at all the insults which the bridal of his daughter had brought upon him from an inferior class, laid the inhuman injunction on his descendants, that in future “no Bedee should let a daughter live.” The boys were horror-stricken at so unnatural a law, and with clasped hands represented to their father that to take the life of a child was one of the greatest sins in the Shastras. But Dharm Chund replied, “that if the Bedee remained true to their faith, and abstained from lies and strong drink, Providence would reward them with none but male children, but, at any rate, let the burden of the crime be upon his neck, and no one else’s.” And from that time forth Dharm Chund’s head fell forward upon his chest, and he evermore walked as one who bore an awful weight upon his shoulders. With consciences thus relieved, the race of Bedee continued for three hundred years to murder their infant daughters, and if any Bedee, out of natural feeling, preserved a girl, he was excommunicated by the rest, and treated as a common sweeper. —Brown's Indian Infanticide, pp. 115-117.

Beder. In the tract lying between the Mysore, the Hyderabad, and the Mahatta territories, are several petty sovereignties, such as that of the Nawab of Banganapilly, a Syud family in the east of the Ceded Districts; until 1839, the Mahatta of Kurnool ruled on the right bank of the Tungabhadra river; further west is the Reddi chief of Gadwal; the Mahatta chief of Sundur, one of the Ghurpa family; the Khatriya Raja Narapatii of Anagonda, the descendant of the great king Rama of Vijnagar, who was overthrown by a combination of the Mahomedan kings of Golconda, Kullburga, Bijapur, and Ahmadnagar; the Pathan nawabs of Shahnur, the Ghurpa chieftains of Gugjundurgur, and Akalkot, and at Ghurgunta, and Beder Zorapore, are the descendants of that Beder soldier, Pid Naek, to whom Aurangzeb, for aid given at the siege of Bijapur, granted a small territory in the Raichore Doab. The Beder race now have only these two small sovereignties. Some of them in Zorapore are tall, well made, robust men. A small body, engaged in cultivation, occupy the plateau of Ramandrug. The town of Zorapore is in the centre of a rocky amphitheatre, admirably suited for a predatory band. They are fond of the chase, and hunt the wild boar with large dogs. They are in various stages of civilisation, but those in Mysore are perhaps most advanced. In parts of Mysore they form a considerable part of the population, and have many poligarmships. Their name is variously pronounced — Beder, Baida, Baida, Waida, Vedda, Vedar, Veddr, Vedan, and Bedan. They are the race that gave their name to the Pindara, who harassed Central India for nearly fifty years. Some of them have become Mahomedans.

The Beder of Zorapore and Ghurgunta drink spirits, eat the hog, crocodile, porcupine (Sambu), manis (Ali), iguana, bullock, cow, buffalo, cat, rat, bull, fox, and jerboa rat. Beder families often devote their daughters to some idol. She is branded with a seal (Muddirai), and becomes a Basavi or Murli. Their men often become Dasari, who are celibates, and subsist on alms. Wilson describes the Mysore Beder as a race who live by the chase, as hunters, fowlers, and are considered in Mysore as coming originally from Telingana. Many of the Bedera are grain carriers. Until the middle of the 19th century, a small tribe of Baidara-wanlu, or Beder people, remained in Bellary; they were Mahomedans, kept numerous little horses, which they used for carriage. They were great carriers, and had been of use in several military operations, and a small body then occupied the Ramannulla hill.

Beder, in lat. 17° 53' 0" N., long. 77° 34' E., a walled town in the Dekhan, near the right bank of the Manjera, 75 miles N.W. of Hyderabad. The top of the minaret is 2550 feet, and the base is 2250 feet, above the sea. Beder was the capital of the Bahmani dynasty, which ruled up to the middle of the 16th century. This dynasty joined the quadruple confederation, formed with the Nizam Shahi, king of Ahmadnagar, the Adal Shahi, king of Bijapur, and the king of Golbarga, to overthrow the Sind sovereignty of Bijanagar, near Bellary, when the sovereign Rama Raja was defeated, taken prisoner, and beheaded at Kala Chabutra. Beder is surrounded by a great curtain, now much dilapidated, and on one of its bastions is an old welded gun, 21 feet long. Many great cupola tombs are on the plain to the S.W. The inhabitants, in 1866, were few and poor. Beder, Bijapur, Berar, Golconda, and Ahmadnagar, in the 16th century, were five independent Mahomedan kingdoms, but about the time of Baber’s invasion they were absorbed by the powerful neighbours. In 1572, Berar was absorbed by the Nizam Shahi dynasty. A peace was concluded here between Salabut Jung and Baji Rao in 1751.

Beder Ware is a tatanagane work which has been described by Drs. Heyne, Buchanan Hamilton, and Smith, and Captain Newbold. It is a metalurgical compound of considerable interest, and the articles made of it are admired for the elegance of their form, as well as for the gracefulness of the patterns with which their surface is covered. Though the groundwork of this composition appears of a blackish colour, its natural
Beder Ware.

Bederi ware is characterized by its color, which is either pewter or zinc. Dr. Heyne informs us that it is composed of copper 16 oz., lead 4 oz., and tin 2 oz. These are melted together, and to every 5 oz. of the alloy 16 oz. of zinc are added, when the alloy is melted for use. But to give it a black color, which is described as a black color vehicle, it is scraped, probably from bringing out the black metal, and is dipped into a solution of sal-ammoniac, salpetro, common salt, and blue vitriol. Dr. B. Hamilton saw an alloy of zinc 12,360 grs., copper 460 grs., and lead 414 grs., melted together, and a mixture of resin and beeswax introduced into the crucible to prevent calcination. It was then poured into a mould made of baked clay, and the article handed over to be turned in a lathe. Artists then inlay flowers or other ornaments of silver or gold. They first smear it over with sulphate of copper and water, which gives the surface a blackish color, and enables the artist more easily to distinguish the figure which he draws; this he does with a sharp-pointed instrument of steel, and cuts it with small chisels of various shapes, and then with a hammer and punch fills the cavities with small plates of silver, which adhere firmly to the Bederi. It is then polished and stained, as described above. The various articles made from it are vases, wash-hand basins and ewers, hookah-bottoms, spittoons, cups, and dishes, small boxes, and weights. These are inlaid commonly with silver, but sometimes with gold. The patterns are usually as much to be admired as the forms of the vessels. Though usually called Bederi, it is manufactured at other places. According to Captain Newbold, the mould of the vessel is first prepared, in the usual manner, of clay turned into shape on a wheel; over the smooth surface of the mould a coat of wax and resin in equal proportions, with a little oil, is laid, of the thickness of the sides of the vessel required; over the wax another thick coat of clay is applied. Gradual heat is next resorted to, to harden the clay part of the mould, but principally to melt out the wax, which of course leaves a vacuum in the space it occupied. Into this space the molten alloy is poured, cooled, the mould broken, and the vessel in rough taken out, polished, and set aside, to receive a black colour, preparatory to inlay, from a smearing of Mor toota (blue vitriol). The alloy itself is of a pewter white colour, and is composed of the following proportions:—1 seer Just (zinc) to 1 Chittak or 6 Shahi piece weight of copper. The pattern of the ornamental device to be inlaid, either in silver or gold, is next drawn lightly with a steel point on the blackened surface of the vessel, and then cut out to the depth of the inlay required, with a tiny delicately-pointed chisel, worked by a small hammer. A thin bit of paper is pressed into the excavated pattern to receive the impression; taken out and placed upon a thin plate of silver (the inlay), which is itself laid out evenly on a bed of mixed wax and resin, and cut into the exact shape of the impression. The cut-out bit of silver is then pressed into its corresponding cavity engraved on the side of the vessel, and firmly inserted by means of a steel point. This done over all parts of the vessel, it is again polished preparatory to receiving its finishing coat of black. This is done by subjecting the vessel to a gentle heat, and smearing it with a mixture composed of—1 tola (lbhur) Shorah ki Mutti (salpetre), 3 masha Nousadar (sal-ammoniac), ground up into the consistence of cream with brackish water. After allowing this mixture to lie upon the vessel for a few hours, it is washed off with a little brackish water. The inlaid silver devices are little altered in colour, but the intervening portions of alloy remain of a permanent dead black. He witnessed the whole process of inlaying, and could not help admiring the precision, beauty of touch, and celerity with which it was performed by a ginnet, which caste and a Daima were the only persons skilled in the art. It seems divided, however, into three branches,—the mould maker, smelter, and inlayer.

In 367 there was only one family. Bederi ware does not rust, yields little to the hammer, and breaks only when violently beaten. According to Dr. Hamilton, it is not nearly so fusible as zinc or tin, but melts more easily than copper.—Royle, Arts, etc., of India, p. 471; Letter from Captain T. J. Newbold to Major-General Fraser; Dr. G. Smith in M. E. J. R. Bi Bai. Hind. A pulpit.

Bedisa Tivva. Tel. Vitsa latifolia, R.

Bedinur, also called Hyder Nagar, also Nagar, a town 4000 feet above the sea, in Mysore, formerly a large and populous city of great strength, but the population in 1851 was 1255 souls. It was taken by Hyder in 1768, and again in 1783 by General Stewart, who was afterwards attacked by Tipu, and the whole destroyed or made prisoners. When sacked by Hyder, the booty obtained is said to have amounted to twelve millions sterling. Hyder established a mint, and here struck the first Hyderi pagodas.

Bedinur, at the foot of the Aravalie hills, within the bounds of Mewar, had, as one of its ancient chieftains, Rao Soortan, of the Solanki tribe. He was a lineal descendant of the famed Balhara kings of Anhalwara, who were expelled from Anhalwara in the 13th century, and migrated to Central India, where they obtained possession of Tonk-Thoda and its lands on the Bunis river; but Lilla, the Afghan, deprived Soortan of Thoda, and restricted him to Bedinur. His daughter is distinguished in Indian annals.—Rajasthan, i. 673.

Bedouin, the Bedawi of the Arabs, may be described as comprising those in the western bordering on Yemen, Hejaz, Palestine, and Syria, and along the banks of the Euphrates; also those of the Najid, and central provinces of Arabia, all of whom migrate but little (?); those who have crossed the Euphrates, and those who migrate or roam all over the deserts.

The Shammar emigrated from Jabil Shammar, in the 17th century, into the northern desert, and they were forced across the Euphrates by some tribes of the Anazah. They have four great tribes,—Jerba, Fadagha, Salama, and Es Safik.

The Anazah are the greatest and most powerful of the Bedouin populations. They are a great people, pastoral, nomadic, dwellers of the desert. They claim descent from Adam. They were dispossessed of Najid by the Wahabis in the early part of the 19th century, and they migrated largely to the north, occupying the deserts between Syria and the Euphrates in summer, and returning to the south as far as Najid in the winter, bartering for grain and goods with the merchants of the border towns of Syria, such as Damascus, Hamah, Homs, and Aleppo. The different Anazah tribes
have each their own separate pastures, and trade with different towns. The profits of the Aleppo merchants alone have been stated at £50,000 a year. They are proud of their race, and despise the Turk, but often fail in their mercantile agreements. They have two divisions of the Bisher, the Walad Ali and Jelas. Abdul-Wahab, the reformed, belonged to the Mekran, a branch of the Messalaky Anazah. When they migrated to the north, they forced the Shammar across the Euphrates, after fierce battles, and hostilities continue. Some have remained in Najd, some in the desert east of Palestine and Syria. The Walad Ali at Khalbar are masters of all the Haj route from Syria. They migrate north to the Harun and Damascuses. They are rapacious and predatory. It was the Walad Ali who defeated the French troops under Kleber. They have many fine horses. Other clans or tribes are the Bani Sahar, Amur, Amarrah, Erfaddi in Najd, Ruwlah and Jelas, who migrate from Damascuses. The confederate tribes are the Fadan, who are predatory; and other clans and tribes are the Shincilat, Hirsa, Adjadjara, Al Ghaban, and Jedaa, the seven Sabha tribes; the Abadat, Duan, and others. Obaid and Tai, ancient and still powerful tribes, are in the neighbourhood of Mosuil, where they sell their wool, for they are rich in live stock. The Taif came from Yemen to the Tigris. Montifish, Al Hindi, and Slaid, tribes of Irak or Turkish Arabia, are scarcely in Arabia. The Montifish are fishermen, and breed horses. Al Hindi are wealthy. They are agricultural and pastoral, sowing, and returning to reap in autumn. The Slaid are cultivators; have a breed of large white asses, much used in Syria. The Tai at one time settled in Yemen. Hatem, one of the tribe, was celebrated for his generosity. The Tai had seven families. 

Mowali, of the northern desert, came from Hejaz, and their shaikh claims to be descended from the Abbassi Khalifs. The strife for the district between the Shammar and the Mowali lasted fifty or sixty years. The Hudadiv are peaceable, wealthy shepherds. The Weldi are agricultural, on both sides of the Euphrates. They were formerly in Mesopotamia; some are tributary to the Shammar, and some to the Anazah. 

Abghedat is a wealthy tribe, dwelling in tents, both pastoral and agricultural. 

Beni Khalid, a numerous tribe, which has spread from Hassa to many parts of the desert. Ferdoon, Ghes, and Lahap (the last a Mowali clan) are nomadic, but grow grain. 

Sohni are carriers, and have some wealth. They make soda. 

Bans Said, north of the Shass, on the right bank of the Euphrates, are wholly predatory, riding horses in their forays; do not cultivate, nor breed horses, nor trade. 

Subia, on the right bank of the Euphrates, below the Weldi. They are constantly at war with the Shammar of Al Jazirah, and on that account are protected by the Anazah. They have large flocks of sheep and camels, and have good horses. Some families grow grain. 

Al-Glat, Al-Medjadama, Al-Bala, Al-Mesha-hads, Al-Bashkch, Al-Baslim, are small tribes of no military repute. 

Hernanl, a warlike branch of the Koresh tribe of Mecca. Many of them in Syria are employed as irregular horse. 

Agkel tribe are carriers. They are numerous, and have large herds of camels; travelling and settling all over Arabia as agents or peddlars. 

Bedouin tribes who dwell permanently among the mountains only rear sheep; the camel-breeding Bedouins migrate with the seasons. The Bedouin is described by Chateaubriand (Itineraire, i. 421): ‘La tête ovale, le front haut et arqué, le nez aquilin, les yeux grands et coupes en amandes, le regard humide et singulièrement doux.’ Every Bedouin grows his hair unshorn from infancy. The young men plait their locks on each side; they never wear the fez; every Bedouin smokes. Bedawi are really the inhabitants of Central Arabia. Reading and writing are almost unknown to them, but they speak the purest and softest Arabic, and the Meccans and others resort to them to obtain a just pronunciation. The Bedawi pronunciation is best, that of Mecca and Hejaz next, and after these come that of Bagdad and Yemen.—Major R. D. Upton, Gleanings from the Desert of Arabia, p. 204; Lady Anne Blunt, ii. 164. 

Beda, a migratory predatory tribe found in most Bengal districts, usually under the special surveillance of the police. They are a branch of the Bazigar or Nat, and sometimes call themselves Manjhi and Mahalli. They are migratory jugglers, fortune-tellers, rope-dancers, beggars, and fowlers, and have a slang language. They submit to circumcisions, and call themselves Mahomedans, but they have many Hindu customs and idolatrous practices, and consult Brahmins on particular occasions. Though scattered, homeless, and migratory, they are in communities in different localities. 

—As. Soc. Res. ii. 458; Dalton, Bengal, 326. 

BEE.

Abelle, . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . .
BEE.

strongly against the combs. The bees hurry through the outer door, when the farmer, introducing the sickle, cuts down the combs nearest to him, leaves undisturbed about one-third of the combs close to the outer door, and then replaces the inner platter. Not above one-hundreth part of the community is destroyed. The produce is less than the ordinary yield of a good swarm in England. The honey is light-coloured, and of a taste as pure and as sweet as that of Narbonne. The paensanity of Kashmir eat it raw, or mixed with various articles of common food, whilst the most wealthy substitute it for sugar in preserving fruits. It is customary to take the hive every year, and the end of September or beginning of October is found the best season for this operation, a little time still remaining for the bees to add to the portion left for their support during five months. The bee of Kashmir is almost domiciled; it is a little smaller than that of Europe, though a little larger than the domesticated bee of Kamaon and of Garhwal. Occasionally the honey made by the Bhoura bee of Garhwal is intoxicating. The Bhoura is compelled to take a more extensive range, and, in the scarcity of food during the short summer, to be less select in regard to its quality.

The bees at the marble rocks of the Nerbulda are the Apis dorsata, and are said to be easily irritated from March to July. On one occasion they attacked an Englishman, Mr. Biddington, and in trying to escape them he was drowned. Captain Forsyth mentions (p. 40) that one of his baggage ponies was stung to death. Writing from Colombo, Ceylon, Mr. Benton says he had seen two native races of bees there, and the comb of a third. One is stingless, but worthless. One race is Apis indica, and the other Apis dorsata. The latter is certainly a wonderful bee; builds in the open air, on branches, often making combs six feet long; and thirty natives have each taken a load of honey from the same tree. Writing from Java, he had seen two of its combs. These were three feet by three and a half feet, and were one and a half inches thick when the brood was reared, and had about twenty cells to the square inch.

Bees in Abyssinia build their combs in the trunk of the baobab, and the honey is deemed of superior flavour.

In Ceylon, bees are all wild. They collect largely from the neho. Their nests hang from the boughs of the trees, and a man ascends with a lighted torch of green leaves, which creates a dense smoke, and he smokes off the swarm from the comb, which is a beautiful circular mass of honey and wax, generally about eighteen inches in diameter and six inches thick. The bee-hunter being provided with vessels formed from the rind of the gourd, attached to ropes, now eats up the comb and fills his chatties, lowering them down to his companions below. When the flowers of the neho fade, the bees leave that district.

A small bee called 'hei-ying-koen,' or 'fly bee,' is found in the valley of Munnipore. The honey is excellent. Another species, very large, forms its nest in the ground, and is dangerous to the unwary traveller. Incidents have occurred of individuals having fallen into these nests, and having been stung to death. The Munnipure, when they come upon a bee of this species, catch it, and, having attached a thread to his body, let it loose. By means of the thread its flight is observed, and it can be followed to the nest. The spot is marked, and fire having been procured, the bees, otherwise so formidable, are easily destroyed, and the comb filled with the young obtained. Another and larger bee of Munnipore forms its nest dependent from the branch of a tree, or under the shelter of a wall, the nest being of a most beautiful substance resembling marble paper.

The bee of the Indian Archipelago suspends its nest from a branch of a tree, in which position they may be seen forming masses of considerable bulk. Certain trees become favourites, and are selected by the bees year after year for many generations, although often disturbed by the taking of their nests. In Borneo these trees become private property among the eastern tribes, and are handed down from father to son. Bees are hived in Borneo, and beeswax is sold at 25, 10s., to 77, 10s. per 133-1-3 lbs.

The Chinese bees are killed off bees by a few dry stems and leaves of a species of artezium, which grows wild on the hills, and which is largely used also to drive the mosquito out of the dwellings of the people. This plant is cut early in summer, sun-dried, then twisted into bands, and it is ready for use. At the commencement of the operation, one end of the substance is ignited, and kept burning slowly as the work goes on. The bees hover about, but apparently quite incapable of doing the slightest injury. — Fortune's Residence; Mourtowock's Travels; McCulloch; Records of the Government of India, F.D., pp. 32-3; Baker's Rifle, pp. 304-5; Indian Field.

BEBEBEE or Bibi. Hind. Any lady, a lady of the Mahomedan races. Beebee Fatima, daughter of Mahomed, was wife of Ali. See Begum.

BEEBEE of Cannamore is the ruler of that neighbourhood, and exercises authority over three of the islands of the Laccadives, all of which formerly belonged to her ancestors. The Beebee is a Mopla Mahomedian, and the senior female member of the family takes the title and position. It is related that in some former time a party of Mopla merchants came upon a number of Nair women while bathing, who hastily snatched up their clothes and ran off, but the apparel of one young woman was accidentally carried away, and as she could not quit the water, a Mopla gave her a cloth to cover herself, which is equivalent to being her husband, and they were married. The girl was the only member of a rich house, and the Cherical raja bestowed on her a tract of country, with the arrangement that it should be held with the title of Beebee by females only.

BEE, CARPENTER, a name given to a hymenopterous insect, the Nylloccia tentaculata of Westwood (X. longipes, Drous), which perforates large beams of timber, as also trees, by boring holes through them. On one occasion, at Kurnool in the Ceded Districts, one of them was seen to kill a sparrow by a single thrust of its sting. Any intruder within the precincts of their nests instantly becomes an object of suspicion and attack, and as the unlucky sparrow was flying towards the corner of the hospital, the bee assailed it, struck it with its sting, and the bird fell dead. On raising the skin from the bone, a small reddened spot on the temporal part of the skull indicated the point at which the sting had entered.

BEEDEUL. Beng. Raulhim purparea.
BEE EATER.

BEE EATER, several species of birds of the genera Merops and Nyctibiomm.

BEE-EW. BURM. A very abundant timber of Tenasserim, not identical with Thee-bew-tha. Its maximum girth is 3 cubits, and length 22 feet. When seasoned it sinks in water. It is a very hard, strong wood; used in rice mills, where great strength and durability are indispensably required; recommended for handles of tools.—Dance.

BEEF.

The flesh of the bull, bullock, or cow is in use amongst Mahomedans and non-Aryans in India. The flesh of cattle that have died is largely used by the Burmese, and by all the shoemaker and Pariah races. Beef is never eaten by any of the Hindu sects; many never even pronounce the word, though in the time of the Veadas the Gao-medha or sacrifice of the cow was common. Menu authorizes the consumption of animal food at all seasons, with the slight restriction of first offering a bit of it to the gods, or menes, or guests. Hence, also, Goghana, or cow-killer, became the term in use to designate a guest; and he names amongst other animals all quadrupeds, the camel excepted, that have but one row of teeth.

Surabhi, in Hindu mythology, is a celebrated cow, obtained, with other of the fourteen products, at the churning of the ocean; and daughter of Surabhi is a common expression to designate a cow. In Valmik's preparation for the reception of Vasishta described in the Uittara-rama-charitram, Blandayans says:

'Why, know you not
The Vedas, which elucidate our law,
Direct the householder shall offer those
Who in the law are skilled, the honeyed meal,
And wish it flesh of ox, or calf, or goat?'

The Vava-Parva of the Mahabharata mentions buffalo flesh as openly sold in the market.

BEEGHOTO. BURM. Castramata muricata, a hard, close-grained, reddish wood, variegated with dark and whitish streaks. It is chiefly used in England in forming borders to work in which the larger woods are employed. It is procured from N. S. Wales, and is imported into the United States in considerable quantities, for various purposes where a hard, heavy wood is required; the Tenasserim coast can furnish almost any quantity of this timber, which is very little used there. Roxburgh says it resembles teon in appearance. The Burmese call it by the same name as the pine.—Fawckner; Mason.

BEEGAH or Bigha, a land measure in use in India, but varying in length. In Northern India it is 3025 square yards, or five-eighths of an acre. In Bengal, 1000 square yards, or little more than one-third of an acre. There is a kuch-ha and a paarkha begah, the former one-third or one-fourth of the latter. The following are some of the local begahas in every 100 acres—

Farrakhabad, 173 12'0
Asimgur, Ghaari,
Gorahpur, 192 19'7
Bihar, 154' 6'8
Allahabad, Asin-
gur, 177 5'15
Upper Doab
(Kuehha), 582 3'0

The smallest begaha, says Sir John Malcolm, may perhaps be computed at one-third, and the largest at two-thirds, of an acre. The common begaha in Central India is sixty guz square, which, taking the guz at thirty-two inches, is fifty-three yards one foot. This makes the contents 3200 English yards, very nearly two-thirds of an English acre. But the guz used in land measure is often not more than twenty-eight inches, which reduces the beegah to about half an acre.—Malcolm's Central India, ii. p. 35; Elliot, Supp. Glos. pp. 53, 54. See Khurj; Weights and Measures.

BEEGHOTO, a tract of country occupied by the Ahir and the Chunhan Rajput. It includes Rewaquee, Bauwul, Kanon, Patody, Kof Kasim, and part of the Baraith jaghir.

BEJABARA SULA, SANSK. Cashew-nut.

BEER-JHUN-JHUN. HIND. Cottonaria resu-
ta.

BEERMAAL, a tributary to the Kistna river. It rises in lat. 19° 5' N., long. 78° 33' E., in the tableland of the district of Poona, 3900 feet above the sea, and runs S.E. into the Kistna, length 510 miles. It receives the Goor, 100; Neera, 120; Sama, 170; Tandoor, 85 miles. About 29,000 square miles drained. At Coreyaum, where it is enclosed by trap banks, it runs with great violence in the rains. Before it joins the Kistna, it runs through the stratified, fossiliferous rocks of the centre of the Peninsula.

BEERMBOO. BENG. Coccinia Indica.

BEEN or Vina, a sort of sitar, but having two dried hollow pumpkins (Cucurbita melopepo, Willke) fixed to the end of it, with five or seven steel strings; described by Sir William Jones in the Asiatic Researches.

BEENZA, a form of polyandric marriage in Ceylon, in which the wife continues to reside with her brothers, and her husband takes up his lot with her.

BEER. SIND. A berry growing in Siud, which is pounded, mixed with water, and parched in pots, and used as a substitute for gram.

BEER, a fermented liquor made from the malt of barley, and flavoured with hops. At nearly all periods in the world's history, and among nearly all nations, the art of making a fermented drink from some kind of grain appears to have been known; but of all the cereals, barley is the best adapted to the making of beer. Beer used in India is mostly imported from Great Britain, in hogsheads and in bottles. Captain Ouchterlony, about 1850, established an experimental brewery in the Neillerry hills. It is still brewed there, also at Bangalore, Simla, Kussowlie, and other places, and used extensively by the local residents, who, apart from the difference of price, prefer it to English-brewed ale. The natives of India only sparingly drink the British beers, but all the hill races brew beers for themselves. In the United Kingdom and Ireland, about 50 gallons per head per annum are consumed. The Kakhyan prepare Sheroo from rice; it resembles small beer. The Lepcha, Lushai, and Nag are a similar beer. The Barman con-gee is a beer which the Khyen and Karen also use. The Naga also prepare moth from rice; and the Khanti and Singpho of the Hukong valley distil a spirit called Sahu.—Tom. Un. Rev.; Ind. Daily News. See Ale.

BEERA or Beerace. HIND. Pan-ka-beera. A small packet of betele leaf folded up contain spices, catechu, calcined shell-line, and pieces of the areca or betel-nut.—Todd's Rajasthan, i. pp. 327, 413.

BEER. BENG. Acellupia rosa.

BEERSEBHA. IS 20 miles south of Hebron. Its name means 'the well of an oath,' or the well
of seven,' because here Abraham made an alliance with Abimelech, king of Gerar, and gave him seven ewe-lambs in token of that covenant to which they had sworn (Gen. xxvi. 28). A Roman missionary was here in the time of Eusebius and Jerome. The limits of the Holy Land are often expressed in Scripture by the terms 'from Dan to Beersheba,' the former being the northern, the latter the southern, extremity of the land.

BEERTIA. Beng. Punicum Italicum. BEER-as-SOMAL, country of the Somalis to the south of Cape Guardafui.

BEESHA ELEGANTISSIMA. Hasskarl. A tall grass, found basking on the mountains of Java, up to 1000 feet.—V. Mueller.

Beesha, . . . MALAKAL | A bamboo growing in the peninsula of India, Bengal, and Chittagong.

Beesha stridula, Moon. The Ochlandra stridula, Thuc., is very common about the low country in the south of Ceylon, at Badagaran, and elsewhere, called Batta; the leaves make an excellent thatch.

Beesha Travancoria, Bedd. The Irul of the Tamil people. This magnificent species of elephant grass is abundant on the S. Travancore and Tinnevelly mountains, at 3600 to 5500 feet elevation, where it covers many miles of the range, often to the entire exclusion of all other vegetation; in open mountain tracts it generally only grows from 6 to 8 feet in height, but is close and impenetrable, elephants even not attempting to get through it; inside shobs and their outskirts it grows to 15 feet high, and is much more straggling.

BEEFAX.

Mom; Peela mom, . . . HIND. Ten Mazaou, . . . TAM. Lilin, . . . MALAY. Mynum, . . . TEL.

Beeswax is more or less yellow, and has an odour of honey; it is brought into the market, after allowing the honey to drain from the honeycomb, and then boiling the combs in water, frequently stirring to prevent burning. The wax thus obtained is melted a second or a third time, and pressed through hair bags of increasing fineness, allowing the molten substance to drop into cold water to firm it and prevent sticking. Another process, however, is to put the combs into a pot with water and nitric acid, one quart of the former to one ounce of the latter, and after boiling it allow them to cool; the pure wax floats on the surface, and two layers of dregs settle, the inferior one being almost worthless. Wax is sometimes adulterated by peaseemal. Beeswax is exported from India. In the Indian Archipelago the natives collect the wax from the nests in the forests, disregarding the honey, which is little in quantity, and worthless. The islands of Timor and Timor Laut afford beeswax in sufficient quantity to form an important article of export. It is a considerable article of exportation from the islands of the Archipelago, chiefly the wilder part of them, where the consumption is small. In the eastern parts of China, where the product of the tallow tree (Stilligia seifbiera), and beef and hog's tallow in the south, are used in the manufacture of candles, wax is only employed to incense the tallow or lard, which, from the heat of the climate and its unclerared condition, never becomes hard. About 130 tons are annually taken to Britain from Africa, America, and India, and sold at £5 to £7 the cwt. Beeswax and camphor are exported largely from Bitnulu and Serekie, at which towns these commodities are collected by the Mahomedans.—Morrison; Crangard; Low's Sarawak; Poole's Statistics; Balfour's Commercial Products.

BEEFLE, the Chagolf of the Hebrews. Beetles belong to the Coleoptera class of insects; they are very numerous in tropical India. The collector in India are species of Mylabris; their market value in Britain is low, only 5s. 8d. the pound. The largest beetles are only found within the tropics, those of the Eastern Archipelago being the largest of all. Mr. Wallace in eight years collected about a thousand species there. The Longicorns, strangely mottled, spotted and rugose, abound where timber trees have been recently felled; their antenna are sometimes excessively long and graceful. The family Buprestidae generally rest on the midrib of a leaf, and the naturalist often hesitates before picking them off, so closely do they resemble pieces of bird's dung. Many of the family Currenilioideae have the wing-cases and other external parts so excessively hard, that they cannot be pinned without first drilling a hole to receive the pin. Dung-beetle is the name given in India to the dung-feeding Lamelliborn beetles. They roll up pieces of excrementitious matter into the form of balls, in which they enclose their eggs, and the balls serve for the food of their young. The balls are sometimes one or two inches in diameter, and the beetles stand on their fore feet, head down, and pushing from behind with their hind legs, roll them along and lodge them in deep holes. One of these, the Atenehus saucer, was revered by the ancient Egyptians as one of their sacred animals; and its image, carved in stone or metal, has frequently been found rolled up in the Egyptian mummies. The Necrophori, or sexton beetles, enter the bodies of small animals to lay their eggs in them. They burrow underneath the creature and let it sink into the earth. They bury horse and cow dung similarly. The Anthribide family also are very abundant in the Eastern Archipelago. They rival the Longicorns beetles in the immense length of their elegant antennae. The Eupholi of the Papan islands and the Paelyrychni of the Philippines are veritable living jewels, golden and green, with Buprestis-like, long-horned Anthribides; numerous Crebilo, queen-shaped Brenchiidae; velvet brown or steel-blue Clerid; the yellow or whitish-coloured Elater or click beetle, and brilliant, metallic and leaf-hunting Canibidae. The Coprida and Dymastia correspond to the dung beetles; some of them are of great size, with immense horn-like protuberances on the head and thorax of the males, and combined with their polished or rugose metallic colours, render them perhaps the most conspicuous of all the beetle tribe. Musk beetles of many sorts, scarlet Telephori, countless Chrysomela, Hispa, and Cocinella, with strange Heteromea and grand Pronias and Lamiae. Indian Beetles, is an article of commerce. It consists of the beautiful wing-cases or elytra of the Buprestis, one of the Coleoptera. They are of a brilliant metallic green colour, and are imported
 Into Britain principally from Calcutta, as ornaments of khuskhus fans, baskets, etc., and on muslins to enrich the embroidery. The beetles’ wings in Ayak are called Chenk Poorie and Thungon Poorie. —Wallace, Trop. p. 94; Hooker, Hin. Journ. : Hart.

**BEET-ROOT.**

BETTER, Beta vulgaris.

Bette rabe, Bette rouge, F. Barba-bistole, J. Rothe rube, Mangold, Ger. Acelga, Sp. Malhe, Bunga-betol, Hin. D. This important root belongs to the natural order Chenopodiaceae, which also includes spinach, orach, mercury, goose-foot, etc. Beet, under its German name of Mangel-wurzel, has afforded a new source of sugar. White Sicilian beet is mainly used for salads, spinach.

Beet Sugar, from a variety of beet-root, is now almost exclusively consumed in Austria, Belgium, France, Germany, Russia, Sweden, and largely in Britain. In Middle Europe, the average yield is 14 tons of sugar beet to the acre, and 14 cwt. of raw sugar. Imperial beet yields 10 to 20 per cent. sugar, identical with that from sugar-cane. A deeply-stirred drained soil, rich in lime, brings the saccharine variety of beet to the greatest perfection. In middle Europe, in 1880, about one-sixth of all the arable land was devoted to beet. Germany is credited with being likely to produce 510,000 tons; France with 435,000 tons; Austria and Hungary, 415,000 tons; Russia and Poland, a crop of 240,000 tons; other and smaller countries, 100,000 tons; and this will bring the grand total up to 1,700,000 tons. —Grocer; von Mueller.

**BEGGARS.**

**BEGGAR.** A great man, a lord; in India, an appellation of all Mahomedans of Moghul, Turk, and Persian descent. It appears as Bey and Bai, and in the feminine as Begum. In Turkey and Turkish Arabia, Ya Bey! ‘O my lord,’ is prefixed to every sentence. The Shamar Arabs pronounce the word Beg, which the Constantinopolitans soften into Bey. In Chinese Tartary the Dagsaks receive pay and gifts and send tribute annually by Bega, who proceed to Pekin according to rolist, so that the whole shall have one tour in six years. These travel at the State’s expense, the weight of baggage carried for them being regulated by their rank, hereditary or fortuitous. The same order of attendance at Pekin and the hunting caps is observed by the Kalkus, Alashan, and tribes of the Edsinel, and by those of Koko-Nor.—Layard’s Nineveh, i. p. 106.

**BEGADA.** Tel. Nauclea purpurea, Roxb.; Anthocephalus Indiens, Rich.

**BEGAMI.** Hind. A good quality of rice.

**BE-GAR.** Hind. In India, forced labour for the repair of roads, tanks, forts, barracks, and for carrying baggage. Begari, a person so compelled to labour. The labourers are usually non-Aryans, Pariahs, and tanners. The last vestige of it, as exercised by the Government of India, was in the formation of the road leading through the Himalaya mountains to Tibet.

**BEGATI KANDA.** Tel. Amberbon Indica.

**BEG-BANAFSHA.** Hind. Root of a small plant brought from Delhi, used as a perfume in medicine, and in compounding perfumes. See Bekh.

**BEGBIE, Major-General Peter James,** an officer of the Madras Artillery. He arrived in India on 3d August 1822, and served in the first Burmese war, and in the Nanning expedition. He translated Beeker’s Art of bringing Horse Artillery into action, Da Brack’s Cavalry Outposts, Migout and Berger’s Essay on Gun Carriages, and he compiled the Services of the Madras Artillery.

**BEGGARS,** from poverty and under religious vows, are numerous throughout British India, as the Mahomedan Fakir, the Hindu Bairagi, Sanyasi, Gossi, Jogi, Satani, Jangam, Dasari, Buda-budike, Gondaliga, Domba, Panasu-makkalu or Hale-makkalu, Kalawar, Pichigunta, Mylari, Korna, Viramasti.

The Satiai Hindu sect have several subdivisions; a few of their number are engaged in tillage.

The Jangam, priests of the Lingaart, wear the lingam and a necklace of Rudrahsha beads; they do not permit any one but a wearer of the lingam to touch them; they smear their bodies with the ashes of cow-dung. They are permitted to marry.

The Dasari (dasa, servant of the deity) are Vaishnava devotees; in Mysore they are said to be a very bigoted and dissolute set of fanatics.

The Buda-budike are worshippers of Hanuman, the monkey-god; they pretend to consult birds and reptiles, and through them predict future events. They are of Mahrratta origin, as also are the Gondaliga musician worshippers of Durga, who, at marriages, sing, and play musical instruments.

The Panasu-makkalu or Hale-makkalu are a class or caste of mendicants, who only accept charity from their own caste. Their chief locality is a village in one of the Bangalore taluqs, from which once a year they go their rounds to collect money in their beat.

The Komati, or Vaisya trading community, have a Hale-makkalu called Kanchala Virar; they wear red clothes, and a breastplate with a likeness of Vira-bhadra. They receive one fanam annually from each Komati, and fees on marriages.

The Kurubar or shepherd, the Agasa or washerman, the Sir-a-charu, Ganda gollem ryots, who wear the lingam, the Ganguligar Ukhalga, the ordinary farmers in Mysore, and the leather-working Madigars, have each their own Hale-makkalu. The Komati Hale-makkalu owe their origin to a sacrifice in the month Phalguna of the year Prabhaeva 2028 after the Kaliyuga, when all the householder of Kusma Chetti, to avoid giving their daughter in marriage to king Vishnu Varaha of Rajamahendrapura, burned themselves. Malla, their servant, followed their example, and his descendants are the Hale-makkalu of the Komati.

Beggars of India mostly belong to sects of religiousmen,—Hindu, Buddhist, and Mahomedan,—who throw themselves on the charity of the world, to show their trust in God.

The Bahu-daka beg his bread from door to door. Dori wala, of the Panjab, stretches a rope in front of a range of shops, and will not quit the place till relieved.

Tasma-wala, of the Panjab, ties a leathern strap round his neck, as if to struggle himself, and lies down on his back, flapping the hands and feet as if in the agonies of death, till paid.

Dandi wala carry small bards (danda) in their hands, which, if not paid, they strike together, and abuse the shopmen with scurrilous language.

Urimar will sit down before a shop all day until paid.
BEGGUD.

Gurmar and Clutirnum are Mahomedans, who carry a mace or knife, with which they wound themselves or others when urging for alms.

The Buddhist priests of Burma move daily through the towns and villages in their neighbourhood, tinkling a bell, but otherwise not asking for food for their monasteries.

Priests of Japan beg for public objects from passers-by. A small booth is erected at the roadside, and each donor's name is written on a little wooden tally, and suspended on one of the posts placed for the purpose along the road. In the Chinese province of Shantung, men who wish to live by mendicancy, voluntarily permit their legs from the middle of the calf to be mortified off. Many die in the process, but those who survive are congratulated by their friends at having acquired a means of livelihood.

Hindu ascetic mendicants wear clothes of a dull orange colour, the 'Bhngwa' tint. Three religious garments, with a begging pot, razor, sewing needle, waistband and lathing cloth, are peculiar to the Bhikshu, or Hindu ascendent ascetic. The begging pot of a disgusting Hindu sect in the Benares district of northern India, is the calvarium, or top of the human skull. A common begging pot is the half of a double coconut. A large offshoot of a common woman is compared to the contents of a begging pot.—Fakir ki jhule men tuka kon dala?—Who placed the owner into the fakir's begging pot, who can tell?—Lockhart's Med. Mis. p. 261; Mysore Census Rep. See Alms; Ascetics; Kashgnal-I-Ali; Mendicants.

BEGGUD. GuA, Hind. Tinfoil.

BEGHRAM, in lat. 34° 53' N., and long. 69° 19' E., 25 miles from Kabul, and 2 miles west of Jalalabad, a ruined city, with walls 60 feet broad, of unburned brick. Massou supposed it to have pretensions to be the ruins of Alexandria ad Caucasum. Its ruins have yielded great quantities of coins to Massou and others. In the first year, 1866 of copper, and a few of silver, with rings, signets, and other relics; in the next year, 1900; in the next, 2554, and in the next, 13,474; and finally, in 1873, it yielded 1,000 Greek and Roman, Greco-Bactrian and Bactrian, Indo-Parthian and Indo-Scythian, Sasanian Hindu and Indo-Mahomedan, which Professor Wilson utilized in his Ariana Antiqua, in elucidating the history of Afghanistan, Central Asia, and India. According to tradition, it was a Greek city overwhelmed by some natural catastrophe. The present Hindu call the site Balram.—Macgregor, pp. 202-3; Masson's Journeys, iii. p. 150. See Nagahraha; Opian.

BEGONIA, a genus of plants belonging to the Begoniaceae. About 30 species have been found in the East Indies. B. Malabarica, lacinia, portecta, diversifolia, discolor, dipetala, picta, and pedunculosa, may be named. The great yellow-flowered begonia is abundant in the Bambang pass in the Sikhim Himalaya, and its juicy stalks make sauce; the taste is acid, and very pleasant. The remarkable variation of the large-bellied leaves renders some of them favourite foliage-plants. Among the more beautiful are B. rex, B. Grifithii, B. argentea, B. xanthina, and several garden hybrids. B. discolor, Ch'un-hai-t'ang, Chin., is an ornamental plant of China.

B. geniculata, Ramput udang udang, Malay. Its leaves are used by the Malays for cleaning and taking out rust from the blades of krissees.

BEGOON. Beng. Egg plant, Solanun melongena.

BEGTI, the Cockup. This, with the Surjeh and Tapi, are the fishes most largely used by Europeans in Calcutta.

BEGUM, Beebee, Be, Nissa, Khanum, Khatooen, and Banoo, are respected terms added to Mahomedan women's names in India. Many towns and hamlets are designated from this title.—Begum bazar, a suburb of Hyderabad, in the Deccan; Begunabad, Begangunge, Begumpett, a hamlet near Secunderabad. Mahomedan ladies of rank have ever been desirous of forming towns.

BEGUM SAMRIOO, a native of Kashmir, who succeeded to a principality by the demise of her husband, supposed to have been a European, of a name or appellation resembling Summers. She bequeathed her kingdom to the East Indian Government, and died on the 27th January 1856. See Thir.<

BEHAR, now a province of British India, was a part of the ancient kingdom of Magadha, first held by the Barhadratha of the Indu, the Chandravans, or Lunar race, and succeeded by other six dynasties, from B.C. 1400 to B.C. 56. The Magadha kingdom flourished from the 4th century B.C. to the 5th century A.D. It is supposed to have attained its greatest splendour in the time of Seleucus Nicator, who invaded it, and appointed Megasthenes as his ambassador at Palaebrotha. The Magadha rulers encouraged arts and learning, and colonized Java and Bali, in the Archipelago. Behar was the cradle of Buddhism, and sent its missionaries to Ceylon, Tibet, Tartary, and China; and it has many Buddhist remains at Gaya and other places. From the beginning of the 13th century A.D., it continued under Mahomedan rule until 1765, when the British succeeded. It comprises the districts of Bhagalpur, Champaran, Gaya, Monghyr, Purnea, Patna, Santal Parganas, Saran, Shibpur, and Tirhut; has an area of 42,417 square miles, and a population of 19,736,101 souls, of whom three-fourths are Hindus and Mahomedans. The principal aboriginal tribes are the Bhar, Churu, Dhangar, Kanjar, Khawar, Kol, Mala Naiya, Nat, Patharia, Santal, and Tharu. North Behar, the ancient Mithila, corresponds to the modern Tirhut and Purnea districts. The name is supposed to be from Vihara, a Buddhist monastery. Under the British, it is one of the four provinces under the rule of the Lieutenant-Governor of Bengal, the other three being Bengal proper, Orissa, and Chutia Nagpur.—Wilson's Glossary; Journ. B. As. Soc. 1864; Imp. Gaz.

BEHAT, near Saharanpur, in the Doab. A submerged ancient town was discovered near this by Sir H. P. Caunter.—Prin. Ind. An.

BEH-DiVNA, or Bibi-Dana. Pers. The seeds of the quince. They are demulcent and cooling, very mucilaginous, and are used in sherbets.

BEHEMOTH, an animal noticed in Job xI. 16, Psalm i. 10, Isaiah lxxiii. 22, xxxv. 11. 'Behold, now, beemoth, whom I made with thee, he feedeth on grass like the ox.' It is supposed to be the hippopotamus.

BEHENTHA. Uka? A timber tree of Ganju
BEHERA. Some of the Joddi and Johya inhabit the range called in the native annals Juddoo-ca-dang, and by Baber, the hill of Jut, skirting the Beht. Behera city is often mentioned in the Yadu Bhatti annals. It was one of their intermediate places of repose on their expulsion from India and migration to Central Asia. Its position was minutely pointed out by the emperor Baber (p. 259), who, in his attack on the hill-tribes of Jit, Gojuri, Gukker, etc., adjoining Kashmir, expelled Hati Gaker from Behreh, on the Behut river, near the cave-temples of Garkotri at Birkum. Baber (p. 254) also found the jet masters of Sialkot—Tod’s Rajasthan, ii. p. 233.

BEHICAR. Hind. Adhatoda vasica.

BEHIStUN. This name is generally written Bisutun in the maps; it is now given to a small village, 21 miles west of Kirmanshah, on the frontier of Persia. It is at the foot of rocky mountains, which are covered with bas-reliefs. The inscriptions are in the Bactro-Medo, or Persian cuneiform character of the Achaemenides. The most important is a list of the Iranian nations subject to Darius in the Nakh-i-Rustam, which the Persians attribute to the chisel of their famous sculptor Herod. Enormous marble capitols of columns are to be seen at Behistun. There are two tablets, the one containing a mutilated Greek inscription, declaring it to be the work of Gotarzes; the other, a Persian sculptured stone, adorned with nearly 1000 lines of cuneiform writing, exhibiting the religious views of Darius Hystaspes after his return from the destruction of Babylon, on the revolt of its Udapati or governor, Nebuchadnezzar, the son of Nebuc. Both Ctesias and Isodore mention a statue and pillar of Semiramis at Bapante, but the sculptures of Semiramis and an inscription in Syriac characters have wholly disappeared. Baghistan is traditionally described as the pleasure-grounds of Semiramis; but D’Anville suggested the identity of Behistun with the Baghistan of the Greeks, and there are good grounds from the ancient notices of this place, for supposing him to be correct. An oriental writer of the 15th century described the rock of Behistun from his own observation; as though it were sculptured in the form of a minaret. Certainly nothing of the kind now remains. The inscription set up here by Darius Hystaspes, commemorates his restoration of the Zoroastrian faith, after its overthrow by the Turanian Hystaspes; it is, therefore, the most complete and authentic of the Zendavesta itself, which had been neglected or proscribed. The inscriptions on the tablets of Darius Hystaspes are in the old Persian language, in the Babylonian, and also in the language of the Scythisms in the Medo-Persian Empire. The Scythian portion of those inscriptions is distinctly of the Scythian, that is, Turanian group, as spoken in the 5th century B.C., though the people by whom it was spoken are believed by Professor Oppert and Mr. Norris to have been Medians. This Scythian part of the Behistun inscriptions bears a special relationship to the Ugro-Finnish family, which Dr. Caldwell considers to resemble the Dravidian dialects, and thinks that the ancient Scythic race, by which the greater part of Central Asia was peopled, prior to the irruption of the Medo-Persians, belonged to the Ugrian stock, and not to the Turkish or Mongolian.—Sayce, vii. 79; Oppert, Records of the Past, vii. 109; Layard’s Nineveh, ii. 168; Ferrer, Journ.; Bunsen, iii. 457; Rawlinson.

BEHJUR. Beng. A mixture of barley and peas.

BEHKUL. Hind. Prinseopia utilis.

BEHMAN. Hind. Withania somnifera.

BEHMEN, also Lal Behmen, the dried roots of two varieties of a composite plant, chiefly obtained from Kabul. Used by the natives as a tonic in debility, in doses of 4 drachmas; also in impotence, and as a deobstruent. Was formerly employed in European medicine as an aromatic stimulant.

BEHOR, a village between Fort Saint David and Pundicherry, at which Major Lawrence, in August 1752, entirely routed the French army.

BEHOYA. Beng. Cyperus dichoros.

BEHRAM, a Parsee or Zoroastrian, who dwelt at Nowsaree, a town about 20 miles from Surat. He wrote the Kisi-i-Sanjan, a history of the Parsee migrations.

BEHUL. Hind. Grewia oppositifolia.

BEHURA. Hind. Terminalia bellerrica.

BEHUSSEJ. Arab. Viola odorata.

BEHUT, a name of the Jhelum river, called also Vehut and Vitashta. It is the Hydaspes of the Greeks. As it passes through Srinagar, the capital city of Kashmir, it is in December about 70 yards broad, and from 6 to 12 feet deep, and runs about half a mile an hour. In May it rises 25 or 30 feet. It is navigable all through the valley, and on reaching the Punjab takes the name of Jhelum. In the Punjab its bed is about 750 feet above the sea. It is to the east of the Indus river, to which it runs almost parallel, but it is smaller. Behut is said to mean unbegotten.—Rennell, p. 99.

BEIAT, a Persian tribe in Khurasan.

BEIGLERBEG, or, as Menisini writes it in his Institute, Beglerbeg, signifies ‘lord of lords,’ is a Turkish title given to the ruler of a province. Under him are the hakins or governor of a large city, the zabit or chief magistrate of a town, and the ked khuda, principal ‘house-holder;’ also the Kalantars or buzzirs, the person who, in a village, exercises authority over the other inhabitants.—Ousley’s Tr. i. p. 194.

BEILSCHMIEDIA FAGIFOLIA. Nees. A very large tree of the dense moist forests in the plains of South Canara, not much above the sea level. It has been found also in North Canara, and on the Silhet mountains in Northern India. The tree is said to yield a soft red timber which is used for building purposes. Two other species inhabit Northern India.—Reddome, Pl. Sylva. 155.

BEILSCHMIEDIA ROXBURGHIANA. Nees. Laurus bilocularis, Roxb., a tree of Tipperah, one of the Laurnceae.—Roxb.; Voigt.

BEIROUT was taken from the Saracens by Baldwin, the first king of Jerusalem, in A.D. 1111, but retaken 1187. Ten years afterwards, the Christians again captured it, and it was frequently ravaged during the crusades. Subsequently it fell into the hands of the Druses, from whom it was taken by the Turks, who still retain possession of it. It is the ancient Berytus. It is situated on the western extremity of a triangular point of land, projecting into the sea about four miles beyond the line of coast. It stands on a

314
gentle rising ground close to the sea-shore, and is about three miles in circumference.—Robinson's Travels.

BEIS, one of the thirty-six royal races of Rajputs who give the name to Biswara.

BEIT, also written Bate and Bete, an island in the Gulf of Cambay, occupied by the Baseli race. It was taken possession of by the pirates of Juggut after they had been defeated by Kutub Shah in A.D. 1482. Beit fell, after having fought twenty naval engagements.

BEI-VURMA BEWA. CAN. Azadirachta, sp.

BEKH. Pers. A root of any plant, but particularly if used medicinally; thus—Bekh-Anjabad, Red-coloured root of a plant brought from Delhi; considered cooling.

Bekh-i-Badyan. Funiculum vulgaris.

Bekh-i-Banafsha. Viola serpens.

Bekh-Karafs. Apium involucratum; Apium graveolens.

Bekh-Karpas, root of a small plant from Dehli.

Bekh-Kasni. Cichorium intybus.

Bekh-Marjan, Red coral.

Bekh-Minaq. Glycyrrhiza glabra.

Bekh-i-Nilofar. Nabalium speciosum.

Bekh-i-Pan, Root of Chavien scribooks, Misq.

Bekh-i-Sosan, Hind. Iris florentina.

Bekh-i-Zafan, Aristolochia rotunda.

Bekh-i-Zanjabi-i-Shami. Elecampane.

BEKHOOR-MIRIAM. ARAB. Cyclemen Europaeum.

BEKHALI, also Bekhli. Hind. Prinsepa titlis.

BEKUK. Pers. Tetraceros quadricornis.

Bekuk. In the beginning of the 18th century, an impostor made his appearance at Dehli, who produced a pretended new Scripture, written in a language of his own invention, framed from those spoken in ancient Persia, and founded a sect, in which the teachers were called Bekuk, and the Disciples Ferabid.

BEL. Hind. Any climbing plant; a tendril.

Bat-bel. Cissampelos Pareira.

Bel-kabij, sugar-cane, cut up for setts.

Bel-Kambi. Aacacia amara.

Bel-ke Buechhi ki bhaij. Basella alba.

Bel-kli pat. Leaf of Egle marmelos.

BEL. Hind. A place where sugar-boiler pans were placed. Bel-Karahi, a sugar-boiling caldron.

BEL, also Belgar. Hind. The Egle marmelos, or Bengal quince. The fruit contains tannin, either pure or in combination; a large amount of mucilage; a concrete essential oil; and an aromatic as well as a bitter principle. A sedative or narcotic property would also appear to exist in one or other of these. The fruit, a little unripe, is given in diarrhea and dysentery. The decoction of the dried fruit is aromatic, slightly bitter and astringent, gummy and mucilaginous, something like a mixture of a decoction of quince and pomegranate, but bearing an aroma peculiar to the Bel. When made into jam, and eaten at meals, like marmalade, every morning, it is found very useful to women and children, whom it is injurious to accustom to continual purgation. With Hindus the leaves are sacred to Mataje (from the milk of whose breast this tree is believed to have sprung up), and they are offered to Mahadeva. The oath of Bel-bandhar, or ‘the pledge of the Bel,’ is one of the most sacred a Hindu can take. When this oath is taken, some of its leaves are filled with turmeric, and interchanged with solemn pledges by the parties.—Roeb. Gen. Med. Top. of Ajmir: Malcolm’s Central India, i. 196.

BEL. Hind. A house Beldar, a labourer.

The Belkar of Northern India are of the Kachki, Kurni, and Chamur races. In Southern India they are of the Wadara tribes. See Belkar.

BEL. Belos or Belus, a Babylonian deity. Bel of Babylon was the Assyrian Belu, and the Hebrew Baal, equal to Lord. The older Bel was called in Akkad, Mul or Mul-ge, the Lord of the Abyss, and presided over the earth and underground world. The younger Bel was called Bel-Merodach. The Babylonian trinity was Anu, Bel, and Hea.

Hirman Bel, supposed by Movers to be the serpent of Bel, is explained by Bunsen to mean the combater of Bel, or struggler with Bel, called in the Canaanish dialect Yeasar or Israel. He was the struggler with El, God, the Hercules of the Greeks.—Bunsen, iv. 284; Sayce, p. 164.

BELA. Hind. Jasmumum zambac; in Bengal, Sapium bacciferum.

BELA. Hind. Alluvial soil on the banks of a river; Pocell.

BELA, the chief town of Las, in Baluchistan, is built on a strong and rocky site on the northern bank of the Purali river. It is the Arua-Bel of the ancient Arab authors; also called Kara bela. It is now decayed, but coins, trinkets, and funeral jars are found near; and in the neighbouring hills are numerous caves and rock-cut temples, now ascribed to Farhad and fairies, but are the earthly resting abodes of former chiefs and governors; also near, are old Mahomedan tombs. One-third of the houses are occupied by Hindus.—Elliot’s India; Mason’s Journeys, ii. p. 28.

BELADUR. Arabic. Semecarpus anacardium.

BELADURI, author of an account of the early Arab invasions of Kandahar. He was so styled because addicted to the use of an intoxicating concoction made from the Beladur.

BELAGORANI or Balagami, a village in the Shimoga district of Mysore, celebrated for its ruined temples, with sculptures of high finish, and many inscriptions. It was the capital of the Kadamba dynasty as early as the 12th century.

BELALOA or Belall, a dynasty in the Peninsula of India, whose sway at one time extended over the whole of Karnata, Malabar, the Tamil country, and part of Telingana. They claimed to be Rajputs of the Yadu branch. This dynasty ruled for 256 years in Warangal, until its capture by Mahomedans, A.D. 1323, on which two of its officers established their rule at Vijianagar.

BELAM-KONDA-SUULA MANI. MALEAL.

Pardanthus Chinensis, Ker.

BELAMUDAGAM. MALEAL. Scrophula bela-mudagam, Linn.

BELAN, the ancient Amma, a large village in a valley of the Mount Amman, about three hours’ riding from Alexandria. The pass of Belan, in the mountains called Pulse Syria by the ancients, was traversed by Darius a few days before the battle of Issus. It is in the route from Antiochia and Syria.

BELANDA, a tribe in Kedah.

BELANUS. According to Colonel Tod (Tr. 258), the Syrian Bel and Belanus is the Bal-Nath (god) of the Zaura, whose grand temple of Somnath is the counterpart of the Syrian Balbec, Soma-Nath.
in sympathy with the goddess in whose widow-

being merely a figurative appellation of Bal, as the ruler of the lesser orb, Soma or the moon.

BELASCHORA. MALEAL. Lagenaria vulgaris. BELASPORE, a town and a district in the Chatishgarh division of the Central Provinces, of which it is the most northerly. The chief town is built on the south bank of the river Arpa. The population of the district is 785,000 souls, in an area of 8800 square miles.

BEL-BANDHAR. HIND. The leaves of the Bel or Ággle marmelos and turmeric placed on an idol; a form of oath, taking these leaves off, and swearing by them. See Bel.

BELBUSSAN CHARREE, of the Astraea steppe, is a species of Galádeo.

BELDAR, a delver, a digger, from bel, HIND., a hoe, and darr, Pers., holder. This race migrate from place to place as work, is heard of. They are stone-cutters, construct dry walls and wells. They have no houses, but dwell in small tents. Those from Poona wear enormous turbans, containing about 80 yards of cloth. They speak Mahtrati, also Hindi. They worship Marri Ai or the Death Mother, who is known also as Sita or small-pox, Mata, Ai, Devi, Bhawaní. They sacrifice rams. They marry when they have the means, when young, bury the dead, and offer water libations and rice on the third day. They do not eat beef, but eat mutton. A few can write. They claim to be dissimilar from the Waddarun, with whom they neither eat nor intermarry. The Waddarun have two sections, one of them earth-diggers, who eat rats. The other are stone-cutters, and cart stones from quarries.

Beldar of the Uria are tank-diggers by profession, and are all under the command of a chief called a jemadar. Under the jemadar are a number of naiks, each of whom has the command of a gang. These gangs have no settled home, but wander about the district wherever they can get work.—1775.

BELEMNITES. Lung-khu. CHIN. Fossils, very common in the limestones of Trichinopoly, and in the Himalaya, of the genera Belenmites, Belennitella, Acanthotethis, Belenmoteuthis, and Conotethis. Belenmites are official in Arabic medicine.—Hönniger, p. 242.

BELERIKA. MALEAL. White var. of Calotropis gigantea.—R. Brown.

BELGAUM. A revenue district of the Bombay Presidency, lying between lat. 15° 22' and 16° 56' N., and long. 73° 4' and 75° 30' E., with an area of 4591 square miles and a population of 928,750 souls. The country is about 3000 feet above the sea, and the rivers Kistna and Malabarha flow through it to the coast. The people are largely agricultural, of the Srawak or Jain faith, Hindus of the saiva, vaisnavas, and lingnet sects, and with 91,836 Mahomedans. The Mahr race are the village watchmen. The district was transferred from the Peshwa to the British under the treaty of Poona of June 1817.

A temple in the Paragad district is a place of pilgrimage, on a hill sacred to the goddess Yellama, visited in the full moon of November and April, commemorative in November of the death of Yellama's husband, and in April of his return to life. At one moment the pilgrims raise a deep wall, and the women break their glass bangles,
thus eclipsing Great Tom of Oxford with a weight of about 7½ tons.

Great Paul, the new bell for St. Paul’s, is by far the largest ever yet produced in England. A mass of upwards of 20 tons of metal was poured into the mould, and the bell, somewhere between 17 and 18 tons in weight, was brought to St. Paul’s in May 1862.

Among the large bells cast of late years, Canada boasts one for the Roman Catholic cathedral of Montreal. It weighs 13 or 14 tons.

Clarke, in his Travels, gives an interesting account of the bells of Moscow, and of the ‘king’ in particular. The large bell near the cathedral is only used upon important occasions, and yields some solemn tones. When it sounds, a deep hollow murmur vibrates all over Moscow, like the fullest tones of a vast organ, or the rolling of distant thunder. This bell is suspended in a tower called the belfry of St. Ivan, beneath others, which, though of less size, are enormous. It is 40 ft. 9 in. in circumference, 164 in. thick, and weighs more than 57 tons. Of the great bell of all he says, ‘It is truly a mountain of metal. They relate that it contains a very large proportion of gold and silver, for that while it was in fusion the nobles and the people cast in as votive offerings, their plate and money. The natives regard it with superstitious veneration.’ It is white and silvery in appearance. The Emperor Nicholas had the bell raised to a granite pedestal, and there it stands now, its interior, to which access is gained through the fracture in its side, being used as a chapel.

Bells are well, and numerous, cast in all parts of the S.E. of Asia. In Burma, those in the small pagodas in form have their inferior part less widened than the bells of Europe, and they are cast with a large hole in the centre of the upper part; no tongues is hung in the interior, the bell being sounded by striking its outer surface below with a deer or elk horn. The bell at the Shooay Dagon pagoda in Rangoon was cast in 1814. Its weight is 42 tons 5 cwt. 40 lbs. (94,682 lbs.); its height, 9½ cubits; its diameter, 5 cubits; its thickness, 15 inches. Whilst the materials were being melted, devout persons threw in copper, silver, and gold in great quantities, increasing the weight by one-fourth. The bell at Mengers, in Burma, is 18 ft. high, besides 7 ft. for hanging apparatus; it is 17 ft. in diameter, and 10 or 12 in. thick. Its weight is supposed to exceed 300,000 lbs. = 88 tons 7 cwt. 106 lbs. Considerable quantities of gold and silver were found in the melting mass. The largest bell in Burma is on a low circular terrace north of the temple at Mengers. Its external diameter at the lip is 16 ft. 3 in., and its interior height 11 ft. 6 in.

A large bell is in a small monastery not far from Pekin; it weighs 5½ tons, and has on it several thousand Chinese characters in bassorelievo, constituting a Buddhist classic, which the priests, when they retire into seclusion for three years, commit to memory.

It has been asserted that Pekin has or had no less than seven, weighing considerably over 50 tons each. One bell has been reported the largest suspended bell in the world, and second only among all bells to the huge creation of Moscow.—Bishop Bigandet, Legend of the Burmese Buddha.

BELLEW, Dr. ANDREW, was the first superintendent of the Madras Military Male Orphan Asylum, when it was opened in 1789. He was the founder of the Bell and Lancaster system of teaching.

BELLA-BEK of the Waddar, Felia chain.

BELLA DONNA. Tien-kin, Chin. Atropa belladonna. The deadly nightshade.

BELLA GADA. Tel. Ceropogia juncea. N. BELLARY, a town and military cantonment in the south of the Peninsula of India, equidistant from the Bay of Bengal and the Arabian Sea. The town is in lat. 15° 8' 51' N., and long. 75° 57' 15" E. It gives its name to a revenue district, which has the Mysore territory on the south and west, that of Hyderabad on the north, and Cuddapah district on the east. Since the 14th century, this district has successively been under the rule of the Vizianagar dynasty, of the Adal Shahi kings, of the Mahratta Sivaji and the Peshwas (1640), of the Moghul emperors of Dehlí, of the Mahomedan rulers of Mysore, of the Nizam of Hyderabad, and finally of the British, to whom it was ceded by the Nizam in 1803. The population in 1871 was 1,668,000 souls, 92 per cent. being Hindus of the Saiva, Vaishnava, and a few of the Linga sects. A small colony of the Beder race occupy the sanatorium hill of Ramnadurg, and the Korcha-wanlu are a predatory race in the plain. The ruins of the ancient capital of Humpi are near. The country is a plain about 900 to 1200 ft. above the sea, with solitary granite hills, projecting from the red and black soil. The climate is very arid, the rainfall about 22 inches, but it has the rivers Tumbudra, Penumar, Hagri, Vedavati, and Chitravati; several anicuts have been built across the head of the Tumbudra, and watercourses have been led along its banks, particularly at Chitwadaghi Humpi (the ancient Vizianagar), Seiragupah, and Rampir. The principal reservoir is at Bookapatnam, formed by embanking the gorges of a range of hills through which the river Chitravati flows. The tanks of Daroji, Anantapur, and Shinganamala are next in importance; but there are many ancient bunks, which were breached during the native governments, and have not been restored. About 1,037,634 acres are of the regur or black soil. Earth salt is made throughout the district; iron is largely made at Simeo. The underlying rock in the Bellary and Cuddapah districts is granite or gneiss.

BELLA SHORA. Male. Lagenaria vulgaris.

BELI AMAZAN. Dik. Semeconus annacardium.

BELLERIC MYROBALAN. See Myrobalan.

BELLEROM. Tam. A wood called in Malabar and Canara, kundle. It resembles the angly wood. The Company’s cruiser Aurora was built of this wood, procured from the forests in the north of Malabar.—Edge, M. and C.

BELLEW, HENRY WALTER, a medical officer who served in the Crimea in 1855, in the war against Russia, and afterwards entered the E. I. Company’s service in the Bengal army, and from 1856 was employed almost exclusively on the N.W. frontier of India, in Kashmir and Afghanistan. In 1857, was a member of General Lumsden’s mission to Kandahar, and wrote the journal of the mission. In 1865, published a topographical history of the Yuzafat district; in 1868, a pamphlet, ‘Our Panjab Frontier,’ advo-
cating reconstruction of the British N.E. boundary, and occupation of the frontier highlands. In 1868, published a grammar and dictionary of the Pushto.

**BELL METAL.**

Kloksips, ... Dut. Kolokinsja-mjed, Rus. Meta de Pointe, Fr. Campanii, ... Sp. Metal de clothes, ... Venalam, ... Tam. Glockengut, ... Ger. Kantan, ... Tel. An alloy, consisting of three parts of copper and one of tin, of which bells are made. — *M. Culloch.*

**BELLOWS.** Eng. Pankha, Hind. For household fires of India, the bamboo blow-pipe is employed. The blacksmiths of India use sheep-skins sewed, with a cleft, edged with wooden rods, which the bellows-blower opens, raises, and depresses. The Chinese bellows consist of forcing air-pumps, two cylindrical tubes of wood, of about eight inches diameter, about five feet long, and placed vertically in the earth, contiguous to each other, with pistons inserted in each, which are alternately depressed, in the manner of churning, by a bellows-man sitting beside them. The air is pressed out of a lateral tube in each, and communicates with the forge. Above these tubes are two apertures furnished with valves to admit fresh supplies of air. Such double-nozzled bellows are in use by the Burmese, the Malays, and the Hovas of Madagascar. Those of Burma are of two bamboos four inches in diameter and five feet long, with pistons clothed with a bunch of feathers or other soft substance. — *Peschel; White's Voyage.*

**BELL PEPPER.** Capsicum grossum.

**BELLUM.** Tel. Coarse sugar, goor, jagari.

**BELNA.** Hind. A roller press to extract juice from the sugarcane; also a machine for cleaning cotton from its seed.

**BELLO.** Tel., Uria? A tree of Ganjam and Gumstur; extreme height 30 feet, circumference 3 feet. Its wood is sometimes employed for making carts; the leaves are used for making the umbrella which is worn on the head by the ryots and coolies. — *Peschel.*

**BELOSTOMA INDICUM.** An aquatic species, attains a size of nearly three inches.

**BELTANE feast** was on May-day, but the word was also applied to fires kindled in honour of Bel on other days, as on Midsummer Eve, All-Hallow E'en, and Yule or Christmas.

**BELUGA CATODON, Pallas,** is placed by Gray, Gerard, Lesson, and Lacepède, as of the genera Physeter, Delphinus, Delphinapterus, and Catodon, one of the Delphinidae found in the North Pacific, North Atlantic, and Arctic Ocean.

**BELULI.** Can. Allium sativum, garlic.

**BELUMBHU.** Duk. Averrhoa bilimbi.

**BELUR,** an ancient city in the Hassan district of Mysore, but now only with about 3000 inhabitants. It is called in the Puranas, Velapura, and is known to the people as Dakshina Varanasi, or southern Benares. Its celebrated temple of Chenna and Kesava is adorned with carvings and sculptures from the master hand of Jakana Charya. It was erected and endowed about the middle of the 12th century, by a king of the Hoyasala-Ballala dynasty, on the occasion of his conversion from the Jaina faith to vaishnava Hinduism. — *Imp. Gaz.*

**BELUR TAGH** is one of the many names given to the Kouen Lun chain, which forms the northern boundary of western Tibet; it is not less elevated than the Himalaya, and is covered throughout a
great part of its length with perpetual snow. Dr. Thomson reached its axis in the Karakoram pass, elevated 18,300 feet. The Kouen Lun chain has been called the Belur Tag or Bulut Tag, which Captain Cunningham regards as synonymous with the Balti mountains. It is also called Mustagh, Karakoram, Hindu Kush, and Tsim lung or Onion mountains, because of a species of Allium growing there. Its continuation is the Pamir range. At the present day, the old indigenous inhabitants of that district, and generally those of Kashgar, Yarkand, Khotan, Turfan, and the adjacent highlands, are Tajak, who speak Persian, and who are all agriculturists. The Turkoman either came after them and settled at a later period, or else they are aborigines whom the Aryans found there; but its slopes are the primeval land of the Aryans. — *Ch. Bunsen,* p. 406.

**BELULA POLA-TALI. MALEAL.** Cinnamomum austatum, Beluta-champagam, Mesua ferrea.

**BELVIDERE,** a house in Bombay, called Mazagong House, once occupied by Mrs. Draper, the Eliza Draper's letters. She left her husband about a 1776.

**BELWA,** a race in Mysore who collect the juice of the palmyu, speaking Malealam.

**BEN. BURM.** Cannabis sativa.

**BEN. HIND.** Eremurus spectabilis.

**BEN. KONAR.** Moschus moschiferus, Linn. **BEN. BENG.** Ardrogopon muriactus.

**BENABA,** also Bia and Bibla. Duk. Pterocarpus marsupium.

**BENABA-JONI. BENG.** Soropolois diander.

**BENARES,** a holy city of the Hindus, is built on the left bank of the Ganges, between the Barna Naddi on the N.E., and the Asi Naddi on the S.W., and extends along the river bank for nearly 9 miles. In 1872, its population was 175,188 souls. It is in lat. 23° 18' 31" N., and long. 83° 13' 4" E. The people call it Kasi, but it is also called Varanasi or Varanasi, also Ati Mukta. It is famed for its artistic work in clays, metal, stone, wood, and alloys. Benares town gives its name to a revenue division of the N.W. Provinces of India, which has the districts of Azamgarh, Basti, Benares, Ghazipur, Gorakhpur, and Mirzapur, of 18,314 square miles, and a population in 1872 of 8,179,307 souls, of whom 90 per cent. are Ahib, Baniya, Brahman, Chamar, Kayasth, Kurmi, and Rajput. The people are largely agricultural, growing rice, wheat, barley, oats, peas, cotton, bajra, sorghum, maize, pulses, indigo. Benares town has many temples and shrines, and Hindus resort to it in pilgrimage. The river Ganges bends round the town, and the view from the river is a beautiful prospect. The Hindu temple of Vish-Eswara has been for many centuries the chief object of veneration at this town. The old temple, described by Tavernier, 1660, was partially destroyed by the Mahmoodans in the reign of Aurangzeb; the present was built up by Ahalya Bai, a Mahrratta princess, and is remarkable for the beauty of its minute architectural embellishment. The thick plates of pure gold with which its dome is covered, were a bequest of Ranjit Singh. The old temple was in the form of a St. Andrew's cross. Benares has been by turns Brahmanical, Buddhist, Saiya-Hindu, Sakta-Hindu, Vaishnava-Hindu, and Jaina; but at
BENARES.

present it is a great Saiva city, and the emblems of this deity's worship are multitudinous. Purga also, and likewise Ganesh, Surya, Vishnu, Rama, and Parashara, all have shrines. But, though now pre-eminently a Hindu city, with numerous tol or monasteries, and besides the celebrated Brahmakshetra or Buddha as the place where their great teacher first expounded his doctrine, or, as they express it, where he first began to turn the wheel of the law, this was one of the four great events in the life of Buddha; and the stupa which was built upon the spot was esteemed as one of the four great monuments of Buddhism. This stupa, now called Dhanak, is situated about 3½ miles to the north of the city, amidst an extensive mass of ruins, which are surrounded on three sides by large artificial lakes. From Benares have emanated, and still emanate, almost all new opinions on questions of Hindu theology, Hindu philosophy, and Hindu jurisprudence. The verdict of the Benares authorities is final in the Hindu world. There, Saukara Acharya won a great Saivite controversial victory; there, disguised as a Hindu boy, Faizi became initiated in the Hindu Shastras; there, at the fountainhead, did Aurangzeb try to diffuse the leaven of Mahomedanism; and there the Benares college has been erected by the British, to enlighten and form the native population with new ideas in their heads, and new institutions.

The length of the city along the river front is about 4½ miles. The houses are built of stone, and some of them are three or four storeys high, and tastefully ornamented on the outside. The ghats, or lathing-places, are large buildings many storeys high, with handsome verandas and majestic portals; but their distinctive characteristic is seen in flights of wide stairs. The manufacture of gold and silver brocade in Benares is famed. The looms are very simple in their construction. The gold and silver pass through many hands before they are formed into thread. Brocades (kimkhab), gold woven scarves (dupatta), and silks are consigned from the city, together with a kind of yellow silk dhoti called 'pitambar,' and a dark-blue silk with white spots called 'bund;' also the silk sari or scarves, exclusively for women's wear, forming both a skirt and a scarf. Its lacquer ware is good. Two kinds of resin are used; one called rali, is sold at eight annas the seer, and is said to be brought from Mirzapur. The finer lacquer is made of a resin called gahia, for a seer of which one rupee and two annas are paid. There is a Maharaaja of Benares; his family was founded by Munsa Ram, zamindar of Gungapore, who died in 1740, and was succeeded by raja Bulwunt-Singh, who joined Shah Alam and Shuja-o-Dowla in their invasion of Bengal in 1763. He joined the British camp, with the emperor, after the battle of Buxar, and in the arrangements made with the emperor in 1764, his zamindari was transferred from Oudh to the British Government. The unsuccessful of Vazir Ali occurred on the 14th January 1796. In March 1862, the Maharaja received the assurance, by amnud, that in the event of failure of natural heirs, Government will permit and confirm any adoption of a successor made by himself or by any future chief of his state, that may be in accordance with Hindu law and the customs of his race. The Maharaja receives a salary of 13 guns.—Aitchison's Treatises, p. 41; Schlagioneit; Schonberg's Tr. in India and Kashmir, i. p. 99;

BENDAR.

BENAUDHA or Benawat, a tract of country in N. India, which includes the western part of Jounpur, Azimghur, and Benares, and the southern part of Math. Some authorities say it extended from Buxar to Jounpur, and from Gorakhpur to Bhujpur, and that it comprised 52 parganas, governed by a granth of 12 rupees, the Garwar of Bijapur, the Khanzada, Bachgot, and Bhumars.

BENCOOLEN was a principal settlement of the British, till surrendered to the Dutch in 1825 in part, for possessions in the Strait of Malacca.

BENDA-KAIL. TAM. Abielmoschus esculentus.

BENDAMIR, a small town of sixty houses, which takes its name from a dyke or bund, constructed in the 10th century by Amir Azam Delemi. A flat bridge of thirteen arches is thrown over the stream, the waters of which form a beautiful cascade just beneath it. As the bed of the river is very deep, seven other dykes have been constructed in its lower course, to procure water for the irrigation of the fields. It has been made famous by the bewitching strains of Moore, whose language surpasses the reality, though, in the spring-time, Bendamir is doubtless a lovely spot:—

'There's a bower of roses by Bendemear's stream,
And the nightingale sings round it all the day long:
In the time of my childhood I was a sweet dream
To sit in the roses and hear the birds' song.

That bower and its music I never forget;
But oft, when alone in the bloom of the year,
I think, Is the nightingale singing there yet?
Are the roses still bright by the calm Bendemear?

"No! the roses soon wither'd that hung over the wave;"

But some blossoms were gathered, while freshely they shine,
And a dew was distilled from their flowers, that gave
All the perfume of summer, when summer was gone. Thus memory draws from delight, ere it dies,
An essence that breathes it many a year;
Thus bright to my soul, as 'twas then to my eyes,
Is that bower on the banks of the calm Bendemear..."

—De Bode's Travels, pp. 169-70; Pottinger's Travels, p. 239; Ouseley's Travels, ii. p. 326.

BENDI. MAH. Thespesia populnea.

BENDIKAR of Konjhir, scattered throughout the southern Tributary Mauls, are colonies of an aboriginal people, often mentioned in the Hindu classics, and named Savara, Saura, or Saur, and supposed to be the Snari of Pliny, and Saborae of Polonius. The Bendikar are said to be numerous in Lehera, in Bamra, and throughout the Tributary States. A paper in the Asiatic Researches of 1842 notices the Bendikar, in the Kolehan district, a clan or tribe, not exceeding 250 or 300 in number, residing entirely in a range of hills, called the Bendikar Booroo, to the north of Konjhir and Jamdipur, the southern border of the Kolehan district. The country inhabited by this tribe is exceeding wild, being in fact one mass of almost impenetrable jungle. The Savara who occupy the country between the Kandul Mauls or hill tracts and the Godavary, retain a primitive form of speech; but the Bendikar Savar have no language of their own, and no tradition that they ever possessed one. The form of speech used is Uria; and those living in mixed villages conform to many customs of Hindu Urias of inferior castes. They worship a female divinity, whom they call Hansuri and Thakurani, to whom annually they offer goats and fowls; but every ten years each community of Bendikar offers a buffalo, a boar, a
BENGAL.

sheep, and twelve fowls. In marriage, the girl is brought by her friends to the bridegroom's house. The young couple make two and a half turns round a pot of water, in which are mango leaves. They are then bathed together, and their hands tied together, and the ceremony is at an end. The dwellings of the Bengakar are constructed of branches and leaves, and covered with grass. Their ordinary food consists of edible roots which they find in the jungle, with berries and wild fruits, such diet being varied and improved occasionally by the produce of the chase. Their husbandry is merely scratching up the surface of the ground. Their scanty crops are raised in little plots on the hill-sides, near watercourses. They barter their maize, grain, or rice with the lowland villagers. The Bengakar burn the dead, with the head to the north. In this they vary from the Kol, who affect the south; and the hill Bhuyia, who honour the west.—Dalton's Ethnol. p.s. 75.

BENDU, a light wood of Java, useful for canoes.

BENDU. Tel. *Jaschnomena Indica, L.*

BENEDICT GOES, in 1608, undertook a jour- ney with the special object of determining whether the Cathay of old European travellers and modern Mahomedans was or was not a distinct region from China.—Yule, Cathay, i. p. exii.

BENG. TAM. Bignonia aucoevae.

BENGAL is the country through which the rivers Brahmaputra and Ganges flow to the bay to which it gives its name, and it gives its name also to the presidency in the Government of British India, which includes Bengal or Lower Bengal, the North-West Provinces and Oudh, the Panjab, Assam, and Ajeer, each with a local government of its own, but all subject to the general control of the Governor-General of India in Council. The area that these five provinces occupy is 501,766 square miles, and in 1878 their population was 139,024,614 souls. Also, the military forces distributed through these five provinces are known as the Bengal army, and form a large portion of the army of India, under a Commander-in-Chief, who has the supreme direction also of the armies of Madras and Bombay. The Bengal or Lower Bengal region now to be noticed is administered by a Lieutenant-Governor. It lies between lat. 19° 18' and 28° 15' N., and long. 82° and 97° E., with an area of 203,437 square miles. The census for 1881 gives a population of 68,750,443, as against 62,724,840 in 1872, showing an advance of 9% per cent. Bengal, 35,954,874; Behar, 22,597,212; Orissa, 5,184,066; Chutia Nagpur, 4,714,291. In all Bengal, the Mahomedans are 19,553,851; Hindus, 38,975,418; Christians, 90,763; Buddhists and Jains, 84,974. It is bounded on the north by Assam, Bhutan, and Nepal. On the east are unexplored mountainous regions separated from it by Chins and northern Burma. It has Burma, the Bay of Bengal, and the Madras Provinces on the south, and the plateau of the Central Provinces and districts of the N.W. Provinces are on its west. In this area are included the four provinces under notice, viz. Bengal proper, Behar, Orissa, and Chutia Nagpur. Bengal is flat, and intersected by the watercourses formed by the branching of the Ganges and Brahmaputra and their tributaries. The climate is comparatively equable; the rainfall ranges from 60 to 100 inches; and Calcutta mean temperature is 78°. The district between the Ganges and the Brahmaputra, extending northwards to the foot of the Himalaya, is a slightly higher tract of country, and specially suited for the growth of fibrous plants, for which the neighbourhood of Itungpur is greatly celebrated. In the districts immediately east of the Brahmaputra, including Dacca and Sylhet, the greater portion of the surface is occupied by the rich plains of Myanmar and Sylhet, through which the river Soornia meanders. The old channel of the Brahmaputra, now nearly dry, winds along by Dacca from the eastward. This tract affords a great variety of produce, such as cotton, sugar-cane, rice, and other grains.

Behar is that portion of the Gangetic plain between the Himalaya and the plateau of Central India, which is terminated at one end by the N.W. districts of Ghazipur and Gorakhpur, and with hills running east and west, but of little height. Sirgijhur is montaneous, rising 600 to 700 feet above the level of Chutia Nagpur. Mun- pat is a table-land about 30 miles south-east from Sirgijhur town, and about 3000 or 3500 feet high. Balamow district is very montane. Hazari- bagh town, 24° N., 86° 54' E., 1750 feet. The slope of country S. towards Sumbulpoor, and even depressed towards the Mahanadi, Sumbulpoor town being only 400 feet. The Orissa table-land then rises on the southern side of Mahanadi, in some places to 1700 feet, backed by the chain of East Ghats. Amarkantak is a jungly table-land, lat. 22° 40' N., long. 81° 5' E., 3500 feet.

Bengal proper, Behar, and Orissa are in the valleys of the rivers Ganges, Brahmaputra, and Mahanadi. They are fertile, and yield every vegetable product which can feed and clothe a people, or enable them to trade with foreign nations. Amid billy spurs and undulations, coal occurs in vast areas, with iron and copper ore and slate stone. Salt is made along the coast line. The great rivers afford facilities for the carriage of their agricultural and mineral wealth, and their annual inundations in Lower Bengal spread a top-dressing of virgin soil over thousands of square miles.

Its early history is obscure. The rajas of Bengal, capital Kanauj (Gaur?), who have been identified as the first rulers, were the family of Bhupala. Abul Fazl, however, enumerates three dynasties as prior to this family. The first of the Vaidya
BENGAL.

rajas was Suh Kh or in a.D. 1063. Its last Hindu king was Lakshmanan. He had been placed on the throne in infancy, and during his long reign had been a just and liberal ruler. In a.D. 1203, Bengal was overthrown by Bakhtiar, a general of Mahomed Gori, and Lakshmanan escaped to Orissa. From that time till the 18th century, it was held by Mahomedans, sometimes, as from 1199 to 1330, under the Mughal emperor of Hindustan; then for two hundred years independent; and again under the Delhi empire, until treaties entered into by the British with the emperor of Delhi, in 1755, placed Bengal and Behar under the administration of the British East India Company. Orissa was occupied, and in 1851 a Lieutenant-Governor was appointed.

The Mahomedan sovereigns were:

Bengal was amongst the first of the places of India with which the English East India Company traded. In 1609, an association was formed in London to trade with the East Indies, and on 31st December 1600 they obtained an exclusive charter of privilege, constituting them a body politic and corporate, by the name of 'The Governor and Company of Merchants of London trading to the East Indies.' In 1613, they were ordered by Jahangir to settle in Surat. In 1634, Shah Jahan issued a firman for two English factories to settle in Bengal; and subsequently, in gratitude for the benefits derived by one of the daughters of the Zamorin of Calicut, the English were granted the medical skill of Mr. Boughton. Shah Jahan granted the privilege to the English of free trade in Bengal. The first factory of the company had been at Masulipatam, but in 1625 it was removed to Armecon, and subsequently (1639) Mr. Day removed it to a village in the territory of the raja of Chandragiri, and erected a factory there, which was first called Fort St. George, and is known now as Madras. The regular connection of the Company with Bengal, however, did not commence until 1642, when a factory was established at Balsore, and in 1652 permission was obtained for unlimited trade without payment of customs dues, on an annual payment of Rs. 3000. In 1661, Charles II. granted a new charter, vesting the Company with power to make peace and war, and to send to England unlicensed traders; but a fresh charter issued in 1693 limited the Company's powers to twenty-one years. In 1698, a rival company was formed, called the new or English Company; but in 1702 this amalgamated with the old or London Company, and the two parties styled themselves the United Company of Merchants trading to the East Indies. During the administration of Shaista Khan, subadar of Bengal, the English were subjected to much oppression. Shaista Khan exacted a duty of 3½ per cent. on their merchandise, and his officers arbitrarily extorted large sums from the factors, till, in 1698, it was resolved to seek redress by force of arms. The hostilities of the English exasperated the Emperor Aurangzeb, who ordered that they should be expelled from his dominions. The Company's factories were seized, and their affairs were brought to the brink of ruin, when negotiations for peace were set on foot, and a reconciliation was effected.

In 1698, the English obtained permission from Azim-us-Shan, grandson of Aurangzeb, and governor of Bengal, to purchase the towns of Cuttut patrol, Govindpur, and Calcutta.

In 1756, Suraj-ud-Dowlah became subadar of Bengal. He had previously manifested aversion to the British, and the Governor of Calcutta having refused to deliver up one of the principal officers of finance under the Nawab's late male, the Governor of Dacca, whom the Nawab had resolved to plunder, Suraj-ud-Dowlah attacked and captured Calcutta on 6th August. One hundred and sixty five of his six hundred fell into his hands, and were thrust into great pain, since called the 'Black Hole,' where all, save twenty three, perished in the night. On 2d January 1757, Calcutta was retaken by a force which had been despatched from Madras under Clive and Admiral Watson, and on the 4th of February the Nawab's army was surprised and defeated by Clive. Overtures were then made by the Nawab, and on 9th February 1757 a treaty was concluded, by which the Nawab agreed not to molest the Company in the enjoyment of their privileges; to permit all goods belonging to the Company to pass freely by land or water without paying any duties or fees; to restore the factories and plundered property; to permit the Company to fortify Calcutta, and to establish a mint. Three days afterwards, a contract with the Nawab, offensive and defensive, was signed. War having broken out between France and Great Britain, Clive attacked the settlement of Chandernagore, on which Suraj-ud-Dowlah had the French with arms and money, and was preparing to make common cause against the British. At this juncture a confederacy was formed among Suraj-ud-Dowlah's chief officers to depose him. The British joined this confederacy, and concluded a treaty with Mir Jafar Ali Khan, and at the battle of Plassey, which was fought on the 23d June 1757, the power of Suraj-ud-Dowlah was completely broken, and on the 29th June, Jafar Ali was installed by Clive as subadar of Bengal.

In 1759, the Shahzada, afterwards Shah Alam, in consequence of some dispute with his father, the emperor Alamgir II., fled from Delhi, and entered into a league with the subadars of Oudh and Allahabad for the conquest of the Lower Provinces. The prince advanced into Behar with about 40,000 men, and laid siege to Patna. Mir Jafar was greatly surprised by the prince's advance and, in his proclamation Clive marched with all the force he could assemble to the relief of Patna; but ere he reached that place, the prince's army had almost entirely dispersed. On Clive's return, the nawab Mir Jafar granted him as a jaghir, the quit-rent, about three lakhs per annum, which the Company had agreed to pay for the zamindari of Calcutta.

To meet his pecuniary engagements, Mir Jafar
had recourse to the severest exactions. He re-
signed himself to unworthy favourites; and it
became necessary to depose him in favour of his
son-in-law, Mir Kasim Ali Khan, with whom a
treaty was concluded on 27th September 1760, by
which the British obtained possession of Bardwan,
Midnapur, and Chittagong. But serious disputes
arose between Mir Kasim and the British regard-
ing the right of the servants of the Company to
trade, and to have their goods passed free of duty,
which led at last to war. In 1764, Mir Jafar Ali
agreed, in addition to the sums for which he had
contracted in the recent treaty, to pay five lakhs a
month towards the expense of the war then being
carried on against the Wazir of Oudh, so
long as it lasted. Mir Jafar died in January 1765,
and was succeeded by his son, Najam-ud-Dowlah,
with whom a new treaty was formed, by which
the Company took the military defence of the
country entirely into its own hands, and, among
other conditions, the Nawab bound himself to
appoint, by the advice of the Governor and
Council, a deputy to conduct the government,
and not to be removed without the consent of the
Council.

Najam-ud-Dowlah died on 8th May 1766, and
was succeeded by his brother, Syed-ud-Dowlah, a
youth of sixteen. Syed-ud-Dowlah was succeeded in
1770 by his brother, Mubarak-ud-Dowlah, with
whom a new engagement was made. By this
engagement the Nawab's stipend was fixed at
31,81,991 rupees. This is the last treaty which
was formed with the Nawab. The office of suba-
dar had now become merely a nominal one, all
real power having passed into the hands of the
British. In 1772, the stipend was reduced to
sixteen lakhs a year, at which rate it is paid to
this day.

Bengal was declared to be the chief presidency
on the 16th June 1775. By the treaty of 22d
February 1845 with Denmark, the British Govern-
ment obtained possession of Scarampore; and now,
excepting the small settlement of the French
nation at Chandernagore of 3 square miles, all
Bengal is under British supremacy. But in 1876
there were in Bengal 150,000 acres on the
roll, besides a vast number of petty revenue-free
estates.

Bengal proper has an area of 84,198 square
miles, with a population of 36,564,708, or 433 to
the square mile. For administrative and revenue
purposes it is arranged into 28 districts, viz.:

- Bakarganj, Bankura, Bardwan, Birbhum, Bogra,
  Cullenct, Chittagong, Chittagong Hill Tracts, and
  Hill Tipperah State, Dacca, Darjiling, Dinajpur,
  Faridpur, Hugli, with Howrah, Jalpagori, Jessore,
  Khandesh, Behar, Mymensing, Madhah, Midnapur,
  Murshidabad, Nadia, Noakhali, Pabna, Rajmahal,
  Rangpur, Sylhet, Tipperah, and the Twenty-
  Four Parganas.

The Hindus of Aryan descent are about 34 mil-
ions; the aboriginal tribes, 887,157; and semi-
Hinduized aborigines, 5,110,989 souls, are—

The Mahomedans in Bengal in 1871 numbered
19,553,881; but this multitude is composed of
many elements, masses of the aboriginal races
as well as of the Hindus of Aryan descent having
been forcibly compelled to profess the Musulman
creed. Of that number, sixteen and a half millions are in
Bengal proper; two and a half millions in Behar.
In Chutia Nagpur and in Orissa they are few;
but in the Bogra district they form 80 per cent.
of the population; in Rajmahal, 77 per cent.; and
in Pabna, 69 per cent. In the districts of Chitta-
gong and Noakhali they form three-fourths of the
population. Wherever they form a principal part
of the population, they are the cultivating classes;
and all the sailors of the eastern districts are
Mahomedans. The Europeans and non-Asiatics are
17,135; and Eurasians, 20,879.

The Hindu population of Bengal are dark;
and some are very dark, and have thick lips, with
features either aboriginal or Indo-Chinese. Some
have curly hair, as if related to the black, woolly-
headed aborigines, who may have stretched across
from the Rajmahal to the Garo hills; others of the
Bengal people especially the Urya, with the
Bhuya, seem rather to have straight hair, with
high cheek-bones, and complexion not very dark,
suggesting an Indo-Chinese element stretching
from Burma across the Sunderbuns (C. p. 106).
Though good-looking, the mass of the Bengalis are
small and effeminate in appearance, remarkable
for tidiness and superstition, as well as for subtlety and art. Their villages are composed of thatched cottages, scattered through woods of bamboo or of palms; their dress is the old Hindu one, formed by one scarf round the middle, and another thrown over the shoulders. They have the practice, unknown in Hindustan, of rubbing their limbs with oil after bathing, which gives their skins a sleek and glossy appearance, and protects them from the effect of their damp climate. During many ages the Bengalis had been trampled upon by men of bolder and more hardy breeds. Courage, independence, and quickness are qualities to which his constitution and his situation are equally unfavourable. His mind is weak, even to helplessness, for purposes of manly resistance; but its suppleness and its tact move the children of sternier climates to admiration, not unmixed with contempt. Large promises, smooth excuses, elaborate tissues of circumstantial falsehoods, chicanery, petty wiles, are the weapons offensive and defensive of the lower Ganges. All its millions do not furnish one sepoy to the native army. In Bengal and Behar, the work of labourers is done by Bhu, Rajwar, Chandal, Dossad, Hari, Bhumali, and other aboriginal tribes.—C. 124.

When the Aryans advanced from the westward to the plain of Bengal, it appears to have been occupied by a race of which the present non-Tibetan tribes of Assam and the Himalayan and Vindhyan range are remnants. The Bengalis, however, have never been wholly absorbed by the intruding race, though somewhat modified. In Silhet and Assam, in particular, the Bengalis retain the stamp of the double origin, and considerable numbers of the original race are still found intermixed. The principal remnant are the Kochi; but there are also the Kachari (Bodo, Boro, or Mech), Dhimal, Rabha, Hajong, Batar or Bor Kebrat, Pollohi, Gangal, Maraha, Diamuk. They are spread eastwards along the skirts of the mountains of Bhutan and Sikkim as far as Aligunj, and the skirts and low valleys of the sub-Himalaya, beyond Sikkim, contain other tribes of the same race. Including those already enumerated, Mr. Hodgson ascertained the presence of twenty-eight tribes between Assam and Kumaun, or from the Bonas to the Kali. Of these the most numerous were the Bodo or Kachari. The Kochi and Bodo or Kachari tribes, of all the prior races, were the latest dominant ones of the Gangetic race in Bengal.

The agricultural products are rice, wheat, barley, maize, pulses of kinds, mustard, turnips, plantains, radishes, cicerbitaccous plants, Lagenaria, Luffa, Trichosanthes anguina, species of arum, sweet potatoes, capsicum, sugar-cane, ginger, turmeric, Piper betel, Areca catechu, tobacco, linseed, opium, indigo, jute, tea, silk. Rice has three harvests in one year, viz., boro or spring rice, in low marshy land, sown in October and reaped in May; aus or autumn rice, sown on high ground in April or May, and reaped in August and September; aman or winter crop, the last, is grown on low land, and is by far the largest crop. It is sown in May or June, transplanted and reaped in November, December, and January. Rice is the principal, often the sole, article of food throughout Bengal proper; pulses, vegetables, spices, oil, salt fish, and condiments being only used as a relish. The consumption varies from two-thirds to three-fourths of a seer per head per diem=1½ to 1½ lbs. In the mountainous districts the pulses and millet are the chief articles of diet.

Bengal suffered in the year 1770 from famine, more widespread and terrible than any which had ever befallen any other British possession, and which Colonel Baird Smith deemed to have been the most intense that India ever experienced. Dr. Hunter states the number of deaths on that occasion at ten millions.

Bengali is a highly cultivated language of Hindu origin, largely stocked with pure Sanskrit words. It is spoken throughout Bengal proper. Tirhuta on its N.E. border has a great affinity with Bengali. Bengali is the language of many millions of souls, and restricted solely to the geographical limits of Bengal, and from the cultivation which has been given to it, well deserves to be ranked as a separate language. It is spoken by about forty millions of people in the delta of the Ganges and to the west. Professor Müller mentions that nine-tenths of the Bengalis and of the Hindi tongues are composed of words taken from the Sanskrit. He regards it as the modern Sanskrit, standing to its parent, the old and classical Sanskrit, almost in the same relation as the modern High German to the old High German, as the modern Italian to the language of Rome. See India.

Bengal army is the political designation of that part of the military forces of the British Indian Empire, occupying Bengal, Assam, Arakan, the N.W. Provinces, with Oudh and the Punjab. It is distributed amongst races speaking the Persian, Puahlu, Panjabi, Hindustani, Hindi, and Bengali languages, besides the Ooraya language in Orissa, and the Rakhoo in Arakan. It is composed of Europeans of the United Kingdom and of the natives of N. and N.W. India; Hindus of high caste, Hindus of low caste; Mahomedans from Hindustan, from the Punjab; and Pathans or Afghans from beyond the N.W. borders; also Sikhs, Rajputs, Gurkha, and Dogra. A revolt of the Bengal native army was commenced at Berhampore by the 19th Ben. N. 1. on the 26th February 1857, and it was reorganized on the 9th September 1857, to become an army.

BENGAL, Bay of. This great bay lies between the Peninsulas of India and Malacca. It receives many great rivers,—the Ganges, Brahmaputra, Irrawaddy, Sittang, Salwin, Monlemein river, Godavery, Krishna, Kolaydin, Mahanadi, and has a coast line of about 2800 miles. Pliny does not make mention of any voyages of the Romans to the Gulf of Bengal or to the Malay Peninsula, although it is clear from Strabo, who wrote before Pliny, that the Ganges had been sailed up as high as Pali-
BENGAL-SAN.

broth. Ptolomy’s Geography, said to have been composed about 60 years after Piny, mentions the diamonds found on the banks of the Mahanadi or Sambulopore river; also speaks of Arcati, the capital of the Sore (or Sora-mandalam, from whence corruptly Coromandel), Mesolia, the district which contains Masulipatam; the river Cauvery, under the name of Chabars. Ptolomy scatters islands over the Bay of Bengal, probably meant for the Andaman and Nicobar Islands, and mentions that most of them were said to be inhabited by anthropophagi, an idea continued by modern navigators. The Bay of Bengal is liable to be swept by hurricanes, which travel quite across the bay. Every few years there occur severe cyclones and advancing storm-waves. Of the latter, that of 1832, which swept over the islands of the delta up to Singur, was attended with great loss of life; as also was a cyclone in 1859, another in 1864, with a storm-wave which submerged islands, and rushed along the coast in the vicinity of Masulipatam; and another in 1876.—Bennell’s Memoir, p. 39.

BENGAL-SAN. Hind. This is identical with the Saka solar year. See Era; Fasli.

BENGAN. Hind. Solanum melongena, the egg-plant. Valayati bengan is the tomato.

BENGIAN, a mountainous district in Mindoro, occupied by a Negrito race.

BENI. Arab. When the Bedouin Arabs speak of tribes, they say Beni, which signifies the sons of some person; thus Beni Leghat means the tribe of Leghat. The word is ibn, a son, and is written bin when preceded by a proper name, and followed by the name of the father, as Hasan bin Muhammad, Hasan son of Muhammad.

This is one of the Cucurbitaceae. It has large white flowers. The rind of the fruit is used as a bottle. The fruit of one variety of it forms the sounding body of the sitar; and that of another variety is used as floats for swimming rivers. Its young fruit is eaten by the people in their curries, and is often candied. The fruit is remarkable for having its surface, when ripe, covered with a white waxy exudation, which smells like resin. Chinese gardeners make its fruit grow to a great size. In India, the tallow gourd is presented to a Hindu widowed pair. A wild variety, Teta-lando, Beng., is poisonous.—Williams; Voigt; Rosb.; Stewart. See Cucurbitacea; Gourds.

BENJAMIN is a word of Hebrew origin, which has in the lapse of time been adopted for several substances now in use. In Upper India, it is the name given to the gum-resin of Boswellia thurifera, but in commerce it is generally applied to the resin of the Styrax benzoin, which grows in Siam and Java, in Sumatra, in the country of the Batak race, and in Borneo on the northern coast of the Bres and Java. In Sumatra, the balsam is obtained, in Sumatra, by incision in the trunk of the tree, practised after it has attained the age of five to seven years. The juice which first exudes is the purest and most fragrant; it hardens on exposure to the air, and becomes brittle and semi-transparent. The resin is white and transparent at first. About 3 lbs. can be obtained by each tree for six years. The white benjamin, termed ‘Covrie luban’ in India, is a superior kind, generally met with in the form of dry, hard, grey masses, rather shining, brittle, formed of ovoid, whitish tears, like stripped almonds. The best comes to India from Sumatra. It is much used as a perfume, and as incense in places of worship, in the composition of frankincense, and in the manufacture of the pastilles called ud-batti. Benzoeic acid is procured from this substance.—Stat. of Com.; M’Culloch’s Dictionary; Crawford, Dict.; Cat. Ezhik. of 1802; Ainslie; Marsden’s Sumatra, 155-56; O’Sh. 480. See Benzoin; Resins; Styrax benzoin.

BENJAMIN, the Jewish traveller, Rabbi Benjamin of Tudela, travelled in the East between 1150 and 1173, when already the empire of the Abbasside Khazis was rapidly declining, and the Turks were gaining the ascendency at Baghdad. He would appear not to have proceeded beyond Kish island. He describes it as the great emporium to which Indian merchants brought their commodities, and the traders of Mesopotamia, Yemen, and Persia, all sorts of silk and purple cloths, flax, cotton, hemp, wheat, barley, millet, etc., which form articles of exchange. He refers to the pearls of the Bahrain islands, and to the pepper, cinnamon, ginger, and many other spices of S. India. He places the island of Kandy at 22 days beyond Kish, and China 40 days beyond Kandy.

BENJAPATSJA. Maleal. Tiaridium Indicum.

BENKAR. Hind. Hiptage madabola.

BENKATAN, a tribe on the E. coast of Borneo.

BENNETT. In 1851, J. W. Bennett published a Selection of Rare and Curious Fishes found on the coast of Ceylon, Bennett, P. F., author of A Whaling Voyage round the Globe. Bennett, George, author of Wanderings in New South Wales, Batavia, Pepo coast, Singapore, and China; also Gatherings of a Naturalist in Australasia, London 1860.

BENOUDDHA, the country between Allahabad and Surwur, the present country of Gorakhpur.

BEN-TEAK. Lagerstromia microcarpa.

Ven-taku, ... CAN. 

Mahr. Bandara, ... Mah. 
Bellingier, ... Maleal.

This tree is common in the Wynn and on the Western Ghats; wood prized for making coffee cases, and much used by the native carpenters for house-building and masts for dow, pattama and other country vessels. It grows 90 and 100 feet long, and from 12 inches to 3 feet in diameter; it is perfectly straight, and without branches, excepting at its top; the leaves are small and very thick. This wood is not so durable as the poon; it is very much lighter in colour, and in this respect much resembles the American red oak.—Edge, M. and C.; M’Ferr.
BENT GRASS, species of Agrostis.

BENTHAM, a Bengal civil servant, who largely extended the knowledge of the botany of India. He published many memoirs on botanical subjects, also the Flora of Hong-Kong, and monographs of Serophysalurinae and Labiatae.—And.

BENTHAMIA FRAGIFERA, the Thurnell of the Panjub, is found in Nepal and in the Sutlej valley between Rampur and Sungnan, at an elevation of 6000 feet. The wood is small; fruit is large, of the shape of a strawberry, edible, and is used as a preserve. B. floribunda extends from the eastern Himalaya to the Sutlej.—H. et Thom. 109, 193; Cleghorn, Report, 64; Hogg, Veg. King. p. 367; Powell, Punjab Products.

BENTINCK, Lord William, G.C.B., an officer of the British army who was governor of Fort St. George, Madras, from the 30th August 1803 to the 13th September 1807. He was subsequently in military employ in Spain during Great Britain's war with France. On the 4th July 1828 he assumed the office of Governor-General, which he held until the 29th March 1835. He afterwards entered the Commons House of Parliament for the town of Glasgow, and died 17th June 1839. During his administration as Governor-General, he appointed Captain Sleeman for the suppression of thugs; sati, also, the self-immolation of Hindu women with the dead bodies of their husbands, was prohibited. Education was fostered, many English schools established; there was laid the foundation for the extensive employment of natives in the administration of justice; and in his time, a so, a Legislative Council was established at each presidency. The only war that occurred was against the raja of Coorg, who by his insanguine-like atrocities drew upon himself the arms of British India.

BEN TREE. In India, the Moringa pterygosperma; in Egypt, M. aperta.

Ben Nut Oil.

Moringhy yanni, Tam. 
Moringa, M. 
Moringa noona, Tetl. 

This oil is the product of the unts of the Moringa aperta. It is valuable on account of the lengthened period which it may be kept without contracting rancidity. In the West Indies the oil is used for salad oil. It is employed by watchmakers, and for retaining the aroma of delicate flowers. The oil is inodorous, and is therefore used by perfumers in the manufacture of scented oils. The seed of M. pterygosperma also yield an oil. M. pterygosperma is common in all parts of S. Asia; the flowers, leaves, and fruit are eaten by the natives; and the rased root is used by Europeans as a substitute for horse-radish, to which circumstance it owes its common name of ‘horse-radish tree.’—Mason; Faukner; Hogg.

BENTUL. MALAY. A vegetable of Bawean.

BENU MASH. Pees. Phaseolus max.

BENZA, P. M., a native of the Ionian Islands, a Madras medical officer. He wrote on the geology of the country between Madras and Neilgerry, in Bengal; also on the geology of the Neillgherry and Koonda mountains, and notes on the geology of the Northern Circars in 1835.—Buell's Catalogue.

BENZON, Liquid.

An oil, like treacle, sold in China in small bottles or in the pericarp of a fruit. It resembles balsam of Peru.—Smith. See Benjamin.

BERAL.

BEO. HIND. Granula religiosa.

BEOMAR. Bepar. HIND. Money-lending, trade. Bepari, a shopkeeper.

BEP-TIAN. BURm. In Amherst, a timber used for making handles for spears and swords; it is a superior wood, and looks like white Jarrold. A timber of same name in Tavoy is used for building; and the Bep-won, BURm., of Tavoy is a timber used for building.—Captain Dance.

BER. HIND. Amongst Rajputs, a feud.

BER. HIND. Zizyphus flexuosa, jujuba, nummularia and vulgaris.

BERA. HIND. Nima quassoides; also Glaciosoch, sp.; also Ficus Indica.

BERA. HIND. A raft or float, on which is placed a paper or tinued boat, with the face of a female and the crest and breast of a peacock at the prow. It is set afloat with lights and music on Thursday evenings, on the rivers of Bengal, by Mahomedan Punjubs of Kajah Khzir. On the last Thursday of the month Bhandon (August—September) it is deemed particularly acceptable as an offering in fulfilment of a vow made in the bygone year.—11.

BERA. HIND. A small packet of betel-nut, catechu, quicklime, anised, coriander seed, cardamuns and cloves, wrapped up in betel leaf. It is a/miscastey used on ordinary occasions, but is also presented as a ceremonial part of a visit either to Hindus or Mahomedans.

BERAD. MAH. A predatory tribe in the south Mahtrr country, inhabiting the hills and thickets, and subsisting by chase and plunder. Wilson says they are the same as the Ramusi, but this does not seem correct. They may be the Bedar.—Wilson's Glossary.

BERAM. MALAY. Elephant. Beram rambut, hair of the elephant’s tail.

BERAR, a province in the northern and central part of the Peninsula of India which belongs to the Hyderabad state, but was assigned by the Nizam to the Government of India to meet the pay of the Hyderabad Contingent, subject to the condition that the surplus revenue shall be paid to Hyderabad. The province is administered by a Commissioner, under the Resident of Hyderabad. It is in a broad valley lying between the Satpura range on the north and the Ajunta range on the south. It has several large towns, Akoh, Akote, Amravati, Ellickpur, and others; and its population in 1867 was 2,251,565 souls in an area of 17,728 square miles. The first inroad of Mahomedans into the Dekhan was led through Berar by Ala-ud-Din, A.D. 1224; and several dynasties, the Kabani, the Izam Shahi, the Nizam Shahi, the Mahatta Peshwas, the Dehli empire, and the Asf at Jahl of Hyderabad have since held it. In 1867 the principal creeds and castes were:

The Kshatriya pretend to Rajput descent. Maharratas of no particular family usually call themselves Thakur; even a Kunbi will occasionally try to elevate himself thereby; while the Purboh, Kayasth, and other castes of mixed origin and good social status are constantly invading the Kshatriya military order. The distinction is also claimed by the rajus of the Satpura hills, who assert that they are Rajputs depressed by the necessities of mountain life, whereas they are Gond or Kurku elevated by generations of highland chieftainship.

Under the heading Vaisya are placed all the commercial classes of Hindus, the north-country Marwari and Agurwalla, with those who are known by the general term Banjara, and a few castes like the Komati from the south, or the Lar, who do not seem to be well known out of Berar.

The Sudra caste in Berar, as in Mysore, all eat together, although they do not intermarry. The Kunbi and Mali eat flesh, drink liquor moderately; and their widows may always remarry if they choose, except the widows of Deshmukhs, who adopt high caste prejudices. The Keshi is a weavering caste. The Banjara were comparatively numerous in Berar; their occupation as carriers is rapidly going, and during their transitional stage they give a good deal of trouble to the police. The Bhui has recently been supposed to belong to a widely-spread primitive tribe; the Garpayari live by the profession of conjuring away hailstorms. The Vahar and Krishnapokshi are the same.

They are descendants of Brahmins by women of inferior castes, and Krishnapokshi is only an astronomical metaphor for describing a half-breed, the term meaning literally 'dark-fortnight,' and referring to the half-darkened orb of the moon. All the Sudras of this part of India are of non-Aryan origin. The Mh BAR have been taken to be the same with the Dher, a very useful and active tribe. The Mong appear to be of low rank in the social scale; they are tanners, curriers, shoe-makers. The puacity of the Khakob or Bhangi, who are so numerous in Northern India, is a serious sanitary difficulty. The Kailkari are a tribe formerly well known for their trading habits. The Ramusi, a predatory race, speak Telugu in their families, and are doubtless from Telengana. The original Purdhun among the Gond answered to the Bhat among the Hindus, but many seem to have settled in the plains as a separate class of Gond.

The Kunbi and Bhoti assimilate themselves into eleven classes:—Mali, Ful Mali, Jotar Mali, Haladi Mali, Wanjari, Gantadi, Sagar, Atole, Telale, Vindesa, Parni.

With the exception of the Haladi Mali and Parni, they have roti vya whar amongst each other, but not beti vya whar, i.e. they eat with each other, but do not intermarry. The Kunbi and Mali alone, of the Sudra peoples, are 834,588 souls.

The Dhangar sheep farmer race are of two sections, the Kota Pilla Dhangar, who keep sheep, and the Barji Hatkar, or 'shepherds with the spears.' The latter still hold much land on the borders of the Nizam's territory, and, until the British domination, were notorious for pugnacity and rebellion, and they still continue a quarrelsome and obstinate race. They are supposed to have come from Hindustan in twelve tribes, and been impelled by the Gonds towards Hingoli and Bassim, which locality got the name of Barah Hatia, or the twelve tribes. They now occupy the hills on the north bank of the Pyn Gang. To die in the chase or in war is deemed honourable, and the Hatkar who are so killed are burned. The Hatkar are fine able-bodied men, independent and arrogant; many of them never shave or cut the hair of their face.

The Bhui are in number 17,980.

The Banjara, 51,982, most of whom belong to the Banjara tribe, supposed to have been Rajputs from Central India.

The Aboriginal races in Berar, 168,059 in number, are as under:—

Gond, 68,542 Andh, 28,037
Bhil, 2,279 Nihal, 2,591
Ramusi, 7 Korku, 28,709
Koli, 21,224 Kurki, 8
Arakh, 331 Kolam, 9,969
Lejar, 1,309

Of the aborigines, the Gond, Kurku, and Bhil are the only completely preserved specimens of tribes. The two first retain their languages, while the Bhil tongue seems to have become extinct very recently in Berar, its disuse being probably expedited by their general conversion to Mahomedanism.

The Gond of Berar inhabit the Melghat and a strip of wild country along the Wardha river. They arrange themselves into thirteen sections, viz.:

Bhui.  

The men and women of the Gond never associate at work, but labour apart. A Gond desires of having a wife, and having resolved on a particular girl, takes with him a band of his comrades to the field where the women are at work, and he suddenly, alone, runs towards and attempts to capture her. His comrades will not, however, aid him to carry off the girl, unless he succeed in touching her hand before she reach the village shelter. By touching the girl's hand, the marriage contract is sealed, and cannot be broken; nevertheless the women often fight every inch of the ground, inflict the most serious hurt, and sometimes shameful defeats, continuing the contest even after the bridegroom has touched the bride's hand, and, if the village skirts be reached, the men turn out to aid the woman, and pursue the attacking party back to their own village.

The Bhil of Berar occupy the eastern slopes of the Gawilghur range to its western extremity, and stretch far westwards in Kandesh. They belong to the Turvi clan; all now are Mahomedans.

The Koli are in two distinct tribes, but they are agricultural, and there are several substantial potuils amongst them.
BER-BAIT.

The Aush are also called Pradhan, and are said to be helot Gonds; but they are cultivators, and do not eat animals that die.

The Kalam are a Gond tribe who have settled to agriculture.

The Lajar are woodcutters in the Satpura range.

The Nihal are a helot class among the Gonds.

BER-BAIT, MALAY, means to make Plantains. A pantun consists of four lines; the two first consist generally of a simile or natural image, and the two last a moral drawn from the simile. The Malays take great delight in listening to two poetical champions pantunting at each other, till one is obliged to give in from want of further matter.—Journ. in Arch. v.

BERBER, a race occupying the northern parts of Africa. In the Berber group of languages, all that is not Arabic in the kingdom of Morocco, in the French provinces of Algeria, in Tunis, Tripoli, and Fezzan, is Berber. The language also of the ancient Cyrenaica, indeed of the whole country bordering the Mediterranean between Tripoli and Egypt, is Berber. The extinct language of the Canary Isles was Berber; and, finally, the language of the Sahara is Berber. The Berber languages in their present geographical localities are essentially inland tongues.—Latham, Rep. Br. Ass. 1817.

BERBERAH, or Maratha, is described as a subdivision of Abhirra; it is the Barbarean of Arrion's Periplus.

BERBEREII, the Mosallyon of the author of the Periplus, is a seaport in Africa, directly south of Aden, in lat. 10° 25' 45" N., and long. 46° 6' E. It was the grand mart of the ancients on this coast, and is still the great outlet for the commerce of north-eastern Africa. It has a large trade in sheep, cattle, ghi, coffee, various gums and resins, and in ostrich feathers. An annual fair is held from October to April, the inhabitants meanwhile living in tents to the number of 20,000, bartering their goods with merchants of Muscat, Bahrein, Busorn, Feresbender, Mandavie, and Bombay, or carrying them over to Aden, where a ready market exists for their produce.—Horsburgh, Blackwood's Magazine.

BERBERIS, a genus of plants belonging to the Berberaceae. The genus has about 60 species in China, Japan, and in India. Amongst them are B. angulosa, aristata, Asiatica, coneimina, insignis, lycium, macrosepalum, Nepalesia, ulicina, umbellata, vulgaris, Wallichiana, xanthoxylon. Three medicinal substances are obtained from species of this genus,—an extract known as Russet, a tincture, and Berberine, which is the active principle of these. But it is a troublesome and an expensive process to extract it pure. It is very bitter, yellow, not easily soluble in water, more readily in spirits of wine. In Europe it has been used chiefly as a tonic in indigestion, in doses of one to six grains, but has been given up to ten grains. B. Asiatica and the B. aristata are generally used. It is from the roots of these species that the bark is stripped for making the tincture. B. conspicua, Hook. et Thom., B. angulosa, Wall. grows at Ramri and Pindorgarh 3000-5000. A small shrub only a foot and a half high, flowers solitary, red fruit, the leaves and stems very spiny. In the Ryott valley in Sikkim, at Lahore, Iris was found by Dr. Hooker abundant, and this small bushy Berberry with oval eatable berries. B. insignis, a plant of the Sikkim Himalaya, forms a large bush with deep green leaves seven inches long, and bunches of yellow flowers. B. Kunsarensis is found in Kunwar, and employed for making Russet.—Hooker, Journ. 12, 1854, ii. 197; Ind. Ann. Med. Sci. 1856, 379; H. f. et Th.

BERBERIS ARISTATA, D.C. Barberry.

Berberis tinctoria, Leach. Barberry angustifolia, B. chitra, Ham.

Berberis floribunda, Wall. Barberry, ceratophylla, B. petiolaris, Don., aristata, B. afflictis, Don., umbellata, Lindl.

BERBERIS LYCIUM. Royle. Barberry.

Extract—Hazzin-Hindi, Att.; Russet; Hinz. This plant is widely distributed over the mountains of India, and assumes many various forms, which has led to botanists giving it a host of specific names. It is found in the Satlej valley between Rampur and Sunagam, at an elevation of 6000 to 10,000 feet; also on the Neilgherry and Pulney hills at from 6000 to 7000 feet, and at Newera Ella in Ceylon. The berries are much esteemed in the countries where they grow for their agreeable acid flavour. A yellow dye is obtained from the root.—Cleghorn, Panjab Report; Ind. Ann. Med. Science.

BERBERIS NEPALENSIS. Spr.

This shrub is found on the Neilgherry, Pulney, and Travancore hills, at an elevation of from 5000 to 8000 feet. It is also on the Himalaya, Bhotan, Garhwal, and Khiasy mountains. The wood is small, and of little use. See Dyers.

BERBERIS SINENSIS, Smith, the Kau-kii of the Chinese. This and its sub-species furnish the drug of China called Kau-kii and Tu-kul-pi. This is a plant of northern China; berries of a dark purple.—Drury; Smith.

BERBIANG, Kyan. Brother-making. See Brother; Ber; Sahibah.

BERCHEMIA FLORIBUNDA. Wall. The Zizyphus floribunda, Wall., is a plant of the
BERDÀ.

Khassya hills, Nepal, and Kamaon. The fruit of a Panjab species is eaten by goats and men. B. aculeatus is common in the Holy Land, and called Christ's thorn, from the tradition that the platted crown of thorns was made of its twigs.—Voigt.

BERDA. MAHR. Terminalia bellerrica.

BERDURANI, a tribe of Afghans on the north-eastern part of Afghanistan, occupying the lower course of the Kâbûl river, and the parts between the Indus, the Hindu Kush, and the Salt Range, touching the Ghilzai on the west, the Sinphosh on the north, and the people of India on the east, the Indus being their boundary; but Ìshâwûr is a Berduranâi town. They were once a great tribe, but were removed from eastern Afghanistan to Herat by Nadir Shah.—Papers, East India, Cobul, and Afghanistan, p. 139.

BEREKEDE, a branch of the Asir tribe of Arabs, said to lend their wives, like the Jakuri Hazara.—Sale's Koran. See Pediandry.

BERENICE, a seaport established by the Ptolemys on the Red Sea, from whence goods brought from the east were conveyed by caravans 255 miles to Coptis on the Nile, and thence to Alexandria. The entire distance from Coptis to Berenice occupied twelve days. The ruins of Berenice were discovered by Captains Moresby and Carless at the bottom of the inlet known as the Sinus Immundus or Foul Bay.—Ind. in 15th Cent. See Saba.

BERFA. HIND. Populus balsamifera.

BERGAMOT, also Bergamotte, a name of the lime tree, Citrus limetta; also of the small pear-shaped fruit of the tree, and also of an essential oil obtained from the rind of the fruit. To prepare this oil, rasp the rind, express the rapsings between flat porcelain slabs, allow the oil to settle, and then filter. The exquisite flavour of this oil is injured by distillation. It is used chiefly as a perfume; colour yellow; sp. gr. 0·888; freezes at 32°. More than 22,000 lbs. of this essence was imported into England in 1848.—Beng. Phar. p. 378; Simmons, p. 566; Hogg, p. 140.

BERGERA KONIGII. L. Curry leaf tree.

Murraya Konigii, Spreng.

Karia-parle, . . . BENG. Kariya-palpa. . . . MALEAL.
Kariypak-kahar, HIND. Kariya-parle. . . . MALEAL.
Kariyapak-kurra, K. Kariyapak-kocr, . . . SANSK.
Gamila, Gardala, . . . KANG. Kariyapak-karam, TAM.
Baranga, . . . MALEAL. Karivepa, . . . TEL.
Kare-hpeon, . . .

A tolerably-sized tree, common throughout British India and Ceylon. It is cultivated generally in gardens for its pinnate-shaped leaves, which retain their fragrance when dry, and are used to flavour curries, mulugattawny, chutney, etc., and are also used in the curry pastes and powders prepared in India for transmission to England and other parts of the world. The mixture of the leaves not only imparts a peculiar flavour to these condiments, but adds a zest to them. It flowers in February and March; fruit of a deep purple colour; wood hard and close-grained. Medicinally, the leaves are considered stomachic and tonic; used raw in dysentery, and when roasted, are administered in cholera, in decoction to stop vomiting, also in fomenting. The bark and root are employed as stimulants.—Royle.

BERGERÀ NITIDA. Theç. The Meegong-katpineche-gass, Singhalése, is a moderately-sized tree, not very uncommon in the warmer parts of Ceylon.—Theç. i. p. 46.

BERHAMPUR, a municipal town and military station in Ganjam, in lat. 19° 18' 40" N., and long. 84° 47' 50'' E. It stands on a rocky ledge surrounded by an extensive plain, bounded on the W. and N. by a range of hills from 5 to 10 miles distant, and open to the S. and E. The district yields sugar; also silk cloth manufactured from Bengal and Chinese cocoons.

BERHAMPUR, a civil station in the Murshidabad district of Bengal, in lat. 24° 6' 50'' N., long. 88° 17' 31'' E., with a population of 27,110. It is built on the left bank of the Bhagirathi river, and is 118 miles from Calcutta. In the beginning of the nineteenth century, General Stewart resided here. He was wont to offer puja to Hindu idols, and to worm up the Ganges. Like Job Charnock, he had married a Hindu. It was here that, on the 25th February, the first overt act of the mutiny of 1857 occurred, in the 19th Regiment Bengal Native Infantry.—Tr. of a Hindu, i. pp. 68, 69; Imp. Gaz.

BEH, a caste in southern India following trade, and claiming to belong to the original Vaisya section. They also call themselves Chetti, or more correctly Sheti, from the Sanskrit Shreshthi, a merchant. The Beri belong to the left-hand sect, and are distinct from the Komati or Chetti of the right-hand division.—Wilson's Glossary.

BEH, HIND. Zizyphus flexuossa; also Z. nummularia.

BEH. HIND. Iron fettlers for prisoners or quadrupeds.

BEH. HIND. A basket used to raise water for irrigation, made of leather or bamboo. It is suspended by four ropes, and swung on a yoke; it has various names in different parts of the country.

BEH, also Bhari and Rana Bhari. HIND. Leo-

BEH, a robber tribe of Central India.

BEH-BERI, a fatal disease, often attended with swelling and burning in the feet and paralysis; first written on by Dr. J. G. Malcolmson, Madras Medical Service, 1835.—Dr. Buist's Catalogue.

BERING. HIND. Nima quassoides.

BEJOYA or Buroja. HIND. A resin from the Pinus longifolia; is rich in oil of turpentine, yielding 15 to 20 per cent., and since 1860 the natives of Najibabad and Bijnore and of the towns of Murutt and Rookee, have distilled turpentine from it. The resin brought from the hills is sold at the markets along the foot of the ghata at Rs. 3 to Rs. 4½ per maund. At Najibabad, 19 miles from the hills, the resin sells at Rs. 6 to Rs. 5½ the maund; the turpentine distilled there at 8 to 12 annas the quart bottle. When the resin is sold in loose quantities (called soondrus), it is sold on the spot for Rs. 8 the maund. This soondrus is the unrestricted resin of the trees, and is technically known as Colophane. The resin is collected by cutting triangular notches in the trees, leaving a hollowed-out space at its foot as a receiving bowl, which is filled and emptied two or three times in the year. About 1000 to 1200 maunds are brought annually to Kamaon. Each tree yields from 5 to 10 seers.

BERLI. MAHR. Caryota urens.

BERNADOTTE, king of Norway and Sweden, commenced life in the French army, and, when serving in India, he was taken prisoner by the British in a night sorti from Cuddalore in the month of June 1788.

BERNARDINO. Fray Gaspar de San Bernardino,
of the order of St. Francis, in 1611 undertook a journey by land from India to Portugal by way of Mombasa and Socotra and the Persian Gulf. His narrative bears witness of the complete revolution which had taken place in the course of the trade between India and Europe, through the Equin斧tes valley and Syria.—Birchwood.

BERNIER, FRANCIS, was born at Angers, in France, about the year 1625. In 1654 he visited Syria, and passed into Egypt, residing a year at Cairo, where he suffered from the plague. Thence sailing down the Red Sea, he passed to India, landing at Surat in the latter days of Shah Jahan. He states that by the time of his arrival at the court of Shah Jahan, the various robbers whom he had met on the road had left him little money. He remained in India ten years (1658-1670?), during eight of which he was the physician of Aurangzeb, whom he accompanied to Kashmir in December 1664. About the end of February 1659, while Bernier was on his way to Delhi, he met Dara Shikoh fleeing towards Ahmadabad, after his defeat by his brother Aurangzeb. Dara's wife had been wounded in the battle, and Bernier turned back as far as Ahmadabad to attend upon her. His history of the revolution was translated into English with his Voyage to Surat; London, 1671 and 1675.—Elph. p. 336.

BERONDA, or Barunda, belongs to a very ancient family of the Rajhansi caste of Rajpoota. Under the rule of the Bundela chiefs, the state seems to have been held under a suzum from Hardi Sah. Its area, 275 square miles; population, 24,000; revenue, Rs. 45,000.

BEROSUS, a learned Chaldean priest who lived in the time of Alexander. He visited Babylon soon after the Macedonian conquest, and he mentions a legend that the first dawn of civilisation was in southern Babylonia, and that the teachers of mankind came from the shores of the Persian Gulf. He took from the sacred books of Babylon the Chaldean account of the Deluge, which he introduced into the history that he wrote for the use of the Greeks. It says that Obartes Elbarabitu was dead, his son Xuthuros (Khasiattia) reigned eighteen eares. Warned by Chronos (Ec) of the coming Deluge, he obeyed the injunction, to build a vessel five stallin long, and five broad, in which he embarked his wife, his children, and intimate friends.

BERRAWI, a district of Kurdistan, on the Zab river. It is a long valley, and has sixteen villages of Kaldi Christians, each with priests.—Macgregor.

This is a native of Ceylon, but has been introduced into the continent of India. The wood is annually introduced from Trincemacee, by which appellation it is known in the Madras market. It is of a pale red colour, highly esteemed for its lightness and strength; is straight-grained, slightly plant, tough, and little affected by the atmosphere. It is employed in the construction of the mass; and boats of Madras, also for the spokes of the wheels, handles, frames, poles, and shafts of carriages. It is inferior to sal for spokes, and to the label for some other purposes, but it is comparatively light and easily worked. Dr. Helder mentions this tree as growing on King's Island opposite Mergui, and as a light, strong, and valuable wood. Flowers small, white, with gold-coloured anthers. The tree yields the best and most useful wood in Ceylon for naval purposes. It grows straight for twenty to forty feet high, and from twelve to thirty inches in diameter. Mr. Edye said that this may be considered superior to any wood for caspian bars, cross and trussel trees, cask staves, battons for yards, fish for mast, boat-building, etc. He added that at Madras it was highly valued for coach-work; from the toughness and fineness of its grain it answers all the purposes of ash in England. Its specific gravity is 0.80; unseasoned it weighs 55 to 60 lbs. the cubic foot, and 50 lbs. seasoned. It is largely imported into Madras from Ceylon, in logs from 18 to 25 feet long, and 24 to 5 feet in girth.—Drs. Mason, Wight, Cleghorn, and Helfirr; Mr. Edye; Mr. Rohde; Mr. Mendis; M. E. J. R.; Thwaites; Rozh.; Voigt; Beddome, Fl. Syl, part v. p. 58.

BERRYA MOLLIS. Wall. Pettoon of the Burmeese is found on elevated ground of British Burma. Wood red, much prized for axles, the poles of carts and ploughs; also used for spear handles. Tonnage 60 to 62 lbs. In a full-grown tree, on good soil, the average length of the trunk to the first branch is 50 feet, and average girth measured at 6 feet from the ground is 7 feet. It sells at 12 annas per cubic foot.—Dr. Brandis.

BERRY-RAIN. On the 8th September 1873, in a shower of rain which fell on some villages on the north of Purniah, small berries fell. They were green, mottled with white streaks, and had a slight point. The outer skin or husk was thin, and came off readily. It resembled a pea in dividing into two parts. It was so full of oil that it burned with a clear flame, though green. See Blood-rain.

BER-SAHHIBAH of Borneo. Brother-making, Sce Be Blang; Brother.

BERSU. HIND. Leptopus cordifolius.

BERRTHA, in Rajputana, a form of land-temple. The ryots or peninsula are distinguished into Kokhirya and Perja. The former are settled in large proprietors, or other lands, and are not liable to be called on by Government for any services except the repair of roads, and attendance in the army upon particular occasions. The Perja, who occupy lands actually belonging to the prince, though perhaps in the immediate possession of jagirdars, are, on the contrary, obliged to perform various services, both at the call of the jagirdar and of the prince.—Toth.

BERTHOLLETTIA LANCEOLATA. D. C. Rshami, Rshambuti, Sarmeei, | HIND. | Leaves—rasana (kura sanma).

The Indian variety of this annual plant grows abundantly in many parts of the plains up to Peshawar, in places forming thickets, up to four and five feet high. Dr. Roye pronounces the leaves to be an excellent substitute for sanma; remarkable for growing with their edges vertical, and for having both sides covered with stomata. Dr. Hornibrook says that they are seldom used by the hakims.—Newtow: Horsh. p. 243; Roye, p. 456; Ill. Him. Bot. p. 19.

BERU. DUK. Pens, writing reeds.

BERWAJA. HIND. Callichonum polygonoides. BERRY is found in the Siberian Altai range,
but many are brought from Khotan, Ichi, the Chinese provinces, and Ceylon. There is a beryl mine at the village of Padddor or Patasiy, about forty miles F.N.E. of the town of Coilmatore, where it is found imbedded in a vein of magnesian limestone, traversed by hornblende rock. Beryls are also found in the sands of the Irwadi. The beryl and emerald in component parts are the same, viz. silica, alumina, and glaucina, coloured by the oxide of chrome. The only important difference is their colours, the emerald being of its own peculiar green, which it derives from a small proportion of chrome. Beryl retains its surface polish more perfectly than almost any other material. The Romans cut it in facets and in the form of a sexangular pyramid. The constituents of the beryl and emerald are:

<table>

</tbody>
</table>

Beryl is also said to be found at Vaniamabadi, at the northern base of the Nelligerry mountains.

BES or Bais. Hnd. Hnd. of Hazara. Salix, sp.

BESAN. Hind. The flour of a pulse, such as that of gram, Cicor arietinum, compound into a cosmetic powder, with aromatics and the flour of several pulses; is also made of pea-meal and orange-peel, and used as a detergent for cleaning the hair.—Powell; Simmonds. See Abir.

BESCHI, a missionary of the Church of Rome, who long resided amongst the Tamil races of the Peninsula of India. He was styled by the Tamil people, Virama - muni or Virama - munivar, the heroic devotee. He composed a poem in the style followed by Kamban, and called it Tombavani, giving the biblical narrative of Christ, the Virgin, and Joseph.

BESH. Pers. More; hence Beshi, increase.

Besh Khat, of high price.

BESHULYO-KURUNEE. Beng. Cocculus cordifolius.

BESISI or Besasis, a Malay tribe in Kedah, in the Malay Peninsula.

BESSI or Sumatra, fruit of Averrhoa bilimbi.

BESSUS, the murderer of Darius. He was put to death in a cruel manner. His body was fastened to the ground, and the boughs of two trees were bent, and, after being fastened to one of his limbs, allowed to spring back to their natural position. They tore him asunder. This fact is mentioned by Plutarch. This mode of executing criminals was occasionally adopted in Persia, and till recently in Nepal.—Malcolm's Persia, i. p. 73.

BESTA or Besta. KAR., TEL. A caste of fishermen in Madras and Mysore, to which the palanquin - bearers usually belong. — Wilson's Glossary.

BET or Beut. Hnd. Rattan, Calamus rotang; any cane. Bet-i-Majnun, also Khilaf-i-Balki, also Leila-o-Majnun, Salix Babylonica. Bet ka P halo, fruit of Calamus viminalis.

BETEL LEAF.

BET or Beut. PAKI. Land along a river subject to periodic inundation.

BETA, the best plant genus. The leaves of B. cicla or white bete are used as salads, and their midrib as a substitute for asparagus. B. martima, or sea bete, requires a sandy soil; used as spinach, or a pot herb. The red bete and mangel-wurzel afford abundance of anyaceous and succarine matter. B. Bengalensis, the Paluk Sag or Palang Shak of Bengal, is cultivated in Bengal and the Northern Circars, and its leaves are used by natives in their curries; when boiled it resembles spinach in flavour. The leaves shoot out again after being cut down.—Roeb. ; Vogt; O' Sh. See Beet.

BETA VULGARIS. Linn. Beet.

BETEL. Shai, Satk, Satk. ARAB. Palak, Chakuna, PERS. There are three varieties,—virikis, green; rubra, red-rooted; and alba, white. The plant is largely cultivated in India as a vegetable. See Beet.

BETADA SWAMAMI VRIKSHA. CAN. Bastard Pomegranate.

BETEL-GANNAPPA. Tel. Nauclea cordifolia.

BETALA, in Hindu mythology, the chief of the Bhuta.

BETCH, a branch of the Kuki in Cachar.

BETE of Ternate. Caladium esculentum.

BETEEKH. ARAB. Cucumis melo.

BETEL BOXES are in use in all parts of the S.E. of Asia, of gold, silver, or other metal; and in peninsular India, about one-fifth of the people have one always in their pockets. In Burma the framework of these boxes is formed of thin strips of bamboo plaited into the shape of a box; the basket-work foundation is then coated with Theetee varnish, painted and varnished. Every Burman has one or more of these boxes, to hold his betel, cigars, money, etc.; and their women, in addition to the above purposes, use them as jewel and dressing cases. Pagan, in Burma, is celebrated for their manufacture. Inferior boxes are made all over Pagan, and in the Shan states. The higher classes of Burmese use boxes of silver, whilst the nobles of the court of Ava use gold.

BETE LEAF.

Pan, ... GUI, HIND. Vettel, ... TAM.

Suru, Shirth, SIREH, ... JAV. Tamalapaka, ... TEL.

The Piper betel belongs to the pepper family of plants, and furnishes the celebrated leaf of the S.E. Asiaties, in which they enclose a few slices of the areca nut and a little shell-line. This they chew to sweeten the breath and keep off the pangs of hunger. It is also slightly narcotic. It is very easily reared in the Indian Archipelago, but in the Peninsula of India it requires manuring, frequent watering, and great care; and in the northern parts of Hindostan it becomes an exotic, very difficult to rear. The plant affords leaves fit for use in the second year, and continues to yield for more than thirty, the quantity diminishing as the plants grow older. In the Tenasserim Provinces, the Karesn plant the vines on their uplands, where there are tall forest trees. The branches are lopped off, leaving only the topmost boughs, and the vines readily climb up and weave their dark glossy leaves all over the summits, making a betel vine farm a most beautiful object. Karen boys and maidens engage in this leaf harvest with great
BETEL-NUT.

The betel, or areca, or Penang nut palm, is grown in many parts of the East Indies and the eastern Archipelago, from the Red Sea to the Pacific Ocean, and many of the people use the kernel of its fruit as a masticatory. It is the Areca catechu; is of elegant growth, and rises with a very erect and slender trunk to a height of forty or even sixty feet, the summit terminating in a tuft of dark green foliage; the trunk is seldom more than eighteen inches to two feet in circumference. The tree produces fruit from the age of five to twenty-fifth fifth; it begins to blossom in March and April, and the nuts are fit to gather in the months of July and August, and are fully ripe in September and October. Fourteen pounds is the average annual produce of a single tree. The single nuts are greatly in size, and their quality depends solely on the amount of astringent matter they contain, a point which is judged of by cutting them. If the white or medullary portion, which intercepts the white or astringent part, be small, has assumed a bluish tinge, and the astringent part be very red, the nut is considered of good quality; but when the medullary portion is in large quantity, the nut is considered more mature, and not possessing so much astringency, is esteemed less valuable. The ordinary nuts have a thin brown rind, and in size are intermediate between walnuts and hazel-nuts. Their general substance is of a faint oily grey colour, thickly marked with early streaks of dark brown or black. Betel-nuts are made into necklaces, rulers, tops of walking-sticks, and other small objects. The best betel-nut of the Madras Presidency grows in the Nuggur district of Mysore, and in Travancore. It occurs in the market sliced and in whole nuts, also boiled and raw, or split and dried hastily over a fire, or dried slowly in that manner. That used by families of rank in Travancore is collected while the fruit is tender; the husk or outer pod is removed; the kernel, a round, fleshy mass, is boiled in water. In the first boiling of the nut, when properly done, the water becomes red, thick, and of a consistence like starch, which is afterwards evaporated into a substance like catechu, and is indeed known by that name. The boiled nuts being then removed, are sliced and dried, the catechu-like substance is rubbed over them, and, on being dried in the sun, they assume a deep black colour. Whole, unslised nuts are similarly treated. Nuts are fit for the slicing process in the months of July and August. Ripe nuts preserved in the pod are also in use. Nuts for exportation to Trichinopoly, Madura, and Coimbatore, are prepared in thin slices, and coloured or left in their natural hue. For Tinnevelly and other districts, the nuts are simply dried. The quantity of nuts produced on the coast of Sumatra is stated at 80,000 pickuls. The quantity imported annually by the Chinese amounts to 45,000 or 48,000 pickuls, exclusive of that brought there from Cochín-China. The nut is carried by the people of the East in pouches, and presented to guests in the houses of the rich, in small boxes, wrapped in gold and silver leaf, and in this form becomes an essential part in all ceremonial visiting. Indeed, the betel of some of the inhabitants of the Eastern Archipelago refuses to accept betel-nut when offered, would give irreconcilable offence. It is believed to sweeten the breath, strengthen the stomach, and preserve the teeth; and when chewed with betel leaf, the Piper betel, Linne., gives the saliva a red colour, which it imparts to the lips and gums. But only some nations chew it with the betel leaf; others add to it lime, tobacco, catechu, gambir (an extract from the foliage of Uncaria gambir, Roxb.), and the leaves of various species of pepper. White areca nuts form an article of trade with Burma from Penang and Acheen. Ordinarily, in Malabar, they are dried or cut into two or three slices; nuts are exported in their pods to Bombay. 2000 cunohes on the average are annually exported from Travancore. The number of the trees of the betel palm in Travancore alone is calculated at 10,585,873. In China they are met with both cut and whole, and the imports are mostly the growth of Java, Singapore, Sumatra, and Penang.

BETEL-NUT CRACKER. Soroto, Hind. In very general use among the natives who are consumers of betel-nut; used in cracking the nut. This instrument appears never to have been imitated by British manufacturers. It is of steel, and ornamental.

BETHAL, also Pethal, Hind., of Chenab, Juniperus squamosa.

BETHANY, a small village, now called Al Azi- riah, about two miles from Jerusalem, on the eastern side of the Mount of Olives. On the summit of the Mount of Olives, within the area of which is a mosque, is a small circular chapel, covering the stone which bears the footprint shown as that of our Lord.—Skinner's Journey, i. p. 215.

BETHEL, of Genesis xxviii. 2, 19, a compound word, El of the Greeks (Vl. in the Hebrew and Phenician), i.e. God, the Strong, whence comes Elohim, literally the gods; and the Graeco-Phoenician Baaltry, or sacred stones, supposed to have fallen down from heaven (Diopeotes), perhaps aerolites, which were honoured and held sacred on account of a divine power supposed to be inherent in them. Jacob rose from his dream exclaiming (ver. 17), 'How holy is this place; this is none other but the house of God. And Jacob took the stone that he had made his pillow, and set it up for a pillar, and poured oil upon the top of it, and called the name of the place Beth-el.' Bethel of the Hebrews, Bagistan of the ancient Persians, and Allahabad of the Indian Mahomedans, mean all the house or place of God. Bagistan, from Bagar, God, and shiana, place.—Bunyan, iv. 242-3.

BETONICA OFFICINALIS, Smith.

Hoh-hiang... Gun... Betony, Bishops该项, Eso.

Top and leaves are warm anti-emetic, Smith.

BETOEA, also Betoya and Betoa. Benson. Chenopodium viride; White goosefoot.

BETTAMU or Bettapu, Calamus rotang. L.

BETTIAH, a town in the Champaran district.
of Bengal, situated on the Harra river, in lat. 26°
48' 5" N., and long. 84° 32' 40" E. The Maharaja of
Bettiah resides here. Mr. Hodgson notices three
tall pillars or columns in North Behar, two of the
pillars surmounted by a lion, and each having an
inscription upon the shaft. These are at Mathia
near Bettiah, Bahra and Rediah. The Bettiah
inscription is precisely the same as that of Delhi and
Allahabad. The language of inscription—Pali, and
character Old Pali. Date—315 B.C. The
Buddhist king mentioned is Piadas, or Asoka.—

BETUL or Baithul, a district lying entirely in
the hill country, comprising the westernmost section
of the great Satpura plateau. Beyond its western
border the Berar country begins. It lies between
lat. 21° 20' and 22° 35' N., and long. 77° 13' and
78° 35' E. The district must have been the centre
of the first of the four ancient Gond kingdoms of
Khela, Deogarh, Mandla, and Chanda; but except
an occasional mention in Farishta, no historical
information as to the Kherla kingdom remains.
It yields coal. Population in 1872, 284,055. The
agricultural population consists of Maharattu, Kumbi,
Pardeski, Kurni, Desi or Dolwar Kumbi, the
Bhuiyars, Mali, Khera, Gond, Kurku, Bhil, Bheria,
Gaoli, Byuya, Mhar. The Gond have about
twenty tribes and twelve sects.

BETULA, the birch genus; one of the Betu-
laceae. In Nepal are B. nitida, alvodeks, utilis, and
aeuminata, and B. cylindrostachya and B. nitida
are also plants of Kanaon. The white birch yields
a bark which the Kamtschadales chop up with
the eggs of the sturgeon, and use as food. The
sap is acrid, and an agreeable beverage, and may
be kept for years without undergoing fermenta-
tion. The bark of a species in Northern India is
used to dye chintz red? B. aeuminata, 
_Wall._ grows 60 feet high at 3000 to 10,000 feet
delevation in Kangra and Nepal, in the Himaalaya. The wood
is hard, strong, and durable.—_V. Mueller._

BETULA BHOJPURA. Wall. Paper birches.
_B. Jaqueumontii, Spach._

Barjri, Burzal, . . . _Tel._

Shag, Shakh, KANAON._

The Indian paper birch was found by Dr. Wallich
on the alps of Garhwal and Kanaon, in the Stutdeo
valley between Rampur and Sungnam, at an eleva-
tion of 10,000 to 13,000 feet; and it is a plant of Tibet,
Kaghian, Pangi, Bussahir, and Lahaul. It is nearly
allied to Betula papyracea of North America. So
long ago as the age of the Hindu dramas, about
the beginning of the Christian era, the Hindus
used the inner bark of this birch as paper. In
the drama by Kalidasa of the Hero and the
Nymph, Hind. Th. i. p. 216, Urvasi says:—

"... I grieve that he should demean me
Cold and unfeeling. I cannot now appear
Before I meet these charges; some reply
I'll make, a birch leaf, and will insert
My thoughts on it, and cast it in his way."

It grows to a higher elevation than most other
trees, generally above coniferous forests. The
tree at times reaches 6 or 10 feet in girth and
35 feet high. The wood is used for ploughs,
small bridges, etc., at altitudes and in tracts where
other trees are scarce. Mr. Watson told Dr.
Stewart that it is good for turning; and in Kanawar
poles of it are used for carrying and swinging a
heavy kind of ark in religious processions, which
implies some strength and elasticity. In Ladakh
the striking part of the stick for polo, hockey on
horseback, is made from it. The bark peels off
in large sheets, and is used also for umbrellas,
and for lining the flexible tubes of hookahs.
Every consignment of the ornamental papier
mache ware of Kashmir reaches the Pandjab packed
in wrappers of birch bark. Hindu pilgrims visiting
the shrine of Amarnath in Kashmir divest them-
selves of their ordinary clothes before entering
the shrine, covering their bodies with the bharj-
patra. The leaves or bark are used to cover
the baskets of Ganges water sold by itinerant
pilgrims. In Kangra, 'being sacred,' the bark
is used for funeral piles. In Kashmir and Kanaon
it is found very durable put under the earthen
roofs; and it is largely used for packing apples,
pomegranates, tobacco, and drugs, writing paper.
It sells for three rupees a kharwar (ass-load) in
Kashmir, according to Lowther. The price in Chumbia
was stated to be ten to sixteen seers for a
rupee. Longden mentions that the old bridge at
Koksar (now replaced by a more civilised one)
was made of birchen twigs.—_J. L. Stewart; Royle;

BETURUNGU. Beng. Peristrophia tinctoria.

BET-YA. BURM. Uricia heterophylla; also
Tadja involucrata.

BEUM. Tel. Husked rice.

BEVOIBETTA PEAK, in lat. 11° 21' N.,
long. 76° 43' E., in the Neighghir hills, is S. of the
Dodubetta peak. The top of the peak is 8488
feet above the sea.—_Batik._

BEYA. SANSK., JAV., MALAY. Cowries.

BEYAH, according to Rennell, anciently called
Beyascha, is the Hypthesis of Alexander.—
_Rennell, Memoir_, p. 102.

BEYPOOL, 5½ miles S. of Calcutt, at the N.
side of the river of same name; at its mouth is the
western terminus of the Madras S.W. Railway.
Beypore river has 8 or 10 feet on the bar at high
tide.

BEYT, or Date, an island on the S. coast of
Kattywar, in the Gulf of Cutch, about 5 miles
long. The town and fort are on its W. side. The
fort is in lat. 22° 26' 30" N., and long. 69° 5' 34" E.
It was taken possession of by the pirates of Jugut,
after they had been defeated by Kutub Shah. In
_A.D. 1482, Beyt fell, after having fought twenty
naval engagements. Beyt fort was taken from
the Waghrs and destroyed by the British on the
15th October 1859, and its fort and principal
temples blown up. It has many pagodas for the
worship of Krishna, and is largely visited by
pilgrims.

BEZOAR, Serpent stone.

BEZOAR, Serpent stone.

Faduj, . . . ARAB. Goliga Muniet, . . . _MALAY._
Haj-uh-nawar, . . . _Pers._

Bezoars are intestinal concretions, some of the
monkey; also of the wild boar, called pig stone;
of the Indian hog, called Malacca stone, or iapis
Malacensis, or yellow bezoar, and Ceylon bezoar,
lapis pori Ceylanici, which was larger and not so

332
scarcely exceeded in smallness; and the golden bezoar, that from the goat of Persia is known as the Chinese bezoar, the ox produces the oriental bezoar, also called the green resinous bezoar; the camel bezoar; the serpent stone is said to be from the cobra; and that of the bezoar of France from the viper. There are also hairy bezoars, agachphiles, concretions obtained from the ox, and sheep, and other quadrupeds. These form in the stomachs and intestines from the accumulation of hairs swallowed by the animals in licking themselves. The hairs become felted together in balls. The word is pa-zahr, from pao, to purify, and zahr, poison. Bezoar, from the mountain goat, the boz-i-kohi, is the most esteemed in Persia. Indeed, the name was at first applied to a concretion found in the stomach of a goat in Persia. Bezoar was formerly much prized as medicine in Europe, sometimes selling for ten times its weight in gold; but since its constituent parts have been ascertained, it has ceased to be sought after. The composition differs often in the same kind of animal, as well as in dissimilar species. Oriental bezoar is formed of bile and resin; other fictitious kinds are found to be made of hair, others of wood, and some principally of magnesia and phosphate of lime. The true bezoar from Persia is counterfeited so well by pipeclay and ox-gall, that even those who have been deceived who procure the genuine from the animal. The genuine then is the only small scale when a hot needle is thrust into it; and put into hot water it remains unchanged; when rubbed on chalk, the trace should be yellow, but green on quicklime. The cow bezoar is valued in the Chinese market at from $20 to $25 a catty, and is used by the Chinese solely as a medicine. The little which is brought there is from India. In China they are called Niu-hwang; also Chau-pan, also Chah-tah. The dog bezoar is called Kaau-pau, and that of the horse Mah-meh. In the interior of the Rajang district, in Borneo, are two species of monkey, which produce the batu nakit, or bezoar stone. One is large and black, with a long tail, called nakit. The other is large and red, but has no tail, and is called bai. In one out of 10 or 20 of these two monkeys, are found the bezoar. Honigberger mentions that Padzahr siah, Pans, kani zahr mohra, Hind, is a dark green serpentine; and a specimen in the Madras Museum, brought from Dehli by Mr. Charles Gubbins, as zahr mohra, is undoubtedly this mineral. Bezoar is brought to Bombay from Gujrat and Malabar in small quantities, and is chiefly re-exported to China. Ainslie mentions that it is brought to India from Ceylon, Bussora, and the seaports in the Gulf of Persia as a medicine. Bezoar is supposed by the native practitioners to possess sovereign virtues as an external application in cases of bites of snakes, stings of scorpions, hydrophobia, etc. Bezoars do not deserve the least confidence. The fadaniya bezoar of the Panjab are intestinal calculi, consisting of phosphatic concretions of lime, etc. They occur there in the intestines of various animals. — Honigb.; O'Sh.; Crawfurd; Powell, Handbook; Morrison; Tavernier; Ouseley; Williams; A. Mqquin Tandon.

BEZOMMAR is the seat of the Patriarch, or spiritual head of all the Armenian Catholics in the East. He is assisted by several bishops, and about twenty or thirty monks.—Robinson, ii. 45.
lating, with good soil and many springs. Their country is the finest in southern Burma, and their villages amount to about 200, with from 100 to 400 houses in each. They are skilled in the arts, are vigorous, hoe their land, and use cattle with yokes or panniers. They use spirituous liquors largely. Many of the population are slaves. The Karen-ni are civil, good-tempered, and intelligent, but they evince great ferocity in their forays.

The Lwai-loyh is a Karen tribe dwelling south of the Ka-khyen, on the edge of the table-land west of lake Nyong-Ywe, two degrees north of Toungoo. They dress like, and are doubtless a branch of, the Red Karen.

Ying-ban is a tribe supposed to belong to the Red Karen, whose dress and language they use. They dwell about 100 miles north of Toungoo.— *Mason, Burma*, pp. 89-91, 641.

BHA.BAR. Hind. *Urtica heterophylla*; also *An
dropogon involucratus* and *Eriophorurn cannabisinum.*

BHA.BAR. *Hind.* In Baitool, light black soil; in Bhandawar, tract of country under the Siwalik hills, from 10 to 20 miles broad. The slope of the ground varies from 17 to 30 feet per mile, diminishing rapidly after the first few miles. The soil in many parts consists of a rich black mould, at the extreme north and south verges of the forest. There are occasional patches free from trees, but covered with high grass, and many spots afford good pasturage; the Bhabar is almost desti
tute of trees valuable for timber; and water is at such depth below the surface, that all attempts to dig wells have been fruitless. It forms the southern portion of Kamaon, and is 10 to 11 miles broad, and it runs between the moun
tains and the Terai. On the south is a line of springs which marks the northern boundary of the Terai district. Up to 1850, the Bhabar was an almost impenetrable forest, given up to wild animals; but since then a large population has entered the hills.

BHA.BOOT. *Hind.* Ashes of dried cow-dung, which Hindus smear over their foreheads and bodies. See Atit.

BHA.BRA, near Bairath, on the road between Jeypoore and Dehli. A sculptured stone was got here. It contains an edict of king Pyaadi, and specifically refers to the precepts and doctrines of Bhagavat Buddha.— *Prinsep’s Tibet*, p. 155.

BHA.BRI. *Hind.* Amaranthus anaranoida.

BHA.BRIA, a section of the Koli race, dwelling from Baroda north to Mahc Kanta.— *Wits.*

BHA.BRU. *Sansk.* A sacred name of Siva.

BHA.DA. *Hind.* A grass which grows in poor soil; it makes excellent fodder.

BHA.DARIA, a tribe of mendicants of Brah
manical descent, who profess astrology.— *C.*

BHA.DA.HUA, a branch of the Chauluk Rajputs residing in the provinces of Agra and Etawa, and in other places along the Jumna, whence the tract is termed the Bhabar. The rajahs of the district claims descent from an ancient family, the mem
bers of which enjoyed high consideration at the court of Delhi from the reign of Akbar; and his pretensions are admitted by the surrounding rajas, who yield him precedence, and accept from him the tilaka or frontal mark on their accession.— *Wilson, Glossary.*

BHA.DON, the fifth month of the Hindu luni
solary year, August and September. On the 8th of this month, amongst Rajputs, there is a grand

BHAGATIYA. *Kali,* from Bhadra, good
ness, and Kali, one of the names of Parvati; in this form she is one of the Granna-devata or village deities, and as such receives bloody offerings, and assists in the practice of sorcery and witchcraft.

BHAGATIYA. A caste in Agra, Etawa, Cawn-

BHADRAPADA, a Hindi month when the sun is in the sign Sinha, corresponding to the Tulun month of Auvani. See Varsha.

BHADRA.SENA, king of Magadha, one of the Sisunaga dynasty, B.C. 400.— *Dunson*, iii. 538, 542.

BHA.EE. Duk. Stereidae colorata.

BHA.EE.L. A Hind. *Grewia oppositifolia.* It grows in the ravines of Simla, and at higher and colder situations. The ropes made from it are strong and durable; during the depth of winter the villagers feed their cattle on the leaves, which sell from three to five annas per load of 25 to 45 seers. It supplies a crop of twigs annually.

BHAGA, a mountain river of Kangra; it unites with the Chandra to form the Chenab.

BHAGADATTA, a king of the Yavana, who submitted to king Jarasandha.

BHAGALPUR, a town in Bengal on the right bank of the Ganges, with a population of 69,678 in 1872. It gives its name to a district of 4268 square miles, and a population of 1,826,290 persons; the soil of the district has been injured by changes in the bed of the Kusi (Cosi) river. Besides the Hindus and Mahomedans, there are 385,137 Goalla, 16,468 Sautal and other aboriginal races. The Oswal clan of Rajputs have two temples and shrines. The sacred hill of Mandarги, is fabled to cover the body of the giant who was decapitated by Vishnu when he was trying to destroy Brahma, Vishnu, and Siva. It is a place of Hindu pilgrimage. It suffered from famine in 1770, 1775, 1779, 1783, and 1865-66.— *Imp. Gaz.*

BHAGANA. *Sansk.* The circumference of a circle. Independently of astronomical purposes, the Hindus frequently divide the circumference of the circle into twelve rasi or signs, subdivided sexagesimally into Bhaga, Cala, Vicala, etc., i.e. degrees, minutes, seconds, etc. Bhagaana means also a revolution.— *E. Warren, Kala Sambhita.*

BHAGAR. *Hind.* Eriophorum cannabisinum.

BHAGAT or Bhakt. *Hind.* A term amongst the vaisnava, now usually applied to a Hindu religious puritan, who is initiated by a necklace of beads round the neck, and a circle on the forehead. After initiation, the puritan abstains from Maha festivals. Bhagat or Bhakt also simply means a follower or worshipper, as Siva bhagat or Vishnu bhagat, a worshipper or follower of Siva or of Vishnu. Bhagat is also a title given to the head of the math or temple of Kanoba. He works himself into a state of hysteria on the Jan’ in Atshami, and the people, believing him to be then possessed by Krishna, worship him with incense and prostration, and present sick people to be touched and cured.— *Wilson.*

BHAGATIYA, a caste in Agra, Etawa, Cawn-

334
BHAAGAVAN.

par, and as far east as Ghazipur, where they number more than 100 families; they pass their time in buffoonery, singing and dancing.—Sher-

BHAGAVAN or Bhagwan, a name of deity, denoting God. The derivation means the primary cause of creation. Bhagwan is the name by which all Hindus recognise the Supreme Being.—Taylor.

BHAGAVATA, an extinct Vaishnava sect, who wore the usual marks, the discus, club, etc., of that
divinity, and likewise reverenced the salagram and
tulasi. The Bhagavat of the present day is one who follows particularly the authority of the
text, the Bhagavat Gita, and the Ramayana. The
name is from Bhagavan or Bhagavata, divine.

BHAGAVAT-GITA. Sansk. From Bhagavan,
divine, and gita, a hymn, i.e. divine song; a
Sanskrit poem in the form of a metaphysical
dialogue between Arjuna and Krishna. It is an
episode in the Mahabharata. It contains many
fine passages, in which Krishna gives an exposi-
tion of the pantheon of the Brahmans and of the
Hindu mystic theology. The Brahmans regard it
as only inferior to the Vedas. It is the most
intelligence and most interesting of all the Sanskrit
writings. It is written in splendifer metre, and
belongs to a literary age. It is recognised by all
Hindu sects and schools. It propounds an eclectic
system. Its two leading doctrines are the adweta
philosophy of Vyasa, and the supreme transcendence
of quietism, resembling the Stoic philosophy of the
Greeks. Its author is unknown, but he was prob-
ably a Vaishnava Brahman, and its date was prob-
ably the second or third century A.D. It is later
than the six Darsanas or philosophic schools. The
poem is divided into three sections, each contain-
ing six chapters, the philosophical teaching in
each being somewhat distinct; but the main
design of the poem is to inculcate the doctrine of
Bhakti (faith), and to exalt the duties of caste
above all other obligations, including those of
friendship and kindred. The sentiments expressed
in it have exerted a powerful influence throughout
India for the past 1600 years. It was early trans-
lated by Mr. Wilkins, subsequently by Mr. J.
Cockburn Thompson; and there are translations
into German, French, etc. Warren Hastings
wrote the preface to Wilkins' translation of it.
The Bhagavat Gita, the Mahabharata, and the
Ramayana are to the Hindu all that the Bible,
the newspaper, and the library are to Europeans.
Dr. Loroizer, in an appendix to his edition of
the Bhagavat Gita, compares, in parallel passages,
portions of this book with that of the Christian
New Testament. He is of opinion that the
doctrines in this book are not only an eclectic mixture
of different Indian philosophies, but have also a
strong infusion at least of ideas and sayings taken
over from Christianity. He is satisfied that it
dates after Buddha; and there are strong reasons
to believe that its composition must be attributed
to a period terminating several centuries after
the commencement of the Christian era. Lassen
inferences its age to have been in the 3rd century after
Christ. It is in the Gospel of John, the Acts of
the Apostles, and Revelation, that the corres-
spondence is apparent, though also Paul’s Epistles
to the Thessalonians and to Philomen, and the
Epistles of Peter, are noticeable.—Ind. Ant. Octr.
1878.—Dowson; W. Taylor; Elph. pp. 93, 158.

BHAGAVAT PURANA, one of the sacred
books of the Hindus, styled Purana, of which
there are eighteen. The Vishnu Purana is that
best known. The Bhagavata Purana teaches
vaishnava doctrines. It is so named from its
being dedicated to the glorification of Bhagavan
or Vishnu. It consists of 18,000 shlokas, dis-
tributed amongst 332 chapters, divided into 12
skandhas or books; and it possesses a more direct
and powerful influence upon the opinions and
feelings of the people of India, than perhaps any
of the Puranas. Its tenth book narrates in detail
the history of Krishna, and has been translated
into all the languages of India. It is understood
by having been written by the grammarians Vopa-
dera or Bopa-deva, who lived about the 12th or
13th centuries, at the court of Hemadri, raja of
Devagiri (Deogarh or Dowltabad).—Groce, p.
50; Dowson.

BHAGAVATI, Sansk., in Hindu mythology,
the wife of Bhagavan. Bartolomeo says that
her figure was on the gold pagoda coin, and gave
her its name.

BHAGDAR. Guj. The headman of a village
commune.

BHAGHEL CUND, 'the land of the Bhaghele,'
also known as Rewa; a territory in Central India,
whose princes are of the Bhaghel or Bhaghele race.
It lies between lat. 22° 40' and 25° 10' N., and
long. 82° 35' and 84° 20' E. According to Wilkins,
are a branch of the Singhote or Rajputs of Gujerat,
who migrated eastwards. Sub-
divisions of the tribe, under different denomina-
tions, are widely spread through Bundelkhand,
Allahabad, Benaures, Gorakhpur, Cawnpur, and
Farrakhabad. They are also said to be of the
Chaulan race, descended from Konmphal (died
A.D. 1166), sovereign of Gujerat. In Gujerat
there are many petty chieftains of this tribe, as
Lunawarrah, Mandle, Mahara, Godra, Dubboge,
etc. Another account makes the Bhaghele Rajput
race descendants of Sid Rane. They also occupy
Pitapur and Tharapia in Gujerat. Tod says the
Bhaghele Rajputs are a branch of the Solangi
kings of Anhawal.—Tod's Rajasthan.

BHAGIRATHI, a branch from the Ganges,
in Bengal, which Hindus regard as the sacred
channel of that river. It leaves the Ganges in the
Murshidabad district; and at the town of
Nadiya it is joined by the Jilangi, and the Hooly
is formed. Its course is frequently changing
and sandbanks forming. The Bhagirathi river
of Garhwal rises from the Gangotri peak, and is
one of the headwaters of the Ganges, and joins
the Alaknanda at Deo Prayag, to form the Ganges.
The people identify that with the branch thrown
off by the Ganges at Chhapati, 1000 miles below.
Bhairaghati is in a deep gorge, at the confluence
of the Bhagirathi with the Jahnvi, and is visited
by Hindu pilgrims from all parts of India.—Imp.
Gaz.

Bhagirathi Peak, in lat. 30° 56’ 5” N., and
long. 78° 59’ 1” E., in Garhwal, near the origin
of the Bhagirathi river, is 21,390 feet G. T. S. in
height. Herbert and Hodgson call this peak the
‘Pyramid,’ and give lat. 30° 54’ 6” N., long. Gr.
79° 2’ 8” E., height 21,379 feet.—Chap.

BHAGMUTTY, a river of Nepal. Kaimanau,
the capital, is built at the junction of the Bhag-
muty and Basmathy.

BHAGNUR, rich alluvial lands under the
Jumna.
BHAGTEEA, a dancing boy dressed up as a dancing girl.

BHAGWANA. See Baluchistan.

BHAGWARI. Guj., also Nirwa. Lands held in commune in Gujerat, Kaira, and Ahmadabad.

BHAGWEE, a cloth dyed with red ochre, used by fakirs.

BHAI. Hind. Brother, comrade, fellow-townman, fellow-contryman, from which are many compound words: Bhai-band, relatives, connections, fellow-townsmen; Bhaiyachara or Bhai-bhant, lands held in common by relatives; a village commune owned by descendants from a common stock.

Latterly, the title of Bhai was in practice frequently given to any Sikh of eminent sanctity, whether his ancestor had been the companion of a guru or not. The Behli and Sodhi, however, confined themselves to the distinctive names of their tribes, as the Behli called themselves Baba, and the Sodhi sometimes arrogated to themselves the title of guru, as the representatives of Govind and Ram Das. Bhand, a brotherhood; a term given to the kinmen of a Jhangah chief.—Elliott, Sup. Glos. p. 61; Cunningham's Hist. of the Sikhs, p. 65.

BHAI BHAGTOO, the founder of the Khutul family; he was a useful partisan of Lord Lake, but was subsequently reduced to comparative insignificance under the operation of the British system of escheat. Dhurum Singh, the ancestor of the respectable Bhai of Bagreain, between the Sutlej and Jumna, was likewise a follower of Hur Rai.

BHAI-BIRRUNG, the seed of a plant brought to Ajmir from Haraodi, considered warm, and used in mesalin, and in prescriptions to promote digestion.—Ged. Med. Top. p. 126.

BHAI-BYA. A Burm.? In Ambber, a timber used for house posts, commonly called white Jacool.—Captain Dow's Ind. p. 52.

BHAIMI. SANSK. The 11th of the Hindu month Magha, on which day offerings are made in honour of Bhima.—W.

BHAINS. Hind. A male buffalo. Mains, the cow.

BHAINSHE. Hind. Salix tetrasperma.

BHAIYARA. SANSK. The fear-exiting, from Bhaya, fear. Bhaiyara, the wife of Bhairava.

Bhairava is a title of Siva in his destructive character, a terrific deity, only to be satisfied by blood. According to Major Tod, there are two Bhairava, the fair and the black (Gora and Kala), who in the field of battle are the standard-bearers of their mother Kali. The sable deity is the most worshipped. The dog is sacred to him, and in sculptures he is commonly represented on one. He is also called Bajranga, or of thunderbolt frame. Mr. Ward states that under the name of Bhairava Siva is that of Kashi (Benares). All persons dying at Benares are entitled to a place in Siva's heaven; but if any one violate the laws of the Sashtra during his residence, Bhairava grinds him to death. At the Lat of Bhairava at Benares, the Kan-phata jogi ascetics officiate as priests. A temple is dedicated to Bhyru and his wife Jayisari at Loni, about twelve miles from Poona, to which people bitten by snakes are brought, and Hindus believe that they invariably recover. Bhyru will not even permit the nim tree, used as a preservative against the bites of snakes, to grow near the place, as all persons so bitten are under his special care. In the temple of Kylas at Ellora is a beautiful sculpture of him, bearing in his hands the damara, the hooded snake, and apparently a richly-sculptured sceptre. —Cole, Myth. Hind. p. 73. See Bhairavi.

BHAIYARA JAP or Bhairava Jhau. At some distance to the north of the Jainas temples of Girnar, and above them, on the verge of the hill, stands a huge insulated rock, the Bhairava jap, or 'Leap of Death,' otherwise styled the Raja-mela-vana-pathiar, the 'desire-realizing rock,' whence Hindus have often been tempted to throw themselves down, in the hope of a happy future.

Laying a cocoa-nut on the dizzy verge of this rock, the victim attempted to poison himself upon it, and in another instant he was beyond humanity's reach, and his body a prey to the vultures that soar about the cliff. Such suicide has long been forbidden; but only about A.D. 1850, three Kalmi, keeping secret their intentions, ascended and made the frightful leap; some Rabari had also determined to do the same, but were restrained.

Postans says the Girnar rock bears three inscriptions. The most ancient, which occupies the eastern side, are the edicts of king Asoka. The celebrated edicts are very perfect.—Postans' Western India, ii. p. 41; Cal. Rec., 1848; J. B. As. Soc. vii. pp. 217-262. See Asoka; Girnar.

BHAIYARA, fierce attendants on the goddess Kali; also ascetic female Hindus in Bengal, who personate Sakti. They take a vow of celibacy. Many of them are influenced by a sincere and enthusiastic devotion, but their reputation is not high.

BHAIYARA CHAKRA. Sansk. Bhairava, a name of Durga, and chakra signifies a circle or wheel. See Bhairava.

BHAIYA, or Rodia, a small, dissolute, and disorderly caste, who wander about in the company of dancing women, and are notorious thieves and scoundrels. They are in many of the districts of the Bengal Provinces, and in Cawnpur.—Sherring's Hindu Tribes, p. 276.

BHAJA, four miles south of the great Karli cave in the Bhor Ghat. It is famed for its Chaitya cave excavated in the rocks. Its date is supposed to be before the Christian era.—Ferg. BHAJJI. Hind. Greens.

BHAIJUMBHAL. Beng. Mellivora Indica, Jordan.

BHAKRA. Hind. Tribulus lanuginosus, T. terrestris.

BHAL. A yellow earth used in coarse dyeing at Multan.

BHAKSHI. Hind. of Kangra. Gardenia tetrasperma.

BHAKTA MALA, a work in which is embodied the legendary history of all the most celebrated Bhaktas, or devotees of the Vaishnav order, which was originally written in a Hindi dialogue, by Nathoo Ji, about A.D. 1580, but was added to by Narayan Das, who probably wrote in the reign of Shah Jahan. This, termed the Mala, was added to in A.D. 1713 by Krishna Das, the additions being named the Tika.—Wilson.

BHAKTI, in Hinduism, signifies a union of implicit faith with incessant devotion. The doctrine of the Bhaktas was an important innovation upon the old Vedic religion. The object of the Vedas, as exhibited in the Vedanta, seems to have been the inculcation of fixed religious duties as a general acknowledgment of the supremacy of the deities, or of any deity; and, beyond that, the necessity of overcoming material im-
purities by acts of self-denial and profound meditation, and so fitting the spiritual part for its return to its original source. This system was diffused throughout the old pagan world. But this fervent adoration of one deity superseded all this necessity, and broke down practice and speculation, moral duties and political distinction. In the Bhagavat Gita, Krishna is made to declare, that, to his worshipper, such practice is infinitely more efficacious than any or all observances, than abstraction, than knowledge of the divine nature, than the subjugation of the passions, than the practice of the Yoga, than charity, than virtue, or anything that is deemed most meritorious. An important consequence results from these premises,-that as all men are alike capable of feeling the sentiments of faith and devotion, it follows that all castes become by such sentiments equally pure. Amongst the Vatsa sectarians founded by Chaitanya, all persons of all castes are admitted into the sect, and all are at liberty to sink their civil differences in the general circulation of mendicant and ascetic devotees, in which character they receive food from any hands, and of course eat and live with each other without regard to former distinctions. In like manner, as followers of one faith, all individuals are equally entitled to the prasad, or food which has been previously presented to the deity; and it is probably the distribution of this, annually, at Jagannath, that has given rise to the idea that at this place all castes of Hindus eat together. See Pran-Pralah.

BHALI, or Bhal Sultan, a tribe of proprietary Rajputs in Secunderabad, Bandalunga, Hatras, and Tuppul in Aligarh. The tract about Balabhupura and northward is called the Bhal.-Elliott; Tod.

BHALATAKI. Hind. Semecarpus anacardium. BHALALIKA, contemporary with Dhiritarashtra and the five Pandu brothers. Bhalika means the Bactrian, from Balkh, the later form of the name of that city.

BHALOO. Hind. A bear. Bhaloo Soor, Arctonyx collaris, Cup.

BHAMIADATTA, a king of Kalinga, supposed to be the Brahmadatta, who after Buddha's death received the tooth relic at Kalinga.

BHAMA, a race in the valley of Nepal, supposed to be the offshoot of the Newar. The Bhamma shave the head, like the Bhuuta.

BHA-MANDALA. Sansk. A nimbus, an aureole.

BHAMTI, also Bhamatya, in Berar, Bhamatya, a pickpocket, a thief.

BHAN. Hind. Populus Euphratica; grows in N.W. Himalaya and in Sind, used for rafters and turndery; also Rhus cotinus; its leaves are used as a tan.

BHA-BIWAY. Birm. In Tayov, a wood used for house posts, like sisoo.

BHAND. Hind. Geranium nodosum.

BHANDAK, a town 18 miles N.W. of Chandia, in the Central Provinces. The architectural remains in and around it consist of temple-caves, and in the Winjhasni and Dewala hills, the foot-print of Bhima, on the latter hill, the temple of Bhadravati.

BHANDAR, a mixture sacred to Kandoba, of powdered turmeric and another substance.

BHANDAR, a cocoa-nut tree toddy drawer.

 BHANDARA. Hind. A treasury, a store, a reservoir; a guarantee, an assurance.

BHANDARA, in lat. 21° 9' 22'' N., and long. 79° 41' 43'' E., is the chief town of a district of the same name in the Central Provinces, through which the Wainganga flows. The population of the district in 1877 was 59,624. The aboriginal races are Gond, Kurk, Kol, Dher or Mhar, Kumb, Funwar, Koli, Mali, Goal, Kalar, Bhimar. The district is infamous for divorces, in which the women take the lead. The pot or concominage is largely followed. The lizards and many animals and reptiles are worshipped. There is a mile from Bhandara, where rest the remains of an English lady. It is held in great veneration by the surrounding villages.-Cand. Proc. Gaz.

BHANDE. Hind. The desert S.W. of Rajputana. See Morewar.

BHANDBAJAN. Hind. Sagereta Brandeshiana.

BHANG. Hind. Subjah, Subji, Sidhi, Hind. Sukho, Sawia, ... SIND. Banghi, ... TAM. Tel.

The larger leaves and capsules of the dried hemp plant, Cannabis sativa. They are used by the natives of S. Asia for making an intoxicating drink bearing the same name, also for smoking; and the powdered leaves are used in infusion and in sweetmeats as an intoxicating drug. The hemp plant in tropical countries also exudes a gum, a very powerful stimulating narcotic, which it does not produce in cold countries. It is the churass of India. The dried leaves partake of this narcotic principle, and are used all over India to produce intoxicating effects. They are used for making the conserve or concoction termed Majoone. Bhang is cheaper than ganjhall, and, though less powerful, is sold at such a low price that for one piece enough can be purchased to intoxicate a 'habituated person.' Sidhi, Subji, or Bang (synonymous) are used with water as a drink. It is generally used in a liquid form, and is fiercely intoxicating. One recipe, which is thus prepared, is,—hemp leaves, washed in water, 8 draehms; black pepper, 45 grains; cloves, nutmegs, and mace, of each 114 grains. Triturate the ingredients with eight ounces of water or milk, or with the juice of watermelon seed, or cucumber seed, and strain. Spices render it more inebriating. Another recipe is,—about three tola weight (540 Troy grains) are well washed with cold water, then rubbed to powder, mixed with black pepper, cucumber, and melon seeds, sugar, half a pint of milk, and an equal quantity of water. This composition is chiefly used by the Mahomedans of the richer classes. Sidhi washed and ground, mixed with black pepper, and a quart of cold water added, is the favourite beverage of the Hindus, especially the Brahiaan, and many of the Rajputana soldiery. Under the Burmese Government at Tayov, no one was allowed to cultivate the plant without a licence from Government. Sometimes a general permission was given, and at other times a general prohibition would be issued. Throughout India bhang is one of the excisable articles, and the place is not taxed for revenue.—Williams' Middle Kingdom, p. 106; Powell's Handbooks, 296; O'Sha. p. 582. Faulkner; Herklotz; Mason.

BHANGAR BIJ. Hind. Asphodelus fistulosus.
BHAO.  HIND.  A brother, a cousin, an honorific adjunct to names, as Sadasiva Rao Bhao, who fell at Panipat, 6th January 1761. A daughter-in-law. Bhao Begum, the Begum daughter-in-law.

BHAORA, a scattered tribe in the Peninsula of India, who snare game and wild beasts. They are styled Pardhi by the Canarese, and Harn Pardhi, and Harn Shikari in the Dekhan, and the British style them the Shikari and hunter race. See Kawari. They snare wild animals, which they bring for sale into towns. They also capture the largest beasts of prey. They work in certain tracts of country, which they call their jungle, each body knowing to whose own circle.

BHAOTA.  HIND.  A banner, a flag; frequently used, as Angri Kaz bhaota kaim,—May the English flag remain secure.

BHAR.  GUI.  A measure of weight in Gujarat, about 960 lbs.

BHAR.  MALAY.  A slab of tin.

BHAR, also written Bhr, an aboriginal race in the Benares district, of whom the Raj-bhar, the Bharat, and Bharpatwa are sections, though they do not eat together nor intermarry. They are said to have ruled in the tract from Gorakhpur to Bhandelkhand and Sanger, and many old stone forts there are ascribed to them; but in that part of India they are now filling the meanest situations. On the hills to the east of Mirzapur, the principalities of Korar, Kurrrich, and Huraha are, however, each held by Bhr. Many of their old stone forts, embankments, and excavations are in Gorakhpur, Azimgur, Jopurr, Mirzapur, and Allahabad, and remnants of the people are still there. The celebrated fortress of Vijayagar is still recognised as a Bhravati fort; and a purgana in Benares is called Bhdal, properly Bhr-dal. Professor Wilson supposes it possible that the name comes from Bharata, an ancient dynastic name of India.—Wls. Glos.; Elliot, p. 83.

BHARADI, the Hindu goddess of learning, a name of Saraswati.

BHARADWAJA is mentioned in the Ramayana as a sage residing at Prayaga, the modern Allahabad. They are a tribe descended to him from the high bhrak of the Gangas. In the Maha-bharata, Bharadwaja is described as residing at Haridwar, and as the father of Drona, the military preceptor of the Pandava and Kaurava princes. He is also the parent of Arundhati, the wife of Vasisthia. Sir H. Elliot suggests that there may have been two saints of nearly the same name, Bharadwaja and Bharadwaja? In Sanskrit, the long a indicates descent, as Sagara from Sagara, Bhairagirthi from Bhagiratha. In the same way, Drona the son of Bharadwaj is called Bharadwaj in the Mahabharata. See Hindu.

BHARANGI.  HIND.  Verbena prostrata. The bark of the stem of this small plant is considered warm, and is used to promote digestion.

BHARANGI CHEITU.  TKL.  Clerodendron sp. Bharga and Bhrangi are explained to be Clerodendron siphonanthus, but evidently refer to a species of Clerodendron called Gantu bharangi, q.v.

BHARAO, HIND., from Bhrava, a field of a size to require a bhran of seed. It is a term in use in the Himalaya.

BHARATA, the founder of a dynasty in the vicinity of the Indus. He was the son of raja Dushyanta and Sakantala, and was of Aryan descent. He established a kingdom amidst an aboriginal population. The original seat of the race was at the site now occupied by the ruins of Takht-i-Baki, in the country of the Yuzufzai, to the north of Peshawur. There is, however, no reliable information extant as to the extent of the kingdom he founded, but to this day India is known to the Hindus by the name of Bharta-varsha, or the country of Bharta, also called Bharata Kshetra and Bharat K'handa. Bharata is said to have been the first to establish a mugh in India, but this process was merely a new dynasty. Under this name, Bunsen, however, supposes two historical accounts. The first Bharata, a supposed son of Bhumanya, he thinks is the name of the primitive race who settled in central Hindustan, the Madhyadesa or Aryavarta. The Bharata kingdom, he thinks, seems to have been established between B.C. 2600 and 2200, when the country was over...
whelmed by the Panchala, and it was followed by an interregnum, B.C. 589. Wheeler also says that Bharata, son of Dushyanta, was of the Aryan race, and established the Bharata kingdom in Hindustan, amidst a preceding people. Some authors in Europe have lately endeavoured to apply the term Bharata to the name of what now India, but it probably varied in extent with the usual fortunes of nations. Under its third king, Shohatra, this kingdom became aggressive, but it ended with Samvarama about B.C. 2200, by the Bharata kingdom being overwhelmed by the advance of the Panchala, and driven westward.

After the inroad of the Panchala, a period of 300 years of anarchy ensued. From about B.C. 1900, the Panchala and Kuru became supreme, then the Pandava power. But about B.C. 1100 a bloody struggle occurred between the Kaurava and Pandava, from which a third interregnum ensued, which lasted 120 years. This period of anarchy was called the Kaiy yoga, B.C. 986 (886?); a new realm was founded in Magadha, and lasted down to Asoka II., B.C. 225, under various dynasties, viz.:—

1. Barhadhratha, B.C. 986-647 IV. Sheshnaga, B.C. 446-379
2. Pratulys, B.C. 647-647 Y. Nanda, B.C. 378-313
3. Udaya-bhadra, B.C. 547-547 Y. Maurya, B.C. 324-284

The above is from Bunson's Egypt, pp. 590-592 of vol. IV.; but at another place he names the Barhadhratha dynasty 220 years of Sonapi, B.C. 886-647, twenty kings, down to Ripunjaya; Pradotya dynasty, B.C. 646-579.

A. Bhattiya dynasty, B.C. 578-447, total 132 years.
1. Bhattiya, B.C. 578-527, murdered by his son Ajita Sutra.
2. Ajita Sutra, B.C. 526-495, murdered by his son Udaya-bhadra.
5. Nagadaasaaka, B.C. 470-447, murdered by his successor the house of Sheshnaga (Sisunaga).

B. Sheshnaga Kshatriya.
1. Sheshnaga, B.C. 446-427.
3. Bhadrasena, nine brothers, B.C. 400-379; the last of the brothers, named Pinjamakha, was de-throned by Nanda.

C. Nanda and his sons.
1. Nanda, not a person of princely extraction, headed a revolt against Pinjamakha, captured Pataliputra, and became king, B.C. 378.
2. Nanda's younger brother de-throned and murdered by Chandra-gupta, B.C. 313.

D. House of Maurya.
3. Asoka (the great), B.C. 260-225.

E. Partition and downfall.

The Sheshnaga family descended from a mother of inferior rank. She had been the head of the dancers of a king of Lakhavi at Vasali, and subsequently became his wife. Sheshnaga's son is properly the first Asoka; but the Brahmins, from hatred towards the second, who was the great patron of the Buddhists, called him only Kaka-Varna, the raven-black. It was he who removed the royal residence from Rajagriva in the south to Pataliputra. He was succeeded by his eldest son, Bhadrasena.

Nanda was a man of great courage, who headed a commotion in his own village.

Chandragupta (Sandalocottus) was present with the army of Porus when the latter was murdered by Emmemes, the general of Eudemenus II., in B.C. 317. He headed the popular party, and marched towards the Ganges. His kingdom extended from the Indus on the north, to the mouth of the Ganges and Telingana, also westwards to Gujara,—the whole of Aryanvarta. He died B.C. 289.

Asoka, the great Buddhist king, was crowned at Pataliputra in the third place of his reign, B.C. 258-259, and openly seceded from the Brahmanical to the Buddhist religion. He seems to have been converted by the son of his brother, whom he had murdered. He is said to have erected 84,000 Buddhist sanctuaries, partly temples (chaitya), partly tumuli (stupa or tops), and inscribed on rocks and pillars earnest incantations of Buddhist doctrines.—Dabush, i. 547, iii. 559, 585, iv. 590-592.

Bharata, one of the four sons of Dasaratha and Kaikeyi, and elder brother of Rama. Bharata's mother secured the exile of Rama, but it was arranged that after the expiration of 14 years Rama should ascend the throne, and Bharata govern Kosala in Rama's name.—Gurrett.

Bharata, the eldest of the hundred sons of Reshabha (Booshabha), prince of Himahwa, to whom Bharata succeeded. Bharata resigned the throne to his son Samati, and retired as an ascetic into the forest. He regarded the soul as distinct from matter, and the gods and kings as in reality the same. From this, apparently, he disregarded caste distinctions.—Gurrett.

Bharati. Sansk. Speech, or its goddess; perhaps Bharadi, a name of Saraswati, the goddess of learning. The prevailing title of the later Sringagri gurus.

Bharhut, a village 120 miles to the S.W. of Allahabad, and 9 miles due south of the Sutna station of the Jubbulpur railway. It is in the state of Nagode in Central India, and is said to be the site of an old city named Bhairanpur, which embraced all the villages round. The ruins of a great Buddhist trophy of the year B.C. 250-200 were discovered here in 1873 by General Cunningham.

Bhariya. In Northern India, braziers, iron-workers, and metal founders, though connected by their avocation with the Thatheras and Kasera, are nevertheless a distinct caste, and do not intermarry with either.—Sherring's Tribes, p. 322.

Bharo, known to Europe as Broach, was the Bhrigu-Kachha of the ancient Sanskrit, the Bhar-kachha of old inscriptions, and the Bary-gaza of Tolomeus and the Periplus. See Broach.

Bharapatwa, a branch of the Bhar tribe.

Bharunja. Hind. A person who is a grain parcher.

Bharta, a husband amongst the races in Malabar who follow the law of descent from the female side.

Bharutpur, a town and fortress which gives its name to a State in Rajputana lying between lat. 26° 43' and 27° 50' N., and long. 76° 33' and 77° 45' E. Its area is 1974 square miles; and in 1874 its population was 743,710. Its princes, nobles, and most of its people are of the Jat.

Its town of Kaman is sacred to the Hindus, Krishna having resided there. Deogtan is noted
BHASKARA CHARYA.

for its elegant banian or palaces. Near Khanbar are three colossal Pandain images of Baldeo, his wife, and Yudishtira, with another supposed to be a Jaina saint, and two enormous monolith columns. At Khanwa, Baber fought a great battle with Rana Sanga of Udaipur. The Bhartpur territory has been repeatedly overrun by conquering races. The Jat principality was founded by a freebooter named Birj, who held the village of Sinsumni in the pargana of Deog, and the power of this state was extended during the decline of the Moghul empire, by his great-grandson, Suraj Mull, who was killed in 1768. Suraj Mull left five sons, three of whom administered the state of Bhartpur in succession. During the rule of the third son, Namil Singh, the fourth son, Ranjit Singh, rebelled, and called in the aid of Najaf Khan, who stripped the family of all their possessions except the fort of Bhartpur, which was held by Ranjit Singh. After much internal and external trouble, Sindia gave back to the family at first eleven, then three parganas, which now form the state of Bhartpur. In 1808, the chief, Ranjit Singh, entered into a treaty with the British; but he gave shelter to Holkar when pursued by Lord Lake after the battle of Deog, and on refusing to deliver him up, Lord Lake’s army stormed it four times unsuccessfully, on the respective occasions of the 9th and 21st January, 21st and 22nd February 1805. On these assaults the losses appear to have been 456, 573, 894, and 987; total, 2910; and 15 officers killed and 95 wounded. But the chief then agreed to expel Holkar from his territory, and a new treaty was entered into. The raja died in 1825, leaving his young son, Bulwant Singh, to the care of Sir David Ochterlony. But his cousin Doorjun Sal set aside the young sovereign, and murdered the uncle guardian.

The British Indian army, on the 10th December 1825, again assembled to besiege it. It comprised 20,205 regulars, and 1705 irregular cavalry, with 112 guns, howitzers, and mortars, and the Commander-in-Chief, Lord Combermere, commanded. The force of the enemy consisted of 20,000 Rajput, Jat, and Afghans. The fortress fell on the 15th January 1826. The British loss was 103 killed and 466 wounded. The enemy lost about 7000. Lord Combermere was made Viscount, and the prize-money amounted to 48 lakhs of rupees. 61,472 shot and shells were fired in the 26 days from 24th December 1825 to 18th January 1826. The races in northern India, owing to the failure of the attempts in 1803, had been in the belief that it was impracticable. The Maharaja has received a sumund, conferring on him the right of adoption, and to a salute of seventeen guns. The revenue is Rs 21,00,000. Bhartpur pays no tribute and no contribution to any local corps or contingent. The army consists of 3668 infantry, 2214 cavalry, and 813 artillery.—Treates, iv. 121, 132. See Jat.

BHARTRIHARI. A celebrated poet and grammarian, who is said to have been named after Vibhramaditya. He wrote three Satakas or Centuries of Verse, called Sringara-sataka, on amatory matters, Niti-sataka on polity and ethics, and Vairagya-sataka on religious austerity. The last are said to have been written when he had returned to a religious life, after a licentious youth. They were translated into French by Fauche, and the erotic verses by Regnand; and into English by Professor Tawney. Bhartrihari also wrote a grammatical work of high repute, called Vakya Padlya (Pradipa); and a poem, called Bhatti-kavya, is also attributed to him. His Vakya Pradipa, or metrical maxims on the philosophy of ayutax, are the best known. They are often cited under the name of Harikarika, and have almost equal authority with the precepts of Panini. His Satakas or Centuries of Verse are also much admired. He is said to have become disgusted with the world on account of the infidelity of his favourite wife. He abdicated the throne, and ended his days at Benares in devout contemplation. He is also said to have been put to a cruel death by his brother Vikramaditya. His aphorisms are also entitled Karika.

—Garrett; Dowson. See Bhatti.

BHARTRIHARI JAGI, an order of Hindu mendicants, who say that they were instituted by Bhartrihari, brother of Vikramaditya. They are reckoned as jogs, because Raja Bhar, it is asserted, was a disciple of a jogi. They carry a magnificent instrument in their hands, on which they play, while they sing the exploits of Raja Bhar. Their abode in Benares is principally at Roali Talao. They are many of the sect in the city. They walk about wearing the gera-vastra, or reddish cloth worn commonly by devotees. At death they are buried.—Wilson; Sherrin, p. 261.

BHARWAR, a tribe keeping goats, sheep, and camels, and living on their produce.

BHARI. HIND. Imperata Koenigii. BHRWUTTIA, a manifestation of lawlessness almost peculiar to Kattiyawar (voluntary outlawry), not yet extinguished in the province.

BHAKYA, also Bharja. HIND. A Hindu wife; a second wife after the Patni or first wife; a Nair woman.

BHASAN, a class of Sadras in the Khassia hills.

BHASHA. SANSK. A language, a dialect, from Bhash, to speak. The terms Bhasha and Prakrit mean vernacular tongues. Do-basha, lit. two languages. Do-bhasha, an interpreter, an agent.

Bhashya, from Bhasha, a tongue; a nongular treatise. One of these treatises was written by Vallabha Acharya, W.

BHASKARA. SANSK. From Bhas, light, and Kri, to do or make. A treatise on the sun, its true nature, in the Mimansa Upanga. Also a name of the sun as the light maker. Bhaskara-Saptami, a Hindu festival in honour of the sun, held on the seventh of the month Magha (Jan.—Feb.).

BHASKARA CHARYA, a celebrated astronomer, born about A.D. 1065, who resided at Beder in the 11th century. He applied his mind chiefly to numerical science. He was a Brahman, and had only one child, a daughter, named Lilavati, to whom he dedicated his work, the Bija-ganita, and singularly it came to be called by his daughter’s name. Its date is SS. 1086 = A.D. 1114. His Siddhanta Siromani (Head Jewel of Accuracy) is an astrological work, published SS. 1050 = A.D. 1128; and he died soon after 65. He had had rival in India in medieval or modern times. Part of it was translated by Colebrooke. He has been supposed to have been acquainted with the principle of the Differential Calculus; and Dr. Spottiswoode considers that the formula which he establishes, and his method of establishing it, bear a strong analogy to the
BHAMA.

Bhat take the honorary title of Rao. In Oudh, the Bhat, Birn-bhat or Bari, and the Jaga-bhat, number 61,429, and they claim a Brahmanical origin. In Rajputana, every family of any pretensions retains one or more bards; and no person can go abroad without bards to proclaim his titles, achievements, or those of his forefathers, which is done in a loud tone, and the bards vie with each other in composing extravagant epithets. No person can enter a room, rise or go out of it, without suitable proclamation from the bards present. Some are good at improvising, and on occasions deliver extempore orations in verse, and chanted in various measures, when their words have a great effect on their hearers. They occupy the exact position of the bards of Europe, meeting to peace, to war, to love, to generosity, as occasion demands.

The Birm-bhat are hired on particular occasions to recite the traditions of a family; the Jaga-bhat being the chroniclers of the family by hereditary descent, and visiting the members periodically, to take note of all occurrences regarding them. Both classes are as much dreaded for their Rapacity as respected for their reputed sanctity. In some places in Upper India, the Bhat are found forming village communities, and branching into various subdivisions; some have become converts to Mahomedanism. The Bhat of the village establishment appears to be of an inferior class.

The Bhat are more immediately connected with the Rajput clans, and the Charan with the Kat'hi. The two castes will eat of each other's food, but will not intermarry. The women of the Charan and Bhat are clad in long flowing black garments, and have a sombre if not actually horrific appearance. They do not wear many ornaments, and are not restricted from appearing in the presence of strangers; accordingly, in passing a Charan village, the traveller is sometimes surrounded by women, who invoke blessings on his head by joining the backs of their hands and cracking the knuckles of their fingers in that position over their heads. Their dress consists of a gogora or petticote, made very full; the neck covered with a choli, which descends below the hips, and covers the stomach, but is open behind, where it is fastened with two strings; a wide muslin scarf, attached to the gogora, passes round the body and the head, completely concealing the wearer from view.—D. J. vii.; Hindous, p. 76; Wilson's Gloss.; Heber, ii. p. 463; Tod's Souyl. Gloss.; Malchot's Central India.

BHATGAON.

In Oudh, the Bhat, Birn-bhat or Bari, and the Jaga-bhat, number 61,429, and they claim a Brahmanical origin. In Rajputana, every family of any pretensions retains one or more bards; and no person can go abroad without bards to proclaim his titles, achievements, or those of his forefathers, which is done in a loud tone, and the bards vie with each other in composing extravagant epithets. BHATA.

Additional allowance, or extra pay to servants, or soldiers, or officers; a ploughman's wages in kind.—W.

BHATA. HIND. Crotalaria buria.

BHA-MA. BURL. In Tavoy, a wood used for common carpentry.—Captain Dance.

BHAJARA, the founder of the Valabhi dynasty.

BHATGAON or Bhatgong, a district and town of Nepal; though the least considerable of the three chief towns in point of size, yet its buildings in general have a more striking appearance. Bhatgong lies nearly 8 road miles S. of Kathmandu. Its ancient name was Dhurmapatan, and it is called by the Newar race, Khopolâre; by them it
is also described to resemble in figure the dhunuro, or guitar of Mahadeo. It is the favourite residence of the Brahmanes of Nepal, containing many more families of that order than Kathmandu and Patan together.

BHATI-GAUR, a subdivision of the Gaur Rajputs.

BHATI, a tribe in the Lahore division of the Panjab. They were Yadubansi Rajputs, who in Akbar's time became Mahomedans.

BHATIA, between Multan and Alor, supposed by General Cunningham to be the city which Alexander built among the Sogdii. It was taken by assault in A.D. 393, or A.D. 1003, by Mahmud of Ghazni, after an obstinate defence, in which raja Bejjur, or Bijé Rai, was killed. Amongst the plunder, Mahmud obtained 280 elephants. — Cunningham, Ancient Geog. of India, p. 256.

BHATTIYA, HIND., also Bhati and Bhatta. The poorest kind of soil in Sagur and Bundelkhand; it is of a reddish colour, and is mixed with kankar and stones. Shallow in depth, and generally exhausted after the third year, after which it requires four years' fallow. Only the poorest grain and millets will grow upon it.

BHATKAL, a small seaport town of 5246 inhabitants, in North Canara, known to the Europeans of the 14th to the 16th centuries as Baticalca, Batteca, and Baticalloa. The Mahomedans here are the Naoat, a Sunni sect.

BHAT-KATAI, also Bhat-katia. SANSK. Solanum Jacquinii, Wildle; also S. Xanthocarpum and Argemone Mexicana.

BHATKOORAL. HIND. A hard, close-grained wood, of a bright green colour, and not heavy. Sought in the Santal jungles. Well adapted for timber bridges, where strength and toughness require to be combined with lightness. — Calc. Engineers' Journal.

BHATMIL. HIND. Argemone Mexicana.

BHAT-NAGAR. HIND. A tribe of Kayasths, originally from Bhatner. — Elliot.

BHATNAIR, a town and fort in the north of Bikanir, in lat. 29° 34' 55" N., and long. 74° 20' 45". See Bhatti.

BHAT-NGGI. HIND. Wikstræmia salicifolia.

BHATOTAR. HIND. Lands allotted to bards.

BHAT-SHOLLA. BENG. Æschynomene Pulidosa.

BHATTA. SANSK. A sage; a Brahman acquainted with Sanskrit literature; literary title conceded to learned Brahmins who commit one of the Vedas to memory, so as to be able to recite the whole without book. In some parts of South India, it especially designates a Brahman who professes a knowledge of the Vedas, or belongs to a family in which they have been taught. Bhatta Acharya, a teacher of Sanskrit literature, is a title which is given to Hindu scholars who not only learn one of the Vedas by heart, but study the meaning of every verse and word, so as to be able to explain it orally. They are now very few. About 1870 there were only three or four at Benares; but they are highly respected, and on certain occasions regularly worshipped as incarnations of Vrhas-pati, the Pandit of the gods. — Elliot; Wilson; Garrett.

BHATTA, Batta, or Battak, a Sumatran race addicted to eating human beings. They occupy the valley of Mandeling and to the west, and the easterly portion of them are under the dominion of the Dutch. The language they use is said to be different from the Malay, and to have several dialects; but it has an alphabet invented by themselves, and in this matter they are perhaps the only human beings who have advanced to a knowledge of letters, but continued to eat each other. The writings of Marco Polo show that so long ago as A.D. 1290, they were known to be addicted to indulgence in this propensity; and Sir Stamford Raffles, in 1820, after visiting Tampanuli Bay, was informed that for a person convicted of adultery, of midnight robbery, prisoners of war, a person intermarried with another tribe, a persontreacherously attacking a village, a house, or another person, the punishment was to be cut up and eaten alive.

The most recent traveller, Professor Bikmore, from America, who was in Sumatra in 1865, mentions that they are an inland people, the Malays from Menangkabau having spread and occupied all the coasts. He says they believe in evil spirits and omens. On the Dutch acquiring the possession of the plain of the Mandeling valley, the Batta dwelling there were compelled to abandon their cannibalism, but all beyond Dutch territory the race still pursue their old customs. He had not, however, been able to verify that part of Sir Stamford Raffles' information which includes marrying into another tribe as incurring the penalty. The raja of Sipirok assured the Dutch governor at Pedang that he had eaten human flesh at least forty times, and that he relished it above everything that he had ever tasted. — Bikmore's Travels, p. 418; March's Sumatra.

BHATI-CURTIE, a distinguished Telugu poet who resided at the court of Krishnaraya. He wrote the Narasa Bhupaliam during his patron's life, but his chief poem, the Vasu Charitram, after that patron's death. It contains florid descriptions of scenery and love affairs, and is much esteemed. — Garrett.

BHATTI. HIND. A distillery, a still, a boiler, a kiln, a forge.

BHATTI or Bhatti-Kavya, by Bhattirhari, is a poem in 22 cantos relating the adventures of Rama. It has been partly translated into German by Schütz. — Dowson. This Bhattirhari was a grammarian and poet, son of Sir Dhara Swami, not the celebrated brother of Vikramaditya. — Ward, iv. p. 587.
